AUTHORS OF ARTICLES IN VOLUME IV

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to place after each contributor's name the numbers of the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the *Shorter Encyclopaedia of Islam*. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears in the text within square brackets after the name of the original author.

the late A. ABEL, Université Libre, Brussels. 128.
A. M. ABU-HAKIMA, McGill University, Montreal. 314.
C. ADLE, Centre National de la Recherche Scientifique, Paris. 702.
AZIZ AHMAD, University of Toronto. 171.
FEROZ AHMAD, University of Massachusetts, Boston. 284, 286, 857.
S. MAQBUL AHMAD, Aligarh Muslim University. 994, 1083.
the late M. AKDAĞ, Ankara. 499, 595.
MÜNİR AKTEPE, University of Istanbul. 194, 901.
HAMID ALGAR, University of California, Berkeley. 167, 696, 852, 854, 856, 857, 865.
J. W. ALLAN, Ashmolean Museum, Oxford. 1105.
ALİ ALPARSLAN, University of Istanbul. 1125, 1126.
GÜNAY ALPAY, University of Istanbul. 192.
A. ALTMANN, Brandeis University, Waltham. 111.
G. C. ANAWATI, Institut Dominicain, Cairo. 86, 277, 283.
A. S. BAZMEE ANSARI, Central Institute of Islamic Research, Karachi. 93, 177, 178, 197, 279, 280, 282, 283, 287, 508, 544, 545.
[A. J. ARBERRY, Cambridge]. 1074.
[C. VAN ARENDONK, Leyden]. 453, 1087.
RACHEL ARIÉ, Centre National de la Recherche Scientifique, Paris. 355.
M. ARKOUN, University of Paris. 119.
R. ARNALDEZ, University of Paris. 120, 121, 255, 988.
[T. W. ARNOLD]. 368.
E. ASHTOR, Hebrew University, Jerusalem. 463, 520, 627, 774.
O. ASLANAPA, University of Istanbul. 1159.
W. ATALLAH, University of Nancy. 496.
D. AYALON, Princeton University. 1100.
[F. BABINGER, Munich]. 737, 885.
G. BAER, Hebrew University, Jerusalem. 206, 835, 894.
J. M. S. BALJON, University of Leyden. 916.
N. A. BALOCH, Islamabad. 535.
[W. BARTHOLD, Leningrad]. 113, 213, 611, 613, 627, 632, 671, 694, 699, 849, 850, 1020, 1181.
[H. BASSET, Rabat]. 656.
[R. BASSET, Algiers]. 316.
A. F. L. BEESTON, University of Oxford. 748, 819.
M. A. J. BEG, National University of Malaysia, Kuala Lumpur. 548, 1100, 1162.
IRÈNE BELDICEANU-STEINHERR, Centre National de la Recherche Scientifique, Paris. 777.
J. E. BENCHEIKH, University of Paris. 719, 929, 1009.
[MOH. BEN CHENEB, Algiers]. 327, 528, 964.
A. BENNIGSEN, École Pratique des Hautes Études, Paris. 724, 850.
M. BERGER, Princeton University. 1153.
NIYAZI BERKES, McGill University, Montreal. 170.
P. BERTHIER, Rabat. 684.
[H. BEVERIDGE]. 523, 915, 1022.
W. BJÖRKMAN, Uppsala. 409, 743, 807.
J. BLAU, Hebrew University, Jerusalem. 303.
LUCIE BOLENS, University of Geneva. 660.
S. A. BONEBAKKER, University of California, Los Angeles. 81, 252, 327, 414, 864.
P. N. BORATAV, Centre National de la Recherche Scientifique, Paris. 271, 603.
J. BOSCH-VILÁ, University of Granada. 117, 478, 665, 718, 739.
W. BOSWELL, Stanford University. 746.
C. E. BOSWORTH, University of Manchester. 107, 189, 208, 210, 218, 269, 350, 357, 358, 411, 467, 511, 538, 542, 547, 551, 573, 583, 584, 659, 669, 696, 754, 808, 815, 892, 910, 918, 989, 1060, 1065, 1068, 1097, 1143, 1160, 1182, 1188.
A. BOUDOT-LAMOTTE, University of Paris. 803.
G. H. BOUSQUET, University of Bordeaux. 280.
CH. BOUYAHIA, University of Tunis. 523, 867.
J. A. BOYLE, University of Manchester. 512, 553, 613, 809, 811, 915, 1010, 1029, 1133.
M. BRETT, University of London. 785.
[C. BROCKELMANN, Halle]. 377, 506, 515, 596, 737.
J. T. P. DE BRUIJN, University of Leyden. 52, 75, 445, 703, 1010, 1022, 1059, 1074.
[FR. BUHL, Copenhagen]. 1113.
R. M. BURRELL, University of London. 1172.
J. BURTON-PAGE, University of London. 277, 368, 513, 514, 534, 538, 667, 752, 908, 1024, 1159.
H. BUSSE, University of Kiel. 294, 295, 818.
CL. CAHEN, University of Paris. 276, 324, 377, 456, 484, 558, 628, 660, 692, 754, 815, 817, 818, 913, 1029, 1034, 1084, 1086.
J. CALMARD, Centre National de la Recherche Scientifique, Paris. 695, 851.
M. CANARD, University of Algiers. 91, 684.
J. CARSWELL, University of Chicago. 1060.
Mme J. CHABBI, University of Paris. 1026.
M. ABDULLAH CHAGHATAI, Lahore. 1128.
P. CHALMETA, University of Madrid. 673, 712, 713.
K. N. CHAUDHURI, University of London. 455.
J. CHELHOD, Centre National de la Recherche Scientifique, Paris. 79, 335, 372, 407, 596, 819, 1149.
M. CHOUÉMI, Centre National de la Recherche Scientifique, Paris. 411.
D. COHEN, Centre National de la Recherche Scientifique, Paris. 302.
the late G. S. COLIN, Institut National des Langues et Civilisations Orientales, Paris. 217, 456, 523.

C. S. Coon, Gloucester, Mass. 11.
R. Cornevin, Académie des Sciences d'Outre-mer. 314, 352, 539.
Patricia Crone, University of Oxford. 929.
Yolande Crowe, London. 1171.
Mme B. Cvetkova, Bulgarian Academy of Sciences, Sofia. 92, 122.
F. Dachraoui, University of Tunis. 460.
U. Dann, Tel-Aviv University. 719.
R. H. Davison, George Washington University, Washington, D.C. 461.
U. Dehghan, Pahlavi University, Shiraz. 763, 773, 910.
G. Deverdun, Lycée Marcel Pagnol, Marseille. 379, 635, 686.
A. Dietrich, University of Göttingen. 418, 773, 1084.
S. Digby, Ashmolean Museum, Oxford. 210, 219, 419, 818.
A. A. Dixon, Baghdad University. 494, 836, 856, 912.
B. Djurdjev, University of Sarajevo. 575.
C. H. Dodd, University of Hull. 792.
G. Doerfer, University of Göttingen. 918.
the late J. Eckmann, University of California, Los Angeles. 528.
C. J. Edmonds, Heronden, Kent. 377.
A. S. Ehrenkreutz, University of Michigan, Ann Arbor. 419.
N. Elisséeff, University of Lyons. 484, 724, 727, 728, 779, 1017.
J. van Ess, University of Tübingen. 372, 1164.
T. Fahd, University of Strasbourg. 92, 260, 264, 265, 270, 291, 406, 422, 763, 804, 1130, 1134.
[B. Farès, Cairo]. 78.
Ravan Farhadi, Kabul. 1102.
A. Faure, University of Rabat. 775.
G. Fehérvári, University of London. 292.

I

CONTINUATION

IRAN

i.—Geography

1. The geological background: The alignments of Iran's principal topographic features, represented by the Kūhhā-yi Alburz and the Zagros Chain, are west to east and north-west to south-east, respectively. In broad context, the Alburz is a continuation of the European Alpine structures, while the Zagros chain has been linked through Cyprus with the Dinaric Alps (Fisher, 1956). The structure of the mountain rim of the country has been influenced strongly by tectonic movements which have not only caused considerable folding, giving rise to the mountain ridges, but have also resulted in overthrusting of the anticlines and complex step-faulting, particularly in the east and north-east. Lying between the two mountain systems of the north and south is the block of the central Iranian plateau, though even here large areas have been affected by the powerful movements which created the Alpine Himalayan orogenic systems.

Structural characteristics have an appreciable influence on the extreme regionalism of Iran. The Caspian basin may be regarded as a down-faulted area in sharp contrast to the adjacent main Alburz range, itself discerned as a main northern range, a southern range or Anti-Alburz (Rivière, 1934) with an internal tertiary basin between the two. The Zagros exhibits two structurally characteristic regions including the area of large-scale over-thrusting, as exemplified in the zone between ʿAlī Gūdarz and Shahr-i Kurd, and the area of lower altitude, where elongated anticlines and synclines are arranged in sub-parallel lines as for example around Do Gunbadān

The main period of earth movements has been established for the Alburz and the north-east region as belonging to the pre-Cretaceous era, when the permocarboniferous beds were widely affected. Further movement began in post-Eocene times and continued through to the end of the Miocene, while the close of the Cretaceous saw increased volcanic activity. The major period of folding is attributed to the Pliocene, especially the late Pliocene (Gansser, 1955). The Zagros was influenced considerably by epeirogenic movements dated to Paleozoic and early Mesozoic times with orogenic disturbances beginning in the Upper Cretaceous (Lees and Richardson, 1940). Prolonged folding in the late Miocene and Pliocene saw the emergence of elongated anticlines and synclines compressed against the resistant Arabian Shield.

2. Location and frontiers: Covering some 164 million hectares, Iran stretches from Bāzārgān (39° 20′ N-44° 20′ E) in the north-west to Sarakhs (36° 30′ N-61° 10′ E) in the north-east and from Ābādān (30° 20′ N-48° 15′ E) in the south-west to Gvātar (25° 05′ N-61° 30′ E) in the extreme south-east.

The land frontiers of Iran total approximately 4,400 kilometres much of which is aligned along natural features and the subject of established international agreements with the notable exception of the Shaṭṭ al-ʿArab boundary with ʿIrāḳ. The 460-kilometre border with Turkey runs south from the Rūd-i Aras through the eastern foothills of the Büyük Ağri Daği and thence roughly along the watershed between the Reżāʾiyeh basin and the Van Golü basin. Of the 900-kilometre frontier with ʿIrāḳ, the northern section follows the watershed of the Zagros and then the low-lying foothills of Mesopotamia before cutting across on arbitrary alignments to the Shaṭṭ al-ʿArab upstream of the confluence with the Rūd-i Kārūn. Iran's border with the U.S.S.R. in Ādhārbāydjān is coincident with the Rūd-i Aras over much of its length except for the eastern extremity, where from approximately 48° E it swings southwards through the Dasht-i Moghān to the foothills of the Kūh-i Ṭālish, which it follows to the Rūd-i Āstārā which forms the boundary to the Caspian Sea (Daryā-yi Māzandarān). The Trans-Caspian border with the U.S.S.R. follows the line of the Rūd-i Atrāk upstream from the Caspian Sea to the confluence with the Rūd-i Sūmbār and then crosses the Kopet Dāgh to arc round to the Harī Rūd along the north facing slopes of the northern Alburz ridges including the Golūl Dāgh and the Kūh-i Hazār Masdjed. Although the Irano-Afghān border runs south along the Harī Rūd over the first section of its 800 kilometres length, the rest of the boundary is more arbitrarily aligned, traversing the inland drainage sumps east of the Ḳāyin-Bīrdjand highlands and the western rim of the Dasht-i Nā Umīd before cutting east through the Daryāčeh Sīstān to include much of the lowland around the Daryāčeh Hāmūn-i Ṣābarī before swinging south-west towards Zāhidān. After following the watershed of the hill range east of Zāhidān, the frontier with Pakistan is coincident with the Tahlāb Rūd south to the Hāmūn-i Mashgel. Thereafter the frontier trends more or less due south with an abutment eastwards to take in the valley of the Rūd-i Mashgel as far as Kūhak, from whence it swings south-west, in parts along tributaries of the Nehang Rūd, to the coast of the Gulf of Oman at the Khalīdj-i Gvātar.

3. Physical geography: The heartland of Iran is regarded by geographers as a plateau defined in the north by the Alburz system and to the south-west and south by the Zagros Mountains, though continuing eastwards into Afghānistān without firm

delineation. This vast triangular plateau is far from homogeneous and includes not only the extensive desert lands of the Dasht-i Kavīr and Lūṭ but also large, though discontinuous, areas of well watered and fertile soils lying between the enclosing mountains and the desert basins which are the centres of the introspective drainage systems. Whereas the great deserts contain few, if famous, settlements, many of the country's richest agricultural areas are located in the lands bordering the plateau, including among others the Dasht-i Ḳazvīn, Dasht-i Varāmīn, the extended oases of Mashhad, Sabzavār, Nīshābūr, Simnān, Tehran, Ḳumm, Yazd and Kirmān and the rich valleys of Arāḳ and Hamadān.

The two principal mountain systems add further regional diversity. The Alburz Mountains dominate the topography of northern Iran even in their eastern extensions where many subsidiary ranges give rise to local micro-climates and permit specialised agricultural activities. No less important, the Zagros chain imposes its own regional influences throughout its length from Kurdistān to Balūčistān, with altitudes sufficient in the west and for a considerable distance south-east to give rise to reliable orographic rainfall capable of supporting forest cover and, in places, a rich agriculture.

Outside the plateau and its surrounding rim lie limited but economically significant lowlands including the Caspian Plain, the Turkoman Ṣaḥrā, the inland sumps of the Harī Rūd and Rūd-i Hīrmand and the great plain of Khūzistān.

In view of the very considerable regional diversity of the country, detailed review of the main geographic areas is necessary.

3.i. The Plateau:

(a) The Central deserts: The central deserts of Iran fall naturally into two groupings separated by the mountain range running from the south-east of the highland belt of Khurāsān from Dastgerdān to Ardestān, the northern section known as Dasht-i Kavīr and the southern as Dasht-i Lūṭ. Both areas are themselves slit into a series of sub-basins. separated by hill ridges, many rising to over 1,500 metres. Dasht-i Kavīr is often presented as a series of ten basins (British Admiralty, 1944), the largest known as Kavīr-i Buzurg, in which the main characteristics are clayey, salty soils and extremely brackish groundwater in parts giving rise to ooze flows (Fischer, 1968), namakzar and temporary salt lakes (Mostofi, 1970). Most settlements are located on higher ground about 1,000 metres in altitude and represent for the most part staging posts on the ancient caravan routes linking northern Khurāsān and even the Caspian area via Simnān and Djandaḳ (MacGregor, 1871) with Yazd and Iṣfahān. Agricultural life is primarily based on oasis cultivation in which the date palm, other fruits and grains and fodders play a major role. The supply of dyes for the carpet industry, formerly of some importance, is now in decline. Mining for lead and other non-ferrous metals retains an albeit smallscale industrial base in the Anārak-Nā'īn area.

Dasht-i Lūṭ forms an elongated basin set between the Kirmān and the Ḳāyin-Bīrdjand highlands and contains many complex geographical features, some only recently studied (Mostofi, 1970). The so-called high northern Lūṭ lies between the Dastgerdān-Yazd axis and the Dehūk-Nayband-Rāvar col and is sometimes taken to include the highlands around Anārak. The southern Lūṭ or Lūṭ-i Zangi Aḥmad is defined in the south by the line of the Bam-Zāhidān road and traditionally and economically excludes Narmāshīr, the Kirmān Desert and Rīgān, though physically this zone, extending up to the Kūh-i Taftān, is included within the Lūṭ proper. Among the characteristic features of Dasht-i Lūṭ is the extensive namakzar-i Shahdād occupying a long trough extending on a serpentine 170-kilometre alignment from north-west to south-east, though formerly of greater extent (Gabriel, 1938). In the shallow centre of the Lūṭ adjacent to the namakzar complex fluvial and later aeolian erosion has produced areas of spectacularly dissected country having much the appearance of ruined towns called Shahr-i Lūṭ. In addition to a series of hill, valley and plain areas, of which six separate units have been recognised (Mostofi, 1970), the other dominating feature of the Lūṭ is the dune mass of the east running from Dih Salm on a NNE-SSW axis almost to Kahūrak on the Bam-Zāhidān road and in parts exceeding 80 kilometres in width.

Production from the region of Dasht-i Lūṭ is small and poor communications discourage active export of most goods. Agricultural output from the oases tends to be subsistence orientated, though oranges from Shahdād and dates from Shahdād and Dih Salm do find their way to markets in Kirmān and Bīrdjand. Mining has more than local importance with lead at Nayband, Kūh-i Garmāb and Seh Čangī and copper at Ḳalʿa Zarī and Ḳollehā (Bariand et al., 1965).

(b) The plains of the Zagros Slopes: A series of fertile plains and basins surround the central deserts lying along the north-eastern edge of the Zagros Mountains. The most extensive areas are those surrounding Iṣfahān, Yazd and Kirmān, though many other smaller centres exist with prosperous agricultural bases. Throughout the zone the principal means of water supply is the *ḳanāt* [*q.v.*], with river water retaining local importance especially in the Iṣfahān region. Drainage within the basins is largely internal and a number of salt-lake basins altitudinally and physically accordant with the Dasht-i Kavīr (Fischer, 1968) stretch from Sīrdjān via Gāvkhūnī to Iṣfahān. Outside the namakzar soils are generally deep and fertile, supporting a varied agriculture mainly irrigated but with a significant area of dryland grains and a rich associated livestock economy. Traditional craft industries are still important employers of labour in this region, with the hand-made carpets of Iṣfahān, Nā'īn, Kāshān and Kirmān accounting for a major portion of Iran's non-oil exports.

One of the factors permitting the early growth of sophisticated urban centres in this area of Iran has been the existence of readily accessible and varied mineral deposits, particularly the lead-zinc occurrences associated with the Jurassic and Cretaceous limestones around Iṣfahān, Kāshān and Yazd and orientated with the line of the Zagros overthrusting (Bariand, 1965). It is an interesting fact that many of the modern mine enterprises in the area represent new workings on ancient sites. Copper mining also has ancient origins in this area, the deposits to the south of Kirmān at Kūh-i Baḥr Āsmān and Tal-i Maʿdan near Rafsendjān both having been exploited at an early date. More recently, the Sar Čashma copper deposit has been proved and developed. Although iron deposits were not valued so highly or subject to such early exploitation as copper, iron workings dating from Archemenian times have been recorded in this area. Among the largest known ironfields in Iran is the magnetite iron bearing area around Bafḳ occurring along the contact lines of the grano-dioritic intrusions with the Upper Cretaceous sediments.

(c) North-West Iran: North-west Iran including East and West Ādhārbāydjān, Kurdistān and Hamadān with its geological continuation through the regions of Malāyer, Golpāyegān, Shahreżā and Balūčistān is considered at the present time to be an integral part of central Iran. The area was intensely folded and faulted during the Alpine orogeny and intrusive processes, localised metamorphism and widespread volcanism are characteristic throughout the zone. Despite the underlying geological similarities, the north-west remains geographically distinct from the areas further east. Topographically, the area has been likened to a series of irregular tablelands (Fisher, 1968), where altitudes attain between 4,811 metres in the main peak of the Sapālān Dāgh, 3,700 metres in Kūh-i Sahand and 3,306 metres in the Kūh-i Boz Ghūsh. Drainage of the north-west area is intricate in pattern. The Rūd-i Aras drains the north-flowing tributaries running from the Ḳareh Dāgh and the Büyük Ağri Daği as well as the Khūy and Ardabīl basins. Much of the south-west of the area is drained by the tributaries of the Rūd-i Zandjānčāy, which eventually joins the Ḳizil Uzon and the Safīd Rūd system. Other radial drainage lines include those streams west of Mahābād which link in the Āb-i Zāb, cross the ʿIrāḳī frontier, and link with the Zāb al-Asfal. Introspective drainage in Western Ādhārbāydjān centres on the Daryāčeh-i Reżāʾiyeh fed by the Zarīneh Rūd and Sīmīneh Rūd from the south and the Adjī Čāy from the east.

Ādhārbāydjān is among the better watered areas of Iran and average annual rainfall at Tabrīz is 285.6 millimetres, though the surrounding highlands receive heavier rainfall, much of it in the form of winter snows. Dryland grain cultivation is possible over large areas and deciduous fruits are universally important together with the vine and almond. Irrigated culture is found throughout the region, with the most productive areas located in the major river valleys around the towns of Ardabīl, Khūy, Mahābād, Miyāneh, Reżāʾiyeh, Tabrīz and Zandjān, where soils are rich and deep and where some shelter is available from harsh winds, frosts and prolonged snow cover.

Ādhārbāydjān is extremely mineral rich in two main areas including the Ahar-Gūlān-Marand area, where large and medium scale deposits of lead-zinc, copper, gold, arsenic and molybdenite exist and the southern Ādhārbāydjān region lying in the Angūrnā-Takāb-Marāgheh area, where large and medium-scale deposits of lead-zinc, copper, arsenic, gold, bismuth and other minerals have been located. Small-scale iron fields are worked at Afshārābād and Goldjūk, while lead-zinc and copper deposits are found between Zandjān and Fīrūzābād.

The southern rim of the central Iranian plateau land running south-east from southern Ādhārbāydjān through Kurdistān and Hamadān to Shahreżā is geologically similar to Ādhārbāydjān, as noted above, though here a larger element of Mesozoic and Tertiary metamorphism is apparent, especially in the Hamadān-Dārān belt. The rim takes the form of a broken mountain system beginning in the west with the Kūh-i Čehel Časmeh (3,163 metres) and continuing in the Kūh-i Alvand (3,548 metres) and in Ashfarān Kūh (4,176 metres). South-west of Nadjafābād the ridge is less distinct. The areas as far east as Nadjafābād are agriculturally well-endowed with deep soils in the valleys and reliable rainfall (Hamadān 385.2 millimetres annual average). Both *ḳanāt* and river water irrigation supplies are utilised for sedentary agriculture, especially favoured centres for which are Malāyer, Arāk, Golpāyigān, ʿAlī Gūdarz and Nadjafābād. Livestock is generally important, with a strong transhumant tradition affecting mainly the Kurdistān area. Sizeable mineral deposits occur in the area of Mesozoic and Tertiary metamorphism and lead-zinc is found at Lākān, Ḥusaynābād and Darreh Noḳreh south-east of Arāk and at Andjīreh, Vīdjīn, Khāneh Sormeh and Shāhkūh in the area west and south of Iṣfahān.

(d) Balūčistān: The mountains of Balūčistān, formerly regarded as continuations of the main Zagros system, are now recognised as a south-east limb of the central Iranian zone. To the north, the area is clearly defined by the Kūh-i Bazmān which, reaching its greatest elevation at 3,489 metres, effectively separates the depression of Dasht-i Lūṭ from the Djaz Moriyān Hāmūn. The mountains of Kūh-i Bazmān are made up of extrusive material with a series of geologically youthful volcanic peaks dominating the range. A north-south syncline running from north of Īrānshahr to the region of Nuṣratābād divides the Kūh-i Bazmān from the Kūh-i Taftān, a geologically mixed region, with extrusive igneous and metamorphic rock in the area of Kūh-i Taftān volcanic peak, a complex zone of ophiolite-radiolarite rocks with ultrabasic masses located west of Taftān and a surrounding mass of Cambrian to Paleogene sedimentaries. Topography throughout the region is irregular and mainly above an altitude of 1,000 metres. In addition to the mountain ridges traversing the area, and noted above, two plateaux lie to the north and south of the Kūh-i Taftān centred on Zāhidān and Khāsh, respectively, though the former is not endowed with sufficient soil or water resources to offer a base for a strong sedentary agriculture. The Khāsh plateau presents a strong contrast, with settled cultivation developed over large areas dependent upon adequate if not abundant subterranean water resources and rich and deep soils, where grains, fodder crops, vegetables and orchard fruits give generally reliable returns (Plan Organisation 1960).

Although the Iranian Makrān shows geological similarities with western Balūchistān, intense overthrusting along a roughly west-east alignment has given the northern Makrān distinctive topography, extremely broken in places and difficult of access and agricultural utilisation. Separating the Djāz Moriyān Hāmūn from the Makrān is the Kūh-i Bashāgerd, the main west-east ridge of which rises to over 1,500 metres, where the ophiolite-radiolarite areas form a more resistant mass than the surrounding sedimentaries. Coastal Makrān, beginning from Rāʾs al-Shīr in the west and continuing into Pakistan in the east, forms yet another distinctive zone of relatively regular anticlines and succeeding synclines aligned more or less parallel with the coastline. The area is pre-eminently one of sedimentaries, geologically forming a depression zone of which the larger part lies below the Gulf of Oman, though the regular folding of the anticline structures gives coastal Makrān a character much different from other major depressions and internal basins in the country. Rapid and intensive erosion of the ridges near the coast by fast-running north-south streams has dissected the anticlines into small hill groups of low elevation except where the geologic outliers of the Cambrian-Paleogene series are exposed to stand out as resistant blocks occasionally attaining more than 1,000 metres in altitude. Despite the occurrence of monsoon rainfall in coastal districts and the existence of ancient *ḳanāt* systems, agricultural deve-

lopment has been inhibited by the unreliability of rainfall, the poor condition of the ḳanāts and, not least of all, by the low levels of technical knowledge of the predominantly Balūč population in both water utilisation and cultivation skills (Spooner, 1968).

Lying between the mountain rims of Balūčistān is the Djāz Moriyān depression, structurally an internal basin and now filled with recent alluvial deposits brought from the hills by numerous streams seasonally flowing to the centre of the basin where *kavīr* and swamp lands cover a considerable area. Away from the Hāmūn itself, the plains of Bampūr and Djīruft, and particularly the latter, offer scope for settled agriculture, though geographic isolation and preoccupation with livestock herding have been constraints on effective use of available land and water resources. Nonetheless, the Bampūr-Īrānshahr area produces grains, including rice, fodders and tree crops utilising *ḳanāt* water supplies and temporary 'bands' or earth dams across the major drainage channels to trap water and silt for cultivation purposes. Djīruft has been developed in the very recent period as a major crop and livestock area under government auspices.

Large deposits of chromite have been located in Balūčistān and the adjacent areas between Bāft and Djīruft, occurring in the area of ultrabasic rocks where magmatic segregation has taken place. The most important deposits are established at Shahriyār and Amīr, north-east of Mīnāb, though scattered sites as distant as Ābdasht and Khāsh are known.

(e) The East Persian Highlands: The East Persian highland system runs from the Kūh-i Surkh south of Mashhad and links up with the Kūh-i Taftān in northern Balūčistān. Kūh-i Surkh is separated from the hill area to the south by the Great Kavīr Fault, which arcs across from west to east fading out near ʿAlamdār. The Kūh-i Surkh attains an altitude of 3,020 metres north-west of Turbat-i Ḥaydarī, though much of its continuation east in the Kūh-i Bīzak and Kūh-i Khvāf rises to over 2,000 metres. South of these highlands a large depression forms a west to east trough, through the foothills of the highlands between Kāshmar and ʿAlamdār including the Turbat-i Ḥaydarī region which act as an intermediate zone, where areas of good soils and fair underground water resources permit cultivation of grains, vegetables and mixed tree crops. In years of above average rainfall, dayīn, or dryland, cultivation is important and some villagers augment their irrigated lands by damming small streams. South of the foothills, soils are poor and namakzar formations characterise the basin bottom from Kavīr-i Namak to the Afghān borders, where marshes are also found. Drainage from the Kūh-i Bīzak, the northern Ḳāyin-Bīrdjand highlands and the Dastgerdān flows to the namakzar formations.

West-east faulting in the north Ḳāyin-Bīrdjand highlands separates the Kūh-i Kalāt from Ḳāyināt proper by a high col. Gunābād village group and its related *yaylāḳ*, Kākhk, form a relatively prosperous agricultural area on the foothills and north-facing slopes of the Kūh-i Kalāt reliant on *ḳanāt* water supply. Crustal instability is marked both here and in the areas as far south as Bīrdjand and many settlements suffer periodic earthquakes of which the last occurred in 1968 affecting Kākhk and Ferdaus particularly.

The Ḳāyin-Bīrdjand Mountains achieve their greatest height in the Kūh-i Āhangerān at 2,877 metres, while the north-west to south-east ridge east of Bīrdjand also runs for some 100 kilometres at altitudes above 2,000 metres. Drainage of the highlands is to the namakzar in the north and to the small western basins and the Dasht-i Lūṭ in the west. Southwards the situation is more complex and the line of the hill ranges and the major streams is strongly affected by faulting trending north-west to south-east in the south-east sector and north to south in the south-west sector, with drainage fed to the Daryāča-i Hāmūn-i Hīrmand in the former and to the Dasht-i Lūṭ in the latter case. Agriculture in the Ḳāyināt and Bīrdjand is based on *ḳanāt*, pump and earth dam systems with subterranean aquifers replenished by the irregular, though at times heavy, rainfall and snows on the mountain ridges. Some hill villages are famous for saffron and vegetable dye cultivation on small artficial terraces, and there is a considerable export of these products from the region to other parts of the country. The southern col reaching from the main mountain area around Khūsf to Nuṣratābād is faulted to both west and east and carries little settlement or cultivation with the exception of the lower east-facing slopes around Neh which sustain minor pockets of cultivation where shelter from the 120-day wind (*bād-i ṣad-u-bīst rūz*) is possible. Further west, oasis date palm culture is found on the fringes of Dasht-i Lūṭ.

(f) The Sīstān Depression: Centring on Zābul is a large depression clearly marked in the east by north-south faults and running east to the foothills of the Hindu Kush ranges. The principal features of the lowland within Iranian territory are the two permanent lakes of the Hāmūn-i Hīrmand and Daryāča-i Hāmūn-i Ṣābarī, which seasonally link with the Hāmūn-i Pūsak in Afghānistān to form a single sweet water lake. The lake is fed by the Rūd-i Hīrmand, having its catchment in Afghānistān, while drainage is to the south via the Shalaḳ Rūd to Gūd-i Zarra on the Afghānistān-Pakistan frontier. Despite the ample supplies of water available for irrigation, settled agriculture is poorly developed, not least of all as a result of structural problems affecting ownership and tenancy of land in the area (Lambton, 1953 and 1969). Distance from urban markets and poor roads have also inhibited development, though severe constraints on summer cropping are imposed by the *bād-i ṣad-u-bīst rūz*, which tends to have a scorching effect on crops. Main products of the area are grains and some vegetables and cotton.

3.ii. The Bordering Mountain Ranges:

(a) The Alburz: Comprising one of the world's greatest mountain systems, the Kūh-i Alburz has an average height estimated at 3,100 metres, the highest point being the volcanic cone of Kūh-i Damāvand overlooking Tehran at an altitude of 5,654 metres. Although strongly related to Central Iran and affected by the faulting and thrusting of the Alpine orogeny, the Alburz Mountains were little involved in the phase of late Jurassic-early Cretaceous folding. Folding intensity decreases appreciably in the northern foothills of the range (Bariand, 1965). The range carries a heavy snow cover through the winter and the northern slopes attract heavy orographic rainfall throughout the year with the seasonal maximum varying with altitude. Abundant water maintains a dense and self-regenerating forest cover on the north slopes of the Alburz above the Caspian Plain, though extremely narrow valleys and absence of broad and well-watered plains in the intermontane basins has limited agricultural life in the mountain areas to small valley defiles and terraces. Drainage patterns in the Alburz are aligned to the Caspian coast or to the central

basins, with streams mainly falling in torrents down the deep slopes. A more intricate pattern exists in the case of the Safīd Rūd, where the north-south stream has captured the Ḳizil Uzon and the Shahrūd which occupy an elevated trough in the central basin of the Alburz. Land communications across the Alburz are difficult and hazardous even at the present time. Except for the Ḳazvīn-Mandjīl-Rasht route using the Safīd Rūd gap, all other routes are subject to temporary closure in winter as a result of snow-blockage, flooding and landslips. The Tehran-Āmul crossing using the Rūd-i Harāz valley is especially notorious in this respect.

Although the Alburz tend to be of lower altitude in the east, there is a large element of geological continuity between the main Alburz and the eastern ranges of Kūh-i Hazār Masdjid and Kūh-i Bīnālūd than specialists formerly believed, the basic folded sedimentaries of the Cambrian to Paleogene of the Alburz system giving an underlying unity (Bariand, 1965). As noted, however, intensity of folding declines in the northern foothills and has given rise to a more regular series of hill ranges and intervening troughs with topography rather different, therefore, from the main Alburz. The main lines of drainage run along the central valley lying between the northern ranges, including the Kūh-i Golūl, Kūh-i Allāh Akbar and Kūh-i Hazār Masdjid and the southern ridges of Kūh-i Alā Dāgh and Kūh-i Bīnālūd. From a watershed in the Ḳūčān-Kalāteh area, the region is drained westwards by the Rūd-i Atrāk and its tributaries towards the Turkoman Ṣaḥrā, while the Kashaf Rūd drains to the south-east joining the Harī Rūd north of Garmāb ʿAliyā. Livestock herding is important in the hill areas of northern Khurāsān, while the major areas of settled agriculture occur both in the lower Atrāk region and the broad plain around Mashhad and in the extended oases of Nīshābūr and Sabzavār. The vast but poorly watered and isolated Djuvayn plain supports a number of formerly prosperous but now depressed villages reliant on *ḳanāt* and spring water supply for agriculture and on livestock herding.

The Alburz is poorly endowed with minerals compared to other areas of the country, though exploration is far from complete. In addition to lead-zinc deposits at Donā, Kalār Dasht, Sarbisheh, Reżāābād and Tūyeh, barite is found at Sīrā, while small deposits of iron ore have been located at Simnān. Old-established coal workings are still actively exploited by addit mining in the high Rūd-i Harāz valley north of Polūr. East of Damghān, the Alburz proper offers no mineral wealth. The sedimentaries of the central Iranian group and the internal Neogene basins between Miyāndasht and Nīshābūr are better endowed, with copper deposits at Dāman Djālā, Buzurg and Čoghondar Sar and turquoise found in the Nīshābūr district.

(b) The Zagros: The Zagros Mountains bound the Iranian plateau on the south, running from the Irano-ʿIrāḳī border at Ḳaṣr-i Shīrīn to the Tangeh-i Hurmuz. A clear boundary marks the break between the Zagros and the plateau on the continuous north-west to south-east line of the main Zagros thrust zone which runs in a roughly 50-70 kilometre belt. The belt may be regarded as the deep central trough of the Zagros basin of former times and exhibits areas of thinbedded red cherts containing radiolaria (Harrison, 1968) in the west around Kirmānshāh and southern Kurdistān and in the east around Nīrīz. Considerable areas lie above 3,000 metres with Zard Kūh at some 4,540 metres and Kūh-i Kalar at some 4,300 metres.

The main Zagros is distinguished from the zone of overthrusting and its associated imbricate zone (Oberlander, 1965) by a discontinuous major line of overthrusting running from slightly south of Kirmānshāh in the north-west to Kūh-i Čashma north of Mīnāb in the south-east and including a 200-kilometre wide zone taking in the whole of south-west and south Iran as far east as Rāʾs al-Shīr with the sole exception of the Plain of Khūzistān. In the main Zagros, conformably laid Cambrian to late Tertiary sedimentary rocks have been folded during Plio-Pleistocene times into extended parallel folds now much eroded and dissected by deep gorges through which the major rivers flow to the Persian Gulf in a complex longitudinal/transverse pattern. The major rivers, all of them perennial, include the Karkha, Kārūn, Hendidjān, Ḥelleh, Mond and Mihrān systems, though several small streams make a direct but seasonal route to the Persian Gulf.

Although few minerals other than hydrocarbons have been found in the main Zagros, oil and gas fields abound, especially in the dome formations of the Asmari and Cretaceous limestones, which have been the basis for the development of the Iranian oil industry since the early twentieth century, first in the northern fields of Masdjid-i Sulaymān and Lālī and later in the more prolific structures such as Āghā Djārī, Ahwāz, Gač Sārān and Mārūn further to the south. Overlying the Asmari limestone in the oilfield zone are the lower Fārs beds which contain plastic evaporite deposits acting as a seal for the oil-bearing structures (Harrison, 1968).

Despite a relatively heavy and reliable rainfall in the area of the western Zagros (Khurramābād, 504.0 and Shīrāz 384.6 milimetres) sedentary agriculture is not well developed except around Shīrāz, most of the area falling under tribal group herding systems of land utilisation. Central government control in the area was tenuous until comparatively recent years since access was difficult and tribal control absolute outside the major towns. The main tribal groups occupying this vast area include Kurds, Lūrs, Bakhtiyārī, Kūhgīlu, Boyer Aḥmad and Ḳashḳāy, all of which are still concerned with transhumant herding, though growing government pressure on the tribes to settle through enforced security, the establishment of agricultural extension services and a road construction programme is having some effect towards increasing the area under sedentary cultivation. Protection of the extensive oak forests on the higher ridges and valleys of the Zagros is helping to conserve timber resources in tribal areas of the zone. The eastern Zagros is an area of poorer rainfall than the west but a prosperous sedentary agriculture is developing in the major river valleys and plains, particularly around Iṣṭahbānat, Fasā and Nīrīz, with grains, including millet, and sugar beet of importance. Livestock, often under a nomadic regime, remain the basis of the economy of the area, exploiting seasonal grasslands of the Garmsīr and Sardsīr.

The long coastline of the Persian Gulf permits of widespread smuggling activity of luxury goods from the trade entrepôts of the Gulf for the Iranian market. Fishing, on the other hand, is little developed and is of only local significance. Of the ports of the coast between Bandar Daylām and Bandar ʿAbbās, none has yet risen to national importance other than the oil terminals of Djazīra-i Kharg, Baḥregān and Djazīra-i Lavān. The agriculture of the coastal strip is extremely poor, limited to grazing and shifting cultivation with the exception of the oases around Bandar ʿAbbās and Mīnāb.

3.iii. The Iranian Lowlands:

(a) The Khūzistān Lowlands: The lowlands of Khūzistān have been described by Fisher (1968) as the largest single expanse of true lowland in Iranian territory and the area does present a sharp contrast to the rest of the country where mountains are rarely out of view. Structurally, the plain is regarded as part of the Arabian platform with a deep cover of Paleozoic-Mesozoic-Tertiary sedimentary rocks under more recent layers of alluvial material making up a continuation of the Mesopotamian region to the foothills of the Zagros (N.I.O.C., 1959). A high rate of deposition of alluvium still exists in the headwaters of the Persian Gulf dependent on the silt load brought down by the Tigris-Euphrates and Kārūn systems. De Morgan's (1905) classical theory on the infilling of the headwaters of the Persian Gulf and the gradual advance of the land surface there has been widely accepted though Lees and Falcon (1952) have offered an alternative hypothesis on the assumption that the lowlands represent a gradual downwarping of the land surface under the weight of accumulated sediments and that the coastline is therefore more or less in stable equilibrium.

Topographically, the plain is virtually unbroken with a slow rise in altitude from the coast to the abrupt slopes of the Zagros foothills. Not until Andīmeshk is reached, 130-kilometres north of Ahvāz, do altitudes rise above 150 metres. The area is drained by the Rūd-i Karkha in its north-west sector towards the Rūd-i Kārūn, which is not reached before the Karkha peters out in salt and mud flats. The north and north-east is served by the Rūd-i Kārūn and its tributaries, while the east is drained by the Rūd-i Djarrāḥi system. Although much of the water is fed to the Persian Gulf through the Shaṭṭ al-ʿArab, a number of narrow creeks known as *khūr* also distribute the river waters of both systems. The largest of these creeks, the Khūr Mūsā, serves as a sea-way to the ports of Bandar Shāhpūr and Māh Shahr, the former rising to importance as a major Gulf port and the latter acting as a terminal for oil product exports from the Ābādān refinery. Khurramshahr lies at the junction of the Rūd-i Kārūn and Shaṭṭ al-ʿArab (the latter officially referred to as the Arvand Rūd in Iran) and is the major commercial goods port for international trade. Ābādān lies downstream from Khurramshahr and is the former oil products port for the Ābādān refinery. The city retains its position as an oil processing centre but is no longer a port of any significance. Ahvāz, situated on the Rūd-i Kārūn 125 kilometres from Ābādān, is the provincial capital and an expanding centre of the oil industry from which most administration and servicing of the field areas is carried on. Until the early 1950s, the agricultural state of the Khūzistān lowland was extremely poor, contrasting sharply with the former prosperity of Archaemenid and Sasanian times. Much of the plain was cultivated by tribal groups under shifting agriculture with only minor pockets of sedentary agriculture in the palm groves around Ābādān and Khurramshahr and the gardens fed by the waters of the Kārūn around Ahvāz. Control of the Āb-i Dīz following construction of the Muḥammad Reżā Shāh dam above Dezfūl has permitted rapid growth of newly reclaimed agricultural areas on the plain of which Haft Tappeh sugar cane plantation is an important early example.

In addition to the activities associated directly with oil production and export, a number of modern industries utilising natural gas have grown up in Ābādān and Bandar Shāhpūr, while new industries processing heavy and bulky imported raw materials, particularly steel, have developed near Ahvāz. The region is favoured by the existence of excellent rail links which run through the Dīz-Sehzar gap in the Zagros to Tehran and northern Iran.

(b) The Caspian Lowlands and Turkoman Ṣaḥrā: The Caspian Lowlands and the Turkoman Ṣaḥrā reach from the Irano-Soviet frontier at Āstārā in a belt of radically varying width (from two to three kilometres to 50 kilometres) to the east of Gunbad-i Ḳābūs. The lowlands are seen as the southern edge of the Asiatic foreland (Harrison, 1968) or as areas of young depressions (Bariand, 1965). Much of the Caspian lowland represents the area left by the recession of the Caspian Sea and the characteristic soil cover is nonsaline alluvial soils and, in the Bandar Pahlavī-Lāhīdjān region, peat and grey soils (Dewan, 1961). In the Gurgān-Gunbad-i Ḳābūs area of the Caspian piedmont, soils are extremely fertile and include deep horizons of podzolic soils. Such fertility combines with heavy rainfall over much of the plains, with the Bandar Pahlavī-Lāhīdjān area receiving an annual average of no less than 1,800 millimetres, though precipitation amounts decline very steeply southwards and more gradually to the east, Bābulsar receiving 819.7 millimetres and Gurgān 649.8 millimetres.

Drainage is highly variable in type. Many short streams run down to the Caspian Sea between Āstārā and Riẓvāndeh and between Rūdsar and Nūr. The plain is also traversed by the braided distributaries of the Safīd Rūd, some water of which is diverted artificially by tunnel to the Fūmenāt district. Flooding of the Safīd Rūd delta was a usual occurrence until the construction of the Safīd Rūd (Shāhbānū Farāh) dam and its associated re-regulation works and present-day river levels are only fractionally below those of the plain itself, thereby permitting direct off-take of irrigation water for the inundation of rice-paddies which form the major item of land use in this zone. Further east, the rivers tend to be more incised, making irrigation more difficult, though rice remains the dominating crop of the lowlands proper as far east as Galūgāh.

Although rice has become increasingly important in the modern period, often on land reclaimed from the sea, swamps and lower slopes of the Alburz, and tea plantations have taken over the undulating land above the Caspian plain, other crops have considerable national importance, including tobacco, citrus fruits (particularly in the Shahsavār-Čālūs region), and sunflower seeds. Mulberry trees are present in large numbers and a small-scale silk industry survives as a fractional legacy of the former traditional economic basis of the area. The Gurgān and Gunbad-i Ḳābūs plains produce large quantities of cotton and grains on lands only recently reclaimed to arable use. Forestry activity on the higher slopes of the Alburz, where the Hyrcanian forest survives over a considerable acreage, is economically important, though the timber resource has been abused in the past by random cutting for construction and charcoal burning purposes. A flourishing fishing industry exists in the small Caspian ports and coastal villages and along the rivers of the region. The state-controlled caviar interest has had international significance for many years and is of continuing importance despite rigorous supervision of sturgeon fishing made necessary by fears of over-rapid depletion of the species. Local and Tehran markets are supplied with fresh-water fish caught in the rivers, particularly the Safīd Rūd. Although the Caspian

ports suffered eclipse following the end of World War II as a result of restrictions on trade with the U.S.S.R., the many problems posed by the silting up of the harbours and the recession of the coastline, the expansion of the Irano-Soviet trade since 1965 has led to the reinvigoration of trade and communications sectors in the area. Bandar Pahlavī handles both Irano-Soviet exchanges and an increasing volume of international transit trade.

4. Summary: Geology, soils and climate combine to give Iran an extremely varied face. Within the broad regions of the Plateau, the Mountain Chains and the Lowlands, very considerable contrasts in land, water and mineral resource endowment are to be found between localities even in close geographical proximity. Differing responses to these underlying variations in natural conditions and isolation of areas from the mainstream of the nation's life caused by strong physical barriers to movement between the regions have accentuated Iran's regional diversity.

(K. S. McLachlan)

ii.—Demography and Ethnography

The distribution of population in Iran, and the ways in which its peoples make their livings, are to a considerable extent a function of its geography (see above). A horseshoe-shaped arc of varying width containing habitable mountains and other arable and pastoral lands, encloses the nucleus of a desert. Because this arc points northwestward, where it merges into the highlands of ʿIrāḳ and Turkey, the bulk of the Iranian population is concentrated near its borders. Since Achaemenian times this habitation pattern has posed an administrative problem to the successive Iranian governments.

Geography has thus also contributed to a diversity of peoples, a problem which the Achaemenians solved by creating the first empire, one in which minorities were allowed local autonomy in dress, religion, speech, and other aspects of culture within a single political framework. This diversity has continued until modern times. To the southwest, Iran touches Arab country, with many Arabs living on contiguous ʿIrāḳī soil, as well as on Baḥrayn Island (which Iran once claimed). To the northwest the crest of the Zagros splits the Kurdish people, and the northwestern corner of Iran, bordering on Turkey and Soviet Ād̲h̲arbāyd̲j̲ān, contains populations speaking Āzarī Turkish, while other Turks are found on Iranian territory east of the Caspian Sea as well as in the southern Zagros. To the east, Iran's borders with Afg̲h̲ānistān and Pakistan are overlapped by Persian-speaking Čahār Lang Mongols, Balūčis, and a few Brāhuīs.

The population of Iran, most recently (1967-9) estimated at 26,284,000 persons, may be divided as follows (see Table I):
4,783,000 inhabitants of cities of over 50,000, or about 18% of the total; 1,110,000, or about 4%, living in smaller cities; and 18,660,000, or about 71%, living in more than 40,000 villages; plus about 1,742,000 "others", including tribal nomads and Gypsies.

As Table II indicates, one sixth of the population of Iran is still tribally organized, whether nomadic or sedentary. In the tribes designated by (f) on Table II the count was made by families, households, or tents, rather than by individuals. Because most tribal "families" are extended households, the number of such units has been multiplied by ten in each case. Although most of these counts were made over twenty years ago, if the number of houses has increased and the number of persons per household has decreased, the tribal populations may not have changed much, especially as some of the tribal people have been lost to the cities.

TABLE I

Population by types of settlement

Cities		
Tehran	2,317,116	
Tabrīz	387,803	
Iṣfahān	339,909	
Mas̲h̲had	312,186	
Ābādān	302,189	
S̲h̲īrāz	229,761	
Hamadān	114,610	4,003,574
Kirmāns̲h̲āh		
Ahvāz	said to be over 100,000 in 1964.	
Ras̲h̲t		ca. 330,000
Arāk		
Ardabīl		
Dizfūl	said to be between 50,000 and 100,000 in 1964.	
Ḳazvīn		
Yazd		
Ḳumm		ca. 450,000
	Total urban = ca.	4,783,357 = 18.2% of population

Towns

Towns of 5,000—50,000, ca.	1,109,000 =	4.2% of population
Villages*, numbering over 40,000	ca. 18,661,640 =	71.0% of population
"*Others*"**	ca. 1,740,860 =	6.6% of population
Total	ca. 26,284,000 =	100%

* Includes tribal and non-tribal, sedentary and seasonally nomadic.
** Probably includes full nomadic.

TABLE II
Tribal Peoples

Zagros			
Kurds (Kurdistan)	600,000		K

Total	4,537,500 or 16.5% of whole		

K = Kurdish P = Persian T = Turkish
B = Balūčī A = Arabic D = Dravidian
f = count by families.

Except for about 15,000 Zoroastrians remaining in and about Yazd and Kirmān, the ethnic Persians, including the tribal ones, are <u>Sh</u>īʿī, and so are most of the Arabs living in Iran. Over two million more of the <u>Sh</u>āh's subjects are Sunnīs, particularly the migratory Kurdish tribes of the northwest, the Turkomans, and the Balūčīs. Ismāʿīlīs and Bahāʾīs still persist in Iran, and the Lur tribesmen were, and may secretly still be, ʿAlī Ilāhīs.

In 1960 there were still some 60,000 Jews in Iran, engaged mostly in the professions and trade, whereas many of the Kurdish Jews of Sananda<u>dj</u> and Saḳḳiz had already migrated to Israel. Almost equally scattered were over 50,000 Armenians, although some had left Iran for Soviet Armenia. Armenian villages may still be seen in the northwest, and the entire suburb, or half-city of <u>Dj</u>ulfā-Iṣfahān is Armenian.

Armenians and Georgians, both used to cold weather, occupy throughout the year villages in the summer pastures of the Ka<u>sh</u><u>gh</u>āī. Like the Jews, the Armenians specialize in the professions, in trade, and also in truck-driving. A colony of Nestorian Christians who call themselves Assyrians and speak Syriac are concentrated in and about Reżāʾiyye. They number over 20,000. Many others have migrated to the United States. Both the Armenians and the Assyrians have undergone strong American and British missionary influence.

Except for the addition of a certain amount of modern industry, the cities of Iran are essentially commercial. In them handicrafts flourish and imported as well as local products are sold in modern shops and in covered bazaars. During the last thirty or forty years Tehran has replaced Tabrīz as the largest city, and has drawn to itself persons from all over the nation, including gardeners from Zabol, Turkoman truckdrivers, an intellectual élite educated mostly abroad, the absentee owners of thousands of villages, and a host of public servants. In summer those who can afford it move to the mountain slopes north of the city or to resorts on the Caspian shore.

The usual Iranian village is an assemblage of mudbrick or pisé dwellings roofed with poplar poles covered with earth. The poles are cut from the closely packed rows of quick-growing poplars that line nearly every canal and stream. In regions lacking such watercourses a row of circular mounds, like hollow molehills, stretches from the hills across the sloping plain to the village. These mounds mark the course of a deep, manmade, underground stream called a *ḳanāt* [*q.v.* & see MĀʾ]. Sheltered from evaporation, it is the product of highly skilled labour. *Ḳanāt*-diggers are specialists from the Gurgān region who go wherever their services are needed.

Apart from the aforementioned poplars and fruit trees, the typical landscape is almost bare of vegetation taller than short grass, for the goats and sheep keep it down and every day women and children go out to collect low bushes and twigs for fuel. There is usually one carpenter in the village, but most of the men are engaged in agriculture, while the boys tend the flocks.

In the absence of the landlord, whom many of the villagers may never have seen, the community is run by his agent, the *katk<u>h</u>udā*, who allocates the land, provides most of the tools, and collects the rent. This usually consists of four-fifths of the grain produced by each man, unless he is the lucky owner of an ox used in ploughing, in which case he may receive the share of five men and may not need to work.

In tribal territory the village may belong to the tribe as a whole, and in non-tribal territory there were, even twenty years ago, a few "free" villages owned by the villagers themselves, and ruled by their own headmen who paid taxes directly to the government. Under the current land reforms instituted by the present <u>Sh</u>āh, the number of such villages has increased.

The principal respites from the dreary, impoverished routine of most villagers' lives come from weddings and other rites of passage, from the celebration of the *ʿā<u>sh</u>ūrā* [*q.v.*], and particularly from *Nawrūz*. Beginning at the vernal equinox, this holiday lasts twelve days. In the balmy spring weather, families move out to the fields to picnic and to disport themselves. Each family collects seven plants and foods whose Persian names begin with S, as does the word for green, the colour of spring. They are apples, malt, sweet biscuits, chives, garlic, vinegar, and hyacinth. These offerings are placed in a prominent place in each house, and thrown out on the thirteenth day.

The Persians are fond of athletic competitions such as wrestling and weight-lifting, and in the cities specially clothed men in need of exercise practise with Indian clubs and dumb-bells, in special gymnasia, to the beat of drums and recitations from the *<u>Sh</u>āh-nāma*. Such a gymnasium is called a *zūr<u>kh</u>āna* [*q.v.*].

The northern Kurds live in villages ruled by their own chiefs during the winter, but in spring it was their habit, until forbidden by the government, to migrate each spring to high pastures across the ʿIrāḳī border, and return before snowfall. They are Sunnis and prefer the type of marriage common among Arabs, in which a young man marries his paternal uncle's daughter. They have three cities, Mahābād, Sanandadj, and Saḳḳiz, of which the third, until recently, included a considerable Kurdish-speaking Jewish population. Around Kirmānshāh the local Kurds have become detribalized tenant farmers and Shīʿī.

In the mountains south of the Kurds live the Lurs, who speak an aberrant form of archaic Persian. Although nominally Shīʿī, they were formerly openly ʿAlī Ilāhīs. Like the Zoroastrians, they revere bread and fire. Being split up into numerous tribes and sections, they migrate to their summer pastures as separate bands without overall command. In 1936 Reżā Shāh's army conquered them, with much bloodshed and starvation, forcing many of the survivors to settle in villages under landlords.

Next to the south are the Bakhtiyārīs, who speak a dialect similar to that of the Lurs. They are a powerful confederation under the command of a paramount chief called the Īlkhānī. In their annual migrations they move simultaneously over five routes from their winter to their summer pastures, crossing the Shustar River partly by fording and partly on inflated skins. Their winter pasture lies on the lowlands and foothills of the lower course of the Kārūn river in Khūzistān, their summer pasture in the long alpine valley of the Upper Kārūn. In both places they have permanent villages, the summer ones occupied by Armenians and Georgians. In between, the Bakhtiyārī chiefs own many of the villages through which they pass. Their migrations require much organization, accurate planning, and exact timing, and armed horsemen police the migrants and their flocks on the way. Kinship ties are strong and succession to the chieftainship is by primogeniture.

Very little is known about the Kuh Galus, who live south and east of the Bakhtiyārīs, except that they are organized into some six tribes, some sections of which speak Turkish, the others Persian. They are under the control of four families which, unlike the ruling élite of the Bakhtiyārīs, include (or did so until recently) few if any men with modern education. The same generalizations may be made of the Mamassanis, about whom even less information is to be found in the pertinent literature.

Beyond the Mamassanis are the Kashghāys, members of a powerful confederation divided into twelve tribes. Their Turkish-speaking ancestors moved out of the Central Asiatic grasslands about 700 years ago, crossing Iran to their present home in the southern Zagros. About half are still nomadic. Every year the latter make the longest biennial migration in Iran, some 350 miles in each direction. They winter between the Fahlian River on the north and the encircling Mand River on the northeast, east, and south; westward it reaches the coast. It is split into two sections by a tongue of Mamassani territory on the Upper Shāhpūr River. Their summer pastures lie in two adjoining regions. One is in the Nīrīz basin, the hills flanking the headwaters of the Upper Pulvar River and the great bend of the Upper Kūr River. The other is on the western side of the Zagros watershed on the plateau between Abādeh and Shāhreżā. These summer pastures are verdant but treeless, ideal country for breeding horses, in which the Kashghāy specialize, importing stallions from Arabia.

Although they follow several routes on the lower and upper parts of their migration, all must converge at a place called Guyum some twenty miles north of Shīrāz, and a vulnerable spot. In Shīrāz is their tribal headquarters, a palace occupied by four brothers who rule the tribe, and who can reach Guyum in less than hour by jeep. On the march the Kashghāy ride both horses and camels along the valley bottoms, while along the ridges to either side mounted men drive their seven million or so sheep, mostly fat-tailed.

Although nominally Shīʿī, the Kashghāy rulers govern by the Turkish *ʿādat*, or customary law, instead of by the *sharīʿa*. The four brothers hold their power in common because, in order to survive, the confederation needs tight organization, run like clockwork. The brothers must constantly make the rounds of the followers, listen to complaints, administer *ad hoc* justice, officiate at ceremonies, and make their presences known and felt. Like that of the Bakhtiyārī, their ruling family includes men educated in Europe and America. As might be expected, from time to time their autonomy has been challenged by the central government.

The easternmost of the Zagros nomads are the Khamsehs, so-called because they consist of five units, brought together over 100 years ago under the leadership of the Ḳavām family of merchants in Shīrāz. One unit, the Bāṣirī tribe, is Persian-speaking. A second, consisting of the Jebbara and Shaybānī and other Arab tribes, all speak Arabic, while the third is made up of the Turkish-speaking Aynalu, Baharlu, and Nafar. The first two are now settled while the third has joined the Bāṣirī. In winter the Khamseh nomads live on the coastal plain east of the Kashghāy. They move to and from their summer pastures, also located east of the Kashghāy's, via the Persepolis plain and over different routes. On both migrations, but not in winter or summer quarters, the Bāṣirī are accompanied by Gypsies who provide them with services in return for protection.

Returning to northwestern Iran, in the country bordering Soviet Ādharbāydjān, we are next concerned with the Turkish-speaking Shāhsavans, or King's Guards. North of Menab and near Khūy, they occupy about 100 villages with about 100,000 inhabitants, and an equal number of seasonal nomads are organized into four main tribes, living farther east. These tribesmen are seasonally nomadic, living during the summer in felt-covered yurt-like portable dwellings, with their roofs reaching a peak rather than being domed. They are first-rate horsemen, and long served the Shāhs as guardians of the Russian border.

The two northernmost tribes spend their summers on the Savālān Dāgh between Ahar and Ardabīl, and winter on the Mughān Steppe, a lowland area shared by the Ādharbāydjān SSR and Iranian Ādharbāydjān. The other two summer in the hills north of Sāwa and Hamadān and move in winter to the inner side of the central plateau, on the northern edge of the Dasht-i Kavīr, which is snow-free at that season.

In the western Alburz mountains live a few other tribes, both Turkish and Kurdish speaking, who dwell in black tents in high pastures during the summer, and winter lower down, but not far enough down to avoid deep snow; in winter some of their sheep freeze and wolves devour them.

In the eastern Alburz, east of a line between

Gurgān and Dāmghān, the crest of the range divides, forming the walls of a valley whose waters flow into both the Atrak River and the canals of Mashhad. Both Kurds and Turks have lived in this valley ever since Shāh ʿAbbās moved them there from the Zagros in about 1031/1622. While the Turks have since become sedentary, the Kurds are still partly pastoral, and live in black tents.

A different type of pastoral nomadism is practised by the Yamut Turkomans who live in domed, felt-covered yurts north of Gurgān from the southeastern corner of the Caspian Sea to Gunbad-i Ḳābūs. Beyond the Russian border, more than 600,000 more Turkomans are found in the Turkmen SSR and in Afghanistan. The Turkomans are typical Central Asiatic nomads, who raise horses, cattle, sheep, and hardy one-humped camels. They drive four-wheeled wagons, as well as riding horseback, and many now drive cooperatively-owned trucks.Their women weave the famous rugs known to the trade as Bokharas.

On the outskirts of Gurgān city is a refugee camp of about 500 Kirghiz who fled from the Soviet Union in 1935 and 1936. They are mostly employed by the Highway Department in moving earth in their high, two-wheeled carts.

Moving to the Persian Gulf, we find Arabs scattered all the way from the ʿIrāḳī border to Pakistan, except for a stretch of shore held by the Kashghāy and the Persian port of Bushire, out of which Persian dhows sail as far afield as Aden and the African coast. Most of the Arab population of Iran is tribally organized, whether sedentary or nomadic, and Shīʿī, although one tribe, the Banū Tamīm, is Sunnī. The two largest tribes are the Āl Kathīr and the Banū Lam.

Most of the semi-settled tribes keep cattle, sheep, and camels, cultivate rice and other cereals, and either own or work in date groves. This mixed economy sets complicated time-tables for some of them. For example, the Muḥaysin leave their palm groves on the east bank of the Shaṭṭ al-ʿArab in November to sow their grain fields along the banks of the Kārūn River, return in February to pollinate their date-palms, and are off again in May to reap their grain, going back once more to harvest their dates in July and August. Like their brethren west of the Shaṭṭ al-ʿArab, they are in every sense unacculturated ethnic Arabs, although none are full-time camel nomads like the bedouin.

Farther east along the coast are maritime settlements of Arab seamen who ply their dhows and *būms* to both sides of the Indian Ocean. Lingeh is their principal port. Nomadic, tentdwelling Arabs also live in small groups scattered along the eastern edge of the Dasht-i-Lūṭ and beyond Mashhad into Soviet territory.

Except for the coast, the southeastern corner of Iran is principally occupied by Balūčis, whose territory also extends northward between the edge of the desert and the Afghān border to Lake Hāmūn, fed by the Helmand River. Others live in Afghānistān and Pakistan; in the latter country they are most numerous. Their economic adaptation is to desert country where grass grows in winter. In summer they camp near permanent water; along *ḳanāt*s serving dependent Persian villages and along the banks of the Helmand and Harī Rūd. Divided into more than a dozen tribes, the Balūčis are Sunnīs, but they also revere the graves of *pīr*s, or holy men.

Like the Kurds, they speak an Iranian language of their own. They breed horses, asses, mules, camels, and sheep. Considering themselves a warrior caste, the Balūčis used to keep the caravan roads open for a fee, to draw rent from villages that they own, and to raid each other for slaves.

Scattered among the Balūčis are Dravidian-speaking Brāhūīs, whose home is in Kalat in Pakistan. They live in small groups of families all the way up the eastern side of Iran to Mashhad and Sarakhs. Many of the Brāhūī men serve in the police and the national gendarmerie.

Near Lake Hāmūn in Sīstān live four tribes of nomadic Persians, the Sarbandīs, Shārekis, Khimars, and Herātīs, totalling about four thousand families. About them we have no detailed information. In the swamps and along the aquatic labyrinth of the mouths of the Helmand is a small population of fishermen and fowlers called Ṣayyād ("hunters"). They catch both fish and ducks in nets, and appear to be the residue of an earlier hunting people.

Viewing the demography and ethnography of Iran
Languages of Iran and Afghanistan
From *Caravan, the Story of Middle East*, by Carleton S. Coon, London 1952.

as a whole, it would be hard to find another Islamic country of its size as decentralized as Iran is geographically and containing as many different peoples and languages. Yet since Achaemenian times it has remained, with a few interruptions, a nation, the world's oldest empire, and with the help of modern transportation and communication, it seems so destined to remain.

iii.—Languages- [see suppl.]

iv.—Pre-Islamic Mythology

The chief sources for Iranian mythology are the *Avesta* and the deeds of kings and heroes collected by the historians and poets of the early centuries of Islam. Their information doubtless came from the "ancient annals" of Iran, the *K͟hudāy-nāmak*. The longest of these works is the famous *S͟hāh-nāma* of Firdawsī (330/941-411/1020 [*q.v.*]). The evidence of ancient Greek historians, rock inscriptions and some Mazdaean books and literary works, rich in pre-Islamic materials but often compiled in Islamic times, are also very valuable. Besides the *Avesta* attributed to Zoroaster, there may be mentioned the *Denkart* (a vast commentary on the *Avesta*, completed in the 3rd/9th century), and the great *Bundahis͟hn* (Book of the Creation). Numerous Mazdaean works written in Pahlavi, the bearers of the ancient tradition, have in large measure only been known for less than two centuries, and the Islamic Iranian world was dependent on traditions recorded in Persian and Arabic by early Muslim writers for its knowledge of a history that was partly only mythology. Ancient Iran continued for a long time to elaborate its mythology from pre-Mazdaean and Mazdaean sources. In the course of centuries chivalrous exploits and an exalted human dignity were grafted on to them. This elaboration in its popular form, written down in Persian, came to an end in the 5th/11th century when the pre-Islamic sources and the oral traditions gave birth to several "books of kings" and historical summaries culminating in the *S͟hāh-nāma* of Firdawsī.

Iranian mythology, rich as it is, has some common features and some undeniable affinities with that of India, but the power and preponderant role of some Indian gods are relegated to a secondary level in Iran.

The analogies and differences between the myths of Iran and those of the Indo-European world are particularly worthy of interest and reveal some relationship between their systems of thought. The tripartite idea of society (priests, warriors and cattle-breeders/agriculturalists) which G. Dumézil remarkably demonstrated in the mythology of India and the Indo-European peoples is at present held in great favour. These three hierarchical functions which are confirmed in the *Avesta* (Y. xi, 6, xiii, 3; Yt xiii, 88-9, xix, 8, xxiv, 16; Vt iv, 28, 57-8, xiii, 44-6, etc.) and to which the *Yasna* xix, 17, adds a fourth, that of the artisans, continued with some slight modifications (priests, *dabīrān* officials, warriors and artisans-peasants) to make up the social order of Iran until the end of the Sasanid period. There is every reason to believe that the tetramerous division of society, whether it was due to the *Yasna* or to the social reorganization of the Sasanid period, follows this triad of hierarchical functions.

Certain memories preserved in the *Gathas* (the oldest part of the *Avesta*) and several *Yas͟hts* of the *Avesta* betoken a pre-Mazdaean mythology. The two primordial spirits, Spənta mainyu (Holy Spirit) and Ahra mainyu (Spirit of Evil) correspond to the two antithetic aspects of *Vayu*, at the same time the good and the bad wind which is the breathing-spirit and the motive force of the Universe. The Indian counterpart of Vayu is Vāyu who stands at the head of a series of functional divinities. In the same manner, but by a reversal of the Indian position, the Iranians contrasted the nature of the ahura (Indian asura) with that of the daēva (Indian déva). These latter, whom the Indians considered as good, take on a malignant character in Iran, while the malignant asura make way for the benignant Iranian ahura. The Indian god Indra, who is assigned the function of a warrior, sees his role reversed in Iran where he becomes a demon in the *Vidêvdât* (the part of the *Avesta* dealing with canonical law and exorcism) x, 9 and xix, 43.

The series of the great Mazdaean divinities is made up of Ahura Mazda, the supreme god, and six entities called Aməsha Spənta (Holy Immortals) who surround him: 1) Vahu Manah (Good Spirit), an entity protecting the conscience of just men and to whom the ox is connected. Her auxiliaries are Māh (the Moon), Geus͟h Urvan (the spirit of the primordial ox) and Rām, a helping divinity which guides the soul after death. 2) As͟ha (Order-Justice), an entity guaranteeing cosmic and moral order. She is seconded by Atar (the divinity of Fire), VrIragna (a god who embodies the victorious attack) and Sraos͟ha (a god of Vigilance and Obedience). 3) K͟hs͟haθra (Kingdom), the entity presiding over metals and thus over arms and the army. She fills the role of warrior or rather of defender of the poor, and she is helped by the Sun, the Sky and Mithras whom a remarkable rise made a rival of Ahura Mazda and who became the object of a cult in the west, the cult of Mithraism. 4) Armaiti (Moderation), the goddess of fecundity and mercy, to whom the earth is linked. The secondary divinities accompanying her are Ardvisura Anahita (the waters) and in second place Daēna (or Dēn in Pahlavi), Religion. 5) Haurvatāt (Integrity) whose associated divinities are Tis͟htriya (Sirius), Vāta (the Wind), and the Fravas͟hī (protective spirits). 6) Amərətāt (Immortality), the guardian of plants, around whom are gathered Ras͟hnu, the infernal Judge, and the two divinities who lead dead souls over the bridge of Činvat: As͟htāt and Zām. Finally, considered as seventh, there is again Sraos͟ha who is added to this but who does not strictly belong to the category of the holy Immortals. In addition, a

multitude of Yazata and Fravashi, who are considered as divinities with less well defined roles, fill out the Iranian pantheon, and hence the idea arises that the origin of angels might be linked to them and to the holy Immortals. A malignant spirit belonging to the train of Ahra Mainyu is opposed to each divinity in the cortege of Ahura Mazda.

If the tripartite division of G. Dumézil is borne in mind, the entities Vahu Manah and Asha correspond to the Indian gods Mitra and Varuṇa and they fulfil, along with Ahura Mazda, the first function—the priesthood and sovereign order. The function of warrior is incumbent upon the Iranian Khshaθra as it is upon the Indian Indra. Finally, the function of production and wealth is shared between Armaiti (goddess of fertility, the Earth) and the Haurvatāt and Amərətāt who are related to the Indian divinities, the goddess Sarasvati, the twins Nāsatyas, and others.

The Mazdaean holy Immortals are at the same time abstract representations giving Ahura Mazda his fullness and beings who, although superior to creatures, remain inferior to Ahura Mazda. They are shown both as personal Agents and personified Powers. The antagonism which sets the Spirit of Good and the Spirit of Evil in opposition, the basis for Iranian dualism, is the metaphysic and the morality of this mythology. According to the great *Bundahishn* (ch. 1), the Upper World, spiritual and luminous, has been the domain of Hormazd (Ahura Mazda) since the beginning of creation, while the nether region is the shadowy world of Ahriman (Ahra Mainyu). An intermediate space divides these two worlds, a mixed world in which good and evil do battle. In this continuous conflict the force of Ahriman faces the army of Hormazd and finally the Spirit of Good triumphs over the Spirit of Evil. Each being must take part in this struggle and it is thanks to his meritorious actions, his good thoughts and words, that Man participates in the final victory.

Ahura Mazda has gradually taken the place of Spənta Mainyu, his own emanation, so as to confront the Spirits of Evil himself. He has granted Ahra Mainyu a respite of 12,000 years and knows his plans in advance.

Alongside this divine mythology, there is a human mythology related to it. In large measure it is presented in the form of historical epics situated (with some exceptions such as the longevity of certain heroes) on the human plane. They tell of a succession of events which are linked together by their own chronology. The first man, Gayomart, directly succeeding the creation of the primordial ox, his source of food, gives birth to an androgynous plant which divides into two, Mashya and Mashyānī, the ancestors of human beings. According to the *Avesta* the first sovereign is not Gayomart, as the *Shāh-nāma* of Firdawsī states, but Yima (or Djamshīd in Persian). A latent force, described as a victorious light (Khᵛarnah), a witness of celestial favour, protects Iran and numerous sovereigns and ancient heroes. The Khᵛarnah abandons Yima who has committed a sin (falsehood or pride) and thus Azhi Dahāka, a foreign tyrant, defeats Yima and steals his kingship. Θraitauna (= Farīdūn), an Iranian hero who has become king thanks to the protection of Khᵛarnah, triumphs over Azhi Dahāka (Y. ix, 8; Yt xiv, 40, xix, 92; Vt i, 17) and puts him in chains on mount Damāvand. He is at the beginning of the universal genealogy of races and human peoples since he shared out the world among his three sons: to Īradj went Iran and India; to Salm the countries to the west of Iran, *i.e.*, the lands of the Semites and the blacks; and to Tūr the countries to the east of Iran, the lands of the Turks (Central Asia) and the Chinese (the Far East). This division of the world is not without echoes of Noah's giving the country of the Turks to Japheth, the tropical countries to Ham, and the lands of the Semites to Shem.

Several kings of this Pēshdādī dynasty, the descendants of Īradj, reign in succession in Iran and then make way for the second mythical dynasty, that of the Kayānī (Kayānids). *Yasht* xix (*Zamyad Yasht*) and *Yasht* xiii (*Farvardīn Yasht*) of the *Avesta* mention a list of Pēshdādī and Kayānī heroes and kings on the occasion of praises addressed to their Khᵛarnah and their Fravahr (or Fravashī), *i.e.*, their protective spirits. Among them may be mentioned the Kayānids Kavi Usan (Persian Kay Kāvūs), Kavī Haosravah (Kay Khosraw), and Kavī Vīshtāspa (Kay Goshtāsp). It was under Vīshtāspa that Zoroaster preached his doctrine. The Pēshdādī and Kayānī kings are personal-types of Iranian mythology. Moreover, it is to be noted that, if the figures of the first dynasty are common with those of India, the Kayānids who make up the second dynasty are specifically Iranian heroes.

These historicised myths recount the main facts which occurred in an era without archives. This human mythology mingles with the other divine one and, by a cyclical conception of time, the Pahlavi Mazdaean books explain the reappearance of certain ancient heroes and kings, Pēshdādids and Kayānids, who are to play their definitive role at the end of time. The three sons of Zoroaster are to succeed each other every three thousand years from the beginning of the fourth millennium. The last of these sons, Saoshyant, will, together with Kay Khosraw, put an end to the corruption and iniquity of the world. The champion Saoshyant will finally give way to Zoroaster, and the king Kay Khosraw to Goshtāsp. Thus there will be established eternal life and the return to cosmic origins.

An apocalyptic literature, enriched by elements of myth and folklore, flourished in the Mazdaean books and expressed the hopes of believers.

On the margin of Mazdaean orthodoxy was to be found the belief in a god of time, Zurvān, who engendered two sons, Ohrmazd and Ahriman, whose struggle began even in the womb. Ahriman, conceived of doubt, struggled to come into the world before Ohrmazd, but Zurvān made his plans miscarry. The cult of Mithras (propagated about the beginning of the Christian era) and Manichaeism (preached after the 3rd century A.D.) preserved the dualist nature of Iranian religious thought, and it was not until its encounter with Islam that the mythical antagonism of Mazdaism was directed towards an absolute monotheism by the accentuation of its moral and transcendental values.

v.—History:
(a) To the Turkoman Invasions

The history of Persia is marked by a number of breaks in political continuity. The most significant is, perhaps, the Islamic conquest, which brought Persia's existence as an independent state to a temporary end. She did not become an independent political unit again until Ṣafavid times. During the intervening period she formed part of the Umayyad and then the ʿAbbāsid caliphate, and when that fragmented, after the period of the minor dynasties, she became the centre of successively the Great Saldjūḳ, Īlkhān, and Tīmūrid empires, the frontiers of which extended beyond the geographical frontiers of Persia. In this article attention will be concentrated on events in Persia, but reference will inevitably be made frequently to a wider area, and in particular to ʿIrāḳ and Transoxania.

The Arab conquest swept away the political framework of the Sasanian empire. The ruling family, the territorial princes and feudal magnates disappeared, and the power of the Zoroastrian clergy, which had been closely associated with the Sasanian empire, was broken. Nevertheless, the new civilization which grew up in the eastern provinces of the caliphate owed much to Sasanian Persia and the Persians played an important part in its development. There was, indeed, a two-fold movement of change, which took some time to work out. On the one hand Islamic theory reacted upon and influenced the development of Persian political, social, and economic institutions, while on the other hand Islamic theory was itself in part moulded and modified by the institutions and attitudes of mind which prevailed in Persia.

When the prophet Muḥammad was born the Sasanian empire under Anūshīrawān (A.D. 531-79) had every appearance of strength, but it no longer preserved its original form. Consequent upon the suppression of the revolt of Mazdak it had become a military despotism. The social discontent manifested by that revolt had been suppressed but not allayed. The prolonged wars with Rome and inroads by nomads from Central Asia had greatly weakened it. The rule of the later Sasanian monarchs was marked by anarchy and the persecution of Christian, Jewish, and Sabean minorities. The disappearance of the Lakhmids, a dynasty of Southern Arabian origin who were Persian vassals, moreover, left the western border of the Persian empire unprotected.

The first attack on the Sasanian empire by the Muslim Arabs began as a raid. Al-Muthannā b. Ḥāritha al-Shaybānī, after the *ridda* wars on the Eastern Arabian coasts, led an expedition into the delta of the Tigris amd Euphrates. He encountered little opposition and won much booty. Abū Bakr then sent Khālid b. al-Walīd with reinforcements to join him. By 13/634-5, when Khālid was recalled to Syria, several towns, including Ḥira, had capitulated or been captured. No permanent administration was established by the Arabs. Tribute was fixed upon the town and freedom of worship accorded. In return the people agreed not to commit hostile acts or aid the Persians. Similar terms were made with some other towns, but in the case of those taken by war, some of the inhabitants were killed, others sold into slavery, and tribute was exacted from the remainder.

The Persians, mounting a counter-offensive, defeated the Arabs at the battle of the Bridge and retook Ḥira. In 14/635 al-Muthannā temporarily reoccupied it. Yazdigird III, the last of the Sasanian kings, had meanwhile succeeded to the throne. With the defeat of Heraclius at the battle of the Yarmūk (15/636) and the collapse of Byzantine resistance in Syria, a large body of troops was made available for operations against the Sasanians. ʿUmar sent these east under Saʿd b. Abī Waḳḳāṣ. The Persians were defeated at the battle of Ḳādisiyya and the Arabs occupied Ḥira for the third time. They then took Madāʾin, one of the Sasanian capitals, and shortly afterwards again defeated Yazdigird's army at Djalūlā (16/637).

The conquest of Persia which followed was undertaken mainly from the garrison cities of Baṣra and Kūfa. The area to the north of Nihāvand, taken by the Kūfans, was known as Māh Kūfa, while the territory further south round Dīnavar was taken by their Baṣran rivals and known as Māh Baṣra. The occupation of Khūzistān (17/638—21/642) was organized by the governor of Baṣra, Abū Mūsā al-Ashʿarī, who also took part in the conquest of Mesopotamia (18/639—20/641). Expeditions also set out towards Ādharbāydjān from Mawṣil. Ardabīl capitulated about 20/641. The final defeat of the Persian army took place at Nihāvand in 21/642. Hamadān made peace and further conquests were made in the direction of Ādharbāydjān (variously recorded under the years 18/639—22/643). Expeditions were also sent against Ḳazwīn, Abhar, and Zandjān, and efforts made to take Daylam and Gīlān. Hamadān appears to have broken the terms of the peace, for it is recorded as being stormed in 24/645. Rayy and Ḳūmis fell also about 24/644-5.

Although the battles of Ḳādisiyya, Djalūlā and Nihāvand were decisive in the overthrow of the Sasanian empire, the conquest, which took place piecemeal, was not completed for many years and the conversion of its people took much longer. The conquest was carried out mainly from the garrison cities by Muslim Arabs, who were by this time far removed from their nomadic background. There was some settlement of Arabs chiefly in the towns; and also of some nomadic groups mainly in southern Persia and Khurāsān. Much of the former system of administration continued in operation. The tax records were kept in Pahlavī by local scribes until the time of Ḥadjdjādj [*q.v.*], and many of the *dahāḳīn* continued to carry out on behalf of the Arabs the

functions they had fulfilled under the Sasanians (see also M. Sprengling, *From Persian to Arabic*, in *A.J.S.L.*, lvi-lvii (1939-40)). From the account of Ṭabarī it appears that prior to Anūs͟hirawān the land tax was assessed on a cropsharing basis. This led to abuses, and Anūs͟hirawān replaced crop-sharing by measurement as the basis for assessment. He also reformed the poll-tax, grading it according to the taxpayer's income. The seven great families (including the royal family), the leading officials, soldiers, priests, and officials in the service of the king were exempt. The payment of poll-tax was, therefore, regarded as degrading.

After the defeat of the Persian army at D̲j̲alūlā, ʿUmar was faced with the problem of the administration of the conquests in the Sawād. He could not conclude treaties as K̲h̲ālid had done, because large areas had been abandoned by the ruling classes and had remained without a government. He therefore decided to immobilize the land and to levy land and poll taxes on the inhabitants, the revenue therefrom to be *fay*ʾ for the profit of the Muslim warriors and those who came after them. In the name of the Muslim state, he assumed full ownership of the estates and villages which had formerly belonged to the Sasanian royal family and the nobility who had been killed or fled, leaving the peasants on the land, and of deserted and "dead" lands. This assumption of ownership carried with it the right to cultivate the lands for the state, give them away, sell them, or grant them as assignments, and to impose on the holders *k̲h̲arād̲j̲* or *ʿus̲h̲r*. In the case of estates and villages still in the possession of their former owners, ʿUmar considered that the legal title belonged to the Muslim state, on the grounds that their holders had resisted conquest, but he allowed them to remain in possession on condition that they paid to the Muslim state the taxes which had formerly been paid to Anūs͟hirawān, and acted as the agents of the Muslim state in their collection. This category of land was probably the largest. Alterations were later made in the rates of taxation paid and the crops on which taxes were levied. This arrangement differed from the case of Ḥira and other towns which had treaties providing for the payment of a fixed sum. In such cases the population raised this sum by whatever means they wished, and after its payment were released from further interference by the Arab government.

In addition to land tax, the non-Muslims paid a graded poll-tax, except that in towns which had treaties they paid such tax only as their own officials assessed it. In 20/641 a *dīwān* on the Persian model was set up, and in it were recorded receipts, expenditure, and stipends. It was not, however, until the reign of Muʿāwiya that the foundations of the future bureaucratic system were really laid, when Ziyād, the governor of Baṣra (45/665—50/670) and of ʿIrāḳ (50/670—53/673), established *dīwān*s and appointed Arabs and *mawālī* as secretaries. Several *dahāḳīn* became Muslims after the battle of D̲j̲alūlā and various groups in south Persia joined with the Arabs, but there is no evidence of widespread conversion after the early conquests. It also seems that some of those who were exempt from the payment of poll-tax in Sasanian times became Muslims rather than pay poll-tax to the Muslims, since to pay such was considered degrading.

The circumstances of conquest varied in different provinces and from this stemmed differences in the tax administration. Towns which did not capitulate before conquest, but asked for an armistice after resistance had seemed hopeless, were required to pay a poll-tax in money and a contribution in kind, which could be increased or decreased as the population changed. The land, having been taken by force, was placed at the disposal of the *imām*, but in contradistinction to land which had capitulated before conquest (*ʿahd* land) the terms of the agreement (*ṣulḥ*) could be changed. *Ṣulḥ* and *ʿahd* lands had their own local administration, whereas *k̲h̲arād̲j̲* lands were closely regulated by the Arab *dīwān*s. (For a discussion of these problems see D. C. Dennett, *Conversion and the poll tax in early Islam*, Harvard University Press and Oxford University Press, 1950).

Although Yazdigird's supporters were still active in northern Fārs, organized resistance ceased with the defeats suffered by the royal army. Some local communities and *marzbān*s with their troops continued to resist. Others concluded treaties with the Arabs on their own account. Many of the Persian captives became *mawālī* and some of Yazdigird's army joined the Arabs. About 23/643 ʿUt̲h̲mān b. Abi 'l-ʿĀṣ T̲h̲aḳafī made advances into southern Fārs from Baḥrayn, supported by Abū Mūsā from Baṣra. Tawwād̲j̲ fell and raids were made on other towns in Fārs. Further advances were made during the caliphate of ʿUt̲h̲mān and between 25/644 and 27/647-8 ʿAbd Allāh b. ʿĀmir, who had been appointed governor of Baṣra, took Arrad̲j̲ān, S̲h̲āhpūr, S̲h̲īrāz, Sīnīz, Dārābd̲j̲ird, and Fasā. Iṣṭak̲h̲r fell in 28/648-9 and Gūr (Fīrūzābād) shortly afterwards. In the following year ʿAbd Allāh set out for K̲h̲urāsān. Yazdigird, pursued by a Muslim force, had meanwhile fled via Kirmān to Marv. Sīrd̲j̲ān, Bam, and D̲j̲īruft were conquered, and Hurmuz fell in 30/650-1. Skirmishes with the inhabitants of the mountain districts of Kirmān continued for many years.

From Kirmān the Arabs under Rabīʿ b. Ziyād al-Ḥārit̲h̲ī pushed north-eastwards into Sīstān. His successor was expelled from the country, but another expedition was sent by ʿAbd Allāh b. ʿĀmir under ʿAbd al-Raḥmān b. Samura, who penetrated to Zamīn Dāwar, Bust, and Zābul. ʿAbd Allāh had meanwhile reached Ṭabasayn and sent Aḥnāf b. Ḳays to take Ḳūhistān, whence he pressed on to Marv, which surrendered. Yazdigird fled to Balk̲h̲ and over the Oxus to Tirmid̲h̲. In 31/651-2 he was murdered in flight near Murg̲h̲āb. The Muslims under Aḥnāf took D̲j̲ūzd̲j̲ān and Balk̲h̲ and advanced to K̲h̲ʷārazm. ʿAbd Allāh had meanwhile set out for Nīs̲h̲āpūr, which surrendered. Bayhaḳ, Nisā, and Sarak̲h̲s also fell. Another group went to Harāt (32/653). ʿAbd Allāh then returned, leaving Ḳays b. al-Hayt̲h̲am as governor of K̲h̲urāsān.

ʿUt̲h̲mān died in 35/656. The conquests in Persia were not yet secure, and during the civil war the Arab advance was stayed. In K̲h̲urāsān fighting broke out between Muḍar and Rabīʿa. The disorders spread throughout the province and enabled the Transoxanian leaders to regain their independence which had been on the point of being extinguished. Balk̲h̲ for a brief period fell under Chinese control. Numerous outbreaks of resistance also occurred in other parts of Persia. In 42/662 Muʿāwiya reappointed ʿAbd Allāh b. ʿĀmir governor of Baṣra and the east. He sent ʿAbd al-Raḥmān b. Samura to restore Arab rule in Sīstān and K̲h̲urāsān. Balk̲h̲ was reconquered in 43/663, Sīstān reoccupied and Kābul taken. The reconquest of K̲h̲urāsān, begun by Ḳays b. al-Hayt̲h̲am, was continued under Ziyād b. Abī Sufyān, who established a strong Arab garrison in Marv and shortly afterwards settled 50,000 Arab colonists in K̲h̲urāsān. Buk̲h̲ārā was captured in 54/674 and Samarḳand fell in 56/676.

In Khurāsān the local leaders had mainly capitulated by treaties (*ʿahd*) which stipulated that a fixed sum should be paid annually to the Arabs. Local administration remained in the hands of the local leaders. The inhabitants, for the most part, continued to pay land, trade, and poll taxes as they had under the Sasanians; local officials kept the registers and collected the taxes, paying the stipulated amount to the Arabs and keeping the remainder. Conversion in Khurāsān, partly because of the large number of Arabs who had migrated there, was probably higher than elsewhere. Large numbers of *mawālī* are mentioned as accompanying the Arabs on their campaigns against the Turks of Central Asia. The local tax-collectors do not appear to have released all converts from poll-tax, or, if they did, they increased the converts' other taxes to compensate for the loss to the revenue of their poll-taxes. This led to discontent and rebellion. (See further Dennett, *op. cit.*).

ʿIrāḳ meanwhile had been reduced to a state of turmoil by the activities of the Khāridjites and the Shīʿa. In 66/685 Mukhtār, launching a revolt in the name of Ibn al-Ḥanafiyya, seized Kūfa. There were *mawālī*, many of whom were Persians, among his followers but his main support came from the dissatisfied Arabs of Kūfa. They were not defeated until 67/687. (See M. A. Shaban, *The ʿAbbāsid Revolution*, Cambridge 1970, 145-6.) In 65/684-5 the Azāriḳa branch of the Khāridjites withdrew from ʿIrāḳ to Khūzistān, and created many disorders in the territory between Baṣra and Ahwāz. After Muhallab b. Abī Ṣufra defeated them in 66/686 they retreated to Fārs. Regrouping themselves, they returned to ʿIrāḳ and sacked Madāʾin, but on the advance of an army from Kūfa they withdrew. They next attacked Iṣfahān, but were defeated and fled in disorder to Fārs and Kirmān (68/687-8). Once more they reassembled, reoccupied Ahwāz and advanced on Baṣra. ʿAbd al-Malik had meanwhile recovered control of ʿIrāḳ and appointed Ḥadjdjādj governor of the province in 75/694. Al-Muhallab, whom Ḥadjdjādj sent against the Azāriḳa, forced them to retreat to Kāzirūn and then to evacuate Fārs. Retiring to Djīruft, they maintained themselves there for some years, but finally split among themselves. One group took refuge in Ṭabaristān, where they were defeated in 78-9/698-9, while a second remained in Kirmān, to be extirpated by al-Muhallab. The last remnants of the Azāriḳa were finally rooted out near Ḳūmis.

Civil war broke out in Khurāsān among the Arabs after the death of the caliph Yazīd in 64/683. In 78/697, after a renewed outbreak of disorder, ʿAbd al-Malik added Khurāsān and Sīstān to Ḥadjdjādj's government. ʿAbd al-Raḥmān b. al-Ashʿath [see IBN AL-ASHʿATH], who was sent by Ḥadjdjādj from Kirmān to Sīstān, recovered part of the province. After Ḥadjdjādj had reproached him for not pushing his advance with greater vigour, he returned to ʿIrāḳ, and attacked Ḥadjdjādj in Baṣra, but was defeated in 82/701. Khurāsān was then entrusted to al-Muhallab, but it was not until Ḥadjdjādj sent Ḳutayba b. Muslim to Khurāsān as governor in 85/705 or 86/705 that the Muslim advance was resumed. Lower Tukhāristān was recovered in 86/705, Bukhārā between 87/706 and 90/709, and Arab authority consolidated in the Oxus valley and extended to Sughd between 91/701 and 93/712. Finally from 94/713 to 96/715 expeditions were sent into the Jaxartes province. (See further H. A. R. Gibb, *The Arab conquests in Central Asia*, and W. Bartold, *Turkestan down to the Mongol invasion*[3], London 1968). In 98/716, Yazīd b. Muhallab, who had succeeded Ḳutayba as governor of Khurāsān, took Gurgān and invaded Ṭabaristān.

It appears that the status of *ʿahd* land in Khurāsān had meanwhile been altered to *kharādj* land, though exactly when this happened is not entirely clear. Converts were thus freed from the poll-tax, but this reform was not extended to Transoxania, where the tax system was probably not identical with that of Khūrāsān. In 110/728-9 Abū Ṣaydāʾ b. Ṣāliḥ b. Ṭarīf was sent to Transoxania by al-Ashras, the governor of Khurāsān, to summon the people to Islam. He appears to have promised exemptions from land and trade taxes to converts. When al-Ashras disregarded these promises and ordered these taxes to be taken from everybody regardless of their religion and position, revolt broke out. (The details of these events are not entirely clear. See further Shaban, *op. cit.* 111-2)., The next ten years or so were occupied by military operations of a somewhat confused nature (see Bartold, *op. cit.*, 189 ff.). Arab dominion was not fully restored until the governorship of Naṣr b. Sayyār (121/738—131/748). He decreed that Muslims and non-Muslims must pay *kharādj* but only unbelievers poll-tax. To enforce this without damage to the revenue, he reclassified *kharādj* and assessed the stipulated tribute according to the treaty of capitulation. (See further Dennett, *op. cit.*). Although Naṣr b. Sayyār brought a measure of prosperity to the province and corrected some of the abuses in the tax administration, he failed to restore order fully or to remove the grievances of the Arab settlers, while the resentments of the *mawālī* were also not entirely removed. It was among these two groups in Khurāsān that ʿAbbāsid propaganda achieved its success.

Umayyad rule, for different reasons, antagonized various groups of people. The hegemony of the Syrians was resented by the ʿIrāḳīs and others, pious Muslims were alienated by the profanity and worldliness of the Umayyads, the Shīʿat ʿAlī, whose alleged wrongs culminated at Karbalā, were disaffected, as also were the Khāridjites and many of the *mawālī* because of their position of inferiority. Persians, however, were to be found mainly only amongst the last named group. Muḥammad b. ʿAlī, a grandson of al-ʿAbbās, the prophet's uncle, who had become the leader of the Hāshimiyya on the death of Abū Hāshim in 98/716, sent missionaries from Kūfa to the Persian provinces. The first to have any considerable success was Khidāsh (first mentioned under the year 109/727-8). He obtained a following in Marv among Arabs, *mawālī*, Khurramiyya, and Rāwandiyya, uniting these disparate groups by the wish to overthrow the Umayyads. He was executed in 118/736 and disavowed for his extremist views by Muḥammad b. ʿAlī. The latter died in 125/743 and was succeeded by his son Ibrāhīm, who sent Abū Muslim, a *mawlā* from Kūfa, to Khurāsān. His main appeal was to the Arab settlers in Khurāsān and his movement was primarily directed against Umayyad and Syrian rule. But he also won support from the Persian *mawālī* and some Zoroastrian and Buddhist *dahāḳīn*. In the new society promised by the revolution all members were to be regarded only as Muslims with the same rights and responsibilities regardless of their racial origins and tribal connections (Shaban, *op. cit.*, 153 ff.). Revolt broke out in 130/747. The Arabs, preoccupied with their intertribal feuds, made little effort to check it. Marv was seized and the whole of Khurāsān fell. Advancing via Rayy and Nihāvand, ʿAbbāsid forces crossed the

Euphrates nd defeated the Umayyads near Kūfa (132/749). Abu 'l-ʿAbbās al-Saffāḥ was proclaimed caliph shortly afterwards. Another ʿAbbāsid army had meanwhile defeated an Umayyad force near Shahrazūr in 131/749, and the fate of the Umayyads was sealed by a second engagement, the battle of the Greater Zab, in 132/750. ʿAbbāsid troops advanced to Syria, occupied Damascus and pursued Marwān to Egypt, where he was killed (see further Shaban, *op. cit.*).

The ʿAbbāsid victory was followed by the transfer of the centre of the caliphate from Syria to ʿIrāḳ. With this the importance of Persia and the Persians in the development of Islamic civilization greatly increased. Syrian *mawālī* in the entourage of the caliph were replaced by *mawālī* from Persia and ʿIrāḳ. Whereas the Umayyads had been first and foremost representatives of the Arabs, the ʿAbbāsids succeeded to a much greater extent in creating an amalgam of the diverse ethnic and social elements included in their empire. The concept of the universal empire of the Sasanians had already made its influence felt under the Umayyads. Under the ʿAbbāsids, Sasanian traditions of government and administration were increasingly in evidence. (Cf. H. A. R. Gibb, *Evolution of government in early Islam*, in *SI*, iv, 5-17). As warriors, merchants, and *ʿulamāʾ* travelled along the great trunk roads which fanned out through Persia, there grew up, in due course, among its people a sense of sharing in a common heritage. This had two components, Islam and *īrāniyyat*, and was handed down on the one hand by the *ʿulamāʾ* and on the other by the *udabāʾ*. This reassertion of Persian consciousness first found expression in the Shuʿūbiyya movement [*q.v.*], which was in Persia primarily a literary movement, and in due course the Persian language and Persian literature played an important role in keeping it alive.

ʿAbbāsid propaganda only temporarily united the heterogenous elements which were opposed to the Umayyads. Once victory had been achieved, the responsibilities of government prevented the ʿAbbāsid leaders from satisfying the aspirations of all their followers (cf. Bartold, *op. cit.*, 194). Rebels arose on every side. In Khurāsān Abū Muslim had to contend with movements of unrest among both Arabs and Persians. In Nīshāpūr Bihʾāfrīd led a movement against the Zoroastrian priesthood and Abū Muslim aided the Magians in suppressing him. In Bukhārā, Sharīk b. Shaykh al-Mahrī headed a revolt of Arabs in favour of the ʿAlids (133/750-1); Abū Muslim sent Ziyād b. Ṣāliḥ to suppress this revolt. Ziyād also frustrated an attempt by the Chinese to reassert their authority in Transoxania in 133/751. Meanwhile, Abū Muslim's success in Khurāsān aroused the apprehension of the ʿAbbāsids. In 135/752-3 Al-Saffāḥ secretly ordered Sibāʿ b. Nuʿmān and Ziyad b. Ṣāliḥ, whom Abū Muslim had appointed governors in Transoxania, to revolt against him. They were defeated. Eventually, Abū Muslim was induced by Manṣūr to come to Baghdād, where he was treacherously murdered in 137/755. This, together with the suppression of the Rāwandiyya, alienated the extremist followers of the ʿAbbāsids.

Between 137/755 and 163/780 there were five uprisings in Persia against ʿAbbāsid rule connected with the name of Abū Muslim. The first was led by Sinbād in Nīshāpūr (137/755), the express purpose of which was to avenge the death of Abū Muslim. It spread from Nishāpūr to Rayy and was eventually stamped out near Hamdān. The second, an outbreak under Barāz in 142/759 in Khurāsān, was more easily quelled. A third rising, which started almost simultaneously in Transoxania, was led by Isḥāḳ the Turk (so-called because Abū Muslim had sent him on a mission to the Turks); it had a semi-secret organization devoted to the cult of Abū Muslim and proclaimed the imminent return of Zoroaster. Its followers wore white garments and were therefore known as the *safīd-djāmagan* (or *al-mubayyaḍa*). A fourth rising was led by Ustād Sīs in Harāt in 150/767. He obtained a large following in Sīstān and Khurāsān but was defeated. The fifth, that of al-Muḳannaʿ in 159/776, was the most serious. He declared that he had succeeded Abū Muslim under whom he had previously served, and that Abū Muslim had succeeded Jesus as the incarnate deity. The movement, which was inspired by extremist Shīʿī ideology and also had 'social' aspects, won many followers in eastern Khurāsān and Transoxania. It was not put down until 163/780. This was not all. There was also a series of Kharidjite disturbances in Khurāsān, Sīstān and Transoxania, notably that led by Yūsuf al-Barm in Bukhārā about 160/777. On the other hand, in Ṭabaristān the Arabs made considerable advances and from about 141/758 appointed governors over the province.

Meanwhile it was not only in Khurāsān that there was turmoil. In ʿIrāḳ there was intellectual ferment and social unrest. This was expressed in a movement generally known by the term *zandaḳa* [*q.v.*]. Its general purpose appears to have been partly at least to curtail the range of Islam and to keep alive Persian cultural traditions. The *zindīḳs* were thought to have retained, in spite of conversion, their former Manichean convictions and to wish to encompass the downfall of Islam (*Cambridge History of Islam*, Cambridge 1971, i, 114). The movement also spread among the lower classes as a revolutionary movement. By the time of the accession of Hārūn al-Rashīd (170/786), the Persian provinces were in a state of unrest, and ʿAbbāsid authority was challenged in Khurāsān and the Caspian provinces. Harūn made his secretary and tutor, Yaḥyā b. Khālid (whose father had served al-Saffāḥ and al-Manṣūr) his vizier. For some seventeen years until their fall in 187/803 Yaḥyā and his two sons played a prominent role in the affairs of the caliphate, and continued the work started under al-Manṣūr of creating a balance between the two main elements in the empire, the Arab and the Persian.

In the east, the rapacity of the governor of Khurāsān, ʿAlī b. ʿĪsā b. Māhān, had meanwhile caused considerable discontent, and in 180/796-7 Hārūn set out himself to investigate affairs. ʿAlī b. ʿĪsā came to meet him at Rayy and secured his position by gifts. Hārūn returned to Baghdād, leaving the causes of discontent unremedied. Rāfiʿ b. Layth, the grandson of Naṣr b. Sayyār, put himself at the head of the malcontents, made an agreement with the Turkish tribes and killed the son of ʿAlī b. ʿĪsā (191/807). Hārūn then sent Harthama b. Aʿyān to seize ʿAlī b. ʿĪsā and confiscate his possessions, and dispatched a free pardon to Rāfiʿ in the vain hope that he would submit. Rāfiʿ, who had won support in Khwārazm, Bukhārā, Farghāna, and Ushrūsana, and among the Ghuzz, remained to all intents and purposes master of Transoxania. In 192/808 a revolt also broke out in Ādharbāydjān, to be followed later by widespread and prolonged disorders by the Khurramdīnīs under Bābak [*q.v.*].

Finally, Hārūn, having sent Maʾmūn in advance to Marv, set out against Rāfiʿ, but died *en route* at Ṭūs in 193/809. Civil war broke out almost at once

between al-Amīn, Hārūn's son by an Arab wife, who had been declared *walī ʿahd* in 175/792, and al-Maʾmūn, the son of a Persian slave-girl, who had been made the next heir to al-Amīn in 183/799, and whose sovereignty over the eastern part of the empire had been recognized by al-Amīn in 186/802 [see AL-AMĪN]. Hārūn's vizier, Faḍl b. Rabīʿ, led the troops back to Baghdād and read the *khuṭba* in the name of al-Amīn first and then of al-Maʾmūn. In the following year al-Amīn introduced the name of his son Mūsā after that of al-Maʾmūn. The latter, apparently on the advice of his vizier, Faḍl b. Sahl, a convert to Islam from Zoroastrianism, refused to be inveigled by his brother into going to Baghdād and remained in Marv. In 195/810 Faḍl b. Rabīʿ induced al-Amīn to drop al-Maʾmūn's name from the *khuṭba* and substitute for it that of Mūsā, and to send an army against al-Maʾmūn. The latter made peace with Rāfiʿ b. Layth, leaving him virtually master of Transoxania, struck coins in his own name, took the Shīʿī title, *imām al-hudā*, and sent his general Ṭāhir b. al-Ḥusayn against al-Amīn.

After defeating al-Amīn's forces near Hamadān, Ṭāhir marched on Baghdād and laid siege to the city. It fell in 198/813. Al-Amīn was murdered; Maʾmūn then appointed Ṭāhir over the whole of ʿIrāḳ. Later Ḥasan b. Sahl, the brother of Faḍl, was entrusted with the governorship of the Djibāl, Fārs, Khūzistān, and ʿIrāḳ, and Ṭāhir was given the Djazīra with the frontier regions, Syria and Egypt. Ḥasan b. Sahl had to contend with various revolts. One of the most serious was in 199-200/815 in Kūfa led by Abū Sarāyā, who raised the standard of revolt in the name of an ʿAlid, Ibn Ṭabāṭabā (whom he poisoned in due course). There were also increasingly frequent riots in the city of Baghdād. In 201/817 al-Maʾmūn, on the advice of Faḍl b. Sahl, and probably in the hope of putting an end to ʿAlid movements of revolt, declared ʿAlī b. Mūsā al-Riḍā, the eighth *imām*, his *walī ʿahd* and married him to his daughter. In the following year, the people of Baghdād, who had already supported an abortive movement in favour of Manṣūr b. al-Mahdī, read the *khuṭba* in the name of Ibrāhīm b. al-Mahdī. Rebellion meanwhile had broken out in Egypt, and the disturbances of the Khurramdīnīs under Bābak in Ādharbāydjān and Arrān, which had begun in 201/816, were assuming threatening proportions.

It was now clear that al-Maʾmūn, if he was to control his empire, must move from Marv to the centre. In 202/818 he set out for Baghdād but did not enter the city until 204/819. Ibrāhīm b. al-Mahdī fled. Faḍl b. Sahl had meanwhile been murdered at al-Maʾmūn's instigation and ʿAlī b. Mūsā poisoned near Ṭūs (203/818). In 205/821, al-Maʾmūn appointed Ṭāhir governor of Khurāsān and Sīstān. He succeeded in making himself virtually independent in Khurāsān and founded the first of the semi-independent dynasties in Persia after the Islamic conquest. Ṭāhir's son ʿAbd Allāh was given Ṭāhir's government in the Djazīra and remained in the western provinces until about 213/828-9. Other members of the family also held office in Baghdād until 270/883-4, which facilitated the rise of the family to semi-independence as governors of Khurāsān. It was not only in Khurāsān that al-Maʾmūn's power was shrinking. Riots occurred in the Djibāl in 210/824 and rebellion in Mesopotamia in 214/829 and in Ḳumm in 216/831. Repeated efforts to suppress the rebellion of Bābak also failed and his revolt had spread to the Djibāl by the end of al-Maʾmūn's reign.

A new period was now beginning in the history of Persia. By this time she had been fully incorporated into the Islamic world. The Arab settlers had been largely assimilated to the local population. Conversion had proceeded throughout the country, though Zoroastrianism was still, to some extent, tolerated. The former ruling classes, so far as they had survived, had been converted to Sunnī Islam, as too had the mass of the people, though there were enclaves of Shīʿism from an early period in some districts, notably Ḳumm, Ahwāz, Kāshān, Rayy, and Sāva. As the central government in Baghdād declined old political and social tendencies began to reassert themselves more strongly and new centres of power began to emerge.

In the field of political thought, there was a strong continuity. The Sasanian concept of the universal empire was greatly strengthened under the ʿAbbāsids. The caliph came to be regarded as the Shadow of God upon earth (though the strictly orthodox never accepted this view). In the course of time this concept was transferred to the temporal rulers, with consequences detrimental to the freedom and dignity of the subject. Similarly, the *imām*'s rights in regard to the ownership of land passed tacitly to the temporal rulers, and his power to delegate authority. Other Sasanian concepts, such as the identification of the state with the social order and the hierarchical nature of society, also came to be increasingly accepted. *Dīn* and *dawla* were two sides of one coin, with the result that non-conformity and political opposition were inseparable. Hostile movements against the government and the ruling classes thus tended to manifest themselves under the guise of Shīʿism.

Most of the dynasties which arose as the caliphate fragmented came to power within the general political framework of the Muslim world and accepted the prevailing administrative traditions and political concepts, or if they did not before their assumption of power, they rapidly conformed once they had seized power—as in the case of the ʿAbbāsids, who quickly abandoned any messianic or extremist tendencies they may have entertained before their victory over the Umayyads. There was, it is true, alongside the "conservative" tendency of society and government a messianic tendency, but its manifestations were usually fleeting. Its most striking expression in ʿAbbāsid times was the Ismāʿīlī movement, which at one time threatened the existence of the Great Saldjūḳ empire and was only finally extinguished as a political movement by Hūlāgū. Broadly speaking, however, the rise of new dynasties did not materially alter the structure of society, but merely the composition of the ruling class and, sometimes, the relative importance of the different classes. From Saldjūḳ times onwards the balance between the settled and semi-settled elements of the population was a delicate one. After the Mongol invasion there was a widespread expansion of nomadism accompanied by a dislocation of rural and urban life.

By the death of al-Maʾmūn in 218/833 the balance between the civil and military arms of the administration had been upset. In an attempt to increase the revenue, the tax-farm became increasingly common, but the money received from the farming of the taxes soon ceased to be sufficient to pay the army leaders and their troops. The practice then arose of assigning the taxes not to taxfarmers but to the military themselves, a practice which made it easy for the military, when the central government was weak, to establish their semi-independence. The result of this was, on the one hand, the ruin of the land, and

on the other the failure of the military to support or defend the central government. This militarization of the state and the growing tendency of the military to be occupied not only with the arts of war but also with administration became marked not only in ʿIrāḳ and the western provinces but also in the east under the Sāmānids and more especially the Ghaznavids.

Under the Būyids the military did not normally live on their assignments or *iḳṭāʿ*s, but sent their agents to collect the revenue. In return for his *iḳṭāʿ* the soldier had to perform military service and was in theory subject to detailed regulations and inspection. A provincial governor could distribute the area under his jurisdiction as *iḳṭāʿ*s but he did this as an official of the state. Legally the possession of an *iḳṭāʿ* did not give the holder rights of jurisdiction over the inhabitants, but in practice it contributed to the spread of patronage and under the Būyids there were widespread acts of usurpation by the military. Further, the tendency for the function of the provincial governor, provincial military commander, tax collector, taxfarmer, and *muḳṭaʿ* to be combined in one person led to the emergence of large properties virtually independent of the central government. Under the Būyids the military *iḳṭāʿ* was the dominant type. Under the Great Saldjūḳs there took place an assimilation of the military *iḳṭāʿ* to the governorate or administrative *iḳṭāʿ* and the tendency was for the *iḳṭāʿ* to be defined not by fiscal value but by service and to become by usurpation a hereditary domain over which the *muḳṭaʿ* had governmental prerogatives (see further, A. K. S. Lambton, *Reflections on the iqṭāʿ*, in *Arabic and Islamic studies in honor of Hamilton A. R. Gibb*, ed. G. Makdisi, Leiden 1965 and C. Cahen, *L'évolution de l'iqta' du IXe au XIIIe siècle* in *Annales, E.S.C.*, 1953).

Throughout, though especially from Saldjūḳ times onwards, four strands were closely interwoven: administration, taxation, tenure, and military service (though society was *not* feudal in the technical sense). The main burden of supporting the government rested upon the peasantry. Agriculture, especially in the pre-Mongol period, showed an astonishing recuperative power. This is probably to be explained in part by the fact that the local village communities formed relatively stable and, to some extent, self-governing communities under their own *kadkhudās*, and in part to the fact that in the pre-Mongol period, although wars were frequent, the numbers engaged were, on the whole, small and the destruction which accompanied campaigns was, for the most part, localized and as such was incidental to the movement of armed bands through the countryside.

In spite of the succession of empires, Saldjūḳ, Īlkhān and Timurid, there was a persistence of administrative tradition from the ʿAbbāsid period and more especially from Saldjūḳ times onwards. This is not to say that there were no changes or new developments: of course, there were, but the element of continuity is more striking than that of change. The Mongol conquest caused a temporary break, but after the conversion of the Īlkhāns to Islam there was a reassertion of Islamic government, though the spread of administrative practices based on custom continued under the Īlkhāns and the Timurids, perhaps to a more marked extent than formerly.

One of the reasons for the persistence of administrative tradition is that the conquerors, whether Arab, Saldjūḳ Turk, Mongol, or for that matter Ṣafavid or Ḳādjār, lacked administrative experience; the original basis of their power was, in all cases, tribal, the officials of the bureaucracy had the "expertise" and so successive dynasties relied upon them. The great families of viziers, the Barmakids under the ʿAbbāsids, the Djayhānīs, Balʿamīs and ʿUtbīs under the Sāmānids, Ṣāḥib b. ʿAbbād under the Būyids, Niẓām al-Mulk and his sons and grandsons under the Saldjūḳs, and the Djuwaynīs and Rashīd al-Dīn and his family under the Īlkhāns, played a significant role in the transmission of this tradition, as also did the families of *mustawfī*s. The religious classes, at another level, also played an immensely important part in the maintenance of continuity. The *ʿulamāʾ*, as the guardians of tradition, enjoyed high status and prestige, and were a stabilizing force. In times of political upheaval they carried on as local administrators and often acted as peacemakers. This was particularly true of the *ḳāḍī*s, among whom there was a strong hereditary tendency.

Alongside this conservatism and continuity, there was also a marked provincial particularism, partly because difficult communications tended to foster isolation, and partly because ethnic differences made for a different ethos of society. The successive empires tended to fragment broadly along similar geo-political lines. Khurāsān, the Caspian provinces, Sīstān, Fārs, Kirmān, Kurdistān, and Ādharbāydjān, all tended at one time or another to become centres of local power, though it must not be supposed that within these different provinces there was necessarily uniformity. Some of these local movements had special and distinguishing characteristics. At the same time, the various movements arising in the different parts of Persia did not develop in isolation, but often reacted upon each other.

Under the Umayyads the Central Asian frontier was re-established broadly where it had been under the Sasanians. They handed on their function as wardens of the marches to the ʿAbbāsids. With the decline in the power of the caliphate, the local dynasties which governed Khurāsān, first the Ṭāhirids, then the Sāmānids, and later the Ghaznavids, took over this task. The first two, broadly, represented the landowning classes and orthodoxy. Although they established virtually independent dynasties, they sought the authorization of the caliph, as did later dynasties, and there was no implication of revolution in their rise to power. Maḥmūd of Ghazna also ruled within the previously existing Muslim political framework. In the latter half of the 4th/10th century the Īlak Khāns broke into Transoxania while the Ghuzz moved into Transcaspia, and finally into the *dār al-islām*. The Saldjūḳs, who established themselves as the leaders of the Ghuzz, in due course found themselves in possession of an empire centred on Persia, and became themselves the wardens of the marches. Towards the end of the reign of Sandjar those Ghuzz who had remained in Central Asia overran Khurāsān. The Khwārazmshāhs, who succeeded the Saldjūḳs in the east, failed to hold the marches against the Mongols in the 7th/13th century.

Although the maintenance of a stable border in the north-east was a condition for the stability of the interior of Persia, Khurāsān was not itself a suitable centre from which to exercise dominion over the whole area. Al-Maʾmūn was forced to move from Marv back to Baghdād, and the Saldjūḳs transferred their capitals progressively westwards and southwards, from Nīshāpūr to Rayy and Iṣfahān. Sandjar, the only one of the Great Saldjūḳ sultans to attempt to rule permanently from Khurāsān, was unable effectively to control ʿIrāḳ. In Ṣafavid and Ḳādjār

times the maintenance of the north-east frontier against encroachments by the Uzbegs and Turkomans was a perennial problem. The frontier finally established in the reign of Nāṣir al-Dīn Shāh was far to the south and west of the mediaeval frontier.

The Caspian provinces with their forests and mountain valleys and difficult communications proved hard to conquer. During the early Islamic period Ḳazvīn remained a frontier district. From the reign of ʿUmar to that of al-Maʾmūn, seventeen expeditions are recorded against Daylam. From about 250/864 the mountain fastnesses of Daylam served as a refuge for the ʿAlids against the ʿAbbāsids, where they formed a new centre of resistance hostile to both Baghdād and Khurāsān, the governors of which sought to extend their dominion over the Caspian provinces. Conversion in the Caspian provinces had been slow. In 259/873 a large number of Zoroastrians were converted by Nāṣir al-Ḥaḳḳ Abū Muḥammad in Daylam, and in 299/912 Ḥasan b. ʿAlī is said to have converted the inhabitants of Ṭabaristān and Daylam, who were still partly idolators and partly Magians, to Islam (Masʿūdi, viii, 279). Many of the movements which originated in the Caspian provinces were characterized by Shīʿī tendencies. Here, as elsewhere, the Shīʿī movement tended to be associated with social movements and to draw into its ranks the discontented. It was not a clear-cut anti-Arab movement supported by Persians. Shīʿism was rather a convenient banner under which to unite in hostility to the ruling class, whether this was Arab in the person of governors appointed by the caliphs, or local rulers who had retained their Zoroastrian faith and who, when they did not feel strong enough to throw off control, either out of fear of local rivals or of rebellion by their subjects, co-operated with the caliphs. The Būyids, who came from Daylam, professed Ithnā-ʿAsharī Shīʿism, though the earlier ʿAlid movements in the province were Zaydī. The Caspian provinces were not only difficult to conquer: they were also difficult to unite. Numerous local dynasties flourished, often simultaneously, sometimes paying tribute to the central government, but more often withholding it, and sometimes extending as far as Ādharbāydjān (see also V. Minorsky, *La domination dailamite*, in *Soc. des études iraniennes*, iii (1932), and DAYLAM).

The neighbouring province of Gurgān, of a rather different physical character, had been a frontier province in Sasanian times over against the nomads from the north. In the 3rd/9th century the ʿAlids of Ṭabaristān extended their influence over it, but in 316/928 Mardāwīdj b. Ziyār, by origin a Gīlakī in the service of the Daylamite leader Asfār b. Shīrūya, whom he overthrew in 319/931, founded a kingdom, which lasted for about a hundred years, nominally dependent, first on the Sāmānids and then on the Ghaznavids. In Saldjūḳ times Gurgān came more fully under the control of Khurāsān and one of the main concentrations of Ghuzz was to be found in its steppes with their plentiful grazing. In the late 18th century it became of importance as the province from which the Ḳādjārs [*q.v.*] drew their main support.

Sīstān (which included much of the modern Afghānistān), partly surrounded by a desert barrier, tended to be isolated from the developments in other parts of Persia, except for a brief period under Yaʿḳūb b. Layth and ʿAmr b. Layth. The special characteristic of political movements in Sīstān in the early centuries of Islam was their Khāridjite tendency. Under the Ghūrids [*q.v.*] Sīstān tended to look east. After the break-up of the Īlkhān empire, Harāt became the centre of the Karts, who had acted as governors on behalf of the Īlkhāns in the heyday of their power. Still later, after the death of Tīmūr, it became the centre of the eastern Timurid empire. (See also C. E. Bosworth, *Sīstān under the Arabs from the Islamic conquest to the rise of the Saffarids, 30-250/651-304*, Rome 1968).

Fārs, which had been the original seat of power of both the Achaemenids and the Sasanians, tended to be somewhat isolated from the rest of Persia in the early years of the Islamic period. This was perhaps partly due to the fact that much of it was difficult mountain country occupied by a tribal population, which formed an obstacle to its conquest and control [see ĪLĀT]. Conversion appears to have been slow. Iṣṭakhrī, writing in the 4th/10th century, states that the *madjūs* were more numerous in Fārs than in any other province. Under the Būyid ʿAḍud al-Dawla (338/949—372/982), Fārs enjoyed prosperity and importance. After the break-up of the Great Saldjūḳ empire Fārs was ruled by the Salgharid dynasty (543/1148—686/1287). Later in the 8th/14th century Fārs became the centre of the Muẓaffarid dynasty, and in the 18th century of the short-lived Zand dynasty.

Kirmān was bounded on the north and east by the great desert. The mountain districts of the province stubbornly resisted the Arab advance and gave much trouble to later rulers also [see ĪLĀT]. Under the Saldjūḳs of Kirmān it formed a prosperous and semi-independent kingdom but suffered in the disorders committed by the Ghuzz at the end of the Great Saldjūḳ period.

Kurdistān was ethnically separate from the rest of Persia. Both the physical configuration of the country and the tribal nature of society there militated against political unity. It looked to Mawṣil. Like the Caspian provinces, parts of Fārs and Kirmān, it was difficult campaigning country, and proved a "thorn in the flesh" of the caliphate and the subsequent empires. Few of their rulers succeeded fully in controlling it, and it tended to break away the moment there was a weakening of the central government. The Arab Dynasty of the Ḥamdānids in the 4th/10th century (see M. Canard, *Histoire de la Dynastie des H'amdânides de Jazîra et de Syrie*, i, Algiers—Paris, 1951), the Kurdish dynasty of the Marwānids who superseded them in Diyār Bakr in the 5th/11th century, and the ʿUkaylids, who held Mawṣil from 380/991 to 489/1096, attained some importance and exercised influence beyond the borders of Kurdistān. Under the Saldjūḳs Mawṣil looked increasingly westwards. It became under the Zangids one of the most important states of Western Asia, but with little influence on the history of Persia. With the rise of the Ottoman and Ṣafavid empires, Kurdistān became disputed frontier territory.

The neighbouring province of Ādharbāydjān was also partly inhabited by Kurds. It was the scene of the Khurramdīnī disorders in the first half of the 3rd/9th century. Subsequently a number of minor local ruling families held sway: first the Sādjids (276/889—317/929), then the Kurd, Daysam, who was a Khāridjite, followed by the Muṣāfirids, who had Bāṭinī leanings, and others. In 513/1136, towards the end of the Great Saldjūḳ period, the atabeg Ildiguz established himself and founded one of the succession states to the Saldjūḳ empire. Under the Mongols, after the destruction of Baghdād, the political and economic centre of the empire shifted from ʿIrāḳ and the Djibāl, where it had been under the Buyids and Saldjūḳs, to Ādharbāydjān. Iṣfahān,

which had been the main city of Persia under the Great Saldjūḳs, although it became one of the centres of power of the Indjuids, one of the succession states to the Īlkhān empire, did not fully recover its importance until the reign of Shāh ʿAbbās. Numbers of Ghuzz had settled in Ādharbāydjān in Saldjūḳ times, and from Mongol times onwards it was inhabited predominantly by Turkish tribes. On the break-up of the Īlkhān empire, the main centre of activity tended to move from Ādharbāydjān to Fārs, Kirmān, and ʿIrāḳ-i ʿAdjam, perhaps partly because Ādharbāydjān was becoming at this time subject to raids by the Kipchaks. A succession state was established by the Djalāʾirids, who ruled intermittently over Ādharbāydjān and ʿIrāḳ.

In the second half of the 9th/15th century Ādharbāydjān became the centre of the rising Ṣafavid power, and Tabrīz became the capital in the early years of the 10th/16th century. Just as the Saldjūḳs moved their capitals westwards from Khurāsān to the centre of Persia, so also the Ṣafavids moved progressively eastwards, from Tabrīz to Ḳazwīn and Iṣfahān. In the 19th century Ādharbāydjān, with the advance of Russia through the Caucasus, succeeded Khurāsān as the crucial frontier area. Here, too, the frontier eventually established after Persia's defeat by Russia in 1828 was considerably inside the mediaeval border.

The period from the death of al-Maʾmūn up to the Mongol invasion falls into three periods, those of the minor dynasties, the Great Saldjūḳ empire (447/1055—552/1157), and the Khʷārazmshāhs, ending with the sack of Baghdād by the Mongols in 656/1258. During the first of these, the western provinces dominated by Baghdād developed along rather different lines from Khurāsān and the east, although there was a certain influence of the one on the other. This was partly because of the difference in society in the two areas and partly because of differences in political development. Baghdād and the neighbourhood had experienced all the vicissitudes of the political and economic decline of the caliphate after the death of al-Maʾmūn. In Khurāsān, on the other hand, the old structure of society had maintained itself to a greater extent: the local ruling families still retained a good deal of their former influence and there was a rich merchant class engaged in the caravan trade with China and other countries. On the other side of the frontier there were still a number of independent principalities, often at war with each other. Under the Ṭāhirids, who came to power in the east, and their successors the Sāmānids, there was a reassertion of old social tendencies, whereas under the Būyids, society was in an advanced stage of disintegration. The Ghaznavids, the successors of the Sāmānids, were in due course overthrown by the Saldjūḳs, under whom the lands of the eastern caliphate were re-integrated and a new system of government worked out, combining features found in both the eastern and western provinces in a new symbiosis.

The Ṭāhirids during their fifty or sixty years' rule based their power on a community of interest of the *dihḳāns*, though the influence and rights of this class were not so rigidly enforced as they had been in Sasanian times. Externally their main problem was to hold the frontier against the nomad Turks from Central Asia and prevent their intervention in the disorders which occurred in Transoxania. Ṭāhir, whose father and grandfather had been governors of Bushang, reached Khurāsān as governor in 206/821-2. His rule, apart from some Khāridjite disturbances, was brief and uneventful. By 207/822 he had consolidated his power. In that year he omitted al-Maʾmūn's name from the *khuṭba*, but providentially died the same night (or shortly afterwards) (see D. Sourdel, *Les circonstances de la mort de Tahir*, in *Arabica*, 1958). In spite of this act of overt rebellion, al-Maʾmūn recognised Ṭalḥā b. Ṭāhir as his successor. Khāridjite disturbances, especially in Sīstān, continued during his governorate. On his death in 213/828-9 al-Maʾmūn, perhaps with a view to regaining some of his lost authority in the eastern provinces, appointed his favourite, ʿAbd Allāh b. Ṭāhir, who was at that time conducting operations against the Khurramdīnīs in Dīnavar, to succeed Ṭalḥā. He advanced to Nīshāpūr and put down the Khāridjite disturbances which had become widespread. Al-Muʿtaṣim, who succeeded to the caliphate in 218/833, confirmed ʿAbd Allāh in his government.

Unrest meanwhile spread throughout the ʿAbbāsid empire. The Turks, whom al-Muʿtaṣim had enrolled in greater numbers in his bodyguard than had former caliphs, increased in power and violent quarrels between them and the people of Baghdād occurred repeatedly. In Ādharbāydjān Bābak and the Khurramdīnīs were still in a state of rebellion. In 220/835 the Afshīn [*q.v.*] was placed in charge of the campaign against them and eventually defeated them in 222/837. In Ṭabaristān Māziyār b. Ḳārin, the last of the Ḳārinwand dynasty, who, after being deprived of his possessions by the Bāwand, the Ispahbud Shahriyār, had taken refuge with al-Maʾmūn, embraced Islam and been sent back to Ṭabaristān as governor, apostasized and rebelled. The Afshīn, who was sent against him, appears to have encouraged him to rebel. Al-Muʿtaṣim then sent ʿAbd Allāh b. Ṭāhir from Khurāsān against him; Māziyār was captured and executed in 226/841, and ʿAbd Allāh made his uncle, Ḥasan b. Ḥusayn, governor of Ṭabaristān.

ʿAbd Allāh b. Ṭāhir's rule in Khurāsān and Transoxania appears to have been enlightened. There are indications that he encouraged agriculture and fostered the spread of learning. He was succeeded in 230/844-5 by his son Ṭāhir, who had become governor of Ṭabaristān in 228/842-3 in succession to his great uncle. Ṭāhir II received diplomas from successive caliphs. He ruled until 248/862-3. Trouble from the Khāridjites in Sīstān continued, and during his reign the *ʿayyār* under Yaʿḳūb b. Layth, the Ṣaffārid, increased in power. Under Ṭāhir's successor, Muḥammad, Ṭabaristān was lost to the Ṭāhirids, when the Ṭāhirid governor, after being defeated in 250/864 by Ḥasan b. Zayd, the ʿAlid, abandoned the province in 252/866. Family quarrels also broke out among the Ṭāhirids, and one branch made common cause with the Ṣaffārids in Sīstān.

Yaʿḳūb b. Layth, the son of a peasant of Ḳarnīn, who became apprenticed to a coppersmith — hence the name of the dynasty he founded—subsequently, with his brothers, joined a band of *muṭaṭawwiʿa* led by the Ṭāhirid governor, Dirham b. Naṣr b. Ṣāliḥ, and took part in operations against the Khāridjites. He was then made amir of Bust, but in 247/861 drove out the Ṭāhirid governor and made himself master of Sīstān. Yaʿḳūb's relations with the Khāridjites are not entirely clear. According to some accounts he was a Khāridjite at the beginning of his career. Later attributions of Shīʿī sympathies to the Ṣaffārids would appear to be unfounded. He extended his rule to the Kābul valley, Sind and the Mikrān, and in 253/867 he conquered Harāt and Bushang from Ṭāhir b. Ḥusayn b. Ṭāhir.

Meanwhile al-Muʿtazz, who had succeeded to the caliphate in 252/866, was unable to control his go-

vernors in the east, and was threatened by the Zandj rebellion in lower ʿIrāḳ in 254/868. Hoping to rid himself of at least one of his troublesome governors, he granted a diploma for Kirmān to both Yaʿḳūb and the governor of Fārs, ʿAlī b. Ḥusayn. Yaʿḳūb was the victor and took not only Kirmān but also Fārs. In 257/871 al-Muʿtamid, following a somewhat similar policy, appointed Yaʿḳūb over the Ṭāhirid provinces of Tukhāristān and Balkh. According to another group of sources, however, Yaʿḳūb had already taken Tukhāristān and Balkh together with Ghazna, Gardīz, and Kābul in 256/870, when the caliph gave him a diploma for Tukhāristān, Balkh, Fārs, Kirmān, Sīstān, and Sind. Finally in 259/873 he marched on Khurāsān, took Nīshāpūr, and made Muḥammad b. Ṭāhir prisoner.

Yaʿḳūb then turned his arms against Ḥasan b. Zayd, the ʿAlid, in Gurgān. The latter fled without giving battle. In 261/874-5 Yaʿḳūb went again to Fārs, and in 262/875-6 he sent an envoy to the caliph al-Muʿtamid. Alarmed by Yaʿḳūb's growing power, al-Muʿtamid, or the regent al-Muwaffaḳ, had given in that year a diploma for Transoxania to the Sāmānid, Naṣr b. Aḥmad, no doubt in the hope that he would counter the spread of Yaʿḳūb's influence. Weakened by the rebellion of the Zandj, who by 264/877 were raiding within seventeen miles of Baghdād, the caliph now gave Yaʿḳūb a diploma for Transoxania, Khurāsān, Ṭabaristān, Gurgān, Fārs Kirmān, Sind and Hind, and made him military governor of Baghdād, and titular governor of the holy cities. Yaʿḳūb, nevertheless, continued his advance on Baghdād, but was worsted by the caliph in an engagement outside the city (265/879). Yaʿḳūb's defeat, however, was not decisive. By the terms of the peace the Ṣaffārids were recognized as the rulers of the provinces mentioned in the diploma already given to Yaʿḳūb, and in return they were to pay an annual tribute of 20 million *dirhams*.

Yaʿḳūb died shortly after this. He was succeeded by his brother ʿAmr, who made ʿUbayd Allāh b. ʿAbd Allāh b. Ṭāhir his deputy in Baghdād, perhaps in the hope of enlisting Ṭāhirid support against the growing power of the Sāmānids. ʿAmr's succession was contested by his brother ʿAlī. He was defeated and held captive by ʿAmr. The provincial governors also began to throw off their allegiance, while in the holy cities ʿAmr's rights of precedence were challenged by the Ṭūlūnids. ʿAmr's life, like that of Yaʿḳūb, was largely spent in expeditions from one part of the empire to another, to deal with rebellious governors, and in particular in wars on the eastern frontier of Sīstān.

With the defeat of the Zandj in 269/883 by al-Muwaffaḳ, pressure on the caliphate began to lessen and intrigues against ʿAmr at the caliph's court began. An envoy was sent to him to demand the tribute due and the despatch of his son to Baghdād as a hostage. ʿAmr retired from Fārs to Kirmān, followed by al-Muwaffaḳ. In 271/885 Muḥammad b. Ṭāhir was again declared governor of Khurāsān and was represented by Rāfiʿ b. Harthama, who had conquered Nīshāpūr in 268/882. Matters did not yet reach breaking-point. In 275/888-9 ʿAmr agreed to pay 10 million *dirhams* tribute for Kirmān, Fārs and Khurāsān, sent presents to al-Muwaffaḳ, and retired to Fārs. About this time ʿAlī b. Layth escaped from captivity and joined Rāfiʿ b. Harthama in Khurāsān against ʿAmr. In 276/889-90 al-Muwaffaḳ seized the occasion offered by this embarrassment to ʿAmr to withhold from him the privileges of the military governor of Baghdād, to which office he had appointed him earlier that year. ʿAmr in retaliation dropped al-Muwaffaḳ's name from the *khuṭba* in Shīrāz in 277/890-1 and advanced on Khūzistān. Al-Muwaffaḳ meanwhile died in 278/891. His son al-Muʿtaḍid, who became caliph on the death of al-Muʿtamid in 279/892, made peace with ʿAmr, confirmed him in his governorships and ordered him to set out for Khurāsān against Rāfiʿ b. Harthama in 279/892-3. After a long-drawn out campaign Rāfiʿ was eventually put to flight, and ʿAmr entered Nīshāpūr in 283/896-7. Rāfiʿ, after briefly joining the ʿAlids in Ṭabaristān, fled to Khʷārazm, where he was killed in the same year. With his death disturbances in Khurāsān subsided.

Not much is known of the civil administration of Yaʿḳūb and ʿAmr, but their military organization is reputed to have been excellent. A distinction seems to have been made between public and private revenue. ʿAmr apparently had three treasuries, onc for revenue from land and other taxes, which was utilized for the upkeep of the army, a second for revenue from the personal property of the ruler, which was expended upon the upkeep of the court, and the third for revenues from occasional taxes (*aḥdāth*), and confiscations, the proceeds of which were largely used to reward faithful servants, followers and envoys. The army was the object of special care, and paid every three months through the *ʿāriḍ* (see Bartold, *op. cit.*, 220-22; and C. E. Bosworth, *Armies of the Saffarids*, in *BSOAS*, 1968).

In origin the Ṣaffārid movement seems to have been a "popular" movement and to have been regarded by the landowners and merchants of Khurāsān and Transoxania as a threat to the established order. Opposition was directed against Yaʿḳūb's alleged Khāridjite tendencies, but it may be that the real grounds for it was the "popular" nature of the movement. Once Yaʿḳūb, and after him ʿAmr, had extended their power beyond Sīstān it seems probable that the "popular" nature of their movement was to some extent lost. They retained their influence in Sīstān, however, and reappeared after the death of Maḥmūd of Ghazna and still existed as a local ruling house when the Mongols invaded in the 7th/13th century.

The Ṣaffārids were faced not only with a revival of the power of the caliphate under al-Muʿtaḍid, but also by the rise of a new power in the east, the Sāmānids, who were extending their influence in Transoxania. Their ancestor, Sāmān, appears to have been a small landowner from the neighbourhood of Bukhārā. During the caliphate of al-Maʾmūn, the sons of Asad b. Sāmān were ordered to help Harthama against the rebellious Rāfiʿ. In return they received governorships in Khurāsān. Under the Ṭāhirids Nūḥ b. Asad was in Samarḳand and in 261/874-5 the caliph al-Muʿtamid gave Naṣr b. Aḥmad a diploma for Samarḳand. When Bukhārā was sacked by Ḥusayn b. Ṭāhir al-Ṭāʾī from Khʷārazm in 260/873-4, Naṣr b. Aḥmad, in response to an appeal from the people of the city, sent his brother Ismāʿīl to their aid. In the same year the caliph gave Ismāʿīl a diploma for Bukhārā. Having restored order in Bukhārā, Ismāʿīl turned his army against Naṣr. Ismāʿīl is represented as the victor and as acting with great moderation in victory. This may or may not be true. What probably happened is that they arrived at a deadlock, neither able to defeat the other. In any case, Naṣr remained governor of Transoxania until his death in 279/892, when he was succeeded by Ismāʿīl, who received a diploma from the caliph in 280/893.

In 285/898 ʿAmr demanded a diploma as governor of Transoxania, in return for which he offered to overthrow the ʿAlid ruler of Ṭabaristān. Al-Muʿtaḍid, anxious for the decline of ʿAmr, probably saw in his demand an opportunity to weaken him by playing him off against Ismāʿīl. Whether ʿAmr was over-confident of his ability to overthrow Ismāʿīl, or whether he feared that Ismāʿīl would, as his power grew, intervene in Khurāsān, and thought it better to forestall him, is not clear. In 286/899 ʿAmr's commander Muḥammad b. Bashar was defeated by Sāmānid forces, and in the following year ʿAmr himself was captured and sent to Baghdād. His sons retired to Sīstān. For some years they continued operations against the Sāmānids in Sīstān and the local rulers in Fārs, but were unable to restore Ṣaffārid fortunes.

By 289/902, when al-Muktafī succeeded to the caliphate, the Sāmānids had gained the whole of Khurāsān, and in the diploma which Ismāʿīl received from al-Muktafī Rayy Ḳazwīn, and Zandjān were added to Khurāsān. The Sāmānids were, however, unable to establish effective control over the western regions and disputed them with the Sādjids, who had come to power when al-Muwaffaḳ had appointed Muḥammad Afshīn Abū ʿUbayd b. Abi'l-Sādj governor of Ādharbāydjān in 276/889-90. The rapid extension of Sāmānid territory put a certain strain on Sāmānid organization, although this was not immediately felt. Aḥmad b. Ismāʿīl, who succeeded in 295/907, established his claim by force of arms. He extended the Sāmānid domains still further by temporarily occupying Sīstān in 298/910-11. Ṭabaristān, on the other hand, was lost to the ʿAlids when Ḥasan b. ʿAlī al-Uṭrush (al-Nāṣir al-Kabīr) staged a successful revolt, making skilful use of the discord existing among the local rulers in the Caspian provinces.

The Sāmānids, like the Ṭāhirids, had a certain affinity with the *marzbān*s on the eastern frontiers of the Sasanian empire. Theirs was the last attempt to maintain the old social system against the general levelling tendencies of Turkish military government. The two centres of their kingdom were Samarḳand and Bukhārā; on the periphery there were a number of states which acknowledged Sāmānid overlordship and in some cases paid a nominal tribute. Among them were Khwārazm, Ghardjistān, al-Shār, Djūzdjān, Isfīdjāb and Ṣāghāniyān. The bureaucracy under the Sāmānids was well-developed and on a somewhat similar model to the bureaucratic administration of the caliphs at Baghdād. Narshakhī mentions nine government offices or *dīwān*s, those of the vizier, *mustawfī*, *ṣāḥib shurṭ*, *ṣāḥib muʾayyid*, *mushrif*, and *muḥtasib*, and the *dīwān-i mamlaka-i khāṣṣ*, the *dīwān-i awḳāf*, and the *dīwān-i ḳaḍā* (*Taʾrīkh-i Bukhārā*, ed. Riḍawī, p. 31).According to Bartold there was a tenth *dīwān*, the *dīwān-i barīd*. The chief civil official was known as the *khwādja-i buzurg*. Abū ʿAbd Allāh Muḥammad b. Aḥmad Djayhānī, who held this office under Naṣr. b. Aḥmad, was, perhaps, a more important figure than his sovereign.

The army was composed of a nucleus of Turks, mainly puchased or captured on the frontiers and brought up as slaves, and levies supplied by the *dihḳān*s. The leading military commander had the title *sipahsālār* and from Nīshāpūr administered Sāmānid territories south of the Amū Daryā. The chief military offices and provincial governments were held by members of local ruling families and by Turkish slaves. The court was elaborately organized with a hierarchy of officials. The main offices were held by the military classes. The domestic affairs of the court were under an official known as the *wakīl*. In the provincial governments many of the same offices and departments were found as at the centre, though there was no uniformity throughout the empire. In the early period of Sāmānid rule, the civil power held the upper hand: the army was subordinate and the troops were paid in cash, but were not debarred from acquiring land. Ibn Hawḳal states that taxes were lower in the Sāmānid empire than anywhere else and wages higher. The taxes, levied in two instalments, totalled some 40 million *dirhams*. Officials were paid quarterly and their pay amounted to about half the revenue. This favourable position of income in relation to expenditure allowed considerable mildness to prevail in the tax administration. Trade and industry were highly developed. Muḳaddasī gives an extensive list of exports from the various towns. Trade with the nomads of Central Asia was also important (ii, 468 ff.; see further, Bartold *op. cit.*, 235 ff.).

Aḥmad b. Ismāʿīl, after a reign of nearly six years, was murdered by his Turkish guards in 301/913. His 8-year-old son Naṣr succeeded. During his reign the spirit of revolt entered the Sāmānid house itself and Naṣr spent much of his long reign, which lasted until 331/942, in putting down the revolts of his cousins and brothers. About 318/930 three of his brothers, who were imprisoned in Bukhārā, were liberated with the help of seditious elements in the city, including Shīʿis and Khārīdjites, and one of them, Yaḥyā, proclaimed amir. The movement was abortive.

In the west the Sādjids had maintained themselves against further Sāmānid advance. In 305/917-18 Yūsuf b. Abi'l-Sādj defeated a force sent against him by the caliph al-Muḳtadir, but was forced, in spite of this, to give up Rayy, and some two years later, although he defeated an army led by the caliph's general Mūnis, retired to Zandjān. Mūnis followed him, defeated him near Ardabīl and brought him to Baghdād. In 310/922, he was set free and given the government of Rayy and Ādharbāydjān. Later he was defeated and killed by the Carmathians (314/926). Ādharbāydjān was then disputed between the Khāridjite Kurd, Daysam b. Ibrāhīm, and the Muṣāfirids, who in the end prevailed.

More important than the attempts by provincial governors to seize the opportunity to establish their independence was the spread of the Carmathian movement, which was eventually captured by the Ismāʿīlīs, who founded the Fāṭimid anti-caliphate in 297/910. Between 318/930 and 328/940 Fāṭimid propaganda made great strides in Khurāsān and Transoxania. Muḥammad b. Aḥmad al-Nasafī (al-Nakhshabī), a Fāṭimid missionary, won over a number of prominent officials and eventually Naṣr himself. The *ʿulamāʾ* and the Sunnī notables were unable to meet this challenge alone and were forced to turn for help to the Turkish nucleus of the army. Naṣr, following a plot to overthrow him, abdicated in favour of his son Nūḥ and was thrown into prison in 330/942. Al-Nasafī and his supporters were massacred. Henceforward the army decided the course of events. Joining in the struggles for supremacy between the rival claimants, they eventually brought the state to ruin.

Khwārazm revolted in 332/943-4 and in the following year Abū ʿAlī Čaghānī, governor of Khurāsān, rebelled. By this time also, the favourable financial position which had prevailed earlier had changed for

the worse. There were acute shortages of funds and the army's pay was often in arrears. There were desertions to Abū ʿAlī, who also obtained support from some of the tributary states. Nūḥ fled to Samarḳand and Abū ʿAlī entered Bukhārā in 335/947 with Ibrāhīm b. Aḥmad, Nūḥ's uncle. Abū ʿAlī was unable, however, to maintain himself in Bukhārā and returned to Ṣaghāniyān, whence he encouraged the tributary rulers along the Amū Daryā to rebel. Sāmānid prestige declined rapidly and the Sāmānid princes played less and less part in the struggles which ensued between the rival amirs and governors.

With the decline of the Sāmānids and the failure of the caliphate to maintain its temporary revival under al-Muʿtaḍid, the northern provinces of Persia became the scene of the exploits of a series of Daylamite leaders who were little more than robber barons, the common characteristics of whose rule were love of money, extortion, and cruelty. In 308/920 Laylā b. Nuʾmān seized Nīshāpūr from the Sāmānids on behalf of Ḥasan b. Ḳāsim, the ʿAlid, who succeeded Ḥasan b. ʿAlī al-ʿUṭrush in 304/917. He failed to hold it. Some years later Kākī took Rayy, but, unable to establish his independence, entered Sāmānid service. Meanwhile Asfār b. Shīrūya had proclaimed himself in Sārī but was defeated by Mākān b. Kākī. He then took refuge with the Sāmānid governor of Khurāsān, Abū Bakr b. Ilyās. When the latter died, Asfār received the allegiance of his troops and seized Rayy, Ṭabaristān, Ḳazwīn, Ḳumm, Kāshān, and Lur-i Kūčik. He was overthrown in 319/931 by one of his own generals, Mardāwīdj. b. Ziyār, the founder of the Ziyārid dynasty. Mardāwīdj, who, according to Ibn Miskawayh, appears to have had visions of restoring the old Persian empire (vii, 5, 489; cf. also Ibn al-Athīr, viii, 226), took Ḳazwīn, Rayy, Hamadān, Kangavar, Dīnavar, and Burūdjird, and then turned back to invade Ṭabaristān and Gurgān, which had been seized by Mākān. Among Mardāwīdj's followers were the three sons of Būya, ʿAlī, Ḥasan, and Aḥmad. They had originally been in the service of Mākān, but had deserted him for Mardāwīdj. When the latter extended his conquests southwards, he appointed ʿAlī b. Būya governor of Karadj.

At first ʿAlī appears to have considered entering the service of the caliph, who was by now a puppet in the hands of the *amīr al-umarāʾ*, but his overtures were ignored. He then took Iṣfahān, but retired to Arradjān when Mardāwīdj sent his brother Wushmgīr against him, and seized Fārs in 321/933, while his brother Aḥmad occupied Kirmān in 322/934. Mardāwīdj, on receipt of this news, set out himself for Iṣfahān and sent another army from Khūzistān to march on the Būyids. ʿAlī thereupon renewed his allegiance to Mardāwīdj and sent his brother Ḥasan to him as a hostage. Mardāwīdj meanwhile appears to have conceived the plan of conquering Baghdād, but before he could put the plan into operation he was assassinated by his Turkish slaves in 323/935. He was succeeded in part of his domains by Wushmgīr, who spent his reign in a constant state of war with the Sāmānids, Būyids, and others and eventually accepted Sāmānid overlordship.

Ḥasan b. Būya rejoined ʿAlī on the assassination of Mardāwīdj and they occupied Iṣfahān. Mākān had meanwhile taken Kirmān and acknowledged Sāmānid overlordship. Later he left Kirmān in an attempt to regain Gurgān and Ṭabaristān. About 329/940-1 he threw off Sāmānid allegiance and when the Sāmānid governor of Khruāsān sent an army against him he appealed to Wushmgīr for help. Ḥasan b. Būya, profiting from the preoccupations of his rivals, seized Rayy and made himself master of the surrounding district.

In Baghdād the struggles between the Turkish amirs and between the Turks and Daylamites had reduced the city and the neighbourhood to anarchy. In 334/945 Aḥmad b. Būya, encouraged by Inal Kūsha, governor of Wāsiṭ, (Ibn al-Athīr, viii, 337) set out for Baghdād and took it without battle. The caliph al-Mustakfī welcomed him and gave him a diploma and bestowed *laḳabs* on the three brothers: ʿAlī became ʿImād al-Dawla, Aḥmad, Muʿizz al-Dawla, and Ḥasan, Rukn al-Dawla. Muʿizz al-Dawla treated the caliph with the greatest contempt. Eleven days after his arrival in Baghdād, he accused him of seditious correspondence with the Ḥamdānids and made al-Muṭīʿ caliph in his place. Although the caliphate reached its lowest ebb during the period of Būyid supremacy, the Būyids did not attempt to overthrow it altogether. There were probably two main reasons for this. In the first place, they may have hoped to use for their own political ends such prestige as the ʿAbbāsids still possessed, and secondly, the existence of a Sunnī caliphate left them with a free hand: had they set up a Shīʿī caliph their troops might well have supported the caliph against them [see further BUWAYHIDS or BŪYIDS]. The consequence of the retention of the caliphate under their dominion was important: it discredited Ithna ʿAsharī Shīʿism as a serious alternative to it with the result that it was the Ismāʿīlīs to whom the discontented turned in the 5th/11th century in the hope of overthrowing the existing order (see further B. Lewis, *The Assassins*, London 1967, especially 29 ff.).

The main Būyid centres were Shīrāz, Rayy and Baghdād. ʿAlī during his lifetime was looked upon as the head of the family. He ruled Fārs and the area extending to Iṣfahān and Ahwāz, while Rukn al-Dawla ruled in the west from Rayy to Hamadān and Iṣfahān, and Muʿizz al-Dawla in ʿIrāḳ. On the death of ʿImād al-Dawla the rest of the family deferred to Rukn al-Dawla, who proved totally unable to control his Daylamite troops, who robbed and plundered wherever they went. After his death there was a repeated subdivision of Būyid territories and their partial reunification by force of arms by one member of the family or another. An abortive attempt was made by the Muṣāfirids to regain Rayy in 336/947-8. The Muṣāfirid Marzbān was defeated near Ḳazwīn in 338/949, but the Būyid force then sent to Ādharbāydjān was unable to make permanent gains and returned to Rayy.

The rule of Muʿizz al-Dawla in ʿIrāḳ did nothing to improve conditions. He had no care for the local population and introduced the custom of quartering the troops on the local population, which caused them serious annoyance. He also made a practice of giving lands to his troops, the result of which was to bring agriculture into a hopeless state of disorganization (*Eclipse*, ii, 96). Quarrels between Daylamites and Turks continued. In every Būyid army there was a bitter feud between the Turks and the Daylamites, to which much of the indecisive fighting of the period is due. From the time of Muʿizz al-Dawla onwards, however, the Turkish element became increasingly important. Muʿizz al-Dawla, not surprisingly in these circumstances, found himself in constant difficulties for money. Confiscations of the property of officials on death or dismissal were common, and offices were put up to the highest bidder. His reign was largely occupied by internal rebellions and a series of expeditions against the Ḥamdānids, the last of

which was in 353/964. The balance of these was in his favour, and from time to time he exacted tribute from them, but he failed to crush them entirely. When finally the Ḥamdānids became increasingly engaged in Syria in a struggle with the Fāṭimids, pressure on the western flank of the Būyids ceased. Muʿizz al-Dawla also undertook various operations against the Barīdīs [*q.v.*] in Khūzistān, and finally extinguished them in 349/960-1. He was succeeded in 356/967 by his son Bakhtiyār ʿIzz al-Dawla, who was an ineffective ruler.

When Bakhtiyār's Turkish mercenaries revolted and seized power, ʿAḍud al-Dawla, the son of Rukn al-Dawla, who had been ruling in Shīrāz since 338/949, set out for Baghdād in 364/974 to restore order. He forced Bakhtiyār to abdicate, but because of the protests of Rukn al-Dawla he re-established Bakhtiyār and returned to Shīrāz. In 366/976 Rukn al-Dawla died and was succeeded by his son Muʾayyid al-Dawla in Rayy and by another son Fakhr al-Dawla in Hamadān. Bakhtiyār took the opportunity to march on Shīrāz and provoke a conflict with ʿAḍud al-Dawla. He was defeated. ʿAḍud al-Dawla occupied Baghdād in 367/977 and seized Fakhr al-Dawla's territories also, but allowed Muʾayyid al-Dawla to rule as his subordinate.

Under ʿAḍud al-Dawla, who ruled first in Fārs (338/949—366/977) and then in Fārs and ʿIrāḳ (366/977—372/983), the Būyids reached their height. Būyid troops occupied Balūčistān and the Mikrān and even operated in ʿOmān. On the Khurāsān border, where there had been constant conflicts with Sāmānid governors usually ending in a Sāmānid victory, there had been a sudden weakening of the Sāmānids, who were defeated towards the end of 371/982. ʿAḍud al-Dawla's death at the critical moment prevented any further Būyid advance into Khurāsān. ʿAḍud al-Dawla, the only real figure of a ruler among the Būyids, established an effective administration. He reorganized the postal system, put down brigandage, and fostered commerce. He followed a policy of religious toleration and suspended the public celebration of sectarian ceremonies which had been introduced by Muʿizz al-Dawla in Baghdād. He was a great builder and patronized men of learning and theologians. He did not, however, entirely lose the characteristics of his race: old taxes were increased and new ones introduced. (See further H. Busse, *Chalif und Grosskönig*, Beirut 1969).

After the death of ʿAḍud al-Dawla the Būyid dynasty declined rapidly. Until the reimposition of orderly government by the Saldjūḳs the western provinces were torn by internecine strife and almost interminable conflicts. The administration was completely broken up, agriculture ruined, and the old money economy destroyed beyond repair. A contributory factor in this decline was the change in the flow of trade connected with the rise of the Fāṭimids (see ʿABBĀSIDS, and B. Lewis, *Fāṭimids and the route to India*, in *Istanbul Iktisat Fak. Mecm.*, 1950, 355-66).

In due course Khurāsān fell, not to the Būyids, but to the new power rising in the east, the Ghaznavids. Two favourable circumstances attended their rise: first the absence of any strong power in western Persia able to fill the vacuum created by the decline of the Sāmānids, and secondly the existence on their frontier of the decaying empire of the Hindū Shāhīs, which offered to them a new field of operations. Alptakīn, the commander of the Sāmānid forces in Khurāsān, after an abortive rising in favour of ʿAbd al-Malik b. Nūḥ in 350/961, withdrew to the eastern frontiers and took Busṭ and Ghazna. After an interregnum following his death in 352/963, Sebuktegīn, one of his *ghulāms*, assumed power in 366/977. He regarded himself as governing on behalf of the Sāmānids but paid no tribute to them. In 383/993 Nūḥ b. Naṣr summoned him to Transoxania to aid him against rebels. After a successful campaign Sebuktegīn was given the governorships of Balkh, Ṭukhāristān, Bāmiyān, Ghūr, and Ghardjistān in 384/994, and his son Maḥmūd was made commander of the army with his headquarters in Nīshāpūr. When the Ḳarakhānids invaded Transoxania in 386/996, Nūḥ again appealed to Sebuktegīn for help. By the peace which was concluded with the Ḳarakhānids the frontier was established on the Ḳaṭwān steppe.

Sebuktegīn died in 387/997. He left his domains to various members of his family, but by 388/998 Maḥmūd, temporarily abandoning Khurāsān, had made himself master of the territory held by his father. In the following year he seized Khurāsān and read the *khuṭba* in the name of al-Ḳādir, whose succession the Sāmānids had not recognised, continuing to read the *khuṭba* in the name of his deposed predecessor, al-Ṭāʾiʿ. In return Maḥmūd was granted a diploma by al-Ḳādir for Khurāsān (389/999). In 390/1000 Maḥmūd made an expedition into India, capturing some fortresses near Lamghān. The following year he invaded India again, defeated Jaipal, and took a great quantity of booty. Subsequently he made several successful expeditions into India, the most famous of which was in 416/1025-6 when he destroyed the idol temple at Sumnath. The attempts made by the last of the Sāmānids, Abū Ibrāhīm Ismāʿīl (d. 395/1005) to recover Khurāsān were in vain. The former Sāmānid territories were now divided between the Ghaznavids and the Ḳarakhānids. In 398/1008 Maḥmūd defeated Ilig Naṣr and Ḳādir Khān Yūsuf near Balkh. He then extended his authority over Ghardjistān, Khwārazm, Sīstān, Ghūr, Ṭabaristān and Gurgān. The conquest of Khwārazm in 408/1017 gave him a preponderance over the Ḳarakhānids, and when civil war spread in the Ḳarakhānid kingdom, he invaded Transoxania in 415-16/1025, but does not appear to have made permanent gains. In 417/1026 Maḥmūd received a diploma from the caliph al-Ḳādir for the conquered provinces. The caliph moreover bound himself not to enter into relations with the Ḳarakhānids except through Maḥmūd.

Maḥmūd was a strict Sunnī, and since at the time of his rise the Fāṭimids were pressing in through Syria towards Baghdād, where the caliph was a puppet in the hands of the Būyids, considerable glamour attached to him as the first ruler who came to the rescue of the ʿAbbāsid caliphate, though in fact it was not until Ṭughril Beg arrived in Baghdād that it was relieved of tutelage to the Būyids. So far as Maḥmūd's administration is concerned there was outwardly little change, but the spirit of the imperial organization was changing. The state was no longer a civil power which maintained an army. The court was to a greater degree than had formerly been the case military and tribal. The army had become the state and its commander the sultan, and the only function and duty of the people was to pay taxes. Maḥmūd did not, however, solve the problem of how to support the army: the new system was to be worked out, not by the Ghaznavids, but by the Saldjūḳs. In 420/1029 Maḥmūd entered Rayy, which had been in the hands of the Būyid, Madjd al-Dawla, and left his son Masʿūd there with orders to complete the conquest of Būyid territories. Hamadān and Iṣfahān fell, but in 421/1030 Maḥmūd died and

Masʿūd hastened back to Khurāsān to claim the throne. The early years of Masʿūd's reign were occupied by struggles for power between rival factions. With his withdrawal from Rayy, the local branch of the Būyids, the Kākūyids, threw off their allegiance. The real threat to the Ghaznavids, however, was to come from elsewhere. During the reign of Maḥmūd, groups of Ghuzz had passed into Khurāsān and the interior of Persia. The first considerable movement was in 420/1029, when Maḥmūd ordered the tribes under Isrāʾīl b. Saldjūḳ, whom he had seized, to migrate into Khurāsān. In 425/1033-4, two brothers, Ṭughril Beg and Čaghrī Beg Dāʾūd, the sons of Mīkāʾīl b. Saldjūḳ, and their uncle Yabghū b. Saldjūḳ moved from Transoxania to the borders of Khwārazm, but were obliged to move again in 426/1034-5 on the death of Hārūn the Khwārazmshāh. A number of them crossed the Oxus into Khurāsān and asked permission to live under Masʿūd's protection. During the next few years they were constantly on the move in search of new pastures, harried by and harrying the Ghaznavids, until finally they met in battle at Dandanḳān in 431/1040. Masʿūd was decisively defeated. Ghaznavid rule was brought to an end in Khurāsān, though the Ghaznavids continued to rule in Ghazna until dispossessed by the Ghūrids [*q.v.*] in 569/1173-4. Further weakened, they retired first to Kābul and then to Lahore.

The Saldjūḳ period in some ways represents a culmination of previous developments, in others a new departure. There had been from the 3rd/9th century onwards much recruitment of Turkish slaves in western and eastern Persia, and the Ghaznavids were, by origin, a slave dynasty. During their rule there was an increased militarization of the state, but no major change in its structure. The Ghuzz movement was different: it was a tribal migration, and the Saldjūḳs who emerged as its leaders became, almost by chance, the rulers of a vast empire. This, at its height, stretched from Transoxania to Syria and Anatolia, though the last two were never under the effective control of the Great Saldjūḳ sultan, and included Khurāsān and the rest of Persia, ʿIrāḳ-i ʿArab, and the Djazīra. The numbers involved in this migration were not large: those taking part were to be counted, perhaps, in tens of thousands. They seem to have caused remarkably little dislocation economically [see ILĀT]. Small though their numbers were, they altered the balance of the population in two ways: henceforward the two main elements were Persian and Turkish—the dichotomy of the early centuries between *ʿarab* and *ʿadjam* was replaced by that between *turk* and *tādjīk*, and secondly there was an expansion of nomadism and a more strongly marked dichotomy between settled and semi-settled. This dichotomy, in the early period of Saldjūḳ rule, coincided, to some extent, with that between Turk and non-Turk, and this in turn corresponded, in large measure, with the dichotomy between the military and the rest of the population.

The Saldjūḳ leaders were not simply the leaders of a nomad tribal group. They were also familiar with urban life, and from the very beginning of their transformation into the rulers of an empire they had settled capitals. As heirs to an empire and to the civilization which had developed in the lands of the Eastern Caliphate, they became the defenders of Sunnī Islam and under them a great revival took place, which made possible the unification of the Sunnī world, against which the Crusaders were unable to achieve lasting success. As heirs to an empire it was not long before a conflict developed between them and the Turkoman nomads, whose main concern was for new pastures and who, in religion, had the attitude of the *ghāzī*. Since many of the Turkomans pushed on to the Georgian, Armeno-Byzantine and Caucasian frontiers to undertake the activities of *ghāzī*s, it was in Anatolia rather than Persia, however, that this Islam took root. Support for Sunnism was imposed upon the Saldjūḳs by political circumstances: opposition to the Būyids dictated a pro-Sunnī and an anti-Shīʿī policy. From the time of Malikshāh onwards, i.e. after the Būyids had been deprived of their political power, the strict orthodoxy of the Saldjūḳ sultans was modified. A pro-Sunnī attitude was also imposed upon them by their need to win the support of the *ʿulamāʾ* in order, in turn, to gain the support of the masses—though they failed to carry with them those who were discontented with the established order, and who were to be found among all classes.

Under the Saldjūḳs, al-Ghazālī [*q.v.*] worked out a new relationship between caliph and sultan, from which stemmed a series of interconnected jurisdictions, whose stability depended upon orthodoxy or right religion, and the personal loyalty of the sultan to the caliph, and of subordinate officials to the sultan. The power of the Saldjūḳs was thus given a *sharʿī* basis and differed from that of the Būyids, which had been usurped. Since Islam still had relevance to the daily life of the people this reformulation was of more than theoretical importance: it made possible the preservation of the religious life of the community and enabled political life to run its course within the framework of Islam. That the sultan's rule was given a *sharʿī* basis did not, of course, stop the arbitrary use of power, but it tempered its use and, generally speaking, prevented it reaching lengths which were felt to be intolerable by the people.

The Saldjūḳ theory of state, as well as its primary Islamic basis, had another basis, which derived its inspiration from Sasanian theory and was expressed by Niẓām al-Mulk, the vizier of Alp Arslān and Malikshāh. According to this theory the sultan was directly appointed by God. His power was absolute and required no justification, and against it the population had no rights and no freedom. This theory, like the Islamic theory, also emphasized the interdependence of kingship and religion, and of stability and right religion. It rested, however, on justice rather than right religion. This was to be achieved by the maintenance of each in his rightful place. To these two bases the Saldjūḳs brought a third, which derived from the practice of the steppe: the practice of consultation. This was, perhaps, never very strong, and as the power of the central government was strengthened and the Saldjūḳs came to rely less on the Turkoman tribes and more on an army composed of slaves and freedmen, so the Islamic theory tended to be superseded by the conception put forward by Niẓām al-Mulk, while the element of consultation weakened and virtually disappeared.

The establishment of a strong central government provided order and discipline, secured the defence of the Muslim community and Muslim lands, and created conditions in which Muslim life could be lived and the various classes carry on their occupations in relative security. But it failed to remove the underlying dissatisfactions, and the Saldjūḳ period is also marked by the appearance of a new phase of the Ismāʿīlī movement, known to Arab historians as the "new propaganda" (*al-daʿwa al-djadīda*) in contradistinction to the "old propaganda" (*al-daʿwa al-ḳadīma*) of the Fāṭimids, and its followers as the Bāṭiniyya.

In the field of administration there was a long continuity of practice stretching back beyond the Saldjūḳs, but, consequent upon the changed political, economic, and social circumstances which prevailed, certain developments which had begun before their arrival took definite shape and provided a pattern which was to persist in its essentials down to the 20th century. The two main aspects of the sultan's administration were the *dargāh* or court and the *dīwān* [*q.v.*], which was the chief department of the bureaucracy. The former was essentially military, composed of amirs, slaves, and freedmen, though it was also frequented by the chief officials of the bureaucracy, the religious classes and learned men. The relations between the *dargāh* and the *dīwān* were not clearly formulated. The vizier, the chief bureaucratic official, bridged the gap between the two. In the reigns of Alp Arslān (455/1063—465/1072) and Malikshāh (465/1072—485/1092), the vizirate reached its height under Niẓām al-Mulk [*q.v.*], who supervised all aspects of the administration. Later the vizier declined in importance and there was an increased militarization of the state and a contraction in the area of its direct operation. (See further A. K. S. Lambton, *The internal structure of the Saljuq empire*, in *The Cambridge history of Iran*, ed. J. A. Boyle, 1968, v, 203-82).

This was accompanied by the emergence of what tended to become a "hereditary" domain or *iḳṭāʿ* over which the *muḳṭaʿ* had governmental prerogatives, which included the collection of taxes (in the details of the local arrangements for the assessment and collection of which there is a striking continuity), the holding of the *maẓālim* court, and the general supervision of security and religious affairs. This development coincided with and was partially the consequence of the change in the military forces of the state. As the army became composed not of Turkoman tribes but mainly of slaves and freedmen, the problem of providing their pay and of financing the administration in general became urgent. The *iḳṭāʿ* was simply a device to solve the problem. Under a strong ruler it did not necessarily involve a relaxation of the control of the central government or decentralization, but in the long run it made for a decline in the power of the sultan relative to that of the amirs and finally under the series of weak rulers who succeeded Muḥammad b. Malikshāh contributed to the political disintegration of the empire.

This tendency was further agravated by the atabegate, an institution peculiar to the Saldjūḳ period, which had a social and a political aspect. The atabeg [*q.v.*] was placed in charge of a prince's education and normally married to his mother. If the young *malik* was assigned a province, the atabeg attached to him was responsible for its administration. Politically one of the objects of the atabegate was to control the *malik* and prevent his rebellion, but as the power of the amirs increased relative to that of the sultans, the atabegate was used, not so much to prevent the rebellion of a Saldjūḳ *malik* as to retain the nominal allegiance of a powerful or rebellious amir (see further *The internal structure of the Saljuq empire*, *op. cit.*). This was the origin of the various atabeg dynasties which arose on the decline of the Great Saldjūḳ empire.

After the battle of Dandanḳān, as the Saldjūḳs consolidated their conquests in Khurāsān and moved westwards, the majority of the Ghuzz became associated with them, though full control was never established over the movement as a whole. Outlying groups, although acknowledging the nominal overlordship of the Saldjūḳs, continued to act independently. Many of them pushed on into Syria and Asia Minor. The geographical extent of the operations of the Ghuzz was thus wider than the area over which the central government exerted control. Politically the Great Saldjūḳ empire was a loose confederation of semi-independent kingdoms. Of these, the Saldjūḳ kingdoms of Rūm and Syria broke away at an early date and developed along more or less independent lines, while the Saldjūḳ kingdom of Kirmān, whose founder Ḳāwurd b. Čaghrī Beg was appointed governor of the province by Ṭughril Beg in 433/1041, also became virtually independent and exerted little influence on the general course of events. During the reign of Ṭughril Beg (429/1037—455/1063) the power the Saldjūḳs was based on the Turkoman tribes. Alp Arslān and Malikshāh, during whose reigns the Great Saldjūḳs were at the height of their power, relied increasingly on armies composed, not of Turkomans, but of Turkish slaves and freedmen. After the death of Malikshāh, these slaves and freedmen as *muḳṭaʿ*s and *atabeg*s, became the dominant class, and eventually, as the power of the central government waned, set up virtually independent kingoms.

Under Ṭughril Beg there was on the one hand an expansion northwestwards, which was facilitated by the weakness of the Byzantine empire, and on the other a consolidation of the gains made in Persia. Čaghrī Beg remained in Khurāsān and ruled in the east until his death in 452/1060. In 440/1048 Ibrāhīm Ināl, Ṭughril's half-brother, undertook a campaign into Armenia, and in 446/1054 Ṭughril captured Ardjish and besieged Manzikert. In the following year Ṭughril entered Baghdād. Already in 429/1038, when the Saldjūḳs had first entered Nīshāpūr, al-Ḳāʾim had sent an envoy to them, and in 431/1040 after Dandanḳān, when they had written to the caliph asking him to bestow upon them the sovereignty of the lands they had already conquered, the caliph in reply had invited Ṭughril to Baghdād. Other preoccupations prevented his coming until 447/1055-6. Shortly after his entry, al-Raḥīm, the Būyid general, was seized and the rule of the Būyids brought to an end, although a branch of the family continued to rule in Yazd as Saldjūḳ governors for several years. On this occasion, however, Ṭughril was not granted an audience by the caliph: this honour was reserved until his second visit to Baghdād in 449/1058. Meanwhile in 448/ 1056 Arslān Khātūn, Dāʾūd's daughter, was betrothed to the caliph.

Al-Basāsīrī, the Shīʿī Turkish general, to whom power had passed in Baghdād on the fall of the Būyids, fled on Ṭughril's entry. He was joined by many of the Arab Shīʿī tribes on the Syrian border, and appealed to the Fāṭimids for help. Ṭughril followed him and operations took place between them in northern ʿIrāḳ in 450/1058. Ibrāhīm Ināl seized this opportunity to rebel a second time—the first had been in 441/1049-50, when he had refused to hand Hamadān over to Ṭughril. The latter was forced to leave Mesopotamia to deal with Ibrāhīm Ināl. Al-Basāsīrī thereupon marched on Baghdād and proclaimed the Fāṭimid al-Mustanṣir caliph. Al-Ḳāʾim, who had sent an urgent message to Ṭughril to return to Baghdād, took refuge with Ḳuraysh, the ʿUḳaylid, who entrusted him to Muhārish b. Badrān. Ṭughril, after he had overcome Ibrāhīm Ināl's revolt with the help of Dāʾūd's sons, Yāḳūtī and Ḳāwurd, retook ʿIrāḳ. Al-Basāsīrī was killed and the ʿAbbāsid caliph restored, but the administration of Baghdād was taken over by Ṭughril.

The caliph's function was henceforward to occupy himself with religious leadership: temporal affairs were delegated to the sultan, though in Bag͟hdād itself there was, to some extent, a conflict of authority.

By 451/1059 Ṭughril was master of Mesopotamia up to Syria and the Byzantine frontier, though on his death there were outbreaks of disorder by the bedouin of ʿIrāḳ. His ambitions were meanwhile growing and in 453/1061 he demanded the hand of the caliph's daughter in marriage. This caused the caliph great annoyance—even the Būyids had not demanded this of him—but after negotiations and threats the marriage contract was eventually ratified in 454/1062 outside Tabrīz. When Ṭug͟hril came to Bag͟hdād in the following year the caliph's daughter was taken to his residence, and when he left Bag͟hdād in 456/1064 she accompanied him.

So far as the relations of the Sald͟jūḳs with local ruling families were concerned, in the early period of their expansion, the local rulers probably looked upon them as a reserve of mercenaries to draw upon in their quarrels. The payments received by them were not tribute (as they are often represented in the sources) but payments to mercenaries for their services, and when the G͟huzz left the district these payments naturally ceased. As the Sald͟jūḳ conquests spread in some cases the local rulers were driven out, but in many cases they were confirmed in all or part of their possessions in return for tribute. By the end of Ṭug͟hril's reign, however, administration by Sald͟jūḳ officials was becoming increasingly common. In due course the former ruling familes were merged into the Sald͟jūḳ imperial structure. Marriage alliances were made with them and hostages were often taken to lessen the likelihood of rebellion.

The loose confederation over which Ṭug͟hril had established some kind of central control was far from being firmly united at his death in 455/1063. In accordance with his will, Sulaymān b. Dāʾūd was declared his successor by his vizier al-Kundurī. Seeing, however, that the amirs opposed his accession, al-Kundurī proclaimed Alp Arslān, another of Dāʾūd's sons, who had been his father's chief lieutenant in the east. Yabg͟hū b. Sald͟jūḳ, governor of Harāt, and Ḳutulmis͟h, a grandson of Sald͟jūḳ, both rebelled and were defeated in 456/1063-4. These events probably mark a turning point in the position of the sultan: if control of the empire was to be retained, it was clear that a standing army loyal to the sultan was necessary. As the conception of an autocratic ruler replaced that of the ruling k͟hān, and the moral basis of Sald͟jūḳ authority weakened, some substitute had to be found for the former tribal loyalties. To some extent the central government supplied an element of unity, but this could be effective only as long as it was supported by a strong central army. This condition was fulfilled under Alp Arslān (455/1063—465/1072) and Maliks͟hāh (465/1072—485/1092), and the latter in particular succeeded in imposing a measure of control throughout the empire.

Under Alp Arslān conquests in the northwest continued. Partly to co-ordinate and partly to control the various groups operating on the Byzantine frontier, Alp Arslān intervened himself and took Ani in 457/1065 and laid waste Cilicia and stormed Caesarea in 459/1067. Romanus IV Diogenes mounted a counter-offensive and had some success in campaigns in 460/1068 and 461/1069, but a third campaign ended in a crushing defeat at Manzikert and his capture in 463/1071 (see C. Cahen, *La campagne de Manzikert d'après les sources musulmans*, in *Byzantion*, ix (1934), 613 ff.). In 465/1072 Alp Arslān was assassinated while on an expedition against the Ḳarak͟hānids. He had appointed Maliks͟hāh his *walī ʿahd* in 458/1066 and with a view to safeguarding his accession had allocated different parts of his kingdom in the form of *iḳṭāʿ*s to various of his relatives. Nevertheless Maliks͟hāh's accession was disputed by Ḳāwurd, the Sald͟jūḳ ruler of Kirmān. He was defeated and killed, but his descendants continued to rule in Kirmān. In 466/1073-4 Maliks͟hāh marched east and turned the Ḳarak͟hānids out of Tirmid͟h and assigned Balk͟h and Ṭuk͟hāristān to his brother Tekis͟h. The latter rebelled in 473/1080-1 and again in 477/1084-5. In 470/1077-8 Maliks͟hāh assigned Syria to another brother, Tutus͟h. Although Maliks͟hāh's nominal authority appears to have been recognized in Syria, he twice had to intervene in person (see H. A. R. Gibb, *The Damascus chronicle of the Crusades*, London 1932, 20-1), but in 484/1091 Tutus͟h came to Bag͟hdād to pay homage to him. In 482/1089-90 Maliks͟hāh made an expedition to the east to deal with disturbances there. During this he received the submission of the K͟hān of Kās͟hg͟har. Further consolidation took place inside Persia. The S͟habānkāra [*q.v.*] of Fārs were subdued, the states of northwestern Persia, except S͟hirwān, were annexed, and the Kurdish dynasty of the Marwānids, which had played an active role in the earlier struggles between Ṭug͟hril, Ibrāhīm Ināl and the Būyids, was brought to an end in 478/1085-6, although the last Marwānid possession was not finally lost to the Artuḳid, Husām al-Dīn Taymūrtās͟h b. Īlg͟hāzī, until 532/1137-8. Various operations were undertaken against the ʿUḳaylids, with whom earlier Ṭug͟hril's relations had been marked by a spirit of compromise. They had by this time begun to expand westwards, but with the death of S͟haraf al-Dawla Muslim b. Ḳurays͟h at Antioch in battle with Sulaymān b. Ḳutulmis͟h in 478/1085 their power disappeared.

The decline of the ʿUḳaylids facilitated the rise of another Arab dynasty, that of the Mazyadids in Ḥilla. They were S͟hīʿis, as were the majority of the Arab tribes in the region, and were, generally speaking, ready to support ʿAlid movements against the Sald͟jūḳs, as were the Kurds of this region, who also had S͟hīʿī leanings. Moreover, it was the natural tendency of the tribes to support a distant ruler, in this case the Fāṭimid, rather than a near one. The Mazyadid ruler, Sayf al-Dawla Ṣadaḳa b. Dubays, who succeeded his father in 479/1086, became a powerful figure in ʿIrāḳ, and became the leader of an Arab revolt against the Sald͟jūḳs.

An attempt to exercise a stricter control over the caliph was made by Niẓām al-Mulk, who sought to control him through the appointment of his own nominee to the caliph's vizirate. Relations with the caliph became further strained when Maliks͟hāh's daughter, who was betrothed to al-Muḳtadī, complained of his neglect after being taken to the caliph's residence in 480/1087-8. In 484/1091 when Maliks͟hāh came to Bag͟hdād, he ignored the caliph's presence and demanded that he should revoke the nomination of his eldest son in favour of his son by Maliks͟hāh's daughter and retire to Baṣra (or according to some accounts to Damascus or the Ḥid͟jāz). The caliph demanded a delay and was relieved of Maliks͟hāh's demand by his assassination in 485/1093.

An important step towards strengthening and regimenting the religious institution—apart from the reaffirmation of the caliph's position as the head of the Islamic community by the early sultans, and

the limitation of his functions to the religious sphere—was the development of the *madrasas* [*q.v.*]. The initiator of this movement was Niẓām al-Mulk, whose intentions were presumably to provide government officials trained in the tenets of orthodoxy to implement his political policies and to use the *ʿulamāʾ* educated in the *madrasas* to control the masses and combat the spread of the Ismāʿīlīs. He did not found the *madrasas*, as is sometimes claimed, but he was responsible for the era of brilliance which began for them in the reign of Malikshāh and caused the new *madrasas* to eclipse all other contemporary institutions of learning. Numerous *madrasas* were built by Saldjūḳ rulers, their ministers, and others, partly for the reasons mentioned above, but partly also to gain the support of the *ʿulamāʾ*, in order, through them, to gain the support of the masses (see further *The interval structure of the Saljuq empire, op. cit.*)

With the failure of al-Basāsīrī to establish Fāṭimid power in Baghdād, Shīʿī propaganda apparently ceased or was carried on in secret, and when the Saldjūḳs invaded Syria, the Fāṭimids went on the defensive. In the reign of Malikshāh a revival of the Ismāʿīlī movement took place, not, perhaps, unconnected with the vigorous steps taken to strengthen the orthodox institution. His reign had brought a measure of order but it had not removed all the old discontents, and by its stricter control and insistence on greater uniformity of thought had probably brought new ones. The "new propaganda" broke away from the old over a dynastic dispute (see further B. Lewis, *The Assassins*). Its founders regarded Nizār as the successor of al-Mustanṣir instead of al-Mustaʿlī. A grandson of Nizār, who with his son was murdered in prison in Egypt, was allegedly brought up at Alamūt by Ḥasan-i Sabbāh (see M. G. Hodgson, *The order of the assassins*, the Hague 1955, 66-7). The latter and his two successors, Kiyā Buzurg Umīd (518/1124—532/1138) and Muḥammad (532/1138—557/1162) claimed only to be emissaries of the imām, but the fourth grandmaster, al-Ḥasan ʿalā Dhikrihi ʾl-Salām (557/1162—561/1166), proclaimed himself to be the son of the infant brought from Egypt and the first of a new cycle of imāms. Politically the methods of the new propaganda were marked by extreme violence. The first assembly of the followers of the new propaganda took place, according to Ibn al-Athīr, in Sāva in the reign of Malikshāh. In 483/1090 they gained possession of Alamūt, in the neighbourhood of Ḳazwīn, which became their headquarters. In the following year they established themselves in Ḳūhistān in east Persia. Malikshāh in 485/1092 sent expeditions against them in both districts. The one despatched against Alamūt was routed by a sally by the garrison. Niẓām al-Mulk was assassinated by a Bāṭinī shortly afterwards. When Malikshāh's death followed a few weeks later, the expedition withdrew. The other sent to Ḳūhistān also failed to make headway and on Malikshāh's death broke up.

Malikshāh and the sultans after him all left young, or fairly young, boys to succeed them, and the death of the sultan was almost always followed by struggles for supremacy among his surviving uncles, brothers, and cousins, The size of the sultan's standing army after the death of Malikshāh decreased, whereas those of the amirs increased. This change in their relative strength was an invitation to the amirs to assert their independence, and especially from the death of Maḥmūd b. Muḥammad (525/1131) onwards the internal political history of the Saldjūḳ empire consists largerly of a series of struggles by the amirs and atabegs to establish their supremacy over the sultan and set up virtually independent governments. Further, since the road to Asia Minor had become blocked by the Turkomans already there, and a stable Christian kingdom had been established in Georgia, the Turkomans had fewer outlets for their activities and were the more ready to join in the struggles for the throne. The incorporation into the state of the Turkoman tribes, to whom the Saldjūḳs for family reasons were under special obligation, had proved an intractable problem. Some had been enrolled in the service of the sultan, but the majority continued to live a semi-nomadic existence, with a general tendency to move westwards. As the basis of the power of the Saldjūḳ state shifted from the Turkomans to slaves and freedmen, the position of the Turkomans in relation to the rest of the population worsened. Apart from Syria and Anatolia, the main concentrations of Turkomans were to be found in Gurgān, the Djazīra, ʿIrāḳ and Ādharbāydjān, and to a lesser extent Khūzistān. The weakening of the Great Saldjūḳ empire on the death of Malikshāh and the subsequent dissolution of the kingdom created by Tutush in Syria to some extent restored the freedom of the Turkomans and several of them succeeded, within a few years, in founding independent principalities. The fact that some of them, such as Īlghāzī b. Artuḳ [see ARTUḲIDS] were officers of the sultan, helped them to transform themselves quickly into small territorial princes when the central authority declined.

On the death of Malikshāh, his wife Turkān Khātūn succeeded in putting her son Maḥmūd on the throne. He was nominally sultan for some two years (485/1092—487/1094), but Turkān Khātūn was ultimately unable to defeat the opposition which gathered round Barkyāruḳ. Ismāʿīl b. Yāḳūtī, Barkyāruḳ's maternal uncle, in response to an appeal from Turkān Khātūn, marched against Barkyāruḳ with an army from Ādharbāydjān and Arrān, of which provinces he had been governor under Malikshāh. He was defeated. Turkān Khātūn's death in 487/1094 was followed shortly afterwards by that of Maḥmūd. Tutush also made a determined effort to obtain the sultanate, but was finally defeated and killed by Barkyāruḳ in 488/1095. This was the last attempt to unite Syria with Persia and the eastern provinces. The Great Saldjūḳ sultan continued for a time to be recognized nominally in Syria, but the control he exercised was negligible. By 490/1097 Barkyāruḳ had obtained possession of Khurāsān, of which his uncle, Arslān Arghū, had made himself master on the death of Malikshāh, and was recognized over the whole of Persia except Kirmān, and in ʿIrāḳ. In 492/1098-9 his brother Muḥammad rebelled. After many vicissitudes, in 497/1103-4, Barkyāruḳ established a slight superiority but at the cost of disorder throughout the country and a decline in the prestige of the sultanate. By the terms of the peace Muḥammad's status was virtually that of an independent ruler in Arrān, Ādharbāydjān, Diyār Bakr, the Djazīra, Mawṣil and Syria. Sandjar in Khurāsān was also to read the *khuṭba* in his name.

The internecine strife between the Saldjūḳ princes on the death of Malikshāh enabled the Bāṭinīs to strengthen their position. In 489/1096 they obtained possession of Girdkūh, situated near Damghān on the main route from Khurāsān to western Persia. About the same time they also seized Shāhdiz just outside Iṣfahān, whence they threatened the capital itself. About 493/1100 they infiltrated Barkyāruḳ's court and army. Eventually the sultan (who had him-

self been accused of Ismāʿīlī sympathies) gave permission for measures to be taken against them. In 494-5/1101 he came to an agreement with Sandjar, who had been governor of Khurāsān since 492/1098, for combined action against them, and an expedition was sent by Sandjar to Ḳūhistān, which achieved some success, as did another expedition three years later.

On the death of Barkyāruḳ in 498/1105, although he had nominated his son Malikshāh as his successor, his brother Muḥammad soon established himself as sultan. The Great Saldjūḳ sultanate once more extended over the whole of Persia with the exception of Kirmān, which continued under the Saldjūḳs of Kirmān. Muḥammad's reign did something to restore the prestige of the sultanate, but the unity of the empire was never again effectively imposed. Fārs was pacified by Čawlī Saḳao, who was governor from 498/1104—500/1106 and 502/1109—510/1117. Sandjar nominally governor of Khurāsān on behalf of Muḥammad, was, in fact, all but independent, and engaged in consolidating his position, which was to enable him to make himself sultan after the death of Muḥammad. Ṣadaḳa b. Dubays, who had encouraged the internal dissensions of the Saldjūḳ empire in order to establish his own independence, rebelled in 501/1107 but was killed in battle. With his death the Arab revolt collapsed. That his son Dubays was appointed to succeed him, although in keeping with the Saldjūḳ policy of toleration and compromise, is, perhaps, also indicative of the inability of the Saldjūḳs to administer the Arab tribal districts except through their own leaders.

Operations against the Bāṭinīs, which under Barkyāruḳ had not been seriously pressed, were prosecuted vigorously. In 500/1106-7 Muḥammad undertook in person successful operations against them in the neighbourhood of Iṣfahān. Shāhdiz was captured after a prolonged siege. Muḥammad then sent an expedition to Alamūt. Operations continued for eight years and the castle was on the point of falling when it was saved by Muḥammad's death. Ismāʿīlī fortresses near Arradjān in Fārs were also taken.

On the death of Muḥammad, although he had nominated his son Maḥmūd as his successor, Sandjar was generally regarded as the head of the family. Maḥmūd ruled in the west from 511/1118 to 525/1131, but his rule was disputed at different times and in different districts by his brothers, Masʿūd, Tughril, and Sulaymān Shāh and their atabegs, and in 513/1119 Sandjar intervened and defeated him at Sāva. Sandjar, however, returned to Khurāsān and allowed Maḥmūd to rule in the west. Although he and his successors used the title sultan, their status was that of *maliks*. Various Saldjūḳ princes on their own initiative, or on the initiative of different amirs and atabegs, rebelled against Maḥmūd and his successors. Sandjar was forced to interfere on a number of occasions, but proved unable to restrain the increasing ambitions of the amirs and atabegs or to prevent the ultimate fragmentation of the empire, preoccupied as he was by the increasing pressure on the eastern frontier from the Ḳarā Khitāys and the growing strength of the Khʷārazmshāh. He suffered a heavy defeat at the hands of the former in 536/1141, and ʿAlāʾ al-Dīn Atsiz, who had succeeded his father Muḥammad b. Anūsh Takīn as governor of Khʷārazm in 521/1127, temporarily occupied parts of Khurāsān after Sandjar's defeat.

The caliphs also took part in the family quarrels of the Saldjūḳs, and as the caliph emerged again as a military power the amirs began to join him as they joined the other temporal leaders. After the death of Muḥammad b. Malikshāh a triangular struggle took place for the possession of ʿIrāḳ between the caliph and al-Bursuḳī against Dubays, who was later joined by the atabeg ʿImād al-Dīn Zangī, ruler of Mawṣil since 521/1127, with the sultan playing an uneasy part in the background. The first caliph to assemble an army and lead it in person in Saldjūḳ times was al-Mustarshid (512/1118-529/1135). Finally, on the death of Masʿūd b. Muḥammad in 547/1152, al-Muktafī established himself as the dominant power in ʿIrāḳ, exercising both temporal and religious power.

During the disorders which followed the death of Muḥammad, the Ismāʿīlīs were to some extent able to recover their position in Ḳūhistān and northern Persia, though Ḥaṣan-i Sabbāḥ died in 518/1124. In 520/1126 Sandjar resumed operations against them in Ḳūhistān. These were only partially successful, and the Ismāʿīlīs, benefiting from the preoccupations of Sandjar on the eastern frontiers and with the Ghuzz in Khurāsān, were able again to increase their power. The fact that the Ghuzz became increasingly restive and intractable towards the end of Sandjar's reign was partly due to an increase in their numbers brought about by a southward movement of the Ghuzz who had remained in Central Asia, which was occasioned by the expansion of the Ḳarā Khitāy into Transoxania. The control of the frontier against the inroads of the Ghuzz became increasingly difficult, and in 548/1153 battle was joined with them. Sandjar was defeated and held captive for over two years, during which the central government in Khurāsān broke down and the province was overrun by the Ghuzz. Sandjar escaped in 551/1156 but died the following year.

With the death of Sandjar, the Khʷārazmshāh Īl Arslān, who succeeded his father Atsiz in 551/1156, emerged as the most powerful ruler in the eastern provinces. He was, however, unable to establish his undisputed rule against the Ghuzz who had defeated Sandjar, and was nominally a tributary of the Ḳarā Khitāy. In the west the Saldjūḳ empire had split into warring principalities. In Mawṣil the Atabegs looked west and were largely occupied in a struggle with the Crusaders. In ʿIrāḳ the caliph was disputing supremacy with the Saldjūḳs of ʿIrāḳ, while in Luristān and Ādharbāydjān atabeg dynasties were establishing themselves, and in Fārs the Salgharids came to power. The last named, whose rule in Fārs began about 543/1148, were descended from Salghar, a Turkoman chief who had been one of Ṭughril Beg's *ḥādjib*s. They were a successful and popular local house under whom considerable prosperity prevailed.

Īl Arslān's death in 567/1172 was followed by civil war. His son, Tekish, finally established himself as Khʷārazmshāh and when the power of the Ḳarā Khitāys weakened towards the end of the 6th/12th century, he became independent. About 588/1192 the caliph al-Nāṣir appealed to Tekish for help against Ṭughril, the last of the Saldjūḳ sultans of ʿIrāḳ. They defeated him in 590/1194 near Rayy. Tekish proved a more formidable rival to the caliph than Ṭughril, and towards the end of his reign he demanded that the *khuṭba* should be read in Baghdād in his name. In 592/1196 fighting took place between the Khʷārazmshāh's army and the caliph's to the disadvantage of the latter and skirmishes continued between them for the next few years until Tekish's death in 596/1200.

This conflict with the caliph played a part in alienating the religious classes and the population from the Khwārazmshāh.

Muḥammad b. Tekish, who succeeded, came into collision with the Ghūrids, who invaded Khurāsān about 597/1200-1. They were eventually worsted and by 612/1215-16 their territories had been annexed by the Khwārazmshāh. Some years earlier, about 607/1210-11, the Ḳarā Khitāy were turned out of Transoxania, and in 612/1215-16 the Khwārazmshāh undertook a campaign against the Kipchaks. On this occasion Muḥammad came into contact with the Mongol vanguard for the first time. Meanwhile Muḥammad reiterated Tekish's demand that the *khuṭba* be read in Baghdād in the name of the Khwārazmshāh, but met with an uncompromising refusal. He then declared the caliph a usurper and marched on ʿIrāḳ. In 614/1217 he defeated successively the Salgharids of Fārs and the atabegs of Ādharbāydjān, but in the winter of that year an army sent from Hamadān to Baghdād was annihilated by the Kurds. The threat of trouble in Khwārazm, led by the religious classes, forced Muḥammad to leave the west before he could make good his defeat. After his return to Khwārazm, hostility between him and his mother, Turkān Khātūn, who had placed herself at the head of the opposing faction, became open. The army, composed largely of Kipchaks and Kangli Turks (who were not, as had been the slave troops of the Saldjūḳs, thoroughly familiar with Islam), was also riddled with faction, and there was a standing opposition between them and the Persian element.

In, or about 615/1218 Čingiz Khān sent a body of merchants to gather information about the empire of the Khwārazmshāh. When they reached Uṭrār they were plundered and put to death by the local governor with the connivance of the Khwārazmshāh. Čingiz sent envoys to Muḥammad's court to protest, threatening war if satisfaction was not given. One of the envoys was murdered and the other two were sent back with their beards shaved off. This action precipitated the Mongol invasion. In the subsequent operations the Khwārazmshāh retreated before the Mongols, and many of his troops deserted to the Mongols. Uṭrār, Bukhārā, Uzkand, Djand, Banākat, Khudjand, Samarḳand, Balkh, and Marv were sacked and their inhabitants massacred. Nishāpūr fell in 618/1221. Muḥammad had meanwhile retired to Ḳazwīn, and thence to Gīlān and Māzandarān. He eventually fled to the island of Abasgūn in the Caspian where he died in 617/1220-1.

Dissension and faction prevailed in Khwārazm. Muḥammad's son, Djalāl al-Dīn Mengubirdi, was unable to establish himself. Fighting a rearguard action, he eventually crossed the Indus (618/1221). The Mongols pushed on through northern Persia and left through the Caucasian Gate near Darband in 620/1223. Djalāl al-Dīn, having failed to deprive the slave kings of Delhi of their kingdom, returned some three years later from India to Kirmān, and thence to Fārs and the Djibāl. He clashed with the caliph and the atabeg of Ādharbāydjān, and having defeated the latter made a foray into Georgia, and embarked on a struggle with the Ayyūbids, who were split by internal dissensions. He seized Akhlāṭ, but was defeated in 627-8/1230 near Erzindjān. With the accession of Ogedei in 626/1229 the respite given by the death of Čingiz in 624/1227 came to an end and a new Mongol attack was launched in 627/1230. Djalāl al-Dīn, unable to regroup his forces, fled to Diyār Bakr, and was murdered by a Kurdish peasant in 628-9/1231.

By the death of Ogedei in 638/1241 the Mongols had overrun northern Persia and had made further conquests in northern Mesopotamia, Georgia, Arrān and Armenia. After his death, the Mongol advance was temporarily held up by dissensions. At the *kuriltay* in 649/1251 Hūlāgū (Hülegü) was appointed to lead an expedition to occupy all the territories between the Oxus and the extreme limits of Egypt, and entrusted with hereditary rights of sovereignty as the representative of the Great Khān in the conquered lands. After lengthy preparations he set out and crossed the Oxus in 653/1256. He was joined at Kish in 654/1256 by Arghūn Āḳā, who had been appointed governor of Persia by Möngke. One of the Hūlāgū's first steps to consolidate Mongol domination in Persia was to exterminate the Ismāʿīlīs, who had by this time become virtually territorial princes, and as such made and changed alliances with other local rulers. He overthrew their strongholds in Ḳūhistān and in 654/1256 took Alamūt and sent Rukn al-Dīn Khurshāh, the grandmaster, to Karakorum, where he was put to death. Thenceforward the Ismāʿīlīs survived in Persia only as a minor sect (see further B. Lewis, *op. cit.*).

From Hamadān Hūlāgū called upon the caliph al-Muʿtaṣim to surrender to the Mongols. His reply was considered unsatisfactory, and Hūlāgū marched on Baghdād. After a siege of some fifty days it fell and was sacked. The caliph and those of his family who could be found were put to death. Hūlāgū then pushed on to Ādharbāydjān and made his headquarters at Marāgha. In 657/1259 he set out for Syria and took Aleppo in 658/1260, and Damascus surrendered. On news of the death of Möngke (657/1259), Hūlāgū returned to Mongolia, leaving an army in Syria. Its defeat at ʿAyn Djālūt by the Mamlūks in 658/1260 stayed the Mongol advance on Egypt. The Mongol empire now split up. Berke, who ruled in the Kipchak steppe, sought to assert his supremacy over Hūlāgū and invaded Persia via Darband and Shirwān, but was defeated in 660/1262. In the following year Abāḳā, Hūlāgū's son, invaded Berke's territory but was defeated and retired to Dāghistān. Hūlāgū meanwhile died in 663/1265 (for details of the Mongol invasion see Bartold, op. cit., and J. A. Boyle, *Dynastic and Political History of the Il-Khans*, in *The Cambridge History of Iran*, v).

The Mongol invasion was carried out by a horde organized for war with the deliberate intention of imposing political domination. Its immediate effect was the devastation and depopulation of the eastern provinces of the ʿAbbāsid caliphate. ʿIrāḳ, once the metropolitan province of the ʿAbbāsid empire, did not recover for centuries. (See further I. P. Petrushevsky, *The socio-economic condition of Iran under the Il-Khāns*, in *The Cambridge History of Iran*, v). Only Fārs partially escaped by the timely payment of tribute. The invasion also altered the balance of population by introducing new Turkish tribes, brought about a widespread extension of nomadism leading to the destruction of agriculture and urban life, and sharpened the dichotomy between *turk* and *tādjīk* and between settled and semi-settled. In the early period of Mongol domination the conquerors lived apart from the local population in tents and encampments. The Mongol leaders and their ministers owned large flocks, which were placed under the care of officials called *ḳāʾānčīs*. Their depredations were a constant source of anxiety to the settled people. The practice of reserving pasturage for the Mongol army was also a burden on the local people. A new feature of society was the extent to

which the Mongol leaders personally indulged in trade (cf. *Dastūr al-Kātib*, 203 ff.). The Yāsā of Čingiz Khān was followed by the early Īlkhāns, as the rulers of the dynasty founded by Hūlāgū were called, and quoted by the later rulers. New practices and taxes, notably *ḳubčūr*, originally a cattle tax and later a fixed tax on peasants and nomads, *ḳalān*, a land tax, possibly levied partly in the form of labour service, and *tamghā*, a tax on trade and urban crafts, possibly originally a poll-tax on urban dwellers and merchants, were introduced. The Mongol leaders, or some of them, and their wives, and the religious leaders enjoyed certain immunities from taxation. The administration was largely in the hands of officials who had served preceding dynasties, and the new customs were in due course to a large extent assimilated to existing Islamic and customary usages. With the conversion of the Mongols to Islam there was a reassertion of the traditional theory and practices of government. The head of the bureaucratic administration was known as the *ṣāḥib dīwān*, whose duties were similar to those of the traditional vizier.

As Persian rulers, the Īlkhāns were subject to the same limitations as other dynasties which ruled in Persia. They were faced with the problem of defence against the peoples of Central Asia and Turkistān in spite of the fact that there were now Mongols on both sides of the Oxus. They were also confronted with a second problem of defence, namely the maintenance of the Caucasus frontier. This region formed a bulwark in the defence of the region to the north and the south of it and was repeatedly fought over by the Īlkhāns and the Golden Horde, and later from the 10th/16th century to the 12th/18th by the Ṣafavids, and in the 19th century was disputed by Russia, the heir to the Golden Horde, and finally obtained by her (see further B. Spuler, *Die Mongolen in Iran*, 2nd ed., Berlin 1955). In the west the Īlkhāns sought to expand by overthrowing the Mamlūks in Syria and Palestine, but they were unable to establish their domination outside the western frontier of Mesopotamia, which became the geo-political boundary of Persia.

The reign of Abāḳā, who succeeded Hūlāgū, was spent in ceaseless campaigns against the Golden Horde, in repelling attacks from Transoxania, and operations against the Mamlūks, which ended in a Mongol defeat at Mardj al-Safar in 680/1281. Abāḳā's successor, Tegüder, the seventh son of Hūlāgū, announced his conversion to Islam after his accession and took the name Aḥmad. It is possible that this was a political gesture to be seen against the failure of the Mongols to take Syria (see Spuler, *op. cit.*, 78). Whether this is so or not, Tegüder Aḥmad's policy of favouring Islam caused unrest among the Mongol leaders to whose support he owed his accession. Civil war broke out and Arghūn seized the throne in 683/1284. During his reign, an abortive attempt was made to enlist support in Europe for a common crusade against Islam. Internally there was a marked improvement in the position of the Christian and Jewish communities and an increase in their influence. Arghūn was succeeded by his brother Gaykhātū in 690/1291. His reign, which is marked by numerous rebellions and losses to the Mamlūks, is chiefly remarkable for growing financial stringency, and the disastrous attempt to solve this by the introduction of paper money known as *čao*. Baydū, a grandson of Hūlāgū, governor of ʿIrāḳ, seized power in 694/1295, but was eventually overthrown by Ghāzān, who was then governor of Khurāsān, in 694/1295. Ghāzān made a public profession of Islam after his victory.

Under Ghāzān (694/1295—703/1304) the Īlkhāns reached their height. The links between them and the Great Khān, which had already been greatly weakened though still borne witness to on the coinage and in documents, were finally broken. This was partly because of Ghāzān's conversion and partly because of the disintegration of the Mongol empire on the death of Kubilay in 694-5/1294. In 695/1295-6 the Čaghatay Khān Duwa b. Baraḳ invaded Khurāsān from Transoxania. Financial stringency had not been relieved and a compulsory loan had to be made on the inhabitants of Tabrīz to enable a force to be sent to expel the invaders. Duwa subsequently seized Ghazna and part of Sīstān and Balkh, whence he invaded India. In 698/1298-99 he invaded Fārs and penetrated to Kāzirūn. An attack by the Mamlūks on Asia Minor in 697-8/1298 was followed by a Mongol invasion of Syria. The Mamlūks were defeated near Ḥimṣ in 699/1299 and Damascus temporarily occupied. In 700/1301 the Mongols of the Golden Horde attacked from the Caucasus via Darband but were repulsed. In 703/1303 another expedition was made against the Mamlūks, ending in defeat at Mardj al-Safar. This was the last attempt by the Īlkhāns to extend their borders to include Syria.

Ghāzān's reign, although a period of military expeditions, was also a period of reform and reorganization, but his reign was too short fully to subordinate the Turko-Mongol tribal element to settled government or to repair the ravages committed during the rule of the earlier Īlkhāns, which had brought about the ruin of agriculture. During the reign of Arghūn there had been an increase in maladministration and extortion. By the accession of Ghāzān, the administration had fallen to a low ebb and the finances of the state were in a critical condition. Farming of the revenue was common, as also were confiscations, extraordinary levies (*nemarī*), and the demand of taxes in advance. Peculation was widespread. Officials of all kinds lived on the country, and the requisitions by *ilčīs*, *i.e.*, envoys and officials despatched by the central government on official business, who travelled through the country with large trains, were a crying evil. Owing to the fact that the treasury was usually empty, the practice of writing drafts on the country had reached unprecedented proportions, and as their realization became increasingly difficult it became the custom to send military expeditions to collect them. Public order also fell to a low ebb: large numbers of fugitive slaves and disaffected elements roamed the countryside (Rashīd al-Dīn in the *Taʾrīkh-i Ghāzānī* gives a vivid account of contemporary conditions).

Realising the difficulty of altering established habits, Ghāzān attacked abuses gradually. He first prohibited the writing of drafts on the peasantry, and reorganised the assessment and collection of taxation. Rashīd al-Dīn, who in all probability played an important part in initiating these policies, claims that as a result the revenue came in and civil and military expenses were paid. The improvement, however, did not last after Ghāzān's reign (cf. Ḥamd Allāh Mustawfī, *Nuzhat al-Ḳulūb*, transl. G. Le Strange, pp. 32-3). The Mongol invasion had brought about great insecurity in matters of tenure and a new expansion of crown lands in the form of *dalāy* lands, *i.e.*, lands which were the property of the ruler, and *indjū* lands, *i.e.*, the appanages of his relatives and the Mongol leaders. Ghāzān attempted to give security of tenure to those in undisputed

possession of land by obtaining a *fatwā* giving validity to the provision in Čingiz Khān's *yāsā*, by which all land claims lapsed after thirty years, and by putting a stop on transactions in land the tenure of which was disputed. The pay of the army was also reorganized and in 703/1303 he reintroduced with modifications the old system of land assignments (*iḳṭāʿ*s) to the soldiery (see further *Landlord and peasant in Persia*, and I. P. Petrushevsky, *op. cit.*).

With the death of Ghāzān in 703/1304 decline set in. There were no more expeditions to Syria. The Turkish rulers in Asia Minor began to throw off Mongol rule. Fārs and Kirmān became increasingly independent. Öljeytü (703/1304—716/1316), who transferred his capital to Sulṭāniyya, failed to complete the reforms of Ghāzān. The empire was divided into rival factions, the most powerful of which were the Čūpānids [*q.v.*] and the Djalāʾirs [*q.v.*]. Ghāzān was succeeded by a child, Abū Saʿīd (716/1316-736/1335), after whose reign the Īlkhān empire broke up, various amirs and provincial governors asserting their independence. (For details of the rule of the Īlkhāns see further J. A. Boyle, *op. cit.*). A period of restless strivings and repeated expeditions by the different leaders to extend their domains at the expense of their rivals ensued. In the east in Harāt there were the Karts [*q.v.*] and in Luristān the Atabegs, also called the Hazāraspids [*q.v.*], both of whom pre-dated the Īlkhāns and acted as their governors in the heyday of Īlkhān power. In ʿIrāḳ and Ādharbāydjān there were the Djalāʾirs, whose founder Ḥasan-i Buzurg first attempted to rule through a series of puppet khāns, and in Fārs and ʿIrāḳ-i ʿAdjam the Indjūids *q.v.* and the Muẓaffarids [*q.v.*], who were perhaps the most successful of the succession states, although internecine strife eventually caused their decay. Their main centres of power were Fārs, Yazd and Kirmān. In the last-named province they succeeded the Ḳutlugh Khāns (the Ḳarā Khitāyiyān), whose founder, Baraḳ Ḥādjib, had established himself in Kirmān after the overthrow of the Khwārazm-shāh by the Mongols. He and his successors ruled as Mongol governors. The last of the Ḳutlugh Khāns, Ḳuṭb al-Dīn Shāh Djahān, died in 703/1303-4. One of the most interesting of the succession states was the Sarbadārid in Sabzawār. They, like the Sayyids of Marʿash, who also established themselves as small local rulers, appear to have based their power partly on a "popular" movement (see further, I. P. Petrushevsky, *Sarbadārids*, translated by Muḥammad Karīm Kishāvarz, in *Farhang-i Īrān Zamīn*, x, 1-4 (1962). All of these local rulers, except the Djalāʾirs, who survived in Lower Mesopotamia until 835-6/1432, were extinguished by Tīmūr, if they had not already disappeared.

The Čaghatāy khānate, which bordered the Īlkhān kingdom on the north-east, had been temporarily usurped by Ḳaydū, Ogedei's grandson. It was recovered by Duwa b. Baraḳ on Ḳaydū's death in 700-1/1301. It consisted of two parts: the western part formed by the oases of the Oxus-Jaxartes basin, excluding the lower course of the Oxus in Khwārazm which belonged to Djoči's khānate, and the eastern part, comprising the Zungarian steppes and known as Mughulistān. In the former the Mongols ruled over a sedentary Muslim population, but in the latter the Čaghatāy khāns were the leaders of pagan nomads. In Mughulistān the Mongol khāns retained their domination, but in Transoxania power passed into the hands of the local Turkish amirs, the most influential of whom in the 9th/14th century was Ḳazaghān, who seized power in 747/1346-7 and ruled some twelve years. His death was followed by an uninterrupted period of war and strife between the Turkish and Mongol khāns of western Turkistān. About 761/1360 Tughluḳ Tīmūr, the newly converted Eastern Čaghatāy khān, sought to assert his dominion over the western as well as the eastern part of the Čaghatāy khānate.

Among the conflicting parties and interests, Tīmūr gradually established himself as the defender of the Islamic borderlands against these renewed attacks from Central Asia. At first, not strong enough to show uncompromising resistance to the invaders, he made terms with Tughluḳ Tīmūr, who gave him Kish as a *suyūrghāl*. He then entered into an alliance with Amīr Ḥusayn, the ruler of Balkh. The next few years (763/1362—769/1367) were a period of great confusion, in which the struggle between the Mongol and Turkish leaders ebbed and flowed. In 766-7/1365 Tīmūr and Amīr Ḥusayn, after being defeated by Ilyās Khwādja Tughluḳ Tīmūr's successor, abandoned Samarḳand, which was, however, successfully defended by the townspeople under the leadership of the *ʿulamāʾ*. When they eventually returned to Samarḳand,, conflict broke out between them. Tīmūr was forced to retire to Khurāsān, but when a new Mongol attack threatened, Amīr Ḥusayn was reconciled to him. The Mongol threat proved to be only temporary, and Tīmūr now turned against his erstwhile ally and took Balkh in 771-2/1370. Although Tīmūr's military power was based on the nomads of western Turkistān, since they were closely linked to the settled population through commercial interests and the protection of the caravan routes, and their chiefs were beginning to acquire property in the towns and to be more fully islamicized, he served, at this period, the interests of both the nomads and the settled population: to the former, who had been rent by squabbles among themselves, he gave cohesion and unity and to the latter security to pursue their commercial activities and to continue their religious life.

Tīmūr's next step was to take the offensive against the nomads of eastern Turkistān, and in a series of campaigns between c. 771/1369—782/1380 he defeated both them and the Kipchaks in Khwārazm. He then turned his arms against the interior of the *dār al-islām*. In 782/1380-1 he invaded Persia, subduing Khurāsān, Māzandarān, and Sīstān. In 786/1384-5 he made a second expedition into Persia, invading Māzandarān again and pushing on to Ādharbāydjān, ʿIrāḳ-i ʿAdjam, and Georgia, coming back via Shīrāz and Iṣfahān. In 790/1388, the Kipchaks under Tukatmish overran the oases of the Oxus-Jaxartes basin up to Samarḳand, but withdrew when Tīmūr returned from Fārs. Two years later, he pursued them into the Kipchak steppe and defeated them at Urtapa in 793/1391. He then went again to Fārs and thence to ʿIrāḳ, Armenia, and Georgia, which he subjugated (795/1393 to 798/1396), before returning once more to Samarḳand. From the spring of 800/1398 to the spring of 801/1399 he was occupied in his Indian campaign and the following autumn (802/1399) he set out for Asia Minor on his most famous campaign, which culminated in the defeat of the Ottomans at the battle of Ankara in 804/1402 and the capture of the Ottoman sultan, Bāyazīd. In the following year Tīmūr raided Georgia and in 806-7/1404 returned to Samarḳand, whence he set out for China, but died en route at Uṭrār in 807/1405 (see further H. Hookham, *Tamburlaine the conqueror*, London 1962, and R. Grousset, *Les empires Mongoles*).

Tīmūr's empire looked back to the Mongols, but although many of its institutions derive from

Mongol practice, his administration had an Islamic veneer and alongside the begs (or amirs), *nā'ib*s, *yasaḳlik* (public guards), *yasā'ul*s (officers charged with the keeping of the public peace), *dārūghā*s, falconers, hunters, and so on, were the whole range of officials known in pre-Mongol times. Under Ḥasan Bāyḳara a sophisticated bureaucratic administration existed, at the head of which was the *dīwān-i aʿlā*, responsible for military and civil affairs. A special *dīwān*, the *dīwān-i buzurg-i imārat* under a *dīwānbegī*, dealt with Turkish and military affairs (see further, ʿAbd Allāh Marwārdī, *Sharaf-nāma*, ed. H. R. Roemer, Wiesbaden 1952). In military affairs Tīmūr carried on Mongol tradition but introduced certain innovations. Although he started his career as the defender of the sedentary Islamised population of western Turkistān against the nomads of eastern Turkistān these terms are relative: the basis of Tīmūr's military power was the nomadic tribes, who made regular summer and winter migrations in which the whole horde took part. Clavijo gives a vivid description of Tīmūr and his horde (*Clavijo: Embassy to Tamerlaine*, 1403-1406, ed. G. Le Strange, Broadway Travellers, 1928, 191 ff.). Their flocks were numbered for taxation. Tradesmen and craftsmen followed the armies, supplying their needs, and the booty obtained in campaigns was bartered and sold in these bazaars. Colonies of workmen were transplanted to Tabrīz and Samarḳand from Syria, China, and other parts of Persia. Artisans were organised in guilds. Some of these were forced to give free labour for the ruler, and in time of war were requisitioned. Samarḳand became under Tīmūr a great industrial and commercial centre. Silk, glass, ceramics, and paper were manufactured there. Trade, which had fallen off since the conversion of the Mongols to Islam, was encouraged with China, India, Persia and Syria. Tabrīz became an important entrepôt.

Tīmūr's religious policy appears to have been dictated by political expediency. In Khurāsān he supported strict orthodoxy but in Syria he appeared as the defender of ʿAlī and the *imām*s. Two important darwish orders, the Niʿmatullāhī and the Nakhshbandī, were founded during his reign. There was a trend towards a closer control of the religious institution which was continued under the Turkoman dynasties of the Black Sheep and the White Sheep and reached its culmination under the Ṣafavids. *Sharʿī* officials were placed under the supervision of a new official known as the *ṣadr*, who was entrusted with their dismissal and appointment, the upkeep of mosques, *madrasas*, graveyards, and *khānḳāh*s, and whose duty, in general, was to further right religion (see especially document 9 in the *Sharaf-nāma*, *op. cit.*).

On Tīmūr's death internecine strife broke out, from which two main kingdoms emerged. Mīrān Shāh, the third son of Tīmūr, and his sons Abū Bakr and Muḥammad ʿUmar, obtained western Persia, with their main centres at Tabrīz and Baghdād, and Shāhrukh, Tīmūr's fourth son, Khurāsān, to which he subsequently added Transoxania. The Tīmūrid state in western Persia did not last long: the Djalā'irs recovered Baghdād and the Turkomans of the Black Sheep, whom Tīmūr had driven out of Armenia, returned to that province and in 810-11/1408 invaded Ādharbāydjān and defeated Mīrānshāh near Tabrīz. Two years later they took Baghdād from the Djalā'irs and found themselves masters of the western part of Tīmūr's empire. The eastern branch ruled rather longer. Shāhrukh (807/1404—850/1447) took Transoxania from one of his nephews and ʿIrāḳ-i ʿAdjam and Fārs from another, thus uniting eastern Persia under his rule. He subsequently attacked the Black Sheep, occupied Ādharbāydjān, and penetrated Armenia, but was unable to defeat the Black Sheep decisively and was forced to leave them in effective possession of Armenia, Ādharbāydjān, and Baghdād (see further below). Shāhrukh was faced by numerous revolts and on his death his kingdom rapidly disintegrated, to fall in part to the Black Sheep and in part to the Uzbegs, who invaded Transoxania at the turn of the 9th/15th century. In spite of the political decline, a brilliant cultural revival took place in Harāt under the successors of Tīmūr and continued down to the end of the dynasty.

(b) Turkomans to Present Day

The devastating campaigns of Tīmūr in Iran between 783/1381—807/1404 swept away the minor dynasties which had sprung up in various parts of the country after the Mongol invasions, and left a political and social vacuum from the Oxus to the Euphrates. In this vacuum, various rival forces fought for supremacy for nearly a century. The establishment of the Ṣafawid dynasty in 907/1501-2 led to the re-integration of Iran and ʿIrāḳ-i ʿArab under one stable administration, certainly for the first time since the break-up of the Īlkhānid empire, *ca.* 736/1335, and, if one takes into consideration the important city of Harāt, virtually for the first time since the invasions of Čingiz Khān [*q.v.*].

At the time of the death of Tīmūr in 807/1405, his descendants found themselves in secure possession only of Khurāsān and ʿIrāḳ-i ʿAdjam, outside Transoxania itself. In the course of the next fifteen years, however, Shāhrukh b. Tīmūr successively annexed the provinces of Gurgān and Māzandarān (809/1406-7), Fārs (817/1414-15), and Kirmān (819/1416-17), and in 823/1420-1 felt strong enough to invade Ādharbāydjān, which had passed into the hands of the Ḳara Ḳoyunlu (Black Sheep) Turkomans.

The Ḳara Ḳoyunlu group of nomadic Turkoman tribes, like their rivals the Aḳ Ḳoyunlu (White Sheep) Turkoman group, had settled in Saldjūḳ times in Armenia, Upper Mesopotamia and Anatolia. In the second half of the 8th/14th century, the Ḳara Ḳoyunlu moved eastwards into north-west Iran, and established themselves in the region of Lake Van as vassals of the Djalā'irids [*q.v.*]. In about 792/1390 the Ḳara Ḳoyunlu *amīr* Ḳara Yūsuf seized Tabrīz and declared his independence of the Djalā'irid sultan. Both rulers were dispossessed by Tīmūr, but regained control of Ādharbāydjān and ʿIrāḳ-i ʿArab respectively within a few years of the death of Tīmūr.

Ḳara Yūsuf rapidly enlarged the area under Ḳara Ḳoyunlu control. In 812/1410 he subjugated Diyār Bakr, held by the Aḳ Ḳoyunlu. In 813/1410 he defeated Sultan Aḥmad Djalā'ir and annexed the whole of ʿIrāḳ-i ʿArab except for a small area of southern ʿIrāḳ. He asserted his authority over various local rulers in Shīrwān and Georgia. In 822/1419 he invaded ʿIrāḳ-i ʿAdjam and expelled the Tīmūrid officers from the cities of Sulṭāniyya, Ṭārum, Ḳazwīn and Sāwa. Ḳara Yūsuf had made the Ḳara Ḳoyunlu the dominant power in western Iran, ruling directly over Ādharbāydjān,

ʿIrāḳ-i ʿArab, and parts of ʿIrāḳ-i ʿAdjam, while the Aḳ Ḳoyunlu of Diyār Bakr, and the Shīrwānshāh, acknowledged their suzerainty.

Ḳara Yūsuf's death in 823/1420 was followed by dissension among his sons, and Shāhrukh was able to subjugate Ādharbāydjān. The Ḳara Ḳoyunlu carried on a guerrilla war against the Tīmūrids, and in 832/1429, and again in 839/1435, Shāhrukh was forced to return to Ādharbāydjān to stabilise the situation. The Tīmūrid governor was replaced by a Ḳara Ḳoyunlu prince subservient to Shāhrukh.

Shāhrukh [*q.v.*], whose reign had represented a measure of stability and reconstruction, died in 850/1447. The Ḳara Ḳoyunlu leader Djahānshāh immediately went over to the offensive and, taking advantage of divisions among the Tīmūrids, extended the Ḳara Ḳoyunlu empire to its greatest extent. He seized Sulṭāniyya and Ḳazwīn in 850/1447, overran the whole of ʿIrāḳ-i ʿAdjam and Fārs within the space of a few months in 856/1452, and in 862/1458 occupied Harāt, the capital of Tīmūrid Khurāsān. A revolt in Ādharbāydjān forced Djahānshāh to cede Khurāsān to the Tīmūrid Abū Saʿīd, who transferred his capital from Samarḳand to Harāt, but Djahānshāh continued to rule over Ādharbāydjān, the two ʿIrāḳs, Fārs, the shores of the Sea of ʿUmān, Kirmān, Sarīr, Armenia, and Georgia, until his death in 872/1468.

During the reign of Djahānshāh a new contender for power in Iran appeared in the shape of the Ṣafawids. Under the leadership of Djunayd [*q.v.*] (851/1447—864/1460), the now strongly Shīʿī Ṣafawid movement entered a new militant phase, and for the first time its leaders aspired to temporal power. Djahānshāh considered the threat so real that he ordered Djunayd to disperse his forces and depart from Ardabīl; should he fail to comply, Ardabīl would be destroyed. Djunayd fled, and ultimately took refuge at the Aḳ Ḳoyunlu court in Diyār Bakr (861-3/1456-9). The political advantages of an alliance against their mutual enemy, the Ḳara Ḳoyunlu, led the militantly Shīʿī Djunayd and the zealously orthodox Aḳ Ḳoyunlu ruler Uzun Ḥasan to sink their religious differences, and to cement their alliance by the marriage of Djunayd to Uzun Ḥasan's sister. Djunayd was killed in battle in Shirwān in 864/1460, but his successor Ḥaydar maintained the close alliance between the Ṣafawids and the Aḳ Ḳoyunlu by marrying Uzun Ḥasan's daughter.

In 872/1468 the Ḳara Ḳoyunlu ruler Djahānshāh attacked Uzun Ḥasan. He was defeated, and the Ḳara Ḳoyunlu empire was overthrown. The Tīmūrid ruler Abū Saʿīd saw this as an opportunity to extend his authority westwards from Khurāsān, but he too was defeated by Uzun Ḥasan, and put to death. The Aḳ Ḳoyunlu thus succeeded to the Ḳara Ḳoyunlu empire in Iran, ʿIrāḳ-i ʿArab, Diyār Bakr and Armenia, but an attempted Aḳ Ḳoyunlu *coup* at Harāt was frustrated by Sulṭān Ḥusayn Mīrzā [*q.v.*], whose occupation of Harāt in 875/1470 inaugurated a period of some thirty-five years of relatively stable and prosperous Tīmūrid rule in Khurāsān. Uzun Ḥasan also had aspirations to extend his empire westwards, but, after some initial success against the Ottomans, he was decisively defeated in 878/1473.

The death of Uzun Ḥasan in 882/1478 marked the beginning of Aḳ Ḳoyunlu decline, as rival princes, supported by, and sometimes dominated by, ambitious *amīrs*, successively contested the throne. In the twenty-five years which remained before the last Aḳ Ḳoyunlu ruler, Murād, was expelled from Iran in 908/1503 by Shāh Ismāʿīl I [*q.v.*], the only thread of continuity is the inexorable progress of the Ṣafawid movement towards its goal of achieving power in Iran by revolutionary means. This progress was marked by the death in battle of two more Ṣafawid leaders (Ḥaydar [*q.v.*], in 893/1488, and ʿAlī in 899/1494), and by the breakdown of the Aḳ Ḳoyunlu-Ṣafawid alliance. Once the mutual enemy, the Ḳara Ḳoyunlu, had disappeared from the scene, it was only a matter of time before the political and military ambitions of the Ṣafawids came into conflict with those of the Aḳ Ḳoyunlu. In 893/1488 Aḳ Ḳoyunlu troops were the major factor in the defeat of Ḥaydar, and in 899/1494 the Aḳ Ḳoyunlu sultan Rustam, having released ʿAlī from imprisonment because he needed his help against a rival prince, then had to crush him when support for him developed on an alarming scale. ʿAlī's brother, Ismāʿīl, escaped, and for five years directed from his refuge in Gīlān the final stages of the Ṣafawid revolution. His emissaries went to and fro between Gīlān and their bases in Anatolia, Syria and the Armenian highlands. It was from these areas that Ismāʿīl derived the élite of his fighting men, his most fanatical adherents, men of the Rūmlū, Ustādjlū, Takkalū, Dhu'l-Ḳadar, Warsāḳ, Shāmlū, Turkmān, Afshār, Ḳādjār and other Turkoman tribes. These men considered Ismāʿīl to be both their *murshid-i kāmil*, as head of the Ṣafawid Order, and their *pādishāh*; *i.e.*, Ismāʿīl was both their religious leader and their temporal ruler. They had acquired the celebrated soubriquet of *ḳizil-bāsh* ("red-heads", T. *ḳızıl-bash*), by virtue of the distinctive crimson hat, with the twelve folds denoting the Ithnā ʿasharī *imāms*, which had been devised for them by Ḥaydar.

In 905/1499 Ismāʿīl made his bid for power; by the autumn of 1500 he had been joined by 7,000 ḳizilbāsh at his rendezvous at Erzindjān. He turned aside to crush the Shīrwānshāh, who had killed both his father and his grandfather, and then, at the battle of Sharūr, he routed Alwand Aḳ Ḳoyunlu. Ismāʿīl entered Tabrīz (907/1501), had himself crowned as the first shāh of the Ṣafawid dynasty, and proclaimed the Djaʿfarī rite of Ithnā ʿasharī Shīʿism to be the official religion of the new Ṣafawid state. He had two main reasons for taking this step: first, he wished clearly to differentiate the Ṣafawid state from the Ottoman Empire, into which it might otherwise have been absorbed; second, he aimed at creating by this means a sense of unity among his subjects, a sense of separate identity which would permit the evolution of a national state in the modern sense of the term. The change to Shīʿism seems to have been accepted by the people at large without any serious display of opposition. Ṣafawid propagandists had, of course, been active for a long period, but there are other factors which may have helped to produce a climate of religious opinion favourable to Ṣafawid Shīʿism, for example, the activities of heterodox and antinomian groups such as the Ḥurūfīs, and the activities of other Ṣūfī Orders in Persia, some of which were unquestionably permeated by Shīʿī ideas. Many, but not all, of the *ʿulamāʾ* resisted the change. Some who did were put to death, notably at Shīrāz; others fled first to the Tīmūrid court at Harāt, and later, after the conquest of Khurāsān by the Ṣafawids, to the Uzbek capital at Bukhārā. To impose doctrinal unity, the Ṣafawids appointed an official termed the *ṣadr*, who was the head of the religious institution, but in practice derived his authority from the political institution.

The first ten years of Ismāʿīl's reign were spent in conquering the rest of Iran and Mesopotamia: In 908/1503 a victory over the remaining Aḳ Ḳoyunlu forces under Sultan Murād, near Hamadān, gave him control of central and southern Iran; Māzandarān and Gurgān were subjugated in 909/1504; Diyār Bakr was annexed in 913/1507, Baghdād was captured in 914/1508, and Khurāsān was annexed in 916/1510 after a crushing defeat of the Uzbeks at Marw. The victory at Marw, however, did not solve the problem of the defence of the eastern marches against the nomads, and, only two years later, a Ṣafawid army was routed at Ghudjuwān, just east of the Oxus, and the Uzbeks swept across Khurāsān as far as Mashhad. Ismāʿīl restored the situation, and an uneasy truce with the Uzbeks followed.

The Sunnī Uzbeks in the east and the Sunnī Ottomans in the west were the principal enemies of the Ṣafawid state. The existence on the borders of Anatolia of a powerful Shīʿī state, which claimed the allegiance of large numbers of Turkoman tribesmen living within the borders of the Ottoman Empire itself, was a threat which the Ottomans could not ignore, and in 920/1514 Selīm I launched what proved to be the first of a long series of invasions of Iran by Ottoman forces. On 2 Radjab 920/23 August 1514 the Ṣafawid army, composed almost entirely of cavalry, was defeated with heavy losses at Čāldirān [*q.v.*] by the fire-power of the Ottoman muskets and artillery. Selīm had to withdraw from Tabrīz after a short occupation, but the Ottomans annexed the province of Diyār Bakr, and the regions of Marʿash and Albistān.

The Ṣafawid defeat at Čāldirān had important repercussions. Ismāʿīl lost his faith in his own invincibility, and during the remaining ten years of his life never again led his men into battle. The ḳizilbāsh, who had revered their ruler as the Shadow of God upon earth and had worshipped him as the manifestation of God, were disillusioned. The actions of the kizilbāsh after Čāldirān, and particularly after the death of Ismāʿīl, show clearly that, although they preserved the outward forms, they considered the concept of their leader as the Shadow of God upon earth, immortal and infallible, to be a polite fiction. From this time, too, the term Ṣūfī, implying a relationship between *murshid* and *murīd* which the ḳizilbāsh had in practice, though not in theory, repudiated, occurs less and less frequently in the sources. The status of Ṣūfīs declined, and the term "Ṣūfī" acquired a definitely pejorative significance under the later Ṣafawids.

Shāh Ismāʿīl died on 19 Radjab 930/23 May 1524, and was succeeded by his son Ṭahmāsp, then ten and a half years of age. The extent to which the theocratic concept of the early Ṣafawid state had broken down in practice was demonstrated by the ten years of civil war between rival ḳizilbāsh factions which marked the beginning of his reign. The authority of the shah was usurped by ḳizilbāsh chiefs, who were the *de facto* rulers of the state during this period. In 940/1533-4, however, Shāh Ṭahmāsp made clear his intention to rule in fact and not in name only, and, for most of the remainder of his long reign of fifty-two years, he maintained a precarious ascendancy over the turbulent ḳizilbāsh

Most Western and Oriental sources give us a totally unfavourable picture of Ṭahmāsp [*q.v.*]. They portray him as a miser, as a melancholy recluse who swung between extremes of abstinence and intemperance, as a man capable of great cruelty. Nobody has given Ṭahmāsp credit for holding the Ṣafawid state together for more than half a century, in the face of the most determined onslaughts by the Ottomans under their greatest conqueror, Süleymān the Magnificent, and by the Uzbeks under one of their greatest leaders, ʿUbayd Allāh Khān. Between 930/1524 and 944/1538, the Uzbeks launched five major attacks on Khurāsān. Between 940/1533-4 and 961/1553, the Ottomans made four full-scale assaults on Ādharbāydjān. Baghdād was captured by the Ottomans in 941/1534, and thereafter ʿIrāḳ-i ʿArab remained in Ottoman hands, except for a brief interlude between 1032/1623—1048/1638. Tabrīz was occupied on several occasions, and Ṭahmāsp transferred the capital to Ḳazwīn, which was not so close to the Ottoman frontier. Attacks by foreign enemies were not the only problem confronting Ṭahmāsp. During the first decade of his reign, Iran was gravely weakened by ḳizilbāsh inter-tribal rivalries and by the defection of groups of ḳizilbāsh to the Ottomans; moreover in 941/1534-5, and again in 955/1548, Ṭahmāsp had to deal with rebellious brothers. In 962/1555 Ṭahmāsp negotiated the Treaty of Amasya, and Iran obtained a respite from Ottoman attack for thirty years.

The reigns of Ismāʿīl I and Ṭahmāsp I represent a period of change and adjustment. Under Ismāʿīl, an attempt was made to reconcile the Ṣūfī organization inherited from the Ṣafawiyya Order with the administrative organization of the Ṣafawid state. The failure of this attempt posed problems in regard to which Ṭahmāsp temporized and to which ʿAbbās I provided solutions which were effective only as short-term measures. The failure precisely to define the scope and function of the principal offices of state during this period produced some degree of conflict between the holders of these offices, and meant that the boundary between the "political institution" and the "religious institution" was never clearly demarcated. The movement away from the theocratic form of government which obtained after the establishment of the Ṣafawid state was noticeable even before the death of Ismāʿīl, and this tendency was reflected in changes in the scope and function of the principal offices of state, and in their relative importance. In particular, the status of the *wakīl-i nafs-i nafīs-i humāyūn*, the *alter ego* of the *shāh* and his vicegerent both in his religious and his political capacity, declined until his position was little different from that of the vizier, the head of the bureaucracy; the power of the *ṣadr*s, once their primary task of imposing doctrinal unity had been achieved, also declined; and the shah himself attempted to restrict the power of the *amīr al-umurāʾ*.

In 982/1574, Shāh Ṭahmāsp became seriously ill, and the Ṣafawid state was once again involved in a crisis. At first, the dissensions which broke out among the ḳizilbāsh appeared to be merely a recrudescence of the factional struggles which had imperilled the Ṣafawid state fifty years previously. But the new crisis was, in fact, of a very different nature. The question from 982/1574 onwards was not which of the ḳizilbāsh tribes should achieve a dominant position over its rivals, but rather, whether the ḳizilbāsh as a whole could maintain their privileged position as the military aristocracy in the Ṣafawid state, in the face of the challenge from new ethnic elements in Ṣafawid society, namely, the Georgians and Circassians. The majority of these people were the offspring of prisoners taken during the course of four campaigns waged in the Caucasus by Ṭahmāsp between 947/1540-1 and 961/1553-4. In addition,

a certain number of Georgian noblemen voluntarily entered Ṣafawid service during Ṭahmāsp's reign. By the time of the death of Ṭahmāsp in 984/1576, the power of the Georgian and Circassian women in the royal *ḥaram* was such that they intervened in political affairs and engaged in active intrigue with a view to securing the throne for their own sons. In this way, they introduced into the Ṣafawid state dynastic rivalries of a new kind.

The struggle for power between the ḳizilbā<u>sh</u> and the Georgians and Circassians, continued during the reigns of Ismāʿīl II (984/1576—985/1577) and Sulṭān Muḥammad <u>Sh</u>āh (985/1578—996/1588), and was finally settled in favour of the latter by the measures taken by <u>Sh</u>āh ʿAbbās I [*q.v.*] (996/1588—1038/1629) — measures which radically altered the social basis of the Ṣafawid state.

The situation which ʿAbbās faced at his accession was critical in the extreme. The Ottomans had resumed operations in Ā<u>dh</u>arbāy<u>dj</u>ān, and the citadel at Tabrīz had been in their hands since 993/1585. In the east, the Uzbeks stormed Harāt in 997/1589, and swept on across <u>Kh</u>urāsān as far as Ma<u>sh</u>had. To free his hands to deal with the Uzbeks, ʿAbbās was forced to negotiate a humiliating peace with the Ottomans which left more Persian territory in Ottoman hands than ever before (998/1589-90). The events of his youth had led him to place no faith in the loyalty of the ḳizilbā<u>sh</u> and he set about creating a standing army which would be paid direct from the Royal Treasury and would be loyal only to himself. From the ranks of the Georgians and Circassians (thereafter termed *<u>gh</u>ulāmān-i <u>kh</u>āṣṣa-yi <u>sh</u>arīfa*) he formed a cavalry regiment of some 10,000 men, and a personal bodyguard of 3,000 men. A regiment of musketeers, 12,000 strong, recruited from the Persian peasantry, and an artillery regiment, also of 12,000 men, completed the new standing army of 37,000 men. In order to pay these new troops, ʿAbbās resorted to the device of increasing the extent of the crown lands (*<u>kh</u>āṣṣa*) at the expense of state lands (*mamālik*). The *mamālik* provinces were in general governed by ḳizilbā<u>sh</u> *amīr*s, who consumed in the areas under their jurisdiction most of the taxes which they levied, but whose self-interest to some extent militated against extortion. Once such provinces were converted to *<u>kh</u>āṣṣa* lands, they were placed in the hands of a comptroller or intendant of the Crown, who had no interest in maintaining their prosperity but whose sole concern was to remit to the Royal Treasury the maximum amount of money possible, in order to ingratiate himself with the shah. Under <u>Sh</u>āh Ṣafī (1038/1629—1052/1642) and <u>Sh</u>āh ʿAbbās II (1052/1642—1077/1666), this process was accelerated to such an extent that even the frontier provinces were brought under the direct administration of the Crown, except in time of war, when ḳizilbā<u>sh</u> governors were reappointed. Ultimately, this policy impaired the economic health of the country and weakened it militarily. Every increase in the extent of crown lands at the expense of *mamālik* lands meant a corresponding decrease in the power of the ḳizilbā<u>sh</u>, and, in practice, the new *<u>gh</u>ulām* regiments did not possess the fighting qualities of the old ḳizilbā<u>sh</u> tribal forces.

In the short term, however, the creation of the *<u>gh</u>ulām* regiments enabled ʿAbbās gradually to reassert the authority of the ruling institution, and so to stabilize the internal situation in Iran. Even so, it was not until 1007/1597 that he dared to commit his forces to a pitched battle against the Uzbeks. In that year, ʿAbbās gained a great victory over the Uzbeks, and liberated Harāt after ten years of Uzbek rule. With the north-eastern frontier at least temporarily secure, ʿAbbās turned his attention to the Ottomans, and by 1016/1607 the last Ottoman soldier had been expelled from Ṣafawid territory as defined by the Peace of Amasya in 1555.

Throughout his reign, ʿAbbās continued his policy of weakening the position of the ḳizilbā<u>sh</u> and strengthening that of the *<u>gh</u>ulām*s, on whom he principally relied for support. He sought to break up ḳizilbā<u>sh</u> tribal groupings, and he constantly replenished his *<u>gh</u>ulām* forces by fresh drafts of Georgian, Circassian, and (from 1013/1604 onwards) Armenian prisoners. The revolution in the social structure of the Ṣafawid state which he thus effected was reflected in changes in the highest levels of the political institution and the religious institution. The titles of *wakīl* and *amīr al-umarāʾ*, which were so closely associated with the organization of the early Ṣafawid state and with the period of ḳizilbā<u>sh</u> supremacy, were no longer used. The *ḳūrčibā<u>sh</u>ī*, as the commander-in-chief of the drastically reduced ḳizilbā<u>sh</u> forces was henceforth usually termed, was still one of the highest officers of state, but his power was balanced by that of the commanders of the new non-ḳizilbā<u>sh</u> regiments, the *tufangči-āḳāsī* and the *ḳullar-āḳāsī*. The influence of the *ṣadr*, who was a political appointee, decreased once doctrinal unity had been imposed throughout the Ṣafawid dominions, and, with the increasing crystallization of I<u>th</u>nā ʿa<u>sh</u>arī theology, the *mu<u>dj</u>tahid*s became the most powerful members of the religious classes. Finally, with the increasing separation between temporal and religious powers, and the growing tendency towards centralization of the administration, the vizier, as head of the bureaucracy, became one of the most influential officials in the state, and frequently adopted the grandiose titles of *iʿtimād al-dawla* and *ṣadr-i aʿẓam*.

The reign of ʿAbbās I in many ways marks the highest point of Ṣafawid achievement. Commercial rivalry in the Persian Gulf and the Indian Ocean between the Dutch, the Portuguese, and the English, meant the development of diplomatic relations between Iran and the West. Spain, Portugal, and England sent ambassadors to ʿAbbās's court, and foreign monastic orders, such as the Carmelites, the Augustinians, and the Capuchin friars, were given permission to found convents in Iran. In 1007/1597 ʿAbbās transferred the capital from Ḳazwīn to Iṣfahān; the more central location of the latter city made it a more satisfactory base for operations against either the Ottomans or the Uzbeks. ʿAbbās addressed himself with characteristic energy to the task of transforming Iṣfahān into one of the most beautiful cities in the world. He embarked on a huge programme of public works, which included mosques, *madrasas*, caravansarais, and *ḥammāms*. The Mas<u>dj</u>id-i <u>Sh</u>āh (begun in 1020/1611) and the Mas<u>dj</u>id-i <u>Sh</u>ay<u>kh</u> Luṭf Allāh (begun in 1012/1603), situated in the famous *maydān* of Iṣfahān known as Naḳ<u>sh</u>-i <u>Dj</u>ahān, are two masterpieces of Iranian architecture. The reign of ʿAbbās also marks the highest point in the renaissance of Iranian arts which had begun under the Tīmūrids in the 9th/15th century and which continued throughout the Ṣafawid period. Except perhaps in painting, in which the productions of the Tabrīz school during the reign of Ṭahmāsp are superior, the artistic productions of the period of ʿAbbās are unsurpassed. In book painting and the illumination of manuscripts, in ceramics, textiles, and the manufacture of carpets and rugs, the Iranian genius achieved its finest expression.

The Ṣafawid state, as rebuilt by S̲h̲āh ʿAbbās, had an imposing façade, behind which the decay which spread with increasing rapidity during the second half of the 11th/17th century was not immediately apparent. Of the Ṣafawid rulers who followed ʿAbbās, only his great-grandson, ʿAbbās II (1052/1642—1077/1666), was a ruler worthy of the name. The degeneration of the dynasty must be attributed to the pernicious practice, instituted by ʿAbbās I himself, of incarcerating the royal princes in the *ḥaram* and never allowing them any contact with the outside world. Prior to ʿAbbās I, it had been the custom to place the royal princes, and in particular the heir-apparent, in the charge of one of the ḳizilbās̲h̲ provincial governors. Such a governor, termed *lala* or *atabeg*, was responsible for the physical and moral welfare of his charge, and for training him for his future responsibilities. Occasionally, an ambitious or rebellious *lala* would use the young prince committed to his care as the focal point of a revolt against the ruler. But this possibility was infinitely to be preferred to the certainty that a prince, brought up by the court eunuchs, in the debilitating atmosphere of the *ḥaram*, would be totally unfitted to rule when the time came to place him on the throne. The increasing control of political and administrative affairs exercised by the officers of the *ḥaram*, in association with the vizier, and the dynastic struggles for the succession resulting from the intrigues of the women of the *ḥaram*, are indeed two of the main features of the later Ṣafawid period and two of the principal reasons for the decline of Ṣafawid power. A third reason, the increase of *k̲h̲āṣṣa* lands at the expense of *mamālik* provinces, which reduced both the economic prosperity and the military strength of the country, has already been mentioned.

Under S̲h̲āh Sulaymān (1077/1666—1105/1694), who was an alcoholic, and under the pious but uxorious S̲h̲āh Sulṭān Ḥusayn (1105/1694—1135/1722), neither of whom took any interest in state affairs, the progressive breakdown of the central administration was marked by increasing inefficiency and corruption at all levels of government. The military machine had been allowed to run down to such an extent that the S̲h̲āh had to turn to the Georgians for help in dealing with a band of Balūči marauders in 1110/1698-99. This warning went unheeded, and in 1121/1709 a group of G̲h̲alzai Afg̲h̲āns seized Ḳandahār, which had been in Ṣafawid hands since 1058/1648. Further north, the Abdālī Afg̲h̲āns ravaged large areas of K̲h̲urāsān, and the whole eastern frontier was in jeopardy. In 1131/1719 the G̲h̲alzai chief, Maḥmūd, having subdued the Abdālīs, temporarily seized Kirmān. Emboldened by the lack of resistance, he returned to the attack two years later, and routed a pathetically weak Ṣafawid force at the battle of Gulnābād, 18 miles east of Iṣfahān, on 20 D̲j̲umādā I 1134/8 March 1722. Too weak to storm the city, Maḥmūd blockaded it. Treachery within the city, and incompetence and irresolution on every side, delivered the Ṣafawid capital to the Afg̲h̲āns in October 1722. Some 80,000 people are said to have perished during the siege from starvation and disease, and the population of Iṣfahān today is probably only one-third of what it was in Ṣafawid times.

The Afg̲h̲āns, though they never subjugated the north and west of the country and though their hold on the remainder was precarious, ruled at Iṣfahān for seven years, 1134/1722—1142/1729. At Ḳazwīn, Ṭahmāsp, a son of S̲h̲āh Sulṭān Ḥusayn, proclaimed himself S̲h̲āh Ṭahmāsp II. In 1138/1726 the Ottomans broke the long peace with Iran which had existed since 1048-9/1639, and the Afg̲h̲ān ruler As̲h̲raf was forced to give *de facto* recognition to the Ottoman occupation of west and north-west Iran. About the same time the Afs̲h̲ār chief Nādir K̲h̲ān emerged as the most powerful of the tribal chiefs lending their support to the Ṣafawid house, and in 1142/1729 he drove the Afg̲h̲āns from Iṣfahān and re-established the Ṣafawid monarchy in the person of Ṭahmāsp II. It soon became clear, however, that Nādir K̲h̲ān's support of the Ṣafawids was only a device to enable him to use pro-Ṣafawid sentiment for his own ends. In 1145/1732 he deposed Ṭahmāsp II in favour of the infant ʿAbbās III, for whom he acted as regent. Four years later, he abandoned this fiction, and had himself crowned as Nādir S̲h̲āh. This marked the extinction of the Ṣafawid dynasty, which had existed only in name since 1134/1722.

Nādir S̲h̲āh (1148/1736—1160/1747) consciously modelled himself on Tīmūr, and there are some points of similarity between his career and that of his exemplar. Like Tīmūr, Nādir was primarily, indeed solely, a soldier, and, like Tīmūr, he was totally unable to administer the territories overrun by his armies. As a result, just as the campaigns of Tīmūr had left a vacuum in south-west Asia, so those of Nādir disrupted the administrative system inherited from the Ṣafawids, impoverished the state, and led to a general breakdown of law and order. The result was half a century of civil war as the Zands and the Ḳād̲j̲ārs fought for supremacy in the vacuum created by Nādir. Nādir restored national dignity and prestige after the humiliation of the Afg̲h̲ān episode, and recovered Iranian territory which had been usurped by the Ottomans, the Russians, and the Afg̲h̲āns. After an ineffectual siege of Bag̲h̲dād in 1145/1733 (the Iranian army still had no proper siege artillery), and an initial defeat at the hands of the Ottoman relief army, Nādir turned the tables on the Ottomans on 1 D̲j̲umādā II 1146/9 November 1733, and the Ottoman commander, Ṭopal ʿOt̲h̲mān Pas̲h̲a, was killed. A provisional treaty between Nādir S̲h̲āh and Aḥmad Pas̲h̲a, the Ottoman governor of Bag̲h̲dād, provided for the return to Iran of all territory seized by the Ottomans in the previous ten years, but the treaty was never ratified by the Porte. In 1147/1735 Russia surrendered Bākū and Darband, and Nādir struck further blows against the Ottomans. ʿAbd Allāh Pas̲h̲a Köprülü-zāde, governor of Ḳārs, was killed at the battle of Aḳ Tepe : ʿAlī Pas̲h̲a surrendered at Gand̲j̲a, and Isḥāḳ Pas̲h̲a at Tiflis; Erivan fell soon afterwards.

Had Nādir S̲h̲āh at this point devoted his efforts to reorganizing the administration of the country on a firm basis Iran might have entered the 19th century better equipped to deal with the internal and external problems of that period. Instead, his growing megalomania led him to invade India, as Tīmūr had done before him. A necessary preliminary was the capture of Ḳandahār, a frontier city which had been held alternately by the Ṣafawids and the Mug̲h̲als during the 10th/16th and 11th/17th centuries, and had been in Afg̲h̲ān hands since 1121/1709. To raise money for his Indian campaign, Nādir levied taxes with more than usual ruthlessness, and Kirmān suffered particularly severely. Ḳandahār surrendered to Nādir in D̲h̲u'l Ḳaʿda 1150/March 1738, G̲h̲azna was occupied in June, and Nādir, crossing the K̲h̲aybar Pass, entered Peshawar. Lahore paid a large indemnity, and thus escaped the sack. After an engagement with the Mug̲h̲al

army at Karnāl in Dhu'l-Ḳaʿda 1151/February 1739, Nādir made his triumphal entry into Delhi on 9 Dhu'l-Ḥidjdja 1151/20 March 1739, and let his troops loose to pillage the city. In this, too, he faithfully followed the actions of his model, Tīmūr, who had sacked Delhi in 801/1398. After levying the enormous sum of 20,000,000 rupees in tribute from the Mughal Empire, Nādir returned to Iran laden with his spoils, which included the fabulous Peacock Throne and the Kūh-i Nūr diamond. The Mughal Emperor Muḥammad Shāh ceded to Nādir Shāh all his territory west of the Indus. On their return from India, Nādir's armies overran Turkistān, the ancient Transoxania and Khwārazm, and Nādir signalled this eastward expansion of his empire by transferring his capital from Iṣfahān to Mashhad. Mashhad had fewer associations with the Ṣafawids—although of course the shrine of the *imām* ʿAlī al-Riḍā was one of the principal places of pilgrimage for the Ithnā ʿasharī Shīʿis—and was nearer the centre of his empire with its new extensions in Turkistān, India and Afghānistān.

In 1153/1741 Nādir Shāh was at the height of his power, but signs of approaching insanity were already visible. His madness was characterized by an overweening lust for power and the most extreme avarice. He became subject to ever more violent fits of rage, associated with the inflicting of ever more terrible punishments. Instead of using his Indian treasure to replenish the exchequer, which he had exhausted by his endless campaigns, he hoarded it in a special treasure-house at Kalʿat-i Nādirī [*q.v.*] in Khurāsān, and imposed further crippling tax burdens on the people to finance expeditions which had no strategic justification, such as his disastrous campaign in Dāghistān in 1154-55/1741-2. Revolts broke out in various parts of his empire, and his attempt to effect a reconciliation with the Sunnī *ʿulamāʾ* did not add to his popularity. On 1 Djumādā II 1160/20 June 1747 he was assassinated by a group of his own officers. His death was followed by a period of anarchy and civil war. In the south, the Zand dynasty gave that part of the country at least a brief respite in the form of orderly, and on the whole good, government. After the death (1193/1779) of Karīm Khān Zand, however, the Zands were weakened by dynastic feuds, and this gave the Ḳādjārs, who from their base at Astarābād had gradually brought most of northern Persia under their control, their chance. Āḳā Muḥammad Khān Ḳādjār escaped from Zand captivity at Shīrāz and embarked on a sixteen-year struggle to assert his authority over that of rival Ḳādjār chiefs, and to overthrow the Zands. By 1209/1795 he had achieved both objectives.

The new rulers of Iran, the Ḳādjārs, were of Turkoman stock. Like the Afshārs, they had formed part of the group of Turkoman tribes which had brought the Ṣafawids to power, and which had constituted the military aristocracy of the Ṣafawid state. The Ḳādjārs, however, like two other Trans-Caucasian Turkoman tribes, the Afshārs and the Bayāts, did not come into prominence until the middle of the 10th/16th century. The first ruler of the new dynasty, Āḳā Muḥammad Shāh, possessed undoubted administrative ability. Making Tehran his capital, he restored security and public order, and reunited Iran under a strong and efficient central administration for the first time for more than half a century. But he maintained his position by the fear which he inspired in all. The castration which he had suffered as a boy at the hands of Nādir's nephew, ʿĀdil Shāh, had rendered him vicious and cruel. In an age when the qualities of mercy and compassion were rare, he became a byword for bloodthirstiness. His ruthless elimination of all possible rivals caused rifts within the Ḳādjār ranks, and militated against the stability of the dynasty. The succession was disputed both in 1250/1834, and again in 1264/1848. Outwardly pious, he cared nothing for an oath, and did not hesitate to obtain his ends by treachery. On 21 Dhu'l-Ḥidjdja 1211/17 June 1797, two years after his coronation, he was assassinated by two of his soldiers. He was succeeded by his nephew, Fatḥ ʿAlī Shāh.

Fatḥ ʿAlī Shāh [*q.v.*] had scarcely ascended the throne when he was forced to recognize that a major change had occurred in the relations between Iran and her neighbours in general, and between Iran and the Great Powers in particular. The advent of the 19th century saw the beginnings of Great Power rivalry in Persia which directly or indirectly affected the political, social and economic life of the country. Already Āḳā Muḥammad Shāh, by his atrocities in Georgia, had caused that country to abandon its traditionally Persian orientation and turn to Russia. Russia had eagerly seized this opportunity to resume that southwards movement toward the Persian Gulf which had been a cardinal point in Russian policy since the time of Peter the Great. Already Russia had demonstrated that, in the military sciences, Iran had fallen behind the West to an alarming extent during the 18th century. If Iran was to preserve its independence, it needed modern weapons and an army trained on modern lines. This point was emphasized when the Russians annexed Georgia in 1800. Fatḥ ʿAlī Shāh's political naïveté and ignorance of world affairs led him to sign the Treaty of Finkenstein (4 May 1807) with Napoleon. Article 4 pledged France to work for the restitution of Georgia to Persia. In return, Fatḥ ʿAlī Shāh promised to declare war on Great Britain (art. 8), and to allow French troops the right-of-way across Iran as part of Napoleon's Grand Design for the invasion of India. The Treaty of Finkenstein, however, was rendered a dead letter almost immediately by the Treaty of Tilsit (2 July 1807), which brought to an end hostilities between France and Russia, and gave Russia a free hand to resume her aggression against Iran. Russia lost no time in pressing her advantage. By the Treaty of Gulistān [*q.v.*] (12 October 1813), Iran lost all her rich Caucasian provinces, and only Russian naval vessels were allowed to operate on the Caspian Sea. A border dispute caused war to break out again in 1826, and the Treaty of Turkomanchai (22 February 1828) imposed even more severe terms on Iran. Iran ceded Erivan and Nakhčiwān, and the Aras river was fixed as the Russo-Iranian border. Iran had to pay a heavy indemnity, but the most significant clause in the Treaty was that concerning "capitulations", *i.e.*, extra-territorial rights for Russian officials resident in Iran. The "capitulations" [see IMTIYĀZĀT] infringed the rights of Iran as a sovereign and independent nation, and marked a new phase in the relations between Iran and the Great Powers. Other countries, including Britain, hastened to follow the Russian example and to demand extra-territorial rights for their nationals in Iran, and the direct penetration of Iran by foreign influences may be said to date from this time.

Fatḥ ʿAlī Shāh's grandson, Muḥammad Shāh, who succeeded to the throne in 1834, attempted to recover territory which had been lost in the east

to the Afghāns. Britain went to the aid of the Afghāns, and Muḥammad Shāh had to abandon the siege of Harāt. Throughout the 19th century, British policy was dominated by one obsession, the defence of India. To achieve this, Afghānistān had to be maintained as a buffer-state, and Iran could not be allowed to regain the territory which had been taken from her by the Afghāns. Consequently, British armies were dispatched from India in 1837, when Iranian troops threatened to recapture Harāt, and in 1852 and 1856, when they succeeded in re-taking that city. Finally, by the Treaty of Paris in 1856, Iran was forced to recognize the independence of Afghānistān and to reconcile itself to the permanent loss of a city which in Tīmūrid and Ṣafawid times had been one of the great cities of Khurāsān.

During the reign of Muḥammad Shāh, the first rumblings of social protest found expression in the politico-religious revolt which followed the manifestation of the Bāb (1844). The Bāb declared himself to be the Hidden Imām (the Mahdī or *ṣāḥib al-zamān*), and in 1848 the Bābīs declared their secession from Islam and the *sharīʿa*. The revolt was harshly repressed by the government, and the Bāb himself was executed at Tabrīz in 1850. An unsuccessful attempt on the life of Nāṣir al-Dīn Shāh in 1852 led to further persecution of the Bābīs. The movement split into two groups, termed Bahāʾīs and Azalīs, of which the former is the more important. Its leader, Bahāʾ Allāh, was banished from Iran, but Bahā'ism was later widely disseminated in Europe and America [see BĀB; BĀBĪS; BAHĀʾ ALLĀH; BAHĀʾĪS].

Nāṣir al-Dīn Shāh, who came to the throne in 1848, and whose long reign was ended only by his assassination in 1896, was a more able man than either of his two immediate predecessors. He appreciated the need for change, if Iran was to retain her independence and to break the political stranglehold which was being exerted by Britain and Russia. During his reign, however, the other half of the Russian pincer gripping Iran lengthened inexorably. In 1865 the Russians captured Tashkent, and extinguished the khānate of Khoḳand. In 1868 they took Bukhārā and, from their new base at Krasnovodsk on the eastern shore of the Caspian, pushed steadily forward into Central Asia. They put an end to the khānate of Khiva in 1873, crushed for ever the Turkoman tribes of the steppe at the battle of Gök Tepe [*q.v.*] (1881), and completed the conquest of Trans-Caspia by occupying Marw in 1884. The Atrek river was established as the new Russo-Iranian frontier in the east.

Nāṣir al-Dīn Shāh instituted a policy of granting concessions to European powers, in the hope that this would improve the economic prosperity of the country. The net result, however, was that by the end of the 19th century, most of Iran's economic resources were exploited or directed by foreign concessionaires, who obtained sweeping concessions in return for paltry sums of money which satisfied the shah's immediate needs. In 1872, for example, a British subject, Baron Julius de Reuter, obtained the exclusive right to exploit all minerals in Iran (except gold and precious stones), to build factories, to construct railways, canals and irrigation works, to exploit the forests, to create a national bank and public utilities (such as a telegraph system), and to control the customs. Strong Russian pressure led the shah to rescind the concession, and, as compensation, the British received a concession to establish the Imperial Bank of Persia (1889). The Russians followed suit with their Banque des Prêts, or Loan and Discount Bank. In 1890, the celebrated Tobacco Concession was awarded to a British company. A letter written by Sayyid Djamāl al-Dīn al-Afghānī [*q.v.*] to the chief *mudjtahid* at Sāmarrā, caused the latter to issue a *fatwā* prohibiting the use of tobacco by all believers until such time as the shah cancelled the concession. The *mullās* and *mudjtahids* organized demonstrations in Shīrāz, Iṣfahān, and Tabrīz, and the shah had to revoke the concession in December 1891. This was a significant occasion : for the first time popular opinion had openly opposed the shah, and the shah had had to give way. As usual, popular opinion had been voiced through the medium of the religious classes, who could, in certain circumstances, be counted on to take the lead in opposing the shah and the government.

Growing discontent with the incompetence and corruption of the government, and resentment at foreign political pressure and economic control, found expression during the last quarter of the 19th century in the form of a challenge to the traditional pattern of society. Secret societies (*andjumans*) were formed whose members discussed the ideas of Western liberalism and problems of social reform [see DJAMʿIYYA]. Out of this social ferment grew the Constitutional or Nationalist movement, which began by demanding a measure of social and judicial reform, the dismissal of certain tyrannical officials, and the expulsion of certain foreign concessionaires, notably the much disliked Belgian Director of Customs, and ended by demanding the promulgation of a Constitution and the establishment of a National Consultative Assembly [see DUSTUR: iv.—Iran]. Although the Fundamental Law was not signed by Muẓaffar al-Dīn Shāh until 30 December 1906, the first National Assembly (Madjlis) was convened on 7th October 1906.

The victory over despotism, far from being won, had in fact barely begun, and the Nationalists, absorbed in their struggle with the shah, were unable to prevent Iran falling even further under foreign domination. Muḥammad ʿAlī Shāh, who came to the throne in 1907, tried by every means to subvert the Constitution and to prevent the implementation of bills passed by the Madjlis. The religious classes, who up to this point had supported the Constitutionalists, mainly from patriotic motives, began to be alarmed by the views of some of the more radical deputies, and this portended a fatal split in the ranks of the Nationalists. On 31 August 1907 the terms of the Anglo-Russian Convention, a treaty inspired by the fear of resurgent German militarism, were made public. Iran was to be divided into a Russian and a British sphere of influence, separated by a neutral zone. In June 1908 the shah declared martial law in Tehran and closed the Madjlis. Despite strong pressure from the Russians, whose troops occupied Tabrīz, the Nationalists mounted in the provinces a counter-offensive which resulted in the deposition of the shah in July 1909. His eleven-year-old son Aḥmad was proclaimed shah. In July 1911 an abortive attempt by the exiled Muḥammad ʿAlī to reinstate himself in Iran led to further direct Russian intervention, and on 3 Muḥarram 1330/24 December 1911 the Madjlis was again forcibly closed.

During World War I, although Iran was a neutral, her territory became a battlefield for Turkish, Russian and British forces, and Iran emerged from the war in a state of administrative and financial chaos. Lord Curzon's solution was an independent

Iran firmly under British tutelage, and the Anglo-Iranian Treaty of 1919 provided for the appointment of British advisers to the Iranian Government. The treaty was never ratified by Iran. The Bolsheviks, after the collapse of the short-lived Soviet Socialist Republic of Gīlān [see DJANGALĪ], concluded the Soviet-Iranian Treaty of 26 February 1921, by the terms of which they renounced the imperialist policies of the former Tsarist regime. Five days before the signature of this treaty, Reżā Khān seized power by *coup d'état*. Reżā Khān was the commander of the Cossack Brigade, created in 1879 by Nāṣir al-Dīn Shāh as a royal bodyguard and used by Muḥammad ʿAlī Shāh to suppress the Nationalists in the period 1907-9. The atmosphere of the post-war period was favourable to Reżā Khān's attempt to re-establish national integrity and independence: the Constitution had been suspended; there had been a complete breakdown of government authority; the treasury was empty, and famine conditions prevailed. Riḍā Khān first thought of abolishing the monarchy and establishing a republic, but, faced with strong opposition from the *ʿulamāʾ* and other traditional elements, he abandoned the idea. Aḥmad Shāh was deposed in 1923, and Reżā Khān was proclaimed shah in December 1925 and crowned on 25 April 1926 as the first ruler of the new Pahlavī dynasty.

Reżā Shāh was determined to launch Iran into the 20th century. Prior to his accession, despite the fact that Iran had been officially converted from a mediaeval Islamic state to a modern constitutional monarchy by the granting of the Constitution in 1906, there were few signs of change in the traditional structure of society. The far-reaching programme of westernization, modernization, and centralization of the administration, on which Reżā Shāh embarked, involved a major upheaval of the traditional social order, and the abolition or modification of many traditional Islamic institutions. Without possessing an ideology, he succeeded in carrying out a revolution. He was impatient with the intellectuals, whom he blamed for Iran's weak and divided state. Unlike Atatürk, he made no long statements of policy, wrote no articles. His failure adequately to explain his objectives to the people was, in fact, a source of weakness. In so far as he succeeded in his objectives, his policies were beneficial to Iran. He completely reorganized the army and created the first unified standing national army in Iran. Between 1921 and 1941, on average one-third of the national budget was allocated to the armed forces. He reorganized the Civil Service on Western lines. In successive phases he laid the foundations of a modern judiciary system: the Penal Code was promulgated in 1926 and the Civil Code in 1928, the year which saw the abolition of the much hated capitulations. Each step necessarily meant a further blow at the position of the *sharīʿa* and at the power of the religious classes in general. In the field of education, the *maktabs*, where pupils of all ages were taught in one room by an *ākhūnd*, were swept away. Compulsory state education for both sexes was introduced (it has not yet been fully implemented, particularly in rural areas), and the curricula were modernized. Teachers' Training Colleges were established, and the University of Tehran was founded in 1935. In 1940 all foreign missionary schools were taken over by the government. In the field of commerce, Reżā Shāh established a number of state monopolies, partly to strengthen the Iranian economy vis-à-vis Britain and Russia, and partly to provide additional revenue. The entire cost of the Trans-Iranian Railway, constructed from the Caspian Sea to the Persian Gulf between 1926-38, was defrayed by means of a tax on tea and sugar, which were state monopolies. Reżā Shāh did much to develop industry in Iran, and his efforts to develop an Iranian textile industry succeeded in making Iran to a large extent independent of Russian textiles. On the debit side, Reżā Shāh, as his reign progressed, showed increasingly despotic tendencies. He became impatient of all criticism, and virtually suppressed political parties, trade unions, and the Press. The Madjlis was reduced to the status of a rubber-stamp. Two areas in which Reżā Shāh failed signally were agriculture and relations with the tribes. Not until 1937 did he make any attempt to improve the lot of the peasants or to introduce legislation to encourage landlords to improve methods of cultivation. Even then, because the implementation of the legislation was entrusted to the very landowners at whose interests it was aimed, nothing was achieved. In regard to the tribes, his policy of enforced resettlement, often in unsuitable regions, failed, and his severe treatment of many tribal leaders left a legacy of bitterness.

During Reżā Shāh's reign, German political and economic influence in Iran increased to a marked degree. Since the Anglo-Russian Convention of 1907, Iran had been psychologically prepared to accept the friendship of a third power which might act as a buffer against British and Russian pressure. Germany, which had no previous history of interference in Iran's affairs and which seemed to be at a safe distance, was welcomed by Reżā Shāh as the "third power". Germany's share of Iranian trade jumped from 8% in 1932 to 45% in 1940. Much of the machinery and heavy equipment needed for Reżā Shāh's programme of industrial expansion was supplied by German, and after Germany's annexation of Czechoslovakia, by Czech firms. German architects designed many of the new government and public buildings in Tehran. In 1936 the German Minister Dr. Schacht visited Iran, and expressly exempted Iranians, as being "pure Aryans", from the provisions of the Nuremburg race laws. On the heels of German technicians came German cultural officials and "tourists", who soon constituted an effective Fifth Column in Iran. In 1941 Britain and Russia presented an ultimatum to Reżā Shāh, calling on him to expel large numbers of these Germans from Iran. Reżā Shāh refused, and on 25 August British and Russian forces simultaneously invaded Iran. Reżā Shāh abdicated and went into exile; he died at Johannesburg in 1944. His son, Muḥammad Reżā Shāh, succeeded to the throne.

The position faced by the young shah was one of the utmost difficulty. There was a dearth of leaders—one consequence of Reżā Shāh's concentration of power in his own hands. Effective government was in any case virtually impossible while the country was occupied by foreign troops. The liberalizing of internal conditions released forces of an illiberal character—forces of the extreme right, such as the *fidāʾiyyān-i islām* [*q.v.*], a terrorist organization which came into being about 1943 and which was later protected by the religious leader Āyat Allāh Kāshānī, and forces of the extreme left, such as the Tudeh party, which was formed in 1942. Initially, the Tudeh party attracted many frustrated intellectuals of leftish sympathies who were not

necessarily Communists, but the party fell more and more under Communist influence and direction, and in 1945 the Tudeh, in close co-operation with the Russians, engineered the overthrow of the authority of the central government in Ādharbāydjān and Kurdistān. By the terms of the Tripartite Treaty of Alliance (29 January 1942), the Allies had promised to withdraw their troops from Iran within six months from the termination of hostilities with Germany and its associates, but Russian troops did not leave until May 1946. Deprived of Russian support, the Autonomous Republic of Ādharbāydjān and the Kurdish People's Republic collapsed before the advance of the Iranian army in October 1946.

German influence in Iran came to an abrupt end in 1941, and the United States now became the "third power" in Iran. American involvement rapidly increased after the formation in 1942 of the Persian Gulf Command, which developed the port facilities at Khurramshahr, Bandar ʿAbbās and Bandar Shāhpūr, and assisted in the supply of war material to the Soviet Union through Iranian territory. The United States also furnished Iran with military and financial advisers. Among the latter was Dr. Millspaugh, who had functioned in a similar capacity in Iran from 1922-27. Finally, in 1947, the United States extended the "Truman doctrine" to include Iran as well as Turkey and Greece, and was thus definitely committed to the maintenance of Iran's independence.

The Tudeh Party rapidly recovered from its defeat in Ādharbāydjān in 1946, and its increased militancy caused widespread insecurity and unrest. On 4 February 1949 a Tudeh Party member made an attempt on the life of the shah. This action was at once followed by the outlawing of the Party and by the reimposition of martial law. The second important event of 1949 was the inauguration of the First Seven-Year Plan for Economic Development. The third significant event of 1949, a year which in many respects marks a turning-point in the history of modern Persia, was the formation by Dr. Muṣaddiḳ of the National Front. This was a coalition of groups of every political hue, from the neo-Fascist *Sumka* Party and the extreme right-wing *fidāʾiyyān-i islām* led by Kāshāni, through the centre block of the Iran Party, composed of bourgeois nationalists and the intelligentsia, to left-wing intellectual groups such as Khalil Māliki's "Third Force". The only common ground shared by these disparate political groups was xenophobia, and fear of the re-imposition of royal dictatorship. There were clear signs that the shah, frustrated by the persistent failure of the Madjlis to pass urgently needed legislation, and desirous of pressing ahead with social and economic reforms, was considering assuming a greater degree of executive power, and each group had its own reasons for opposing such a move.

In 1950 the shah took the first positive steps in the direction of social and economic reform when he established the Imperial Organization for Social Welfare, and transferred to this organization, for distribution to the peasants, the crown lands. He further appointed to the office of Prime Minister General ʿAlī Razmārā, an honest, patriotic and energetic man. General Razmārā immediately launched an anti-corruption drive which was so effective that still more individuals arrayed themselves against him and the shah. On 7 March 1951 General Razmārā was assassinated by a member of the *fidāʾiyyān-i islām*, an act which put an end to orderly progress towards reform. Dr. Muṣaddiḳ introduced into the Madjlis a bill calling for the nationalization of the oil industry. On 29 April, Dr. Muṣaddiḳ became Prime Minister, and at once implemented the oil nationalization law and appropriated the Anglo-Iranian Oil Company's installations. Muṣaddiḳ's National Front supporters, deprived of the principal target for the xenophobia which had held them together, soon showed signs of disunity. Muṣaddiḳ, in the absence of oil revenue, faced a financial crisis; furthermore, once he had achieved his "negative equilibrium", the poverty of his political thinking became apparent. Far from ushering in a social revolution, Muṣaddiḳ found himself obliged to demand plenary powers and to resort to unconstitutional means in order to maintain his own position. The dissolution of the Senate (the upper house of the Iranian Parliament, provided for in the 1906 Constitution but not convened until 1950), in July 1952, was followed by that of the Supreme Court (November 1952) and of the Madjlis itself (August 1953). In addition, Dr. Muṣaddiḳ imposed martial law and curbed the Press. After January 1953, when Muṣaddiḳ insisted on an extension of his plenary powers, he found himself in a position of increasing isolation as National Front leaders such as Makkī, Baḳāʾī and Kāshānī successively broke away from him. On 13 August the shah issued a *farmān* dismissing Muṣaddiḳ and appointing General Zāhidī Prime Minister. Muṣaddiḳ refused to take cognisance of the *farmān*, and the shah temporarily left the country. On 28 Murdād 1332 s./ 19 August 1953 Zāhidī suppressed the Tudeh mobs over which Muṣaddiḳ no longer had any control, and succeeded in establishing himself in Tehran. The Shāh returned to Iran, and in November 1953 Muṣaddiḳ was brought to trial on a charge of treason, on the grounds that he had defied an imperial *farmān* and had abrogated the constitutional procedures and basic laws of the land. He was sentenced to three years' solitary confinement, from which he was released in August 1956.

After the fall of Muṣaddiḳ, the oil dispute was settled (August 1954) by the formation of a consortium of British, American, Dutch and French companies, which ran the industry on behalf of the National Iranian Oil Company. On 3 November 1955 Iran joined the Baghdād Pact, with Great Britain, Turkey, Pakistan and ʿIrāḳ; ʿIrāḳ withdrew in 1959, and the alliance was renamed the Central Treaty Organization (CENTO). The shah, advocating a policy of "positive nationalism", indicated that he intended to exercise greater personal control over the administration of the state than he had prior to the dictatorship of Muṣaddiḳ. In 1957 the National Security Organisation (SAVAK) was formed. The shah attempted to check corruption. In 1958 the Imperial Investigation Organization was set up to receive and investigate complaints from the public against any official of the bureaucracy, judiciary, or army, and this was followed by the passage of several bills designed to discourage bribery and peculation by government officials. In 1958 the Pahlavī Foundation (*Bunyād-i Pahlavī*) was set up to administer certain resources of the Crown and to expend the income accruing from these assets on social services. On 5 October 1961 the shah handed over to the Pahlavī Foundation property valued at more than £ 47,500,000, comprising farms, villages owned by the shah, hotels, the shah's holdings in the Iranian oil tanker fleet,

and all stocks and shares held by the shah. These funds and assets were constituted into a *wakf*, or trust, for charitable, social, educational and health services. In this way, the shah has virtually divested himself of the personal fortune which he had inherited from his father. The birth of a son and heir (Reżā) to the shah and the Empress Faraḥ on 31 October 1960 was a stabilizing factor in Iranian affairs, in that it assured the continuance of the Pahlavī dynasty (succession is through the male line only). Nevertheless, the political outlook continued to be uncertain. The shah's policy of "repolitization" had resuscitated the National Front, which contained many of Muṣaddiḳ's former supporters. The shah's experiment in "controlled democracy", in which two artificially-created parties known as *Milliyūn* and *Mardum* were to represent the government party and the "loyal opposition" respectively, predictably failed. The shah had to annul the elections of August 1960, and the new elections, begun in January 1961, were accompanied by such widespread disorders that on 9 May 1961 the shah, using powers which had been granted to him in 1949, dissolved the Madjlis and the Senate. He took this action not only "for the protection of the nation's rights and interests, and to safeguard the Constitution", but also in order that "no obstacles should hinder the strong Government which had been appointed to institute fundamental reforms."

As an earnest of his intentions, the shah promulgated the Agrarian Reform Bill (15 January 1962). Prior to this, all legislation designed to break up the large estates, and thus make land available for distribution to the peasants, had consistently been blocked in the Madjlis. The shah had completed his programme, begun in 1951, of distributing crown lands to the peasants, but his example had not been followed by the large landowners. Under the provisions of the Agrarian Reform Bill, no landowner was to be allowed to own more than one village, regardless of size; all villages in excess of this allowance were to be bought by the State and sold to the peasants. Considerable progress was made during 1962 in implementing the new regulations, and land reform was a major item in the shah's six-point programme which was approved by national referendum in January 1963; other radical reforms were the enfranchisement of women, and the creation of the "Literacy Corps" to combat illiteracy, particularly in rural areas. This six-point programme was opposed by the National Front, and opposition from the religious classes culminated in serious rioting in the capital and the major provincial cities in June 1963. In September 1963, after an interval of more than two years during which the shah ruled by decree, general elections were held, and the newly-formed National Union Party, a coalition pledged to give full support to the shah's reform programme, gained a strong majority in the Madjlis. The elections were boycotted by the National Front. The election of six women to the Madjlis no doubt reflected the fact that, in these elections, women for the first time were able to vote.

Since 1963, the shah has made steady progress with his "white revolution", or "revolution from above," despite further acts of violence by those opposed to his policies. On 21 January 1965, for instance, the Prime Minister Ḥasan ʿAlī Manṣūr, whose New Iran Party, formed in December 1963, commanded a large measure of support in the Madjlis, was shot and mortally wounded by a supporter of an extreme right-wing *mudjtahid*. In April 1965 yet another attempt was made to assassinate the shah. The greatest hope for the future, perhaps, lies in the achievements of the Plan Organization. The First Seven-Year Plan was launched in 1949, but the preliminary surveys and blueprints had hardly been completed before Muṣaddiḳ's nationalization of the oil industry deprived the Plan Organization of its principal source of revenue, and consequently many of the projects remained unrealized. The Second Seven-Year Plan (1956) provided for the expenditure of $ 850,000,000 (to be obtained partly from oil revenue and partly from foreign loans) on communications, agriculture and irrigation; industry and mines; and public works. The Second Plan brought positive benefits, including the completion of major hydro-electric and irrigation projects like the Karadj dam (1961), the Safīd River dam (1962), and the Diz River dam (1963). This last is the largest Iranian development project to date. It is designed to irrigate 325,000 acreas of Khūzistān which were once fertile, but which for centuries have been arid; the hydro-electric project associated with the dam has a potential capacity of 520,000 Kw. It is only one of fourteen major projects scheduled for Khūzistān. During the period of the Second Plan, too, the capacity of the Gulf ports was increased, highways were built, and the production of sugar, construction materials, and textiles was increased. The Third Economic Development Plan, inaugurated in 1962, has been severely hampered by drastic cuts in the budget of the Plan Organization, but in October 1963 the shah pledged more money for this purpose. On 29 July 1963 Iran and the Soviet Union signed an Economic and Technical Co-operation Agreement for the construction of a barrage on the River Araxes which will irrigate 148,000 acres on both sides of the frontier. The oil industry, under the control of the National Iranian Oil Company, continues to expand, and production increases as new oil-fields are discovered.

There has been a gradual détente between Iran and the Great Powers as the latter have relaxed their political and economic pressure. Simultaneously, relations between Iran and its immediate neighbours have become closer as a result of the establishment in 1965 of the Regional Co-operation for Development Corporation (R.C.D.). The participants in this corporation are Pakistan, Iran and Turkey, and already joint schemes are in progress in such fields as communications, industry, education and health.

The stability of the dynasty has been further assured by the birth of a second royal prince, ʿAlī Reżā, on 28 April 1966, and particularly by an amendment to the Constitution effected on 7 September 1967. This amendment provides that, if the shah dies before Crown Prince Reżā comes of age, or if the shah is unable to carry out his duties, the Empress Faraḥ will act as Regent until the crown prince reaches the age of twenty. In such a case, the Regent will be assisted by a Council of Seven, including the Prime Minister, the Presidents of the Madjlis and the Senate, and the President of the Supreme Court. On 26 October 1967, the shah, then in the twenty-seventh year of his reign, was officially crowned. This was a symbolic act, since the shah had repeatedly declared that he did not wish to be crowned as long as Iran was under foreign domination. There is no doubt that Iran today (1971) is more truly independent than at any time since 1800. The reforms introduced by the shah have already brought about radical changes in the struc-

ture of Persian society, and this trend is likely to become more marked in the years to come.

(R. M. SAVORY)

vi.—RELIGIONS

When the Arabs destroyed the Sasanian empire they also dealt a heavy blow to the national religion of ancient Iran, Zoroastrianism. As the official cult of the state, the Mazdean church had become dependent on the support of the political body and had identified itself to a large extent with the existing social order. As a result of this the clergy had lost touch with the broad masses of the population. Although our knowledge of the religious situation during the last days of the Sasanids is very limited, it seems certain that Zoroastrianism was no longer a very vital force, at least not in the orthodox form of the religion. Sectarian movements, the true nature of which is still rather difficult to ascertain, provided alternatives to the official doctrines and practices. The most important of these was Zurvānism.

In the Islamic theocracy, which during the first century of its existence was dominated by the Arabs, the Zoroastrians could only retain their identity as one of the tolerated religious minorities. In general, the Arab conquerors did not insist on an immediate conversion of their foreign subjects. In most cases, they were satisfied with the conclusion of a treaty which guaranteed freedom of cult to the non-Muslims in exchange for tribute. Originally the Zoroastrians (*Madjūs* [*q.v.*]) were not included among the "people of the Book" (*Ahl al-Kitāb* [*q.v.*]), but very soon the doctrine was adapted in such a manner as to extend the contractual protection (*dhimma* [*q.v.*]) to the Zoroastrian communities as well. Traditions containing decisions made by the Prophet in favour of the Zoroastrians in Baḥrayn and Yaman were adduced in support of this new interpretation.

Thanks to the tolerant attitude of Islamic officialdom, the Mazdeans were able to consolidate their position by retreating into small close communities standing aside from the life of the Islamic commonwealth. In this way they were able to survive the coming of Islam for several centuries, especially in rural districts and in those provinces where the Arabs did not settle in great numbers. Fire-temples continued to function in many parts of the country. The main centre of intellectual activity of the Zoroastrian theologians was Fārs. The archaic Pahlavi was used to commit the whole body of religious knowledge to writing after it had been transmitted chiefly by oral tradition during the pre-Islamic period. In some of the Pahlavi books there are traces of a confrontation with Islam, more specifically with the speculative *kalām* of the Muʿtazila. Important in this respect is the apologetic work *Shkand Gumānīk Vičār* ("The decisive solution of doubts") (edited by P.-J. de Menasce, Freiburg 1945). Citations from the Ḳurʾān occur in the Zoroastrian encyclopaedia *Dēnkart* (cf. A. Bausani, *Persia religiosa*, 138 ff.). This renaissance of Mazdean religious culture reached its peak in the 8th-9th centuries. Afterwards, the pressure exerted by the Muslim environment, which by that time had already been strongly iranized, became too strong. Those who did not want to follow the majority of the people in their conversion to Islam began to leave Iran. This exodus to Gudjarāt seems to have started in the 10th century A.D. [See PĀRSĪS]. Only a small minority continued to adhere to the religion in Iran. In later times they were chiefly concentrated in Yazd and Kirmān. They were rather contemptuously designated as *gabrs* [*q.v.*].

Already the Sasanian empire had had its religious minorities. Its policy with regard to these groups had been subject to many changes resulting from the vicissitudes of foreign and internal political events. Generally speaking, the minorities were far better off under Islamic rule. This is especially true of the Manichaeans who had fled from Sasanian persecution to Central Asia but partly returned to the homeland of their creed, Mesopotamia, in the early Islamic period. Little is heard of them until ʿAbbāsid times when they began to exert a considerable intellectual influence which was countered both by Muʿtazilī apologists and by an official inquisition [see further *s.v.* ZINDĪḲ]. As far as Iran is concerned, there are only scattered references to Manichaean communities in the north-eastern provinces. A *Khānḳāh-i Manāviyān* directed by a *nigōshak* is still mentioned by the *Ḥudūd al-ʿālam* (p. 113) in 372/982-3. Persian literature has preserved numerous references to Manichaean painting.

The Christians in Iran belonged in the main to the Nestorian church which had sought here a refuge from persecution in the Byzantine Empire. Its missionary activity did not have much success in Iran. The evidence relevant to the early Islamic period points to the existence of a limited number of bishoprics with a relatively great density in Fārs. In the north-east, Marv was the see of a Metropolitan.

The settlement of Jews in Iran goes back to antiquity. They enjoyed a large amount of tolerance in the country both before and after the coming of Islam. Their communities, often living in separate Yahūdiyya-quarters, were to be found in many of the larger cities, but were particularly important in Khūzistān, Hamadān and Iṣfahān. At an early stage, the Iranian Jews started to use Persian for their writings, using the Hebrew-Aramaic alphabet. A small but interesting Judaeo-Persian literature [*q.v.*], consisting mainly of religious works, has been preserved.

Since the 2nd century B.C., Mahāyana Buddhism had penetrated those parts of Central Asia which were inhabited by Iranian peoples. Already in pre-Islamic times it had to retreat before Zoroastrianism but it continued to be of some importance in the region of Gandhara and Balkh during the first few centuries of the Islamic era. The Buddhist convent of Naw Bahār (from Sanskrit *nōva vihāra* "new monastery") was very renowned and figures often in early Persian poetry. The Barmakids, the Iranian viziers of Hārūn al-Rashīd, were descended from an abbott (*parmak*) of the convent [cf. AL-BARĀMIKA].

The process of Islamization which eventually made Iran a thoroughly Islamic country took several centuries to be completed. The great historians of the Arab conquest (*e.g.*, al-Balādhurī, al-Ṭabarī), as well as a number of local histories (*e.g.*, the *Taʾrīkh-i Sīstān*, al-Narshakhī on Transoxania and Ibn Isfandiyār on the Caspian provinces), have transmitted a great variety of reports on the conversion of groups or individuals originating from different regions and scattered over a large period of time. It is hardly possible to form a coherent picture of the process as a whole out of incidents which not unfrequently seem to contradict each other. Undoubtedly, the chaotic character of the evidence corresponds with the nature of the actual historical development. As there was no consistent policy on the part of the government, local conditions as well as social differences usually decided the course of events. The individual arbitrary decisions of local officials were often a very important factor.

The first report about the acceptance of Islam dates from as early as the battle of al-Ḳādisiyya [*q.v.*] when Daylamī cavalry troops (*asāwira*, also designated as Ḥamrā Daylam) deserted from the Imperial army and came to terms with the Arabs. This included conversion to the new religion as well as the settlement of these mercenaries in the recently founded *miṣr* of Kūfa (cf. L. Caetani, *Annali*, iii/2, 916-20). On some occasions Iranian notables were deported to the centre of the Caliphate to serve in the Umayyad administration and were remembered by later generations as the pride of their regions (cf. e.g. *Taʾrīkh-i Sīstān*, ed. M. T. Bahār, 18 ff.).

Conversions of this kind required a complete assimilation to the way of life of the conquerors, including the adoption of Arabic names. Reports of forced conversions or the violation of the sanctuaries of the protected religions are rare, but this may be partially due to the predominantly Islamic bias of the sources.

The pattern of Arab settlement [see AL-ʿARAB, iii] largely determined the pace of the Islamization of the different regions. In the cities of Khurāsān and of northern al-Djibāl, later also in those of Transoxania, large Arab garrisons were stationed which had a great influence on the rate of conversion among the townspeople. It has been suggested by several scholars that the urban class of artisans and tradesmen adopted the new religion so easily because in Sasanian society they had been discriminated against on account of their low status in the Mazdean scale of social values. Of the other social classes, the peasants were least open to outside influences and accepted Islam only very slowly. This cannot be explained exclusively by their isolation and the conservatism usually found among a rural population, but equally by their economic situation. The dependence of the state finances on the revenues of the land-tax, which was levied only on the non-Muslims, one of the most thorny problems of the young Islamic empire, put a great restraint on missionary activity directed towards the peasantry. In the administration of the great mass of non-Muslim subjects the Arab rulers for a long time used the services of the local aristocracy who had survived the downfall of the Sasanian empire. Although the *dihḳān*s [*q.v.*] and *marzpān*s were sometimes invited to become Muslims, their symbiosis with the Islamic government was not dependent on a religious affiliation but was essentially a political and economic necessity.

Massive conversions could still take place in Iran as late as the 5th/11th century. The rise of Ṣūfism did much to bridge the gap between the broad masses and the bearers of the religious tradition who mainly belonged to the upper classes of society. Members of the pietist Karrāmiyya sect were also very active as missionaries. The Shīʿī propaganda of the Zaydiyya is to be credited with the Islamization of the Caspian provinces.

Being a Muslim brought many social advantages to a non-Arab subject of the Islamic theocracy, but during the period of Arab hegemony which lasted till the downfall of the Umayyads in the middle of the 2nd/8th century, the convert could only aspire to the status of a second-class citizen. As a client or *mawlā* (pl. *mawālī* [*q.v.*]), the non-Arab Muslim enjoyed the protection of an Arab tribe or family but was subject to certain disabilities

Although the Iranian *mawālī* often participated with great enthusiasm in the wars against unbelievers (*e.g.*, at the time of the conquest of Soghdia and afterwards in the struggle with the pagan Turks), the disadvantages of their status made them a potential ally to any politico-religious movement that came out in revolt against Umayyad rule.

The participation of Iranian *mawālī* in a sectarian movement is recorded for the first time in the accounts of the rebellion of al-Mukhtār [*q.v.*] who in 66-7/685-7 defended the claims to the imāmate of Muḥammad ibn al-Ḥanafiyya [*q.v.*] and demanded revenge for the death of al-Ḥusayn. His personal guard was recruited from the Ḥamrā *mawālī* in Kūfa. They are designed as *kāfirkūbāt* ([*q.v.*] literally "unbeliever clubs"), a designation which reappears in the sources when they mention the Iranians who took part in the ʿAbbāsid revolt. [See also KAYSĀNIYYA]. The Azāriḳa [*q.v.*], a Khāridjite group which, after having been defeated in ʿIrāḳ, continued its opposition in various parts of Iran (66/685-78/698-9), was also supported by many Iranian clients. Another Shīʿī pretender, ʿAbd Allāh b. Muʿāwiya [*q.v.*], was equally forced to retreat into Iranian territory after the failure of his rising in Kūfa (127/744). Taking advantage of the general atmosphere of discontent prevailing in the later Umayyad period, he succeeded in uniting dissenters of quite different religious and political parties under his command. Among them were Zaydīs, Khāridjīs and even prominent members of the ʿAbbāsid family. This sect, known as al-Djanāḥiyya [*q.v.*], displays doctrinal features that are common to many other early Shīʿī heterodoxies (*e.g.*, esoteric knowledge invested in the *imām* and the concealment (*ghayba*) and eventual return (*radjʿa*) of the founder of the sect). None of these movements, however, originated in Iran. They were the products of the syncretistic religious culture of ʿIrāḳ where Iranian ideas formed only one of several constituant elements. [See further s.v. GHULĀT].

From 116/734-128/746, the Soghdians were in open revolt over the poll-tax. This rebellion acquired a religious dimension through the collaboration of a group of pious Arabs like Abu 'l-Ṣaydāʾ Ṣāliḥ b. Ṭarīf, who had been a successful missionary among the Soghdians, and al-Ḥārith b. Suraydj [*q.v.*]. In the interests of Islam, they supported the claim of the *mawālī* to full rights as Muslims and they summoned the Umayyad government to return to the ordinances of the Ḳurʾān and the *sunna*. The secretary of al-Ḥārith, Djahm b. Ṣafwān [*q.v.*], was one of the earliest Islamic theologians working in Iran.

The non-Muslim subjects showed a remarkable restraint towards the strife among the different factions of the Muslim community. The orthodox Mazdeans, the most numerous group, made no attempts to take advantage of this confusion. The movement of Bihʾ āfrīd b. Farwardān [*q.v.*], who proclaimed himself a Prophet about 129/747 in Khʷāf (near Nīshāpūr), originated in a sectarian environment. He claimed to be sent from heaven in order to reform the Mazdean religion. His message, which is said to have been laid down in a book written in Persian, was mainly concerned with religious practice. The prescriptions he gave were aimed at an adaption of Zoroastrianism to the moral and ritual code of Islam. The most outspoken opposition to his activities came from the orthodox Zoroastrian clergy.

In the last years of the first century A.H., the ʿAbbāsid family, through the famous testament of Abū Hāshim [*q.v.*], had acquired the leadership of the most active section of the early Shīʿī movement. From Kūfa, the traditional centre of politico-religious opposition against the Umayyad regime, an effective propaganda was organized, focused on the province of Khurāsān where conditions seemed especially favour-

able for stirring up a massive revolt. The activities of the ʿAbbāsid missionaries were directed to all the groups, whether Arab or Iranian, who had reason to be discontented with the present situation. To Iranian participants, the problem of equality within the Muslim community provided the main incentive. Another issue of a religious nature was the claim of revenge for the Zaydī pretender Yaḥyā b. Zayd [*q.v.*], who had been killed in battle with Umayyad troops in 125/743 when he was trying to win support in Khurāsān. The religious motivation of the ʿAbbāsids themselves is not quite clear [see AL-HĀSHIMIYYA], but it is certain that they did not desire any emphasis on extreme points of doctrine, as is apparent from their disavowal of one of the prominent agitators, Khidāsh, when he was tried and executed on the grounds of spreading "khurramī" heresies, as well as from the vehement action taken by Abū Muslim, the architect of ʿAbbāsid victory, against several heretical movements.

In retrospect, the founding of the ʿAbbāsid caliphate appears to be a turning point in the development of Islam in Iran. Iranian Muslims, whose numbers were rapidly increasing, could now partake on an equal footing in the affairs of the Islamic community. The theocracy itself, on the other hand, became to a certain extent "iranized" as a result of the infiltration of a great number of Iranians into all the branches of its central administration. Many cultural traditions of ancient Iran were integrated into Islamic culture. There was also a large measure of participation by the Iranian Muslims in the elaboration of the great theological and juridical systems of Islam which took place in the early ʿAbbāsid period. The cities of Khurāsān and Transoxania developed into important centres of Islamic learning.

The immediate effects of the revolt which brought the ʿAbbāsids into power seemed at first to point to a quite different line of development. A wide-spread discontent with social conditions, as well as a receptiveness to heterodox religious ideas, notably among those sections of the population which had only been touched very slightly by Islam, the very elements on which the leaders of the revolution had built their success, continued to form an obstacle to political stability in the Iranian provinces. The severance by the ʿAbbāsids of their former relations with sectarian groups and, more specifically, the crude disposal of the popular leader of the movement in Khurāsān, Abū Muslim, provided the incentive for a long series of politico-religious risings. They were often headed by former collaborators of Abū Muslim, who made him the object of a messianic expectation similar to those current among the early Shīʿī *ghulāt*. It was believed that after a period of occultation (*ghayba*) he would return in the company of the pre-Islamic heretic Mazdak and of the Mahdī. A pronounced anti-Islamic tendency was expressed in the prophecy of a return of Zoroaster and the destruction of the Kaʿba. The idea of metempsychosis (*tanāsukh*) was also present: a divine element was thought to have been transmitted to Abū Muslim's daughter Fāṭima and to his son Fīrūz Mahdī. Collectively these movements are designated as the Abū-Muslimiyya. Another general term used in reference to a variety of these sects is Khurramiyya or Khurramdīniyya [*q.v.*]. This appellation is used in particular to characterize a number of customs, among which community of goods and wives are cited as the most objectionable, deviating from the Islamic way of life. A historical connection with the movement of Mazdak in Sasanian times has often been suggested but cannot be substantiated by the available evidence.

Most of these movements manifested themselves in the rural districts of eastern Iran and Transoxania. The leaders of the revolts were Sinbādh, Isḥāḳ al-Turk, Ustādhsīs and the "veiled Prophet", al-Muḳannaʿ [*q.v.*], whose followers were known as the *Mubayyiḍa* or *Safīd-djāmagān* on account of their white garments. The most dangerous rebellion was led by Bābak [*q.v.*], and took place in Ādharbāydjān. It was only subdued after a long campaign directed by the best generals of the ʿAbbāsid army. The Rāwandiyya [*q.v.*], which projected spiritual leadership, based on a divine incarnation, in the person of the caliph al-Manṣūr [*q.v.*], also originated in Iran, but its main activity was in ʿIrāḳ. The geographers and historians of the 4th/10th century still make mention of remnants of these sects in isolated parts of the country [for historical details see IRAN, HISTORY and the references given there].

Among the early ʿAbbāsid caliphs who still had a direct control over all the Iranian provinces, al-Maʾmūn [*q.v.*] showed a special interest in this part of his empire. His attempt to make an alliance with the Ḥusaynī branch of the ʿAlids by appointing the *imām* ʿAlī al-Riḍā as his heir to the caliphate was little more than an episode. Yet it left permanent traces in Iran in the form of the two most venerated shrines of the Iranian Shīʿa: the Āstān-i ḳuds-i Raḍawī, the grave of the *imām* ʿAlī al-Riḍā [*q.v.*], who died under suspicious circumstances in Ṭūs (the present-day Mashhad [*q.v.*]) in 203/818, and the tomb of his sister Fāṭima al-Maʿṣūma in Ḳumm. The religious disputes held at the court of this caliph in Marv, in which representatives of various Islamic and non-Islamic denominations took part, show the great differentiation of religious opinion prevailing at this time as well as the relatively tolerant attitude adopted by the government.

In the long run, however, Iran developed into a predominantly Sunnī country, which it remained until the end of the Middle Ages. The rise of semi-independent dynasties in the eastern parts from the early 3rd/9th century onwards in no way checked this general trend. Both the Ṭāhirids and the Sāmānids acted as guardians of Sunnism and continued to acknowledge the suzerainty of the ʿAbbāsids as the ultimate source of legitimate rule within the Islamic community. The same seems to hold true of the Ṣaffārids in spite of the intimation of heterodox leanings put forward by Niẓām al-Mulk (*Siyāsatnāma*, ed. H. Darke, Tehran 1340 *sh.*, 20; transl., idem, London 1960, 15). They had come to power as the leaders of a popular movement against the Khāridjites who had managed to obtain a foothold in Sīstān. Even the growth of a distinctive Iranian self-awareness, expressing itself in the use of Persian for literary purposes and the creation of Persian literature, was not connected with a tendency to depart from Islamic orthodoxy. Among the earliest works that became accessible in Persian were such classics of Sunnī Islām as the *Taʾrīkh* and the *Tafsīr* of al-Ṭabarī.

The religious situation in Iran during the second half of the 4th/10th and the beginning of the next century can be reconstructed to some extent from scattered pieces of information which have been transmitted by the geographers and historians of this period. The *Kitāb Aḥsan al-taḳāsīm* of al-Muḳaddasī, written in 375/985, is a particularly rich source as far as the geography of religion is concerned (cf. the compilation of these references in P. Schwarz, *Iran*, *passim* as well as B. Spuler, *Iran*, 145 ff. and the *Karte III* with *Erläuterungen* at the end of this work).

Together these data point to a confusing diversity, even within the community of the people of the Sunna. It is therefore difficult to trace the main lines of division between the various doctrinal and juridical schools. In general there was a preference for the Ḥanafī school of law in the eastern provinces, especially among the lower classes. The Shāfiʿiyya had strongholds in Kirmān, Ṭabaristān and in several parts of Transoxania. The position of the *madhāhib* in the western provinces is less clear. For some period of time smaller schools like the Ẓāhiriyya [*q.v.*] founded by Dāʾūd al-Iṣfahānī [*q.v.*] and the Thawriyya of Sufyān al-Thawrī [*q.v.*] had a fair number of followers in Iran. The doctrinal school of the Muʿtazila had, from the time of its efflorescence under the protection of the early ʿAbbāsids onwards, penetrated the Iranian provinces with much success. It managed to hold its ground there for a very long time after the reaction of the Ḥanbalī traditionalists had put an end to its dominant position in ʿIrāḳ. The struggle with the emerging neo-orthodox schools founded by al-Ashʿarī and al-Māturīdī continued at least till the time of the Saldjūḳs. The *kalām* of the Muʿtazila became of lasting significance to Iranian Islam on account of its influence on the doctrinal system of the Ithnā-ʿasharī branch of the Shīʿa. The larger cities usually contained a number of different religious minorities who lived in continuous rivalry and strife. The antagonism of social groups designated as *ʿaṣabiyyāt* [*q.v.*] merged with the controversies among the adherents of the various ritual or doctrinal schools. Not unfrequently, this took the form of small-scale civil war within the cities (cf. Cl. Cahen, *Mouvements populaires et autonomisme urbain dans l'Asie musulmane du moyen âge*, in *Arabica*, vi (1959), 27 ff.).

The sect of the Karrāmiyya [*q.v.*] originated in Khurāsān out of the teachings of Abū ʿAbd Allāh Muḥammad b. Karrām (d. 255/869). It found its following chiefly among the artisans. The most remarkable traits of the Karrāmiyya as far as practical religious life is concerned were the emphasis on traditionalist piety, the foundation of *khānḳāh*s or small convents which may have supplied the models for later institutions of religious education, and the vehement missionary zeal of the sect, directed as much to the heterodox groups within Islam as to the non-Muslims. The height of its development was reached at the beginning of the 5th/11th century when they acquired a considerable influence on the Ghaznavid rulers as well as on the early Ghūrids [*q.v.*].

Ṣūfism appears in Iran for the first time in the second half of the 4th/9th century. One of the earliest representatives was the great Ṣūfī *shaykh* Abū Yazīd al-Bisṭāmī [*q.v.*]. The foundation of the school of the Malāmatiyya [*q.v.*] is attributed to Ḥamdūn al-Ḳaṣṣār [*q.v.*] of Nīshāpūr. The emphasis on absolute sincerity and indifference to all outward appearances of piety, characteristic of the Malāmatiyya, became a distinctive mark of the mysticism of Khurāsān as compared with the Ṣūfism of ʿIrāḳ. In the first half of the 5th/10th century pupils of the ʿIrāḳī schools settled in eastern Iranian towns, e.g. Mūsā al-Anṣārī (d. *ca.* 320/932) in Marv and al-Thaḳafī (d. 328/940) in Nīshāpūr. The great extension of Ṣūfism in Khurāsān was recorded a century later by al-Hudjwīrī [*q.v.*] in his *Kashf al-maḥdjūb*.

A second centre of early Ṣūfism was Fārs where the first important *shaykh* was Ibn al-Khafīf [*q.v.*] (d. 371/981). His teaching had a profound influence in this province which lasted for many centuries. It was continued by Shaykh Abū Isḥāḳ Ibrāhīm b. Shahriyār (d. 426/1033) [*q.v.*] of Kāzarūn, the eponym of the Isḥāḳiyya or Kāzarūniyya, one of the very first Ṣūfī orders not only of Iran but of Islam in general.

Until the rise of the Ṣafawids about 1500 A.D., the Shīʿa remained a religious minority in Iran. As a matter of fact, it did not constitute a homogeneous group but consisted of quite different parties which were opposed to each other as much as the Sunnīs were opposed to all of them together. The small but militant movements of the *ghulāt*, which were particularly active during the Umayyad period, as a rule did not originate in Iran but emanated from southern ʿIrāḳ. The great majority of the Shīʿites living in Iran adhered to the quietist attitude in the matter of the political leadership of the community which had been adopted by the Ḥusaynī branch of the ʿAlids after the tragic failure of al-Ḥusayn's expedition to ʿIrāḳ at Karbalāʾ. Apart from their views on the doctrine of the Imāma [*q.v.*], they did not differ significantly, either in doctrinal or in ritual questions from the Sunnīs. This large moderate group of the Shīʿa, originally referred to by the general name of al-Rāfiḍiyya [*q.v.*], was from an early date strongly represented in the northern cities of al-Djibāl or ʿIrāḳ-i ʿAdjamī. Shīʿism was brought here by the Arabs who settled in this area when this part of the country was still a frontier with the not yet Islamized Caspian regions. Ḳumm, in particular, is an old stronghold of the Shīʿa in Iran. Scattered Shīʿa communities were to be found in other provinces as well. In Khurāsān, Nīshāpūr, Harāt and Ṭūs significant Shīʿī minorities were living together in separate quarters, generally tolerated by the Sunnī majority although from time to time they became involved in *ʿaṣabiyyāt* struggles. A rural district with a long tradition of Shīʿism was Bayhaḳ, with the city of Sabzawār. Khūzistān and Fārs also contained a fair number of Shīʿites.

The Zaydiyya [*q.v.*], for whom the active assertion of his claim had become an important pre-requisite of the rightful *imām*, were moderate in doctrine but not deficient in political zeal. In 250/864 a Zaydī pretender belonging to the Ḥasanī branch of the ʿAlids, Sayyid Ḥasan b. Zayd, entitled *al-dāʿī al-kabīr*, succeeded in driving the Ṭāhirid governor out of Māzandarān, and founded there a Shīʿī state which in spite of successive reverses held its ground for several centuries. The Zaydites did a great deal to spread Islam in the Caspian regions, extending their influence both to Gurgān in the East and to Gīlān and Daylam in the West. Al-Ḥasan b. ʿAlī al-Utrūsh [*q.v.*] was very active as a missionary of Shīʿī Islam.

The mountains of Daylam, the inhabitants of which owed their acquaintance with Islam mainly to Zaydī missionaries, were the place of origin of the clan of the Būyids [*q.v.*]. As rulers of western Iran and ʿIrāḳ they did not put an end to the Sunnī caliphate of Baghdād, although it had been deprived completely of its political power. On the other hand they gave much stimulus to the further development of Shīʿī doctrines and customs, especially among the followers of the Ḥusaynī *imāms* who began to form a more defined denominational entity as the Imāmiyya or Ithnā-ʿashariyya [*q.v.*]. The celebration of the most important Shīʿī festivals such as the remembrance of the investiture of ʿAlī at Ghadīr al-Khumm [*q.v.*] and the mourning (*taʿziya*) of the martyrs of Karbalāʾ in the month of Muḥarram [*q.v.*] is for the first time recorded in the Būyid period.

The mission (*daʿwa*) of the Ismāʿīliyya [*q.v.*] in Iran had already started before the end of the 3rd/9th century. The initiative was taken by the Ḳarma-

ṭians [*q.v.*] who, in addition to their centres in the Arabian territories bordering on the Persian Gulf, had a footing in Khūzistān as well. From here the missionary Khalaf was sent to the Shīʿī areas in al-Djibāl. From their base near Rayy, the Ismāʿīlīs, who in this part of Iran were known for a long time as Khalafiyya, tried to extend their influence to the Caspian regions, and to Khurāsān and Transoxania. After the establishment of the Fāṭimid caliphate in Egypt propaganda was directed from Cairo. Missionary activity in Iran was on the whole not very fruitful, in spite of the frequently outstanding intellectual capacities of the *dāʿīs*. The efforts were chiefly directed to the conversion of influential men of the ruling classes. Some spectacular but not very permanent achievements were made, e.g., the conversion of the Sāmānid *amīr* Naṣr II b. Aḥmad by the *dāʿī* Muḥammad b. Aḥmad al-Nasafī, which led to the former's forced abdication in 331/942-3, and of one of the latest Būyid rulers, Abū Kalidjar, who was won over to the Fāṭimid cause by al-Muʾayyad fi 'l-Dīn [*q.v.*]. The latter, by winning over a Turkish commander in the Būyid service, al-Basāsīrī [*q.v.*], almost succeeded in establishing Fāṭimid suzerainty in Baghdād. But this was frustrated by the intervention of the Saldjūḳ chief Ṭughril Beg, who rescued the ʿAbbāsids from their imprisonment in a Shīʿī state. More permanent results of the early Ismāʿīlī *daʿwa* were the strongholds in isolated parts of the country like Ḳuhistān and Badakhshān. The literary output of the Ismāʿīlī communities, both in Arabic and Persian, was not inconsiderable. (See further S. Stern, ***The early Ismāʿīlī missionaries in North-West-Persia and in Khurasan and Transoxania***, in *BSOAS*, xxiii (1960), 59-60; on the literature of the early period: W. Ivanow, *Studies in early Persian Ismailism*, Bombay 1955²; idem, *A Guide to Ismaili Literature*, London 1933; idem, *Ismaili Literature. Bibliographical Survey*, Tehran 1963).

The propagandist activities of the Ismāʿīliyya, usually referred to as Bāṭiniyya, became a great concern of the Sunnī rulers in Iran. This led to increasing intolerance with regard to religious minorities. Especially under the rule of the Ghaznavids and the Saldjūḳs in the 5th/11th—6th/12th centuries, a hardening of the relationship between the denominations can be observed. The situation grew worse towards the end of the 5th/11th century. The leadership was taken by Ḥasan-i Sabbāḥ [*q.v.*], who in 483/-1090 made himself master of the impregnable fortress of Alamūt [*q.v.*] in Daylam. This became the residence of an Iranian Ismāʿīlī dynasty in open rebellion against the Saldjūḳ sultan. Almost at the same time the supporters of the Fāṭimids split over the succession to the imāmate after the death of the caliph al-Mustanṣir (487/1094). The party who lost the struggle in Cairo, the Nizārīs [*q.v.*], had won the support of most of the Ismāʿīlīs in Iran under the guidance of Ḥasan-i Ṣabbāḥ. In Western reports on this movement they are referred to as the Assassins, a name originating in Syria [see ḤASHĪSHIYYYA]. In the doctrines of this new sect great emphasis was laid on the necessity of a continuous teaching (*taʿlīm*) by a present *imām* in order to make the esoteric meaning of the revelation accessible to the believers. The breach from all the other sections of the Islamic community became absolute when in 559/-1164 the "resurrection" (*ḳiyāma*), by which the *sharīʿa* was abolished for the Nizārī community, was proclaimed. Half a century later the community reconciled itself to its Islamic environment and placed itself again under the rule of the religious law. After the final destruction of its strongholds during the campaign of the Mongol prince Hülegü (654/1256), the Ismāʿīliyya in Iran ceased to exist as an independent force but lived on in the form of a religious minority for which the *imām* acted as spiritual guide (*pīr*).

Through the victory of the Saldjūḳs over the Būyids Sunnism had again acquired supremacy in most parts of Iran. Although the sultans adhered to the Ḥanafī *madhhab*, the Shāfiʿiyya, to which the most prominent theologians belonged, became very influential thanks to the personal adherance of the powerful vizier Niẓām al-Mulk. The class of the theological and juridical scholars began to infiltrate the administration of the central government. To this end the extension of traditional academic education was fostered by the foundation of *madrasas* [*q.v.*] in the larger cities of the empire, known by the name of Niẓāmiyya.

The representatives of the Ithnā-ʿashariyya were, at the beginning of the Sunnī restoration in Western Iran, regarded with great suspicion. This attitude both on the part of the sultans and of the great vizier is clearly expressed in several anecdotes of the latter's *Siyāsatnāma*. In the 6th/12th century, when Niẓām al-Mulk no longer put his stamp on religious policy, the Shīʿites were able to take a greater share in the affairs of the state. Some of them even reached the rank of vizier. The altercations between Sunnis and Shīʿa continued, however, in disputes and literary polemics, as well as outbursts of physical violence. An invaluable source for our knowledge of these controversies is the *Kitāb al-Naḳḍ* or *Baʿḍ mathālib al-nawāṣib fī naḳḍ faḍāʾiḥ al-Rawāfiḍ* by Naṣr al-Dīn Abu 'l-Rashīd ʿAbd al-Dhalīl al-Ḳazwīnī al-Rāzī, an apology for the Shīʿa in reply to a Sunnī literary attack.

In the course of the 5th/11th century Ṣūfism was well on its way towards becoming one of the dominant forms of Islam in Iran. Its greatest progress was made among the predominantly Sunnī population of the eastern provinces while the Shīʿa, in general, took a critical stand towards mysticism. The numerous Ṣūfī *shaykhs* of this period still lived and worked within the small circles of their pupils, established usually in convents (*ribāṭ, khānḳāh*) but without organizational ties. They taught by their words as well as by the example of their spiritual life, and did not pay much attention to the scholastic elaboration of Ṣūfī doctrine, to which, in the schools of ʿIrāḳī Ṣūfism, the name of al-Djunayd [*q.v.*] is especially connected. The ideas of the great *shaykhs* of Khurāsān living in this period are best known from the hagiographic works written by their followers (*e.g.*, Abū Saʿīd b. Abi 'l-Khayr [*q.v.*], Abu 'l-Ḥasan ʿAlī b. Aḥmad al-Kharakānī [*q.v.*] and Aḥmad-i Djāmī [*q.v.*]). One of the first theoreticians of mysticism in eastern Iran was ʿAbd Allāh al-Anṣārī [*q.v.*] of Harāt (d. 481/1089). The reconciliation of Ṣūfism with the doctrines of Sunnī orthodoxy which took place in this century was largely due to the efforts of eminent Khurāsānī mystics like al-Ḳushayrī [*q.v.*] and Muḥammad al-Ghazālī [*q.v.*]. On the whole, the Turkish rulers of Iran, as well as their Iranian bureaucrats, favoured the Ṣūfī *shaykhs*, chiefly out of respect for the miracles (*karāmāt*) attributed to these holy men.

One of the most decisive influences of Iranian mysticism, spreading to the farthest corners of the Islamic world, was the formation of Ṣūfī brotherhoods known as *ṭarīḳas* [*q.v.*]. Apart from the Kāzarūniyya of Fārs already mentioned, most of the early orders were formed in the 6th/12th century. Among them was the fraternity of the Khʷādjagān founded by

Kh^wādja Yūsuf al-Hamadhānī (d. 555/1160) in Khurāsān but better known through its Transoxanian branch, the Yasawiyya, named after the Turkish Ṣūfī *shaykh* Aḥmad Yasawī [*q.v.*] (d. 562/1166). With the expansion of the Turks to the West the Yasawī type of Ṣūfism was introduced in Anatolia where it was continued by the Bektashiyya.

Towards the end of this century two great *ṭarīḳa*s emerged almost simultaneously at opposite sides of Iran. In ʿIrāḳ and western Iran the Suhrawardiyya, which was based on the teachings of Abū Ḥafṣ al-Suhrawardī [*q.v.*] (d. 632/1234-5), was raised for a short time to the position of an official Ṣūfī organization by the caliph al-Nāṣir. A secondary branch of the Suhrawardiyya was established in Multān on the Indian subcontinent. The order of the Kubrawiyya goes back to the Kh^wārazmian *shaykh* Nadjm al-Dīn Kubrā [*q.v.*] (d. 617 or 618/1220-2). The majority of the later Ṣūfī orders of Iran derive their *silsila* from this order. Both the founder and the many eminent scholars among his pupils made a great contribution to mystical thought in Iran. The order of the Čishtiyya [*q.v.*] was also formed in Iran but reached its greatest development in India. Although it was founded in Anatolia, the Mawlawiyya [*q.v.*] should also be mentioned in this connection on account of the deep roots it had in the religious environment of eastern Iran.

The attempts of the caliph al-Nāṣir [*q.v.*] to assert the secular power of the ʿAbbāsids as well as their leading position in the religious matters of the Sunnī community led to sharp conflict with the Kh^wārazm-shāhs, who were supported by Shīʿīs seeking revenge for the repression suffered under Sunnī rule. As a part of this struggle Shāh Muḥammad tried to establish a rival caliphate for which he put forward, as his candidate, a member of the ʿAlid family. This scheme was frustrated by the Mongol invasion.

The effects of the Mongol conquest decisively changed religious conditions in Iran. Retrospectively, these changes appear to form a prelude to the establishment of a Shīʿī state a few centuries later. The disappearance of the ʿAbbāsid caliphate had weakened the position of the Sunnīs, who were deprived of this living symbol of the unity of the Islamic community, without having any theological expedient to account for the vacancy of its leadership such as the Shīʿa possessed in the doctrine of the *ghayba*. The secular power had, moreover, for the first time since the Arab conquest, passed into the hands of unbelievers. Up to the time of the conversion to Islam of Ghāzān Khān and the Mongol aristocracy (694/1295), the Īlkhāns, with the sole exception of the Muslim Aḥmad Tegüder (681/1283-683/1285), were either Shamanists, Buddhists or Nestorian Christians. Temples and churches had been erected in various places and Buddhist bakhshīs came to Iran from Central Asia and India. An interesting example of their spiritual influence is provided by the conversations with Buddhist ascetics recorded in the biography of the famous Kubrawī *shaykh* ʿAlāʾ al-Dawla [*q.v.*] al Simnānī. Other groups of non-Muslims were able to acquire a greater political influence than had previously been possible. The rise to power of the Jewish vizier Saʿd al-Dawla during the reign of Arghūn Khān (683/1284-690/1291) and the prominent place he gave to many of his co-religionists provoked at the time of his downfall one of the rare instances of an anti-Jewish outburst in the history of Iranian Islam.

In so far as the early Ilkhāns showed any interest in the religious affairs of their Muslim subjects, they not unfrequently favoured the cause of the Shīʿa. Already under Hülegü the prominent Shīʿī scholar Naṣīr al-Dīn Ṭūsī [*q.v.*] reached a position of great influence at the Mongol court. Apart from his many other intellectual pursuits, he founded a school of Shīʿī theology which flourished throughout the Mongol period. Although Ghāzān officially adhered to the Ḥanafī *madhhab*, on several occasions he showed his devotion towards the ʿAlid family, e.g., by making the pilgrimage to the holy shrines in ʿIrāḳ and by founding "houses of the *sayyids*" (*dār al-siyāda*) in many of the larger towns providing shelter and support to indigent and wandering descendants of the *ahl al-bayt*. His successor Öldjäytü (703/1304-716/1316) even temporarily joined the Shīʿa after earlier having shifted his allegiance from the Ḥanafiyya to the Shāfiʿiyya.

During the interval between the decline of Il-khānid power after the death of Abū Saʿīd in 736/1336 and the rise of Tīmūr, the discontent of the population with Mongol rule found an outlet in the revolt of the Sarbadārids [*q.v.*] in Khurāsān. A religious dimension was given to this movement by the collaboration of the Shaykhiyya-Djūriyya, a Shīʿī order of Ṣūfīs established in Sabzawār by Shaykh Khalīfa (d. 736/-1335) and his pupil Ḥasan Djūrī (d. *ca.* 739/1338). To a branch of this order belonged Mīr Ḳiwām al-Dīn al-Marʿashī, a *sayyid* who in the same period founded a small Shīʿī state in Māzandarān. His dynasty, residing in Āmul, is known as the Sādāt-i Marʿashī.

Tīmūr and his successors were without exception Sunnīs. The great conqueror, however, often subordinated his religious allegiance to political interests. His son Shāhrukh (807/1405-850/1446) was an excellent example of the righteous Sunnī ruler, but a much more relaxed attitude was adopted by the provincial government in Transoxania under Ulugh Beg [*q.v.*]. It was supported by the aristocratic *ʿulamāʾ* of Samarḳand and Bukhārā who by tradition exerted secular power. But, on the other hand, it provoked a fierce reaction from the Naḳshbandiyya [*q.v.*]. This Ṣūfī order regarded itself as the defender of the lower social classes as well as of the strict observance of the *sharīʿa*. With the rise to power of the Tīmūrid Sultan Abū Saʿīd [*q.v.*] (855/1452-872/1469) in Samarḳand the leading Naḳshbandī *shaykh*, Kh^wādja Aḥrār, acquired a predominant influence in political affairs. Simultaneously, the Naḳshbandiyya became also the main spiritual force at the court of the Tīmūrids in Harāt during the reign of Ḥusayn Bayḳara [*q.v.*] (872/1468-911/1504). But here the *ṭarīḳa*, led by such eminent cultured men as Djāmī [*q.v.*] and his *murīd* Mīr ʿAlī Shīr Nawāʾī [*q.v.*], did not display the obscurantism which characterized the Transoxanian branch. The sultan himself was not entirely free from Shīʿī sympathies. His deportment at the rediscovery of the alleged tomb of ʿAlī near Balkh, where he founded the shrine that became known as Mazār-i Sharīf [*q.v.*], was a remarkable instance of this.

At the end of the 8th/14th century the Ḥurūfiyya [*q.v.*], a sect originating in a milieu of Ṣūfīs and *sayyid*s, and owing its name to its grammatolatrous tendencies, was initiated by Faḍl Allāh [*q.v.*] Astarābādī. Very soon it was subdued in Iran by Mīrān Shāh, a son of Tīmūr. The further history of the sect was enacted chiefly in Syria and Anatolia. Another heretic leader, Nūrbakhsh [*q.v.*] (d. 869/1464), who during the reign of Shāhrukh repeatedly asserted himself to be Mahdī in various parts of Iran, was through his teacher Isḥāḳ al-Khuttalānī connected with the Kubrawiyya order which up to his time had adhered

to the Sunnī sharīʿa in spite of a considerable influence of Shīʿī ideas.

The dynasties which dominated Western Iran during most of the 9th/15th century were based on confederations of Turkoman tribes. Among these still only superficially Islamized nomads an intensive religious propaganda was spread in the course of this period. It radiated from Ardabīl in Ādharbāydjān, which from the early 8th/14th century onwards was the centre of a Sunnī mystical order founded by Shaykh Ṣafī al-Dīn [*q.v.*] (d. 735/1335). Under the leadership of his descendants, this *ṭarīḳa* won great support among the tribes living in the borderland between Anatolia and Iran. This expansion was accompanied by a shift in the religious orientation of the Ṣafawid family towards Shīʿī concepts, which included the belief in a divine incarnation in the spiritual leader (*murshid*) of the order. This change seems to have taken place when it was guided by Shaykh Djunayd [*q.v.*] (851/1447-864/1460), and became particularly clear at the time of his successor Shaykh Ḥaydar [*q.v.*] (864/1460-893/1483). From this time onwards the Ṣafawids claimed descent from the line of Ḥusaynī *imāms*. The politico-religious confederation of Turkoman tribes which they formed was known as the Ḳïzïlbash [*q.v.*]. Similar traces of extreme Shīʿī doctrines, though far less clear than in the case of the Ḳïzïlbash, appear among the Ḳara Ḳoyunlu [*q.v.*], especially during the reign of Sultan Djahān Shāh (841/1438-872/1467) (cf. V. Minorsky, *BSOAS*, xvi/2 (1954), 271-97). The other Turkoman power in this area, the Aḳ Ḳoyunlu [*q.v.*] was, however, unquestionably Sunnī.

Two other Shīʿī movements with *ghulāt* doctrines, focused on the concepts of incarnation and messianism, and not unsimilar to those of the 15th century Ṣafawiyya, were the sect of the Ahl-i Ḥaḳḳ [*q.v.*], which spread from its place of origin in the area of Shahrazūr into western Iran, and the Mushaʿshaʿ [*q.v.*], which recruited its following among the Arab tribes in Khūzistān and southern ʿIrāḳ. The latter started with the appearance as Mahdī of Sayyid Muḥammad b. Falāḥ in about 840/1436. He formed a small theocratic state which under the suzerainty of the Ṣafawid shāhs continued to exist for a considerable period as a buffer state between Iran and Ottoman ʿIrāḳ.

The great expansion of Ṣūfism is one of the main characteristics of spiritual life during the three centuries separating the Mongol invasion from the rise of the Ṣafawids as rulers of Iran. The most obvious signs of this in religious practice were the pious devotion offered by men of quite different social status to the mystical *shaykhs* and the growth of the Ṣūfī brotherhoods. The orders which came to flower in the course of this period have maintained themselves in Iran up to the present day in spite of a dramatic reversal of their success in the subsequent period. The Kubrawiyya [*q.v.*] produced a number of outstanding mystical philosophers like ʿAlāʾ al-Dawla [*q.v.*] al-Simnānī (d. 736/1335-6) and Sayyid ʿAlī al-Hamadhānī [*q.v.*] (d. 786/1385). A gradual convergence of the lines of thought of Sunnī mysticism and Shīʿī imāmology is the most interesting feature of their works. The main theme is the identification of the doctrine of the *ghayba* of the Imām-Mahdī with the concept of the permanent existence of a hidden *ḳuṭb* [*q.v.*] at the top of a hierarchy of Ṣūfī saints. (See further M. Molé, *Les Kubrawiya entre sunnisme et shiisme aux huitième et neuvième siècles de l'hégire*, in *REI*, xxix (1961), 61-142).

The second great organization of Iranian Ṣūfism, the Niʿmat Allāhī Order, was founded by Shāh Niʿmat Allāh [*q.v.*] Walī (d. 834/1431). Although this *ṭarīḳa* has split into many independent branches in later times, its spiritual centre is still the shrine of the founder at Māhān in Kirmān. The individual wandering *darwīsh* [*q.v.*], a well-known figure of Iranian social life until quite recently, had his prototype in the members of *ḳalandarī* [*q.v.*] groups.

Among the Shīʿa, who in this period were still a minority, the tendency towards a reconciliation with Sunnī Ṣūfism can also be observed. Sayyid Ḥaydar Āmulī (d. after 787/1385) in his main work, *Djāmiʿ al-Asrār*, laid great emphasis on the fundamental unity of both strains of esoteric thought in Islam. They converge in the acknowledgement of a common source of religious inspiration: the teaching of the *imāms*, who appear at the beginning of nearly all the chains of tradition (*silsila*s [*q.v.*]) of the Ṣūfīs. (Cf. H. Corbin, in *Mélanges Henri Massé*, Tehran 1963, 72-101; see also the edition of the *Djāmiʿ* by H. Corbin and Osman Yahya, *La philosophie shi'ite*, Tehran-Paris 1969).

As elsewhere in the Islamic world of that day, the pantheistic philosophy of Ibn al-ʿArabī [*q.v.*] did not fail to have a profound influence on metaphysical thinking in Iran. It found a particularly fertile soil as quite similar ideas were already current in Persian mystical poetry although they had not yet been synthesized into a coherent system of doctrine. This congeniality, which is notable especially with the great mystical poets of the 7th/13th century, made it very easy for the commentators of subsequent generations to interpret their works in terms of the scholastic patterns of the philosophy of *waḥdat al-wudjūd*. Beginning with the poets of the early 8th/14th century like Shāh Niʿmat Allāh Walī and Maḥmūd-i Shabistarī [*qq.v.*], these models were consciously applied in all Ṣūfī poetry. The impact of Ibn al-ʿArabī affected both Sunnīs and Shīʿīs. To the latter belonged the earliest writers on mystical philosophy who can be regarded as his adepts in Iran: Saʿd al-Dīn Ḥamūya (d. 650/1252) and his pupil ʿAzīz al-Dīn Nasafī.

The proclamation issued by Shāh Ismāʿīl in 907/1501 on his ascent to the throne in Tabrīz as the first Ṣafawid ruler marks the most decisive turning-point in the history of Iranian Islam. The population of the newly conquered empire was enjoined to adopt the Shīʿī form of the call to prayer and to practise the cursing of the first three patriarchal caliphs. The former kaleidoscopical pattern of religious allegiances, which up to that time had always shown a predominance of Sunnism, was now replaced by theocratic unity based on the claim of the exclusive sovereignty in matters spiritual and secular of the ʿAlid *imāms*. In its earliest stage the Ṣafawid state was dominated by the Turkoman tribal chiefs of the Ḳïzïlbash who at the same time constituted the leading caste of the religious body. The shah, who was also the *murshid* of the Ṣafawī order, was according to contemporary reports of European observers worshipped as God. This is confirmed by allusions to a divine incarnation made by the shah himself in his Turkish poems (cf. V. Minorsky, in *BSOAS*, x (1942), 1007 ff.).

Apart from the belief in the mission of their religious guide, the intellectual content of the Ḳïzïlbash movement seems to have been very limited. Before long the movement proved to be unequal to the task of converting the majority of the people of Iran, with its ancient Sunnī traditions, into a homogeneously Shīʿī community. The initiative was taken over by the *ʿulamāʾ* of the Ithnā-ʿashariyya [*q.v.*], the only

section of the Shīʿa numerous and sophisticated enough to provide religious leadership on an adequate level. The indigenous tradition of Shīʿī scholarship was considerably reinforced by the emigration of *ʿulamāʾ* from centres outside Iran like Djabal ʿĀmil in Syria and al-Baḥrayn. A powerful clergy came into being which gradually extended its influence and endeavoured to eliminate the traces of the heterodox origins of the Ṣafawids. At the same time, however, the emergence of this class posed the fundamental question of ultimate sovereignty within the theocracy. According to the Ithna-ʿasharī doctrine of the *imāma* [*q.v.*], the Hidden Imām continues to govern the world during his *ghayba* and his sovereign rights cannot be shared by any secular power. In the 11th/17th century it had become a point of discussion whether the interpretation of the will of the *imām* was entrusted to one of the living members of the ʿAlid house (which implicitly meant the Ṣafawid shāh) or whether it was the prerogative of the collective opinion of the community as interpreted by the doctors of the Shīʿa. About the same time shah ʿAbbās I was, for political reasons, forced to break the military power of the Ḳïzïlbash. For a short while the shah tried to find a new base for his position as a spiritual leader in the Nuḳtawiyya [*q.v.*], a sect in Khurāsān in which remnants of various earlier Shīʿī movements seem to have reassembled. At the time of the last Ṣafawid ruler, Shāh Sulṭān Ḥusayn (1105/1694-1135/1722), the theologians virtually dominated the state.

The central religious official in the Ṣafawid state was the *ṣadr* [*q.v.*], whose function had existed already in the Timūrid period. He was charged with the supervision of religious affairs and institutions in general. At the local level he was represented by the *shaykh al-Islām* [*q.v.*], who was appointed in most of the larger cities and controlled more directly the jurisdiction of the *sharīʿa* courts. Towards the end of the 11th/17th century the office of the *ṣadr* declined and was replaced by that of a *mullābāshī* (Turkish: head mullah). The members of the clergy were mainly dependent on the revenue of *waḳf*s, but some of them also acquired great personal wealth which enhanced their prestige among the populace and made them more or less independent of the support of the political power. The shahs, for their part, took a great interest in the maintenance of the pious foundations and the embellishment of the holy places of the Shīʿa, both inside and outside Irān. Shāh ʿAbbās I, who transformed his own landed property into *awḳāf*, assumed the title of administrator (*mutawallī*) of the extensive possessions of the shrine of the *imām* al-Riḍāʾ, the actual duties of which were performed by a *mutawallībāshī* residing in Mashhad. The Shīʿī clergy was hierarchically divided into the higher group of the *ʿulamāʾ* and the lower one of the *mullās* [*q.v.*]. The duties of the latter were restricted to education and some functions deriving from the practical application of the *sharīʿa*. Among themselves the *ʿulamāʾ* constituted two opposing theological schools, the Akhbārīs who rejected all speculative theology and demanded a strict adherence to the *ḥadīth* of the Prophet and the *imāms*, and the Uṣūlīs [*q.v.*] who claimed a right of direct resort to the ultimate sources (*uṣūl*) of the faith for the fully qualified scholars of Islam. On the basis of this claim these scholars could call themselves *mudjtahid*. From this emerged the later institution of the *Mardjaʿ-i taḳlīd* [*q.v.*].

The history of the conversion of the people of Iran to Shīʿism is still largely unknown in its details. Apparently, it was not quite completed before the 12th/18th century. The victims of the first wave of actual persecution at the time of the conquest by Shāh Ismāʿīl and his Ḳïzïlbash were predominantly Sunnī theologians. Among the Ṣūfīs, the order of the Kāzarūniyya in Fārs suffered very great losses as a result of this persecution. Outbursts of violence against dissenters continued to take place throughout the Ṣafawid period. During the reign of Shāh Sulṭān Ḥusayn the powerful *mullābāshī* Muḥammad Bāḳir al-Madjlisī [*q.v.*] intensified the persecution of Ṣūfism in which the Ḳïzïlbash were not spared. Most of the Iranian *ṭarīḳas* had virtually ceased to exist at the beginning of the 12th/18th century.

Religious topics were very much in prominence in the intellectual life of Ṣafawid times. In Persian poetry the preoccupation with mysticism was replaced by the cultivation of Shīʿī themes such as the elegies on the holy martyrs. These products of classical literature also influenced the various forms of a rich religious folk-literature. Traces of this can, for instance, be found in the libretti used for the recitals of the *rawḍakhʷān* [*q.v.*]. According to the autochthonous tradition, the passion plays (*taʿziya* [*q.v.*]), the occurrence of which is not documented before the late 12th/18th century, were instituted by Shāh Ismāʿīl as a means of propagating Shīʿī sentiment among the Iranians. Whatever the historical value of this assertion, it shows at least the important part played by religious literature in this respect. Through the efforts of the expanding religious class a large theological literature written in Arabic came into being, the magnum opus of which is the *Biḥār al-anwār* of Muḥammad Bāḳir al-Madjlisī. In addition to these scholarly works, many books on religious subjects were composed in Persian for the propagation of Shīʿī doctrines.

The most important contribution of Ṣafawid Iran to Islamic culture was the philosophical school of Iṣfahān which resuscitated the philosophy of *ishrāḳ* [*q.v.*], first elaborated by Shihāb al-Dīn Suhrawardī [*q.v.*] al-Maḳtūl in the 7th/12th century. Forerunners of this school were the eminent Shīʿī scholars, Shaykh Bahāʾ al-Dīn al-ʿĀmilī [*q.v.*] and Mīr Muḥammad Bāḳir al-Dāmād [*q.v.*], but the actual founder, as well as its foremost representative, was Mullā Ṣadr al-Dīn al-Shīrāzī [*q.v.*], usually known as Mullā Ṣadrā. Other notable members were Mullā Muḥsin-i Fayḍ-i Kāshānī, Mullā ʿAbd al-Razzāḳ-i Lāhīdjī and Mīr Abu ʾl-Ḳāsim-i Findariskī. A late 13th/19th century follower of the Iṣfahān school was Ḥadjdjī Mullā Hādī-i Sabzawārī (1212/1797-8—1295/1878). The strong gnostic element in their philosophy made them suspicious in the eyes of the orthodox *mudjtahid*s. They did in fact have an impact on the development of new religious tendencies deviating from the mainstream of the Ithnā-ʿashariyya such as the school of the Shaykhiyya and the Bābī religion.

Since the establishment of the Shīʿī theocracy in Iran, the allegiance of the political power to this form of Islam has only been interrupted twice. The first occasion was the short reign of Ismāʿīl II (984/1576-985/1577), the second the period of Nādir Shāh [*q.v.*] (1148/1736-1160/1747). Notwithstanding the fact that his tribe, the Afshārs, had taken part in the original Ḳïzïlbash confederation, he pledged himself at the time of his election as *Shāhinshāh* of Iran in 1148/1736 to an attempt at a reconciliation between the Ithnā-ʿasharī Shīʿa and the Sunnism of the surrounding Islamic peoples. To this end he suggested a transformation of the Shīʿa into a fifth school of Islamic law, the Djaʿfariyya, which would share in the state of

mutual recognition existing between the four Sunnī *madhāhib*. Although this proposal was favourably received by a council of Sunnī and Shīʿī scholars held at Nadjaf in 1156/1743, it was rejected by the leading Sunnī power, the Ottoman sultan.

Under the rule of the Zand dynasty, the government returned to a strict observance of orthodox Shīʿism. One of the signs of this was the reinstatement of a *shaykh al-Islām* in Shīrāz. During this period a revival of Ṣūfism came about as a result of the missionary activities of Maʿṣūm ʿAlī Shāh, who was sent to Iran by the "pole" (*ḳuṭb*) of the Indian branch of the Niʿmat Allāhī order. This provoked a fierce persecution end with the execution of Maʿṣum ʿAlī Shāh in 1212/1797-8. The driving force behind this was the dominating *mudjtahid* of this time, Āḳā Muḥammad Bāḳir-i Bihbihānī (1117/1705-1208/1803). Living in Karbalāʾ, as a leading scholar of the Uṣūlī school, he succeeded in bringing to an end the predominance of the Akhbārīs at the holy shrines (*ʿatabāt*) in ʿIrāḳ, a predominance which had existed there since the end of the Ṣafawid period. At the same time, the Shīʿī theory of the *uṣūl al-fiḳh* was being elaborated and greater emphasis was laid on the right of *idjtihād*. These developments were of great significance for the relationship between the dynasty of the Ḳādjārs and the clergy during the 13th/19th century. The latter came to hold the spiritual leadership whereas the shahs could no longer point to an ʿAlid descent as a counterweight. The situation of the chief centres of Shīʿī learning outside the boundaries of the Iranian state did very much to strengthen the position of the clergy whenever they opposed the policy of the Ḳādjārs. But even inside Iran they enjoyed a large measure of immunity, an important part of which was the traditional right of asylum (*bast* [*q.v.*]) accorded to places of religious importance.

During the reigns of the early Ḳādjārs, the Shīʿī clergy was able to exert a considerable influence on the affairs of the state. Fatḥ ʿAlī Shāh (1211/1797-1250/1834), who in all possible ways endeavoured to foster the growth of the religious body, showed himself especially amenable to pressure from the *mudjtahids*. On more than one occasion they actually interfered with his foreign policy. Under his successors relations between the state and the religious leaders became more strained. The latter's fierce opposition to the growing impact of western influences in Iran finally led to their active support of the popular protests against foreign monopolies like the tobacco concession of 1891-1892 and their involvement in the struggle against the authoritarian rule of the Ḳādjār shahs during the constitutional revolution at the beginning of this century. The Iranian government, on the other hand, as it more and more assumed the attitudes of a modern secular state, became less willing to respect the traditional privileges of the religious class.

Almost at the same time as the controversy between Akhbārīs and Uṣūlīs was settled in favour of the latter, a new schism divided the Shīʿī theologians. The doctrines of Shaykh Aḥmad al-Aḥsāʾī [*q.v.*], which were mainly concerned with the role of the Hidden Imām as a mediator in men's striving towards moral perfection and with problems of eschatology, were condemned as heretical by the *mudjtahids*. As a result of this the sect of the *Shaykhīs* [*q.v.*] was formed out of what had only been a school of Shīʿī theology. After the death of al-Aḥsāʾī in 1241/1826, his teaching was continued by Sayyid Kāẓim-i Rashtī (d. 1259/1843) who, from his residence in Karbalāʾ, was able to exert his influence through the Iranian pilgrims. Afterwards the Shaykhī sect split into three branches of which only the Āḳāʾī's are of any significance today. The centre of the present community is the *madrasa* of Kirmān. Larger groups of Shaykhīs are also to be found in Tehran, in Ādharbāydjān and Fārs, as well as among the employees of the oil industry in Khūzistān. (Cf. G. Scarcia, *Stato e dottrine attuali della setta sciita degli shaikhi in Persia*, in *Studi e materiali di storia delle religioni*, xxix (1958), 215-41).

In 1260/1844 Sayyid ʿAlī Muḥammad of Shīrāz revealed himself as the Bāb [*q.v.*] or "gateway" who had come to inaugurate a new prophetic cycle. This meant no less than a breach with the Islamic *sharīʿa*, as was explicitly confirmed by a convention of the followers of the Bāb in 1264/1848 at Badasht. The first stage of this new religion was a period of persecution to which the early believers often reacted with violence. The Bāb himself was executed in 1266/1850. After an attempt on the life of Nāṣir al-Dīn Shāh in 1266/1852, the persecution reached a climax and the movement was wiped out as far as public life in Iran was concerned. Although it continued to have its secret sympathizers, especially among merchants and other groups of the middle class of Iranian society, its further development as an organization could only take place in exile. The succession to the Bāb was for some time a matter of contention between Mīrzā Ḥusayn ʿAlī Nūrī and his brother Mīrzā Nūrī, who, among their following, were respectively known as Bahāʾ Allāh [*q.v.*] and Ṣubḥ-i Azal. The former, who was able to get the support of the large majority, initiated a reform of the Bābī religion, which, as the religion of the Bahāʾīs [*q.v.*], extended its aspirations and activities far beyond the limits of Iranian religious life.

The renaissance of Ṣūfism in Iran, which had started in the late 12th/18th century, had continued during the Ḳādjār period in spite of the often violent opposition of the *mudjtahids*. During the reign of Muḥammad Shāh (1250/1834-1264/1848), it even received official backing as the shah had become an adept of Ṣūfism under the influence of his vizier Ḥadjdjī Mīrzā Āḳāsī. Up to the present time the *ṭariḳas* have been able to hold their ground and even to expand the number of their adherents, which are to be found almost exclusively among the urban population. They have also displayed a considerable literary activity. Modern Shīʿī Ṣūfism in Iran chiefly consists of three big orders: 1. The Dhahabiyya, which is a recent appelation of that branch of the Kubrawiyya that separated itself from the main body at the time of the appearance of a Mahdī of Nūrbakhs in the 9th/15th century. It was also called Dhahabiyya-i ightishāshiyya, the "Dhahabiyya of the rebels". The modern revival dates from the middle of the 19th century and is due to the activities of the *ḳuṭb* Ḥaḍrat-i Rāz (d. 1286/1869-70). His descendants, the Sharīfīs, are still at the head of a smaller branch of this *ṭariḳa*, whereas the majority follows the tradition of Waḥīd al-awliyāʾ (d. 1374/1954). Both sections of the Dhahabiyya have their centre at Shīrāz. 2. The Niʿmat Allāhiyya have since the middle of the 19th century been divided into three independent groups which each have a separate chain of *ḳuṭbs*. The most numerous and influential branch is the Gunābādiyya, named after the Khurāsānian town of Gunābād near which the spiritual leadership has its residence. It has many followers among the higher classes. The other branches are the line of Dhu 'l-riyāsatayn, starting with Munawwar ʿAlī Shāh

(d. 1301/1884), and that of Ṣafī ʿAlī Shāh (d. 1342/-1924). The majority of the latter's adherents have, after his death, abolished the principle of guidance by one single *ḳuṭb* and have replaced this by the form of a brotherhood (*ukhuwwat*) with a collective leadership. 3. The Khāksār *darwīsh*es, who recruit their following chiefly from the lower classes, continue the traditions connected with the mystical life of the ancient Malāmatis and Ḳalandar *darwīsh*es. They have no reliable tradition about their origins. They regard as their founder a Shaykh Sulṭān Djalāl al-Dīn Ḥaydar who may be identical with Shaykh Djalāl al-Dīn of Bukhārā (d. 690/1291). This would mean that they go back to the Djalāliyya branch of the Suhrawardī order. In recent times the Khāksārs have abandoned the way of life of wandering *darwīsh*es and have adopted almost completely that of the other Ṣufī orders of Iran. The *faḳr-i ʿadjam*, an organization of artisans of the *futuwwa* type, is closely related to the Khāksār order. Among the Sunnī population of Kurdistān, the Ḳādiriyya and the Naḳshbandiyya are still of some importance. (See further R. Gramlich, *Die schiitischen Derwischorden Persiens. Erster Teil: Die Affiliationen, Abh. K.M.*, xxxvi, 1, Wiesbaden 1965).

The Iranian Constitution of 1906 and the Supplementary Fundamental Law of 1907 confirmed the privileged position of Ithna-ʿasharī Shīʿism as the religion of the state. The *mudjtahid*s acquired a right of veto on legislation as far as any proposals violating the prescriptions of Islamic law were concerned. [See further DUSTŪR, iv. - IRAN]. The policy of modernization pursued by the founder of the Pahlavī dynasty, Reżā Shāh (1924-1941), greatly affected the religious life of the country. Although he had yielded to the opposition of the *ʿulamāʾ* against the establishment in Iran of a republic modelled on the modern Turkish state, Reżā Shāh embarked on a vigorous programme of secularization in education, and civil and penal law which to a large extent reduced the clerical predominance in public life. The political power granted to the *ʿulamāʾ* under the Constitution was suspended. Regulations regarding the celebration of religious festivals, the emancipation of women and the use of European dress very much changed the outer appearance of the Islamic society of Iran. The introduction of the Djalālī [*q.v.*] era, a solar hidjrī calendar based on pre-Islamic traditions, is only one example of the vivid interest in ancient Iranian civilization which constitutes an essential element of modern nationalism. Although the impact of these developments on the attitude towards Islam among the educated was very considerable, its effects on the broad masses were still only superficial. After the abdication of Reżā Shāh in 1941, many of the old religious sentiments and customs were revived. Political groups based on a reaction against secularization and foreign influence took part in the turbulent political life of the early post-war years. The most prominent of these organizations were the *fidāʾiyyān-i islām* [*q.v.*], led by Nawāb-i Ṣafawī, and the *mudjāhidīn-i islām* of Āyat Allāh Abu 'l-Ḳāsim Kāshānī [*q.v.*]. The publication of religious literature was also revived (cf. Y. Armajani, *Islamic Literature in post-war Iran*, in *The World of Islam. Studies in honour of Philip K. Hitti*, ed. by J. Kritzeck and R. Bayly Winder, London 1959, 271-82).

Bibliography: In addition to the references in the text of this article only a few works of general character can be mentioned here. For more detailed bibliographies see the individual articles relating to each of the manifold aspects of Iranian Islam.

(J. T. P. DE BRUIJN)

vii.—LITERATURE

As the literature of Iran in its widest sense can not be surveyed in this article, a preliminary definition of its contents is necessary. Essentially, the article is restricted to Persian literature, by which we will understand the poetry and belletristic prose works composed in the New Persian literary language in as far as they have been produced by the Muslim population of Iran from the 3rd/9th century onwards. After a treatment of the origins of this literary tradition and of some of its main characteristics, a historical survey will be given encompassing both the

literary works of the past and of the present. This definition excludes the literatures of pre-Islamic times, the writings of the non-Muslim communities (*e.g.* Judaeo-Persian literature [*q.v.*]), the learned prose works, the literatures of other New Iranian languages and folk-literature. The cultivation of Persian letters outside the boundaries of present-day Iran is taken into consideration only as far as and as long as it has been directly connected with the literary life of *l'Iran intérieur*. Some references to general works about most of these excluded branches of Iranian literary activity have, however, been entered into the Bibliography.

I. General Aspects.

a. *The origins of Persian literature.*

About the beginnings of Persian poetry, several different traditions have been handed down. According to one of them, the first Persian poem was composed by the Sasanian king Bahrām V Gūr (421-439 A.D.). This initiative remained fruitless, it is said, on account of the opposition by the Zoroastrian clergy who regarded all forms of poetic speech as being based on falsehood and as a dangerous tool in the hands of heretics. Whatever the historical value of this story might be, it is at any rate significant in as far as it perfectly illustrates the literary conditions in pre-Islamic Iran during the last few centuries preceding the Arab conquest. The fact that the same monarch is credited with Arabic poems as well, moreover, points to the complex origin of Persian literature: on the one hand, from patterns of linguistic art as they are known to have existed in pre-Islamic Iranian culture; on the other, from Arabic literature as it had developed during the first two centuries of Islam out of the Bedouin poetry of the D̲j̲āhiliyya. The traditional literary critics of the Middle Ages, like ʿAwfī [*q.v.*] and S̲h̲ams-i Ḳays [*q.v.*], have denied this double ancestry. To them, Persian poetry was entirely a product of Islamic culture. Its formal and thematic conventions were either taken over from Arabic poetry or newly invented by the first Persian poets. An important role as a creator of new forms in assigned to Rūdakī [*q.v.*]. The information concerning literary activity in Sasanian times that was available to these mediaeval critics was not accepted as evidence of the existence of a pre-Islamic poetry in Iran but was interpreted as referring only to a kind of rhymed prose set to music, not to be confused with serious literature.

Modern scholarship has established beyond doubt that Iran did have an independent literary tradition from ancient times onwards. This included poetry with a set of prosodic and metrical rules of its own, the historical development of which can be traced up to a certain extent. The oldest documents of Iranian literature, the *Gathas*, have been found to be partly poetical texts with an arrangement into stanzas of different length and with a metrical system based on the number of syllables. Within this system at least five variants are known. This prodosy is quite similar to that of the Vedic texts. Poetical fragments have also been discovered in the younger parts of the Avesta. A new metrical principle seems to be involved in these last texts, viz. the fixed number of accents. Most of the Middle Iranian languages were also used for writing poetry. The Manichaean hymns in Parthian and Middle Persian that have been found among the Turfan-manuscripts are partly translations from Syrian models, partly original compositions. Many of them are acrostic poems based on the order of the Semitic alphabet. In some of these hymns there are evocations of nature at the time of spring which are very much reminiscent of later Persian lyrical poetry. In the so-called Book-Pahlavi literature a number of texts have been shown to be original poems disguised by later Zoroastrian traditions as prose works. They represent different strains of Middle Iranian literary culture: the *Ayyātkār* (or *Yādgār*)-*ī Zarērān* belongs to the national epic (cf. E. Benveniste, *JA*, ccxiv (1932), 245-93), the allegorical tenzone *Drak̲h̲t-i Asūrīg* to the literature of wisdom (cf. idem, *JA* ccxvii (1930), 193-225). In both cases, linguistic evidence points to a Parthian origin. There are also remnants of religious poetry like the hymn on Zurvān discovered by H. S. Nyberg in the *Bundahis̲h̲n* (*JA*, ccix (1929), 214-5) and a number of other Zoroastrian poems of a didactical or visionary nature (cf. E. Benveniste, *RHR*, cvi (1932), 337-80; J. C. Tavadia, *Indo-Iranian Studies*, i (1950), 86-95; idem, *JRAS* (1955), 29-36; W. B. Henning, *BSOAS*, xiii (1950), 641-8). The metrics of Middle Persian verse presents considerable difficulties as a result of the corrupted state of the available material. According to W. B. Henning (*l.c.*), the predominant principle is not syllabic but accentual; there are also unmistakable traces of rhyme, although this was not used with great consistency, while the dating of the known specimens is still uncertain. Imitation of Persian models is, therefore, not excluded. In addition to these specimens of poetry, some examples of *belles-lettres* in prose have been preserved as well. Furthermore, a number of Pahlavi works have survived in Arabic translations or at least in the New Persian versions based on the latter. Extremely popular were the collections of Indian stories such as the *Kalīla wa-Dimna* [*q.v.*], *Bilawhar wa-Yūdāsaf* [*q.v.*] and the book of Sindibād [*q.v.*]. They had been introduced in Iran during the later Sasanian period. Their preservation is due to the translators of the 2nd/8th century among whom Ibn al-Muḳaffaʿ [*q.v.*] is the most prominent. References to a fairly extensive novelistic literature in Middle Persian are to be found in Arabic sources of which the *Fihrist* of Ibn al-Nadīm should be mentioned in particular. Nearly all of this literature has disappeared in Islamic times but not without leaving behind numerous traces both in Arabic and Persian literature. In this way, most of its subject-matter has in fact been incorporated into Islamic culture. This process of assimilation took place at such an early date that this ancient Iranian lore could play an important role in shaping the typical Islamic civilization of the Middle Ages. Instances of this cultural influence are: the legendary or semi-historical tales about the Iranian kings which through the late Sasanian codification in the *K̲h̲watāy-nāmak* not only reached its definite form in the *S̲h̲āhnāma* of Firdawsī [*q.v.*] but also became a part of Islamic world-history; the gnomic literature of the *andarz* surviving in numerous didactical works in poetry and prose, more specifically in collections of maxims like the one put to the name of the vizier Buzurgmihr [*q.v.*]; finally, a number of romantic themes both with and without a historical background, a famous example of which is the Parthian romance of *Wīs u Rāmīn* adapted from a Pahlavi model by Fak̲h̲r al-Dīn Gurgānī [see GURGĀNĪ]. The Arabic sources also tell us something about the activities of court minstrels and musicians at the time of the last Sasanian kings. The names of some of these artists like Barbād, Sarkas̲h̲ and Nigīsa remained famous far into Islamic times and we know a few titles of their songs.

From this and similar materials it has been possible to reconstruct a long tradition of minstrel poetry going back to Parthian times and perhaps even

earlier. As a form of oral literature closely connected with the art of music, it continued to flourish up to the time of the Arab conquest. Even after that event it did not vanish completely but left its influence on the popular poetry of Iran as well as on the practice of the Persian poets of the classical tradition. The minstrel tradition was clearly distinct from the written literature that was mainly cultivated by the class of professional scribes who monopolized the difficult writing system of Pahlavi. The Zoroastrian clergy, whose bias against poetry is exemplified by the anecdote about Bahrām Gūr cited above, adhered for a very long time to an oral tradition of the religious texts (see further Mary Boyce, *The Parthian gōsān and Iranian minstrel tradition*, *JRAS* (1957), 10-45).

Several modern scholars have tried to correct the traditional view of the origins of Persian poetry by making use of this new evidence for the existence of a pre-Islamic poetry in Iran. Special attention has been given to the possible connections between the quantitative metrics of classical poetry, described by the theoreticians of the Islamic period in terms of the Arabic system of al-Khalīl [see ʿARŪḌ], and older indigenous metrical patterns. According to some, the later prosody is nothing but an adaptation of earlier syllabic or accentuated metres. Although this conclusion seems too rash in view of the limitations and uncertainties of our knowledge of Middle Iranian prosody, there are on the other hand a few indications that make a more complex origin of the New Persian metres at least plausible. One could point, e.g., to the great differences in the frequency of certain metres or metrical variants between Arabic and Persian poetry, and to the fact that some of the most popular metres, at least as far as the Persian *mathnawīs* are concerned, seem to fit into an eleven-syllable scheme that could very well be related to an older autochthonous metre (cf. J. Rypka, *History*, 132 f. with further references). On the evidence of two late Middle Persian or early New Persian poetical fragments Chr. Rempis has tried to establish an Iranian lineage for two forms of Persian poetry. In a hymn on the firetemple of Karkōy, preserved in the local history *Taʾrīkh-i Sīstān*, he recognized a stanza of a strophic poem comparable to the later *tardjīʿband* or *mukhammas*; in the ceremonial address of the *mōbadhān mōbadh* to the King of Kings at the New Year festival, transmitted in the *Nawrūz-nāma*, a work ascribed to ʿUmar-i Khayyām, a specimen of the double rhymed *mathnawī* in Pahlavi (*ZDMG*, ci (1951), 233 ff.).

No matter how great a continuity can be reconstructed in Iranian literature, the fact remains that the minstrel poetry dissolved as a self-conscious artistic tradition after the coming of Islam, together with many other elements of ancient Iranian culture. Since the time of the Umayyad caliph ʿAbd al-Malik [*q.v.*] Arabic had replaced Pahlavi and Greek in the chancelleries of the Muslim empire. The religious minorities continued to have literary languages of their own. In Iran the Zoroastrian clergy continued to cultivate the archaic Pahlavi whereas the Jews started at a very early date to write in a form of Persian that was close to the actual speech of those days. Within the Muslim community, however, Arabic dominated all literary activity during the first few centuries of Islam. At a very early date the Iranian *mawālī* appear to have taken an active part in Arabic poetry. A few names are even known from Umayyad times: Abū Ziyād b. Salmā (d. after 100/718) used Persian words in Arabic lines; Ismāʿīl b. Yasār, of Ādharbāydjānian extraction, dared to sing the praise of the Persians in front of the caliph Hishām (cf. V. A. Eberman, *Persī sredi arabskikh poetov epokhi Omeyyadov*, in *Zapiski kollegii vostokovedov Akad. Nauk*, Leningrad, ii (1927), 113-53; *GAL*, I, 60 ff. and S I, 92 ff.; Dh. Ṣafā, *Taʾrīkh*, I[4], 190-4). The hazardous action of this last poet, which nearly costed him his life, can be regarded as an early instance of the Shuʿūbiyya [*q.v.*], the struggle for equality of Arabs and non-Arabs—in particular the Iranian *mawālī*—that in the early ʿAbbāsid period was fought out on the field of literary culture (*adab*). It should be pointed out that the question of the use of the vernacular in literature did not enter at all into this controversy. It is a wellknown fact that several of the great poets of Baghdād who created the new style of Arabic poetry during the 2nd/8th century were of Iranian descent. The oldest of these was Bashshār b. Burd [*q.v.*]. Abū Nuwās [*q.v.*] actually used Persian words and expressions in some of his poems (cf. M. Mīnowī, *Madjalla-i Dānishkada-i Adabiyyāt, Dānishgāh-i Tihrān*, i, 3 (1333 sh.), 62-77). It is likely, though difficult to assess in detail, that the emergence of new trends in the poetry of the multiracial urban society of ʿIrāḳ during this period owed much to Iranian influences. More evident is this impact in Arabic prose literature as well as in such a short-lived phenomenon as the adaptation of Middle Persian prose works in epic *radjaz* or *muzdawidj*-verses as practised by Abān b. ʿAbd al-Ḥamīd al-Lāḥiḳī [*q.v.*]. Arabic poetry was also cultivated with great intensity in the great cities of Khurāsān and Transoxania. A rich documentation about the poets in the Iranian provinces who wrote in Arabic from the 4th/10th century onwards has been brought together by al-Thaʿālibī [*q.v.*] in the 3rd and 4th volumes of his anthology *Yatīmat al-dahr* and its numerous supplements, like the author's own *Tatimmat al-Yatīma* (ed. by ʿAbbās Iḳbāl, Tehran 1313 sh.), the *Dumyat al-ḳaṣr* by al-Bākharzī [*q.v.*], the *Zīnat al-dahr* by Abu 'l-Maʿālī Saʿd b. ʿAlī al-Ḥarīrī (d. 518/1172), and the *Kharīdat al-ḳaṣr* by ʿImād al-Dīn al-Kātib al-Iṣfahānī (d. 597/1201; for the subsequent centuries see *GAL*, I, 251-4; S I, 445-9; II, 245; S II, 255-7). Arabic coexisted for a considerable time with Persian as an idiom for poetry. This is expressed in the honorific *dhu 'l-lisānayn*, "master of the two tongues", bestowed on some poets.

The very first signs of the use of the vernacular in poetry are a few scattered pieces that have come to light from a number of different Arabic sources as well as from the Persian *Taʾrīkh-i Sīstān*. Dating from the first two centuries A.H., they do not yet follow the quantitative metrics of later times, but on the other hand they do have rhyme in some sort. They can be regarded as late examples of the old minstrel poetry, or, rather, as specimens of popular literature from the time when Arabic poetry still reigned unrivalled among the educated classes. Often quoted and much discussed by modern researchers are the satirical lines put into the mouth of Yazīd b. Mufarrigh (cf. Fr. Meier, *Die schöne Mahsatī*, i, Wiesbaden 1963, 9. f. with further references). Also satirical are the four lines the people of Balkh addressed to the governor of Khurāsān, Asad b. ʿAbd Allāh, at the moment of his return after having been defeated in battle (*ibid.*, 10). See further on these fragments: Th. Nöldeke, *Das iranische Nationalepos*[2], 91; M. Ḳazwīnī, *Bīst Maḳāla*, i, Bombay 1928, 26-36; S. Ḥ. Taḳīzāda, *Hazāra-i Firdawsī*, Tehran 1944, 46-9; Muh. Taḳī Bahār, *Mihr*, v, 1316-7 sh., *passim* (reprinted as *Sabkshināsī*, iv/1 by ʿAlī-ḳulī Maḥ-

mūdī Bakhtyārī, n.p. 1342 sh.); Dh. Ṣafā, *Ta'rīkh*, i[4], 147-51. The distich attributed to Abū Ḥafṣ Sughdī might very well be a citation from his lexicon (cf. G. Lazard, *Les premiers poètes persans*, i, Tehran-Paris 1964, 10 f.). A more serious claim to precedence as the author of a Persian poem composed according to the rules of Arabic prosody can be held by ʿAbbās or Abu 'l-ʿAbbās al-Marwazī, who is named by ʿAwfī (*Lubāb*, i, 21) as the author of a *ḳaṣīda* in honour of the caliph al-Ma'mūn composed at the occasion of the latter's arrival in Marw in the year 193/809. This account is rejected by most modern scholars, mainly on stylistic grounds. The lines quoted by ʿAwfī show a dexterity of poetical diction that suggests a much later time of origin (cf. G. Lazard, *l.c.*, 12 and the references there; for contrary opinions see Chr. Rempis, *l.c.*, 221 and J. Rypka, *History*, 135).

Whether this notice of ʿAwfī is to be accepted as historical or not, the rise of Persian poetry appears to us essentially as one aspect of a larger development of political and cultural emancipation in the Iranian provinces of the caliphate. It has often been styled an "Iranian renaissance" though it should be understood that this may not be interpreted as a return to pre-Islamic culture. As the final outcome of that process of Iranization which was facilitated by the ʿAbbāsid revolution, it really meant the acceptance of the Iranian element as an integrated part of the Islamic commonwealth and its civilization. In politics, this found its expression in the short intermezzo of *de facto* independent rule of Iranian dynasties between the periods of Arab and Turkish domination; in the domain of culture, in the elevation of Persian to the rank of a literary language. In its oldest form it was known as *darī* [*q.v.*], originally a south-western dialect which since the later Sasanian period had spread over the whole area where Iranian languages were spoken [see further IRAN. LANGUAGES]. The eastern parts of Iran took the lead in the use of the vernacular in writing. In the west and the south, Arabic retained its supremacy even under the rule of the Daylamite Būyids.

From the time of the Ṭāhirids, only a few names of Persian poets are known to us and next to nothing of their work has been preserved, although it is recorded that at least one of them, Ḥanẓala of Bādghis, had his poems collected into a *dīwān*. Thanks to the data transmitted by the *Ta'rīkh-i Sīstān* we are somewhat better informed about the poetry at the court of the Ṣaffārids. This source contains a detailed account of the birth of Persian poetry which presents a convincing picture of the way it actually happened, even if similar occurrences can easily be imagined to have taken place in the entourage of other local rulers as well. The notice has the form of an anecdote situated at the court of Yaʿḳūb b. Layth when he was being hailed by the poets after the capture of Harāt and the victory over the Khāridjites. As the amīr expressed his annoyance on account of the fact that he could not understand anything of these Arabic panegyrics, one of his secretaries, by the name of Muḥammad-i Waṣīf, started to compose poetry in Persian. "And he made the first Persian poetry addressed to Iranians. Before him, no one had done such a thing for, as long as they were *pārsīs* (*i.e.* before they became Muslims, both in a religious and in a cultural sense), lyrics used to be sung to them at the sound of the lute (*rūd*) in the *khusrawānī* manner. When the Iranians were defeated and the Arabs came, poetry among them was in Arabic and they all had knowledge and understanding of it. No one amongst the Iranians rose to such a greatness that they would sing poems to him, before the time of Yaʿḳūb. The only exception was Hamza b. ʿAbd Allāh al-Shārī, but he was a learned man and knew Arabic." (ed. Muḥ. Taḳī Bahār, Tehran 1314 sh., 210). The expression *bar ṭarīḳ-i khusrawānī* in this passage corresponds to the terms *surūd* or *nawā-i khusrawānī* as they occur in the descriptions of the minstrel and his art at the Sasanian court in other sources. Scattered pieces of afew other poets of the Ṣaffārid period have also been preserved but this material is too limited to give us more than a vague idea of the poetry of this time. The poets made use of Arabic prosody though the lack of technical perfection they display characterizes them as first trials at handling a new linguistic medium of literary expression. The real history of Persian literature only began with the next period, the time of the Sāmānids of Transoxania.

b. *General traits of the Persian literary tradition.* Already from the earliest phase of its history Persian literature presents itself as a clearly defined tradition that guides as well as limits the artist in his creative work. Within this traditional pattern there are not only strict rules for prosody but also stringent prescriptions with regard to the choice of themes, images and metaphors. In spite of the dramatic developments that occurred in the course of time in Iranian society, its artistic traditions displayed a remarkable resistance to fundamental changes, at least until the overwhelming influence of Western civilization made itself felt with all its force in the present century. In the preceding section we have referred to some of the elements out of which this tradition has been built up. Ancient Iranian literature may have played a much greater role than has been thought before. Undoubtedly there have also been indirect influences from Indian and from Hellenistic culture. As a typical product of mediaeval Islamic culture Persian literature was syncretistic. It was able to absorb these heterogeneous elements and give them a place in a new harmonious unity. This adaptability can also be observed in other forms of Persian art. The mould in which this literary tradition was cast was, however, Arabic literature. In the 3rd/9th century the latter had already gone through the most dynamic stages of its history. It had developed a formal and conceptual idiosyncrasy that would determine the literary activity of the Arabs for many centuries to come [see further ʿARABIYYA. B. ARABIC LITERATURE, especially the sections i and ii]. This determined also to a large extent the Persian tradition. The work of the early Persian poets was in particular influenced by the "new poetry" of the early ʿAbbāsid period, although some Persian poets still tried their hands at imitations of the old Bedouin *ḳaṣīda* and its repertoire (e.g. Manūčihrī, Muʿizzī). The poets of the Ḥamdānid school equally should be mentioned in this respect. In particular al-Mutanabbī was very much admired in Iran. The nature poetry of al-Ṣanawbarī [*q.v.*] and the genre of the prison ballad of Abū Firās al-Ḥamdānī [*q.v.*] also provided models for the Persian poets (cf. U. M. Daudpota, *The influence of Arabic poetry on the development of Persian poetry*, Bombay 1934; Viktūr al-Kik, *Ta'thīr-i farhang-i ʿArab dar ashʿār-i Manūčihrī-i Dāmghānī*, Beirut 1971).

The faithfulness of the artist to the established patterns was greatly favoured by the methods of training recommended to the beginner. He was advised to learn the craft by memorizing large quantities of verse from the works of the great masters of the

preceding generations. In addition to this he was urged to become a scholar since learning was considered to be a great asset in poetry. Finally he should study the different branches of literary theory and criticism. The censure of the critics, either the professionals in their learned works on *naḳd-i shiʿr* or the educated public in its informal reactions, will have done its share to contain any attempt to go too far beyond the accepted bounds of tradition.

A similar restraint was put on the poet by his social status. Until the end of the 19th century most Persian poets were in some way or the other dependent on patronage. Literary life was mainly centred at the courts of greater or smaller monarchs. If the position of the poet as a craftsman was economically based on the favours of the princely maecenas, he was at the same time indispensable to the court. His task was not confined to entertaining but included also the advertizing of the virtues and exploits of the ruler. From the eagerness with which poets were attracted tc the courts it can be concluded that this form of political propaganda was regarded as effective. Apart from the sultans, the amīrs and the atabegs, the poets sang the praise of lower members of the ruling class as well: viziers, generals or prominent jurists and theologians. From the 5th/12th century onwards the patronage was also assumed by the urban aristocracy. The persistance of this relationship between poet and maecenas (*mamdūḥ*) is illustrated by the continuous use of titles like *amīr* or *malik al-shuʿarāʾ* (poet laureate) from the times of Maḥmūd of Ghazna (ʿUnṣurī) to the last days of the Ḳādjārs (Bahār). A counterpart to the panegyrical function of poetry was formed by satire [see HIDJĀʾ, ii]. If poetry had the power to enlarge the prestige of a patron it could equally well serve to damage a reputation. This weapon might be used against the enemies of the patron or of the poet himself, but it could also be wielded against the former when he disappointed the poet's expectations. This social function of Persian court poetry certainly did not hinder its reaching at times a high degree of artistic perfection. Sometimes the symbiosis of political power and literary talent may even have stimulated the endeavours towards an ever more refined use of the poetical means. The effectiveness of a literary work as a medium for social and political publicity depended to a large degree on its artistic value. (Several authors have left explicit statements of the opinions concerning the poet and the function of his profession in society prevailing in their times, *e.g.*: Niẓāmī-i ʿArūḍī, *Čahār maḳāla*, ed. M. Ḳazwīnī-M. Muʿīn, Tehran 1955-7, text, 42 ff.; tr. by E. G. Browne, JRAS (1899), 661 ff.; Kay-Kāʾūs, *Ḳābūsnāma*, ed. Ghulām-Ḥusayn Yūsufī, Tehran 1345/1967, 198-92; Shams-i Ḳays, *al-Muʿdjam fī maʿāyīr ashʿār al-ʿadjam*, *khātima*, ed. M. Ḳazwīnī, Leiden-London 1909, 415 ff.; ed. M. Raḍawī, Tehran 1338 sh., 445 ff.; see also Naṣr Allāh Falsafī, *Zindagānī-i shāʿirān-i darbārī*, in *Čand maḳāla-i taʾrīkhī wa-adabī*, Tehran 1342 sh., 327-51).

Next to its other functions literature has in Iran always served as a medium for instruction and edification. Didactical works were among the first manifestations of Persian literature. Even the heroic epic, as we know it from the *Shāhnāma* of Firdawsī and the works of his imitators, is full of moralising asides. Religious themes also appear at a vefy early date. At first they consisted of ascetic warnings (*mawāʿiẓ*) which had their parallels already in Arabic literature in the *zuhdiyyāt* of poets like Abū Nuwās and Abu 'l-ʿAtāhiya [*qq.v.*]. Gradually ecstatic mysticism found a way of expression in most forms of literature whether poetry or prose. This conquest by Ṣūfism is by far the most decisive development that took place in the history of Persian literature. Some poetical forms became almost completely absorbed by it. The line of development A. Bausani has sketched for the Persian *ghazal* [*q.v.*]—from the address to the *mamdūḥ* through an identification with the *maʿshūḳ*, the beloved as the object of an erotic poem, to the *maʿbūd*, the transcendental Beloved—can very well serve to characterize this whole process of transformation. The attitude of absolute loyalty towards the maecenas which had to be expressed by the panegyrical poet was already in the early court poetry often associated with the total submission of the lover to his beloved as a metaphorical device. For a mystical application of this poetry with all its conventions this fundamental attitude did not need, therefore, to be changed. All that was necessary was a new interpretation of the symbols used. One of the results of this was a great amount of ambiguity in Persian poems. It is by no means always clear whether a poem is addressed to a venerated person in this world or in a transcendental sphere. This ambiguity constitutes one of the greatest problems of the interpretation of the work of a poet like Ḥāfiẓ, who seems to fuse the panegyric, the erotic and the mystical intention into one. This case may not be as unique as it is sometimes presented. Although some of the Ṣūfī poets certainly did withdraw from all attachments to this world in actual life and projected their poetically phrased veneration exclusively to the mystical object, or perhaps to the person of their spiritual leader (*pīr*), it is undeniable that mystical ecstasy did turn out to be not always incompatible with the relationship to an earthly maecenas. In the course of time the flavour of Ṣūfism to such an extent permeated lyrical poetry that its absence was felt as an aesthetic defect (cf. the remark of Shiblī Nuʿmānī, cited by J. Rypka, *History*, 233).

Another characteristic that made Persian verse a pliable medium for the expression of mystical ideas was its idealism. Quite often, and not least by modern Iranian critics, the early poetry in the so-called Khurāsānī-style is qualified as realistic. This misunderstanding arises from the fact that the poet seems to speak about things in the outer world whereas in fact he evokes a poetical world in which the objects of his description possess an ideal and immutable form. His vernal garden is more akin to paradise than to any specific garden on earth, his idolized beauty is more like a *ḥūrī* than like any particular human being. Even when he speaks about topical events such as a military campaign, a hunting-party or a festival he does not depict them as concrete events, but treats them on an abstract level. In the same way his often very detailed attention for natural phenomena does not concern the things themselves but rather the metaphorical possibilities they offer him as symbols. Together they form a fixed stock of images that tend to acquire stereotyped symbolic values. A great number of these have been accepted as tropic expressions in the ordinary use of the language, *e.g.* narcissus (*nargis*) for the eye, ruby (*laʿl*) for lips, cypress (*sarw*) for slim stature.

The originality of an artist can only be evaluated within the framework of the artistic tradition which defines the boundaries of his work. In the case of Persian lyricism with its pronounced classicism this means that creative invention can only be applied on

the smallest elements of the poem, *i.e.* the individual lines (*bayts*) and the images and metaphors on which they are based. The poets vie with each other in formal perfection and refinement of expression, not in novelty of ideas. Sometimes this takes the form of citation (*taḍmīn*) which consists in incorporating a line of another poet into one's poem in order to be able to add an original line expressing the same idea in a still subtler way. This preoccupation with the single line of poetry has resulted in a remarkable loose structure, in particular of the *ghazal*. Recent research on the *ghazals* of Ḥāfiẓ [*q.v.*] has for a great deal been concentrated on attempts to ascertain the structural principle of these poems which is thought to be of an associative character.

c. *Forms and themes.*

The most obvious mark of its ties to Arabic literature is the prosodic system that governs classical Persian poetry. At least theoretically all poetical forms, whatever their origin, have been defined in terms of the flexible system of *ʿarūḍ* [*q.v.*] as formulated by al-Khalīl. Both quantitative metres and, to a lesser extent, the use of rhyme were novelties to Iranian literature. Differences in linguistic structure between the two languages presented the first Persian poets with many difficulties as can be noticed in the technical deficiencies (from the point of view of scholastic theory) in their works (cf. Th. Nöldeke, *Das iranische Nationalepos*², Berlin-Leipzig 1920, 95 ff.; G. Lazard, *Les premiers poètes*, i, 45 f.; M. Dj. Maḥdjūb, *Sabk-i khurāsānī dar shiʿr-i fārsī*, Tehran 1345/1967, 35, 40 ff.). Before long a strict observance of the rules became imperative for the professional poet. It came also to play an important role in indigenous criticism. In practice there exist many differences between Arabic and Persian prosody. Apart from the striking diversity in the use of certain metres referred to already there is also a contrast in the manner in which the metres are applied within the bounds of a single poem. Whereas Arabic poetry permits of a wide range of variants to be chosen as derivative forms (*azāḥīf*, *ʿilal*) from the ideal metrical patterns (*buḥūr*), the Persian poets restrict themselves to one fixed (usually a derivative) form with only small room for alternatives (in most cases the substitution of two short syllables for one long syllable or *vice versa*). The rules of scansion allow a limited number of anceps syllables—the enclitic denoting the *iḍāfa*, the conjunction *u*, the words *tu* and *du* and the ending *-a*—and leave it to the poet to decide whether he wants to treat a vowel at the beginning of a word independently or whether he connects it with a preceding consonant. The enclitic forms of the singular personal pronouns can be treated as open short syllables. The most characteristic trait of Persian scansion is, however, the extended long syllable. This feature is disregarded in the contemporary practice of reciting poetry. A peculiarity of Persian rhyme is the *radīf*, *i.e.*, the adjunction of a word or a short phrase to the rhyming sound (*ḳāfiya*) and its repetition throughout the poem. It is very frequently used in *ghazals*. [See further ʿARŪḌ, ii].

The forms of poetry can be divided into two groups, the lyrical and the epic forms. The first group is characterized by patterns of rhyme that can all, again in theory, be reduced to the monorhyme pattern of the *ḳaṣīda*: aa, ba, ca, etc. The second consists only of one form: the *mathnawī* in which each distich has a different internal rhyme (aa, bb, cc, etc.). In other respects as well, the *ḳaṣīda* [*q.v.*] can be regarded as a basic form. It is the most unquestionable piece of the Arabic legacy. True to its origin it is first and foremost a medium for panegyric poetry and therefore closely connected with the social role of many Persian poets. The *ḳaṣīda* usually consists of three parts: the prologue (*nasīb*, *tashbīb*), the actual panegyric (*madīḥ*) and the concluding appeal to the generosity of the patron (*duʿāʾ*). The literary convention required that the poet should give special attention to the embellishment of the opening (*maṭlaʿ*) and concluding lines (*maḳṭaʿ*) of the poem as well as of the passage where he turns from the prologue to the panegyric (*gurīzgāh*, *makhlaṣ*, *takhalluṣ*). The most interesting part is undoubtedly the prologue. A great variety of topics can be used as themes. The choice is often decided by the topical occasion of the poem. Descriptions of nature in spring or in autumn were current in odes to be recited at the *nawrūz* or the *mihragān* festivals. The fire festival (*djashn-i sada*) at the end of winter called for descriptions of bonfires. Another famous theme was provided by wine and viniculture. The life of the court gave opportunities to chant the hunting parties or the campaigns of the patron or to describe the symbols of his royal status (*e.g.* the sword, the pen, the horse). A special branch of *ḳaṣīda* poetry was formed by the elegy (*marthiya*). A more personal note seems also to be struck in complaints about old age or about imprisonment as well as in the favourite subject of love (*taghazzul*). All of these are conventional themes which can be traced back to the tradition of Arabic poetry. Very soon the *ḳaṣīda* was equally used for the expression of secular moralism, religious topics and even mysticism. The most common form of the prologue was that of a description (*waṣf*), but sometimes other devices were applied as well, such as semantic riddles (*lughz*, *čīst*), tenzons (*munāẓara*) or plays of question and reply (*suʾāl wa-djawāb*). Until the time of the Mongol invasion the *ḳaṣīda* was the most important lyrical form. It reached a height of rhetorical perfection in the hands of the poets of the Saldjūḳ court (Muʿizzī, Anwarī) and in the school of Ādharbāydjān (Khāḳānī). From the 7th/13th century till the classicist renaissance of the middle of the 12th/18th century it was relegated to the background, although the intervening period still produced some outstanding poets of the *ḳaṣīda* like Salmān-i Sāwadjī [*q.v.*] and ʿUrfī [*q.v.*]. At the time of the Ṣafawids the elegiac *ḳaṣīda* was used for religious poetry mourning the holy martyrs of the Shīʿa. The decline of the *ḳaṣīda* in the Mongol period coincided with the full development of the *ghazal*. It succeeded as the principal form of lyrical poetry. The prosodic characteristics of the *ghazal* are identical with those of the prologue of a *ḳaṣīda*; it has approximately the same length and exactly the same pattern of rhyme. Although no specimens that can be attributed with certainty to Sāmānid and early Ghaznavid times (4th/10th-middle of the 5th/11th century) have survived, the occurrence of *ghazals* in a romantic *mathnawī*, *Warḳa u Gulshāh* by ʿAyyūḳī, proves that it was known already as a separate form during the latter period. At a later stage of its development the use of the poet's nom de guerre (*takhalluṣ*) in the *maḳṭaʿ* became an inseparable element of the *ghazal*. Some researchers have tried to relate the origin of this usage to the origin of the Persian *ghazal* itself, in particular in its function as a mystical poem (cf. e.g. E. E. Bertel's, *Istoriya*, 519; A. Ateş, İA, s.v. *gazel*). This view is incompatible with the evidence. Its use is from the earliest period onwards attested in the panegyrical *ḳaṣīda*. In the *dīwān* of Sanāʾī, one of the oldest poets who has left an extensive collection of

ghazals, the takhallus occurs far more frequently in the kasida than in the latter form. In addition to its use as a poem of profane and mystical love it could also serve as a subtle medium for panegyrism. [See further s.v. GHAZAL, ii]. Other lyric forms, far less frequently used, are the strophe-poems, *tardjiʿ-band* and *tarkib-band*, the multiple poem, *musammat*, which most often consists of four (*murabbaʿ*), five *mukhammas*) or six lines (*musaddas*), and the increment poem *mustazād*. [See also ʿARŪḌ, ii]. Most collections of poetry contain a section of fragmentary pieces (*kiṭʿa*, pl. *kiṭaʿāt* or *mukaṭṭaʿāt*). They are classified as unfinished poems because of the omission of a regular *maṭlaʿ* with internal rhyme. They range from a half verse or a single line (*fard*) to a poem of the length of a *kaṣīda*. Very often these *mukaṭṭaʿāt* are topical poems, such as elegies, chronograms (*taʾrīkh*) and satires.

The Persian quatrain (*rubāʿī* [*q.v.*], also named *du-baytī* or *tarāna*) is not only defined by the number of lines but also by its pattern of rhyme (aaba, less commonly aaaa) and by its metre, to be described as a series of variants of the ideal metre *hazadj* according to traditional theory. This is undoubtedly an artificial construction but the real origin of this form of short epigrammatic poems is still uncertain. Various themes can be chosen as a subject for the *rubāʿī*. At an early date they occur in the sermons and the biographies of Ṣūfī *shaykhs* and in mystical treatises. Best known to Western readers is the philosophical quatrain. Erotic and anacreontic themes were by no means imcompatible with this form. It is also frequently used for topical poetry, for inscription on buildings, tombstones etc.

The possibilities offered by the much simpler rhyme of the *mathnawī* [*q.v.*] have been exploited to the full in Persian literature. A rich epic poetry has been based on it, comprising many works of great extent. The only rarely used *muzdawadj* [*q.v.*] of Arabic poetry can hardly be compared with it. Although the factual evidence pointing to an Iranian origin for the Persian *mathnawī* is very limited, the importance this form has had from the very beginning makes it at least likely that it continues some kind of older indigenous literary form. Three main groups can be distinguished in the Persian epic: (a) the heroic epic, based on ancient Iranian mythology, the legendary as well as the historical lives of the kings of Iran and other heroic cycles that became attached to this [see further ḤAMĀSA, ii]. (b) The romantic epic, elaborating in most cases famous stories about a pair of lovers whose names provide the title of the poem. These stories come from quite different origins. Some of them are episodes taken from the heroic epic (e.g. *Khusraw u Shīrīn*), others go back to Iranian (e.g. *Wīs u Rāmīn*), Hellenistic (e.g. *Wāmiḳ u ʿAdhrā*) and Arabic sources (e.g. *Laylā u Madjnūn*), or are derived from the *Ḳurʾān* (*Yūsuf u Zalīkhā*). Nearly all of them developed into literary models which were imitated by successive generations of poets. The poetical language of the romantic *mathnawī* is more rhetorical than that of the heroic epic. Lyrical intermezzi often interrupt the intrigue. There are always a few passages added with moralistic aphorisms. With the growing influence of mystical philosophy on literature, the romantic tales acquired an allegorical meaning. (c) The didactic *mathnawī* includes a diversity of works the main purpose of which is instruction of one kind or another. This can be the vulgarization of science, moral precepts of a secular nature or the exposition of philosophical, religious or mystical truth. The poems of this category belong to epic literature in as far as they make use of narratives to typify the theoretical subject-matter. Frame-stories are also used to wrap the contents in an attractive epic form (cf. e.g. Rūdakī's *Kalīla u Dimna* and several of the mystical *mathnawīs* of ʿAṭṭār). In the great tradition of the so-called Ṣūfī *mathnawī* anecdotes became particularly important. In these last works stories can be found that were taken from the Ḳurʾān, from *Ḥadīth*, from the *ḳiṣaṣ al-anbiyāʾ* and the hagiography of Ṣūfī saints as well as from a great number of other sources. (Of some of the most important among these works the narrative elements have been analysed and related to their sources; cf. on Sanāʾī: M. Raḍawī, *Taʿlīḳāt-i Ḥadīḳat al-ḥaḳīḳa*, Tehran 1344 sh.; on ʿAṭṭār: H. Ritter, *Das Meer der Seele*, Leiden 1955; on Djalāl al-Dīn Rūmī: R. H. Nicholson, *The Mathnawī* of *Jalálu'ddín Rúmí*, vols. vii and viii (*Commentary*), London 1937-40; Badīʿ al-Zamān Furūzānfar, *Maʾākhidh-i ḳiṣaṣ wa tamthīlāt-i Mathnawī*, Tehran 1333 sh.: idem, *Sharḥ-i Mathnawī-i sharīf*, 3 vols., Tehran 1346-8 sh., left unfinished). A favourite allegorical technique is the *zabān-i ḥāl*, "the speech of state". This means that animals, things, or even metaphysical and legendary beings are introduced as speakers illustrating through a description of their own mode of existence the abstract ideas put forward by the author.

As metre and rhyme were, in the classical tradition, regarded as almost indispensable to a genuine literary composition, prose could only play a modest role in Persian literature. It had, moreover, to compete with the *mathnawī* in most narrative genres. Still, when considered from a more impartial point of view, a rich and varied literature of prose works of artistic value appears to exist. Anecdotes are also a favourite instrument of prose-writers even if their works are of an entirely utilitarian intent. It is, for that reason, not always possible to draw a clear line between artistic and non-artistic prose. A survey of different genres of story-telling in prose is given s.v. ḤIKĀYA, ii.

Conspicuous traits of the stylistic development of Persian prose are the interspersion of prose with poetical fragments and the increasing abundance of rhymed prose for which full advantage was taken of the possibilities offered by the vocabulary of Arabic. From the Mongol conquest onwards the tendency towards formal embellishment went to such extremes that meaning became almost completely subordinated to form. A trend to simplify the language of literary compositions started early in the 13th/19th century. For a detailed history of Persian prose style see M. T. Bahār, *Sabkshināsī, yā taʾrīkh-i taṭawwur-i nathr-i fārsī*, 3 vols. Tehran 1321 sh.

In the course of this survey there has been occasion to refer to several of the genres current in Persian literature, in particular in as far as they were connected with one of the poetical forms. In addition to this, some reference should be made to the genre of the *ḳalandariyyāt*, named after the *ḳalandar* [*q.v.*], a type of wandering *darwīsh* who practices in its extreme form the antinomian way of life of *malāmatiyya* [*q.v.*] mysticism. Poems of this genre can be quatrains (Bābā Ṭāhir, ʿAṭṭār) or may have a form intermediate between the *ḳaṣīda* and the *ghazal* (cf. esp. Sanāʾī). It seems to have absorbed the literary tradition of provocative identification of the poet with forms and symbols of non-Islamic religions (*kufriyyāt*) which is attested already in Arabic poetry of ʿAbbāsid times and in Persian poetry appears as early as Daḳīḳī [*q.v.*]. The *ḳalandariyyāt* later on

merged with the mystical *ghazal* (cf. H. Ritter, *Das Meer der Seele*, 487 ff.; idem, *Oriens*, xii (1959), 14 ff.). Another genre worth mentioning here is the *shahr-āshūb* or *shahr-angīz*, short poetical witticisms on young artisans, usually quatrains but also occuring as *ḳaṣīdas* In the latter case, they have been worked out to a satire on a whole town. Although themes of this kind can be found at quite an early date they really became popular only from the 10th/16th century onwards. The importance of the *shahr-āshūb* poems as documents of social conditions has been overrated (cf. A. Mirzoev, *Sayyido Nasafi i ego mesto v istorii tadžikskoy literaturi*, Stalirabad 1955, 143 f., cited by J. Rypka, *History* 297, 302 f. See also on this genre: M. Dj. Maḥdjūb, *Sabk-i Khurāsānī*, 677-99; A. Gulčin-i maʿānī, *Shahr-āshūb dar shiʿr-i fārsī*, Tehran 1346 sh.). There are also genres that are strictly bound to prosodic forms, e.g. the *Sāḳī-nāma*, a short *mathnawī* piece in the metre *mutaḳārib* on themes belonging to the topic of wine-drinking. The oldest specimens date from the 8th/14th century (Salmān-i Sāwadjī, Ḥāfiẓ). An anthology of works of this type was compiled by ʿAbd al-Nabī Fakhr al-Zamānī Ḳazwīnī in 1028/1619 (*Tadhkira-i Maykhāna*, ed. by Gulčin-i maʿānī, Tehran 1340 sh.).

The poetical language, its images and metaphors have only been explored to a limited extent so far. The nature themes in the early court poetry have been inventorised and analysed by C.-H. de Fouchécour, *La description de la nature dans la poésie lyrique persane du XIe siècle. Inventaire et analyse des thèmes*, Paris 1969. Especial attention is given to the symbolism of the erotic-mystical *ghazal* in the chapter on *Motivi e forme della poesia persiana* of A. Bausani's *Storia*, 239-95; cf. idem, *Persia religiosa*, Milan 1959, 298-354; Manūčihr Murtaḍawī, *Maktab-i Ḥāfiẓ yā muḳaddama bar Ḥāfiẓ-shināsī*, Tehran 1344 sh. The Zoroastrian background of many themes is examined by M. Muʿīn, *Mazdayasnā wa taʾthīr-i ān dar adabiyyāt-i pārsī*, Tehran 1326 sh., 1338 sh.[2]. On various topics of lyrical poetry see further: A. Schimmel, *Die Bildersprache Dschlelâladdin Rûmîs*, Walldorf-Hessen 1950; eadem, *Schriftsymbolik im Islam*, in *Aus der Welt der islamischen Kunst, Festschrift E. Kühnel*, Berlin 1957, 244-54; eadem, *Rose und Nachtigall*, in *Numen*, v/2 (1958), 85-109; E. Yarshater, *The theme of wine-drinking and the concept of the beloved in early-Persian poetry*, in *Stud. Isl.*, xiii (1960), 43-53. The fundamental study by H. Ritter, *Über die Bildersprache Niẓāmīs*, Berlin-Leipzig 1927, deals in particular with the use of metaphor in Persian poetry. A new approach to the study of the language of poetry and literary prose makes use of the method of statistical wordcount: cf. R. Koppe, *Statistik und Semantik der arabischen Lehnwörter in der Sprache Alawi's*, in *Wissensch. Zeitschrift d. Humboldt-Universität zu Berlin, gesellsch. u. sprachwiss. Reihe*, ix (1959-60), 585-619; W. Skalmowski, *Ein Beitrag zur Statistik der arab. Lehnwörter im neupersischen*, in *Folia Orientalia*, iii (1961), 171-5 (on Saʿdī and Ḥāfiẓ) and M. N. Osmanov, *Častotniy slovar' Unsuri*, Moscow 1970. Some aspects of literary technique have been studied by G. Richter, *Persiens Mystiker Dschelâl-Eddîn Rumi: eine Stildeutung*, Breslau 1933; W. Lentz, *Beobachtungen über den gedanklichen Aufbau einiger zeitgenössischer Prosastücke*, in *Isl.*, xxx (1952), 166-208; idem, *ʿAṭṭār als Allegoriker*, in *Isl.*, xxxv (1960), 52-96.

The rhetorical schemes played an important part in the style of Persian lyricism, especially in the art of the panegyric *ḳaṣīda*. Poems based on an intensified use of these figures were called *ḳaṣīda-i muṣannaʿ*. A specimen of this is the poem designed by Ḳiwāmī of Gandja (6th-12th century) as a textbook on the subject (cf. Browne, ii, 47-76). An analysis of one of the masterpieces of poetical rhetoric has been given by J. Rypka, *Ḫāqānīs Madāʾin-Qaṣīde rhetorisch beleuchtet*, in *ArO*, xxvii (1959), 199-205. The exposition of the schemes by Persian theoreticians is derived from the Arabic works on *badīʿ* and *balāgha* [*qq.v.*]. The oldest extant work is the *Tardjumān al-balāgha* by Muḥ. b. ʿUmar al-Rādūyānī (probably second half of the 5th/11th century; ed. with facsimile of the unique MS. by A. Ateş, Istanbul 1949). It was adapted about a century later by Rashīd al-Dīn Waṭwāṭ in his *Ḥadāʾiḳ al-shiʿr*. The most authoritative work dealing with the disciplines of prosody as well is *al-Muʿdjam fī maʿāyīr ashʿār al-ʿadjam* by Shams al-Dīn Muḥammad b. Ḳays al-Rāzī, Shams-i Ḳays for short (ed. by E. G. Browne and M. Ḳazwīnī, London 1909; ed. by Mudarris-i Raḍawī, Tehran 1314 sh., 1338 sh.).[2] For a survey of works on the theory of literature see the introduction by M. Ḳazwīnī to the last-mentioned work and F. Tauer, in J. Rypka et. al., *History*, 432 ff.

II. Historical Survey.

a. *Periodization of Persian literary history.*

Most histories of Persian literature derive the arrangement of their subject-matter largely from the divisions of dynastic history. This method is to a certain extent justified by the fact that royal courts have always been very important in the literary life of Iran. Schools of poetry can quite conveniently be identified and labelled by reference to the political centres on which they depended. Apart from the theoretical objections that can be brought forward against the exclusive use of a political frame of reference, one of the main practical disadvantages is that it cannot account for literary developments that intersect the boundary lines of political history. An arrangement based on a classification of forms and genres, as has been chosen for instance by H. Ethé and, more recently, by A. Bausani, can do more justice to the intrinsic history of literature as an autonomous artistic tradition. In the present survey, a broad historical scheme has been adopted which leaves sufficient room to trace out at least the most essential lines of the purely literary development. Within each historical section a secondary arrangement according to the main genres of literature (lyric poetry, epic poetry, prose) has been followed as far as possible.

Several attempts have been made to work out a more fundamental theory of periodization. A. Zarre has based his trifold division of Iranian literature as a whole on the principles of Marxist literary theory. The feudal period encompasses both the classical Persian literature and the literature of the Middle Iranian period (cf. *Očerk* in *Vostok, sbornik*, ii, 26). Suggestions for a much more refined scheme based on autonomous literary developments as well as on political and economic factors have recently been made by A. N. Boldîrev and I. S. Braginskiy (cf. I. S. Braginskiy et. al., *Problemî periodizatsii istorii literaturî narodov Vostoka*, Moscow 1968, containing reprints of articles published earlier in *Narodî Azii i Afriki*, 1963/6, 290-314 and *ibid.*, 1965/2, 100-10; see also the summary in *Central Asian Review*, xii (1964), 132-9). S. Nafîsî has borrowed the terms of his scheme (realism, naturalism, symbolism, etc.) from the historians of European literatures (cf. *Shāhkārhā-i nathr-i Fārsī-i muʿāṣir*, i, 23 ff.). A quite different system, developed by Oriental students of Persian literature, both in Iran and on the Indian subcontinent, makes use of a geographical nomen-

clature but is essentially based on stylistic criteria. This theory distinguishes three different styles each of which is typified by the poetry of a specific region during a certain period of time. (a) The style of Khurāsān or Turkistān (*sabk-i Khurāsānī, sabk-i Turkistānī*), *i.e.*, the comparatively simple and balanced style of early Persian poetry up to the Saldjūḳ period. It is ruled by the principle of harmonious use of images and metaphors within the limits of one line (*murāʿāt al-naẓīr*). The language both of prose and verse is still the old *darī* which has not yet been overloaded with Arabic loanwords and expressions. The main forms of poetry are the *ḳaṣīda* and the *mathnawī*, especially the heroic genre. (b) The style of ʿIrāḳ (*sabk-i ʿIrāḳī*) is characterized by a development towards a rhetorically more sophisticated type of poetry, the language of which is much more influenced by Arabic. There is also a tendency to use difficult learned allusions. In the course of the period of the *ʿIrāḳī* style, the *ghazal* and the romantic epic become the most prominent forms of poetry. It is equally the time of the rise of Ṣūfī literature in all its various forms. Most of these developments affect prose literature as well. There exists some uncertainty about the exact beginnings of this style. The shift of the main centre of literary life to the west during the second half of the 6th/12th century is reflected in its name, but unmistakable traces of similar stylistic trends can be found in the literature produced in the eastern parts of the country from the end of the preceding century onwards. (c) The Indian style (*sabk-i Hindī* [*q.v.*]) is in its origin as a clearly defined poetical style more narrowly associated with historical and geographical factors than the two others. These factors are the radical changes in Iranian society resulting from the victory of the Ṣafawids in the 11th/16th century and the migration of many Persian poets to Indian courts, which took place simultaneously. The characteristic traits, as they have been described by A. Bausani, are: deviations from the rule of harmonious use of imagery, leading to a "baroque" extension of the stock of images and metaphors allowed in poetry, the predominance of mystical-philosophical themes, and an extreme tendency towards allegory. This style reached its full development with the Indian poets, but was also followed for some time by poets in Iran until the middle of the 12th/18th century when a return to the classical models (*bāzgasht*) took place. This neo-classicism prevailed in traditional poetry and criticism until quite recently. (For a general survey of the theories of periodization see J. Rypka, *History*, 112 ff. See also M. Dj. Maḥdjūb, *Sabk-i Khurāsānī dar shiʿr-i fārsī*, Tehran 1345/1967 and, on the *sabk-i Hindī*, A. Mirzoev, *Sayyido Nasafi i ego mesto v istorii tadžikskoy literaturī*, Stalinabad 1955; E. E. Bertel's *K. voprosu ob "indiyskom stile" v persidskoy poezii*, in *Charisteria orientalia praecipue ad Persiam pertinentia Ioanni Rypka ... sacrum*, Prague 1956, 56-9; A. Bausani, *Contributo a una definizione dello "stile indiano" della poesia persiana*, *AIUON*, *NS*, vii (1957), 167-78).

b. *From the Sāmānids to the Mongol invasion (4th/10th—beginning of the 7th/13th centuries)*

As has been observed already in the section on the beginnings of Persian literature, the poetry of the time of the Ṭāhirids and the Ṣaffārids has been almost completely lost. Only from the early 4th/10th century onwards does the available material gradually increase, although our documentation remains scanty till the beginning of the next century, from which time date the oldest *dīwāns* that have been preserved. For the earlier period our knowledge entirely depends on the fragments transmitted by a number of sources of quite different nature. The most important categories are the anthologies (*tadhkira* [*q.v.*]), foremost the *Lubāb al-albāb* by ʿAwfī [*q.v.*], lexicographical works, the oldest extant work being the *Lughat al-Furs* by Asadī [*q.v.*], and works on literary theory. Usually the fragments do not amount to more than one or two lines. Complete lyric poems of the 4th/10th century are very rare. Perhaps the most ancient specimen is a *ḳaṣīda* on the cultivation of wine by Rūdakī preserved in the *Taʾrīkh-i Sīstān*. The first attempt to reassemble these scattered pieces was made by H. Ethé in a series of monographs published between 1872 and 1875. Several scholars both inside and outside Iran have continued this line of research (cf. G. Lazard, *Les premiers poètes persans (ixe-xe siècles), Fragments rassemblés, édités et traduits*, 2 vols., Tehran-Paris 1964, with further references).

The court of the Sāmānid *amīrs* in Bukhārā in the 4th/10th century is the first great centre of literature about which some detailed information is available. Both the *amīrs* and the prominent men of their entourage, like the Balʿamīs [*q.v.*] and the members of the military clan Sīmdjūr, encouraged men of learning and poets to use the vernacular as a literary language. There was much interest in Iranian lore but on the whole the literary tradition conformed to the existing patterns of Islamic culture. A particularly splendid episode was the reign of Naṣr II (301/914-331/942), the patron of Rūdakī [*q.v.*] (d. 329/940-1), who was the most distinguished figure of Sāmānid literature. More than 100 *bayts* from his works have been retrieved, considerably more than of any of his contemporaries. He cultivated a great variety of forms but the traditional accounts that ascribe to Rūdakī the invention of several forms of poetry are certainly unhistorical. There are indications that the literary activities of the Ismāʿīliyya [*q.v.*] exerted some influence on the intellectual circles at the Sāmānid court. The anonymous commentary on a didactical *ḳaṣīda* by Abu 'l-Haytham Gurgānī (ed. by H. Corbin and M. Muʿīn, Tehran-Paris 1955; cf. G. Lazard, *op. cit.*, i, 24) contains references to the interest taken in the doctrines of this Ismāʿīlī philosopher by Rūdakī and two other poets: Shahīd of Balkh, who himself is also known as a philosopher, and Muṣʿabī, one of the viziers of Naṣr II. Another notable poet of the earlier Sāmānid period was Farālāwī. To a later generation belong Abu 'l-ʿAbbās Rabindjanī, Abū Shuʿayb of Harāt, Maʿrūfī of Balkh and Daḳīḳī [*q.v.*]. This last, who is best known through his epic work, was also a great master of the early lyrical style. Much attention has been paid to his allusions to Zoroastrianism, which are best explained as early instances of the topic of the *kufriyyāt* and should not be taken at their face-value. From the increasing number of poets of the last decades of this century, special mention should be made here of Kisāʾī (born 341/952), the first to write religious poems showing his Shīʿite sympathies. Other names are Abu 'l-Ḥasan Lawkarī, Sipihrī, Badīʿ Balkhī, Khusrawānī, Abu 'l-Mathal, Shākir, Djullāb, ʿAmmāra Marwazī, Amīr Āghādjī and Ismāʿīl Muntaẓir, the last two mentioned being members of the Sāmānid house.

The local rulers of Čaghāniyān, the Āl-i Muḥtādj, were equally interested in Persian poetry. They patronized Daḳīḳī during a part of his career and later Mundjīk Tirmidhī as well as some of the great poets of the Ghaznavid period. To the west, Persian poetry penetrated to the court of the Ziyārids in Gurgān and even to the residence in Rayy of the Būyid vizier

"Ṣāḥib" Ismāʿīl b. ʿAbbād al-Ṭālakānī [see IBN ʿABBĀD] (326/938-385/995), who is also renowned as a writer and a patron of Arabic letters. Among the first poets at these courts were Manṭiḳī Rāzī (d. between 367/977 and 380/991) and Khusrawī Sarakhsī (d. before 383/993). The popularity of poetry in dialects (Ṭabarī, Gīlakī) in northern Iran during this period is worthy of note.

The Turkish Ghaznavids inherited the cultural traditions of their former masters, the Sāmānids. Their remote capital, Ghazna, was, during the first half of the 5th/11th century, the most brilliant centre of intellectual and literary life in Iran. All this was the result of a conscious policy pursued by the early Ghaznavids to attract scholars—the most celebrated among them being al-Bīrūnī [*q.v.*]—and poetical talents to their court. It was inspired by a keen sense of the propagandist value of patronage. The writers and poets of this time put great emphasis on the glory of the dynasty and on its legitimacy. Poets accompanied the sultans on their campaigns, particularly on the raids into Indian territories, and celebrated their victories (e.g. the destruction of the temple of Shiva at Sōmnāth in 416/1026). Sultan Maḥmūd himself entered into literature on account of the stories about him and his favourite slave Ayāz [*q.v.*].

Thanks to a much fuller documentation of the literary production, we can for the first time study the lyricism of the Khurāsānī style in all its details in the works of the poets of the early Ghaznavid school. The period is dominated by three poets who exerted an influence on Persian poetical style that lasted throughout the centuries: ʿUnṣurī [*q.v.*] (d. 431/1039-40), Farrukhī [*q.v.*] (d. 429/1037-8) and Manūčihrī [*q.v.*] (d. about 432/1040-1). ʿUnṣurī, the poet laureate of the court of Sultan Maḥmūd, is first of all a great panegyrist, which made his work a favourite source for the older writers on the rhetorical schemes. The descriptive art of the prologues is more fully developed in the poetry of Farrukhī, especially in the formalized descriptions of nature. His style is characterized by the use of parallelism in the structure of the two parts of the distich. Manūčihrī shows a certain amount of individuality within the common tradition in the choice of his images. He is especially famous on account of his strophic poems.

The works of the other poets of the period have only been transmitted in a very imperfect way. We can have at least some idea about the poetry of Labībī [*q.v.*] (d. after 429/1037-8) and ʿAsdjadī (d. *ca.* 432/1040-1). Rābiʿa Ḳuzdārī of Balkh is probably the earliest female poet of Iran, although the chronology of her life is uncertain. She became the heroine of a popular romance (cf. Fr. Meier, *Die schöne Mahsati*, 27-42). The poet Bahrāmī is known to have composed some treatises on prosody which were used as textbooks for a considerable time but have not been preserved. Abu 'l-Fatḥ Bustī (d. between 400/1009 and 403/1013 is said to have left two *dīwāns*, one in Arabic and one in Persian.

A second centre of patronage was the residence of Amīr Naṣr, a brother of Sultan Maḥmūd and governor of Khurāsān. In Rayy lived the poet Ghaḍāʾirī (d. 426/1034-5) who, in spite of his service to the Būyid court, was in close contact with the Ghaznavid sultan as well.

The defeat of Sultan Masʿūd I at the hands of the Saldjūḳs in the battle of Dandānḳān (432/1040) divides the history of the Ghaznavids into two parts. After this event they lost control over the western parts of their empire and drew back upon the eastern half, *i.e.*, the present-day Afghānistān and the conquered areas on the Indian subcontinent. They did not abandon their cultural interest, however. Poetry was now also patronized at the court of the Ghaznawid viceroy in Lahore. This can be regarded as the starting-point of Indo-Persian literature. Quite prominent names are to be found among the first poets at the court of the Pandjāb: Abu 'l-Faradj Rūnī (d. after 492/1098-9) and Masʿūd-i Saʿd-i Salmān [see MASʿŪD-I SAʿD] (438/1046-7—515/1121-2). The former brought many new elements in the style of the panegyric *ḳaṣīda* which anticipated later developments finally resulting in the style of ʿIrāḳ. His work is known to have influenced Anwarī. Masʿūd-i Saʿd is especially famous because of his prison-poems, reflecting personal experiences, although as a genre the *ḥabsiyyāt* were already a part of the Arabic-Persian tradition. The importance attached to poetry in the capital itself is demonstrated by the large frieze containing poetical inscriptions that has been unearthed in the ruins of the palace of the sultan (cf. A. Bombaci, *The kûfic inscription in Persian verses in the court of the Royal Palace of Masʿûd III at Ghazni*, Rome 1966). The reign of Sultan Bahramshāh (512/1118-552/1151) was very fruitful. Mukhtārī (d. probably 554/1159 [*q.v.*]) was a versatile writer of *ḳaṣīdas*. The fame of Sanāʾī [*q.v.*] (d. about 535/1140-1) is particularly based on his religious and moralistic poetry. A great number of his *ḳaṣīdas* belong to the genres of the "ascetic poems" (*zuhdiyyāt*) and the *ḳalandariyyāt*. A similar preoccupation with religious and ethical themes is to be found in the *dīwān* of the great Ismāʿīlī poet and philosopher Nāṣir-i Khusraw [*q.v.*] (d. about 465/1072-470/1077). Sanāʾī's extensive collection of *ghazals* has been mentioned already on account of its significance for the history of this poetical form. Another notable poet of the *ghazal* was Sayyid Ḥasan-i Ghaznawī Ashraf (d. 556/1160-1).

The foundation of the Saldjūḳ sultanate in Iran reunified the country both politically and in a religious sense This new situation gave the cause of Persian letters a better chance to win the western provinces. Asadī [*q.v.*] of Ṭūs compiled his dictionary *Lughat al-Furs* in order to make the writers in other parts of Iran acquainted with the vocabulary of the eastern literary language. He himself emigrated to Ādharbāydjān where he found a patron in Abū Dulaf, the ruler of Nakhčuwān. The first prominent poet born in the west was Ḳaṭrān [*q.v.*] (d. after 465/1072-3). He attended the local courts of Tabrīz and Ghazna. Local centres of power emerged also in other parts of the country and offered the poets a greater variety of chances. Best known among the provincial panegyrists was Azraḳī [*q.v.*] (d. before 465/1071-3), who glorified the governor of Harāt as well as the Saldjūḳ Sultan of Kirmān. The central seat of power, the court of the Great Saldjūḳs, was during the 5th/11th century not very conspicuous for its interest in poetry. We know a few names such as Lāmiʿī (d. *ca.* 455/1063) and Burhānī (d. 465/1072-3), but the one truly great poet was the latter's son Muʿizzī [*q.v.*] (d. between 519/1125 and 521/1128), who later on joined the group of poets at the court of Sandjar in Marw. Here the art of the *ḳaṣīda* was elaborated with great rhetorical refinement. A great master of this art was Anwarī [*q.v.*] (d. probably 585/1189-90). Other lyricists of great talent were Adīb-i Ṣābir (d. between 538/1143 and 542/1148) and Djabalī (d. 555/1160).

In Central Asia Turkish dynasties continued to favour Persian panegyrism. Under the Ilek-Khāns, Bukhārā had its own school of poets led by the rivals ʿAmʿaḳ (d. *ca.* 543/1148-9) and Rashīdī of Samar-

ḳand. The most interesting figure was the satirist Sūzanī [*q.v.*] (d. 562/1166-7) who directed his ridicule against several of his colleagues. In the time of the Khwārazm-shāhs the most influential man of letters was Rashīd al-Dīn Waṭwāṭ [*q.v.*] (d. 573/1177-8 or 578/1182-3). Besides being a poet, he was a prolific writer in Arabic and Persian prose.

The growing insecurity of life in Khurāsān from the middle of the 6th/12th century onwards, mainly a result of fresh invasions of Turkish Ghuzz tribes, caused an increasing number of poets to emigrate to the west. This trend is exemplified in the career of Athīr-i Akhsikatī (d. *ca.* 570/1174-5) and Ẓahīr-i Fāryābī [*q.v.*] (d. 598/1201-2), who both travelled to the Saldjūḳ court in ʿIrāḳ and further to the Ildegizid atabegs in Ādharbāydjān. At the same time there emerged a short-lived but not insiginificant school of poets in Iṣfahān dependent on the patronage of local aristocrats such as the Āl-i Khudjand and the Āl-i Saʿid. To this group belonged Djamāl al-Dīn Iṣfahānī (d. 588/1192-3) and his son Kamāl al-Dīn Ismāʿīl [*q.v.*] (d. 635/1237-8) as well as the lesser known Sharaf al-Dīn Shufurwa. Closely related to the work of these poets was the school of Ādharbāydjān. It comprised the encomiasts of the many local rulers of north-western Iran, among whom the Ildegizids and the Shirwānshāhs were the most prominent. The outstanding lyrical poet was Khāḳānī [*q.v.*] (d. 595/1199), the last great poet of the *ḳaṣīda* of pre-Mongol times. Mention should also be made of Falakī Shirwānī [*q.v.*] (d. about 550/1155-6), whose *dīwān* contains a number of remarkable *ḥabsiyyāt*, and Mudjīr-i Baylaḳānī (d. about 594/1197-8), one of Khāḳānī's pupils.

The *ghazal* continued its development into one of the majors forms of lyricism throughout the 6th/12th century. The course of this process since late Ghaznavid times can be traced in the *dīwāns* of Adīb-i Ṣābir, Anwarī, Djalāl al-Dīn Iṣfahānī, Ẓahīr Fāryābī and Khāḳānī. The mystical application of the symbolism of the *ghazal* shows itself in an unequivocal form only at the very end of this century in the work of Farīd al-Dīn ʿAṭṭār [*q.v.*].

Another form that became a favourite of Saldjūḳ times was the *rubāʿī*. We find it in the 5th/11th century often used for the expression of mystical thoughts. The poems are ascribed to famous Ṣūfī *shaykhs* like Abū Saʿīd b. Abi 'l-Khayr [*q.v.*], Anṣārī [*q.v.*] and Abu 'l-Ḥasan Kharaḳānī (d. 425/1033-4). The *du-baytīs* of Bābā Ṭāhir ʿUryān [*q.v.*] (d. 401/1010) contain early examples of the *ḳalandarī* themes. They show their affinity to popular poetry by the use of dialect forms. At the end of the period the mystical quatrain is again well represented in the *Mukhtārnāma* of ʿAṭṭār, a huge collection of *rubāʿiyyāt* arranged according to topics by the poet himself (cf. H. Ritter, *Philologika* xvi, in *Oriens*, xiii-xiv (1961), 195-228). The philosophical agnosticism of the famous quatrains of ʿUmar-i Khayyām [*q.v.*] (d. probably 515/1121-2) has some affinity to this mystical trend but cannot be identified with it. This short poem lent itself to the expression of quite profane topics as well. Anacreontic and erotic themes closely related to those of the *ghazal* are to be found in the poems of the female poet and singer Mahsatī [*q.v.*]. Like Rābiʿa, she is historically a rather vague personality and appears also as the heroine of a popular novel. It should be noted that most Persian poets have left collections of quatrains.

Among the fragments of Sāmānid poetry there is a remarkably large number of *mathnawī*-lines, but it is very often impossible to define the exact nature of the poems from which they originate. It is clear, however, that in addition to the versions of the heroic epic in prose, already at the turn of the 3rd/9th and 4th/10th centuries an attempt was made to treat the same subject-matter in the form of a *mathnawī*. The poor remnants of this work by Masʿūdī of Marw just permit the conclusion that it comprehended the whole range of the royal epic as we know it in the classical form of the *Shāhnāma* of Firdawsī [*q.v.*], which was completed about 400/1009-10. Through the latter work a fragment from the unfinished *mathnawī* of Daḳīḳī has been preserved. After Firdawsī the heroic epic continued in the form of monographic poems dealing with the adventures of individual heroes. Especially favourite were the members of the Sīstānian dynasty of vassals to which Rustam belonged. The most important writer of this genre is Asadī [*q.v.*] (the theory of the two Asadīs now has few defenders) with his *Garshāspnāma*. The strong influence of the romance of Alexander shows itself in the emphasis on philosophical discussions and journeys to far and mysterious countries. The tales about Alexander [see ISKANDARNĀMA] formed the only part of the epic of the kings that ultimately survived as a separate genre in the literature of the *mathnawī*. The classical model of this branch was provided by the double *Iskandarnāma* of Niẓāmī [*q.v.*]. [See further ḤAMĀSA, ii].

The earliest subject of a romantic *mathnawī* that can be identified is the story of *Yūsuf u Zalīkhā* [*q.v.*], based on the 12th sūra of the Ḳur'ān. Of the several versions known to have been composed in pre-Mongol times only one has been preserved. This poem used to be ascribed to Firdawsī but recent research has rejected this and attributed it to a certain Amānī who wrote it after 476/1083 for a Saldjūḳ prince (cf. J. Rypka, *History*, 157 f.). It contains references to two versions of the 4th/10th century by Abu 'l-Mu'ayyad and Bakhtiyārī. The same story was later treated by ʿAmʿaḳ. From the romances written by ʿUnṣurī [*q.v.*], *Wāmiḳ u ʿAdhrā*, a story going back to Hellenistic sources, has been partly recovered recently. Two others, *Khing-but u surkh-but*, inspired by the statues of Buddha at Bāmiyān, and *Shādbahr u ʿAyn al-Ḥayāt* have been lost. Another recent discovery is *Warḳa u Gulshāh* by ʿAyyūḳī, a contemporary of Sultan Maḥmūd. It is a love story, situated in Arabia in the lifetime of the Prophet, and not unlike the European romance of Floire and Blancheflor. Towards the middle of the 5th/11th century Fakhr al-Dīn Gurgānī [*q.v.*] elaborated an ancient Parthian tale, transmitted up to his times by Pahlavi literature, in the *mathnawī*, *Wīs u Rāmīn*. The significance of this work for the history of Persian literature lies not only in its origin, thoroughly investigated by V. Minorsky, but equally in the influence it exerted on the further course of courtly romance. Several stylistic conventions and topics were introduced by Gurgānī and afterwards developed by a long line of imitators. A particularly close relationship appears to exist between this work and *Khusraw u Shīrīn* of Niẓāmī [*q.v.*] (d. 605/1209). While Gurgānī's story itself was abandoned, Niẓāmī set the pace for future generations both as far as the subject-matter and the formal conventions are concerned. The same can be said of his other romances: *Haft Paykar*, the romanticized lifestory of Bahrām Gūr, serving also as a frame-story for seven splendidly told fairy tales, and the celebrated Arabian story of *Laylā u Madjnūn*. Niẓāmī treated these subjects with great psychological depth. On the other hand he enriched the romantic *mathnawī* by using the imagery of lyric poetry to the full, treating it with all the rhetorical

ingenuity characteristic of the ʿIrāḳī style. He is justly regarded as the real founder of the Persian romantic epic. The *Khusrawnāma* by ʿAṭṭār [*q.v.*] also belongs to this category.

The *mathnawī* was from the earliest times onwards used for didactic purposes as well. Rūdakī composed versions of the Indian collections of fables and tales *Kalīla u Dimna* [*q.v.*] and *Sindibādnāma* [*q.v.*]. They were both repeatedly remodelled by later writers both in prose and in verse.To the same group of works belongs the *Bilawhar u Yūdāsaf* (*Būdāsaf*) [*q.v.*], fragments of which have been recovered form the Turfan manuscripts. Although written with Manichaean characters, the language of this text shows unmistakable signs of a New Persian original which can be dated in the Sāmānid period (cf. W. B. Henning, *Persian poetical manuscripts from the time of Rūdakī*, in *A Locust's Leg. Studies in honour of S. H. Taqizadeh*, London 1962, 89-104). Narratives of this kind were from pre-Islamic times onwards especially valued on account of the element of moral instruction they contained. They can therefore be classified as a branch of the didactic epic. Another type is represented by the *Āfarīnnāma* of Abū Shakūr of Balkh completed in 336/947-8. Quite a number of fragments have been retrieved which can be ascribed to this work with some certainty. As far as we can judge from these remnants, it consisted of a series of aphorisms predominantly of a moralistic nature and illustrated by the use of inserted anecdotes. If this description is correct, it would mean that the *Āfarīnnāma* prefigured a structural type on which most later works of secular or mystical didacticism were based. The first and perhaps most important instance of this is the *Ḥadīḳat al-Ḥaḳīḳa* of Sanāʾī [*q.v.*], usually regarded as the beginning of a long tradition of Ṣūfī *mathnawīs*. The anecdotes in this work are very short and entirely subordinated to the theoretical contents they serve to exemplify. Although the poem has sometimes been described as an encyclopaedia of Ṣūfism, the *Ḥadīḳa* contains, in fact, besides mystical elements, a wide range of other themes such as philosophy, ethics, science and even panegyrics. It is not surprising, therefore, to find that diverging lines of development originate from this point in the history of the genre. On the one hand, the *Makhzan al-asrār* of Niẓāmī, dealing mainly with secular ethics, is notwithstanding its different metre and the far more rigid composition, according to the statement of the poet himself written in competition with the work of Sanāʾī. On the other hand, ʿAṭṭār's *Asrārnāma*, built on the same principle, is entirely devoted to mysticism. In both works the narrative has become a fully elaborated element in its own right. Quite a different type of structure is revealed by the "frame-story" *mathnawīs* of ʿAṭṭār [*q.v.*], the most famous of which are the *Ilāhīnāma*, the *Manṭiḳ al-ṭayr* and the *Muṣībatnāma*

Some of the *mathnawīs* produced in this period cannot be classified into any of the three categories outlined above. Still to the Sāmānid period belongs the *Dānishnāma* of Ḥakīm Maysarī composed between 367/978 and 370/981. It gives a popular exposition of medical theory and practice and therefore hardly belongs to literature proper (cf. G. Lazard, *Premiers poètes*, i, 36 ff.). Metaphysical doctrines combined with ethical maxims and some amount of gnostic speculation are to be found in the *Rawshanāʾīnāma* of Nāṣir-i Khusraw, in which no anecdotes have been used. A number of short *mathnawīs* has been ascribed to Sanāʾī, but only two of these can with certainty be regarded as authentic: *Karnāma-i Balkhī* containing both eulogy and satire, the latter directed against some of the Ṣūfīs and poets of Ghazna, and *Sayr al-ʿibād ila'l-Maʿād* depicting the gnostic's journey through the cosmos followed by a panegyry. To a similar type belongs the *Hunarnāma* of Mukhtārī. A very original work is the *Tuḥfat al-ʿIrāḳayn* of Khāḳānī. Conceived as the poetical journal of a pilgrimage, it contains a variety of other materials as well, out of which the repeated addresses to the sun deserve to be noted.

Among the many cultural achievements of the Sāmānid period, the creation of a Persian prose literature takes a very prominent place. Nearly all the works of this early time that have been handed down are non-artistic writings and cannot concern us here. Still, some information is available which points to the existence of a number of works in prose that, at least on account of their subject-matter, are relevant to literary history. To this group belong the prose versions of the epic of the kings, three of which are known to have existed although no more than the introduction to one of them, composed in 346/957 by Abū Manṣūr al-Maʿmarī (or Muʿammarī), has been preserved. It is not quite certain whether the fragments dealing with the hero Garshāsp, cited in the *Taʾrīkh-i Sīstān* and attributed there to Abu 'l-Muʾayyad of Balkh, have been taken from the Shāhnāma version of this prolific writer or from a separate "Book of Garshāsp". Monographs of this last type were written about several heroes who play some role in the epic cycles. They have all disappeared, but to a large extent their contents have been transmitted by way of the numerous *mathnawīs* of the same genre produced during the 5th-6th/11th-12th centuries. In prose, heroic themes are further developed in an extensive literature of popular novels. To the 6th/12th century belong the works of Abū Ṭāhir Muḥammad b. Ḥasan Ṭarsūsī (or Ṭarṭūsī). His *Dārābnāma* elaborates the legends about the last of the ancient Iranian kings with many fantastic details. It ends with a treatment of the history of Alexander, one of the favourite subjects of this narrative literature. Another novel of Ṭarṣūsī deals with a hero of Islamic times, Abū Muslim (cf. I. Mélikoff, *Abu Muslim, le Porte-Hache du Khorassan, dans la tradition épique turco-iranienne*, Paris 1962). The chivalrous romance *Samak-i ʿAyyār*, which was originally written by Ṣadaḳa b. Abi 'l-Kāsim of Shīrāz, but has only been preserved in a later version dated 585/1189, is entirely a work of fiction.

An alternation between versions in prose and in verse is equally observable in the tradition of the Indian collections of fables and stories. For two of these there is evidence of Persian prose renderings in the Sāmānid period (*Kalīla wa Dimna, Sindibādnāma* [*qq.v.*]). They have been replaced by later adaptations made with an intent to make these works more palatable to the literary taste of a later generation. The principle of the frame-story, so characteristic of these Indian books, was borrowed for a Persian imitation in the *Bakhtiyārnāma* [*q.v.*], while the animal fable introduced by the *Kalīla wa Dimna* was cultivated in the collection entitled *Marzbānnāma*, which was originally composed in the Ṭabarī dialect. [See further ḤIKĀYA, ii].

The fashion of embellishing prose by the application of rhymed and measured phrases was known already from the early 5th/11th century from the sayings attributed to the Ṣūfī *shaykh* Abū Saʿīd b. Abi 'l-Khayr [*q.v.*] and, more particularly, from a string of *risālas* usually ascribed to Anṣārī [*q.v.*] (cf. on the philological problems attached to these texts and their authenticity, G. Lazard, *La langue des plus*

anciens monuments, 111 f.), of which the small collection of prayers called *Munādjāt* has become quite celebrated. The style of Arabic prose, as it had developed in the time of the Būyids in the hands of such masters of the *risāla* as Ibn ʿAbbād [*q.v.*] and al-Hamadhānī [*q.v.*], very much affected the style of elegant Persian prose. A clear instance of this influence is the introduction of the genre of the *maḳāma* [*q.v.*] into Persian literature by the *ḳāḍī* Ḥamīd al-Dīn of Balkh or Ḥamīdī [*q.v.*] (d. 559/1164). One of the best examples of the sophisticated style of pre-Mongol times, still very much appreciated in present-day Iran, is the version of *Kalīla wa Dimna* by Naṣr Allāh b. Muḥammad [*q.v.*], a secretary to the late Ghaznavid Sultan Bahrāmshāh. Other specimens of the style current among secretaries, theologians and men of learning and letters include pieces of official or personal correspondence preserved from the hands of several prominent men (e.g. the *Faḍāʾil al-Anām* by Muḥammad al-Ghazālī, the correspondence between his brother Aḥmad al-Ghazālī and ʿAyn al-Ḳuḍāt al-Hamadhānī, and further the letters handed down from poets such as Sanāʾī, Khāḳānī and Rashīd-i Waṭwāṭ).

The characteristic traits of artistic prose are not confined to those works that can be classified as *belles lettres* in the strict sense of the term but occur in many works of a more "utilitarian" purpose as well. The same can be said of the art of narrative, whether of pointed anecdotes or of short stories. They are especially abundant in works of history and biography. It need not surprise, therefore, if a work like the *Taʾrīkh* of Bayhaḳī [*q.v.*] is reckoned among the masterpieces of early Persian prose. Even a listing of all the writings that in some way or the other are interesting from the aesthetic point of view would by far exceed the limits of this article. Only one group of prose-works cannot be left unmentioned here. In spite of great individual differences, these works share a common feature in that, as a kind of *Fürstenspiegel*, they have been written for the instruction of those in power and they abundantly make use of anecdotes and tales functioning both as illustrative examples and as a means to enliven the theoretical exposition. To this group belong the *Ḳābūsnāma* by ʿUnṣur al-Maʿālī Kay-Kāʾūs [*q.v.*] (d. 492/1098-9), the *Čahār Maḳāla* by Niẓāmī ʿArūḍī [*q.v.*] (d. about 560/1164-5), the *Siyāsatnāma* by Niẓām al-Mulk [*q.v.*] (d. 485/1092) and the *Naṣīḥat al-Mulūk* by al-Ghazālī [*q.v.*] (d. 505/1111). All these works were written in a comparatively sober style.

Mainly on account of the relevance of its subject-matter to the study of certain themes of lyric poetry, mention should also be made of the *Nawrūznāma*, a treatise on the origins and customs of the ancient Iranian New Year's festival. It contains, among other things, a reference to the ceremonial use of poetry at the Sāsānian court and an account of the legendary origins of the cult of wine. The authorship of ʿUmar-i Khayyām [*q.v.*] is denied by most scholars.

Apart from the wealth of narratives contained in such works as the commentaries on the Ḳurʾān, the biographies of prophets and Ṣūfī saints, and mystical treatises, there is little in the religious prose literature of the pre-Mongol period that needs to be mentioned on account of its great artistic value. An exception, however, should be made for the allegorical tales, describing the spiritual journey of the gnostic, by Shihāb al-Dīn Yaḥyā Suhrawardī [*q.v.*] (d. 587/1191). Another famous mystic, Aḥmad al-Ghazālī [*q.v.*] (d. 520/1126), examined the psychology of love in a string of concise and subtle aphorisms entitled *Sawāniḥ*. As it is presented in this work, the theory of love can be applied both to the earthly and to the mystical beloved.

c. *From the Mongol period to the rise of the Ṣafawids (7th/13th-9th/15th centuries).*

The successive invasions of the Mongols, resulting in the founding of the empire of the Īlkhāns, did not fail to affect the course of literary history just as it affected all other sections of Iranian society. The destruction of the great cities of Transoxania and Khurāsān, the enormous loss of life, the sharp decline of the economy, the disappearance of dynastic centres, all brought to an end the predominance of the north-eastern provinces in the Islamic civilization of Iran that had lasted for so many centuries. Not before the 9th/15th century could these areas for a short while regain some of their old cultural importance under the reign of the Tīmūrids. The shift of literary activity from the east to the western parts of the country, already in process from the middle of the 6th/12th century onwards, became definite as a result of these events, but it was no longer the north-western part that profited from this development. The Mongol Khāns, who established the centre of their rule in this area, assimilated far less easily to Persian culture than their Turkish predecessors. They were willing to accept and support those products of Islamic civilization that they regarded as useful, such as historiography and the natural sciences, but never developed any taste for the aesthetic achievements of its literature. The few instances of patronage to poetry known from the court of the Īlkhāns did not emanate from the rulers themselves but from erudite high officials of Persian descent in their service, like the Djuwaynīs [*q.v.*]. While the vocabulary of the great historians of this period was very much influenced by Mongol and Turkish (cf. G. Doerfer, *Türkische und mongolische Elemente im Neupersischen*, 4 vols., Wiesbaden 1963-71 and H. H. Zerinezade, *Fars dilinde Azerbaydjan sözleri*, Baku 1962) the language or artistic literature shows hardly any trace of this. The *ḳaṣīda* on an earthquake in Nīshāpūr of Pūr-i Bahā-i Djāmī, a deliberate attempt to introduce loanwords from the language of the conquerors into the poetical idiom, is an isolated phenomenon (cf. V. Minorsky, *Charisteria Orientalia... Ioanni Rypka... hoc volumen sacrum*, Prague 1956, 186-201; *BSOAS*, xviii/2 (1956), 262-78).

In spite of all this, some of the greatest works of Persian literature were produced during these centuries. Favourable conditions for a continuation of the literary tradition were present in those parts of the country that had escaped from the devastations of Mongol warfare. For the first time, southern Iran, more specifically Shīrāz, began to take part in the history of Persian poetry. A strong impulse was given by the arrival of many refugees, among whom the prominent theoretician of literature Shams-i Ḳays [*q.v.*] should be mentioned. New centres also arose outside the boundaries of Iran. The capital of the Saldjūḳs of Rūm, Konya, became the seat of a major school of mystical literature established there by immigrants. The cultivation of Persian letters on the Indian subcontinent became more and more independent after the foundation of the Sultanate of Dihlī in 602/1206.

In those days, however, poetry was no longer exclusively dependent on the economic and social support provided by patronage. From the 5th/11th century onwards, Ṣūfism penetrated Persian literature just as it gradually permeated Persian society as a whole. As a social phenomenon, this meant that a new

public and a new environment had come into being which created a wider range of functions for the poet and his art. Poetry could serve to express the ineffable experiences of the mystic through an ever more refined use of its symbolic language, or illuminate the subtleties of mystical doctrines from its vast resources of narrative material and techniques. It could also be used as a liturgical element in the "musical sessions" (*samāʿ*, [*q.v.*]) of the Ṣūfī circles. The traditional place of the *mamdūḥ* could be taken either by the spiritual leader (*pīr*) or by a human manifestation or "witness" (*s̲h̲āhid*) of the Eternal Beloved. For the poet who wanted to devote himself entirely to mysticism without any attachment to secular patronage, this new environment was provided by the communities of mystics, out of which the Ṣūfī fraternities (*ṭarīḳas*) developed in the course of this period. The first notable example of this withdrawal of poetry from the world is Farīd al-Dīn ʿAṭṭār, of whom no relation to any maecenas is known.

The most striking resnlt of these developments to be noticed in literature is the sharp decline of the *ḳaṣīda* as the main form of lyric poetry. To some extent this can be explained by the lack of interest in panegyrics shown by the chief court of the times. But the same trend can be observed at those courts where the traditions of courtly lyricism were continued on similar lines as before. In many instances the *g̲h̲azal*, which had now become the favourite poetic form, seems to have taken over the panegyric functions of the *ḳaṣīda*.

The ubiquity of the *g̲h̲azal* in Persian literature between the 7th/13th and 12th/18th centuries tends to obscure the fact that the *ḳaṣīda* never quite disappeared from the scene. At the beginning of this period Saʿdī [*q.v*.] of S̲h̲īrāz (d. 691/1292) cultivated the ode, which he largely used for religious and moral admonition on the lines of Nāṣir-i K̲h̲usraw and Sanāʾī. Apart from Salmān-i Sāwad̲j̲ī [*q.v.*] (d. 778/1376), who glorified the D̲j̲alāʾirids of Bag̲h̲dād, in the 9th/15th century D̲j̲āmī should also be mentioned as a prominent poet of the *ḳaṣīda*. Most other poets also wrote at least some poetry in this form, although it is true that the production of *ḳaṣīdas* during this period lags far behind that of the *g̲h̲azal*.

In the main line of the history of lyric poetry two strains, which seem to be distinguished by the different demands put upon the poets by their social environment, became visible. One of these strains is the purely mystical *g̲h̲azal* which leaves no room for any ambiguity concerning its fundamental meaning. Its model was provided by the *dīwān* of ʿAṭṭār (see, for an analysis of his *g̲h̲azals* in comparison to those of the earlier Sanāʾī and the later Ḥāfiẓ: H. Ritter, *Oriens*, xii (1959), 1-88). The foremost representative of this type of the *g̲h̲azal* after ʿAṭṭār is D̲j̲alāl al-Dīn [*q.v.*] Rūmī (d. 672/1273), in Iran usually known as Mawlawī. His life as a spiritual leader and a poet in the community of mystics at Konya is the best documented instance of the entourage in which an uncompromisingly mystical literature could flourish. His immense collection of *g̲h̲azals*, the *Kulliyyāt-i S̲h̲ams*, is attributed by the poet himself to S̲h̲ams al-Dīn al-Tabrīzī as an act of identification with the person regarded as the *s̲h̲āhid*. These poems are either expressions of mystical love, formulated under emotional stress without much care for formal perfection, or they serve to illuminate essential topics of mystical doctrine by means of a rich and sometimes very original imagery. In spite of this idiosyncrasy of Mawlawī's poetry, it became in its turn a model for the literary tradition of the fraternity of the Mawlawiyya [*q.v.*], which was formed out of the spiritual community of Konya after his death. This is especially noticeable in the lyrical poetry of his son Sultan Walad [*q.v.*] (d. 712/1312) and his grand son Ulu ʿĀrif Čelebī (d. 719/1320). Another poet who cultivated this type of *g̲h̲azal*, though with a greater technical sophistication, was ʿIrāḳī [*q.v.*] (d. 688/1289). In the course of his eventful life he practised the way of life of the *ḳalandar darwīs̲h̲es*, the traces of which can be found in his works.

The second type of *g̲h̲azal* was cultivated by those poets who did not abstain from the established conventions of courtly poetry even if their works display the all-pervasive influence of Ṣūfism. The double character of the *g̲h̲azal*-style, referred to above, is characteristic of this type. Although there are great differences in the intensity of mystical influence, some overtones of a transcendental connotation can be noticed in nearly all erotic poetry written in this period. The S̲h̲īrāzi school is particularly famous on account of the full development of this kind of *g̲h̲azal*. The oldest of the two great poets of the *g̲h̲azal* who flourished in this city was Saʿdī. His lifetime covered most of the 7th/13th century when S̲h̲īrāz was ruled by the Salg̲h̲urid Atabegs. Nearly all his *g̲h̲azals* are contained in three large collections, the *Ṭayyibāt*, the *Badāyiʿ* and the *K̲h̲awātim*. They show Saʿdī's perfect mastery of all the themes connected with the *g̲h̲azal* as a genre as well as of their associative interplay. Mystical notes can be observed, but they are harmoniously fused with secular themes. His graceful style, which also pervades the other literary works of this very versatile author, influenced the idiom of Persian more than the work of any other writer. Among his contemporaries, the names should be mentioned of Imāmī of Harāt (d. 667/1268-9 or 676/1277-8) who attended the court of Kirmān, Mad̲j̲d al-Dīn Hamgar (d. 686/1287), a citizen of S̲h̲īrāz, and Humām al-Dīn [*q.v.*] of Tabrīz (d. 714/1314), who glorified the members of the D̲j̲uwaynī family.

During the 8th/14th century, S̲h̲īrāz was in turn ruled by the Ind̲j̲ūs and by the Muẓaffarids. The names of these two dynasties are forever connected with that of Ḥāfiẓ [*q.v.*] (d. 792/1390), often nicknamed K̲h̲ʷād̲j̲a or Lisān al-G̲h̲ayb. He was much more a specialist of the *g̲h̲azal* than Saʿdī, as his not very extensive *dīwān* contains only a few poems in other forms. Of these, the short *mat̲h̲nawī* piece *Sāḳīnāma* has acquired some celebrity. According to A. J. Arberry, Ḥāfiẓ developed in the course of his career the refined art of the *g̲h̲azal*, as he inherited it from Saʿdī, by introducing the device of contrapuntal interaction of several themes within one single poem. Very often no more than a short allusion in one or two lines was applied to evoke, in the mind of the hearer who was familiar with the literary tradition, associations with a whole thematic complex. This technique was the essential novelty of Ḥāfiẓ's art (cf. *BSOAS*, xi (1943-6), 699-712; *Fifty Poems of Hafiz*, Cambridge 1953, 28 ff.). The most characteristic themes he employed—e.g. the cult of wine, the tavern, the cup-bearer, the *pīr-i mug̲h̲ān* who reveals esoteric wisdom from the cup of D̲j̲ams̲h̲īd (*d̲j̲ām-i D̲j̲am*), the disdain of the antinomian mystic for the hypocritical piety of the ascetic, showing itself in a provocative playing with non-Islamic religious symbols—were derived from such traditional topics of Arabic and Persian literature as the *k̲h̲amriyyāt*, the *ḳalandariyyāt* and the *kufriyyāt*. Outstanding features of the style of Ḥāfiẓ are also his frequent use of ambiguity (*īhām*) and his irony. In spite of his pre-

dilection for mystical subjects, several of his *ghazals* have proved to be designed as panegyric poems.

There were several other prominent poets of the *ghazal* in the time of Ḥāfiẓ: ʿUbayd-i Zākānī [*q.v.*] (d. 772/1371), more renowned as a satirist, left a small but exquisite collection of lyrics. He shows a preference for short poems usually of seven lines, a trait also observable with Kamāl-i Khudjandī [*q.v.*] (d. probably 803/1400-1). The *ghazals* of Khwādjū-i Kirmānī [*q.v.*] (d. 753/1352 or 762/1361) and Salmān-i Sāwadjī are of particular importance on account of the influence they exerted on Ḥāfiẓ, as has been acknowledged by the poet himself.

In the early 9th/15th century, the unambiguously mystical *ghazal* is cultivated again by Muḥammad Shīrīn Maghribī [*q.v.*] (d. 809/1406-7). By this time the poetical symbolism of the genre had been reduced to a system of fixed emblems denoting elements of the pantheistic philosophy of Ibn al-ʿArabī [*q.v.*], which had become predominant in Persian mystical thought. They lend themselves quite easily to a more or less mechanical interpretation, as often applied in commentaries or other essays on the allegorical language of Ṣūfī poetry. Of a quite similar nature is the poetry of Shāh Niʿmat Allāh [*q.v.*] of Kirmān (d. 834/1431), the founder of one of the most important Ṣūfī orders of Iran, and of Shāh Ḳāsim al-Anwār [*q.v.*] (d. 837/1433-4), who also wrote some poetry in Turkish and in the Gīlakī dialect.

The first sign of a revival of Persian letters in Khurāsān was the literary activity at the local courts that asserted themselves during the interval between the decline of the Īlkhānid empire and the rise of Tīmūr: the Shīʿite Sarbadārs of Sabzawār and the Kurts of Harāt. This short period produced a notable poet in Ibn-i Yamīn [*q.v.*] (d. 769/1368), who together with Anwarī, is reckoned among the best writers of the fragmentary poem (*ḳiṭʿa*). The old traditions of courtly poetry were more completely restored in the times of the Tīmūrids of the 9th/15th century. The wide range of cultural activities being cultivated in this period, as well as the active interest shown by several princes of the Tīmūrid house, are very reminiscent of the European renaissance. As far as literature is concerned, the flowering of all the visual arts connected with the production of manuscripts (calligraphy, miniature-painting, bookbinding) and philological projects such as the redaction of the *Shāhnāma*, usually attributed to the prince Bāysonghor [*q.v.*], should be mentioned in this connection. The main trait of literature itself is its classicist attitude. The Tīmūrid writers apply themselves to an ever more refined use of the transmitted forms and genres without adding much new to it. Some amount of novelty may, however, be granted to a genre of a rather bizarre kind introduced by Būsḥāḳ [*q.v.*] (first half of the 9th/15th century) of Shīrāz, who wrote a number of literary parodies on famous poets using culinary themes in his *Dīwān-i Aṭʿima*. On the same lines Ḳārī of Yazd (prob. 2nd. half of the 9th/15th century) composed a series of parodies based on terms current in the craft of the tailor (*Dīwān-i Albisa*). Other rhetorical devices like the enigma (*muʿammā*) and topical verses such as the chronogram (*taʾrīkh*) enjoyed a great popularity.

The most splendid centre of Tīmūrid culture was Harāt during the reign of Sultan Ḥusayn [*q.v.*] Bayḳara (873/1469-911/1506). Two great personalities dominated the literary scene of this court. ʿAlī-Shīr Nawāʾī [*q.v.*] (d. 906/1501), counsellor of the sultan and himself a patron of literature, wrote some Persian poetry under the pen-name Fānī but his main significance lies in the many works he composed in the eastern-Turkish literary language, known as Čaghatay. In addition to a great number of non-artistic writings, they comprehended the complete range of literary forms current in Persian poetry. In this way Nawāʾī created a series of classical models for the Turkish literature of subsequent ages, both in Central Asia and in the Ottoman empire [see further TURKS-LITERATURE]. Closely associated with Nawāʾī was the Persian poet and Ṣūfī *shaykh* Djāmī [*q.v.*] (d. 898/1492), whose productivity and versatility were even greater than those of his patron. He has often been called the last classical poet of Persian literature, a qualification based on the presumption that with the rise of the Ṣafawids a period of decadence began, lasting for nearly three centuries. But it is true that the works of Djāmī can be regarded as a vast summary of the entire mediaeval literature of Iran, comprising both its courtly and its mystical traditions. His lyrical work has been collected in three volumes, the first containing the poetry of his youth (*Fātiḥat al-Shabāb*), the second that of his middle age (*Wāsiṭat al-ʿIḳd*) and the third the production of his later days (*Khātimat al-Ḥayāt*). With this arrangement he imitated the Indian poet Amīr Khusraw [*q.v.*] (d. 725/1325) who, together with Saʿdī and Kamāl-i Khudjandī, also provided models for his *ghazals*. Other *ghazal*-poets of the Tīmūrid period worthy of note are Kātibī [*q.v.*] of Turshīz (d. 838/1434-5) and Amīr Shāhī of Sabzawār (d. 857/1453).

In the *mathnawī*-literature of the post-Mongol period, the five poems of Niẓāmī, joined by a later tradition into an artificial unity known as the *Khamsa* [*q.v.*], had become a conventional model that constituted an irresistible challenge to numerous poets both in Persian and in Turkish literature. The first of the long line of imitators was Amīr Khusraw. He kept himself strictly to the scheme of Niẓāmī, reproducing most of its structural features, but showed his originality by laying special emphasis on certain elements of the stories or by choosing new subsidiary tales in *Hasht Bihisht*, his imitation of *Haft Paykar*. The *Khamsa* of Khwādjū Kirmānī deviates much farther from the original pattern. It comprises two romantic epics with new stories (*Humāy u Humāyūn*, *Nawrūz u Gul*) as well as three didactical poems of a mystical and ethical nature. Djāmī enlarged the scheme to seven poems in his *Haft Awrang*. The most celebrated of these is his version of *Yūsuf u Zalīkhā* in which the Ḳurʾānic story has been elaborated into an extensive allegory. Another of his new subjects is the philosophical novel *Salāmān u Absāl*. Many poets readapted only single poems of the Niẓāmian canon. The *Laylā u Madjnūn* of Maktabī of Shīrāz, written in 895/1489-90, one of the most successful instances among the works of this kind. (A full list of the known imitators of the *Khamsa* has been compiled by H. Ethé, *Gr. I. Ph.*, ii, 245-8; see also the following works on the tradition of the individual poems, usually dealing with the Turkish versions as well: (1) on *Makhzan al-Asrār*—E. E. Bertel's, *Izbrannie Trudi. Nizami i Fuzuli*, Moscow 1962, 204-14. (2) on *Laylā u Madjnūn*—H. Araslı, *Türk Dili Araştırmaları Yıllığı, Belleten* 1958, 17-39; A.-S. Levend, *Arap, Fars ve Türk Edebiyatlarında Leylâ ve Mecnun hikâyesi*, Ankara 1959; E. E. Bertel's, *op. cit.*, 275-313. (3) on *Khusraw u Shīrīn*—H. W. Duda, *Ferhad und Shirin. Die literarische Geschichte eines persischen Sagenstoffes*, Prague 1933; G. Y. Aliyev, *Legenda o Khosrove i Shirin v literaturakh narodov Vostoka*, Moscow 1960. (4) on *Haft*

Paykar—Hikmet T. Ilaydın, *Behram-i Gûr menkabeleri*, *Türkiyat Mecmuası*, v (1935) 275-90. (5) On *Iskandarnama*—E. E. Bertel's *Roman ob Aleksandre i ego glavnie versii na Vostoke*, Moscow-Leningrad 1949, reprinted in *Izbrannîe Trudî. Navoi i Dîami*, Moscow 1965, 283-413).

In spite of the overwhelming influence of these models, new ways were also sought for the further development of epic literature in the *mathnawī* form. Amīr Khusraw introduced items taken from contemporary history, either romances or glorious events in the reigns of the sultans of Dihlī. This example was followed by Salmān-i Sāwadjī in his *Firāḳnāma*, whereas the *Djamshīd u Khwarshīd* of the same author is in its outline related to *Khusraw u Shīrīn* of Niẓāmī. An important new development was also the growing tendency to allegorize the courtly romance. In analogy to the semantic transformation that had been applied to the themes and images of the *ghazal*, the plots and characters of epic literature could equally be exploited for an allegorical representation of mystical ideas, such as the relationship of the mystic and his transcendental Beloved, or the purification of the human soul in the course of its journey through the cosmos. It is difficult to assess when and where the transformation of a particular narrative theme has actually taken place. The process affected old favourite tales of Persian literature like *Laylā u Madjnūn* and *Yūsuf u Zalīkhā*. But new protagonists acting according to more or less stereotyped plots were introduced as well. This allegorical fashion became particularly prominent during the Tīmūrid period, although a forerunner can already be found in ʿAṣṣār [*q.v.*] (d. 779/1377-8 or 784/1382-3), who attended the court of the Djalāʾirid Sultan Uways. A very influential writer, at least as far as the history of Persian literature outside Iran is concerned, was Fattāḥī [*q.v.*] (d. 852 or 853/1448-50), in whose main work, *Dastūr-i ʿUshshāḳ*, the protagonists are the abstract concepts Beauty (*Ḥusn*) and Heart (*Dil*). ʿĀrifī of Harāt (d. *ca.* 853/1449) construed his *Ḥālnāma* or *Gūy u Čawgān* on symbols provided by the game of polo as well as on the equally conventional theme of the king and the beggar. To this last feature of his work refers the title of an imitation by Hilālī [*q.v.*] (d. 936/1529-30), *Shāh u Gadā*. The theme of the candle and the moth, another commonplace of mystical lyrics, was treated by Ahlī of Shīrāz (d. 942/1535-6) in his *Shamʿ u Parwānā*.

The history of the mystic *mathnawī* after the Mongol invasion opens with the *Mathnawī-i Maʿnawī* of Djalāl al-Dīn Rūmī, the most impressive work of its kind. It is especially renowned for the riches of its narratives, the complicated style of its composition, consisting of an endless associative concatenation of primary and secondary tales, and for the kaleidoscopical structure of its ideological contents. The doctrinal background of this great work, by traditional commentators usually identified with the pantheism of Ibn al-ʿArabī [*q.v.*], is far from being fully understood. The poet consciously attached himself to the tradition of Sanāʾī and ʿAṭṭār. Together these three poets had a very great impact on the subsequent generations of mystical poets and writers, but it is not possible to survey completely those compositions which develop one aspect or another of their works since only a few have been published. (See for the most complete survey: H. Ethé, *Gr. I.Ph.*, ii, 298-301).

The earliest follower of Mawlawī's work was his son Sulṭān Walad who explained the meaning of his father's works in a series of *mathnawīs* giving at the same time invaluable information about his life. Among these poems the *Waladnāma* is the most celebrated. In the *ʿUshshāḳnāma* of ʿIrāḳī, characterized by the insertion of *ghazals*, the theme of mystical love is elaborated. The topic of the *Miṣbāḥ al-arwāḥ* is the visionary journey of the mystic through the cosmos. The authorship of this interesting work is uncertain. Old manuscripts attribute it either to the well-known Ṣūfī *shaykh*, Awḥad al-Dīn Kirmānī, or to a certain Shams al-Dīn Muḥammad Bardsīrī Kirmānī (cf. the edition by Badīʿ al-Zamān Furūzānfar, Tehran 1349 sh.). A pupil of the former, Awḥadī [*q.v.*] (d. 738/1337-8), wrote his once very popular *Djām-i Djam* as an imitation of Sanāʾī's *Ḥadīḳa*. Its more ethical than mystical spirit is also reminiscent of another masterpiece of the didactic *mathnawī*, the *Būstān* of Saʿdī. Written almost simultaneously with Rūmī's *Mathnawī*, with all the brilliance and clarity of the style of Saʿdī, the *Būstān* certainly surpassed the latter's celebrity, but nowhere does it even approach Rūmī's depth of thought. Although some of its chapters deal with mystical topics, on the whole the work seems to be designed for little more than elegantly presented moral admonition. From the 8th/14th century three other writers of mystical *mathnawīs* are worthy of note: Ḥusaynī Sādāt [*q.v.*] (d. after 729/1328), ʿImād al-Dīn Faḳīh, a contemporary of Ḥāfiẓ, (d. 773/1371), and Maḥmūd-i Shabistarī [*q.v.*] (d. about 720/1320-1). The last mentioned wrote *Gulshān-i Rāz*, which among other things contains an explanation of the symbolic language of Ṣūfī poetry.

An interesting personality, standing more or less aside from the trodden paths of Persian literature, is Nizārī [*q.v.*] (d. 720/1321). Being an Ismāʿīlī, he incurred the condemnation of orthodox critics which the vehement sarcasm often displayed in his works did nothing to prevent. He wrote three *mathnawīs*: a love-story, *Aẓhar u Maẓhar*, a short but highly original parody on the customary didacticism, *Dastūrnāma*, and a versified book of travel, *Safarnāma*.

Among the prose-works produced in these centuries, again a work by Saʿdī, *Gulistān*, stands out as the most perfect example of classical Persian style for which it serves as a textbook up to the present day. It treats of much the same subjects as the *Būstān* but presents them in a more entertaining form. The anecdotes are told in a terse, rhythmic prose sometimes approaching the metrical patterns of poetry. The poet's moralising reflections upon the narratives are mostly put into the form of Persian or Arabic poetical fragments. Like so many other great works of Persian literature, it very soon became a model that was a copied by a long row of imitators. One of these was Djāmī, in whose *Bahāristān* even more room is given to poetry than in Saʿdī's work. The stylistic type of the *Gulistān* was the target of parody in some of the best works of ʿUbayd-i Zākānī, by far the greatest satirist Iran has ever produced (*Akhlāḳ al-Ashrāf*, *Rīshnāma*); [see also HIDJĀʾ, ii].

The tendency towards an ever more prolix rhetorical embellishment of Persian prose came to its full strength in Mongol times and continued to dominate the style of prose-writing for several centuries to come. It gave most works on history, the sciences, ethics, religion and other scholarly subjects the appearance of artistic writings. The *Taʾrīkh* of Waṣṣāf [*q.v.*] (d. 735/1334), the last of the great historians of the Īlkhāns, has become proverbial for this extremely florid style. Another work that set the pace in the use of a literary idiom inflated with Arabic words was the *Anwār-i Suhaylī*, another

version of the *Kalila wa Dimna* written by Ḥusayn Wāʾiẓ-i Kāshifī [see KĀSHIFĪ] (d. 910/1504-5), a very prolific and versatile author attending the Tīmūrid court of Harāt.

d. ***From the rise of the Ṣafawids to the late Ḳādjār period*** (***beginning 10th/16th-end 13th/19th centuries***). The establishment of the Ṣafawid state in Iran was not merely a political event. Through the introduction of Imāmī Shīʿism [see ITHNĀ ʿASHARIYYA] as the official religion of Iran, radically new conditions were created which were not very favourable to the flourishing of literature. Especially during the 10th/16th century neither the theocratic rulers nor the powerful Shīʿite clergy, which had acquired a great influence on official policy, were particularly interested in the traditional court literature. The cultivation of religious poetry was, on the other hand, greatly encouraged. The founder of the dynasty, Shāh Ismāʿīl [*q.v.*], was himself a writer of Turkish poems, in which he expressed ideas related to the doctrines of extreme Shīʿite sects. As soon as religious policy was firmly in the hand of the Imāmī *ʿulamāʾ*, deviations of this kind were no longer possible. The themes of Ṣafawid religious poetry were mainly taken from the stories about the martyrdom of the *imāms*. Devotion to the ʿAlid family is very often expressed in pre-Ṣafawid literature as well. It can even be found with authors whose Sunnī persuasion is beyond doubt. At least from the Būyid period onwards, the Shīʿite communities in Iran had tried to win more support by sending around the bazaars popular reciters of poems on the "virtues" of ʿAlī (*manāḳibkhwānān*, *manāḳibiyyān*) who made use of the works of Shīʿite poets like Ḳiwāmī of Rayy (6th/12th century). These texts were mainly *ḳaṣīda*s (cf. Dh. Ṣafā, *Taʾrīkh*, ii³, 192 ff.). A. Shīʿite epic, modelled on the style of the *Shāhnāma*, was introduced by Muḥammad b. Ḥusām (d. 875/1470) with his *mathnawī*, *Khāwarān*-(or *Khāwar*-)*nāma* [see further ḤAMĀSA, ii]. Another work of the Tīmūrid period, the collection of tales about the holy martyrs, *Rawḍat al-Shuhadāʾ*, written in artistic prose by Muḥammad Wāʿiẓ-i Kāshifī [*q.v.*], was used as a textbook for the Muḥarram celebrations and even lent its name to the function of a reciter of religious poetry, the *rawḍakhwān*.

The most important Ṣafawid poet of this genre was Muḥtasham [*q.v.*] of Kāshān (d. 996/1587-8). He is especially famous on account of a *marthiya* on the holy martyrs known as the *haft-band*, *i.e.*, a poem consisting of twelve seven-line stanzas. The *ḳaṣīda* was also used for this kind of elegy. *Mathnawī*s on the *imām*s were composed by Ḥayratī (d. 961/1553-4 or 970/1562-3) and by Fārigh of Gīlān who wrote his work in 1000/1591-3 to celebrate the conquest of Gīlān by Shāh ʿAbbās I. There was, in fact, a subtle connexion between the praise of the ʿAlid family and the glorification of the dynasty, as the Ṣafawids regarded themselves as descendants of the *imāms*. Shīʿite literature both in poetry and prose continued to be extremely popular till the present day. It has a solid base in religious sentiment as well as in the demand for liturgical texts to be used on various occasions.

The propagation of Shīʿite traditions and doctrines among the population of Iran could not be achieved by means of poetry alone. While the learned theological works continued to be written in Arabic, there was a growing need for works of a more popular kind in Persian on the different branches of religious science. A number of theologians set themselves this task. The comparatively simple style they used favourably contrasts with the verbosity still current in the literary prose of this period. Notable among these writers were Muḥammad Bahāʾ al-Dīn al-ʿĀmilī or Shaykh-i Bahāʾī [see AL-ʿĀMILĪ] (d. 1031/1622), who should also be mentioned on account of his Persian poetry, and Muḥammad Bāḳir al-Madjlisī [*q.v.*] (d. 1111/1699-1700).

Ṣūfism as a form of religious life was declining in Ṣafawid times as a result of the enmity of the religious leaders, which sometimes took the form of actual persecution. As mysticism and poetry had become very closely connected during the preceding centuries, this could not but unfavourably affect literary production. Yet the mystical strain could never be deleted entirely from Persian poetry. It is particularly evident in the poetical works of the members of the flourishing school of philosophy founded by Mullā Ṣadrā of Shīrāz, e.g. Muḥsin-i Fayḍ of Kāshān (d. 1090/1679), Mīr Abu 'l-Ḳāsim Findariskī (d. *ca.* 1050/1640-1) and the teacher of Mullā Ṣadrā, Mīr Muḥammad Bāḳir-i Dāmād [see AL-DĀMĀD] (d. 1040/1630). The poet Saḥābī of Astarābād (d. 1010/1601-2), who spent most of his life at the holy shrine of Nadjaf, expressed pantheistic mysticism in a *dīwān* which consisted almost entirely of quatrains.

Secular poetry suffered not only from the changes in the intellectual atmosphere but also from political changes. The disappearance of local courts reduced the market for the professional poet to one dynastic centre. Apart from the successive residences of the Ṣafawids, only Shīrāz remained as an important literary centre. Yet there was a great deal of continuity with the preceding Tīmūrid period. Just like the painters of the school of Bihzād [*q.v.*], the poets travelled to the west as soon as the new power had established itself there. That the royal family was not completely averse to court poetry is shown by Sām Mīrzā (d. 974/1566-7), a son of Shāh Ismāʿīl I, who described the history of poetry during the first half-century of Ṣafawid rule in his *tadhkira*, *Tuḥfa-i Sāmī*. Even the court of Shāh Ismāʿīl had its encomiast in Umīdī (d. 935/1519). The genre of *shahrāshūb* poems on the young artisans of a particular city was revived by Lisānī (d. 940/1533-4). It became a great fashion both with the Persian poets of his time and with the contemporary Ottoman poets (*e.g.* Medīḥī [*q.v.*]). The historical connection between these two schools is still uncertain. Another favourite topic was short poems on a single dramatic incident, under the heading "*ḳaḍā u ḳadar*". Some scholars have interpreted these genres as indications of a growing tendency towards realism in poetry (cf. J. Rypka, *History*, 296).

During the long reign of Ṭahmāsp I (930/1524-984/1576) courtly poetry gradually regained more ground. Waḥshī [*q.v.*] of Bāfḳ (d. 991/1583) excelled in the didactic and romantic *mathnawī* as well as in strophe poems. Even Muḥtasham did not shun panegyrism and Ḥayratī combined his religious art with satire.

To the most ambitious young talents, however, Iran did not offer sufficient opportunities for a literary career. Far better prospects offered themselves on the Indian subcontinent where the Mughal emperors resumed the splendid cultural traditions of their Tīmūrid ancestors. From the second half of the 10th/16th century onwards, an increasing number of Persian poets went to India and gave there a new impulse to the tradition of Indo-Persian letters. The most decisive literary development of the Ṣafawid period is connected with this migration of poets: the emergence of a new poetical style which in modern criticism has received the name *Sabk-i Hindī* [*q.v.*].

This Indian style, the main characteristics of which have been sketched above in the section on the periodization of Persian literature, distinguishes itself markedly from the earlier poetical styles. The causes of this greater amount of independence from the established literary canons have been sought in changes in the social conditions (A. Mirzoev) or in a relaxation of critical attention to the work of the poets especially in Ṣafawid Iran (A. Bausani). Under the influence of the negative verdict given almost unanimously by neoclassicist literary critics since the 12th/18th century, the characteristics of this style have for a long time been regarded as symptoms of a general poetical decadence. The rich imagery and the often highly original use of metaphors in the poems influenced by the Indian style has only quite recently become more appreciated. There is still a great deal of uncertainty about the actual beginnings of this new stylistic trend. Traditionally, an important role as an initiator is assigned to Bābā Fig̲h̲ānī [*q.v.*] (d. 925/1519), a poet of the *g̲h̲azal* continuing the style of Ḥāfiẓ who attended the court of the Aḳ Ḳoyunlu in Tabrīz. It is certain, anyhow, that from the second half of the 10th/16th century onwards its characteristics can be detected almost everywhere in Persian poetry. The works of ʿUrfī [*q.v.*] of S̲h̲īrāz (d. 999/1590-1), one of the earliest poets who went to India, and of his patron at the court of Akbar, Fayḍī [*q.v.*] (d. 1004/1595), although their renown was much greater in Indo-Persian and Turkish literature than in Iran, were very influential. Many of the prominent representatives of this style were Iranian by birth but made their literary careers at Indian courts (e.g. Naẓīrī of Nīs̲h̲āpūr (d. 1021/1612-3), Ẓuhūrī [*q.v.*] of K̲h̲ud̲j̲and (d. 1024/1615), Ṭālib of Amul (d. 1036/1626-7), Abū Ṭālib Kalīm of Hamadān (d. 1061/1651)). The Ṣafawid poets who remained in Iran, or returned there after a stay in India, applied the devices of the Indian style as well but generally with a great deal of moderation. By far the most talented among them was Ṣāʾib [*q.v.*] of Tabrīz (d. 1088/1677-8). Other notable poets in Iran during the 11th/17th century were Zulālī [*q.v.*] (d. 1024/1615), who wrote the *Sabʿ sayyāra*, a set of seven didactic and romantic *mat̲h̲nawīs*, Faṣīḥī-i Anṣārī of Harāt (d. 1046/1636-7), D̲j̲alāl-i Asīr (d. 1049/1639-40 or 1069/1658-9), who was famous as a "drunken" (*rind*) poet, and Nāẓim of Harāt (d. 1080/1670). Some independence from the current literary fashion was shown by S̲h̲ifāʾī (d. 1037/1628), the physician of S̲h̲āh ʿAbbās I, who wrote satires as well as *mat̲h̲nawīs* in the style of Sanāʾī and K̲h̲āḳānī.

The Ṣafawid period did not produce any artistic prose work of great value. Mention might be made of *Laṭāʾif al-ṭawāʾif*, a collection of anecdotes about the various social classes by Ṣafī [*q.v.*] (d. 939/1532-3), the son of Ḥusayn-i Wāʿiẓ-i Kās̲h̲ifī. A typical man of letters of this time was also Kās̲h̲if-i Kumayt [*q.v.*]. Much more fertile in this respect was again Indo-Persian literature. Already in the 8th/14th century it had produced a major work in the *Ṭūṭīnāma* of Ḍiyāʾ al-Dīn Nak̲h̲s̲h̲abī [*q.v.*] which was adapted in this period by Muḥammad Ḳādirī. The interaction of Hinduism and Islam in the culture of the Mug̲h̲al empire resulted in translations of the classical works of Sankrit literature, *Mahābhārata* and *Ramāyana*, as well as in the religious writings of Dārā S̲h̲ukōh [*q.v.*]. The poet Ẓuhūrī achieved fame with a series of short sketches written in a highly affected form of prose. The poor state of Iran during the first few decades of the 12th/18th century, the time of the Afg̲h̲ān invasion and the subsequent downfall of the Ṣafawid dynasty, is reflected in the *Tad̲h̲kirat al-aḥwal* or *Taʾrīk̲h̲-i Ḥazīn*, a book of memoirs by S̲h̲ayk̲h̲ ʿAlī Ḥazīn [*q.v.*] (d. 1180/1766-7). Under the rule of Nādir S̲h̲āh national pride was restored in Iran, which showed itself in a flowering of panegyrism on the great conqueror. The leading man of letters was Mahdī K̲h̲ān [*q.v.*], secretary as well as historiographer to Nādir. He used the bombastic style of Waṣṣāf in his main work, *Durra-i Nādirī*, but wrote his various other works in a much simpler fashion.

About the middle of the 12th/18th century a new school of poetry asserted itself in Iṣfahān and S̲h̲īrāz. The poets of this school, headed by Mus̲h̲tāḳ (d. 1171/1757-8) and S̲h̲uʿla (d. 1160/1747), turned their backs on the Indian style and proclaimed a literary return (*bāzgas̲h̲t-i adabī*) to the more harmonious standards of the earlier styles. They looked, for the models of their poems, to the *dīwāns* of the great poets of the pre-Mongol period. The *ḳaṣīda* was restored to its former prominence as a poetical form. This movement very soon dominated the literary scene and its aesthetic ideals have governed traditional poetry in Iran up to the present day. (See further M. T. Bahār, *Bāzgas̲h̲t-i adabī*, in *Armag̲h̲ān*, xiii-xiv (1311-2 s̲h̲.), *passim*; idem, *Sabks̲h̲ināsī*, iii, 318 f.; J. Rypka, *History*, 306-8).

To the first generation of neo-classicist poets belonged Muḥammad ʿĀs̲h̲iḳ (d. 1181/1767-8), Hātif [*q.v.*] (d. 1198/1783), S̲h̲ihābī of Turs̲h̲īz (d. 1215/1800-1) and Luṭf ʿAlī Beg Ād̲h̲ar (d. 1195/1780-1), the author of the *tad̲h̲kira Ātas̲h̲kade*, a first-hand source on the *bāzgas̲h̲t*-movement. After the founding of the Ḳad̲j̲ār dynasty, Fatḥ ʿAlī S̲h̲āh (reigned 1212/1797-1250/1834) tried to revive the ancient traditions of the royal maecenate at his court in Tehran. The centre of the circle of poets gathered here, who all emulated the classics, was Ṣabā [*q.v.*] (d. 1238/1822-3). He was highly appreciated in his own days on account of his panegyric *ḳaṣīdas* and of his *mat̲h̲nawī*, *S̲h̲āhans̲h̲āhnāma*, picturing the contemporary wars with Russia in the style of the old heroic epic. Worthy of note are also Ṣabāḥī Bīdgulī (d. 1218/1803), Saḥāb (d. 1222/1807-8), Mid̲j̲mar (d. 1225/1810) and Nas̲h̲āṭ (d. 1244/1828-9). A peculiarity of this period was the formation of small literary societies (*and̲j̲umans*) [see D̲J̲AMʿIYYA]. In the next generation the cultivation of classicism reached its richest development in the work of Ḳāʾānī [*q.v.*] (d. 1270/1854), a virtuoso of the poetical language. He showed, however, his awareness of the reality of his time in satirical poems and in his prose-work, *Kitāb-i paris̲h̲ān*. Ḳāʾānī was the first Persian poet who had some knowledge of European languages.

The tradition of the mystical *g̲h̲azal* was resumed by Furūg̲h̲ī [*q.v.*] (d. 1271/1857-8) of Bisṭām, who also used the pen-name Miskīn. A remarkable personality was Yag̲h̲mā [*q.v.*] (d. 1276/1859) of D̲j̲andaḳ. He lived both as a *darwīs̲h̲* and as a panegyrist of the Ḳad̲j̲ār court while he was at the same time a redoubted satirist. His independent frame of mind showed itself in the invention of a new type of religious elegy in a style related to popular songs, known as *nawḥa-i sīnazan*. An interesting trait of his use of the language is the puristic effort to replace Arabic words by Iranian equivalents. Several poets of this century founded literary dynasties as their sons continued to work on the same lines as their fathers. Besides Ṣabā and Yag̲h̲mā, a famous instance of this is the family of Wiṣāl [*q.v.*] (d. 1262/1846), a learned poet living in S̲h̲īrāz.

During the last period of the unchallenged rule of classical poetry, the long reign of Nāṣir al-Dīn S̲h̲āh

(1848-96), the institution of the encomiast of the court was already declining. Only a few names are worthy of mention: the religious poet Surūsh (d. 1285/1868), Humā (d. 1290/1873-4), a poet of the *ghazal*, and the mystic Shaybānī [*q.v.*] (d. 1308/1890), in whose pessimistic lyrics an element of social criticism can be noticed. Minor poets, who distinguished themselves in other fields of literary activity or in public life, were the historian Muḥammad Taḳī Siphir [*q.v.*] (d. 1297/1880) and Riḍā Ḳulī Khān [*q.v.*] (d. 1288/1871). The latter, who used Hidāyat as his poetical name, was the leading literator of his time. He wrote a number of authoritative works on political, literary and religious history as well as a lexicon. The *Madjmaʿ al-Fuṣaḥāʾ*, the last great *tadhkira* of the old style, in which most of the materials on literary history contained in earlier works of this kind was compiled, became particularly famous.

e. *Modern literature (19th-20th centuries).*

The impact of western civilization, which began to affect life in Iran in the course of the 19th century, did not leave its solid literary tradition untouched. The ancient structure of Persian literature was attacked by the forces of change from several sides. Political developments put an end to the system of court poetry and caused a fundamental change in the attitude of the poet towards his art. The modern poet, whether he continued to work on traditional lines or not, could no longer make a living out of poetry. He had become, in a certain sense, an amateur who composed his poems on his own account. This led, on the one hand, to a much greater involvement of literature in the political and social vicissitudes of the nation, on the other, to a more individual form of poetical expression, the models of which were provided by European literature. New concepts like nationalism, democracy and social justice demanded the attention of the modern intellectual. The earliest poets of the modern period who, during the struggle for the Iranian constitution [see IRAN, HISTORY], had to express these ideas with some urgency, could only make use of the classical forms of poetry, which proved to possess a remarkable adaptability. Eventually, however, the formal system could not remain unchallenged. Especially in poetry a long battle was waged on the question whether it was permissible to evolve a new type of poetry (*shiʿr-i naw*) through experiments with prosody, or even to use entirely free verse (*shiʿr-i āzād*), or not. In this struggle the classical style of poetry was shown to have deep roots in Iranian culture. Perhaps the most important formal innovation was the emergence of a genuine prose literature based on the forms of the novel and the short story, which were borrowed from modern European literature.

While the actual birth of the modern literature of Iran took place during the turbulent years between 1890 and the beginning of the First World War, the process leading up to fundamental changes started early in the Ḳādjār period. Simultaneously with the classicist renaissance at the court of Fatḥ ʿAlī Shāh, a much more progressive attitude could be observed in the entourage of ʿAbbās Mīrzā [*q.v.*], the heir-apparent and governor of Ādharbāydjān. Confronted with the necessity of military reform on account of successive defeats in the wars with Russia, several measures were taken which proved to be of great consequence to the future course of cultural life in Iran. For the first time students were sent to Russia and Western Europe. One of their tasks was to study typographical techniques. A printing-press was founded in Tabrīz in 1816-7. Very soon typography (*čāpi-surbī*) was replaced by lithography (*čāp-i sangī*), which remained the principal form of printing during most of the 19th century. In 1834 the first Iranian newspaper was published in Tehran, the *Rūznāma-i akhbār-i waḳāyiʿ* which had only a limited circulation. A more direct influence on literature was exerted by the efforts to simplify the style of official correspondence, a good example of which was given by Abu 'l-Ḳāsim Farahānī (1799-1835), better known by his title Ḳāʾim-maḳām [*q.v.*], *i.e.*, deputy-minister of ʿAbbās Mīrzā

A second episode of cultural modernization was the short term of office of Mīrzā Taḳī Khān [*q.v.*], also known as Amīr-i Kabīr or Amīr-i Niẓām, as prime-minister of the young Nāṣir al-Dīn Shāh. It ended abrubtly with the execution of the Amīr-i Kabīr in 1852. The publishing of a newspaper was resumed in 1851 (*Rūznāma-i waḳāyiʿ-i ittifāḳiyya*, in 1860 renamed *Rūznāma-i dawlat-i ʿaliyya-i Īrān*). In the following decades the number of periodicals rapidly increased. Although they were all more or less mouthpieces of the government, they helped to spread new ideas through the information they provided about the world outside Iran. During the last few decades of the century political emigrants spread pan-Islamic or liberal ideas in a number of papers published in Istanbul, Cairo, Calcutta and London. [See DJARĪDA, ii, with further references].

Another initiative of the Amīr-i Kabīr was the founding of a polytechnic school (Dār al-Funūn) in Tehran (1852), which provided a modern education in technical and natural sciences with some attention to the humanities as well. The staff of the school, directed by Riḍā Ḳulī Khān, consisted mostly of European teachers. The Dār al-Funūn formed the beginning of modern academic education in Iran [see DJĀMIʿA]. An immediate effect was an increased demand for the translation of books from European languages, among which French was by far the best known in Iran. The list of the earliest translations contains, besides textbooks and scientific works, also *belles lettres*, e.g. works by Al. Dumas, Daniel Defoe and Bernardin de Saint-Pierre (cf. E. G. Browne, *The press and poetry of modern Persia*, Cambridge 1914, 154-66). Many translations are attributed to Muḥammad Ḥasan Khān [*q.v.*] (d. 1896) who successively used the titles Ṣanīʿ al-Dawla and Iʿtimād al-Salṭana, but they were chiefly made by a corps of translators working under his direction in the government's printing office (Dār al-Ṭibāʿa) and the bureau of translators (Dār al-Tardjama).

Among the preliminaries to the modern period mention should also be made of the religious movement of the Bāb [*q.v.*], which manifested itself for the first time in 1844. From the very beginning the Bābīs displayed a great literary activity, encompassing theological and historical writings as well as poetry. The most celebrated figure is the female poet and martyr of the Bābī cause, Ḳurrat al-ʿAyn [*q.v.*] (d. 1851). (See further E. G. Browne, iv, 198-220; idem, *Materials for the study of the Bábí Religion*, Cambridge 1918, 341-58).

The heralds of modern "committed" poetry were Muḥammad Bāḳir Bawānātī (d. 1891-2), who as early as 1882 published a *ḳaṣīda* attacking the imperialist policies of Britain and Russia, and Aḳā Khān Kirmānī (d. 1896), a prominent political exile in Istanbul and a follower of Djamāl al-Dīn al-Afghānī [*q.v.*]. The latter contrasted the decadence of Iran in the late Ḳādjār period with its ancient splendour in his historical *mathnawī*, *Sālārnāma* or *Nāma-i bāstān*. An interesting feature of this work was the attack launched

on classical literature (with the single exception of Firdawsī whose *Shāhnāma* stood as a model for the poem), which was considered as a principal source of degeneration in the Islamic history of Iran. The political movement against the despotism and misrule of the Ḳādjārs and the foreign forces that supported it brought quite different groups of the population together. Several eminent erudites of the old cultural tradition contributed to the creation of a patriotic poetry: e.g. Sayyid Aḥmad Adīb-i Pīshāwarī (*ca.* 1845-1930), ʿAbd al-Djawād Adīb-i Nīshāpūrī (1864-5—1926), and especially Mīrzā Ṣādiḳ Khān, better known by his pen-name Amīrī or his honorific Adīb al-Mamālik (1860-1917), who abandoned a successful career as a court-poet in 1898 to become a journalist. In the first decade of the 20th century the proliferating press became the chief medium for the publication of poetry. One of the best periodicals was the *Nasīm al-Shimāl* edited in Rasht by Ashraf-i Gīlānī (1871-about 1930), a writer of satirical poems (*fukāhiyyāt*) criticizing in particular the conservative Shīʿite *ʿulamāʾ* in a simple language full of colloquial expressions. ʿAlī Akbar Dihkhudā (about 1880-1956) published his poems under the name Dakhaw in the *Ṣūr-i Isrāfīl*. Besides his great merits in other fields of literature andscholarship, he was the first to try some formal experiments. Muḥammad Taḳī Bahār [*q.v.*] (1886-1951), a master of the classical forms who already in his early years had earned the title *malik al-shuʿarāʾ* as a panegyrist, put his great talents entirely at the service of the constitutional movement, successfully applying the old forms to the expression of new contents. Throughout the first half of this century Bahār was the leading modern poet of Iran. Forms of popular poetry like the folk-song (*surūd*) and the ballad (*taṣnīf*), usually recited to the accompaniment of music, became favourites with the political poets. A famous composer, as well as an impressive performer of *taṣnīfs*, was Abu 'l-Ḳāsim ʿĀrif of Ḳazwīn (about 1880-1934).

The core of the new nationalist ideology was Iranism, *i.e.*, the glorification of the pre-Islamic past of Iran, of which the Iranian intelligentsia had become conscious mainly through the results of western philological, historical and archaeological research. Zoroastrianism very often appeared as the enlightened counterpart ot the obscurantism that was felt to be fostered by traditional Islam. Those works of the classical literature that seemed to express a similar feeling of nostalgia for the glorious past, like the *Shāhnāma* and the *ḳaṣīda* on the ruins of al-Madāʾin (Ctesiphon) by Khāḳānī, enjoyed a great popularity. The foremost philo-Iranian poet was Ibrāhīm Pūr-i Dāwūd (1886-1968), who later in his life became a distinguished student and translator of the *Avesta*.

To Abu 'l-Ḳāsim Lāhūtī (1887-8—1957) a revolutionary change of social conditions was the main goal of the political struggle in which he took a most active part until he was forced to flee to the Soviet Union in 1922. There he wrote the long poem (*manẓūma*), *Kiriml*, as a tribute to communism. Afterwards, he became the leading poet of the Soviet Republic of Tādjikistān [*q.v.*]. Farrukhī Yazdī (1889-1939) continued to fight for his socialist ideals in Iran. His best poetry is to be found among his *ghazals*, written in a conventional style in spite of their quite modern contents.

Although his short life was filled with radical political action, Muḥammad Riḍā ʿIshkī [*q.v.*] (1894-5—1924) is more significant in the history of literature on account of his formal and thematical innovations. He has been styled the first romantic poet of Iran, because of the strong influence of French romantic and symbolist poetry on his work. This is particularly noticeable in his greater poems, *Kafan-i siyāh*, *Īdeāl* and *Rastākhīz*. His experiments with prosody were chiefly concerned with the strophe-poem (*musammaṭ*). Many other poets endeavoured to extend the possibilities of the *ʿarūḍ* system, but, until the period after the Second World War, few dared to follow the example of a complete rupture from traditional forms given by Muḥammad Isfandiyārī, better known as Nīmā Yūshīdj [*q.v.*] (1897-1960). His *Afsāna* (1921) marks the beginning of his efforts to create a type of free verse that was no longer bound by the old rules of metre and rhyme but was based directly on the rhythm and music of the language.

During the period between the wars contemporary politics almost completely disappeared as a theme of literature. All the same, many poets displayed a concern with individual social problems, most prominent among which was the position of women in Iranian society. This was the main topic of Īradj Mīrzā (1874-5—1925), a prince of the Ḳādjār house, whose simple yet graceful style made him one of the most beloved poets of modern times. The talented female poet Parwīn-i Iʿtiṣāmī (1906-7 or 1910-1941) showed a deep concern with the miseries of the poor. Satirical verse was still very popular but had to respect the bounds set by official censorship. Especially renowned for their satirical poems were Ḳulzum (b. 1891), Rūḥānī (b. 1896) and Muḥammad ʿAlī Nāṣiḥ (b. 1898).

The mainstream of Persian poetry still consisted of the poets who applied in varying degrees modern elements in their works but remained essentially faithful to tradition. A point of focus of literary life was the *andjuman-i adabī-i Irān* founded by Waḥīd-i Dastgardī (1880-1942), who, since 1919, edited the authoritative literary periodical of this period, *Armaghān* (cf. F. Machalski, *Vahid Dastgardi and his "Armaġān"*, in *Folia Orientalia*, iv (1963), 81-103). M. T. Bahār established a circle of poets of his own as well as the journal *Naw-Bahār* (1921-51). *Wafā* (1923-5) was edited by the popular poet Niẓām-i Wafā (b. 1887-8). The progressive writers expressed themselves in *Āyanda* (1925-40). The most brilliant poet among the many who first appeared on the literary stage between 1920 and 1040 was Muḥammad Ḥusayn Shahriyār (b. 1906-7). In his *ghazals* inspired by Ḥāfiẓ he displays a remarkable ability to blend the old poetical idiom with a modern sentiment.

From 1941 till about 1950 there was a great increase in political and literary activities. In 1946 the first congress of Iranian writers was held in Tehran (cf. *Nukhustīn Kongre-i nawīsandagān-i Īrān*, Tehran 1325 sh.). Several new periodicals were started, e.g. *Sukhan* (1943), the organ of the progressive poets and prose writers, edited by Parwīz Nātil Khānlarī (b. 1913), and *Yaghmā* (1948), edited by the poet Ḥabīb-i Yaghmāʾī (b. 1901). Among the scholarly journals which pay much attention to the study of literature mention should be made of *Yādgār* (1944-9), *Farhang-i Irān-zamīn* (since 1953), and of the periodicals of the Faculties of Arts of the Iranian universities e.g. *Madjalla-i Dānishkada-i adabiyyāt*, Tehran (since 1953), *Nashriyya-i Dānishkada-i adabiyyāt-i Tabrīz* (since 1948), *Madjalla-i Dānishkada-i adabiyyāt*, Iṣfahān (since 1964), and *Madjalla-i Dānishkada-i adabiyyāt*, Mashhad (since 1965).

The most conspicuous feature of the poetry of the post-war period is the acceptance by an expanding groups of poets and literary critics of the ideas on free verse as they had been put forward by Nīmā

Yūs͟hīd͟j. The debate between modernists and the defenders of the classical tradition was resumed with great intensity in the literary journals. The leading advocates of a modernized prosody were Farīdūn Tawallulī, who published a manifesto as an introduction to his volume of verse *Rahā* (1951), P. N. K͟hānlarī and Nadīr-i Nādirpūr. They also belong to the most prominent poets of the new style. The criticism of the classicists is not only directed against deviations from the traditional forms but equally against the unusual metaphors applied by these poets. (See further on the latest developments of Persian poetry: V. B. Klyas͟htorina, *Sovremennaya persidskaya poeziya. Očerki*, Moscow 1962; B. Alawi, *Geschichte und Entwicklung*, 225-35; Fr. Machalski, *New Poetry in Iran*, in *New Orient*, iv (1965/4), 33-6; Mansour Shaki, *Modern Persian Poetry*, in *Yádnáme-ye Jan Rypka*, Prague-The Hague 1967, 187-94; Dāryūs͟h S͟hāhīn, *Rāhiyān-i s͟hiʿr-i imrūz. Djungī az nawsarāyān-i s͟hiʿr-i imrūz*, Tehran 1349 s͟h.[s]).

The tendency towards a simplification of the language and style of prose writing continued to become stronger throughout the 19th century. Whereas the Ḳāʾim-maḳām still wrote in a style that was very close to the classical concept of literary elegance, the growing necessity to express new impressions and ideas demanded the creation of a much more direct way of writing and the use of a form of language that was understandable to a greater number of people. Abundant material for a study of the modernization of prose is to be found in the works of the translators and journalists of the second half of the century. But already before 1850 an example of a graceful sober new style had been given by ʿAbd al-Laṭīf Ṭasūd͟jī in his translation of the Thousand and One Nights. A similar concern for directness of expression is displayed by several memoirs and books of travel written by prominent men of the Ḳād͟jār period. The most celebrated example of this was given by Nāṣir al-Dīn S͟hāh [*q.v.*] in the books of travel he composed after each of his many journeys to Europe, to ʿIrāḳ, and to the provinces of Iran.

The propagation of new ideas on political, social and scientific issues was the principal aim of many early writers of modern prose. A number of political essays was composed by Malkum K͟hān [*q.v.*] (1833-1909), e.g. *Kitābča-i g͟haybī* of 1859, a proposal for a radical reform of the public institutions of Iran addressed to the shah. He made great efforts to adapt Persian to its modern functions and even suggested a change of the writing system. The Ād͟harbāyd͟jānian writer ʿAbd al-Raḥīm Nad͟jd͟jārzāda, better known as Ṭālibof [*q.v.*] or Ṭālibzāda (*ca.* 1845-1910), devoted himself in particular to the vulgarization of modern science in an attractive literary form (e.g. the dialogue between a father and his son in *Kitāb-i Aḥmad*, the device of an imaginary journey in *Masālik al-Muḥsinīn*). Mīrzā Āḳā K͟hān Kirmānī should also be named among these pioneers, especially on account of his *Āʾina-i Iskandarī*, a history of ancient Iran.

On the eve of the constitutional revolution two works were written that are usually regarded as the beginning of modern fiction in Iran. The picaresque novel of James Morier, *The Adventures of Hajji Baba of Ispahan*, was adapted in Persian by Mīrzā Ḥabīb Iṣfahānī (d. 1897-8), a teacher of Persian living in exile in Istanbul (cf. H. Kamshad, *Modern Persian Prose*, 21 ff.). In spite of its pitiless criticism of traditional Persian life, the work became extremely popular in Iran. The second work is *Siyāḥatnāma Ibrāhīm Beg*, an original novel by Zayn al-ʿĀbidīn Marāg͟haʾī [*q.v.*] (d. 1910). The first volume was completed in 1887 and published in 1888 at the press of the emigrant paper *Ak͟htar* in Istanbul (cf. the introduction to the reprint, Calcutta 1910, by Āḳā Muḥammad Ḳāẓim-i S͟hīrazī). It is a fictitious book of travel describing the deplorable state of Iran in late Ḳād͟jār times. The narrative structure is rather loose and dissolves in the two subsequent volumes (published in Calcutta, 1907 and 1909) into a string of instructive and moralistic excursions. In this respect, the author follows an ancient indigenous tradition of moralizing prose writings, the influence of which can be traced in many later Persian novels as well.

During the years of the revolution, political journalism became militant in Iran. The best specimens of this are the satirical sketches contributed to the journal *Ṣūr-i Isrāfīl* by Dihk͟hudā under the heading *Čarand-parand*. He frequently used colloquial words and expressions, by which he led the way for the *avant garde* writers of a later generation. An anonymous work of this period is *Ruʾyā-i ṣādiḳa*, written by a group of supporters of reform about 1900. It contains an attack on those in power in Iṣfahān clothed in the form of a vision of doomsday.

The first genre of fictional prose to become fully developed and achieve a great popularity was the historical novel. The earliest was *S͟hams u Ṭug͟hrā* of Muḥammad Bāḳir K͟husrawī, the first part of a trilogy situated at the time of the Mongol rulers of Iran, published in 1909. It was followed in 1919 by *ʿIs͟hḳ u Salṭanat* of S͟hayk͟h Mūsā Nat͟hrī, a novel about Cyrus the Great. The same period was treated by Ḥasan Badīʿ in *Dāstān-i bāstān* (1920-1). The ruin of the Sāsānids and the Arab conquest provided the background to *Dāmgustarān yā Intiḳām-k͟hʷāhān-i Mazdak*, which in 1921 opened a long series of novels by ʿAbd al-Ḥusayn Ṣanʿatīzāda. The best writers of this genre took pains to base their works on historical research. Sometimes they even supplied notes with references to their sources. The choice of the subjects, taken either from pre-Islamic or Islamic history, was dictated by nationalistic sentiments. Occasionally, contemporary history provided the material, e.g. in *Dalīrān-i Tangistān* of Ḥusayn Ruknzāda Adamiyyat, which is situated in southern Iran during the First World War. Quite often, these works show the influence of European novels of the romantic period. (See further on the historical novel: E. E. Bertel's *Persidskiy istoričeskiy roman XX veka*, in *Problemī literatur' Vostoka, Trudī Moskovskogo Instituta vostokovedeniya*, i (1932), 111-26; B. Nikitine, *Le roman historique dans la littérature persane moderne*, in *JA*, cciii (1933), 297-33; Fr. Machalski, *Historyczna powieść perska*, Krakow 1952 (in Polish with a French summary); H. Kamshad, *op. cit.*, 41-53).

From 1920 onwards the range of fictional prose became considerably wider. Many novelists began to pay attention to the social problems which were either caused or brought to the moral consciousness by the accelerated process of westernization. Themes like the inferior position of women in Iranian society, the disorientation and immorality of modern youth, prostitution and corruption were taken as subjects for a long series of novels most of which had very little artistic value. Among the best works of this kind is *Tihrān-i mak͟hūf* (1922) of Murtaḍā Mus͟hfiḳ Kāẓimī, giving a gloomy picture of modern life in the capital. Worthy of note are also *Man ham girya karda-am* (1933) of D͟jahāngīr D͟jalīlī (1909-38) and *Tafrīḥāt-i s͟hab* (1932) of Muḥammad Masʿūd (d. 1947), whose pen-name was Dihātī. The latter was much criticized on account of his negativism. In

1942 he started to publish a series of autobiographical novels of great interest, beginning with *Gulhā-ī ki dar djahannam mīrūyad*, which was left unfinished. The most popular writer of the period between the wars was Muḥammad Ḥidjāzī (b. 1899). His novel *Zībā* (1931) is distinguished by the clever description of a corrupt bureaucracy. He also published many short stories and essays with a strong element of didacticism. ʿAlī Dashtī opened his career as a writer with *Ayyām-i maḥbas* (1921), a collection of sketches and essays written in prison, which was later on enlarged with recollections of his life as a politician during the reign of Reżā Shāh Pahlavī. In recent years Dashtī has become a successful novelist as well as an important critic of the classical poets (e.g. *Naḳshī az Ḥāfiẓ*, 1957).

The most significant contemporary writers have shown a distinct preference for the short story and the novelette. These forms were developed to a much higher level of artistic perfection than the longer novel. An event of major importance in the history of modern Persian prose was the appearance in 1921 of *Yakī būd yakī nabūd*, a volume of satirical stories by Sayyid Muḥammad ʿAlī Djamālzāda (b. 1891-2). It was the first completely successful attempt to apply the narrative technique of European literature. The first edition was accompanied by a manifesto advocating the right of existence of a realisitc literature,, the value of which as a means of public education is particularly stressed. In order to be able to reach the broad masses of the people, the literary language should not only be simplified but also made more democratic by the assimilation of elements from living speech which were not regarded as correct forms according to the prevailing standards of literary culture. In spite of the fact that he has lived in Europe during most of his life, Djamālzāda never lost his interest in the exploration of the resources of colloquial Persian, which eventually resulted in the compilation of a special dictionary of colloquial words (*Farhang-i lughāt-i ʿāmmiyāna*, edited by M. Dj. Maḥdjūb, Tehran 1341 sh.). His later novels and short stories were not published before 1941. The autobiographical work *Sār u tah-i yak karbās* (1956) is of popular interest.

The principles laid down by Djamālzāda were applied with great talent by Ṣādiḳ Hidāyat [*q.v.*] (1903-51) in his early stories collected in the volumes *Zinda bi-gūr* (1930), *Si ḳaṭra khūn* (1932) and *Sāya-rawshan* (1933), as well as in the novelette *ʿAlawiyya Khānum* (1933). This can be observed especially in the stories which portray the life of the middle and lower classes of Iranian society. The most celebrated aspect of his work is the analysis of mental suffering for which Hidāyat made use of the literary technique of surrealism. The novelette *Būf-i kūr* (1937) received international attention when a French translation was published in 1953. The short novel *Ḥādjdjī Āḳā*, which was published in 1945, is his best satirical work.

To the same school of writers belongs Buzurg ʿAlawī (b. 1907). He is, however, much more involved in politics than the preceding authors. The collection *Čamadān* (1934) earned him an early recognition as an important writer. His *Čashmhāyash* (1952) is one of the best modern Persian novels. Among the writers who made their debut after the Second World War the outstanding writer of the short story is Ṣādiḳ Čūbak (b. 1916) whose first collection *Khayma shab-bāzī* was published in 1945. His latest works are the novels *Tangsīr* (1963) and *Sang-i ṣabūr* (1966). Other notable writers of the last few decades are Muḥammad Iʿtimāzāda (Bihādhīn), who is especially known on account of his novel *Dukhtar-i raʿiyat* (1951), Djalāl Āl-i Aḥmad (1923-69) and Taḳī Mudarrisī. The extensive novel *Shawhar-i Ahū Khānum* (1961) of ʿAlī-Muḥammad Afghānī (b. 1925) was received with great enthusiasm both by the public and the critics in spite of its technical defects. (See on the latest development of modern prose: B. Alawi, in *Yádnáma-ye Jan Rypka*, Prague-The Hague 1967, 167-72; M. Zavarzadeh, in *MW*, lviii (1968), 308-16).

Drama (*numāyish*) has never been a part of the classical tradition but has existed on the level of folk literature for a long time in many different forms (cf. J. Cejpek, *Dramatic Folk-literature in Iran*, in J. Rypka *et. al.*, *History*, 682-93). Much attention has been given to the Iranian passion plays (*taʿziya*) [*q.v.*]), the development of which culminated in the Ḳādjār period. Modern playwriting in Iran is entirely derived from European literature. The oldest specimens are translations of some of the most famous comedies of Molière. Of greater importance were the modern comedies of Ākhundzāda [*q.v.*], written in Azeri Turkish and adequately translated into Persian by Muḥammad Djaʿfar Ḳarāčadāghī. They were published for the first time in 1874 (reprinted Tehran 1349 sh.). The plays of Ākhundzāda inspired the first original dramatic works: a series of comedies said to have been written by Malkum Khān [*q.v.*], although his authorship of at least some of these has been denied recently (cf. *Central Asian Review*, xv (1967), 21-6). Interesting features of these early comedies are the element of social criticism they contain and the use of colloquial expressions in the dialogues. From the First World War onwards play writing became a great fashion in Iran. From the vast production of plays only the historical dramas *Parwīn dukhtar-i Sāsān* (1930) and *Māziyār* (1933) of Ṣādiḳ Hidāyat are named here because of their importance for the history of literature [See further MASRAḤIYYA].

Bibliography: in addition to the references in the text, only works of a general character can be mentioned here. For monographs, editions of texts and translations see especially the bibliographies in H. Ethé's contribution to *Gr.I.Ph.*, *passim* and, for works published after 1900, in J. Rypka, *History*, 757-808. The articles in Iranian periodicals have been recorded in Īradj Afshār, *Fihrist-i maḳālāt-i Fārsī*, i: 1328 ḳ.—1338 sh., Tehran 1340 sh., ii: 1339-1345 sh., Tehran 1348 sh. For books published in Iran see Khān-Bābā Mushār, *Fihrist-i kitābhā-i čāpī-i Fārsī*, 2 vols., Tehran 1337-42 sh., supplemented by Karāmat Raʿnā Husaynī, *Fihrist-i kitābhā-i čāpī-i Fārsī. Dhayl-i Fihrist-i Mushār*, Tehran 1349, sh.; cf. also Ī. Afshār and Ḥ. Banī-Ādam, *Kitāb-shināsī-i dahsāla-i* (1333-1342) *kitābhā-i Īrān*, Tehran 1346 sh. The current production of books can be followed in the periodical *Rāhnumā-i kitāb* (since 1337 sh.), as well as in the annual surveys *Kitābhā-i Īrān*, edited by Ī. Afshār, and *Kitābshināsī-i millī*-i *intishārāt-i Īrān*, a publication of the Wizārat-farhang wa hunar.—As no comprehensive bio-bibliographical survey of the classical literature exists, reference to the catalogues of Persian manuscripts is still indispendable. A bibliography of catalogues has been compiled by Ī. Afshār in *Kitābshināsī-i fihristhā-i nuskhahā-i khaṭṭī-i Fārsī*, Tehran 1337 sh., which has been supplemented by O. F. Akimushkin and Yu. E. Borshčevskiy in *Narodî Azii i Afriki*, 1963/3, 169-74 and *ibid.*, 1963/6,

228-41. Several important new catalogues have been published during the last decade; a) in Iran: M. T. Dānish-pazhūh, *Fihrist-i nuskhahā-i khaṭṭī-i kitābkhāna-i Dānishkada-i adabiyyāt, Tihrān*, Tehran 1339 sh.; idem and ʿAlī-Naḳī Munzawī, *Fihrist-i kitābkhāna-i Sipahsālār*, iii-iv, Tehran 1340-6 sh.; Sayyid ʿAbd Allāh Anwār, *Fihrist-i nusakh-i khaṭṭī-i kitābkhāna-i millī*, 2 vols., Tehran 1342-7 sh.; the cataloguing of the Kitābkhāna-i markazī-i Dānishgāh-i Tihrān, the Kitābkhāna-i Madjlis-i Shūrā-i millī and the Kitābkhāna-i Astān-i ḳuds-i Raḍawī, Mashhad, has been carried on by several scholars. A systematically arranged synopsis of Persian manuscripts is being supplied by ʿAlī-Naḳī Munzawī, *Fihrist-i nuskhahā-i khaṭṭi-i Fārsī*, i-ii, Tehran 1348-9 sh. b) in other countries: A. M. ĪRĀNĪ [see Mughals].

IRATEN (Ayt > Ath Yiratən; Ar. Banū Ratən), a Berber tribal group of Great Kabylia, whose territory is bounded on the north by the Sebaw, in the west by the Wādī Aïssi (Wādī ʿAysī), which separates them from the Ayt Yenni, in the south by the Ayt Yaḥyā and in the east by the Ayt Frawsen. It is a hilly country from 3000 to 3500 feet in height, producing olives and figs and some cereals. The inhabitants are settled in several villages, of which the most important are Adni, Tawrirt Amekkran, Usammer and Agemmun. The Iraten numbered some ten thousand, belonging to the *commune mixte* of Forth-National.

We know little about the history of the Iraten. Ibn Khaldūn (*Berbères*, tr. de Slane, i, 256) mentions them as inhabitants of "the mountain between Bidjāya [Bougie] and Tedellys [Dellys]". They were nominally under the governor of Bougie and were on the list of tribes liable to *kharādj*, while being in fact independent. At the time when the Marīnid al-Ḥasan undertook his campaign in Ifrīḳiya, they were subject to a woman called Shamsī, of the family of the ʿAbd al-Ṣamad, from whom their chiefs came.

Throughout the Turkish period, the Iraten maintained their independence, secure behind their mountains. They formed one of the most powerful federations in Kabylia, which comprised five *ʿarsh*: Ayt Irdjen, Akerma, Usammer, Awggasha and Umalu, and could put in the field a force of 2800 men. They kept their independence until in 1854 the French, under Marshal Randon, for the first time penetrated into the Kabylian mountains. To prevent an invasion of their territory the Iraten agreed to give hostages and to pay tribute. Nevertheless, their land remained a hotbed of intrigues against French rule, so that Randon in 1857 decided to subdue them completely. The French troops, leaving Tizi-Ouzou on 24 May, conquered all the Kabyl villages in succession and on 29 May defeated the army of the Iraten and their allies on the plateau of Sūḳ al-Arbʿā. To keep them in check Random at once began to build Fort-Napoléon (later Fort-National) in the heart of their country and thus placed "a thorn in the eye of Kabylia". The Iraten were then quiet for 14 years, but in 1871 they again took to arms and participated in the siege of Fort-National, which however the rebels did not succeed in capturing. (For subsequent events, see ALGERIA).

IRBID, the name of two places:

I: (Irbid/Arbad), the centre of the *ḳaḍāʾ* of ʿAdjlūn [*q.v.*] in Transjordania (32° 33′ N., 35° E.). According to al-Ṭabarī, the Umayyad caliph Yazīd II died at Irbid which, the chronicler states, at that time formed part of the region of the Balḳāʾ [*q.v.*].

Several traditions place the residence of Yazīd II at Bayt Rās [*q.v.*], situated about 3 km. to the north of Irbid. In the Mamluk period, Irbid was a halting-place of the *barīd* [*q.v.*]. Today it is a small town of about 3000 inhabitants with basalt houses.

II: (Khirbat Irbid, Arbad, Erbed), vestiges of the ancient Arbela, west of Lake Tiberias, in the ravine formed by the Wādī 'l-Ḥamām. The most noteworthy of the ruins is a synagogue which dominates the ravine. On the sides of the ravine some caves are situated, connected by steps cut from the rock. It is in one of these caves that tradition places the tomb of the mother of Moses (Mūsā b. ʿImrān), and also those of four sons of Jacob (Yaʿkūb)— Dān, Isākhār, Zabūlūn and Gād.

(S. Ory)

IRBIL, a town in Upper Mesopotamia, situated about 80 km. east-south-east of al-Mawṣil (36° 11′ N., 42° 2′ E.), in the centre of a region known as Adiabene, bounded on the north by the course of the Great Zāb and on the south by that of the little Zāb. Irbil is a site which has been inhabited since very early times, being referred to in cuneiform inscriptions under the name Arbailu; the religious centre of the kingdom of Assyria with a sanctuary of the goddess Ishtar, it was also a centre of communications and a point of intersection of caravan routes. It was near to this spot, later known as Arbeles, that in 331 B.C. Darius III was defeated by Alexander. In dispute between the Parthians and the Romans, the town, then known as Arbira, became Christian at an early date, though it is not possible to determine to what extent Christianity penetrated the region. The seat of a governor in the Sāsānid period, Irbil was the scene of persecutions of the Christians, who by an edict of 340 were subjected to a capitation tax and various other tribulations; the resistance of certain Christians led to their execution, and some years later, in 358, the governor Kardagh suffered martyrdom when he became a convert to Christianity.

The conquest of the town by the Muslims, apparently achieved without serious resistance, did not prevent its remaining an active Christian centre, the seat of a bishopric which was held by several outstanding figures. However, for reasons that elude the historian, Irbil was swiftly eclipsed by al-Mawṣil, to which the metropolitan moved in the 3rd/9th century. At that time, Irbil was referred to by the Arab geographers merely as a leading town of the district of Ḥulwān. Irbil again became a town of some importance when, in 563/1167, it was the capital of the Kurdish *amīr* Zayn al-Dīn ʿAlī Küčük Begtegin, the former lord of Sindjār, Ḥarrān and Takrīt, who was soon replaced by his son. The most famous sovereign of this dynasty was Muẓaffar al-Dīn Kökbürī [see BEGTEGINIDS], the brother-in-law of Ṣalāḥ al-Dīn, who ruled Irbil from 586/1190 until 630/1232 and made his capital a place of some importance, in particular by the creation of new districts at the foot of the upper town. This lower town was embellished with various public buildings, hospitals, a *madrasa* known as al-Muẓaffariyya, and a *ribāṭ* for the use of the Ṣūfīs. It was there, every year, that Kökbürī had the *mawlid* celebrated with particular solemnity, in commemoration of the Prophet's birth. On the death of Kökbürī, the state of Irbil passed into the hands of the caliph al-Mustanṣir, to whom Kökbürī had bequeathed it, but he was compelled to lay siege to the town to gain possession of it.

In 633/1235, the town was attacked and partly pillaged by the Mongols, who succeeded in capturing the citadel only in 656/1258, after the fall of Baghdād, and with the help of Kökbürī's old rival, Badr al-Dīn Luʾluʾ, upon whom the town was conferred. For some years, despite a massacre which took place on the occasion of the unsuccessful revolt of al-Malik al-Ṣāliḥ Ismāʿīl, son of Luʾluʾ, in 659/1261, the Christian community of Irbil experienced a period of relative prosperity, and was strengthened by the arrival of new elements. In fact, the town was given a Christian governor, Tādj al-Dīn Mukhtaṣ, who encouraged some Jacobite country-people to move to Irbil and, with the agreement of the Nestorian metropolitan Denḥa, allowed them to build a church there. The new Jacobite community succeeded, some years later, in being granted their own bishop. Denḥa, for his part, was appointed catholicos in Baghdād in 663/1265, but he had to leave that town in 666/1266 and take refuge in Irbil, from which he also fled in 669/1271, this time settling in Ādharbāydjān, as a result of a dispute with the governor. In 687/1289 the recall and torturing of Tādj al-Dīn marked the beginning of a period of persecution and harrassment for the Christians of Irbil. In 693/1295, three churches were destroyed on the orders of the Mongols and, in 708/1310, following some incidents provoked by Christian mercenaries, the Christian population of the lower town, and later that of the upper town also, were in part exterminated and several churches sacked. From that time the Christian community of Irbil lost all its importance and the few survivors gradually emigrated. Under Ottoman rule Irbil, which belonged to the *pashalïķ* of Baghdād, had to endure the campaign of Nādir Shāh into Turkey in 1156/1743. In 1892 the town possessed only 3,200 inhabitants, of whom 457 were Jews, but this estimate was considered too low by travellers who visited it at the beginning of the present century. Today Irbil is the chief town of a province which, in 1935, contained some 100,000 inhabitants. It is a commercial centre, and still dominated by its upper town. A little way outside the lower town there still stands a minaret with a cylindrical shaft and octagonal base which may be attributed to the end of the 6th/12th century and which probably belonged to the Muẓaffariyya *madrasa*.

(D. Sourdel)

ʿIRḌ (pl. *aʿrāḍ*), Arabic term corresponding approximately to the idea of honour, but somewhat ambiguous and imprecise, as the hesitations of the lexicographers testify. It does not appear in the Ḳurʾān, and the contexts in which it figures in *ḥadīth* do nothing to clarify its precise meaning. Al-Djāḥiẓ does not seem to have attempted to analyse the idea of *ʿirḍ*, while Ibn Ḳutayba sees in it a reference sometimes to the soul, sometimes to the body, an interpretation attacked by al-Ḳālī, *Amālī*, Cairo 1323, i, 118. In fact, apart from such material meanings as "strong army", "valley covered with palm trees", etc. (see *TA*, s.v.; *LA*, s.v.), *ʿirḍ* seems to imply also, in *ḥadīth* and in poetry, the body of animals, or even of men; the parts of the body which sweat; and the smell of a man or a woman. In the abstract, the lexicographers accept the following notions; distinction of one's ancestors or personal nobility (*ḥasab* [*q.v.*]), good character (*khalīḳa maḥmūda*) or soul (*nafs*). Now the expressions, very common in Arabic, relating to the protection (*ṣāna* and its synonyms) or the insulting (*shatama* and its synonyms) of *ʿirḍ* obviously cannot apply either to the soul, considered as a metaphysical entity, or to good character, which can claim only praise; hence, whereas the identification of *ʿirḍ* with *ḥasab* is correct in itself, yet the first implies more than the second, which is merely one of its manifestations.

From the semantic point of view, the radical letters of *ʿirḍ* can give useful guidance. Several derivates from this root imply the notion of something "laid across" (*taʿarraḍa*, *iʿtaraḍa*), and a *ʿarḍ* is a cloud which obstructs the horizon. Since the Arabs used the expression *hatak al-ʿirḍ* "to tear the *ʿirḍ*" as one tears a veil, and since *hatīka*, from the same root, meant "dishonour", it is legitimate to consider *ʿirḍ* as a sort of partition or curtain separating the individual from the rest of mankind; behind this veil were concealed personal characteristics or characteristics relating to ancestors which the Arabs of old were assiduous to keep safe from insult; one of the aims of *hidjāʾ* [*q.v.*] was to tear down this veil and to expose the dishonourable characteristics of the person attacked.

The elements of *ʿirḍ* may be classed under three headings: the tribal group, the family and the individual. Under the heading of the group come the number of its members, the qualities of the poet and the orator, victories and independence; under the head of the family: the sons; of the individual: the group. Other elements like rebellion, courage, liberty, vendetta, chastity of the wife, liberality, faithfulness to one's word, *ḥasab*, protection of the weak, hospitality, invulnerability of the abode, belong sometimes to the group and the individual, sometimes to the family and the individual, sometimes to the group, family and individual.

We find the explanation of the various elements of *ʿirḍ* in the warlike life led by the ancient Arabs. Indeed any sign of failure in fighting or of loss of independence humiliated the Arab and dishonoured him. Now humiliation (*dhilla*) is the opposite of power (*ʿizza*) simply because it implies weakness; hence weakness is the condition of dishonour, while power is the foundation of honour or *ʿirḍ*. In other words, everything that contributes to power is an element of honour, while all that causes weakness is an element of dishonour. It is evident then that *ʿirḍ* was in its origin associated with fighting.

ʿIrḍ moreover had an important social function; it was the guiding motive in the acts and deeds of all the Arabs except those of the Yaman, and so took the place of religion at the gatherings held for contests of honour called *mufākhara* and *munāfara* [*qq.v.*], and *ʿirḍ*, on account of its sacred nature, was entitled thus to take the place of religion, since the Arab put it in the highest place and defended it arms in hand.

The consequences to be drawn from the above are the following: being subjected in their everyday life to the controlling influence of an ethical principle, namely honour (*ʿirḍ*), the Arabs were not an anarchical nor truly individualist, nor primitive people, nor one at heart materialist; on the contrary, *ʿirḍ*, regarded as an ethical principle, was found to be at the root of various aspects of the moral life, of manners and even of social institutions. It was at the basis of the social hierarchy or of the non-egalitarian social structure; the poet, the orator, and, in a certain sense, the *sayyid*, enjoyed a special respect. The son was superior to the daughter, the *sharīf* to the *waḍīʿ*, the *ḥurr* to the *ʿabd*, the vigorous tribe to the weak tribe, etc.

The *ʿirḍ* which we have analysed refers to the *djāhiliyya*. Yet Muḥammad still regarded *ʿirḍ* as sacred; it even ranks as equal to religion. Islam maintained many of its elements, which found a place in it in the form of obligations: protection, largesse, courage, etc., form part of Muslim practice. These elements lost their original character: they are no longer capable of being the cause of boastfulness (Islam opposing *taḳwā* to *ḥamiyya*); they are rather connected with religion or with a moral principle emanating from religion. Other elements have been rejected by Islam (like *ḥasab* and *sharaf*) because they were incompatible with its spirit. Some of them, on the other hand, still survive and sometimes are intensified. Among the modern Bedouins we still find *ʿirḍ* with almost all its pre-Islamic force (the *ḥuḳūḳ* of the Arabs of Transjordania and Moab).

At a later date these elements underwent more than one transformation, or even became extinct, especially in the cities. Yet the use of the term *ʿirḍ* in its traditional sense, though less rich in meaning, continued, especially in the Umayyad period, keeping its sacred character and its relation with insult (cf. Ibn Durayd, *Djamhara*, Būlāḳ ed., 166; *Aghānī*, xi, 49; Ibn Ḳutayba, *ʿUyūn al-akhbār*, i, 293; al-Thaʿālibī, *Mirʾāt al-muruwwāt*, Cairo 1898, 22, 31; Abū Tammām, *Dīwān*, Cairo 1875, 93; al-Buḥturī, *Dīwān*, Beirut 1911, 441, 442, 449, 652; al-Mutanabbī, *Dīwān*, ed. Dieterici, 416; Mihyār al-Daylamī, *Dīwān*, Cairo 1929, ii, 4). Its place has been partly taken by the term *sharaf*, which has received the simple meaning of honour, without the complicated shades of the *djāhiliyya* attached to this idea (Yaʿḳūbī, *Historiae*, ii, 314; Ibn Ḳutayba, *ʿUyūn al-akhbār*, i, 246; al-Mutanabbī, *Dīwān*, 342; Ibn Khaldūn, *Muḳaddima*, Beirut ed. 1900, 396; cf. al-Ḥuṣrī, *Zahr*, ed. Zakī Mubārak, i, 135 and the lexicons).

At the present day, the meaning of the word *ʿirḍ* has become restricted, relating particularly to women: in Transjordania it is associated with the virtue of a woman or even with her beauty. In Egypt the *ʿirḍ* of a man depends in general on his wife's reputation and that of all his female relatives. In Syria the reputation of every member of a tribe reflects on a man's *ʿirḍ*.

Bibliography: B. Farès, *L'honneur chez les Arabes avant l'Islam*, Paris 1932, where the subject is fully treated; see also SHARAF. (B. FARÈS*)

AL-**IRDJĀNĪ**, ABŪ YAḤYĀ ZAKARIYYĀʾ, chief of the Berber tribe of Nafūsa and last Ibāḍī-Wahbī *imām* in North Africa. He is probably the same person as R. Basset refers to in error as Abū Zakariyyāʾ Yaḥyā al-Irdjānī, confusing him with his son, Abū Zakariyyāʾ b. Abī Yaḥyā al-Irdjānī, who also was chief (*ḥākim*) of the Djabal Nafūsa. According to the Ibāḍī document known under the name of *Tasmiyat shuyūkh Djabal Nafūsa wa-ḳurāhum* (6th/12th century), Abū Zakariyyāʾ (error for Abū Yaḥyā Zakariyyaʾ) of Irkān (Irdjān) was elected *imām* after Abū Ḥātim (that is Abū Ḥātim Yūsuf b. Abi 'l-Yaḳẓān Muḥammad b. Aflaḥ b. ʿAbd al-Wahhāb b. ʿAbd al-Raḥmān b. Rustam). As the latter was in office until 294/906-7, the election of Abū Zakariyyāʾ Yaḥyā al-Irdjānī cannot have taken place until after that date, perhaps not until after the fall of the Rustamid imāmate of Tāhert in 296/909. In a passage in his *Kitāb al-Siyar* (also entitled: *Kitāb Siyar mashāyikh Nafūsa*), quoted by al-Shammākhī, Maḳrīn b. Muḥammad al-Bughṭūrī refers to Abū Yaḥyā Zakariyyāʾ al-Irdjānī as *ḥākim* or *imām mudāfiʿ*, "the *imām* of defence". In another passage in al-Shammākhī's work, Abū Yaḥyā Zakariyyāʾ is given the title of *al-ḳāḍī al-ʿādil al-ʿālim al-kāmil al-imām al-fāḍil*. He was thus *imām* and judge at the same time. He lived at Irdjān or Ardjān (also Irkān or Arkān), a village in the eastern region of the Djabal Nafūsa (today the ruins of Khirbat Ardjān near Mezzu, in the region of Fossaṭo), whence he travelled each day to the town of Djādū, at that time the political and administrative centre of this region and perhaps of the whole of the Djabal Nafūsa.

The rule of Abū Yaḥyā Zakariyyāʾ al-Irdjānī, which lasted for about fifteen years and which extended over the whole of the Djabal Nafūsa, was disturbed by civil wars which took place between two Ibāḍī-Wahbī factions of the region—the Banū Zammūr and the people of Ṭermīsa. It was in the middle of these civil wars, which ravaged all the eastern part of the Djabal Nafūsa and in which the family of Abū Yaḥyā Zakariyyāʾ al-Irdjānī could not avoid becoming involved, that, in 310/922-3, there occurred the invasion of the Djabal Nafūsa by Fāṭimid troops. According to Ibn ʿIdhārī, these troops were under the command of the general ʿAlī b. Salmān al-Dāʿī, and, according to the Ibāḍī chronicles, they consisted of Kutāma warriors, the bravest and most loyal supporters of the Fāṭimid dynasty. The Fāṭimid troops attacked al-Djazīra, the main stronghold of the Djabal Nafūsa, but they were defeated by the Ibāḍīs. In the course of a second battle between the Nafūsa and the troops of ʿAlī b. Salmān, which took place near Tirakt (apparently on the territory which is now al-Rudjebān in the east of the Djabal Nafūsa), Abū Yaḥyā was killed by an Ibāḍī soldier in vengeance for some act of injustice.

In Ibn ʿIdhārī, the chief of the Nafūsa who fought against ʿAlī b. Salmān al-Dāʿī is called Abū Baṭṭa. There is no doubt that this was one of the by-names of Abū Yaḥyā Zakariyyāʾ al-Irdjānī.

(T. LEWICKI)

ʿIRḲ, an Arabic word which, etymologically, has the basic meaning of "root", but other acceptations have been grafted on to this original meaning so that it eventually approximates to the idea of race. It is clear, as far as can be judged from the rare documents which can be collected, that such a concept is nowhere clearly attested, and it would be more correct, in this respect, to speak of a stock: "I trace my origins (*ʿurūḳ*) to the root (*ʿirḳ*) of the land" said Imruʾ 'l-Ḳays (*LA* s.v. *ʿrḳ*). But the idea of race seems to be present in outline behind this substantive which also designates blood, understood as a factor of heredity.

ʿIrḳ is nowhere used in the Ḳurʾān. In *ḥadīth* it is not unknown but is only used sporadically. There, first of all, the general sense of root is to be noted: "whoever brings back to life uncultivated land becomes the owner of it; but a root which unjustly grows there does not give any right to this land" (al-Bukhārī, *K. al-Wakāla*, Cairo 1376, iii, 93). Besides the idea of a nerve which strikes man in his head, there is also to be found in *ḥadīth* the indiscriminate sense of artery and vein: "When he finished massacring them, his "artery" burst and he died" (see Wensinck, *Concordance*). It also designates the blood: "his soul left with the *ʿurūḳ*" (see Wensinck), alluding to the liquid soul, *al-nafs al-sāʾila*; regarding a woman whose period is unusually long, it is said: "it is not a question of menses, but of blood (*ʿirḳ*)" (Bukhārī, vii, 46). Finally, and it is this acceptation which especially interests us here, an *ʿirḳ*, the function of which is imprecise, seems to be at the origin of certain anomalies of birth. A man came to the Prophet and said to him "Oh Messenger of God, I have had a black child".—"Do you have any dromedaries?", Muḥammad asked him. "Yes."—"What colour are they?"—"Red."—"Are there no grey ones among them?"—"Indeed yes."—"How did that happen?"—"Perhaps an *ʿirḳ* attracted it towards him."—"Then for your son too, perhaps an *ʿirḳ* attracted him." (Bukhārī, vii, 46). Thus the concept is made to relate to descent and birth. The *ḥadīth* in question would seem to go even further since it seems to invoke, in order to explain an irregularity, a factor as uncontrollable as heredity. According to this hypothesis, *ʿirḳ* would here, too, be a synonym for blood. It is exactly this idea which modern bedouins express when they announce: *ʿirḳ al-khāl lā yanām* (the blood of the maternal uncle does not lie dormant). Classical Arabic also seems to confirm this interpretation when it says: *fī fulān ʿirḳ min al-ʿubūdiyya* (so and so has some slave blood). In the final analysis, then, we are faced with a notion which, in spite of its ambiguity, seems related to the concept of race, since it appeals to the purity of blood.

It is well known that the ancient Arabs made much of the purity of their genealogy [see NASAB], to the extent that they only grudgingly recognized a child born of a slave woman. The purer their blood, the greater the esteem they enjoyed. The social inferiority of those who could not boast of a noble extraction, who were neither *ṣarīḥ* nor *maḥḍ*, was in direct relation to the dubiousness and obscurity of their origins. The Ḳurʾān attempted, not unsuccessfully, to substitute religious ties for tribal and to affirm the supremacy of Islamic values in everything. In advising his followers to marry a believing slave rather than a woman of the polytheists (II,

221), Muḥammad struck a blow at the old preoccupations concerning race. But, nevertheless, these survived among the bedouins. The same concern is shown among the *sharīf*s and the *sayyid*s, both because of the nobility of their stock and the *baraka* which they have received from their illustrious ancestor Muḥammad.

ʿIRḲ, [see ṢAḤRĀʾ].

ʿIRḲ AL-**LUʾLUʾ**, [see ṢADAF].

ʿIRḲA (ARḲA), township and district on the southern coast of Arabia, situated just within the Ḥaḍramawt [*q.v.*], about midway between Aḥwar and Ḥawra [*q.v.*]. The population of about 500 depend mainly on fishing for their livelihood. Prior to the creation of the People's Republic of Southern Yemen, ʿIrḳa formed an independent shaykhdom within the territories of the Wāḥidī sultanates, and came under the protection of the Aden authorities under an agreement concluded in 1888. According to Landberg the town was the residence of the *shaykh* of Bā Dās, a division of the Dhiʾāb [*q.v.*], who were the largest tribe of the Eastern Ḥimyar, though in Hamdānī's time it belonged to the banū ʿĀmir of Kinda. Of ʿIrḳa's history little is known and it is not mentioned in the inscriptions. The Dhiʾāb, however, probably feature in the inscription *R.E.S.* 3945/4, where the cities and irrigated lands of ḤBN (Ḥabbāb, [*q.v.*]) and ḌYB are seized by Karabʾil Watar of Sabaʾ from the kingdom of Awsān. In more recent times ʿIrḳa contained the sanctuary of a woman of the same name who was venerated by the local *mashāʾikh* and passing sailors.

(A. K. IRVINE)

IRMIYĀ (the name is also written Armiyā and Urmiyā, with or without *madd*), the prophet Jeremiah (Yirmĕyāhū) of the Old Testament, is not mentioned in the Ḳurʾān although the legends concerning him are connected by traditional exegesis with sura II, 261/259, a "récit édifiant" (R. Blachère), inspired by the apocryphal book "the Paralipomena of Jeremiah" or III Baruch (ed. R. Harris, *The Rest of the Words of Baruch*, London 1889; G. tr. P. Riessler, *Altjüdisches Schrifttum ausserhalb der Bibel*, Augsburg 1928, 903-19; reconstruction (in Hebrew) by J. Licht *Séfer maʿasey Yirmeyāhū*, in *Shenaton Bar-Ilan*, i (1963), 63-80), perhaps also by the Talmudic legend of "Ḥōnī the drawer of circles", and related in its general theme to the legend of the "Seven Sleepers".

Two versions of the Muslim legend, transmitted on the authority of Wahb b. Munabbih and Kaʿb al-Aḥbār, make wide but free use of the details in the Bible concerning Jeremiah. In the first (al-Ṭabarī, i, 658 ff.) the oracles attributed to the prophet consist of a cento of scriptural passages drawn not only from the Biblical book which bears his name but also from that of Isaiah. According to this account, the destruction of Jerusalem was not actually to take place until the prophet had himself pronounced judgment on the faithless city.

The second version (al-Ṭabarī, i, 646 f.) has as its main theme the relations between Irmiyā and Bukht-Naṣṣar [*q.v.*] Nebuchadnezzar; it corresponds roughly to the Biblical account in Jeremiah XXXIX-XLIII. The tomb of Irmiyā was pointed out in Alexandria: al-Harawī, *Guide des lieux de pèlerinage*, ed. J. Sourdel-Thomine, Damascus 1957, 47, tr. 111. On the other hand, al-Yaʿḳūbī (*Taʾrīkh*, ed. Houtsma, i, 70 = G. Smit, *Bijbel en Legende*, 83) echoes the Aggadic tradition, according to which the Ark of the Covenant had been hidden before the destruction of the Temple by the Babylonians; however, no other source, apocryphal or rabbinic, attributes (as Yaʿḳūbī does) this precaution to Jeremiah: cf. L. Ginzberg *The Legends of the Jews*, vi, 377 (n. 118) and 410 (n. 61).

Finally, it is Jeremiah who, in a story also recorded by al-Ṭabarī (i, 666) and repeated many times by later authors, is the hero of the episode of the man of God (according to another version this was ʿUzayr [*q.v.*]) who slept for a century and was miraculously restored to life, in order to demonstrate God's power to bring the dead to life. It is said that, after this return to life, Irmiyā became one of the mortals endowed with exceptional longevity: thus there is a tendency to confuse him with al-Khaḍir (Khiḍr [*q.v.*]), as is attested by a passage of al-Djāḥiẓ (*Tarbīʿ*, ed. Pellat, § 40).

Bibliography: The legends briefly summarized above are analysed in more detail in the article Irmiyā, by A. J. Wensinck, *Handwörterbuch des Islam*, 214 ff. = *Shorter Encyclopaedia of Islam*, 172 ff. In addition to the sources mentioned in the article, see Ṭabarī, *Tafsīr*, new ed. v, 438-84; *Chronique de Tabari* (Balʿamī), i, 492, 494 ff.; Masʿūdī, *Murūdj*, i, 117 f., tr. Pellat, i, § 113; *al-Badʾ waʾl-taʾrīkh*, iii, 114/117 f.; Thaʿlabī, *ʿArāʾis al-madjālis*, 195-8 (old ed., 192 ff.); Ibn Kathīr, *Bidāya*, ii, 33-8; Mudjīr al-Dīn al-Ḥanbalī, *al-Uns al-djalīl*, Cairo 1283/1866, i, 138 ff.; I. IRŌN [see OSSETS].

IRSĀLIYYE or MĀL-I IRSĀLIYYE, an Ottoman financial term applied to the annual "remittances" of cash and kind sent to the personal treasury of the sultan (*Djeyb-i hümāyūn* or *Ḥarem-i Hümāyūn khazinesi*) in Istanbul by the holders of the non-feudal *sandjaḳ*s as well as by the governors of the non-feudal Arab provinces. The former usually were remitted under names such as *Nevrūz Irsāliyyesi* (New Years Remittance) or *Aghustos Irsāliyyesi* (August Remittance). The latter were called *Irsāliyye Khazīnesi* (Remittance Treasury), sometimes shortened to *Khazīne*, and consisted of the balance left in each provincial treasury (*Khazīne-i ʿAmire*) after the provincial expenditures and governor's salary (*sāliyāne*) were paid.

Such remittances came regularly to the sultan from Damacus, the Yemen, Baṣra, and Baghdād, but by far the largest and best-known of them was that sent by the governors of Ottoman Egypt from the time of its conquest until well into the 13th/19th century. The Egyptian *irsāliyye* was fixed at sixteen million *paras* shortly after the conquest. It was raised to 20 million *paras* annually in 1005/1596 and to 24 million *paras* in 1009/1601, and it remained at between twenty and thirty million *paras* during the remainder of the 11th/17th and 12th/18th centuries.

While the dispatch of the Remittance, whether by caravan through Syria or by sea, was always the occasion for a lavish ceremony, only a small part of the *irsāliyye* was actually sent to Istanbul. The remainder was kept in Egypt and used as a permanent deposit, applied to meet special obligations of the sultans, such as provisioning Ottoman naval units at Alexandria, Damietta and in the Red Sea, supplying Ottoman pilgrims and troops passing through Egypt on their way to southern Arabia, and paying for the purchase of Egyptian commodities and supplies used in the Sultan's palace kitchen in Istanbul and in the Holy Cities of Mecca and Medina. Starting in the late 17th century, the Mamlūk factions in Egypt assumed control of the Ottoman administrative structure in the country, including the Treasury, and managed to divert an ever-increasing proportion of the *irsāliyye* sums to their own accounts in addition to collecting much of the Treasury's tax revenues, thus further lowering the amount left for the *irsāliyye*. Periodic efforts were made to correct this situation and restore the *irsāliyye*, with the administrative reforms introduced in 1081/1670, 1106/1695, 1156/1743, 1175/1761 1180/1767, and 1200/1786 being most important, but their effects were short-lived due to the continued Mamlūk power. During most of the 12th/18th century, however, the Ottoman governors were largely able to replace the lost *irsāliyye* funds by using Mamlūk rivalries, supporting those parties which agreed to allow the Treasury to confiscate and sell the properties of their defeated rivals and to use the resulting revenue, called *māl-i ḥulwān*, to pay for the expenditures formerly provided by the *irsāliyye*.

Irsāliyye payments were completely suspended during the reign of the Mamlūk rebel ʿAlī Bey al-Kabīr [*q.v.*] (1170/1757-1178/1765, 1180/1767-1186/1772) and the French Expedition to Egypt (1798-1801), but they were resumed, on a reduced scale, upon the restoration of the Ottoman power and were retained by Muḥammad ʿAlī, not only for Egypt but also for his Syrian possessions, except during the time of his two wars with the Porte.

Bibliography: Detailed references to sources and secondary works concerning the Egyptian *irsāliyye* can be found in S. J. (S. J. Shaw)

IRTIDJĀʿ [see RADJʿIYYA].

IRTIDJĀL, improvising, extemporizing a poem or a speech. Ibn Rashīḳ (*ʿUmda*, i, 131), followed by Azdī (*Badāʾiʿ*, p. 5 of the Būlāḳ ed.) connects the term with the meaning "to be easy", "to flow down" implied in the expression *shaʿr radjil*, "lank hair", or with *irtidjāl al-biʾr*, "descending into a well on one's feet", *i.e.*, without the help of a rope, and the synonym of *irtidjāl*, *badīha*, with the root *badaʾa*, "to begin", substituting *hāʾ* for *hamza*. According to these two authors, the difference between *irtidjāl* and *badīha* is that whereas in the case of *irtidjāl* the poet does not prepare his poem in advance, in the case of *badīha* he allows himself a few moments of thought. Of the other synonyms of *irtidjāl* mentioned in the dictionaries only the term *iḳtiḍāb* is used occasionally. For an explanation of the etymology of this last term see Abū Hilāl al-ʿAskarī, *K. al-Ṣināʿatayn*, 39-40 (cf. also the expression *kalām ḳaḍīb*, "unprepared, unpolished speech", as used by the poet Baʿīth and in a famous saying by the Khāridjī leader ʿAbd Allāh b. Wahb al-Rāsibī in Djāḥiẓ, *Bayān*, ed. ʿAbd al-Salām Muḥ. Hārūn, Cairo 1367/1948, i, 204-5).

According to R. Blachère (*Litt.*, 87-8, 364, 369-73), the metre used for improvisations in pre-Islamic and early Islamic times was mostly, though not exclusively, the *radjaz*. In addition to songs by camel drivers (*ḥidāʾ*), cradle songs, etc. which in the nature of things are often improvised, there were improvisations on solemn occasions: curses or satires directed against the enemy, war songs, and dirges (see also the catalogue of *radjaz* themes in M. Ullmann, *Untersuchungen zur Rağazpoesie*, Wiesbaden 1966, 18-24). The corresponding verbs *radjaza* and *irtadjaza* are therefore often used in the sense of "to improvise in *radjaz*" (often also with the secondary meaning "to deride", "to sneer", see I. Goldziher, *Abhand. zur arabischen Philologie*, Leiden 1896, i, 79-81). For a *radjaz* improvisation on a victory won by the ʿAbbāsid caliph Mutawakkil see *Aghānī*[1], ix, 119 (= *Aghānī*[3], x, 231-2).

On the other hand the terms *irtidjāl* and *badīha* (as well as *badīhan*, "extemporaneously") seem to have been used mostly of improvisations in metres other than *radjaz* (for exceptions see the above-cited passage in the *Aghānī* and Ibn Ḳutayba, *Shiʿr*, 178). These terms are commonly found in texts dating from the first half of the 3rd/9th century, but many anecdotes suggest that they existed earlier. Except for the chapter by Ibn Rashīḳ there is little discussion of either term in the handbooks on rhetoric. ʿAlī b. Ẓāfir al-Azdī (d. 613/1216) may therefore be correct when he claims that his *K. Badāʾiʿ al-badāʾih* (Būlāḳ 1278/1862 and on the margin of ʿAbbāsī, *Maʿāhid al-tanṣīṣ*, Cairo 1316/1898) is the only work on the subject. The *Badāʾiʿ* contains a wealth of anecdotal material and improvisations on an almost unlimited variety of humorous, sometimes also serious, themes arranged roughly in chronological order, as well as a detailed discussion of various types of the *idjāza* [*q.v.*] which, since metre and rhyme are suggested by somebody else, is the only form of improvisation which does not allow the poet to compose any part of his poem in advance. Some of these anecdotes may well be authentic (*e.g.*, the anecdote on pp. 90-2 of the Būlāḳ ed.) as is shown by the fact that individuals capable of improvising compositions of some length are found in the Arab countries to this day.

For improvisation in Persian and Turkish, [see Supplement].

IRTIFĀʿ [see falak, ʿilm al-hayʾa].

IRTISH [see Supplement].

ʿĪSĀ, Ḳurʾānic name for Jesus; the Ḳurʾān refers to him in 15 sūras and devotes to him 93 verses which are the foundation for Muslim Christology. Various traditions, containing additions drawn from the apocryphal gospels of the childhood of Jesus, or from mystic Christian literature, have enriched this Christology and, in certain respects, brought it nearer to the Christian Christology. Islamo-Christian polemic has tended through the years to harden the positions; most of these positions have become classic and are to be found unchanged in present day Muslim writers.

I. Etymology of the word ʿĪsā: Certain western writers (Marracci, ii, 39; cf. Landauer and Nöldeke in *ZDMG*, xlvi, 720) consider that the Jews induced Muḥammad to use the form ʿĪsā and he did so in good faith. In fact the Jews, in hatred, referred to Jesus as Esau (עֵשָׂו) maintaining that the spirit of Esau had passed into him (cf. Lammens, in *Machriq*, i, 334). Others (cf. J. Derenbourg, in *REJ*, xviii, 126; Frankel, in *WZKM*, iv, 334; Vollers, in *ZDMG*, xlv, 352; Nestle, *Dict. of Christ and the Gospels*, i, 861) state that Yasūʿ derives, by a phonetic change, from the Syriac Yeshūʿ (ܝܫܘܥ), itself coming from the Hebrew Yeshuaʿ, with harmonization with Mūsā. But it should be pointed out that it is used only five times with Mūsā, while it is mentioned 25 times altogether (cf. Parrinder, *Jesus in the Qurʾan*, London 1965, 16-7; Henninger, *Spuren christlicher Glaubenswahrheiten im Koran*, Freiburg 1951, 32-3). Finally some modern scholars have seen it as a reference to an ʿĪsā mentioned in the pre-Islamic inscriptions, *ytʿ*: a dialectical variant of *hysʿ*, a theory which has been strongly rejected by G. Ryckmans who disputes the reading in *Analecta Bollandiana*, lxvii (1949), 62 and in *Les religions arabes préislamiques*, 1951, 48. For the Muslim writers, see al-Bayḍāwī on III, 45 (ed. Fleischer, i, 156, l. 2).

II. The various names of Jesus in the Ḳurʾān (see below for a study of the terms):—a) al-Masīḥ (eleven times).—b) *Nabī*, prophet (XXIX, 30).—c) *Rasūl*, "envoy, messenger" (IV, 157, 171, V, 75).—d) Ibn Maryam, "son of Mary" (33 times: 16 times ʿĪsā ibn Maryam, 17 times Ibn Maryam alone or with another title, while in the Gospels the expression appears only once; cf. E. F. F. Bishop, *The Son of Mary*, in *Moslem World*, 1934, who considers that the name came from the Church of Ethiopia after the return of the second group of emigrants. The expression appears five times in the Arabic Gospel of the Childhood, and fifteen times in the Syriac version of this Gospel.—e) *Min al-muḳarrabīn*, "among those who are close to God" (III, 45), later explained by the fact of his "ascension" (*ṣuʿūd, rafʿ*).—f) *Wadjīh*, "worthy of esteem in this world and the next" (III, 45); al-Bayḍāwī explains this: on earth as a prophet and in Heaven as an intercessor.—g) *Mubārak*, "blessed" (XIX, 31): "a source of benefit for others" (al-Bayḍāwī), probably a bringer of *baraka*.—h) *Ḳawl al-ḥaḳḳ* (XIX 34), "sure word", an obscure expression which is perhaps not a title but refers to the preceding statement; cf. al-Bayḍāwī, i, 580, l. 25.—i) ʿAbd Allāh, "Servant of God" (see below).

III. The annunciation, conception and birth of Jesus. There are in the Ḳurʾān certain features which, more or less directly, reflect the Gospels. Some writers, for example P. Hayek (*Le Christ de l'Islam*, Paris 1959, 65) go so far as to state that apart from the dogma that Mary is the mother of God, rejected by the Muslims since they formally deny the divinity of Jesus, "all the other dogmas defined by the Church or transmitted by its traditions of worship, find a support in the Ḳurʾān, rather weak it is true, but certainly real: the Immaculate Conception, the Presentation in the Temple, the Annunciation, the Virgin Birth, Christmas and even the Assumption" [cf. maryam].

The Annunciation made to Mary is related with a touching freshness and recalls the scene in the Gospels. Mary, withdrawn into the Temple, receives the visit from the "Spirit of God" [see rūḥ allāh], "then We sent unto her Our Spirit that presented himself to her a man without fault", (XIX, 17), which tradition identifies with the Archangel Gabriel. He announces to her the miraculous birth of Jesus; miraculous because Mary has vowed her virginity to God and intends to retain it (LXVI, 22; XXI, 91). The Angel reassures her: this is easy for the Lord, who wishes to make of her a sign (*āya*) for men and a mercy (*raḥma*) from Him (XIX, 21). "So she conceived him, and withdrew with him to a distant place".

It seems that in the Ḳurʾān the distinction between the Annunciation and the Conception is not precisely made. According to Luke I, 26-38, the angel of the Lord who appears to Mary is distinct from the Holy Spirit who performs the miracle. The Ḳurʾān seems to unite these two ideas. In fact, while in XIX, 17, there is mentioned an angel who appears to Mary in the form of an actual mortal, in two other texts (LXVI, 12 and XXI, 9) where God mentions the Spirit ("Our Spirit"), there is no reference to the angel. The confusion between the annunciation and the conception led to the Angel Gabriel's being considered as the father of Jesus, a thesis supported by Gerock, *Versuch einer Darstellung der Christologie des Koran*, Hamburg-Gotha 1839, 36-46; cf. Michaud, *Jésus selon le Coran*, Neuchatel 1960, 20, a thesis based on the interpretation of certain Muslim exegetists stating that the angel breathed into a slit in Mary's cloak which she had taken off; when she put it on again, she conceived Jesus (cf. al-Thaʿālibī, *Ḳiṣaṣ*, 381).

In fact, the conception of Jesus was the result of a creative decree made by God: the creation of Jesus by God was after the example of that of Adam. The creation of Adam was at least as marvellous as that of Jesus, conceived by a virgin (cf. III, 52).

Mary was overtaken by the pangs of childbirth be-

side the trunk of the palm tree. To reassure Mary's fears of a scandal, the child addressed her from the cradle. She shows the child to her family. In order to silence their reproaches he declares: "Lo, I am God's servant; God has given me the Book, and made me a Prophet. Blessed he has made me, wherever I may be; and He has enjoined me to pray, and to give alms, so long as I live, and likewise to cherish my mother" (XIX, 16-35).

It is known that Islam does not admit the idea of an "original sin" transmitted to the descendants of Adam (cf. G. Anawati, *Islam and the Immaculate Conception*, in *The dogma of the Immaculate Conception*, ed. E. D. O'Connor, University of Notre Dame Press, 1958, 447-61). Concerning Mary and her son however, there is a tradition, accepted by al-Bukhārī and Muslim, which states that they were granted an extraordinary privilege: that of both having been preserved from any contact with the devil at the instant of their birth. "Every son of Adam when newly born", says the *ḥadīth*, "is touched (or probably squeezed) by Satan, except for the Son of Mary and her mother; it is at this contact that the child utters his first cry".

IV. The mission of Jesus: Jesus is a Prophet (*nabī*; XIX, 31) and the Envoy (*rasūl*; IV, 156, 169, LXI, 6). Like all prophets, he has a mission to fulfil, for to each separate people God has sent a special prophet. Of the son of Mary and of his mother He has made a sign, "and He has given them refuge on a quiet and dewy hill" which the commentators have identified with Jerusalem or Damascus. On the different interpretations concerning this topography (the influence of Byzantine iconography [Ledit], reference to the Assumption of Mary [Rudolph, Ahrens, Henninger], Srinagar [Aḥmadiyya]), cf. Michaud, 29, n. 3.

The "miraculous sign" shown by Jesus and his mother is apparently his miraculous birth. But he himself was to perform "signs", proving through miracles his prophetic mission. Among these "proofs" (*bayyināt*) (cf. II, 254 and 81, III, 43, V, 110, XLIII, 63, LXI, 6), should be mentioned the following:—1. Jesus spoke even in the cradle (XIX, 30) and already with the authority of a grown man (III, 41).—2. He made small clay models of birds, breathed life into them, and "it will be a bird, by the leave of God" (III, 43). The modelling of birds is found in the apocryphal gospels: the Gospel of Thomas, ch. 2, the Gospel of the Childhood in Arabic, ch. 36, 46, 1; the Armenian book of the childhood, 18, 2. The Aḥmadiyya give a symbolic interpretation to this miracle: it signifies the spiritual flight of the Galilean peasants under the influence of Jesus (cf. Parrinder, *Jesus in the Qur'an*, 6).—3. Jesus cured the man blind from birth and the leper (V, 110).—4. He raised the dead, always "with God's permission" (III, 43; V, 110).—5. At the request of the Apostles (*ḥawāriyyūn*, [*q.v.*]), he made to come down from the sky a "Table prepared" (*māʾida*); for them it was a feast (*ʿīd*), a meal and a proof (*āya*) of his mission (V, 111-14); cf. Bayḍāwī, i, 280; Hayek, 220-2; Gerock (46), followed by Rudolph, thought that this was either a reminiscence of the Last Supper or of the vision of Peter related in the Acts of the Apostles, X, 9). According to the traditional material collected by al-Ṭabarī, 86 (Hayek, 220-2) this is an echo of the miracle of the loaves and fishes (Matthew, XIV, 17 f.; XV, 32 f.). Michaud (56-7), following Masson (328-9), produces texts from the Old and the New Testament in favour of interpreting it as referring to the Last Supper. On the sources of the commentaries on this passage cf. Sidersky, 328-9. It is possible that the Ḳurʾānic passage was influenced by some apocryphal tradition of which nothing has survived. (cf. G. Rosch, *Die Jesusmythen*, 447).

Jesus comes to declare the truth of what has been given before him in the Torah (III, 44). The Scripture which belongs to Jesus is the Gospel [cf. INDJĪL] which is judged favourably because it fills the hearts of those who follow it with meekness and pity (V, 82). Jesus covers with his prophetic authority not only the Gospel and the Torah but also the earlier writings, all of them taught by God to the Son of Mary (III, 43, V, 110).

V. Jesus the Messiah: We must here define certain terms applied to Jesus which, in Christianity, have a fundamental value: the terms Messiah and Servant of God. Concerning the first, in the structure of the New Testament the revelation was gradual and Jesus did not reveal himself to the disciples as the promised Messiah until after a long psychological preparation. This historical perspective is not found in the Ḳurʾān: the term Messiah is given to Jesus from the time of his birth, though in a narrow sense which in no way corresponds to the Christian concept. Jesus the Messiah in the Ḳurʾān is only one in a series of prophets which ends with Muḥammad. Like all the prophets he is only an ordinary man; the Ḳurʾān is entirely opposed to any doctrine of Jesus the Messiah the Son of God (IX, 30-1). It reproaches Christians for having taken "their scholars and their monks as lords apart from God, and the Messiah, Mary's son" (IX, 31). The uncompromising dogma of the unity of God removes any Christian overtones from the word Messiah.

The word Masīḥ is used eleven times in the Ḳurʾān, in passages all of which are Medinan (III, 40, IV, 156, 169, 170, V, 19 (twice), 76 (twice), 79, IX, 30, 31). The word is of Jewish origin, transmitted through Syriac. It seems to have been known in the north and the south of Arabia in the pre-Islamic period. The Hebrew *mashiaḥ* was used of the kings and the patriarchs and especially for the awaited Saviour. The Septuagint translates it by Christos. Al-Zamakhsharī and al-Bayḍāwī admit that the word is foreign and al-Fīrūzabādī states that there are fifty explanations for this word [see MASĪḤ]. In the Ḳurʾān the word is used only to signify Jesus.

The Arabic writers found two roots for it: 1. the verb *masaḥa*, to rub with the hand, to anoint; in the passive sense Jesus is Messiah, a) because he was anointed by means of blessings and honours (XIX, 32), b) because he was covered, from birth, by the wing of Gabriel to shield him from the bite of Satan, c) because he was anointed in Adam, like all men, but in a particularly way in order to be inplanted in Mary. In the active sense, Jesus is Messiah, a) because he anointed the eyes of those born blind in order to cure them (III, 43), b) because he rubbed sick people with his hand, c) because he anointed with a holy oil. 2. The second root is the verb *sāḥa*, to travel, go on a pilgrimage, to wander. Jesus became for the Muslim mystic writers "the model of the pilgrims", "the imām of the wanderers", the example of the mystics. Cf. Abd El-Jalil, *Marie et l'Islam*, 59, based on the Commentary of al-Alūsī, iii, 142.

VI. Jesus the servant of God: *ʿAbd*, literally "slave", means in theological terms, "the creature". Man is not only the "servant" of God but also his "property". Cf. *ʿebedh* in the Old Testament (Isaiah, XLII, 1, LII, 13-LIII, 12, the fourth song of the Servant of Yahweh) and δοῦλος in the New Testament (Phil., II, 7). In the Ḳurʾān IV, 170, the angels

are also called *ʿabd*. The basic meaning of adoration is found, with various nuances, in all the derived meanings (cf. Jeffery, *Foreign vocabulary of the Qurʾan*, 209). What must be remembered is that the Ḳurʾān insists on the status of Jesus as no more than that of a created being (XLIII, 59); it reacts against any belief in the divinity of Jesus. "Thus the first word he uttered was to recognize his character as a servant, to make more decisive the argument against any who might claim that he was God" (Hayek, 84; cf. Ibn al-Athīr, i, 220-1; al-Ṭabarī, i/2/, 733-4; al-Thaʿālibī, *Ḳiṣaṣ*, 386). Thus it would be wrong to exaggerate the meaning of this term (as does Ledit, *Mahomet, Israel et le Christ*, 145) and to interpret it in the Judaeo-Christian sense: everywhere in the Ḳurʾān the word means a being created by God and subject to Him (cf. III, 52, 73).

VII. Jesus and Muḥammad: According to the Muslim commentators, who base themselves on LXI, 6, Jesus announced the coming of one who would come after him. According to the recension of Ubayy, this was "the seal of the Prophets" and of the messengers; in the Vulgate, it is "a Messenger" named Aḥmad. On the meaning of the variant of Ubayy, cf. Blachère, tr. 909. Islam recognizes Muḥammad in Aḥmad, both names deriving from the root *ḥ.m.d.* In St. John's Gospel Jesus announces the sending of the Paraclete (XIV, 16; XIV, 26; XVI, 7). The main early versions of the Gospels have merely transcribed the term without translating it: *parakletos* has given *fāraḳlīt*.

Sale, in his *Preliminary Discourse*, 1877, iv, 53 (quoted by H. A. Walter, *The Aḥmadiya Movement*, 30), following up a suggestion of Marracci, suggests that the Gospel text on which these are based had something like περικλυτός, meaning famed, illustrious, and rendered in Arabic by Aḥmad. The same explanation is found in C. F. Gerock, 109 and Zwemer, *The Moslem Christ*, 139, n. 1: the Muslim commentators accuse the Christians of having substituted παράμλητος for περιμλυτός which stood in the original. Cf. Michaud, 36-7; Henninger, 313; Parrinder, 96-100; L. Bevan-Jones in *Muslim World*, x, 112 ff.; A. Guthrie and E. F. F. Bishop, *ibid.*, xli, 251 ff.; M. Watt, *His Name is Aḥmad*, *ibid.*, xliii, 110 ff.; J. Schacht, in EI², s.v. AḤMAD.

VIII. Jesus and the Word of God: On the use of the word *kalima* in the Ḳurʾān see the thesis by Th. O'Shaughnessy, *The koranic Concept of the Word of God*, Rome, Pontificio Istituto Biblico, 1948. On its origin and possible borrowing from the Christian Logos, cf. Gardet-Anawati, *Introduction à la théologie musulmane*, Paris 1948, 88 ff. For Pretzl, (*Die Frühislamische Attributenlehre*, Munich 1940, 26-7), the question of the Logos and that of the nature of the Ḳurʾān share earlier common sources.

As to the Muslim exegesis of the Ḳurʾānic texts referring to the "Word" coming from God to Jesus, four possible exegeses may be distinguished (cf. Abd El-Jalil, 39, using al-Alūsī, iii, 141):—1. Jesus is the fulfilment of the creating word of God, uttered at the moment of his conception (IV, 169, XIX, 30, III, 42).—2. Jesus is the prophet announced in the word of God, received and preached by the earlier messengers.—3. Jesus is the word of God because he speaks on behalf of God and thus leads men in the right way.—4. Jesus is a word of God because Jesus is, in his own person, "good tidings".

IX. Jesus and the Spirit of God: In order to accomplish his mission, Jesus was fortified by the Holy Spirit (*Rūḥ al-ḳudus*) (V, 109, XIX, 30-3), first at his birth, and then during his adult ministry among the Jews (II, 81, 254). The complete formula: "we have ... confirmed him with the Holy Spirit" is used in the Ḳurʾān only for Jesus. However the Ḳurʾān uses an almost identical formula in connection with the believers whom God confirms "with a Spirit from Himself" (LVIII, 22). On the Holy Spirit in the Ḳurʾān, cf. Henninger, 4-6, which is based, among others, on the article by Macdonald in *Moslem World*, xxii (1932).

X. Jesus and the Trinity: In the passage III, 40, Jesus is mentioned as being among those "close" to the Lord (*min al-muḳarrabīn*). Jesus will be glorious, honoured both in the present world and in the world to come. This privilege of being close to God is shared by Jesus with the angels (IV, 170). But, however sublime they may be, both they and he remain created beings. The unity of God is stated in III, 52-5 in a passage dealing with the person of Jesus. The reference is probably to the reply made to the Christian delegates of Nadjrān in 631 (cf. Blachère, 865). In spite of his great veneration for the Son of Mary, Muḥammad is quite clear that he is in no sense divine. The Christians who insist on this divinity are "Liars".

From the same period is the passage V, 19-21, in which Muḥammad once again insists on the entirely human condition of Jesus: "They are unbelievers who say, 'God is the Messiah, Mary's son' ". And the Christians are no more the sons of God than is Jesus himself.

It will be clear that with such a perspective, the Ḳurʾān formally rejects any doctrine of the Trinity. It should however be pointed out that the Trinity as understood and rejected is not the same as that which is taught by Christian dogma, and defined by the councils which were held before the revelation of the Ḳurʾān. The Ḳurʾānic Trinity seems to be a triad composed of Allāh, of Mary his consort and of Jesus their child (cf. V, 116); a concept which is reminiscent on the one hand of the stellar triads of the pre-Islamic Pantheon (cf. T. Fahd, *Le panthéon de l'Arabie centrale à la veille de l'Hégire*, Paris 1968), and on the other hand of the cult of Mary verging on idolatry practised by certain Christian sects of Arabia, the Mariamites and the Collyridians.

It is important to note that the formal denials of the Ḳurʾān are directed towards these views, which are "heretical" from the point of view of Christian orthodoxy itself. Certain modern Muslim writers, taking note of the explanations provided by their Christian informants, are inclined to recognize the basic monotheism of the Christian religion, without however admitting its revealed nature, (cf. J. Jomier, *Le commentaire coranique du Manār*, 308). For all this section, cf. Michaud, 77-83.

XI. Jesus and the problem of the crucifixion. On the subject of the death of Jesus, two questions require to be answered: (1) was Jesus really crucified and did he therefore die on the cross? (2) supposing that this was not the case, did he die a natural death?

Concerning the first question, the Ḳurʾān states its position categorically: against the Jews who claimed "we slew the Messiah, Jesus son of Mary, the Messenger of God", it states "yet they did not slay him, neither crucified him, only a likeness of that was shown to them (*walākin shubbiha lahum*). Those who are at variance concerning him surely are in doubt regarding him; they have no knowledge of him except the following of surmise; and they slew him not of a certainty (*yaḳīnan*)—no indeed; God raised him up to Him"; (IV, 156-7). Muslim tradition com-

pletes the statements of the Ḳurʾān. According to some, Christ was replaced by a double, according to others it was Simon of Cyrene or one of the Apostles (Judas).

On the different modern explanations of the *walākin shubbiha lahum*, cf. Michaud, 64-5, who mentions them and himself agrees with Hayek (41) in understanding "it seemed thus to them", which this writer considers to be the most plausible interpretation. Certain *falāsifa* and some Ismāʿīlī commentators have interpreted this passage thus: the Jews intended to destroy the person of Jesus completely; in fact, they crucified only his *nāsūt*, his *lāhūt* remained alive; cf. L. Massignon, *Le Christ dans les Évangiles selon Ghazāli*, in *REI*, 1932, 523-36, who cites texts of the *Rasāʾil Ikhwān al-Ṣafāʾ* (ed. Bombay, iv, 115), a passage of Abū Ḥātim al-Rāzī (about 934), and another of the Ismāʿīlī Muʾayyad Shīrāzī (1077). But this interpretation was not generally accepted and it may be said that there is unanimous agreement in denying the crucifixion. The denial, furthermore, is in perfect agreement with the logic of the Ḳurʾān. The Biblical stories reproduced in it (*e.g.*, Job, Moses, Joseph etc.) and the episodes relating to the history of the beginning of Islam demonstrate that it is "God's practice" (*sunnat Allāh*) to make faith triumph finally over the forces of evil and adversity. "So truly with hardship comes ease", (XCIV, 5, 6). For Jesus to die on the cross would have meant the triumph of his executioners; but the Ḳurʾān asserts that they undoubtedly failed: "Assuredly God will defend those who believe"; (XXII, 49). He confounds the plots of the enemies of Christ (III, 54).

On the origins of the Ḳurʾānic concept of the crucifixion (gnostic and docetic Christianity, as maintained by H. Gregoire, seeing here a concession to certain docetic Monophysites, in *Mélanges Charles Diehl*, Paris 1930, i, 107-19; a rejection of Ledit's view in *Mahomet, Israël et le Christ*, 151-6, where he attempts to find texts of the Ḳurʾān which refer symbolically to the mystery of the redemption) cf. Michaud, 68-71.

Concerning the second question (the death of Jesus and his ascension to God), an examination of the Ḳurʾānic texts XIX, 34, III, 48, XXXIX, 43, and in particular the key text IV, 155-7 (which throws light on the preceding ones and reveals the true Islamic attitude to the death of Jesus), shows (1) that the resurrection referred to in XIX, 84 is the general resurrection which the Ḳurʾān proclaims for the end of the world; there was a special resurrection for Jesus, since Jesus did not die on the cross. Later tradition (cf. Hayek, 265-8) stated that it would be at the end of time, when Jesus returned again, that he would die the natural death announced in XIX, 34. (2) The word *tawaffā* usually means a death which is blessed, a return to God for the final judgement, but it is also used in VI, 60 for God's recalling the souls of those who sleep while they are asleep and returning them when they awake (cf. Fränkel, in *ZDMG*, lvi, 77). The verb is twice used of Jesus, in III, 48 and V, 119. The first passage could imply an elevation of the living Jesus to God. The second is ambiguous. The question is settled by the passage IV, 155-7, in which it is stated that Jesus was not killed by the Jews but was raised up to heaven. In other words, we have the following succession of events: apparent death, ascension, second coming, natural death, general resurrection. For all this section, cf. Michaud, 60-4.

XII. The return of Jesus: The only authority is the passage XLIII, 61, which contains some variant readings: the first reading, that of the Vulgate: *wa-innahu la-ʿilm*[un], "He (Jesus) is truly a knowledge of the Hour", *i.e.*, he by whose descent the approach of the Hour is known; the second reading, the canonical variant: *wa-innahu la-ʿalam*[un], "And he (Jesus) is truly a sign for the Hour"; the third reading, in the recension of Ubayy: *wa-innahu la-dhikr*[un], "And he (Jesus) is truly a warning of the hour"; fourth reading: *wa-innahu*: the *hu* refers to the Ḳurʾān.

If the second coming of Christ is taken as established, his death is placed after the Hour, as mentioned above, and then the references in IV, 159 and XIX, 33 are easily explained. Similarly, the expression *kahl*[an] in III, 46 becomes clear, because when he was "raised" he was still *shābb*, young, and had not attained *kuhūla*; cf. al-Bayḍāwī, in loco. On the positions of various commentators, cf. Hayek, 244-51.

On these few facts tradition has succeeded in accumulating a mass of detail (cf. al-Bayḍāwī on XLIII, 61, ed. Fleischer, ii, 241) and in producing books devoted specifically to this subject, among them: *al-Taṣrīḥ bi-mā tawātara fī nuzūl al-Masīḥ*, of Muh. Anwar Shāh al-Kashmīrī al-Hindī (published in 1965 in Aleppo by Abu 'l-Fattāḥ Abū Ghudda). Some of these details are as follows: Jesus, on returning to the earth, will descend on to the white arcade of the eastern gate at Damascus, or, according to another tradition, on to a hill in the Holy Land which is called ʿAfīḳ; he will be clothed in two *muṣarra*; his head will be anointed. He will have in his hand a spear with which he will kill the Antichrist (al-Dadjdjāl). Then he will go to Jerusalem at the time when the dawn prayer is being said, led by the *imām*. The latter will try to give up his place to him, but Jesus will put him in front of him and will pray behind the *imām* following the prescription of Muḥammad. Then he will kill all the pigs, will break the cross, destroy the synagogues and the churches, and will kill all the Christians except those who believe in him (following IV, 159). Once he has killed the false Messiah (al-Masīḥ al-Dadjdjāl), all the Peoples of the Book will believe in him, and there will be only one community—that of Islam. Jesus will make justice to reign. Peace will be so complete that it will extend also to the animals among themselves and to man's relations with the animals. Jesus will remain for forty years and then will die. The Muslims will arrange his funeral and will bury him at Medina, beside Muḥammad in a place left vacant between Abū Bakr and ʿUmar.

There has come to be grafted on to the belief in the second coming of Christ, sometimes merging which it, the doctrine of the Mahdī. This term, which at first had a mainly honorific meaning, gradually came to indicate the very person of him who, at the end of time, is to restore the lost faith. On this doctrine, [see MAHDĪ].

Finally, it may be mentioned that the Aḥmadiyya sect holds that Jesus, after his apparent death on the cross and resurrection, emigrated to India, to Kashmir, to preach the Gospel there. He lived there until the age of 120. His tomb is at Srinagar. They believe that the Mahdī is an incarnation simultaneously of Jesus, Muḥammad and an avatar of Krishna [see AḤMADIYYA].

XIII. Jesus and the Last Judgement: At the time of his nocturnal ascension (XVII, 1), Muḥammad met Abraham, Moses and Jesus. Questioned concerning the Final Hour, Jesus announced: "To me has been confided the knowledge of what will precede its occurrence. As to the occurrence itself, only God can determine this". This verse enables us to

understand the passages where Jesus is called "Knowledge of the hour": he knows of its existence, but not the exact time, this being reserved to God alone. In spite of his ascension to God's side and his purification (III, 48), Jesus will not assist God in the Judgement which will follow the Hour: it is God alone who decides, He is the only Judge. On the day of the universal Resurrection, Jesus will be a witness against the Christians, accusing them of having regarded him and his mother as equal with God, but he will not be their judge (cf. *infra*, the different position of Ibn ʿArabī).

XIV. Jesus in tradition and in the mystic writers: The Christological elements contained in the Ḳurʾān, listed systematically above, have been the subject of meditation by ascetics and mystics. There has gradually grown up around the figure of Jesus an abundant hagiographic literature stressing the poverty of the Son of Mary, his detachment from the world, his teaching, his power of performing miracles, his devotion to prayer. These elements, with anecdotes, sermons and advice attributed to Jesus, are found in the classical works of the mystics such as the *Ḥilyat al-awliyāʾ* of Abū Nuʿaym, the *Rawḍ al-rayāḥīn* of al-Yāfiʿī, the *Ḳūt al-ḳulūb* of al-Makkī, the *Nawādir* of al-Tirmidhī, and especially in the works of al-Ghazālī: *Iḥyāʾ ʿulūm al-dīn, al-Durra al-fākhira, Mukāshafāt*. Even in the "secular" writers like al-Damīrī in his *Ḥayāt al-ḥayawān* and Ibn ʿAbd Rabbih in his *ʿIḳd*, there may be found interesting details on Christological literature. Fifty years ago, Asín Palacios had collected and translated the texts concerning Jesus in the works of al-Ghazālī and had published them under the title of *Logia et agrapha Domini Jesu*, in *Patrologia orientalis* (xiii (1919), 335-431; xix (1926), 532-624). In his turn, Father Michel Hayek collected and translated texts about Jesus and classified them systematically in a complete Christology (*Le Christ de l'Islam*, Paris 1959; Arabic text: *Al-Masīḥ fi 'l-Islām*, Beirut 1961). A large part of the work is occupied with Jesus's teaching; it includes *logia* on poverty, on detachment from the life of this world, denunciation of false wisdom and of the specious sureties of this world, dialogues, pilgrim stories, the resurrection of the dead who bear witness against the vanity of the world against which Jesus constantly warned his Companions, his Apostles, the Children of Israel and his listeners in general. His description is based on that of the Christian ascetics and monks: wearing a woollen habit, detachment, a life of solitude, the power of the initiate to perform cures.

When, later, the Ṣūfīs came into direct contact with the Gospels, they took from them the elements which corresponded to their ascetic ideas, which they themselves attributed to Jesus: "this explains the gospel background of certain *logia* and accounts which are here almost always taken out of their original context" (Hayek, 136). Ibn ʿArabī (d. 638/1240) went even further: he stated that it is Jesus who merits "the Seal of universal Holiness" because he possesses the quality of faithfulness in the faith (*amāna*), because he holds in his hands the keys of living breath and because he is at present in a state of deprivation and journeying" (cf. Hayek, 262-3). "And", he adds, "know that without doubt Jesus will descend and will be our judge, according to the law of Muḥammad" (*ibid.*).

XV. Islamo-Christian polemic concerning Jesus: The central place in the Christian religion of the dogmas of the Incarnation and the Redemption made inevitable doctrinal conflict between Christian and Muslim theologians. The latter worked out fairly rapidly a system of apologetics which became accepted as classic and the features of which have been repeated without variation until the present time; cf. INDJĪL where a substantial bibliography is given. On the most recent Muslim books on Christ see the article by J. Jomier im *MIDEO*, v (1958), *Quatre ouvrages en arabe sur le Christ*, 367-86, and G. C. Anawati, *Polémique, apologie et dialogue islamo-chrétiens, Positions classiques médiévales et positions contemporaines*, in *Euntes docete*, Rome 1969.

Two works published in Cairo show a new tendency in the Muslim approach to the problem of Christ. The first (1952) is by the Egyptian essayist ʿAbbās Maḥmūd al-ʿAḳḳād and is entitled *The spirit of the Messiah* (*ʿAbḳariyyat al-Masīḥ*). This work, which enjoyed wide success, may be described thus: the writer approaches Christ with great respect—the Christ of the actual Gospels and not only the ʿĪsā of the Ḳurʾān; he defends vigorously the historicity of Jesus and the authenticity of the Gospels, the only sources for our knowledge of Christ; he rejects nationalist prejudice against the miracles but, following a method which he has worked out for himself, he does not make use of them in his exposition. Finally, al-ʿAḳḳād has a clear grasp of certain aspects of Christ's teaching: the insistence on love, the complementary role of the Gospel counsels, the primarily spiritual character of Christianity: this is essentially a demand for perfection made of the conscience and not a religious law bristling with texts. From the Christian side he has been criticized for announcing arbitrarily when he approaches the account of the Passion and death of Jesus: "This is where history ends and belief begins", whereas the remainder of the book rests on the authenticity of the Gospels, which he defends vigorously. Furthermore, the dogmatic teaching of Christ is left in the background.

The second book (1954), *An iniquitous city* (*Qarya ẓālima*) is by a doctor, Dr. Kāmil Ḥusayn, former rector of the University of ʿAyn Shams (Cairo). It is presented rather as a work of imagination than a historical biography, being a personal meditation on the trial and condemnation of Christ, a trial considered as the greatest crime in history.The whole thread of the story unwinds on Good Friday and the work is conceived in the form of a triptych describing successively, in a style both sober and elegant, the attitudes of the Jews, the Apostles and disciples, and finally of the Romans. Concentrating on this or that scene (Calvary, the meeting of the Apostles), on this or that person (Caiaphas, Lazarus, Pilate, Mary Magdalene) the author is able to stress profound psychological details and to discuss great metaphysical or moral problems: liberty, authority, the existence of God, the relations between religion and the state, conscience etc. Without being described anywhere, the face of Christ is present everywhere. The essential part of his mission is to remind men that conscience, which is a participation in the divine light, must be above everything, above even religion if need be. Very skilfully, in order to distress neither Christians nor Muslims, the author leaves the problem of the Crucifixion in the background. Although to a certain extent the whole book converges on this main event (all the characters speak of it, all the movement of the book leads to it, nature herself is covered with darkness on the afternoon of Good Friday), the author does not actually state that Christ was crucified. Nor however does he deny it. He merely repeats a Ḳurʾānic saying: "God has raised Jesus to Himself", a saying which in the context can receive

an acceptable interpretation from Christian readers. Finally, in one of the last chapters. "Return to the Sermon on the Mount", the author movingly develops the words of Christ. He summarizes them for the modern world into the three following points: one should reject with all one's might all the false gods of money, the state, religion or the common good; one should truly live according to the precept of brotherly love; finally one should free oneself of any passion which might stifle the voice of conscience. The book has been translated into English by Kenneth Cragg under the title *City of Wrong. A Friday in Jerusalem.* Djambatan-Amsterdam 1959 and into Spanish by José Maria Fornéas; the Spanish translation has as an introduction the long article on the book by G. C. Anawati in *MIDEO*, ii (1959), 71-134, entitled *Jésus et ses juges d'après "La Cité inique" du Dr. Kamel Hussein.*

On a portrait of Jesus by a contemporary Persian writer, Shīn Parto, in a short book entitled *Haft čehrè* (*Sept visages*), cf. the article by P. de Beaurecueil in *MIDEO*, ii, (1955), 310-2.

Bibliography: A large part of the bibliography has already been given in the article itself and in the article INDJĪL where are listed the works of Ahrens, Blachère (tr. of the Ḳur'ān), Fritsch, Goldziher, Henninger, Horovitz, Jomier, Masson, Steinschneider, Tor Andrae, etc. We give here only the books and articles devoted more especially to Ḳur'ānic Christology (in chronological order):

For Muslim works in Arabic, see the articles by J. Jomier and G. C. Anawati mentioned in paragraph XV above. (G. C. ANAWATI)

ʿĪSĀ, NAHR, in full NAHR ʿĪSĀ IBN ʿALĪ, was in the Middle Ages one of the four major canals leading to the general vicinity of Baghdād, the others being Nahr al-Malik, Nahr Ṣarṣar and Nahr al-Ṣarāt (Muḳaddasī, 124). Watering the district of Fīrūz Sābūr, Nahr ʿĪsā flowed past the villages and domains situated along both banks until it reached the town of al-Muḥawwal west of Baghdād, and from there into the Tigris (*Ta'rīkh Baghdād*, i, 111-2; Le Strange, *Baghdad*, Map III). A tributary of the Euphrates, it was deep enough to allow large boats coming from al-Raḳḳa to deliver foodstuffs from Egypt and Syria (Yaʿḳūbī, *Buldān*, 250). Since the canal emptied into the Tigris, below Ḳaṣr ʿĪsā, it connected both these major waterways (Iṣṭakhrī, 84-5; Ibn Ḥawḳal, 164-5). As a result the city was strategically situated amidst the major inland water routes of the empire, as well as on the great highways leading to the East and the Arabian Peninsula. When the construction of dams along the Ṣarāt made it impossible for large boats to reach the Tigris, the ʿĪsā alone remained open to heavy traffic. The course of Nahr ʿĪsā is reported by al-Khaṭīb al-Baghdādī (d. 463/1071), whose account is identical with that of Suhrāb (*ʿAdjā'ib*, 123) and is the same as the text published by Le Strange as *Ibn Serapion, Description of Mesopotamia and Baghdad*, London 1895, 13. The text of Suhrāb can be dated on internal evidence to *ca.* 925 A.D. He lists nine locations along the canal, all of which are apparently identified by masonry bridges (*ḳanṭara*) spanning the water. The course of the canal is also described by Yāḳūt (d. 622/1225), whose account is based on that of the Khaṭīb (*Muʿdjam*, iv, 842). He adds, however, that in his time only Ḳanṭarat al-Zayyātīn and Ḳanṭarat al-Bustān remained standing, the other seven bridges having apparently fallen into disuse. However, the *Marāṣid* indicates that these bridges must have been destroyed before then, and that the only bridges standing in the time of Yāḳūt were Ḳanṭarat al-Yāsiriyya, Ḳanṭarat al-Shawk, and Ḳanṭarat Banī Zurayḳ (iii, 250). See also Yāḳūt (*op. cit.*, 190, 191, 839). However, Ibn al-Djawzī, writing in the 6th/12th century, reports that Ḳanṭarat Banī Zurayḳ collapsed into Nahr ʿĪsā in 433/1042. There is no indication that the bridge was repaired then (*Muntaẓam*, viii, 108). Furthermore, a century earlier (323/935) Ḳanṭarat al-Ushnān and its environs were reported to have been ravaged by fire. According to al-Ṣūlī it was not rebuilt in his time (*Akhbār*, 68). To what extent the destruction of individual bridges

reflects the decline of the surrounding area bearing the same name is not clear. Nahr ʿĪsā in the Middle Ages formed the southern boundary of the suburb of al-Karkh and thus marked the southern limits of Baghdād. No real trace remains of it in modern times.

Bibliography: In the text. (J. LASSNER)

ʿĪSĀ B. **ʿALĪ** [see ʿALĪ B. ʿĪSĀ].

ʿĪSĀ B. **DĪNĀR** B. WĀFID AL-GHĀFIĶĪ, one of the three major founders of Islamic jurisprudence and theology in Spain, the other two being Yaḥyā b. Yaḥyā (d. 234/848) and ʿAbd al-Malik b. Ḥabīb (d. 238/852). ʿĪsā is considered the most learned and important of the three, and is described as *ʿālim al-Andalus.* He was born in Toledo, most probably around 155/771, because when he arrived at Medina to study with Mālik b. Anas he found he had "recently" died (in 179/795). He went back to Fusṭāṭ and made all his studies under ʿAbd al-Raḥmān b. al-Ķāsim (d. 191/806) who was considered the most eminent disciple of Mālik. He attended also the lectures of the other two distinguished Mālikī scholars of Fusṭāṭ: ʿAbd Allāh b. Wahb (d. 197/812) and Ashhab b. ʿAbd al-ʿAzīz (d. 204/819). While Yaḥyā b. Yaḥyā boasted that he had made some of his studies with Mālik and completed them afterwards at Fusṭāṭ, and while the flamboyant ʿAbd al-Malik b. Ḥabīb was always keen to show that he had obtained his knowledge from the four Medinan disciples of Mālik—namely al-Mughīra b. ʿAbd al-Raḥmān al-Makhzūmī (d. 188/804), Abu 'l-Muṣʿab al-Zuhrī (d. 242/856), ʿAbd al-Malik b. al-Mādjishūn (d. 212/827) and al-Muṭarrif b. ʿAbd Allāh (d. 220/835)—ʿĪsā b. Dīnār proved that better results could be achieved by studying with one good professor if the student possessed superior talent and character. ʿĪsā b. Dīnār was nominated, a short time after his return from Egypt, the Mufti [*q.v.*] of Cordova and stayed in that office until his death in 212/827. Only then could Yaḥyā, who was older than ʿĪsā but lived longer, obtain the post. ʿĪsā wrote a large work of Mālikī jurisprudence called *al-Hidāya*, in which he collected the knowledge he had got from Ibn al-Ķāsim and added his personal points of view. He arranged its material according to the branches of *fiķh* and dedicated a volume to the questions of each branch. A student of his read the volume about sales (*masāʾil al-buyūʿ*) to Ibn al-Mādjishūn, who could not help repeating time and again: "By God! that ʿĪsā of yours has indeed made an excellent thing! (*aḥsana wa-'llāhi ʿĪsāka hādhā!*) The *Hidāya* was considered superior in quality to the ten Books of Yaḥyā (*ʿasharat Yaḥyā*) and *al-Wāḍiḥa* of Ibn Ḥabīb. While these two were mere manuals of Mālikī law, *al-Hidāya* was a substantial contribution to the making of Spanish Mālikī doctrine.

Besides his vast knowledge of law and theology, ʿĪsā had his own personal views that sometimes contradicted those of the government and the rest of the *fuķahāʾ*. He was accused of taking part in the Rebellion of the Suburb of Cordova (*haydj al-rabaḍ*) in 203/818 and had to escape and hide when the rebellion was suppressed. Al-Ḥakam I pardoned him later, and he regained his post and prestige. Towards the end of his life he grew weary of the rigidity of the Mālikī *madhhab* and the servile manner in which the jurists applied the *Muwaṭṭaʾ*. He decided to abandon both, and go back to the original sources of the faith: the Ķurʾān and the *sunna.* The idea had been given to him long before by ʿAbd Allāh b. Wahb, when he was studying at Fusṭāṭ. Ibn Wahb had always warned against the dangers of regarding the *Muwaṭṭaʾ* as the ultimate source of legal rulings. ʿĪsā however did not live to fulfil his desire. The *Muwaṭṭaʾ* continued to be the unique source of jurisprudence in Muslim Spain until it was successfully challenged by Baķī b. Makhlad (201/816-276/889) and Muḥammad b. Waḍḍāḥ (199/814-287/900) fifty years later. ʿĪsā b. Dīnār was moderate in his judgements, especially when they concerned the inflicting of punishment. For instance, while ʿAbd al-Malik b. Ḥabīb ruled that the Khāridjīs and the Muʿtazilīs should be sentenced to death without mercy, ʿĪsā insisted that they should first be given the opportunity to disavow their doctrines and rejoin the *sunna.* Here ʿĪsā b. Dīnār was more consistent than Mālik himself, because this last had said in the treatise called *Bāb al-nahy ʿan al-ķadar* that the Muʿtazilīs should be accorded the opportunity to disavow *iʿtizāl* before any punishment was inflicted on them; but when he was asked about them in the mosque he shouted: "Heretics, infidels, kill them!"

ʿĪSĀ B. **MUHANNĀ**, d. 683/1248, appointed *Amīr al-ʿArab* by the Mamlūk sultan, was the chief of the Āl Faḍl, a Bedouin clan of Bādiyat al-Sha'm. His genealogy is usually given as ʿĪsā b. Muhannā b. Māniʿ b. Ḥadītha b. ʿAṣaba (var. ʿUķba) b. Faḍl b. Rabīʿa; his *laķab* was Sharaf al-Dīn al-Ṭā'ī. The Āl Faḍl, connected to the Rabīʿa and hence to the Ṭayy (for their early history see Ibn Khaldūn, *al-ʿIbar*, Cairo 1284, v, 436 f.; al-Ķalķashandī, *Ṣubḥ*, Cairo 1914, iv, 203 f., 206), were very wealthy (see al-ʿUmarī, *al-Taʿrīf*, Cairo 1312, 79) and ranged from Ḥimṣ as far as Ķalʿat Djaʿbar and Raḥba (*Ṣubḥ*, iv, 204, 231; al-Khālidī, *al-Muķṣid al-rafīʿ*, Paris, Bibl. Nat., MS. 4439, 155). ʿĪsā himself, with his immediate followers (Āl ʿĪsā) dwelt in Bādiyat al-Sha'm, occasionally crossing the Euphrates at Raḥba into ʿIrāķ.

ʿĪsā played an important role in the battles between the Mamlūks and the Mongols in the second half of the 7th/13th century. With the other Bedouin, he fought beside Ķuṭuz [*q.v.*] at the battle of ʿAyn Djālūt [*q.v.*] in 658/1260, and he (or his father) was rewarded with the grant of the *iķṭāʿ* [*q.v.*] of Salāmiyya [*q.v.*]. Although in general he enjoyed good relations with the neighbouring amirs, especially Djalāl al-Dīn al-Kalālī of Irbil (see Ķāḍī Muḥyī al-Dīn b. ʿAbd al-Ẓāhir, *al-Rawḍ al-ẓāhir*, ed. S. F. Sadeque, 1956, 112), he was on bad terms with Baybars [*q.v.*]; the sultan however, was obliged to appoint him Amīr al-ʿArab over all the Bedouin in 663/1264, in succession to his cousin ʿAlī b. Hudhayfa b. Māniʿ, whose bloodthirsty tyranny had reduced the region to chaos (*al-Rawḍ*, 123). Contemporary sources report that he did much to restore order, by his good administration and justice (*e.g.*, Ibn al-Furāt, *Taʾrīkh*, Beirut 1939, viii, 12 f.). ʿĪsā led the way in Baybars's invasion of Asia Minor in 675/1277; and, together with Nūr al-Dīn ʿAlī, *nāʾib* of Aleppo, prevented the

Mongols from infiltrating into Syria (see *Baybars tarihi*, T. tr. Ş. Yaltkaya, Istanbul 1941, 85). Under Ḳalāwūn, however, he allied himself with Sunḳur al-Ashḳar, who had rebelled at Damascus taking the title al-Malik al-Kāmil, and entered into contact with ʿAlāʾ al-Dīn ʿAṭāʾ Malik Djuwaynī, who was governing Baghdād for the Ilkhānid ruler: in 679/1280 he and Sunḳur began a correspondence with Abāḳā, to whom, through the intermediary of Djuwaynī, he sent his son. Abāḳā presented the son with a *khilʿa* and granted to him part of the revenues of Baghdād (D'Ohsson, *Histoire des Mongoles*, iii, 522). This rapprochement did not, however, last long: ʿĪsā visited Cairo in 680/1281, was pardoned by Ḳalāwūn, and, at the battle of Ḥimṣ [*q.v.*], commanded all the Bedouin levies as leader of the vanguard of the right wing of the Mamlūk army (see Abu 'l-Fidāʾ, *al-Mukhtaṣar fī akhbār al-bashar*, Istanbul 1286, iv, 15; D'Ohsson, iii, 526). ʿĪsā died in Rabīʿ I 683/May 1284, the *ṣalāt al-ghāʾib* being performed for him in the Great Mosque of Damascus on the 9th of the month/ 26 May (see Ibn al-Furāt, viii, 13). During his twenty years of rule, ʿĪsā, in spite of his approaches to the Ilkhānids, followed a sound policy, ensuring internal peace and order in his territories, and he is praised by the sources as a good and pious man (Ibn al-Furāt, viii, 13; al-Yāfiʿī, *Mirʾāt al-djinān*, Ḥaydarabād 1338, iv, 199).

His son and successor as leader of Āl ʿĪsā, Husām al-Dīn Muhannā, the lord of Tadmur, pursued his father's policy; but in 692/1293, the Mamlūk Sultan Khalīl had him arrested at Ḥimṣ, together with his brothers Muḥammad and Faḍl and his son Mūsā, and brought to Cairo, where they were imprisoned in Ḳalʿat al-Djabal (Abu 'l-Fidāʾ, iv, 29; Ibn Khaldūn, v, 438; *Ṣubḥ*, iv, 206). Two years later, however, he was restored as Amīr al-ʿArab. He performed the Pilgrimage, with much pomp, in 697/1298 (Wüstenfeld, *Chron. der Stadt Mecca*, ii, 275). Soon afterwards he fell out with al-Malik al-Nāṣir Muḥammad, and in 712/1312, 716/1316, and especially 720/ 1320, allied himself with the Ilkhānids (Ibn Khaldūn, v, 439). As a result, the Āl ʿĪsā were fiercely persecuted by the *nāʾib* of Damascus and by one party of Bedouins, and his *iḳṭāʿ*s were taken away (Abu 'l-Fidāʾ, iv, 91-3; al-ʿUmarī, 79). Nevertheless, when the Mamlūks and the Ilkhānids made peace in 723/ 1323, Muhannā returned to Syria. During his emirate the clan was divided into two branches, Bayt Muhannā b ʿĪsā and Bayt Faḍl b. ʿĪsā (al-ʿUmarī, 79; *Ṣubḥ*, iv, 205, 208; *Muḳṣid*, 155), and a third branch, named the Āl-Muhannā, came into existence under Muhannā's grandson Nuʿayr (Muḥammad b. Djabbār b. Muhannā) (for Nuʿayr, see M. C. Sehabeddin Tekindağ, *Barḳūḳ devrinde Mamlūk Sulṭāniği*, Istanbul 1961, 59, 65, 72-3, 75, 81-2, 95-6). These families seem to have retained the post of Amīr al-ʿArab until 879/1474.

(M. C. ŞEHABEDDİN TEKİNDAĞ)

ʿĪSĀ B. **MŪSĀ** B. MUḤAMMAD B. ʿALĪ B. ʿABD ALLĀH B. AL-ʿABBĀS. ʿAbbāsid prince, nephew of the first two caliphs of the dynasty. Governor of al-Kūfa in the reign of al-Saffāḥ [*q.v.*], he was then designated as the second heir after Abū Djaʿfar, and it was he who, at al-Anbār, administered the oath of allegiance on behalf of al-Manṣūr, who was in Mecca at the time when al-Saffāḥ died.

ʿĪsā b. Mūsā kept his post of governor during the reign of al-Manṣūr. He directed military operations against the ʿAlids Muḥammed b. ʿAbd Allāh, and then Ibrāhīm, who were in revolt. In Dhu'l-Ḳaʿda 145/ February 763 he won the victory of Bākhamrā [*q.v.*] but was obliged to renounce his rights as heir apparent in favour of al-Mahdī in 147/764-65. Again in Muḥarram 160/October-November 776, al-Mahdī, who had become caliph, put pressure on ʿĪsā, so that he would renounce his rights in favour of his own son, Mūsā, the future al-Hādī. ʿĪsā b. Mūsā died in 167/783-4 at Kūfa aged 85.

It seems he took an active part in the planning of Baghdād (the reason, according to certain sources, for the name of Nahr ʿĪsā [*q.v.*]), and the chroniclers mention a palace which had belonged to him and which became the property of the descendants of the Caliph al-Maʾmūn. Moreover, the foundation of the castle of al-Ukhayḍir is generally attributed to him. This castle is situated in the steppe not far from al-Kūfa and has, as has recently been remarked, a strategic importance. Its construction seems to have been related to the repression of the ʿAlid movements in the region.

(D. SOURDEL)

ʿĪSĀ B. AL-**SHAYKH** B. AL-SALĪL, ABŪ MŪSĀ AL-DHULĪ AL-SHAYBĀNĪ no doubt belonged to the Rabīʿa (Bakr) tribe of the Banū Shaybān of Djazīra (for which see al-Ḳalḳashandī, *Nihāyat al-arab fī maʿrifat ansāb al-ʿArab*, Baghdād 1332, 259; idem, *Ṣubḥ al-Aʿshā*, i, 338; al-Nuwayrī, *Nihāya*, ii, 335-6; Ibn Ḳutayba, *Kitāb al-maʿārif*, Cairo 1300, 32-3, ed. Okāsha[2] 1969, 97; cf. M. Canard, *Hist. de la dynastie des H'amdānides*, 134 ff., 141). We do not know the exact name of his father, who was called al-Shaykh or Shaykh, and elsewhere Aḥmad (Ibn Taghribirdī, iii, 46 note, and Defrémery, *Recherches*...) or ʿAbd al-Razzāḳ (al-Masʿūdī, *Murūdj*, viii, 134). ʿĪsā's early history is shrouded in obscurity. He seems to have made his first appearance in 234/848 during the reign of al-Mutawakkil, in the following circumstances. There was a member of a Rabīʿa tribe of Ādharbāydjān, Muḥammad b. al-Baʿīth (or Buʿayth), whose father and grandfather had set up for themselves a fief in Marand and around the lake of Urmiya, and who, at certain times as the ally of Bābek and at other times as his adversary, had been imprisoned in Sāmarrā; he had taken flight, and had then returned to Marand and fortified himself there. An army was sent against him, under the command of Bughā al-Sharābī. ʿĪsā b. al-Shaykh was a member of this force. Bughā used him to negotiate with the besieged, and since these were for the most part of Rabīʿa like himself, ʿĪsā secured the surrender of a certain number of the companions and relations of Ibn al-Baʿīth. The latter escaped, but was captured and taken to Sāmarrā [see MARAND].

It does not appear to be true that ʿĪsā was governor of Damascus in 247/861, as is suggested by Zambaur (*Manuel de chronologie*, 28), who confused him with ʿĪsā b. Muḥammad al-Nawsharī. Under the year 251/865, two items of information relating to ʿĪsā b. al-Shaykh are to be found in al-Ṭabarī. The first states that he fought against a Khāridjī named al-Muwaffaḳ and took him prisoner. According to

the second, ʿĪsā requested the caliph al-Mustaʿīn to send him arms and equipment, in order to consolidate his power in the country and to allow him to conduct a campaign against the Byzantines (*al-ghazw*); furthermore, he asked the caliph to give orders to the commandant of the garrison at Tyre (Ṣūr) to place four armed vessels at his disposal, in addition to those he could already count on. This would suggest that ʿĪsā at that time held a command in the Syrian frontier region.

If al-Yaʿḳūbī is to be believed, when al-Muʿtazz ascended the throne on 7 Muḥarram 252/29 January 866 and asked the various governors to recognise him, certain of them did so immediately, but others, among them ʿĪsā b. al-Shaykh in Palestine, bided their time. This ʿĪsā would have been governor of Palestine as early as 251. It was perhaps as a result of this incident that al-Nawsharī, governor of Damascus, marched against ʿĪsā b. al-Shaykh, joined battle with him by the Jordan and compelled him to flee, first to Palestine, later to Egypt, while al-Nawsharī entered Ramla. An envoy from al-Muʿtazz came to Egypt and received the oath of loyalty from the governor and his entourage, and also from ʿĪsā b. al-Shaykh. It appears that al-Muʿtazz had not given his consent to the occupation of Ramla by al-Nawsharī, since he sent against him into Palestine the Turk Muḥammad b. al-Muwallad who drove out al-Nawsharī. ʿĪsā b. al-Shaykh left Egypt, and then established himself in a *ḳaṣr* between Ramla and Ludd. Muḥammad b. al-Muwallad could do nothing against him, and finally both of them returned to ʿIrāḳ, according to al-Yaʿḳūbī.

According to al-Ṭabarī, at the end of 252/December 866, ʿĪsā b. al-Shaykh was nominated by al-Muʿtazz as governor of Ramla in Palestine. He was said to have obtained this appointment by paying, or guaranteeing, a sum of 40,000 dinars to Bughā al-Sharābī who, in 252, still possessed considerable influence, since it was not until 254/868 that he was imprisoned and put to death.

According to al-Masʿūdī, he was said to have been appointed by al-Muʿtazz as governor of Palestine because he had come from Egypt to Sāmarrā bearing huge sums of money (perhaps the proceeds of taxes) and bringing with him a group of seventy ʿAlids who had fled from the Ḥidjāz as a result of disturbances there.

The occasion of this nomination marks the appearance of a figure who is later to be found at the side of ʿĪsā b. al-Shaykh; this is Abu 'l-Maghrā' ibn Mūsā b. Zurāra, of a family which held an important fief in southern Armenia in the region of Arzanene. It was this man whom ʿĪsā sent to represent him as his deputy in Ramla.

From this time onwards, the career of ʿĪsā b. al-Shaykh is described in greater detail. The anarchy then prevailing in ʿIrāḳ allowed him to extend his area of authority by seizing Damascus. The caliph al-Muhtadī, who succeeded at the end of Radjab 255/July 869, granted an amnesty to all those who had taken part in disturbances or had usurped power, and he wrote in this sense to ʿĪsā b. al-Shaykh, ordering him to hand over the money which he was keeping in Egypt and other countries. ʿĪsā refused, and kept the proceeds from the taxes for himself, thus making himself financially independent. According to al-Kindī (*The Governors and Judges of Egypt*, ed. Guest, 214), he embezzled a sum of 750,000 *dīnārs*. No doubt it is to this episode that Ibn al-Muʿtazz was alluding in his *ḳaṣīda* (*urdjūza*) in praise of al-Muʿtaḍid, when he states (verse 41 ff.) that ʿĪsā and his son (that is to say Aḥmad, see below) are robbers, that they never give a single coin to the caliph and extort money from their subjects. The caliph al-Muʿtamid in 256/870 sent emissaries to him, to demand this money. ʿĪsā replied that he had used it to pay his troops. He was then offered the governorship of Armenia on condition that he recognised al-Muʿtamid, which he had not hitherto done. ʿĪsā consented, thinking that he would be able to retain Syria while at the same time becoming governor of Armenia. Al-Muʿtamid did not regard it in the same way, but instead of leaving it to the new ruler of Egypt, Aḥmad b. Ṭūlūn (from September 868), to expel ʿĪsā b. al-Shaykh from Syria, he himself sent an army commanded by the Turk Amādjūr, who was appointed governor of Damascus. In the battle which he fought outside Damascus, ʿĪsā b. al-Shaykh lost his son al-Manṣūr who was killed, and he himself was defeated and fled to Armenia by the coast road (256/870, or, according to al-Yaʿḳūbī, 257/871).

The governorship of Armenia no doubt also included Diyār Bakr in Djazīra and Ādharbāydjān. In Armenia, ʿĪsā b. al-Shaykh responded to an appeal from the Arab colonies established in the Lake Van region, the ʿUthmānids (Utʿmanikkʿ) and the Ḳaysīs (Kaisikkʿ), who were threatened by Ashot Artsruni, prince of Vaspurakan, who was about to besiege Amiwk, a fortress of the ʿUthmānids on the east shore of the lake. Thanks to his armed intervention, the siege was raised. An agreement was reached, and ʿĪsā b. al-Shaykh went to Ādharbāydjān where he established one of his officers, Muḥammad b. ʿAbd al-Wāḥid al-Tamīmī al-Yamāmī (cf. Yāḳūt, ii, 58, 740), whom the Armenian historians call Yamamik or Ememik. In Armenia, which was partitioned between the Bagratuni and the Artsruni and which was in fact independent, the authority of ʿĪsā b. al-Shaykh diminished constantly, and all the more when his deputy in Ādharbāydjān revolted against him, thus involving him in a fruitless struggle for a whole year, probably in 877-8; afterwards, he had to return to "Syria" (according to the Armenian historians), that is to say to Āmid in Diyār Bakr. In fact, in 266/879-80 there is no record of his presence anywhere save in that region, although the Armenian historians consider that he remained governor of Armenia until his death in 269/882-3.

In 266, he was involved in hostilities with Isḥāḳ b. Kundādjīḳ (Kündäčik: see Markwart, *Südarmenien* . . . , 315, n. 4), who was claiming the governorship of the Djazīra and some neighbouring territories and who was established in Mosul. Ibn Kundādjīḳ was in conflict with a powerful Khāridjī movement, one of whose leaders was Isḥāḳ b. Ayyūb of Naṣībīn, supported by the Taghlibī Ḥamdān b. Ḥamdūn (for incidents see M. Canard, *H'amdānides*, 294 ff.). Ibn Kundādjīḳ won a victory over them, but Isḥāḳ b. Ayyūb sought the help of ʿĪsā b. al-Shaykh of Āmid and of Abu 'l-Maghrā' ibn Mūsā b. Zurāra of Arzan; defeated by this new coalition, Ibn Kundādjīḳ returned to Mosul. There, he received from the caliph the governorship of Mosul, Diyār Rabīʿa and Armenia. In view of this strengthening of their adversary's forces, ʿĪsā b. al-Shaykh and Abu 'l-Maghrā' determined to seek peace by offering Ibn Kundādjīḳ a tribute of 200,000 *dīnārs*, on the condition that they retained their possessions. After refusing at first, Ibn Kundādjīḳ later accepted, when threatened with a renewal of hostilities. Nevertheless in the following year, 267, a coalition of his various enemies, Khāridjīs and others, was once again formed.

A battle took place in Ramaḍān 267/April-May 881: Ibn Kundādjīḳ was the victor and pursued his foes as far as Āmid, then returned, leaving a contingent outside Āmid to lay siege to ʿĪsā b. al-Shaykh. Some indecisive battles were fought.

ʿĪsā b. al-Shaykh died in 269/882-3, and Ibn al-Athīr, in placing his death at this date, still described him as governor of Armenia and Diyār Bakr, but we do not know what part he played in Armenia between 267 and 269. It is possible that he may have recovered some measure of influence, for Ibn Kundādjīḳ seems to have had no authority there and in 269 he is described by al-Ṭabarī (iii, 2037) merely as governor of Mosul and Djazīra. Moreover, following the attempted flight of al-Muʿtamid which was foiled by Ibn Kundādjīḳ, the latter went to receive from the regent, al-Muwaffaḳ, the governorship of Egypt and the Ṭūlūnid lands, and from then onwards all his efforts were aimed at gaining control of the Syrian possessions of the Ṭūlūnids.

Aḥmad b. ʿĪsā b. al-Shaykh succeeded his father as ruler of Diyār Bakr where, like him, he was almost independent and was regarded by the historians, like many other princelings of the time, as exercising power *ʿalā sabīl al-taghallub* (through usurpation) Aḥmad was never officially governor of Armenia, but nevertheless he played a part in the affairs of the country. His ambition, incidentally, was to extend his possessions to the furthest possible limits and even to make himself master of the whole of Armenia. To this end, he seized the fortress of Mārdīn, which dominates the plain of Djazīra, from Muḥammad b. Isḥāḳ b. Kundādjīk, the successor to Isḥāḳ (d. 278/891-2) as ruler of Mosul and Diyār Rabīʿa. In about 890, after taking Abu 'l-Maghrāʾ ibn Mūsā b. Zurāra prisoner, he occupied Arzanene in southern Armenia, as far as the Sim Mountain which separates Arzanene from Taron (Ṭarūn; Arm. Tarawn). After treacherously securing the assassination of Gurgēn, the son of the prince of Taron, Ashot the Curopalatine the son of David, Aḥmad b. ʿĪsā took possession of the whole territory of Taron, in 895 or early in 896. The king of Armenia, Sembat Bagratuni (890-914), requested Aḥmad b. ʿĪsā to restore Taron to its lawful possessor, promising Aḥmad that he would secure for him his nomination by the caliph as governor of Armenia. When Aḥmad refused, Sembat gathered an army, but he was defeated in a battle to the south-west of Lake Van in which Gagik Artsruni, prince of Vaspurakan, who was in league with Aḥmad b. ʿĪsā, betrayed Sembat. Thus Aḥmad b. ʿĪsā remained in possession of Arzanene and Taron, which were added to Diyār Bakr.

Moreover he endeavoured to win the trust of the caliph. When al-Muʿtaḍid had demonstrated the full extent of his power to the Khāridjīs and rebels, by his expedition in 280/893-4 against the Banū Shaybān and Mosul, Aḥmad b. ʿĪsā complied readily with the request made to him by the caliph, on his return to Baghdād, that he should send him all the money he had taken from Ibn Kundādjīḳ, and indeed he included numerous presents, in addition to the money. At the same time he sent to al-Muʿtaḍid a Khāridjī who had fled to Āmid and whom he had taken prisonner. This submissiveness on the part of Aḥmad is noted in the *ḳaṣīda* of Ibn al-Muʿtazz in praise of Al-Muʿtaḍid (verses 177-80). But it seems doubtful whether, to escape death, he contemplated crossing into Byzantine territory and becoming a Christian, as Ibn al-Muʿtazz claims in the same passage.

Although he was not a governor of Armenia, it was Aḥmad b. ʿĪsā who, in the time of al-Muʿtamid, was entrusted in 887 with the task of carrying the royal crown to the new king of Armenia, Ashot I, for it was certainly not his father ʿĪsā (d. 882) who was charged with this mission, as might be thought from the account of the Armenian historian John Catholicos who confused the son with the father (see Vasmer, *Chronologie* . . ., 99-100 and Thopdschian, *Die inneren Zustände* . . ., 125).

Aḥmad b. ʿĪsā b. al-Shaykh died in 285/898. His history formed the subject of a detailed account by al-Masʿūdī in his lost work *Akhbār al-zamān* (see *Murūdj*, viii, 112).

His successor as ruler of Āmid and the other territories he held, still *ʿalā sabīl al-taghallub*, was his son Muḥammad who built the minaret of the principal mosque of Mayyāfāriḳīn. With him was to end this minor Shaybānī dynasty of Djazīra. In 286/899, al-Muʿtaḍid decided to have Āmid brought back under his own authority, and for this purpose set out with a large expeditionary force, accompanied by his son the future al-Muktafī. Muḥammad shut himself up in the town which was besieged from April-May until June 899. Siege engines were used on both sides. Finally Muḥammad surrendered, begging for clemency for himself and his men as well as for the inhabitants of Āmid, which was granted. He was treated with consideration by the caliph, who made him a ceremonial gift of clothing, but he was taken away to Baghdād. In al-Masʿūdī, viii, 134 ff., will be found a long account for which the source is a person whom al-Muʿtaḍid sent to Muḥammad to ask him to surrender; in this passage, an aunt of the rebel, a talented poetess, advises her nephew to obey the caliph. She herself wrote a letter to al-Muʿtaḍid, in verse. The caliph admired her talent, and this influenced his decision to treat his prisoners generously. Muḥammad was given the Ṭāhirids' palace as his residence in Baghdād. In Muḥarram 287/January 900, the vizier ʿUbayd Allāh b. Sulaymān discovered that he was planning to escape. He informed the caliph, who ordered the vizier to have Muḥammad arrested. The historians do not record what became of him after his arrest.

In the 4th/10th century a figure appears named Aḥmad b. al-ʿAbbās b. ʿĪsā b. Shaykh, a worthy if somewhat dull-witted fellow who, during the vizirate of Ibn al-Furāt, was the victim of a practical joke on the part of certain secretaries in the vizirate. They presented him with a diploma (*tawḳīʿ*), conferring on him the right to farm taxes for Āmid and the lands which had been subject to ʿĪsā b. al-Shaykh. The vizier's son, al-Muḥassin, heard a rumour about the incident and reported it to his father, who questioned the man. He seemed to regard the favour which had been granted him as something entirely natural. The vizier let the matter rest, and it went no further. It seems that the man in question was in fact a descendant of ʿĪsā b. al-Shaykh (see Hilāl al-Ṣābiʾ, *Wuzarāʾ*, 146).

As the defender and panegyrist of al-Muʿtaḍid, Ibn al-Muʿtazz judged ʿĪsā and Aḥmad with severity. Basically, in the disturbed period in which these Mesopotamian Arabs lived, they were no worse in their behaviour than the other soldiers of fortune of the ʿAbbāsid regime. In any event, ʿĪsā had a certain reputation for magnificence and generosity, as is born out by an anecdote related by Ibn al-Djawzī and recorded by Defrémery in his work on ʿĪsā b. al-Shaykh.

(M. CANARD)

ʿĪSĀ B. ʿUMAR AL-THAḲAFĪ AL-BAṢRĪ, an early Arabic grammarian, and Ḳurʾān-reader, d. 149/766. He was a client (*mawlā*) of Khālid b. al-Walīd al-Makhzūmī al-Ḳurashī [*q.v.*], but was called al-Thaḳafī because at Baṣra he had settled amongst the Thaḳīf. He had a brother, Ḥādjib, d. 158/774-5 (Ibn Ḥadjar, *Tahdhīb al-Tahdhīb*, ii, 133). Their mother was the daughter of Ziyād, who owned the estate Ziyādān in Baṣra (Balādhurī, 362); her sister was the mother of Muʾnis b. ʿImrān, who belonged to the circle of Djaʿfar b. Yaḥyā al-Barmakī. ʿĪsā studied the Ḳurʾān under ʿAbd Allāh b. Abī Isḥāḳ [*q.v.*], Ibn Kathīr [*q.v.*], al-Djaḥdarī (see Ibn Djazarī, i, 349), and Ibn Muḥayṣin (*ibid.* ii, 167, 10). In his own *ikhtiyār* he did not follow blindly the language of the Bedouins, but criticized their poets and, like Ibn Abī Isḥāḳ, applied the principles of logical reasoning (*ḳiyās*). Even in ordinary conversation he always applied *iʿrāb*, and his biographers give some specimens of his affected style. Amongst his pupils were al-Aṣmaʿī, Khalīl b. Aḥmad, and Sībawayh (who mentions him several times in his *Kitāb*). It is said that he wrote two books on grammar, but they have not come down to us. His readings were objected to and considered exceptional (*shawādhdh*).

This ʿĪsā b. ʿUmar is not to be confounded with his namesake al-Hamdānī of Kūfa, who died in 156/773 (see *Fihrist*, 31, 1; Ibn Ḥadjar, *Tahdhīb al-Tahdhīb*, viii, 222; Ibn Djazarī, *Ghāya*).

ʿĪSĀ BEG [see ÜSKÜB].

ISAAC [see ISḤĀḲ].

ISĀF WĀ-NAʾILA, a pair of gods worshipped at Mecca before Islam. Several orientalists of the last century, such as Rudolph Krehl and Francois Lenormant, saw in them, not unreasonably, replicas of Baʿl and Baʿla. Indeed Isāf and Nāʾila do display the essential characteristics distinguishing this pair of gods from the many avatars known in the various Semitic religions: physical representation by two sacred stones erected close to each other, or by two parallel hills; symbolic representation of the fertility of living beings and of the earth; and the euhemeristic expression of the myth of divine loves such as those of Hippomenes and Atlanta in Greek mythology who dared to embrace in the temple of Demeter and were changed by her into a pair of lions harnessed to her chariot. Certain details of the legend of Isāf and Nāʾila recall the myth of the loves of Adonis and Astarte, avatars of Baʿl and Baʿla.

These characteristics stand out from the material from which the stories about these idols are composed, although these stories are clearly conceived with an edifying aim. Thanks to this laudable aim this pagan legend had come down to us through the early Islamic sources.

Hishām al-Kalbī (d. 204/819 or 206/821), to whom we owe the preservation of numerous traces of pagan Arabia, reporting a saying attributed to Ibn ʿAbbās, transmits this legend to us in its most basic form (*K. al-Aṣnām*, ed. and tr. W. Atallah, Paris 1969, 6; cf. Klinke-Rosenberger, *Das Götzenbuch*, Leipzig 1941, 6 and 18): Isāf b. Yaʿlā and Nāʾila bint Zayd, both of Djurhum (cf. other genealogies in *Aghānī*, xiii, 109), originally from the Yemen, were passionately in love. They came on pilgrimage to Mecca and, finding themselves alone for a moment in the Kaʿba hidden from view, committed fornication there (*fadjara bihā*); according to another opinion reported in *Aghānī*, *loc. cit.*, they only embraced (*ḳabbalahā*). They were immediately changed into stones (*famusikha*—a verb usually meaning metamorphosis of a man into an animal, as in the myth of Hippomenes and Atlanta, but the context requires, and the same author further on and other sources add, *ḥadjarayn*), and were erected there on the spot. They were worshipped by Khuzāʿa, Ḳuraysh, and all the pilgrims.

It seems that originally these two sacred stones were separated: one adjoining (*bi-liṣḳ*) the Kaʿba, the other on the site (*fī mawḍiʿ*) of the well of Zamzam. Ḳuraysh reunited them close to Zamzam and they slaughtered the sacrificial victims nearby. But al-Azraḳī (*Akhbār Makka*, ed. Wüstenfeld, 49) places them at the foot of al-Ṣafā and al-Marwa, the two parallel hills separated from the Kaʿba by the depression of Mecca.

According to the same author (78), ʿAmr b. Luḥayy, the Khuzāʿī reformer of idol worship in Arabia, also set up two idols on these two hills: Nahīk Mudjāwid al-Rīḥ on al-Ṣafā and Muṭʿim al-Ṭayr on al-Marwa. These two divine epithets which could have referred to Isāf and Nāʾila and to the Baʿl and Baʿla which they stood for, applied, according to their significations, the first to a god of the winds and the rain, the second to a goddess of fertility assuring the birds of the valley of their subsistance (cf. details in *Panthéon*, 107). If this hypothesis is correct, the agricultural character of this pair of gods, already suggested by their Yemenī origin, will be confirmed. Their relationship with Zamzam and the meanings suggested for their names would reinforce this confirmation. Indeed the Hebrew *āsāf* (to store up, to gather) and the Aramaic *nawlyl* (to receive gifts) suggest that Isāf and Nāʾila,

positioned at Zamzam where the treasure of the sanctuary was stored, received the offerings and kept guard over them (details in *Panthéon*, 108).

Bibliography: T. Fahd, *Le Panthéon de l'Arabie centrale à la veille de l'hégire*, Paris 1968, 103-7, with a fuller bibliography. (T. FAHD)

ĪSĀGHŪDJĪ, the *Isagoge* of Porphyry [see FURFŪRIYŪS]. According to Ṣāʿid al-Andalusī (*Ṭabaḳāt al-umam*, ed. Cheikho, Beirut 1912, 49, tr. Blachère, Paris, 1935, 101), it seems that Ibn al-Muḳaffaʿ [*q.v.*] was the first person to translate this introduction to logic into Arabic. The *Fihrist* (i, 244), on the other hand, maintains that it was Ayyūb b. al-Raḳḳī, who based himself on a Syriac translation. Among the Arabic adaptations of the *Isagoge* we possess that of Abu 'l-Ḥasan Ibrāhīm b. ʿUmar al-Biḳāʿī al-Shafiʿī (see Brockelmann, S II, 177). with a commentary by al-Sanūsī (ms. Algiers no. 1362) and that of al-Abbarī, which is the best known and most commented upon; al-Abbarī's adaptation of the Isāghūdjī was put into verse by al-Akhḍarī [*q.v.*]. On the translation by Dimashḳī and the commentary by Ibn al-Ṭayyib, see FURFŪRIYŪS. (ED.)

ISAIAH [see SHAʿYĀ].

ISAKČA, a place in modern Rumania, the origins of which go back to antiquity, known in the Middle Ages as Oblučica. In the time of the Turks it was a fortress of great strategic importance, serving them as a base from which to attack Moldavia and, later, for their campaigns against Poland. As early as 889/1484 Bāyezīd II with his troops had crossed the Danube by a bridge near Isakča and conquered Kilia (Kili) and Cetatea Alba (Aḳ Kermān). The Ottoman government gave particular attention to the upkeep of the fortress and the provision of supplies for the garrison. Isakča constituted an important transit centre for cereals and livestock sent from Wallachia and Moldavia to Istanbul, and for merchandise going in the opposite direction.

The centre of a *ḳażāʾ* in the 11th/17th century, Isakča was not very large, with a population, according to Ewliyā Čelebi, composed of Wallachians, Moldavians, Greeks, Armenians and Bulgars. The port was the centre of a very active river traffic. The local governors and the State Treasury received considerable revenues from the taxes and port dues. There was also some trading in Isakča; the shops were fairly numerous, but there was no *bezistān*. The whole market, together with the fortress, the inn, the mosque, the *ʿimāret* and the baths was the *waḳf* of the *ḳapudān* Ḥasan Pasha. In the 11th/17th century it was his heirs who were receiving the revenues.

In the course of the Russo-Turkish wars of the 18th and 19th centuries Isakča was occupied more than once by Russian troops advancing, by way of Dobrudja, towards the Ottoman territories in the Balkans.

ʿIṢĀMĪ, *takhelluṣ* and family surname of a Persian poet who flourished in the 8th/14th century in India and composed in 750-1/1349-50 an epic poem dealing with the exploits of the Muslim conquerors and rulers of India and their military commanders from the Ghaznawids down to the date of composition. Practically nothing is known about ʿIṣāmī, as no biographical work on Indian poets mentions him; the present article is based mainly on the scattered references which he makes about himself in the text of the poem. One of his ancestors, Fakhr al-Mulk ʿIṣāmī, a vizier to the ʿAbbāsid caliphs, migrated to India during the reign of Iltutmish [*q.v.*] and settled at Multan. Later he migrated to Delhi, the capital city. The family enjoyed royal favour and some of its members held high offices of state. ʿIṣāmī himself was born at Delhi in about 711/1310-11 and was brought up by his grandfather ʿIzz al-Dīn ʿIṣāmī, a *sipāhsālār* under Balban (664/1266-684/1285). He makes no mention of his father, which suggests that he lost him while still very young. In 726/1326, when Muḥammad b. Tughluḳ [*q.v.*] ordered the transfer *en masse* of the population of Delhi to Dēvgīr (Dawlatābād), ʿIṣāmī also accompanied his 90-year-old grandfather to the Deccan. The latter died on the way, unable to stand the fatigue of the journey, but the young ʿIṣāmī reached Dēvgīr safely: for the next 24 years he remained a little known and neglected man of letters, bitter and frustrated. Still unmarried and disgusted with the manners and morals of his contemporaries, he decided to migrate to the Ḥidjāz. Accordingly, he left for Arabia in 751/1350, soon after the completion of the poem, settled there, and most likely died at Medina. The year of his death is not known.

His fame rests mainly on his only surviving work, the *Futūḥ al-Salāṭīn* (ed. Agra 1938, Madras 1948; Eng. tr. with a commentary by Agha Mahdi Husain, i, Bombay 1967), which he composed under the patronage of ʿAlāʾ al-Dīn Ḥasan Bahman Shāh, the founder of the Bahmanī dynasty. Composed in about five months, the poem comprises 11,693 verses, written in the metre of Firdawsī's *Shāhnāma*, which he intended to emulate, and narrates historical events in a clear, simple style drawn from all available sources. Although not rated very high as a source for the period it covers, its value as an historical narrative cannot be denied. One of its remarkable features is its regard for factual information and its avoidance of poetic licence or freedom. Niẓām al-Dīn Aḥmad, the author of *Ṭabaḳāt-i Akbarī*, Firishta and Ṭabāʾṭabāʾī, the author of *Burhān-i Maʾāthir*, a history of the Deccan, as well as Badāʾūnī [*q.v.*] used his works as one of their sources. A talented poet, gifted with imagination and power of expression, ʿIṣāmī used simple and straight-forward language, devoid of rhetorical flourishes and verbal juggling. He acknowledged his debt to Niẓāmī [*q.v.*] whom he followed as a model, but failed to reach the heights attained by Niẓāmī. His work, dedicated to Bahman Shāh, "offers . . . not critical history but historical evidence", for the simple reason that his ambition was to produce an epic poem rather than a work of history.

(A. S. Bazmee Ansari)

ĪSAR-DĀS (or Īshwar-dās), one of the two Hindu historians of the reign of Awrangzīb [*q.v.*], was a Nāgarā Brahmaṅ of Paṫan (Nahrawālā or Anhalwaṙa [*q.v.*] of Muslim historians). Born in 1066/1655 he seems to have received a good education in Persian language and belles-lettres at his native town. Up to 1096/1684 he was employed, most probably, as letter writer and scribe, with the *ḳāḍī* Shaykh al-Islām b. *ḳāḍī* ʿAbd al-Wahhāb, who was *Ḳāḍī al-lashkar* from 1086/1675 to 1096/1683. On account of certain differences with the Emperor Awrangzīb, Shaykh al-Islām resigned his post and went on the Pilgrimage to Mecca in Muḥarram 1095/December 1684. Īsar-Dās having thus been thrown out of employment sought service with Shadjāʿat Khān, the governor of Gudjarāt from 1098/1686-7 to 1113/1701, who employed him as an *amīn* (revenue collector) of certain *maḥall*s in the *parganah* of Djōdhpūr [*q.v.*]. It was here that he came to develop friendly relations with the Rāṫhors, who resented some features of the religious and state policies of the emperor, and ultimately procured the submission of Durgādās Rāṫhor, the rebel chieftain of Djōdhpūr. He successfully performed the diplomatic mission, with which he was entrusted by Shadjāʿat Khān, of recovering the young princess Ṣafiyat al-Nīsāʾ, a daughter of Awrangzīb's son, Muḥammad Akbar, from the custody of the Raṫhors, with whom her father had left her when he fled to Persia in 1099/1687 following his unsuccessful rebellion in 1092/1681. For this service to the imperial household the emperor raised his rank from 200 to 250 horsemen and also awarded him a robe of honour (*khilʿa*). His immediate master Shadjāʿat Khān, too, conferred upon him a *djāgīr* [*q.v.*] in Mēṙtha, west of Adjmēr (not Meerut, near Dehli, as stated by Storey, i/I, 587). Thereafter nothing is known about him, except that he lived at least to the age of 75.

His only claim to fame rests on his Persian work *Futūḥāt-i ʿĀlamgīrī* (still in Ms., Rieu, *CPM*, Additional 23884, Edinburgh 218), completed on 21 Rabīʿ I 1143/4 October 1730, when he was 75 years of age. It is a contemporary account of Awrangzīb's reign beginning with the illness of Shāhdjahān [*q.v.*] and ending with the submission to the Imperial Court of Durgādās Rāṫhor in 1110/1698 and the author's audience with the emperor for the award of the *khilʿa*. Its value lies in the fact that it is written by a non-Muslim who, during the course of his official duties, came to have access to first-hand sources of information and was himself an eyewitness of many events. Although the author completed it in 1730 it does not go beyond 1698 for reasons still unknown: most probably it was in the latter year that he gave up imperial service, lost touch with events and retired to his *djāgīr*. He wrote it as a memorial to himself and for the benefit of his grandson Khʷushḥāl Rāʾi, son of Bradja Rāʾi; (it is also, incidentally, a refutation of the allegation that Awrangzīb had forbidden the writing of contemporary history).

ʿĪSĀWĀ, ʿĪsāwiyya, collective name (sing. *ʿĪsāwī*) denoting the confraternity or "path" (*ṭarīḳa*) founded at the beginning of the 10th/16th century by Shaykh Muḥammad b. ʿĪsā al-Ṣufyānī al-Mukhtārī (other ethnics—al-Miknāsī, al-Fahrī or al-Fahdī), named "the Perfect Master" (*al-Shaykh al-Kāmil*).

The founder.—Stripped of the very abundant growth of hagiographic legend, the biography of Sīdī Ibn ʿĪsā consists merely of a number of well-established facts. Born in 842/1467-8 in Sūs or Gharb, probably of a family of Idrīsid *sharīf*s (though this connection is disputed by some historians, including al-Salāwī), he applied himself to Ḳurʾānic studies from a very early age and travelled with his father, a man of great piety and modest circumstances, through the north of Morocco among the Banū Ṣufyān, the Banū Mukhtār (where he married) and the Banū Ḥassān; he stayed in Fās and then in Miknās where he attached himself to an eminent teacher of mysticism, Shaykh Aḥmad al-Ḥārithī al-Ṣufyānī, a ṣūfī of *Shādhiliyya* [*q.v.*]-*Djazūliyya* obedience. After the death of this teacher, to complete his education he went to two other continuators of al-Djazūlī [*q.v.*], Sīdī ʿAbd al-ʿAzīz Tabbāʿ of Marrākush, and Muḥammad al-Ṣaghīr al-Shiʿlī, of Khandaḳ al-Zaytūn (a suburb of Fās), who taught him the *Dalāʾil al-khayrāt* in detail. Having finally settled at Miknās, he taught in the chief mosque of the town and then, since a constant stream of disciples came to him, attracted by his saintliness, he bought a property which he set up as a *waḳf* for use as a cemetery and where he had the *zāwiya* built which still exists. It was there that he was buried after his death, which took place in 930, 932 or 933/1523-7.

Sīdī Ibn ʿĪsā was an accomplished mystic "whose asceticism and devotion were unassailable" (R. Brunel) and whose love of God was combined with constant practice of the virtues and a charity that communicated itself to others. Gifted with an aptitude for penetrating men's thoughts, he also possessed remarkable powers of healing, and countless miracles are attributed to him. Although he lived at a time of great turmoil—the period which followed the end of the Marīnid dynasty (869/1465) and witnessed the reigns of four Waṭṭāsid sultans and the rise of the Saʿdid dynasty—he does not appear to have taken any part personally in the dissensions between local chieftains or to have participated in the struggle against the Christian invaders. Nevertheless, his popularity made him suspect to the authorities, and at one time he was compelled to go into exile from Miknās, with a group of his disciples; it was on this occasion, according to the legend, that he is said to have obtained for his companions the gift of immunity from the poison of scorpions and snakes and from the barbs of cactus. He was then recalled to Miknās in triumph and became the patron saint of the town

The literary output of Ibn ʿĪsā is sparse. It consists of several invocations (*awrād*), some litanies (*aḥzāb*), including the very popular *Ḥizb Subḥān al-Dāʾim* which is a compilation of works of al-Djazūlī, al-Ḥārithī and al-Suhaylī, some *ḳaṣīda*s which the ʿĪsāwā sing at their meetings, and a spiritual testament (*waṣiyya*), in which are incorporated numerous teachings of the Shādhilī authors.

Dissemination and organization of the *ṭarīḳa*. Ibn ʿĪsā had great numbers of disciples, six hundred of whom were said to have achieved the state of perfection; particularly prominent among them is the figure of his immediate successor, Abu 'l-Rawāʾin. This man belonged to the class of Ṣūfis known as "the reprehensibles" (*malāmatiyya* [*q.v.*]), who conceal their wisdom beneath an extravagant exterior. He never married and, even today, women avoid approaching his tomb, which is situated alongside that of his master, for fear of a curse. He was given the name *al-Mukadhdhib* (the Contester) on account of his anti-conformist behaviour; he used to contrive to sell to some rich or powerful man a town or a whole territory to which he had no claim whatsoever; anyone who refused to pay him this strange tribute found himself struck down with some misfortune; if on the other hand he completed the transaction, God granted him the advantages promised by the Saint, who indeed himself distributed as alms the sums of money thus acquired. Abu 'l-Rawāʾin played an important part in supporting the first Saʿdids in their struggle against the Portuguese, in preparing the way for their proclamation as sultans in Marrākush (951/1544), and later in stirring up the people of Fās against the Waṭṭāsids. After his death (963/1556), control of the *ṭarīḳa* reverted to the descendants of Ibn ʿĪsā and remained with them by hereditary succession. Thereafter the ʿIsāwā hardly appeared on the political scene.

During the actual lifetime of the founder, several *zāwiya*s were founded outside Miknās, one of them at Figuig (south-eastern Morocco), from which the confraternity spread out towards Algeria and Tunisia. According to various censuses and estimates, the *Ṭarīḳa ʿĪsāwiyya* at the present day is said to include about 50,000 active members divided as follows:

Morocco: according to Drague (1939), 21, 591 affiliated members, 3,181 of these being in the region of Miknās; but, in the opinion of Brunel (1926), Miknās alone included "more than ten thousand affiliated members of both sexes"; numerous *zāwiya*s in the whole country, particularly in Fās, Tiṭwān, Tangier, in all the towns on the Atlantic seaboard, in Tāza, in the Rif, the Tafilālt, etc.—Algeria: approximately 4,000 members and about a dozen *zāwiya*s, including those at Blida and Uzara (dépt. of Algiers), Remshi and Tlemcen (dépt. of Oran), Bône, Bougie and Constantine.—Tunisia: according to H. R. Idris (*Initiation à la Tunisie*, Paris 1950), 11,290 members and 87 *zāwiya*s.—Other *zāwiya*s, in Libya, Syria, Cairo and Mecca.

The *Ṭarīḳa ʿĪsāwiyya* possesses a fairly homogeneous though decentralised structure. A superintendant (*mazwār*), chosen from the founder's descendants and confirmed by the *makhzen*, administers the mother-*zāwiya* of Miknās and divides the income from it between the *shaykh*'s descendants living in Miknās and Fās, but it is in fact the *muḳaddam* of the mother-*zāwiya* who exercises the spiritual authority and the principal temporal functions in Miknās, while the *awlād al-shaykh* perform the same functions in their respective *zāwiya*s. There is consequently a division of authority, and also very pronounced individual features in the practices of the order. Every year, however, a meeting is held in Miknās when the ʿIsāwā of all lands come together at the tomb of their patron saint at the time of the *mawlid*, the anniversary of the Prophet's birth. It is then that, for three days, one can witness the processions, the ecstatic dances, the blood-stained feasts (*frīsa*) and *faḳir*-like performances which have fascinated and often shocked observers. (A detailed study of the *mawlid* ceremonies has been made by Brunel; a literary but fairly accurate description appears in the novel of H. Ardel, *Colette Bryce au Maroc*, Paris 1937, 91-101).

Doctrine and method.—On the question of the doctrine of union with God and the fundamental methods of attaining spiritual perfection, the *Ṭarīḳa ʿĪsāwiyya* stands directly in the line of classical orthodox Ṣūfism which takes as its basis the common religious law (*sharīʿa*) and leads the aspirant (*murīd*), thanks to the appropriate training that he undergoes under the direction of his spiritual guide (*murshid*)—a training which constitutes the "path" (*ṭarīḳa*), strictly speaking—into direct contact with the divine Reality (*ḥaḳīḳa*). The chain of transmission (*silsila*) of the esoteric teachings of Ibn ʿĪsā goes back beyond al-Djazūlī and Abu 'l-Ḥasan al-Shādhilī, to ʿAbd al-Salām b. Mashīsh [*q.v.*], Abū Madyan [*q.v.*], ʿAbd al-Ḳādir al-Djīlānī [see ḲĀDIRIYYA], and al-Djunayd [*q.v.*], to ʿAlī b. Abī Ṭālib and the Prophet. Like his predecessors, Ibn ʿĪsā exhorted his disciples to detach themselves from worldly desires, passions and individual ambitions in order to attain the state of total dependence or "poverty" in relation to God, *faḳr* (hence the word *faḳīr* [*q.v.*] to denote the adept of the mystical path). Just as the Prophet did in regard to the whole body of the Faithful, Ibn ʿĪsā assumed for his disciples the role of model and intercessor: "He who in this world keeps company with me, or watches me, even though only in a dream, goes to paradise at my intercession", he says, and "My hand is above my initiates, alive or dead, just as the heaven is above the earth". Hence the importance of *adab*, the norms of conduct which govern relations between master and disciples, and those between the disciples themselves. Ibn ʿĪsā places particular emphasis on love (*maḥabba*), in which he sees "the fullest degree of perfection", and he states explicitly that "There are four kinds of love: love from the intelligence, love from the heart, love from the soul, mysterious love . . . Love from the intelligence or spiritual love is the perpetual love of God; it gives rise to the desire to merge oneself with the object that is loved, to possess it, to pray to it . . . Love from the heart, which is called passion . . . reveals itself through languor, regrets, lamentations, neglect of the world, the desire for God. . . Love from the soul is shown by perplexity, astonishment, regret, sobs, thirst, frenzy, by prostrating oneself within God, . . . by poverty. Secret love consists in enclosing oneself within God, in losing oneself in His praise, through the study of oneself, in abasing oneself in contemplation of the essence of God, in such a way as to allow oneself to be entirely absorbed into the Divine Being" (quoted by Rinn). The initiatory bond (*ʿahd*) is given by a clasping of hands, and women are admitted to the *ṭarīḳa* on the same footing as men.

The basic method for the approach to God is the practice of invocation (*dhikr* [*q.v.*]). This can take different forms:—a) the recital, individually or collectively, of liturgical formulae (*wird*; pl. *awrād*) peculiar to the *ṭarīḳa*; three of these exist—the short *wird*, the medium *wird*, and the long *wird*, corresponding to the increasingly exalted stages of initiation.—b) rhythmical intoning of litanies, among them being the *Ḥizb Subḥān al-Dāʾim*, peculiar to the *ṭarīḳa*, and the *aḥzāb* of al-Djazārī, al-Djazūlī, Al-Nawāwī, al-Shādhilī and Zarrūḳ, common to almost all the confraternities of North Africa, and also prayers on the Prophet, like the *Mashīshiyya*, and poems by Ṣūfī authors.—c) metrical repetition of the *shahāda*, the divine Names and the *ism al-mufrad* ("the supreme

Name", *Allāh*);—d) ecstatic dancing, to which the ʿĪsāwā give the name of *taḥayyur*, *ḥayra* or *idjdhāb* ("ravishment"). This is accompanied by various instruments—drums (*ṭabl*, *bandīr*) and tambourines (*daff*), reed-flutes (*geṣba* [*ḳaṣaba*]) or clarinets (*ghayṭa*) —and songs. It consists of a rather slow introductory section, the *rabbānī*, during which the dancers, standing in line, hold hands and perform vertical bending movements together with lateral motions; and a more rapid section made up of supple complex movements, the *mudjarrad* ("denuding"), for which the dancers remove their djallāba and form a circle round their *muḳaddam*. The dances often end in displays of fakirism in which the disciples, apparently anaesthetized, walk on glowing coals, take burning brands in their hands and between their lips, swallow fragments of broken bottles or strike themselves with swords.

Particular practices.—The explicitly devotional character of the teaching of Ibn ʿĪsā and the dynamism of the *ḥaḍra ʿĪsāwiyya* (the sessions for invocation and dancing) favoured the spread of the *ṭarīḳa* among the common people—artisans in the towns, Berbers in the country, negro slaves brought back from the Sudan by Sultan Aḥmad al-Dhahabī at the time of the Timbuktoo expedition (1591) and grouped together at Miknās by Mawlāy Ismāʿīl after 1672. In the course of this expansion, the confraternity absorbed a certain number of local customs (in particular, borrowings from Berber carnivals) and survivals of ancient pagan or animistic worship which gave it a highly individual aspect. The most characteristic elements of this magico-religious complex are as follows:—a) the horror of black, which is revealed only during festivities and which sometimes incites affiliates to throw themselves on persons wearing clothing of this colour, strip off their garments and tear up the material;—b) the wearing of the *gaṭṭāya*, a kind of mat of plaited hair, which is worn very long and grown only from the top of the cranium, the remainder of the head being shaved;—c) the practice of healing by the recitation of formulae, by trampling the sick man under foot, or by placing the patient in contact with snakes;—d) the association with snakes which are regarded as a friendly race, with whom al-Shaykh al-Kāmil is said to have concluded a pact; this allows a special category of affiliates, the *Ḥnayshiyya*, to charm these creatures, to heal the bites they inflict and even to grant to others immunity from their venom;—e) the practices of conjuration and exorcism, for which the *ṭallāʿ* uses a flat basket, the *madjmāʿ al-asyād* or "assembly of the Great Masters", on which are placed pebbles, shells, and various other objects representing protective saints and familiar *djinns*; according to the relative position in which these objects are found, the magician foretells the future or makes a diagnosis; to cure a patient who is nervous or possessed, he can order him to drink the blood of a newly sacrificed animal; —f) representations of animals. In each *ṭāʾifa*, a certain number of *fuḳarāʾ* embody some animal species whose behaviour they mimic in a very realistic manner, particularly during feasts and at gatherings. The animals thus represented are:—lions and lionesses which, with jackals and panthers, have a part in some ritual feasts (*frīsa*), during which they lacerate an animal, a sheep or goat, sacrificed earlier, tear it to pieces, smear themselves with its blood and eat the raw flesh; wild boars (*ḥallūf*) and dogs which come face to face in ferocious fights; cats, which perform thefts and acrobatic feats; camels, which carry enormous burdens and do not hesitate to devour cactuses, thistles and barley; lastly, hyenas, gloomy carnivorous creatures which appear more rarely. If the existence of these animal clans seems to derive from negro totemism (Van Gennep, *Religion, Moeurs et Légendes*, Paris 1908), the elements of communal sacrifice have nonetheless been profoundly changed, particularly in a moderating sense, by Islamic influence. It has also been noted (Brunel) that, for the idea of filiation stemming from an animal ancestor, there has been substituted that of a covenant (*ʿahd*), on account of the *baraka* of Sīdī Ibn ʿĪsā: thanks to his domination (*taṣarruf*) over created beings, this master seems to have succeeded in achieving in his *ṭarīḳa* a kind of fraternity between men, animals and *djinns*.—g) Finally, many *ʿĪsāwiyya* meetings have their clown, the *ʿaṭṭār* or mock pharmacist, who amuses everyone with his ridiculous stories and behaviour.

The unusual aspects of the *Ṭarīḳa ʿĪsāwiyya* have not failed to arouse the indignation of the anti-mystical *ʿulamāʾ* and to stir up lively criticism. An expression of such views is to be found, for instance, in an order which the ʿAlawid sultan Mawlāy Sulaymān caused to be read in all mosques in Morocco in 1815 and which stated in particular: "Cast far from you the *moussem*... and these innovations... Times have been fixed for these practices and considerable sums are thus spent for love of Satan. The people devoted to these innovations, the Aissaoua, the Jilala and other confraternities attracted to novelty and error, folly and ignorance, hasten to them..." (quoted by Drague, 89-91). As for the attitude of an élite among the Ṣūfīs, of a gnostic contemplative tendency, this is well illustrated by the case of the Algerian *shaykh* Ibn ʿAlīwa [*q.v.*] who was himself an ʿĪsāwī before becoming an affiliate of the Darḳāwā [*q.v.*]: while recognising the authenticity of the ʿĪsāwī mystical teaching and the excellence of the masters in the *ṭarīḳa*, Ibn ʿAlīwa regrets that affiliates should attach so much importance to the search for prodigies and to the practices of fakirism (cf. M. Lings, *A Moslem saint of the twentieth century*, London 1961, 50-1). This opinion is corroborated by the works of rientalists who have made a close study of the ʿĪsāwā.

Bibliography: The fundamental work still remains the monograph of R. Brunel, *Essai sur la Confrérie religieuse des Aissaoua au Maroc*, Paris 1926, which takes into account not only all the earlier works, in particular those of Cat, Delphin, de Neveu, Depont and Coppolani, Doutté and above all L. Rinn (whose *Marabouts et Khouans*, Algiers 1884, chap. XXI contains translations of texts not reproduced by Brunel), etc., but also some printed Arabic sources (the *Istiḳṣāʾ* of Salāwī, the *Salwat al-anfās* of Djaʿfar al-Kittānī, among others) and several unpublished manuscripts. It is only possible here to refer the reader to the bibliography contained in this work (p. vii-x).

Among the more recent studies, that of E. Dermenghem in *Le Culte des Saints dans l'Islam maghrébin*, Paris 1954, 303-18, is of special interest in that it allows some of Brunel's oversevere criticisms of the ʿĪsāwā of Algeria to be rectified; it contains abundant extracts from the liturgical formulae used at meetings and includes interesting musical notations (from Léo-Louis Barbès in *R. Afr.*, 1951). Consult also the following works: —P. J. André, *Contribution à l'étude des Confréries religieuses musulmanes*, Algiers 1956; A. Bernard, *La religion musulmane en Berbérie*, Paris 1938; G. Drague, *Esquisse d'histoire religieuse du Maroc*, Paris 1951, *passim*.

(J. L. Michon)

ʿĪSĀWĪ [see NAṢĀRĀ].

AL-**ʿĪSĀWIYYA**, a Jewish sect, the followers of Abū ʿĪsā al-Iṣfahānī [*q.v.*], also known as ʿObhadya and ʿObhedel. The sect is also referred to as the Iṣfahāniyya.

Abū ʿĪsā was the leader of a Jewish uprising, which occurred either in the reign of the Caliph ʿAbd al-Malik b. Marwān, as is reported by the Ḳaraite author al-Ḳirḳisānī, or in the reign of the last Umayyad caliph as is stated by al-Shahrastānī (followed on grounds of general probability by I. Friedlaender). On the available evidence no definitive solution can be given to this chronological problem.

Abū ʿĪsā claimed to be a prophet (*nabī*: al-Ḳirḳisānī) and, as al-Shahrastānī puts it, one of the five messengers (*rusul*) of the expected Messiah (*al-masīḥ al-muntaẓar*), charged by God with the deliverance of the Children of Israel. Al-Bīrūnī too refers to his describing himself as a messenger of the Messiah (*al-Āthār al-Bāḳiya*, ed. E. Sachau, 15). Al-Shahrastānī also mentions that Abū ʿĪsā considered that "the missionary" (*al-dāʿī*; it may be legitimate to consider that he referred to himself) could be regarded as, in a sense, identical to the Messiah, a conception reminiscent of the doctrines of certain extremist Shīʿī sects. There can be hardly any doubt, however, that Hadassi's statement that he put forward the claim to be the Messiah is due to a misapprehension. In proof of his prophethood, his partisans adduced the fact, that, in spite of being illiterate (*ummī*, a word used by Muḥammad), he produced books and scriptural scrolls (*muṣḥaf*). At the head of his followers he joined battle with soldiers of the Caliphate and was killed (or as his followers reported, vanished in the cleft of a rock). The number of his followers (who were few to begin with) dwindled constantly. In Ḳirḳisanī's time (4th/10th century) there were approximately twenty in Damascus and possible also a few in Iṣfahān. Those who were personally known to Ibn Ḥazm were probably not members of the sect in the strict sense of the word.

According to Ḳirḳisānī, Yūdghān, who was regarded by his followers the Yūdghān(iyya) as the Messiah, was reported to have been a disciple of Abū ʿĪsā.

Abū ʿĪsā taught (in common with other Jewish sects, for instance, the Mūshkāniyya, said to stem from the Yūdghāniyya) that Jesus and Muḥammad were true prophets, each of whom was delegated to bring a distinctive law to a community of his own —in the case of Muḥammad to the Arabs. But in spite of their prophethood, the observance of the Mosaic law continued to be incumbent upon the Jews. (In consequence of this thesis Muslim theologians such as al-Bāḳillānī and ʿAbd al-Ḳāhir al-Baghdādī discussed the question whether the ʿĪsāwiyya, who believed in the prophethood of Muḥammad and whose beliefs authorized them, according to al-Baghdādī, to profess the *shahāda*, could be regarded as Muslims; their answer was negative). Al-Ḳirḳisānī mentions that Abū ʿĪsā promulgated a prohibition against drinking wine and eating meat and al-Shahrastānī speaks of his forbidding the eating of any animate being. He also prohibited divorce.

Friedlaender finds points of similarity between the ʿĪsāwiyya and Shīʿī sects and to some extent his remarks may be valid (see also above), but they do not account for the strange fact that on the one hand Abū ʿĪsā showed great regard for the rabbinical interpretation and observance of the law (and in consequence the Rabbanites allowed the members of their community to intermarry with the ʿĪsāwiyya: al-Ḳirḳisānī, i, 52) and that, on the other hand, Abū ʿĪsā acknowledged the prophethood of Jesus and Muḥammad. A possible explanation might be that the ʿĪsāwiyya stemmed from Jewish Christians, *i.e.*, from a community which believed in the validity of Mosaic law and considered Jesus as a prophet. For some members of such a community the acknowledgement of the prophethood of Muḥammad after the advent of Islam need not have presented insuperable theological difficulties. The existence of Jewish Christians in Jerusalem at the time of Muʿāwiya is attested by contemporary evidence. Ibn Ḥazm's statement, contradicted by other sources, that the ʿĪsāwiyya believed that Jesus was a prophet sent to the Children of Israel, would, if accepted as correct, reinforce this hypothesis. This hypothesis could account for Abū ʿĪsā's prohibition of divorce (which is compared by al-Ḳirḳisānī with the similar Christian ordinance) and for the fact that the Yūdghāniyya, the followers of Yūdghān, who is reported to have been a disciple of Abū ʿĪsā, appears to be classified by Muṭahhar al-Maḳdisī as a Christian sect (*al-Badʾ wa 'l-taʾrīkh*, ed. Cl. Huart, reprinted Tehran 1942, iv, 42, 46; the reading Yudghaniyya necessitates a very slight emendation). Abū ʿĪsā's description of himself as a *rasūl* of the *masīḥ* may be a transposition of the Christian nomenclature referring to Christ and the apostles.

IṢBAʿ (A.), also AṢBAʿ, "finger", as a measurement of length the breadth of the middle joint of the middle finger, conventionally one twenty-fourth of the cubit, *dhirāʿ*. See DHIRĀʿ, penultimate paragraph and bibliography. (ED.)

In Arab navigational texts *iṣbaʿ* is unit of measurement of star altitude (*ʿilm al-ḳiyās*). Latitude on the Ocean was indicated by the altitude of certain stars, usually the Pole Star or one of the Bears, above the horizon at certain times. Complete tables of Pole Star, Little Bear and Great Bear altitudes of ports in the Indian Ocean are given by Arab navigational texts and partial tables of altitudes of the Southern Cross and several other stars. The *iṣbaʿ* was considered to be the angle subtended by the width of a finger held at arm's length against the horizon. Four fingers, *i.e.*, the measurement of one hand (the thumb could not be used) were one *dhubbān*, a word of unknown origin. The *dhubbān* was the width of the standard measuring instrument, the *khashabat al-arbaʿ* and a universal standard could be obtained by comparing the stars α and β Aurigae which were 4 *iṣbaʿ* apart. The *iṣbaʿ* was divided by the navigators into eighths known as *zām*, which was a "watch" of 3 hours. It is explained in the navigational texts of Ibn Mādjid and Sulaymān al-Mahrī that a ship sailing one *zām* due north raised the Pole Star $^1/_8$ *iṣbaʿ*, therefore assuming that the average ship sailed one

iṣbaʿ due north in 24 hours. A *tirfa* was the distance sailed on any rhumb to raise the Pole Star's altitude one *iṣbaʿ* and varied according to the rhumb. A *tirfa* due north or south was 1 *iṣbaʿ*.

The actual value of the *iṣbaʿ* in terms of European measurements varied somewhat. Originally it varied with the finger of the navigator, but by the time of the surviving Arab navigational texts (1450-1513) the *iṣbaʿ* had become standardized. There were however variations, which may have been national or regional, and other variations in the stellar altitude of a particular port may have been due to inaccurate observation. The standard measurement used by the Arabs was 224 *iṣbaʿ* in 360° (*i.e.*, 1 *iṣbaʿ* = 1°36′) but this was a figure of convenience, for it made 7 between each rhumb of the compass rose and 8 to each lunar mansion. Sulaymān al-Mahrī used the fact that the diameter of the circle made by the Pole Star round the Pole was 4 *iṣbaʿ* (the navigator's usual figure) and showed by astronomical means hat this was $6\frac{6}{7}$ degrees. Therefore 1 *iṣbaʿ* was $1\frac{5}{7}$ degrees (1°43′) or 210 in 360°. However for practical purposes he used the figure of 224 in 360°.

European scholars have followed up the equation given that the Pole Star's polar distance is 2 *iṣbaʿ* and produced values. Princep, allowing for precession, gave values for the year 1394 of 1°56′ and for 1550 of 1°33′. Ferrand working for 1500 produced the figure of 1°45′. The Arabs however never gave an epoch to their figures—most of their figures were probably inherited from previous centuries and not all from the same time, so that it seems fruitless to speculate too much on actual values of the measurement.

IṢFAHĀN (in Arabic Iṣbahān), a town and province in Persia, whose name, according to Hamza al-Iṣfahānī, means "the armies" (Māfarruk͟hī, *Kitāb Maḥāsin Iṣfahān*, ed. Sayyid D͟jalāl al-Dīn Tihrānī, Tehran n.d., 5-6).

1. History

The province, whose precise boundaries have varied at different times, is bounded on the north-east and east by the central desert. In the south-east by Yazd and Fārs, in the south and south-west by the Bak͟htiyārī mountains, with peaks rising to over 11,000 ft., in the north-west by Luristān, Kazzāz, Kamara, and Maḥallāt, and in the north by the districts of D͟jaws͟haḳān and Natanz, which have an elevation of 5-7,000 ft., with peaks rising considerably higher. Under the Sasanians it was an important province, holding a central position (Cf. Christensen, *L'Iran sous les Sassanides*[2], Copenhagen 1944, 506). Hurmuzān, when consulted by ʿUmar b. al-K͟haṭṭāb on his plans for further conquest, advised him to march on Iṣfahān, which he compared to the head whose fall would be followed by that of the two wings, Ād͟harbāyd͟jān and Fārs (Balād͟hurī, *Futūḥ*, Cairo 1957, ii, 371-2; Abū Nuʿaym, *Geschichte Isbahans*, ed. S. Dedering, Leiden 1931, i, 21; Māfarruk͟hī, 6). Balʿamī likened Fārs and Kirmān to the two hands of Iṣfahān and Ād͟harbāyd͟jān and Rayy to its two feet (*Tard͟juma-i taʾrīk͟h-i Ṭabarī*, ed. Muḥammad D͟javād Mas͟hkūr, Tehran 1959-60, 326).

After the Arab conquest Iṣfahān formed part of the province of the D͟jibāl, which corresponded to the earlier Media, and which became known in the 6th/12th century as ʿIrāḳ-i ʿAd͟jam (G. Le Strange, *The lands of the Eastern Caliphate*, 5, 185). According to Ḥamza, Iṣfahān extended from Hamadān and Māh Nihāwand to Kirmān, and from Rayy and Ḳumis to Fārs and K͟hūzistān, and consisted, in pre-Islamic times, of three *ustān*s, 30 *rustāḳ*s, 120 *tasūd͟j*, 5,000 villages, and 7 cities. Four of these became ruined, the province then comprising two *kūra*s, 27 *rustāḳ*s, and 3, 313 villages. When the Arabs came, two more cities were ruined, leaving only D͟jay (Abū Nuʿaym, 14). In 189/804-5 Hārūn al-Ras͟hīd separated the *kūra* of Ḳumm, which consisted of four *rustāḳ*s, from Iṣfahān together with what he added to it from the *rustāḳ*s of Hamadān and Nihāwand, after which Iṣfahān consisted of 23 *rustāḳ*s (Abū Nuʿaym, 14; Ḥasan b. Muḥammad b. Ḥasan Ḳummī, *Taʾrīk͟h-i Ḳumm*, translated by Ḥasan b. ʿAlī b. Ḥasan b. ʿAbd al-Malik Ḳummī, ed. Sayyid D͟jalāl al-Dīn Tihrānī, Tehran 1935, 24-5, 28 ff., 57, 101). Al-Muʿtaṣim made further changes, constituting Karad͟j into a *kūra*, taking four *rustāḳ*s from Iṣfahān and some estates from Nihāwand and Hamadān, after which Iṣfahān consisted of 19 *rustāḳ*s, 1 *kūra*, and 2,500 villages (Abū Nuʿaym, 14).

Under the Mongols the province of Iṣfahān contained three main cities, Iṣfahān, Fīrūzān in the *bulūk* of Lind͟jān, and Fārifāʾān in Rūdas͟ht, and consisted of 8 *bulūk*s, and 400 villages, together with many cultivated lands belonging to these villages. The *bulūk*s were D͟jay (which included the town of Iṣfahān and its environs), with 75 villages, Karārid͟j with 23 villages, Ḳuhāb with 40, both to the south of the town, Barāʾān with 80 villages and Rūdas͟ht with 60 to the east, Burk͟hʷār with 32 to the north, and Mārbīn with 58 and Lind͟jān with 20 to the west (Ḥamd Allāh Mustawfī, *Nuzhat al-Ḳulūb*, ed. G. Le Strange, London 1919, 48, 50-1). In the 19th century Iṣfahān formed an extensive province divided into 9 *bulūk*s, the ninth being Karvan, north of Lind͟jān, 8 *maḥall*, namely Rār, Kiyār, Mīzdad͟j, and Gandumān (which together formed Čahār Maḥall), Simīrum, D͟jarḳūya, Ardistān, and Ḳuhpāya (south of Ardistān, and east of Iṣfahān, on both sides of the Zāyanda-rūd river), two *ḳaṣaba*s, Nad͟jafābād and Ḳumis͟ha (the modern S͟hahriḍā), and 5 *nāḥiya*s, Čādagān, Varzaḳ, Tuk͟hmāḳlū, Gurd͟jī, and Čināṛūd, which together formed Firaydan (Muḥammad Mihdī b. Muḥammad Riḍā al-Iṣfahānī, *Niṣf-i d͟jahān fī taʿrīf āl Iṣfahān*, ed. Manūčihr Sutūda, Tehran 1962-3, 21-2, 296-336; A. Houtum-Schindler, *Eastern Persian Irak*, London 1898, 125-9). The number of villages in all the *bulūk*s except Karārid͟j and Barāʾān, which had declined, and Rūdas͟ht, which was unaltered, had increased by the 19th century (Ḥasan K͟hān S͟hayk͟h D͟jābirī Anṣārī, *Taʾrīk͟h-i niṣf-i d͟jahān va hama-i d͟jahān*, lith., n.d., 168 ff.). Under Riḍā Shāh Iṣfahān was reduced to a district or sub-province (*s͟hahristān*) and formed part of the Tenth Ustān, which also included, as separate *s͟hahristān*s, S͟hahr-i Kurd, S͟hahriḍā, Firaydan, Yazd, Ardistān, and Nāʾīn (Ḥasan ʿĀbidī, *Iṣfahān az liḥāẓ-i id͟jtimāʿī va iḳtiṣādī*, Iṣfahān 1956-7, 6). Its population according to the census of 1319 (A.H.S.)/1941-2 was 240, 598. By 1956-7 the

population of the *s͟hahristān*, which comprised the town of Iṣfahān, Sidih, Falāvard̲j̲ān, Nad̲j̲afābād, and Kūhpāya (Ḳuhpāya), was 880,027 (*ibid.*, 53).

Physically and climatically Iṣfahān is a varied province ranging from the mountain districts of Firaydan and Čahār Maḥall, with their extensive pastures where transhumance is practised, the plateau in the north and north-west where oasis-farming prevails, the immensely fertile riverain plain of Iṣfahān, and districts in the east and north-east bordering the *kavīr*. Rainfall is heaviest in the mountain districts of Firaydan and Čahār Maḥall, where it is *c.* 10 inches with heavy snowfalls in winter. In the town of Iṣfahān the annual rainfall is *c.* 5 inches and falls mainly from November to April. The prevailing winds are north-west in winter and south-east in summer. Temperature varies with altitude. Extremes of heat and cold occur in August and January. In the mountain districts the cold is intense in winter, but the heat is not very great in summer. In the neighbourhood of the town of Iṣfahān the seasons are extremely regular. The mean monthly maximum temperature in the town in August is 36.1° C. and the mean monthly minimum temperature in January is -2.2° C. Humidity is low. Outbreaks of plague are recorded in 324/936, 344/955-6, (von Kremer, *Culturgeschichte*, Vienna 1875, ii, 492), and 423/1031-2, when 4,000 people died (Ibn al-At̲h̲īr, ix, 290), and 810/1407-8 (ʿAbd al-Razzāḳ, *Maṭlaʿ al-saʿdayn*, ed. Muḥammad S̲h̲afīʿ, Lahore 1941, i, 110). The only severe earthquake recorded in Iṣfahān took place in Rabīʿ I 239/950, when many people were killed (Houtum-Schindler, 124; Muḥammad Mihdī, 96).

Except in Firaydan and Čahār Maḥall, where dry farming is practised, all cultivation is irrigated by river water, *ḳanāt*s, or wells. Water in the Iṣfahān plain is found at a depth of 12-15 ft. (Muḥammad Mihdī, 83). In recent years a large number of machine-operated wells have been sunk, which has been a contributory factor in the lowering of the water-table which has taken place. The Zāyanda-rūd River, or Zanda-rūd (also called by Ibn Rusta, Māfarruk̲h̲ī and others the Zarīn-rūd), which rises on the eastern slopes of the Zarda Kūh, receives various tributaries from Firaydan and Čahār Maḥall and then flows south-east through the town of Iṣfahān and finally disappears in the Gāvk̲h̲ʷānī (Gāvk̲h̲ūnī) marsh to the east of the town. Between Lind̲j̲ān, where the Zāyanda-rūd enters the Iṣfahān plain and the Gāvk̲h̲ʷānī, it waters the *bulūk*s of Lind̲j̲ān, Mārbīn D̲j̲ay, Karārid̲j̲, Barāʾān, and Rūdas̲h̲t, by means of 105 canals, known locally as *mādī*s. The original distribution of the water was attributed by Ibn Rusta to Ardas̲h̲īr b. Bābak (155). The modern division of the water goes back, according to tradition, to S̲h̲āh ʿAbbās. Between Lind̲j̲ān and the Gāvk̲h̲ʷānī the river was crossed by twelve permanent and two temporary bridges. Below the last of these at Varzana there are three dykes or dams for the purpose of raising the water to irrigate the land on either side. One, the Band-i Marwān, was built in Umayyad times (Ibn Ḥawḳal, ii, 365-6; Muḥammad Mihdī, 16-17, 94-104; Houtum-Schindler, 17-18; Ḥusayn K̲h̲ān Taḥwīldār-i Iṣfahān, *D̲j̲ug̲h̲rāfiyā-yi Iṣfahān*, ed. Manūčihr Sutūda, Tehran 1964-5, 37 ff.; A. K. S. Lambton, *The regulation of the waters of the Zāyanda Rūd* in *BSOAS*, ix/3 (1937-9), 663-73). In 1954 a tunnel connecting the Zāyanda-rūd with the R. Kārūn was opened at Kūhrang, which materially increased the flow of water in the Zāyanda-rūd. This plan was first conceived by S̲h̲āh Ṭahmāsp. His successor, S̲h̲āh ʿAbbās, began to cut through the mountains near Kūhrang, but the work was abandoned before completion. New plans were made during the reign of Riḍā S̲h̲āh to tunnel through the Kūhrang in order to join the two rivers (ʿĀbidī, 74). In 1970 the S̲h̲āh ʿAbbās the Great dam was opened in the Kavand district. This dam enables the flow of water to be regulated throughout the year so that surplus water no longer flows into the Gāvk̲h̲ʷānī marsh, which was reported to be drying up.

Many of the early Islamic geographers, Māfarruk̲h̲ī, his Persian translator, Ḥusayn b. Muḥammad b. Abi 'l-Riḍā Āvī (*Tard̲j̲uma-i Maḥāsin-i Iṣfahān*, ed. ʿAbbās Iḳbāl, Tehran 1949-50), and numerous other writers speak of the excellent climate, fertility and abundant crops of Iṣfahān. These included wheat, barley, millet, opium, which became an important export in the 19th century (Curzon, *Persia and the Persian question*, London 1892, ii, 42; Muḥammad Mihdī, 125), rice (in Lind̲j̲ān and Alind̲j̲ān), cotton, tobacco, various oilseeds, pulses and legumes, beet, madder, saffron, many kinds of vegetables and herbs, melons, grapes, fruits of various kinds, almonds and nuts (Ibn Ḥawḳal, ii, 363-7; Muḳaddasī, 386-9; Iṣtak̲h̲rī, 198-200; Ḥusayn K̲h̲ān Taḥwīldār, 43 ff.; S̲h̲ayk̲h̲ D̲j̲ābirī Anṣārī, 168 ff.; Muḥammad Mihdī, 19-20, 113-25). The Iṣfahānī peasant is known for his thrift and good farming (A. K. S. Lambton, *The Persian Land Reform 1962-1966*, Oxford 1969, 145). Animal manure, sewage and pigeon manure collected in pigeon-towers, a characteristic feature of the landscape of the Iṣfahān plain, noted by many travellers (see Curzon, ii, 19-20), have traditionally been used in agriculture round Iṣfahān. Ḥamd Allāh Mustawfī mentions excellent pastures in the neighbourhood of Iṣfahān (*Nuzhat*, 49). In many parts of the province flocks are a supplementary source of livelihood, and in Firaydan and Čahār Maḥall the main source. From these two districts abundant meat supplies also were available to Iṣfahān. Formerly horse-breeding and mule-breeding were important in Čahār Maḥall (S̲h̲ayk̲h̲ D̲j̲ābarī Anṣārī, 182-3), and camels were kept in the Ardistān district (*ibid.*, p. 191). Rugs and carpets are woven in different parts of the province. Iṣfahān was also noted for its textiles (cf. Olearius, *The voyages and travels of the ambassadors....*, London 1669, 225), armour and brass-work. Small mineral deposits were formerly worked in Ḳuhistān and Taymara (Abū Nuʿaym, i, 32; Māfarruk̲h̲ī, 18, 39), but had fallen out of use by the second half of the 19th century (Muḥammad Mihdī, 20).

The city of Iṣfahān, situated on longitude 51°35 east and latitude 32°40 north at an altitude of some 5,200 ft. above sea-level, is an old foundation, centred originally on the village of D̲j̲ay, otherwise called S̲h̲ahristān or S̲h̲ahristāna, two miles to the west of which was Yahūdiyya, where Jews are supposed to have been settled by Nebuchadnezzar (Schreiber, *Rev. des Études Juives*, xii, 259; Ibn al-Faḳīh, 261), or under Yazdigird I at the request of his Jewish wife S̲h̲ōs̲h̲anduk̲h̲t (E. Blochet, *Liste des villes*, para. 54 in *Receuil des travaux*, xvii, 1895; J. Marquart, *Ērānšahr*, 29). Ancient legends, transmitted by Ibn Rusta, attribute the building of the citadel to Kay Kāʾūs [*q.v.*]. Yahūdiyya later became the centre of the city while S̲h̲ahristān became a suburb.

The province of Iṣfahān, in view of its central position, has experienced most of the vicissitudes undergone by Persia since the Arab conquest. The population is nevertheless remarkably homogenous, apart from certain well-marked geographical areas, notably Firaydan and Čahār Maḥall, which are inhabited chiefly by Bak̲h̲tiyārī tribes [*q.v.*], and small Jewish

and Christian minorities mainly in the town of Iṣfahān. For the rest the various settlers brought in by different dynasties which successively ruled the province have been absorbed into the local population (cf. Ḥusayn Khān Taḥvīldār, 91-2). Jews, as stated above, have been settled in Iṣfahān from ancient times. Benjamin of Tudela, writing in the 6th/12th century, states that there were 15,000 Jews in the town (Elkan Adler, *Jewish Travellers*, London 1930, 53). By the 19th century their numbers had fallen. Curzon puts them at only 3,700 (i, 510; see further W. J. Fischel, *Isfahān, the story of a Jewish community in Persia*, in *The Joshua Starr Memorial Volume*, New York 1953, 111 ff.). Under Shāh ʿAbbās Armenians were brought from Djulfā and settled south of Iṣfahān in a suburb which came to be known as New Djulfā. Towards the end of the 11th/17th century their numbers reached 30,000. After the fall of the Ṣafawids, because of oppression and persecution, their numbers were greatly reduced. In 1889 there were only some 2,000 Armenians in Djulfā (Curzon, ii, 51-3; L. Lockhart, *The fall of the Safavi dynasty and the Afghan occupation of Persia*, Cambridge 1958, 484-5). Small settlements of Armenians and Georgians in Firaydan and Čahār Maḥall are also said to go back to the time of Shāh ʿAbbās (Curzon, ii, 284).

Iṣfahānīs are noted for their vigour, quickness of intellect, and good craftmanship. Māfarrukhī states that the best Iṣfahānīs were very good but the bad very bad (21). Ḥusayn b. Muḥammad b. Abī 'l-Riḍā Āvī also mentions their intelligence and skill as craftsmen (78; cf. also Muḥammad Mihdī, 126). Al-Ḳazwīnī similarly praises their craftsmanship and learning in *fiḳh*, *adab*, astronomy and medicine (*Āthār al-bilād wa-akhbār al-ʿibād*, Beirut 1960, 297). Māfarrukhī relates that Anūshīravān preferred Iṣfahānī troops, especially those of Firaydan, over all others (42). The city has produced many scholars, divines, and literary men (for accounts of these see Abū Nuʿaym; Māfarrukhī; Shaykh Djābirī Anṣārī; ʿAbd al-Karīm Djazī, *Ridjāl-i Iṣfahān ya tadhkirat al-ḳubūr*, ed. Muṣliḥ al-Dīn Mahdawī, Iṣfahān 1949 (2nd ed.); and Muṣliḥ al-Dīn Mahdawī, *Tadhkira-i Shuʿarā-yi Iṣfahān*, Iṣfahān 1966-7).

Factional and sectarian strife between Shāfiʿīs and Ḥanafīs appears to have been a common feature of Iṣfahānī life in medieval times (cf. the verses by Kamāl al-Dīn Iṣfahānī quoted by Ḥamd Allāh Mustawfī, *Nuzhat*, 49-50, and others). Ibn Baṭṭūṭa, who visited Iṣfahān in 727/1326-7, states that the people of Iṣfahān had fine figures and clear white skins tinged with red, and were brave, pugnacious, and generous, and given to much hospitality, and also to sectarian strife. "The city of Iṣfahān is one of the largest and fairest of cities, but is now in ruins for the greater part, as the result of the feud there between the Sunnīs and Rāfiḍīs" (*The travels of Ibn Baṭṭūṭa A.D. 1325-1354*, Hakluyt, ed. H. A. R. Gibb, ii, 294-5). Ḥamd Allāh Mustawfī also mentions their courage and the prevalence of faction. He states that the majority were Sunnīs of the Shāfiʿī rite and that they performed their religious duties very exactly (*Nuzhat*, 56). After the adoption of Shīʿism under the Ṣafawids, Shāfiʿī-Ḥanafī strife disappeared, but a new form of factional strife between Ḥaydarīs and Niʿmatīs, popularly supposed to have been started and encouraged by Shāh ʿAbbās, began. It was still strong in the 19th century (Ḥusayn Khān Taḥwīldār, 89; Chardin, *Voyages*, ed. Langlès, Paris 1811, additions by the editor, viii, 155-6; *The travels of Monsieur de Thevenôt into the Levant*, London 1687, ii, 108 bis.). Curzon, writing in the late 19th century, gives an unfavourable account of the Iṣfahānīs. He alleges that they enjoyed an unenviable reputation for cowardice and morals, and were niggardly and close in business matters, and that the *lūṭī*s of Iṣfahān were regarded as the biggest blackguards in Persia (ii, 43).

Iṣfahān in the early Islamic centuries. There are two versions of the capture of Iṣfahān by the Muslims. According to the Kūfan school, it took place in 19/640. On the order of the caliph ʿUmar, ʿAbd Allāh b. ʿItbān marched on Djay, which was commanded by one of the four *pādhospān* of the Persian empire (see Nöldeke, *Gesch. der Perser und Araber, etc.*, 151, no. 2; cf. Christensen, *L'empire des Sassanides*, 87), who, after several battles, capitulated on condition that *djizya* was replaced by an annual tribute. Ṭabarī gives the date as 21/641-2 (ed. Leiden, i, 2637 ff.). The Baṣran school state that in 23/644 Abū Mūsā al-Ashʿarī [*q.v.*], after Nihāwand, took Iṣfahān, or that his lieutenant ʿAbd Allāh b. Budayl received the capitulation of the town on the usual conditions of the establishment of *kharādj* and *djizya* (Balādhurī, *Futūḥ al-buldān*, Cairo 1957, ii, 383-4; on these varying versions see Caetani, *Annali*, v, yr. 23, para. 4-25). Māfarrukhī states that the *djizya* and *kharādj* of Iṣfahān in the first year of the conquest amounted to 40,000,000 *dirhams* (p. 12).

Under the Patriarchal Caliphs and the Umayyads, Iṣfahān came under the jurisdiction of the governors of Baṣra and ʿIrāḳ, who usually appointed the governors of Iṣfahān. It did not entirely escape the disturbances committed by the Khāridjīs. In 68/687-8 the town was besieged by the Azāriḳa branch, who were defeated by ʿItāb b. Warḳa and fled to Fārs and Kirmān. From 75/694 Ḥadjdjādj b. Yūsuf [*q.v.*], who had become governor of ʿIrāḳ, appointed governors over Iṣfahān. During his government there appears to have been some settlement by Banū Tamīm in Djay, Banū Ḳays in the *rustāḳ* of Anār and Taymara, Banū ʿAnaza in Djāpalaḳ and Barḳrūd, and Ashʿarīs in Kumīdān, the *rustāḳ* bordering Rayy and Ḳumīs (*Taʾrīkh-i Ḳumm*, 264). Arab settlement in Ardistān also traditionally goes back to early Islamic times, and in the late 19th century Ardistānīs still traced back their genealogies to Arab ancestors (Shaykh Djābirī Anṣārī, [*q.v.*] 191).

In 127/744-5 ʿAbd Allāh b. Muʿāwiya, the ʿAlid rebel, seized Iṣfahān and held it for some two years until he was put to flight by ʿĀmir b. Ḍabāra, who recovered Iṣfahān for the Umayyads. After the ʿAbbāsid revolt broke out in 130/747, Ḳaḥṭaba, Abū Muslim's general, defeated an Umayyad force in the neighbourhood of Iṣfahān and in 131/748-9 a second and larger force under ʿĀmir b. Ḍabāra was defeated near the town. From 132/749-50 ʿAbbāsid governors were appointed over Iṣfahān. On the whole, the history of Iṣfahān under the early ʿAbbāsids appears to have been uneventful, apart from its abortive seizure in 138/755-6 by Djumhūr b. al-ʿIdjlī, who rebelled against al-Manṣūr. Under Hārūn al-Rashīd, as stated above, Ḳumm was separated from Iṣfahān in 189/804-5. Its *kharādj* after this amounted to some 12,000,000 *dirhams* (*Taʾrīkh-i Ḳumm*, 31). After the civil war, Iṣfahān became part of the government of Ḥasan b. Sahl. In 200/815-6 and 201/816-17 there was a severe famine. Whether this had anything to do with an apparent decrease in the revenue or not, it had fallen to 10,500,000 *dirhams* in the year 204/237 according to Ḳudāma (von Kremer, *Culturgeschichte*, i, 337). In 221-2/836-7 it was still lower, being only 7,000,000 *dirhams* according to Ibn Khurradādhbih

(*ibid.*, 364). This may, perhaps, have been due in part to the fact that about 218/833 the Khurramdīnī movement, which had caused dislocation in Ādharbāydjān for many years, spread to Iṣfahān. An army sent by al-Muʿtaṣim put the disturbances down. According to Yaʿḳūbī, the revenue had again risen towards the end of the century to 10,000,000 *dirhams* (*ibid.*, 377) while Ibn Rusta puts it at over 10,300,000 *dirhams* (154).

In 253/867 ʿAbd al-ʿAzīz b. Abī Dulaf was appointed to the government of Iṣfahān, which remained in the hands of the Banū Dulaf until 282/895-6 when al-Muʿtaḍid seized Ibn Abī Dulaf's property (Ibn al-Athīr, vii, 327). In 260/873-4 Yaḥyā b. Harthama appears to have reassessed Iṣfahān (*Taʾrīkh-i Ḳumm*, 185). In the following year, Iṣfahān passed briefly under the control of the Ṣaffārid, Yaʿḳūb b. Layth. The Banū Dulaf, who had been reinstated, continued, however, to hold the government of the province, as they did also under ʿAmr b. Layth, who succeeded in 265/879. In due course, when al-Muwaffaḳ felt strong enough to move against ʿAmr, he ordered Aḥmad b. ʿAbd al-ʿAzīz b. Abī Dulaf in 271/884-5 to attack ʿAmr. The latter was defeated and Iṣfahān once more came under the control of the caliphate. In 284/897-8 ʿAlī b. ʿĪsā was sent to the Djibāl and ordered to reassess Iṣfahān and abrogate the assessment (*dastūr*) of Yaḥyā b. Harthama (*Taʾrīkh-i Ḳumm*, 184-5). Ibn Rusta, who lived in Iṣfahān and probably wrote his account of the town about 290/903, described Djay as measuring half a league across and covering an area of 2,000 *djaribs* (*ca.* 600 acres). It had four gates and 100 towers (152).

ʿAbd Allāh b. Ibrāhīm al-Mismaʿī, who had been appointed governor in 290/902-3, rebelled in 295/907-8 with the support of Kurds from the mountain regions to the south-west. He was subdued by a force sent by al-Muḳtadir under Badr al-Ḥammāmī, who became governor of Iṣfahān (Ibn al-Athīr, viii, 9). The latter was succeeded by ʿAlī b. Wahsūdān, the Daylamite, who, when he was appointed governor of Fars in 300/912-3, also became governor of Iṣfahān. In 301/913, Iṣfahān passed for a brief period under the nominal rule of the Sāmānids, but in 304/916-17 it was again under an ʿAbbāsid governor, Aḥmad Ṣaʿlūk, during whose tenure of office Ḥamīd, the vizier of al-Muḳtadir in 307/919-20, farmed the *kharādj* of Iṣfahān on a *muḳāṭaʿa* contract. In 311/923-4 Aḥmad rebelled but was defeated and killed.

The Būyids. A troubled period now began for Iṣfahān. In 315/927 Mardāwīdj b. Ziyār [*q.v.*] took the city and appointed Aḥmad b. Kayghulugh governor. In 319/931 the Daylamite Lashkarī took Iṣfahān from Aḥmad, who subsequently recovered the city and killed Lashkarī (*The eclipse of the ʿAbbāsid Caliphate*, ed., tr. and elucidated by H. F. Amedroz, Oxford 1921, iv, 239-40). Muẓaffar b. Yāḳūt, whom al-Muḳtadir had appointed governor of Iṣfahān in the same year, does not appear to have gone there (*ibid.*, 236). Mardāwīdj meanwhile returned to the city where he billeted large numbers of troops. Some two years later in 321/933 ʿAlī b. Būya ʿImād al-Dawla, who had been appointed by Mardāwīdj over Karadj, took Iṣfahān, but retired when Mardāwīdj sent his brother Wūshmgīr against him. In the same year al-Ḳāhir appointed Muḥammad b. Yāḳūt governor of Iṣfahān after he had written to Mardāwīdj bidding him to evacuate the city in return for recognition as ruler of Rayy and the Djibāl, and to Wūshmgīr to retire from Iṣfahān. Al-Ḳāhir was deposed shortly afterwards (*ibid.*, 307). Mardāwīdj retained Iṣfahān and in the following year, after ʿAlī b. Būya had seized Fārs and his brother Aḥmad had occupied Kirmān, set out again for Iṣfahān, where he was assassinated by his Turkish troops. ʿAlī b. Būya and his brother Ḥasan Rukn al-Dawla then occupied Iṣfahān, turning out Wūshmgīr. The latter recovered Iṣfahān in 327/938-9, but in the following year Ḥasan retook it and continued to rule it until his death in 366/976, though a Khurāsānī force under Manṣūr b. Ḳarātegīn temporarily took the city in 339/950-1. In 343/954 Iṣfahān again suffered a Khurāsānī incursion, and was plundered by Bū ʿAlī Čaghānī.

On the death of Rukn al-Dawla Iṣfahān went to his son Muʾayyid al-Dawla, who, from 367/977, ruled as ʿAḍud al-Dawla's subordinate. He was followed in 372/982-3 by his brother Fakhr al-Dawla. The latter died in 387/997, and was succeeded by his four-year-old son Madjd al-Dawla, whose mother became the effective ruler of the kingdom. Madjd al-Dawla, resenting his mother's interference, made an abortive attempt in 397/1006 to throw off her control. In the following year ʿAlāʾ al-Dawla Abū Djaʿfar Muḥammad b. Dushmanziyār, the maternal uncle of Fakhr al-Dawla's wife, became governor of Iṣfahān, which he ruled intermittently until his death in 433/1041-2. He was turned out by the Būyid, Ibn Fūlād, in 407/1016-17 but regained the city in 411/1020-1. In 418/1027-8 he was besieged for four months by ʿAlī b. ʿUmrān the Ispahbud and Manūčihr b. Ḳābūs. In 420/1029 he lost Iṣfahān to Masʿūd b. Maḥmūd the Ghaznavid. Having appointed a governor over the city, Masʿūd went away, but when the Iṣfahānīs rose and killed the Ghaznavid governor, he returned and massacred a large number of the inhabitants. In the following year ʿAlāʾ al-Dawla recovered the city, but Anūshīravān b. Ḳābūs, with the help of Ghaznavid troops, put him to flight. In 423/1032 he returned to Iṣfahān and in 424/1032-3 Masʿūd gave him the government of Iṣfahān in return for a sum of money. In the following year ʿAlāʾ al-Dawla was again defeated by a Ghaznavid force. He retired to Firaydan and Khwānsār. After collecting reinforcements he retook Iṣfahān in 427/1035-6.

In spite of repeated disorders in Būyid times, Iṣfahān became a flourishing and extensive city, especially during the vizirate of Ismāʿīl b. ʿAbbād to Muʾayyid al-Dawla and Fakhr al-Dawla (Māfarrukhī, 40). The Ṭabara or Ṭabarak quarter was added by the Būyids, its fortress being built according to tradition by Rukn al-Dawla or Muʾayyid al-Dawla. In 429/1037-8 ʿAlāʾ al-Dawla built a wall round the city, for which purpose he laid heavy impositions on the people (Māfarrukhī, 81, 113). The city under the Būyids contained splendid private and official residences, stables, baths, gardens, and fine well-stocked bazaars (Māfarrukhī, 83 ff.). Ibn Ḥawḳal mentions the wealth and trade of Iṣfahān and its export of silks and textiles to other provinces. No other city between ʿIrāḳ and Khurāsān except Rayy had more trade. There was a Friday mosque in Shahristān and Yahūdiyya, which was more than twice the size of the former and bigger than Hamadān (ii, 362-3; Iṣṭakhrī, 198-9; Le Strange, 203-4; *Ḥudūd al-ʿālam*, translated and explained by V. Minorsky, London 1937, 131). Māfarrukhī records that formerly nearly 2,000 sheep and goats and 100 head of cattle were slaughtered daily in Iṣfahān (86-7). If these figures are at all accurate, even allowing, in view of the high prosperity, for a much heavier meat consumption than in later times, the population, on a conservative estimate, would have been over 100,000.

The Saldjūḳs. During the reign of Maḥmūd, the Ghuzz [*q.v.*] had begun to move into Persia. They

were active to the north and north-west of Iṣfahān but do not appear to have penetrated to Iṣfahān itself, though in 430/1038-9 ʿAlāʾ al-Dawla marched from Iṣfahān against bodies of Ghuzz who had been operating in the neighbourhood of Dīnawar and defeated them (Ibn al-Athīr, ix, 217). It was not until some years after the battle of Dindinḳān (431/1040) that the Saldjūḳs took Iṣfahān. In 434/1042-3 Ṭughril Beg advanced on the city. Farāmurz, who had succeeded his father ʿAlāʾ al-Dawla in the previous year, bought him off and agreed to read the *khuṭba* in his name (Ibn al-Athīr, ix, 349). Farāmurz later allied himself with the Būyid Abū Kālīdjār and omitted Ṭughril's name from the *khuṭba*. In 438/1046-7 Ṭughril once more advanced on Iṣfahān and on this occasion laid siege to the city. Farāmurz submitted, agreeing to pay an annual tribute and to read the *khuṭba* in Ṭughril's name, but once Ṭughril left the district he again withdrew his allegiance.

In 442/1050 Ṭughril besieged the city for the second time. It fell after nearly a year, in Muḥarram 443/1051 (Ibn al-Athīr, ix, 385). Ṭughril appointed a young Nīshāpūrī over the city and ordered that no taxes should be demanded for three years. His conciliatory policy was successful. The city rapidly recovered its prosperity and those who had been scattered abroad during the years of disorders and famine returned. Nāṣir-i Khusraw, who came to Iṣfahān via Khān Lindjān in 444/1052, wrote that the people there were secure and at peace and went about their own business. Speaking of Iṣfahān, he states that it was the most populous and flourishing city that he had seen in Persian-speaking lands. Describing the thriving condition of the town, he states that it had a large Friday mosque and many bazaars, including one occupied by 200 *ṣarrāf*s, and caravansarais in which many merchants were to be found. The town had a strong wall with battlements, said to be 3½ *farsakh*s in circumference; the quarters of the town were divided from each other by gates (*Safarnāma*, ed. C. Schefer, Paris 1881, Persian text, 92-3).

Ṭughril Beg is alleged to have been much attached to the city. He moved his capital there from Rayy and made it his chief residence for the last twelve years of his reign. He spent over 500,000 *dīnār*s on public buildings and improvements in the city and its environs (Māfarrukhī, 101). It continued throughout the Great Saldjūḳ period to be one of the main centres of the empire and to be directly administered (whereas much of the empire was alienated from the control of the central government as *iḳṭāʿ*s). Alp Arslān also treated the people of Iṣfahān with favour (Māfarrukhī, 101-2). Malikshāh received the caliph's investiture as *walī al-ʿahd* there in 464/1071-2 (Ibn al-Athīr, x, 48). On the death of Alp Arslān, Ḳāwurd b. Čaghrī Beg, in an abortive attempt to assert his claim to the throne, briefly occupied Iṣfahān. During the reign of Malikshāh, Iṣfahān reached great heights and became an important Sunnī centre (see A. Bausani, *Religion in the Saljuq period*, in *The Cambridge History of Iran*, Cambridge 1968, v, 283-302). Both he and his vizier Niẓām al-Mulk exerted themselves in its development. Māfarrukhī relates that it was exempted during the reign of Malikshāh from *ḳisma* and *taḳsīṭ* and extra-ordinary dues. Announcements to this effect were made in the mosques and tablets put up at the gates and on the walls of the bazaars (103-4). The Gulbār quarter, in which is situated the square now known as the Maydān-i Kuhna, with government offices and residences was added. New mosques were built and additions made to old ones, notably the old Friday mosque (see A. Godard, *Historique du Masdjid-é Djum'a d'Isfahan*, in *Āthār-i Īrān*, i, ii, and iii, 1936-8; A. Gabriel, *Le Masdjid-i Djumʿa d'Iṣfahān*, in *Ars Islamica*, ii, 1935). A fortress was made in Diz Kūh (Shāhdiz) where Malikshāh kept his armoury and treasury. Niẓām al-Mulk built a Niẓāmiyya in the Dardasht quarter. The annual revenue of the property which he constituted into *waḳf* for it was over 10,000 *dīnār*s (Māfarrukhī, 104-5). According to Ḥusayn b. Muḥammad b. Abi 'l-Riḍā Āvī the *madrasa* was still in existence in 729/1328-9, but its endowments had been usurped (p. 142).

With the death of Malikshāh in 485/1092, Iṣfahān ceased to prosper, though as the capital of the empire its possession was of importance to those who contended for power. The townspeople were probably not closely engaged in these struggles, but it is likely that the prevailing insecurity and the coming and going of troops dislocated their lives to some extent and engendered discontent. The balance between order and disorder in the city was always delicate, as the following incident which happened about this time shows. A report was spread that a certain blind man, alleged to be a Bāṭinī, had lured unsuspecting people to their death. The populace rioted and seized and burnt all who were accused of being Bāṭinīs (Ibn al-Athīr, x, 214-5). This did not, however, end the activities of the Bāṭinīs. ʿAbd al-Malik ʿAṭṭāsh, the *dāʿī*, had laid the foundations of the movement carefully during the reign of Malikshāh, and in the disorders following his death the movement spread.

Tādj al-Mulk and Turkān Khātūn, Malikshāh's wife, read the *khuṭba* in Baghdād, where Malikshāh had died, in the name of her four-year-old son Maḥmūd and hastened to Iṣfahān. Barkyāruḳ, the son of Zubaydā Khātūn, who had been seized by the supporters of Turkān Khātūn, but later freed by the Niẓām *mamlūk*s, left the city on the approach of Turkān Khātūn, but subsequently returned and besieged her there (*ibid.*, x, 146-7). In 487/1094, on the sudden death of Turkān Khātūn, who had meanwhile distributed to her followers all the treasure and stores which had been accumulated in Iṣfahān, Barkyāruḳ re-entered the city. He remained in possession for some years, although mainly absent from it dealing with rebellions in other parts of his empire. From about 490/1097, however, when the struggle with his half-brother Muḥammad began, his position in the city was no longer secure. In 492/1098-9, after numbers of his army had deserted to Muḥammad, he was refused entry and forced to retire to Khūzistān (*ibid.*, x, 195). The struggle between the brothers continued for the next five years or so, during which time the Bāṭinīs greatly increased their power in Iṣfahān and the neighbourhood. Aḥmad b. ʿAbd al-Malik ʿAṭṭāsh, who had succeeded his father as *dāʿī* at Iṣfahān, obtained entry to the fortress of Shāhdiz (according to one account as schoolmaster to the garrison), won them over and seized the fortress. By 494/1100 the Bāṭinīs were collecting taxes in its neighbourhood and had also gained possession of the fortress of Khān Lindjān. Barkyāruḳ, who had been, rightly or wrongly, accused of Bāṭinī sympathies, now decided to move against the Bāṭinīs. The Shāfiʿī *ḳāḍī*, Abu 'l-Ḳāsim Khudjandī, roused the populace, and a large number of persons accused of being Bāṭinīs were rounded up and burnt (*ibid.*, x, 214-5). The Bāṭinīs, however, remained in possession of Shāhdiz.

In 495/1102, Muḥammad, having been defeated near Rayy by Barkyāruḳ fled to Iṣfahān, where he was besieged by his brother for some nine months. During this period he was forced twice to ask loans of

the prominent people of the city to satisfy the demands of his troops (*ibid.*, x, 228). When the city finally became short of food, Muḥammad escaped and fled to Ādharbāydjān, where he was pursued by Barkyāruḳ (*ibid.*, x, 227-8). The struggle continued until 497/1103-4 when peace was made and Barkyāruḳ returned to Iṣfahān (*ibid.*, x, 253-4). On Barkyāruḳ's death in the following year Muḥammad re-entered the city (*ibid.*, x, 273). One of his first tasks was to reduce the Bāṭinīs in Shāhdiz and the neighbourhood. For some time Aḥmad b. ʿAṭṭāsh negotiated successfully to be allowed to remain as chief of the garrison, and it was not until 500/1107 that a capitulation was agreed to. Some of the garrison accepted a safe conduct, but the remainder fought to the end. Aḥmad was finally captured, paraded through the town and skinned alive (see further M. G. S. Hodgson, *The order of the Assassins*, The Hague 1955, and idem, *The Ismāʿīlī state*, in *The Cambridge History of Iran*, v, 422-82). There does not appear to have been any renewal of Bāṭinī activities after this apart from isolated incidents, such as the burning of the Friday mosque and its library in 515/1121-2, which was attributed to them (Ibn al-Athīr, x, 420).

From 500/1106-7 until Muḥammad's death in 511/1118 Iṣfahān remained the main centre of the Great Saldjūḳ empire. Thereafter power moved to Khurāsān, where Sandjar ruled as the Great Saldjūḳ sultan, while Iṣfahān and the western provinces were disputed by the Saldjūḳs of ʿIrāḳ and their atabegs. There were renewals of sectarian strife, notably an outbreak in 560/1164-5 between the Khudjandī faction and others accompanied by arson, destruction of property and loss of life (*ibid.*, xi, 210). In 590/1194 Iṣfahān was taken by the Khwārazmshāh Tekish, to whom the caliph al-Nāṣir had appealed about 588/1192 for help against Ṭughril, the last of the Saldjūḳs of ʿIrāḳ. Iṣfahān changed hands several times in the subsequent campaigns between the caliph and the Khwārazmshāh. In 623/1226 the Mongol armies under Djurmāghūn reached the neighbourhood of Iṣfahān and in 625/1228 Djalāl al-Dīn Khwārazmshāh defeated them outside the city (J. A. Boyle, *Dynastic and political history of the Īl-Khāns*, in *The Cambridge History of Iran*, v, 330). Although he was unable to sustain his victory, Iṣfahān did not finally fall until about 638/1240-1, when it was delivered into the hands of the Mongols by treachery within the walls (Minhādj al-Dīn al-Djuzdjānī, *Ṭabaḳāt-i Nāṣirī*, Calcutta 1824, 422-3).

Īlkhāns and Tīmūrids. In addition to the disorders and extortion which everywhere accompanied Mongol rule, the fact that the centre of the kingdom was moved to Ādharbāydjān was also to the detriment of Iṣfahān. The Iṣfahānīs did not easily accept Mongol rule and proved a tough proposition for the conquerors. Bahāʾ al-Dīn b. Muḥammad Djuwaynī, who was appointed governor of Iṣfahān and ʿIrāḳ by Abāḳā, took a strong line because of the reputation of the Iṣfahānīs for rioting and disorder. He placed heavy impositions upon them and broke them by his severity. Thieves and disturbers of the peace were reduced to obedience and security was established in the city and countryside (Banākatī, *Taʾrīkh*, ed. Djaʿfar Shiʿār, Tehran 1970-1, 427; Muḥammad Mufīd, *Djāmiʿ-i mufīdī*, ed. Iradj Afshār, Tehran 1961, iii, 119-21).

By the 8th/14th century the natural advantages of Iṣfahān had enabled it to regain some cf its former prosperity. Ḥamd Allāh Mustawfī states that the price fixed for corn and other grain was always moderate and fruit extremely cheap (*Nuzhat*, 49). In 735/1335 *dīwānī* taxes levied as *tamghā* [*q.v.*] amounted to 350,000 currency *dīnārs* in Iṣfahān while 500,000 currency *dinars* were levied as *dīwānī* taxes from the surrounding districts. Fīrūzān, one of the three main cities of the Iṣfahān province in his time, paid 134,500 currency *dīnārs* as *dīwānī* taxation (*ḥuḳūḳ-i dīwānī*, *ibid.*, 50-2). It is difficult to compare these figures with the figures for earlier periods because of the different methods of raising revenue and fluctuations in the value of the coinage. Ḥamd Allāh, however, maintains that there had been a marked decrease in the revenue in Mongol times and that the improvement made under Ghāzān Khān was not sustained. There is no reason to suppose that Iṣfahān was exempted from this general tendency. Ḥamd Allāh also mentions that there were many *madrasas*, *khānḳahs*, and *awḳāf* in Iṣfahān (*ibid.*, 49), though, as stated above, some of them had been usurped. From the account of Ibn Baṭṭūṭa, the craft guilds appear to have been in a thriving condition (ii, 295-6), though we have unfortunately little information about the internal and external trade of Iṣfahān at this time.

With the break-up of the Īlkhān empire, Iṣfahān fell to the Čubanids [*q.v.*]. In 742/1341-2, Shāh Shaykh Abū Isḥāḳ the Īndjūid [see Īndjū] took it from them and later lost it to the Muẓaffarids, when Mubāriz al-Dīn Muḥammad Muẓaffar obtained possession of it in 758/1357. The Muẓaffarids, although much split by internecine strife, were the most successful of the succession states. Their main centres, however, were in Fārs and Kirmān, and their rule did not restore Iṣfahān to its central position. The city was besieged several times and frequently changed hands (Muʿīn al-Dīn Naṭanzī, *Muntakhab al-tawārīkh*, ed. J. Aubin, Tehran 1957, 183 ff.). When, during Tīmūr's second expedition to Persia in 786-9/1384-7, the Muẓaffarid Zayn al-ʿĀbidīn b. Shāh Shudjāʿ refused a summons to join him, Tīmūr marched on Iṣfahān, which he reached in 789/1387. The *ʿulamāʾ* sued for peace. Tīmūr sent *muḥaṣṣils* into the town to collect the money which they had promised. A riot ensued in which the *muḥaṣṣils* were killed, together with many soldiers who had entered the town on their own affairs. Tīmūr in retaliation massacred 70,000 of the inhabitants (Niẓām al-Dīn Shāmī, *Ẓafarnāma*, ed. F. Tauer, Prague 1937, i, 104-5).

Prosperity did not return to Iṣfahān under Tīmūr's successors. Shāhrukh besieged Mīrzā Iskandar there in 817/1414 from 4 Rabīʿ I to 2 Djumādā I when the city fell by assault and was looted (*Maṭlaʿ al-saʿdayn*, i, 269 ff.). In 856/1452 Iṣfahān was taken by Djahānshāh of the Black Sheep and in the following year was sacked by him. In due course it passed under the control of the White Sheep, who ruled from Ādharbāydjān. The Venetians, Josapha Barbaro and Ambrogio Contarini, visited Iṣfahān when Uzun Ḥasan was there in 879/1474-5, and the former estimated the population to be only 50,000 (*Travels to Tana and Persia by Josafa Barbaro and Ambrogio Contarini*, Hakluyt, 1873, 71-2; cf. G. Berchet, *La Repubblica di Venezia e la Persia*, Turin 1865). Even allowing for the roughness of the estimates, it is clear that there had been a big decline in population since Māfarrukhī wrote.

The Ṣafawids. Shāh Ismāʿīl, the founder of the Ṣafawid empire, took Iṣfahān in 908/1502-3. Both he and Shāh Ṭahmāsp made token gestures of favour to the Iṣfahānīs. The former in 911/1505-6, according to an inscription in the Friday mosque, forbade the writing of drafts on the districts of Iṣfahān and their inhabitants (Luṭf Allāh Hunarfar, *Gandjīna-i āthār-i*

ta'rīkh-i Iṣfahān, Iṣfahān 1966-7, 76-7), and the latter, also according to inscriptions in the Friday mosque, remitted various taxes on the guilds and certain dues and tolls in 971/1563-4, and *rāhdārī* on foodstuffs, except imported sugar (*ibid.*, 153-7, 89-90), and also forbade the quartering of troops in the city (*ibid.*, 75-6). In 955/1548 during the rebellion of Ilḳās Mīrzā, Iṣfahān was for a brief period taken by the Ottomans, and for some years prior to the accession of Shāh ʿAbbās great disorder appears to have prevailed in the city (Iskandar Beg, *ʿAlam-ārā-yi ʿAbbāsī*, lith., Tehran 1896-7, 265). By the beginning of the 11th/17th century the Ṣafawid empire extended from Georgia to Afghānistān and from the Caspian Sea to the Persian Gulf. Iṣfahān was its natural political, administrative, and commercial centre, as it had been of the Saldjūḳ empire, and in 1005/1596-7 Shāh ʿAbbās made it his capital. He replanned and largely rebuilt the city. Later additions were made by Shāh ʿAbbās II and Shāh Sulṭān Ḥusayn. Here the Ṣafawid shāhs were visited by embassies from European powers, factors of the great trading corporations, and representatives of the religious orders of Christendom. Many of these foreign visitors resided for long periods in the city, where "a life of gorgeous ceremonial mingled with holiday festivity rendered Isfahan the most famous and romantic city of the East" (Curzon, ii, 22 ff., 546 ff.; see also Lockhart. *The fall of the Ṣafavī dynasty*, app. III, 473-85).

Chardin, who visited Persia from 1664-70 and 1671-77 calls Iṣfahān "the greatest and most beautiful town in the whole orient", in which there were to be found inhabitants of all religions, Christians, Jews, Mahommedans, gentiles, and fire-worshippers, and merchants from the whole world (*Voyages*, ed. Langlès, Paris 1811, viii, 134). He states that there were 162 mosques, 48 colleges, 1,802 caravansarais, 273 baths and 12 cemeteries within its walls. The caravansarais were full of Armenians, who traded in cloth (vii, 367), while the place of the *ṣarrāf*s of earlier times had been taken by *banians*, of whom there were, according to Thévenôt, 1,500 in 1665 (ii, 111; see also Jean-Baptiste Tavernier, *Voyages en Perse 1632-67*, ed. Pascal Pia, Paris 1930, 176 ff.). The city by this time had grown enormously. Estimates of the population varied from 600,000 to 1,100,000. Chardin who records that 2,000 sheep were killed daily in the city, 500 in the suburbs, and 90 in the shah's kitchens (viii, 135), while giving no precise figure for the population, believed Iṣfahān to be as populous as London. This suggests that its population was between 600,000 and 700,000. Muḥammad Mihdī gives the latter figure for the population by the death of Shāh ʿAbbās and estimates it at 1 million under Shāh Ṣafī and still higher under Shāh Sulṭān Ḥusayn (176-8; see further Lockhart, *op. cit.*, 476-7).

Administration under Shāh ʿAbbās and his successors was highly centralized. The different departments, with their elaborate procedures, had their offices in Iṣfahān (see further Mīrzā Rafīʿā, *Dastūr al-mulūk*, ed. Muḥammad Taḳī Dānish Pazhūh, *Rev. de la faculté des lettres et des sciences humaines*, Univ. of Tehran, xv, 5-6 and xvi, 1-4, which in some respects gives a fuller account of the organization of the state than the *Tadhkirat al-mulūk*, tr. and explained by V. Minorsky, London 1943). The city and neighbouring districts came under the *khāṣṣa* administration. Most of the land had been converted into *khāliṣa* and some into *wakf* (see ʿAbd al-Ḥusayn Sipintā, *Ta'rīkhča-i awḳāf-i Iṣfahān*, Iṣfahān 1968-9, 35 ff., 44-5, 51 ff., 64 ff., 111-2; *Gandjīna*, 729-30; Muḥammad Takī Dānish Pazhūh, *Asnād-i wakf-i Khāndār-i Khalīfa Sulṭān*, in *Nāma-i Āstān-i Ḳuds*, ix, 1-2, 97-117; A. A. Salmāsīzāda, *Ta'rīkh-ča-i wakf dar Islām*, Tehran 1964). The vizier of Iṣfahān arranged for the cultivation of the former and the *wazīr-i mawḳūfāt* (also called the *wazīr-i fayḍ āthār*) for the latter (*Dastūr al-mulūk*, xvi, 3, 319-21), while a special department under the *wazīr-i ḥalāl* administered Shāh Sulṭān Ḥusayn's *awḳāf* (*ibid.*, xvi, 3, 322).

In addition to land and property taxes, dues and tolls, the people were subject to *ad hoc* levies, while many local officials, such as the *mīrāb* (*ibid.*, xvi, 4, 432), collected dues and fees as the whole or part of their emoluments. Drafts on the revenue were common practice and certain sums, especially for the payment of officials of the central government, were made a charge on different groups of taxpayers. For example 50 *tūmān*s was levied on the Armenians of Djawlāha (in Djulfā) on account of the *inʿām-i hamasāla* of the *amīr shikārbāshī* (*ibid.*, xvi, 1-2, 89). These practices were known under previous governments, but were less widespread than under the Ṣafawids.

The craft guilds were assessed by the *naḳīb al-ashrāf* in a lump sum, which was subsequently allocated among the individual members, subject to the acceptance of the assessment by two-thirds of the members. The *naḳīb al-ashrāf* also appointed the elders (*rīsh-sifīdān*) of the dervishes and certain other guilds (*ibid.*, xvi, 5-6, 549). Prices were under the control of the *muḥtasib al-mamālik* (*ibid.*, xvi, 4, 418). Some of the guilds performed *corvées* for the court and some from time to time were granted exemptions from taxation. (Tavernier, 239; Chardin, iv, 95, vi, 119-20; A. K. S. Lambton, *Islamic society in Persia*, inaugural lecture, School of Oriental and African Studies, London 1954, 22 ff.; *Gandjīna*, 434-6, for a firman of Shāh ʿAbbās dated 1038/1629 inscribed in the Shāh mosque in Iṣfahān forbidding the writing of drafts on the barbers for any kind of due). Public order within the city was under the *dārūghā* [*q.v.*], who carried out summary punishment for disorders and acts contrary to the *sharīʿa* (*ibid.*, xvi, 4, 428-30). The *ʿasas*, who belonged to the *dārūghā*'s office, patrolled the city with his men (*ibid.*, xvi, 5-6, 551).

The *kalāntar* [*q.v.*] was the main link between the population and the government, corresponding in part to the earlier *ra'īs*. It was his duty to reconcile the interests of the two parties. He was usually recruited from among the notables of the town. He had general oversight of the *kadkhudā*s of the districts and the craft guilds. Together with the vizier, he appointed the *kadkhudā*s (*ibid.*, xvi, 4, 421-2; see also A. K. S. Lambton, *The office of kalantar under the Safavids and Afshars*, in *Mélanges Massé*, Tehran 1963).

Under Shāh ʿAbbās Iṣfahān again became an important religious centre, with this difference that orthodoxy was now Ithnā ʿAsharī Shīʿism. Shīʿī divines were brought to Iṣfahān from other centres and taught and disputed there, but there is unfortunately little information on the course of the conversion of its inhabitants. By the middle of the 17th century religious festivals such as the *ʿīd-i ḳurbān* (see Thevenôt, ii, 107-8 *bis*) and the Muḥarram ceremonies were performed with passion and vigour. Under Shāh ʿAbbās there was strong supervision of religious affairs as there was over other aspects of the life of the city. The religious classes were organised into corporations under the general oversight of the *ṣadr* (*Dastūr al-mulūk*, xvi, 1-2, 64). Under Shāh

Sulṭān Ḥusayn a new office, that of *mullā-bās̲h̲ī* was created, and its holder made head of all the religious classes (*ibid.*). The decision of *s̲h̲arʿī* cases was in the hands of the *s̲h̲ayk̲h̲ al-islām* and the *ḳāḍī* (*ibid.*, xvi, 1-2, 69). S̲h̲āh ʿAbbās and his immediate successors treated other religions with toleration, but persecution began under S̲h̲āh Sulaymān and in the time of S̲h̲āh Sulṭān Ḥusayn was directed, not only against other faiths, but also against Sunnīs and Ṣūfīs (see further Lockhart, *op. cit.*, 32-5, 70-9).

The wellbeing of Iṣfahān, as the capital of the empire, was closely bound up with the fortunes of the Ṣafawid dynasty, as it had been earlier with those of the Sald̲j̲ūḳ dynasty, whose capital it had also been. The fall of the Ṣafawids, however, proved far more disastrous for Iṣfahān than that of the Sald̲j̲ūḳs. By the reign of S̲h̲āh Sulṭān Ḥusayn, a marked decay in standards of public and private life and administrative competence had taken place (Muḥammad Hās̲h̲im Āṣif Rustam al-Ḥukamāʾ, *Rustam al-tawārīk̲h̲*, ed. Muḥammad Mus̲h̲īrī, Tehran 1969, 82-3, 90 ff., 98-9, 102 ff.; L. Lockhart, *op. cit.*). Security in the town was also at a low ebb. Rustam al-Hukamāʾ gives a list of bloodthirsty "toughs" (*pahlavānān va zabardastān va gurdān s̲h̲abraw va ʿayyār*), and alleges that the s̲h̲āh was unable to punish them because the "pillars of the state protected and aided them" (106).

The 12th/18th and 13th/19th centuries. Eventually the Afg̲h̲āns rebelled and invaded central Persia. In 1134/1722 after the Ṣafawid army had been decisively beaten at Gulnābād near Iṣfahān, the city was besieged (see Lockhart, *op. cit.*, 144 ff. for a detailed account of the siege; and also *Rustam al-tawārīk̲h̲*, 133 ff. on the intrigues and disunity prevailing in Iṣfahān during the siege). It was reduced to appalling straits and fell after six months. Some 20,000 persons were killed by enemy action and it is estimated that four times as many died from starvation and pestilence. The city was declared to have been conquered by force (*ʿanwatan*) and orders given for all land to be declared *k̲h̲āliṣa*. Many of those who had escaped in the siege fled to India and the Ottoman empire (S̲h̲ayk̲h̲ D̲j̲ābirī Anṣārī, 32-3, 113-14). Sunnism once more, for a brief period, became the official religion.

The Ṣafawid restoration which began when Nādir entered Iṣfahān in 1141/1729 with Ṭahmāsp after defeating the Afghans near Murčak̲h̲ʷart was short-lived. Iṣfahān was only a shadow of its former self. Many of the inhabitants who had survived the siege perished in the subsequent massacres. Heavy impositions were laid upon those who survived to pay the soldiery, by whom they were treated with great cruelty (Lockhart, *Nadir Shah*, London 1938, 39 ff.). When Nādir finally assumed the crown in 1148/1736, he moved the capital to Mas̲h̲had. Iṣfahān, like other parts of Nādir's empire, suffered heavy exactions. More land was confiscated for the state, and orders were given for the resumption of *awḳāf*. ʿĀdil S̲h̲āh on his accession in 1160/1747-8 revoked Nādir's land decrees, but confusion continued to exist because there had been many cases of falsification of title deeds, destruction of land registers and usurpation (S̲h̲ayk̲h̲ D̲j̲ābirī Anṣārī, 35 ff., 122 ff., A. K. S. Lambton, *Landlord and peasant in Persia*, 131-2).

On Nādir's death, the people rose against the governor, who took refuge in the fortress of Ṭabarak, where he was besieged. He was eventually killed by one of his own *g̲h̲ulāms*. Ibrāhīm S̲h̲āh then sent a new *beglarbegī* to the city in the person of Abu ʾl-Fatḥ K̲h̲ān Bak̲h̲tiyārī, who on Ibrāhīm S̲h̲āh's death shortly afterwards ruled in the name of Abū Turāb Mīrzā, the eight-year old grandson (through the female line) of S̲h̲āh Sulṭān Ḥusayn. An abortive attack on the city was made shortly afterwards by ʿAlī Mardān K̲h̲ān Bak̲h̲tiyārī, who retired to Luristān. After collecting reinforcements and allying himself to the Zands, he marched a second time on Iṣfahān in 1164/1750. Abu ʾl-Fatḥ K̲h̲ān, having failed to raise any money from the townspeople, was unable to muster an army to oppose him. ʿAlī Mardān K̲h̲ān entered the city, which was thereupon looted by his troops, (*Rustam al-tawārīk̲h̲*, 244 ff.). For a brief period ʿAlī Mardān K̲h̲ān, Karīm K̲h̲ān Zand and Abu ʾl-Fatḥ K̲h̲ān ruled the city and its neighbourhood jointly. The latter was then killed by ʿAlī Mardān K̲h̲ān who was, in turn, dispossessed in 1165/1751-2 by Karīm K̲h̲ān, who then appointed his brother Ṣādiḳ K̲h̲ān as governor. For the next few years Iṣfahān was fought over by marauding bands of Zands, Afg̲h̲āns and Ḳād̲j̲ārs. Its miseries were added to by famine in 1170/1756-7, which carried off 40,000 persons. Finally, in 1172/1758-9 Karīm K̲h̲ān took the city. A period of peace now began and under the government of Muḥammad Rinānī, a local man whom Karīm K̲h̲ān appointed governor in 1173/1759, the city recovered somewhat from the ravages of the previous years (S̲h̲ayk̲h̲ D̲j̲ābirī Anṣārī, 127 ff.; Muḥammad Mihdī, 279). Iṣfahān, however, did not regain its former pre-eminence: S̲h̲īrāz became the capital in 1180/1766-7.

On the death of Karīm K̲h̲ān, anarchy broke out once more. In 1199/1774-5 Iṣfahān was looted for three days when Bāḳir K̲h̲ān, the *kadk̲h̲udā* of K̲h̲ʷurāskān, who had made himself governor, lost control on the advance of D̲j̲aʿfar K̲h̲ān Zand (*Rustam al-tawārīk̲h̲*, 59; Ibn ʿAbd al-Karīm, *Taʾrīk̲h̲-i Zandiyya*, ed. E. Beer, Leiden 1888, 30). In the following year Āḳā Muḥammad K̲h̲ān Ḳād̲j̲ār appointed his brother D̲j̲aʿfar Ḳulī K̲h̲ān governor of Iṣfahān (S̲h̲ayk̲h̲ D̲j̲ābirī Anṣārī, 126 ff.). Under the Ḳad̲j̲ārs the capital was moved to Tehran. Iṣfahān for a time remained the chief commercial city of the empire (J. Macdonald Kinneir, *A geographical memoir of the Persian Empire*, London 1813, 113), but gave way to Tabrīz in the second half of the 19th century (Curzon, ii, 41). The events of the 18th century had taken a heavy toll on Iṣfahān. Olivier, who visited the city in 1796, describes its ruined condition and states that its population did not exceed 50,000 (*Voyage dans l'Empire Othoman, l'Égypte et la Perse*, Paris 1807, iii, 101). Morier in 1811, revising his own earlier estimate, which had been much higher, put the population at probably about 60,000, on the basis of a daily slaughter of 300 sheep (*A second journey through Persia, Armenia and Asia Minor*, London 1818, 141-2).

After the death of Āḳā Muḥammad Khān, an abortive attempt was made in 1212/1797-8 by Muḥammad K̲h̲ān Zand to seize the city. This was followed by the rebellion of Ḥusayn Ḳulī K̲h̲ān Ḳād̲j̲ār, who, however, fled the city in 1216/1801-2 on the approach of Fatḥ ʿAlī S̲h̲āh. In 1219/1804-5 there was a further setback to the wellbeing of the city in the shape of a severe famine caused by the ravages of locusts. About this time (or possible earlier) Muḥammad Ḥusayn K̲h̲ān Nāẓim al-Dawla was made governor. He was a native of Iṣfahān, a self-made man who acquired great riches, largely in land, some of which he constituted into *waḳf*. Under him and his son, Amīn al-Dawla, who succeeded him when he became *ṣadr-i aʿẓam*, Iṣfahān began once more to prosper (S̲h̲ayk̲h̲

Djābirī Anṣārī, 41 ff., 137 ff.; Muḥammad Mihdī, 281; Sipinta, 398 ff., 408 ff.; Macdonald Kinneir, 113; Morier, *Second Journey*, 132; *Rustam al-tawārīkh*, 212-3; Gandjīna, 743-4). On the death of Muḥammad Ḥusayn Khān in 1239/1823-4, Āṣif al-Dawla, who succeeded him as *ṣadr-i aʿẓam*, demanded a large sum in arrears (which was later remitted) from Iṣfahān and Amīn al-Dawla was dismissed. In 1242/1826-7 he returned to favour and became vizier to Sayf al-Dawla, the new governor of Iṣfahān. He was made *ṣadr-i aʿẓam* in the following year, but fell on the death of Fatḥ ʿAlī, which took place in 1250/1834-5 in Iṣfahān when he was on his way to Fārs. Farmān-Farmā, governor of the province, made a bid for the throne but was defeated near Iṣfahān.

Renewed outbreaks of rioting in 1252/1836-7, 1254/1838-9, and 1255/1839-40, during which much damage was done, forced Muḥammad Shāh to come to Iṣfahān in 1256/1840-1 to deal with the disturbances. About 150 *lūṭīs* were seized and order restored (Shaykh Djābirī Anṣārī, 48 f., 143 ff.). Riots broke out again in 1265-6/1848-9 during the reign of Nāṣir al-Dīn. After his visit to the city in 1267/1859 conditions began to improve, but severe famine in 1288/1871-2 and 1289/1872-3 once more arrested its growth. The population declined steeply (Ḥusayn Khān Taḥvīldār, 65; Muḥammad Mihdī, 281-2; Shaykh Djābirī Anṣārī, 158-9). Ẓill al-Sulṭān was appointed governor in 1874, and by 1881 had become the virtual ruler of most of southern Persia. His government was severe and autocratic. Disorders were not tolerated. The city again began to flourish and the population to increase. According to a census taken in 1882 it was 73,654. Eleven years later Houtum-Schindler considered it had risen, by natural increase and immigration, to close on 82,000 (119-20; Muḥammad Mihdī and Shaykh Djābirī Anṣārī, however, give higher estimates). In 1888 when Ẓill al-Sulṭān fell from power, he was deprived of all his governments except Iṣfahān. During the reign of Muẓaffar al-Dīn, who succeeded in 1896, there were various outbreaks of violence in the city, including an attack on the Bābīs in 1903-4 (Shaykh Djābirī Anṣārī, 182). Winds of change were meanwhile blowing in Iṣfahān as elsewhere. Discontent with the government and its policies was spreading, and when the Constitutional Revolution came, Iṣfahān played a prominent part [see DJAMʿIYYA].

2. MONUMENTS

The Islamic monuments of Iṣfahān today constitute one of the most significant and complete architectural complexes preserved at the heart of a modern city which owes them much of its prestige. Carefully restored, the most important amongst them dominate the developing urban landscape in the midst of which they stand, while the old quarters, both in the built-up area of Iṣfahān itself and in the many surrounding villages, still harbour numerous modest structures, often partially ruined, which remain insufficiently studied. Some idea of the richness of this complex may be gathered from the fact that more than fifty structures of various kinds figure in the brief archaeological inventory drawn up about forty years ago by André Godard, and that this figure is still minute compared with that of the 162 mosques, 48 colleges, 1802 caravanserais, and 273 baths enumerated at the end of the 11th/17th century by that trustworthy traveller and observer, Chardin.

All these various buildings, however, famous and less known alike, on account of their nature and especially their date, bear but incomplete witness to the past of a city which from the 1st/7th century onwards has played an important role in the Islamic history of Iran. Belonging for the most part to the

11th/17th century, which saw the installation at Iṣfahān of the Ṣafavid Shāh ʿAbbās I, and with the oldest parts not going back beyond that 5th/11th (Saldjūḳ) century in which the imperial vocation of the city was established by Malikshāh and his ministers, they are insufficient to allow us to retrace on the ground with any degree of certainty the stages of the city's development, which began soon after the Arab conquest and for which the literary sources provide most of the evidence. The general outline both of the plan of the twin cities of Djay and al-Yahūdiyya, between which from the beginning of the ʿAbbāsid period the population of an already prosperous trading centre was divided, and of the locality used as a residence by the Buwayhid princes, can be seen only in such indications as the permanence of the site of the great mosque and a mud-walled citadel, itself completely rebuilt several times, and the recent discovery of a doorway which probably belonged to the mosque of al-Ṣāḥib ibn ʿAbbād. The evidence is almost as vague regarding the organisation of a Saldjūḳ capital, in which we can locate with difficulty, apart from the great mosque and citadel already mentioned, the situation of a few sanctuaries still marked by minarets, and the probable site of the great *maydān*, by which, in earlier times, the royal palace and the Niẓāmiyya *madrasa* stood. This situation, so inimical to any methodical approach to the architectural school of Iṣfahān, can in fact be attributed to the very conditions in which the town has survived, partially ruined more than once, and then rebuilt according to the unchanged techniques of an impermanent method of building in mud- or baked brick, or even in puddled clay, which was traditional in that area, and dictated by geography. Thus either side by side or the one above the other, urban nuclei replaced each other, comparable in their evolution to the large villages also situated in the oasis, which were themselves from time to time the object of intense architectural activity. And similar difficulties of identification, due both to the paucity and the frailty of archaeological landmarks, hinder the study of the older districts of present-day Iṣfahān, as well as that of the settlements, thriving or half-ruined, around the city, such as Būzūn, Barsyān, Gār, Sīn, Ziyār, Lindjān/Pir-i Bakrān—or Ashtardjān, to mention but a few among the best known, where significant remains dating from the Saldjūḳ and Ilkhānid periods survived until recently and in some cases are still preserved.

In the centre as a whole, we must give particular attention to the Great Mosque, which by its antiquity and extent provides us with an archaeological document of exceptional value: the *Masdjid-i Djumʿa* where authentic traces of the period of Malikshāh between 465/1072 and 485/1092 have survived in the midst of later constructions or modifications no less worthy of interest. Here are abundant inscriptions from the 5th/11th century onwards, and noteworthy decorative elements such as the brick ornamentation in the interior of two Saldjūḳ domed halls, or the stucco *miḥrāb* of the Mongol ruler Öldjeytü, are preserved there behind the *īwān*s and façades entirely covered in faience which give the courtyard its Ṣafavid appearance. But the very variety of the pieces of evidence found together in this venerable yet disparate building, where the necessary sondages and investigations have never been carried out, prevents us from reconstructing its history with any degree of certainty. For this history contradictory hypotheses suggest widely differing interpretations, and there have even been produced more general theories, such as that of the "kiosk-mosque", resting on assumptions as impossible to prove as to refute.

In effect then it is the Ṣafavid achievements, either in isolation or taken in conjunction with earlier buildings of secondary importance reworked in the Ṣafavid period (numerous small more or less disguised Saldjūḳ or Ilkhān sanctuaries are in this position), which make up the architectural landscape of the monuments in Iṣfahān today. This landscape, whose uniformity so well conceals the achievements of earlier periods, gives but an inadequate impression of the totality of the grandiose design for an imperial city once conceived by Shāh ʿAbbās I. However, it retains enough of the earlier features to enable one still to distinguish the overall plan which made the Maydān-i Shāh—the royal square in front of the ruler's palace—into the majestic centre of the city; this centre led on one side to the older thoroughfare linking the Great Mosque both with the Citadel and the Pūl-i Khadjū, or at least with the bridge which had preceded the present bridge-barrage built by Shāh ʿAbbās II; it was completed on the other side of the royal palace and gardens by the new Čahār Bāgh avenue which led from these gardens to the Allāhwardī Khān bridge, which like the Čahār Bāgh itself dates from the monarch's first series of architectural undertakings in 1006/1598.

The Maydān-i Shāh itself, 510 metres long by 165 metres wide, framed by a wall of blind arcades concealing a trading street full of shops, was a monumental work of art, splendidly complemented by the imposing perspective of the tree-lined Čahār Bāgh bordered with canals of running water over more than one and a half kilometres. But the buildings which surrounded this square towards the end of the reign of Shāh ʿAbbās I, to the south the majestic royal mosque of Masdjid-i Shāh (probably begun in 1021/1612-13), to the east the Masdjid-i Shaykh Luṭf Allāh (begun 1012/1603), to the north of the royal bazaar with its monumental gateway (built in 1029/1620), could be seen above all as worthy companions to the ʿAlī Kapu palace which had been constructed by Shāh ʿAbbās I on the basis of a Tīmūrid pavilion, and which gave the monarch a panoramic view of the esplanade and its surroundings from the raised terrace of its talar. This latter place, together with the Čihil Sutun palace which was soon erected not far away and inside the same enclosure, and whose construction must also have been started in 1006/1598, thus formed the essential preliminary starting-point in Shāh ʿAbbās' plan to convert Iṣfahān above all into a "jewel box city" for his own residence.

Moreover, the importance of this "royal city" situated between the Maydān-i Shāh and the Čahār Bāgh continued to be strengthened under succeeding monarchs by the building of other sumptuous pavilions. But one last Ṣafavid building for religious purposes from the 12th/18th century remains to be noted with the construction between 1118/1706 and 1126/1714 of the Mādar-i Shāh *madrasa* and the adjoining caravanserai, which has also survived until today. Mention must be made too of those Armenian churches of the New Djulfā district, in which can still be seen the fundamental characteristics of the imperial style dominant at the time when they were founded by an emigré colony.

The various buildings briefly listed here in order to recreate a panorama of Ṣafavid Iṣfahān all possess as their prime quality the ability to serve as living testimony to a refined art form which caused the city to be described, as the expression of Gobineau's admiring critical appreciation, as "a triumph of

elegance and model of prettiness", but which in effect makes it above all a museum the size of a city. Travellers and writers to whom it owes its fame have served it well up to now; it is to be hoped that such a complex of Ṣafavid monuments will henceforth give rise to precise scientific and aesthetic studies which will provide a clearer view of a distinctive historical epoch sharply defined in time and in space.

AL-**IṢFAHĀNĪ** [see ABU 'L-FARADJ; IBN DĀWŪD; ʿIMĀD AL-DĪN].

ISFARĀYĪN, a district, and in earlier Islamic times a town, in northwestern Khurāsān. It lies on the northern edge of the long plain which extends from Bisṭām and Shāhrūd in the west almost to Nīshāpūr in the east and whose central section is drained by the Kāl-i Shūr river before it turns southwards into the Dasht-i Kawīr. In mediaeval Islamic times, the route from Nīshāpūr to Gurgān ran across this plain, and the geographers place Isfarāyīn at roughly the midpoint, five stages from Nīshāpūr and five from Gurgān.

Though allegedly founded by Isfandiyār, little is known of Isfarāyīn's pre-Islamic past except that it was under a *dihkān* (Thaʿālibī, *Ghurar al-siyar*, ed. Zotenberg, 591). A popular etymology, given e.g. by Yāḳūt, derives its names from *ispar-āyīn* "shield-like", and this may have influenced the *Ḥudūd al-ʿālam*'s spelling as *Siparāyīn*. It is also said that it used earlier to be called Mihradjān, a name surviving in later times as a village in the *rustāḳ* of Isfarāyīn.

The 4th/10th century geographers describe Isfarāyīn as being administratively one of the *rustāḳs* of Nīshāpūr, its town being, according to Muḳaddasī, the most prominent of the towns of these *rustāḳs*. It had five markets and a well-fortified citadel called "the golden castle", *ḳalʿa-yi zar*. The inhabitants were Shāfiʿīs; Isfarāyīn was one of the remaining pockets in Khurāsān of Shāfiʿism, which was then retreating under the advance of the Ḥanafī *madhhab*, The surrounding district contained 40 or 50 villages. and cereals, rice, grapes and other fruit were grown there. Samʿānī and Yāḳūt name a large number of scholars from Isfarāyīn, of whom the most notable were the theologian and jurist dealt with in the next article and Abu 'l-Muẓaffar Ṭāhir b. Muḥammad al-Isfarāyīnī (d. 471/1078-9), a protégé of Niẓām al-Mulk and author of a Ḳur'ān commentary in Persian, the *Tādj al-tarādjim*, one of the earliest after the Persian adaptation of Ṭabarī's commentary, cf. G. Lazard, *La langue des plus anciens monuments de la prose persane*, Paris 1963, 94-6. Another famous son of Isfarāyīn was Maḥmūd of Ghazna's vizier Abu 'l-ʿAbbās Faḍl b. Aḥmad al-Isfarāyīnī (d. 404/1013-14), to whose exactions in Khurāsān the historian ʿUtbī attributes much economic distress (cf. Barthold, *Turkestan*, 287).

During the Mongol invasions of Persia, the commander Sübetey came from Nīshāpūr in 617/1220 and sacked Isfarāyīn; but the northwestern region of Khurāsān, including Djuwayn, Djādjarm and Arghiyān, seems to have suffered less than the province in general, and was in 630/1233 placed under the rule of a local *malik* subordinate to the Mongol governor of Khurāsān, Čin-Temür (Djuwaynī-Boyle, i, 146, ii, 487). In Mustawfī's time a century later, there was still a flourishing town and agricultural hinterland at Isfarāyīn, with the town itself getting water from an adjacent river and the villages dependent on *ḳanāts*; we hear, too, of coins being minted there under the Ilkhānids, as later under the Ṣafavids.

In Ṣafavid times, Isfarāyīn was only just within the northern frontier of the province of Mashhad, and suffered repeatedly from Özbek incursions, with a particularly severe devastation just before 1006/1597; during the 12th/18th century there was a further destruction by the Afghāns. The site of the mediaeval town is probably now represented by the ruins called Shahr-i Bilḳīs (cf. Yate, *Khurasan and Sistan*, 378-9). Today, the region of Isfarāyīn is prosperous and fertile, being famed for its fruit; since 1958 it has formed a separate district or *shahristān* in the province of Khurāsān. The main town of the district is Miyānābād.

(C. E. BOSWORTH)

AL-**ISFARĀYĪNĪ**, ABŪ ISḤĀḲ IBRĀHĪM B. MUḤAMMAD B. IBRĀHĪM B. MIHRĀN AL-MIHRDJĀNĪ, Ashʿarī theologian and Shāfiʿī jurist, was along with Ibn Fūrak [*q.v.*], the chief propagator of Ashʿarī theology in Nīshāpūr at the turn of the 5th/11th century. Originating from Isfarāyīn, he studied mainly in Baghdād, where he must have arrived before 351/962. He attended the lectures of Abu 'l-Ḥasan al-Bāhilī in Ashʿarī theology at the same time as al-Bāḳillānī [*q.v.*] and Ibn Furāk. After leaving Baghdād, he taught in Isfarāyīn. Later he accepted an invitation to Nīshāpūr, where a *madrasa* was built for him. He engaged in disputations with Karrāmī scholars at the court of Maḥmūd

of Ghazna. From 411/1020 he also held sessions teaching *ḥadīth* in the congregational mosque of Nīshāpūr. After his death in Muḥarram 418/February 1027, his body was brought to Isfarāyīn. His tomb continued to attract pious visitors in the 6th/12th century.

None of his works on Shāfiʿī law, principles of law (*uṣūl al-fiḳh*), and theology is extant, but the numerous references to his doctrine in later works attest their popularity for several generations after his death. He played a leading role in the elaboration of Ashʿarī doctrine in his generation, which in several areas covered new ground not touched by the founder of the school. In the struggle against the anthropomorphism of the Karrāmiyya he, like Ibn Fūrak, supported a more abstract view of God closer to Muʿtazilī doctrine as compared with al-Ashʿarī, who had been mainly concerned with the defence of the traditionalist view of God against Muʿtazilism. In the theory of knowledge, prophethood, the nature of the Ḳurʾān, human acts, his views are frequently contrasted in the sources with those of al-Bāḳillānī and are often closer to Muʿtazilī doctrine. He ascribed wider immunity [see ʿISMA] from falsehood to the prophets than did al-Bāḳillānī and held that the extraordinary acts of saints (*karāmāt*) do not reach the degree of miracles of prophets (*muʿdjizāt*). In the words of al-Djuwaynī, he inclined to a position close to the Muʿtazilī rejection of the miracles of saints. In substantial agreement with al-Bāḳillānī he distinguished between the eternal speech (*kalām*) of God, which according to his doctrine could not be heard, and the Ḳurʾān. Against al-Bāḳillānī's view that the miraculous inimitability of the Ḳurʾān resides in its superior composition and rhetorical perfection, he supported the view of the Muʿtazilī al-Naẓẓām that God prevents man from imitating the Ḳurʾān. Like al-Bāḳillānī he attempted to define the concept of *kasb* referring to human acts, which had been of no significance in the doctrine of al-Ashʿarī, which exclusively stressed divine omnipotence. Also in agreement with Muʿtazilī doctrine and against the prevaling Ashʿarī view he held that man's first duty was to reach knowledge of God through reason, independently of the mission of prophets, and he opposed the doctrine that God may impose on man obligations which are beyond his power (*taklīf mā lā yuṭāḳ*).

ISFENDIYĀR OGHLU, the name of a Turkoman dynasty, which founded the independent kingdom of Ḳasṭamonu on the decline of the Saldjūḳ kingdom of Ḳonya, at the end of the 7th/13th century, in N.W. Asia Minor, in the ancient Paphlagonia. The name is taken from that of the best known ruler of this dynasty, Isfendiyār Bey; in the 10th/16th century we find the name Ḳīzīl Aḥmedlu, from Ḳīzīl Aḥmed, the brother of Ismāʿīl Bey. The Byzantines called the Isfendiyār Oghlu "the sons of Amurias" or of Omur. The founder of the dynasty appears to have been Shams al-Dīn b. Taman (Timūr?) Djāndār, who held a grant of the district of Affānī; he went to war with Masʿūd II (681/1282-697/1298), captured the town of Ḳastamonu and in 690/1291 (Münedjdjimbāshī) was appointed governor of the districts seized by him by the Īlkhān prince Gaykhātū. He seems to be identical with Sungur Bey Shamsī Pasha, who conquered Bōlu according to Ewliyā, ii, 173. His son, Shudjāʿ al-Dīn Sulaymān Pasha (700/1301-740/1340), at first acknowledged the suzerainty of the Īlkhāns, but afterwards made himself independent and conquered Sinope, which was still in possession of a daughter of Masʿūd II. He is mentioned in Ibn Baṭṭūṭa (ii, 343 ff.), Shihāb al-Dīn (*Not. et Extr.*, xiii, 340 and 361 f.) and Abu'l-Fidāʾ (*Géographie*, ed. Reinaud, ii, 1, p. 35; 2, p. 142, 145); Pachymeres, ii, 345 ff. and 456 f., knows him by the name Σολυμάμπαξι. His successors were: his son Ibrāhīm Pasha; ʿĀdil Bey, son of the Emīr Yaʿḳūb and grandson of Shams al-Dīn (about 746/1345); Djalāl al-Dīn Bāyazīd, son of ʿĀdil Bey, called Kötürüm by the Ottomans, died 787/1385; Sulaymān Bey, son of Bāyazīd, from 787/1385-795/1393; Sultan Bāyazīd I killed him and seized the land (according to *Rev. Hist.*, 389; the Ottoman chronicles make no mention of Sulaymān Bey and make Bāyāzīd Kötürüm reign till 795/1393). Mubāriz al-Dīn Isfendiyār, son of Bāyāzīd, was restored by Tīmūr in 805/1402-3. He died on 22 Ramaḍān 843/26 Feb. 1440. About 820/1417 he had to cede the towns of Ṭosya, Čankīrī and Ḳalʿedjiḳ and the district of Djānīk to Meḥemmed I and later the rich copper mines to Murād II; Ibrāhīm, son of Isfendiyār, 843/1439-857/1443; Ismāʿīl, son of Ibrāhīm, was deposed by Sultan Meḥemmed II at the instigation of his brother Ḳīzīl Aḥmed in 864/1460 and died in Philippolis, which was allotted to him as a residence by the sultan. He wrote a widely circulated book, *Ḥuluwiyyāt-i Sulṭānī*, on the ritual prescripts of Islām. His brother Ḳizil Aḥmed fled to Uzun Ḥasan after the confiscation of Ḳastamonu, returned to Constantinople after the death of Meḥemmed II, and was honourably received by Bāyazīd II; his son Mīrzā Meḥemmed married a daughter of the sultan and his grandsons Shamsī and Muṣṭafā Pasha filled high offices under Selīm II and Murād III; Shemsī Pasha in particular had great personal influence as the confidant (*muṣāḥib*) of Murād III. He fabricated a genealogy of the "Ḳīzīl Aḥmedlu Isfendiyār-Oghlu" which went back to Khālid b. al-Wālid, and invented the name Ḳīzīl Aḥmedlu for the dynasty of Isfendīyār-Oghlu. Descendants of this family still exist and, when at the beginning of the 11th/17th century it was feared that the Ottoman ruling house might become extinct, the Ḳīzīl Aḥmedlu were considered amongst others as possible claimants to the throne on account of their frequent marriages with relatives of the sultans.

On this genealogy cf. that of Ismāʿīl Bey, in the *Ḥuluwiyyāt-i Sulṭānī* in Rieu, *Catal. of Turkish MSS*,

GENEALOGY OF THE ISFENDIYĀR-OGHLU

1. Yaman Djāndār (for Yaman b. Djāndār?)

2. Shams al-Dīn (= Sungur Shamsī Pasha?)

3. Shudjā' al-Dīn Sulaymān Pasha

4. Emīr Ya'ḳūb

5. Ibrāhīm Pasha

6. 'Alī Bey

7. Nastratios (= Nāṣir al-Dīn ?)

8. 'Ādil Bey ('Alī)

9. Bāyazīd Kötürüm (Valī)

10. Sulaymān Pasha

11. Mubāriz al-Dīn Isfendiyār (reg. 795-843 A.H.)

12. Iskandar

13. (daughter)

14. daughter, married to Murād I.

15. Ḳara Yaḥyā

16. Ibrāhīm, reg. 843-847/1439-43

17. Ḳawām al-Dīn Ḳāsim Bey, married (828/1425) a sister of Murād II.

18. Khiḍir Bey

19. Murād

20. Ḥalīma, married 828/1425 Sultan Murād II

24. Iskandar, called Mīrzā Bey

25. Ḥasan, killed 855/1451

21. Kamāl al-Dīn Abu 'l-Ḥasan Ismā'īl; reigned 847-864/1443-60; in 844/1440 married a daughter of Murād II.

22. Ḳîzîl Aḥmed

23. Khadīdja

26. Ḥasan

27. Meḥemmed, called Mīrzā, married a daughter of Bāyazīd II.

28. Shamsī Pasha

29. Muṣṭafā Pasha

in the British Museum, II, and that of Shamsī Pasha in Pečewī, ii, 10 ff.; 4 perhaps the brother of Sulaymān Pasha, called al-Efendi by Ibn Baṭṭūṭa; the sons of Sulaymān Pasha, 5-7, in Ibn Baṭṭūṭa, ii, 340, 348, Shihāb al-Dīn, and Pachymeres, ii, 327 ff., 611; 8 according to Münedjdjimbāshī, son of Sulaymān Pasha; 13 according to Sa'd al-Dīn, i, 192; another sister of Isfendiyār and her son is mentioned by Clavijo, 92, but without giving her name; 14 according to *Ta'rīkh-i Ṣāf*, i, 39 f.; on 17 see Sa'd al-Dīn, i, 277 f., 318 f., Ḥamīd Wahbī, 1350 f.; on 18 Sa'd al-Dīn, i, 287; on 19 Sa'd al-Dīn, i, 318 f.; 21, the epithet in Ferīdūn, i, 250; on his marriage with a daughter of Murād II: Dukas 243; Sa'd al-Dīn, i, 343; on 23 cf. *Rev. ISFĪD DIZ [see kal'a-yi safīd].

ISFĪDJĀB [see Supplement].

'ISHĀ' [see ṣalāt].

ISḤĀĶ, the Biblical Isaac, mentioned in fifteen passages of the Ḳur'ān. God gives Abraham "good tidings of Isaac, a prophet, of the righteous", and blesses them both (XXXVII 112 f.). In a fuller description, when messengers concerning Lot come to Abraham; his wife "laughed, and we gave her good tidings of Isaac, and after Isaac of Jacob" (XI, 71/74); and it is explained that this will happen despite their age. Several verses speak of Isaac and Jacob being given to Abraham (VI, 84; XIX, 49/50; XXI 72), and XXIX, 27/26 adds that God "made prophethood and the Book to be among his offspring" (cf. XXXVIII, 45 f.). Ishmael is joined to Isaac in XIV, 39/41, where Abraham praises God for giving him the two although he was old. Elsewhere the name only occurs in lists: Joseph follows the creed of his fathers Abraham, Isaac and Jacob (XII, 38), and speaks of God's favour to them (XII, 6); Jacob's sons serve the God of his fathers, Abraham, Ishmael and Isaac (II, 133/127); and revelations are given Abraham, Ishmael, Isaac, Jacob and the Patriarchs (II, 136/130, 140/134; III, 84/78; IV, 163/161). In the account of Abraham's would-be sacrifice of his son (XXXVII, 102/100-107), the name of the son is not mentioned; and there was a fierce controversy among Muslim scholars over the identity of the son. At first most Muslims probably considered the "sacrifice" (*dhabīḥ*) was Isaac (cf. Goldziher, *Koranauslegung*, 79-81). This is explicitly stated of 'Umar and 'Alī by Ḳuṭb al-Dīn (Wüstenfeld, *Chron. Mekka*, ii, 37). A story is told of how a convert told 'Umar b. 'Abd al-'Azīz that the Jews had substituted Isaac (their ancestor) for Ishmael (the Arabs'). Actually the controversy came to be more concerned with Persian than with

Jewish rivalry for the Arabs (Goldziher, *Muh. St.*, i, 144 f., Eng. tr., i, 135), since the Persians claimed descent from Isaac. Al-Masʿūdī (*Murūdj*, ii, 146 f.) quotes a Persian poet in 290/902 who boasted that his descent from Isaac the *dhabīḥ* was superior to that of the Arabs. Later representatives of the Isaac-party were Ibn Ḳutayba (*Maʿārif*, 18 f. ed. ʿUkāsha², Cairo 1969, 30 f.) and al-Ṭabarī (*Tafsīr* on XII, 6 and XXXVII, 107; vol. xii, 86; xxiii, 46-9); they argued that God's perfecting his mercy on Abraham and Isaac (in XII, 6) referred to his making Abraham his friend and saving him from the burning bush and to his rescuing Isaac. The other party held that the promise to Sarah of Isaac followed by Jacob (XI, 71/74) excluded the possibility of a sacrifice of Isaac. Although Ibn Ḳutayba, for example, had seen Isaac mentioned in the Old Testament, Muslim opinion eventually gave full endorsement to the view that the son in question was Ishmael, the ancestor of the Arabs (cf. al-Bayḍāwī on XXXVII, 102/101). In the works entitled *Ḳiṣaṣ al-anbiyāʾ* by al-Thaʿlabī (Cairo 1312, 48-60) and al-Kisāʾī (Leiden 1922, 150-3) the story of Isaac is elaborated along lines reflecting extra-Biblical Jewish tradition.

Bibliography: there are a number of further references in the works of I. Goldziher cited, and also in *ZDMG*, xxxii, 359, n. 5 (*Schriften*, ii, 19); cf. also commentaries on the verses quoted; C. H. Becker, *Islamstudien*, i, 437 (= *ZA*, xxvi, 182). (W. MONTGOMERY WATT)

ISḤĀḲ B. **ḤUNAYN** B. ISḤĀḲ AL-ʿIBĀDĪ, ABŪ YAʿḲŪB, like his father Ḥunayn b. Isḥāḳ [*q.v.*] an eminent translator of ancient science and philosophy, well versed in the Greek, Syriac, Arabic, and Persian languages. Some authors, such as Ibn al-Nadīm and Ibn al-Maṭrān, assert that his Arabic style is superior to that of his father, and like other well educated persons of his surroundings he even indulged in writing poetry. He followed the medical profession of his father, who dedicated to him some of his translations of Galen. It is interesting to note that these were made into Syriac and not into Arabic. A talk between Ḥunayn and Isḥāḳ about pre-Socratic philosophy was included in Abū Sulaymān's *Ṣiwān al-ḥikma* (see F. Rosenthal, in *Orientalia*, N. S. x (1941), 395). Isḥāḳ served as a physician at the court of the caliphs; al-Bayhaḳī further represents him as a boon companion and astrological adviser of al-Muktafī [*q.v.*] and also as a good Muslim. Isḥāḳ was on familiar terms with the notorious vizier al-Ḳāsim b. ʿUbayd Allāh, with whom he exchanged witty epigrams (cf. C. Elgood, *A medical history of Persia*, Cambridge 1951, 115). After suffering a stroke he died in Baghdād in Rabīʿ I or II 289/November or December 910 or January 911 (Ibn Khallikān also gives the year 299).

As a translator Isḥāḳ was less concerned with medicine; he left the numerous works of Galen [see DJĀLĪNŪS] to the other members of his father's school and himself rendered only two of them into Syriac and nine into Arabic, *e.g.*, *De partibus artis medicativae*, where he completed the version which Ḥunayn had left unfinished at his death (cf. M. Lyons, *Corpus Medicorum Graecorum*, Suppl. Orient. ii, Berlin 1969, 8 f.). It was by his many translations of Aristotle [see ARISṬŪṬĀLĪS] that he rendered his greatest services (cf. F. E. Peters, *Aristoteles Arabus*, Leiden 1968). Other philosophers he was concerned with are Plato [see AFLĀṬŪN], pseudo-Plato (see *Mashriq*, ix (1906), 677), Nicolaus of Damascus (*De plantis*, cf. B. Hemmerdinger, in *Philologus*, cxi (1967), 58), Alexander of Aphrodisias [see AL-ISKANDAR AL-AFRŪDĪSĪ], Porphyry [see FURFŪRIYŪS], Themistius, Nemesius of Emesa (see P. Sbath, *Bibliothèque de manuscrits Paul Sbath*, Cairo 1928, no. 1010) and Proclus [see BURUḲLUS]. Moreover he translated many standard works on mathematics and astronomy, *e.g.*, those of Euclid (cf. G. P. Matvievskaya, *Učenie o čisle na srednevekovom bližnem i srednem vostoke*, Tashkent 1967, 100 f.), Autolycus of Pitane, Archimedes, Theodosius of Bithynia, Menelaus of Alexandria (cf. Max Krause, in *Abh. G. W. Gött.*, *phil.-hist. Kl.*, *Dritte Folge*, no. 17, 1936, 21, 23) and Ptolemy [see BAṬLAMIYŪS]. Some of these translations were revised by Thābit b. Ḳurra [*q.v.*] (cf. M. Bouyges, in *Mélanges de l'Université Saint-Joseph*, ix (1923-4), 77-81); there exists also a fragment of a letter on astronomical matters sent to him by Thābit (see F. J. Carmody, *The astronomical works of Thabit b. Qurra*, Berkeley, Los Angeles 1960, 20, 45 f., 229).

Isḥāḳ's own writings were mainly on medical and pharmacological subjects. In 290/903 he composed at the request of al-Ḳāsim (see above) his *Taʾrīkh al-aṭibbāʾ* (ed. F. Rosenthal, in *Oriens*, vii (1954), 55-80; cf. *JAOS*, lxxxi (1961), 10 f.). This book is the first known attempt to write about the beginnings of medicine in connexion with the history of philosophy and religion.

ISḤĀḲ B. **IBRĀHĪM** AL-**MAWṢILĪ**, the son of IBRĀHĪM AL-MAWṢILĪ [*q.v.*], and like him the greatest musician of his time, was born in 150/767 in Rayy and died in Ramaḍān 235/850 in Baghdād. He received an excellent education, studying Ḳurʾān, *ḥadīth*, and *adab* under Hushaym b. Baṣīr, al-Kisāʾī,

al-Farrā', al-Aṣma'ī, and Abū 'Ubayda. His teachers in music were his father, his brother-in-law Zalzal, and 'Ātika bint Shu'ba. He had a magnificent voice, and made use of the headvoice (*takhnīth*); he was also an excellent composer. He was highly appreciated by the caliphs from Hārūn to al-Mutawakkil, and especially by al-Wāthiḳ; al-Ma'mūn permitted him to wear the costume of a *faḳīh* and placed him among the *'ulamā'* (see also Ḳālī, *Amālī*[1], iii, 90). In the controversy between the modernists, who followed the theories of Ibrāhīm b. al-Mahdī [*q.v.*], and those who adhered to the music of the Ḥidjāz, Isḥāḳ was a stout defender of the old style and systematized its musical modes. He showed the same predilection for ancient poetry, following its language, style and topics in his own poems, whilst he criticized modern poets like Abū Tammām and Abū Nuwās. He was a very learned man and took many books with him when travelling; he paid the philologist Ibn al-A'rābī an annual stipend. Many of his own works deal with music and musicians. Already his father, together with Ibn Djāmi' and Fulayḥ b. Abi 'l-'Awrā' had selected for Hārūn al-Rashīd 100 songs (cf. Agh.[3] i, 4-5, 7). Later on Isḥāḳ, by order of al-Wāthiḳ, made a new edition of the one hundred selected melodies, keeping the finest of them, and replacing those of minor quality by better ones (Aghanī[3], i, 8 ff.). This is the *Ikhtiyār min al-Aghānī li 'l-Wāthiḳ* (Fihrist, 141, 4; Yāḳūt, *Udabā'*, ii, 223, 9). He also composed books on the biographies and compositions either of a single musician or a group of them, *e.g.*, *akhbār 'Azza* (*Fihrist*, 141), *akhbār al-Hudhaliyyayn* (see *Aghānī*[1], iv, 152 ff.), *al-Makkiyyīn* (see Yāḳūt, l.c. ii, 223, 7), *al-Ḳiyān*. These monographs are directly or indirectly sources for the corresponding sections in the *Aghānī*. There existed also a book of songs containing Isḥāḳ's own compositions; but it had been compiled without Isḥāḳ's permission by one of his copyists. Most of our information about Isḥāḳ goes back to his son Ḥammād, who also published the genuine book of Isḥāḳ's songs. A book about Isḥāḳ was written by his pupil 'Alī b. Yaḥyā Ibn al-Munadjdjim (*Fihrist*, 143, 22), whilst the latter's son Yaḥyā b. 'Alī devoted to Isḥāḳ a chapter in his anthology *al-Bāhir* (*Fihrist*, 143, 27). His death was mourned in many elegies (*Aghānī*[3], v, 256 and 431-4). Isḥāḳ had many pupils and his fame has lasted up to this day. He is mentioned in the "Assemblies" of al-Ḥarīrī and in the Arabian Nights.

(J. W. FÜCK)

ISḤĀḲ B. MURĀD, Turkish physician who lived in Gerede in Anatolia in the time of Sultan Bāyezīd I. Little is known of his life: he practised medicine and also wrote on the subject. His chief work is *Kitāb Edwiye-i müfride*, "The book of simple remedies", which he completed in 792/1390. In the first section he deals with the medicinal plants of his native land (giving the Arabic and Persian names of each beside the Turkish name) and, at the end, gives prescriptions for various illnesses. The second section describes the illnesses in detail. The work, surviving in various manuscripts in Turkey, is also of linguistic interest, in that it presents many early features of orthography, grammar and vocabulary.

(O. SPIES)

ISḤĀḲ B. SULAYMĀN AL-ISRĀ'ĪLĪ, ABŪ YA'ḲŪB (*ca.* 243/855 - *ca.* 343/955), physician, medical writer and philosopher, was born in Egypt and appointed court physician by 'Ubayd Allāh al-Mahdī after his emigration to Ḳayrawān at about the age of fifty. His high reputation among his fellow-Jews is attested by Sa'īd (Se'adya) al-Fayyūmī's letters consulting him on philosophical and scientific matters. His medical works were translated into Latin by Constantine the African (1087) and enjoyed great esteem in the Middle Ages (printed in *Omnia opera Ysaac*, Lyons 1575). Of his philosophical writings the *Kitāb al-Ḥudūd wa 'l-rusūm* was popular among the Latin schoolmen, who know it in two versions (edited by J. T. Muckle in *Archives d'histoire doctrinale et littéraire du moyen age*, xii-xiii, Paris 1937-38). Mediaeval Jewish writers were equally familiar with the work. It was twice translated into Hebrew (see A. Altmann, in *JSS*, ii (1957), 232 ff.). The *Kitāb al-Djawāhir* has survived only in fragments discovered by A. Borisov and edited by S. M. Stern (*Journal of Jewish Studies*, vii (1956), 13-29). The most extensive treatise is the *Kitāb al-Usṭuḳuṣṣāt*, extant in a Latin version (contained in *Omnia opera Ysaac*) and in two Hebrew ones by Abraham ibn Ḥasday (ed. by S. Fried, 1900) and by Moses ibn Tibbon (?) respectively. The "Chapter on the Elements" preserved in a Hebrew Ms (*Sha'ar ha-yesodoth*) has been shown by A. Altmann, following a suggestion by Gershom G. Scholem, to be another work of al-Isrā'īlī's (*Journal of Jewish Studies*, vii (1956), 31-57).

Al-Isrā'īlī, the father of Jewish Neoplatonism, is largely influenced by al-Kindī and by a pseudo-Aristotelian neoplatonic source which Altmann discovered in the "Chapter on the Elements" and which Stern has identified as underlying also such works as the Long Version of the *Theology of Aristotle* (discovered by Borisov) and Ibn Ḥasday's *Prince and Ascetic* (see *Oriens*, xiii-xiv (1961), 58-120).

Bibliography: In addition to the works mentioned in the text: J. Guttmann, *Die philosophischen Lehren des Isaak b. Salomon Israeli*, Münster 1911; A. Altmann and S. M. Stern, *Isaac Israeli, a Neoplatonic philosopher of the early tenth century*, Oxford 1958; reviewed by M. Plessner, in *Ḳiryat Sefer*, xxxv (1960), 457 ff.; J. D. Latham, *Isaac Israeli's* Kitāb al-Ḥummayāt *and the Latin and Castilian Texts*, in *JSS*, xiv (1969), 80-95.

(A. ALTMANN)

ISḤĀḲ, ADĪB, journalist and scholar of Syrian origin and Catholic by religion, but Egyptian by adoption. Born in 1856 at Damascus, where he studied under the Lazarist Fathers, he was, while still very young, obliged to accept a modest post in the Customs office in order to help his family, though he did not cease to pursue his Arabic studies more deeply and to extend his knowledge of French and Turkish, in which he obtained a high degree of proficiency. His family's removal to Beirut gave him the opportunity of forming fruitful contacts with the representatives of the Arab cultural awakening which

was taking place at that time. They were impressed by his lively mind and his remarkable knowledge of classical Arabic, which contributed to his appointment as editor of the periodical *al-Taḳaddum*. From this time on, Adīb Isḥāḳ devoted himself entirely to his work as a writer, poet and essayist; in this field mention should be made of his *Nuzhat al-aḥdāḳ fī maṣāriʿ al-ʿushshāḳ* and of several articles in *Āthār al-adhār*, edited by Salīm Djubrāʾīl al-Khūrī and Salīm Mīkhāʾīl Shiḥāda. In 1876, during the reign of the Khedive Ismāʿīl [*q.v.*], he settled in Alexandria at the suggestion of Salīm al-Naḳḳāsh [*q.v.*] from Beirut, the creator of the modern Arabic theatre, who was anxious to escape from the pressure of the Ottoman authorities in the countries of the Middle East, and had come to Egypt in order to pursue his theatrical activity in a more sympathetic political and literary climate. The two compatriots then collaborated in the work of the development of Arabic drama, which was then beginning, and to which Adīb Isḥāḳ had already contributed with his Arabic adaptation of Racine's *Andromaque*, which he had written at the suggestion of the French consul in Beirut, and with the translation from French of an historical play called *Charlemagne*.

But the event which marked the beginning of a new phase in Adīb Isḥāḳ's Egyptian career was his contact with the famous reformer Djamāl al-Dīn al-Afghānī [*q.v.*], whose lectures at al-Azhar he attended and who proposed the foundation, in 1877, of the political weekly *Miṣr*, which Adīb Isḥāḳ published at first in Cairo and later in Alexandria. Around this periodical there very soon gathered the best writers and the most able politicians of the time; among them should be mentioned al-Afghānī himself and Muḥammad ʿAbduh, his most famous pupil. But this publication, and also the daily paper *al-Tidjāra*, to which Adīb Isḥāḳ had given a financial and commercial, and later a political character, were suppressed in 1880, and their editor was banished from Egypt because of his extremist revolutionary ideas and his opposition to the government.

Adīb Isḥāḳ then went to Paris, where, in order to continue his patriotic action on behalf of his adopted country and compatriots, he founded the periodical *Miṣr al-Ḳāhira* (known also as *Miṣr* or *al-Ḳāhira*), formed contacts with the literary and political circles, and published a series of articles in the Paris press. Nine months later, he returned to Beirut for a year, during which he agreed to resume the editorship of *al-Taḳaddum*, and at the end of 1881, encouraged by the improvement in the political situation, he returned to Egypt, where he was appointed *nāẓir* ("supervisor") in the Editorial and Translation section of the Ministry of Education; he was later made second secretary of the Chamber of Deputies, and at the same time obtained permission to resume the publication of his journal *Miṣr*, which he entrusted to his brother. But, as a result of the revolution of ʿUrābī Pasha [*q.v.*] in 1881, he fled to Beirut and did not return to Egypt until after the British occupation in 1882; but being unable to resume his government post, he went back to Beirut, where he accepted for the third time the editorship of *al-Taḳaddum* and published in 1884 the translation of *La belle parisienne*, *al-Bārīsiyya al-ḥasnāʾ* by Comtesse Dash, of which he had produced an Arabic version in his youth. Adīb Isḥāk died at al-Ḥadath (Lebanon), after a last stay of some weeks in Cairo and Alexandria, in 1885.

It is stated in *al-Durar* (extracts from his poems, articles, lectures, tracts, Arabic adaptations of plays, etc., Beirut 1909, collected by his brother, ʿAwnī Isḥāḳ) that he is also the author of the play entitled *Gharāʾib al-ittifāḳ* (which was several times performed in Alexandria), and of the collection of biographies made during his stay in Paris, *Tarādjim Miṣr fī hādha 'l-ʿaṣr*, but the first of the two manuscripts was stolen from him and the other is lost.

Bibliography: To the references in Brockelmann, II, 759, add Ibrāhīm ʿAbduh, *Aʿlām al-ṣaḥāfa al-ʿarabiyya*, Cairo 1948, 116-24; M. Y. Nadjm, *Al-Masraḥiyya fi 'l-adab al-ʿarabī al-ḥadīth, 1847-1914*, Beirut 1956, 58, 100-1, 215-6; J. M. Landau, *Studies in the Arab theater and cinema*, Philadelphia 1958, 61, 63, 64, 71. H. Pérès has noted the translation of *La belle parisienne*, in *Le roman, le conte et la nouvelle dans la littérature arabe moderne*, in *AIEO Alger*, iii (1937), 294, no. 207. (U. Rizzitano)

KHODJA **ISḤĀḲ EFENDI**, Ottoman mathematician and engineer in Maḥmūd II's reign. He was born at Arta in the province of Janina (Yanya) in 1774 (?), the son of a Jew converted to Islam (Faik Reşit Unat's thesis in *Başhoca Isḥāḳ Efendi* (*Bell.*, xxviii (1964), 89-115) that Khodja Isḥāḳ Efendi and Sulṭān-zāde Isḥāḳ Bey, the favourite of Selīm III, were the same person is far from convincing). After the death of his father he came to Istanbul, where he studied mathematics privately and learned various Oriental and Western languages. Appointed instructor (*khodja*) of mathematics at the Military School of Engineering (*Mühendiskhāne-i Berrī-i Humāyūn*) in 1816, he became interpreter of the *Dīwān-i Humāyūn* [*q.v.*] in Dhu'l-Ḳaʿda 1239/July 1824, in addition to his position at the *Mühendiskhāne*. He was dismissed from his post at the *Dīwān* in 1245/1828-9 and sent to the Balkans to supervise the construction of fortresses there. It seems that his dismissal was due to Pertev Efendi (later Pasha) [*q.v.*], the *reʾīs al-küttāb* of the time, who saw in him a potential rival. Isḥāḳ Efendi continued his teaching at the *Mühendiskhāne*, where he became Chief Instructor (*Bash-khodja*) in Radjab 1246/December 1830-January 1831. He succeeded in reforming the curriculum and improving the teaching staff at the *Mühendiskhāne*, but his predecessor in the office, Seyyid ʿAlī Efendi (later Pasha), was influential enough to have him removed and sent to Medina to supervise the restoration of various sacred buildings. While on his way back to Istanbul, he died at Suez in 1251/1835 and was buried there.

Isḥāḳ Efendi's main work, entitled *Madjmūʿa-i ʿulūm-i riyāḍiyye* (4 vols., Istanbul 1247-50/1831-34), consists largely of translations from French books on mathematics, physics, chemistry, geology and their applications. Although a school manual of no great scientific value, it is the first work in Turkish on the modern physical and natural sciences (see *Tanzimat I*, Istanbul 1940, 479 f., 492 f., 554 f.). Furthermore the scientific terminology, based on Arabic, which was used in Turkey up to the 1930's and in some Arab countries still later, was mainly Isḥāḳ Efendi's creation. Through his teaching and publications he contributed much to the introduction of Western sciences to Turkey and the Arab countries

(E. KURAN)

ISḤĀḲ PAS̲H̲A [see Supplement].

ISḤĀḲ SÜKŪTĪ, a Young Turk leader, was born in 1868, probably of Kurdish extraction. As a student at the Military Medical School in Istanbul, he was in May 1889 one of the original group of founders of the Secret Committee, which eventually developed into the Committee of Union and Progress [see ITTIḤĀD WE-TERAḲḲĪ D̲J̲EMʿIYETI]. Later, in 1895, he was exiled to Rhodes but managed to escape and went to Paris, where he associated with the Young Turk émigrés. In 1897, with others, he founded the anti-government journal *Osmanlı* (*ʿUt̲h̲mānlī*), which was published in Geneva. In 1899, under combined pressure and blandishments from the Sultan, the journal ceased publication and several of its sponsors received official appointments.

Isḥāḳ Sükūtī became medical officer to the Ottoman Embassy in Rome. He did not, however, sever his connection with the Young Turks and when a group of them moved to London to continue the publication of *Osmanlı* there, he underwrote the expenses of publication and continued to do so until his death in San Remo in 1903. In 1909, after the revolution in Turkey, his friend Dr. Riḍā Nūr [*q.v.*] brought his remains to Istanbul and had them buried in the garden adjoining the tomb of Sultan Maḥmūd.

(ED.)

ISḤĀḲIYYA [see KĀZARŪNĪ].

ISHAKOVIČ [see ÜSKÜB].

IS̲H̲ĀN. 3rd pers. plur. of the Persian personal pronoun. The word, which has always had an honorific significance, was formerly used in Central Asia (*i.e.*, what is now Soviet Central Asia and the Sinkiang-Uygur Autonomous Region of China) in the sense of *s̲h̲ayk̲h̲* or *murs̲h̲id* (teacher or guide) in contrast to *murīd* (disciple or pupil). It has still to be established when the term first appeared in this sense. It certainly existed in the middle ages; the celebrated K̲h̲ʷād̲j̲a Aḥrār (died 895/1490 in Samarḳand) is always referred to as *is̲h̲ān* in his biography. The rank of *is̲h̲ān* was frequently hereditary. An *is̲h̲ān* lived with his followers in a dervish monastery (*k̲h̲ānḳāh*), and sometimes at the tomb of a saint. Most *is̲h̲ān*s made journeys from time to time into the Kazakh steppe where they had more adherents and received richer presents than in the settled districts. Greater attention was drawn to the *is̲h̲ān*s by a revolt started at Andizhan in 1898 by a certain Dukchi Is̲h̲ān. Literature on the subject is scanty and, since the very existence of *is̲h̲ān*s is strongly disapproved of by the Soviet and Chinese authorities, the term is now obsolescent, if not obsolete.

(W. BARTHOLD—[G. E. WHEELER])

IS̲H̲ĀRA (A.), "gesture, sign, indication", has acquired in rhetoric [see BADĪʿ] the technical meaning of "allusion" but, in its early connotation, a gesture of the hand, a sign of the head, of the elbow, the eyes, the eyebrows etc., is considered by al-D̲j̲āḥiẓ (*Bayān*, i, 80; *Ḥayawān*, i, 33), together with speech, writing, *nuṣba* and computation on the fingers [see ḤISĀB AL-ʿAḲD where other gestures to indicate numbers are also dealt with], as one of the five methods by which a man may express his thoughts [see BAYĀN]. Whether combined with words or not, a gesture (*is̲h̲āra* and also *imāʾ*) allows a man to make his meaning clear without revealing his thoughts entirely (*Bayān*, i, 77 ff.) and may even be necessary in order to explain the meaning of a concrete idea which is unknown to the listener; it is sometimes more expressive than words, and carries further than the voice; a gracious movement of the hand or the head (*ḥusn al-is̲h̲āra*) elegantly emphasises the expression of an idea, in spite of those who consider that absolute immobility is necessary for dignity (*ḥilm* [*q.v.*]). Love poetry often refers to the language of the eyes, which express intimate feelings better, and less dangerously than words; lovers have a complete code, the scope of which is summarised by Ibn Ḥazm (*Ṭawḳ*, ch. ix, *bāb al-is̲h̲āra bi'l-ʿayn*) thus: [a sign made with the eye] "cuts off and brings together, it promises, it threatens, refuses harshly, fills with contentment, commands and forbids, strikes the servants, warns against the watcher, makes laugh and causes grief, asks and answers, holds back and grants generously" (tr. A. R. Nykl, 44); he describes some of these signs and gives their meaning ("to close the eyelid in a wink signifies consent", etc.), but admits that the majority of them cannot be described, though he implies that everyone should be able to grasp their meaning.

In fact the Arabs considered anyone who did not understand the language of gestures and obliged his interlocutor to express his thoughts in words to be a fool (cf. the proverb: *inna man lā yaʿrif al-waḥy*ᵃ *aḥmaḳ*, *waḥy*/*waḥī* also meaning sign; see al-Maydānī, i, 15; *LA*, s.v. *WḤY*). They had a collection of signs with their own meaning: agreement, refusal, indifference, etc., which were used in everyday life, and according to contemporary witnesses, the Prophet used to accompany his words with gestures whose meaning was not always clear. There existed also ritual or symbolic gestures made when a contract or an alliance was concluded, when an oath of allegiance was sworn or act of allegiance made, etc., [see BAYʿA; ḤILF AL-FUḌŪL; ṢAFAḲA; YAMĪN; etc.]. With the question of the gesture with the uncovered hand is connected that with a staff, the symbol of authority [see ʿANAZA] held by orators and preachers; al-D̲j̲āḥiẓ devoted in his *Bayān* a long section to the manifold ways of using the baton, which also served, together with the whip or the sword, to express threats.

More research needs to be done on the ritual or symbolic gestures, which with the Arabs go back to remote antiquity, to complete and amplify the observations of I. Goldziher and to verify the opinions he has advanced in a number of publications: *Orient. St. . . . Th. Noeldeke*, Giessen 1906, i, 303 ff.; *ZDMG*, 1, 495 ff.; *Abhand. zur arab. philologie*, i, 55-7, ii, p. cv

(analysis by G. H. Bousquet, in *Arabica*, vii (1960), 22-3, viii (1961), 269-72).

The magic value of certain gestures can be detected behind some *ḥadīths*, in particular the prohibition of using the hand to indicate a flash of lightning (Ibn al-Athīr, *Usd al-ghāba*, v, 266) or of greeting a person with one finger only (al-Dhahabī, *Mīzān*, ii, 162), in the same way that it survives for example in the gestures to protect against the evil eye [see ʿAYN]. As for *hidjā'* [*q.v.*], I. Goldziher points out the imprecatory meaning of the index finger pointing at an enemy, and the importance of this finger in Islamic ritual [see TASHAHHUD] where it has acquired the characteristic names of *sabbāba, musabbiḥa, muhallila, daʿʿā'a*; it was thus that the Prophet's habit of extending the index finger during prayer, after having been interpreted as a magic survival, became the symbol of the unity of God [see ṢALĀT]; in the *ḳunūt* [*q.v.*] the act of raising the hands with the palms turned towards the face was the subject of long discussions by the *fuḳahā'* whereas, in invocation (*duʿā'* [*q.v.*]), the palm turned towards the sky may have had originally a magic force [on the North African *fātḥa*, of a different type, see FĀTIḤA].

Many other gestures have still to be studied, but it is enough to mention here those given above plus a brief reference to the game of "mora" (see G. Lemoine, *Les anciens procédés de calcul sur les doigts* in *REI*, 1932/1, 4-8); in this game the partners, facing each other, at a given signal open the fist (or fists), raising whatever number of fingers they choose and speaking at the same time the number indicated by the total number of fingers raised (or else saying simply "odd" or "even"), the winner is the one who has guessed correctly. This process can be used to arrange different types of sharing out, which are known by various names: *muḳāraʿa, mukhāradja, munāhada, musāhama* [see MUKHĀRADJA]. For *ism al-ishāra* "demonstrative", [see ISM].

Bibliography: in the text. (ED.)

The Ṣufīs frequently use the word *ishāra* in a very technical sense, but when one attempts to define its meaning exactly, one finds that they give few satisfactory definitions or explanations. "Allusion" or "allusive language" would be a literal translation. But whereas these English words refer to a symbolical language which brings the object to mind by suggestion rather than by direct reference (Mallarmé), the Arabic word does not necessarily have this meaning which the Ṣūfīs prefer to render by the term *ramz* (pl. *rumūz*) (see *Lumaʿ* of al-Ṭūsī, 338). When the Ṣūfīs call themselves the *ahl al-ishāra* (the allusionist school) or when they say that their science consists of *ʿulūm al-ishāra*, they are attempting to define not only the way in which they express themselves, but also the content of an experience which can only be evoked by this method. *Ishāra* is in this sense the opposite of *ʿibāra*, not in the way that symbolical language is opposed to "realistic" language or in the way that a parable cannot be translated into abstract language, but in the way that something incommunicable is opposed to something communicable. All knowledge acquired by natural means falls within the domain of the *ʿibāra* in that it can be "expressed" and communicated to others in their language. In mystical experience, however, the bonds of natural knowledge are burst, and man reaches a new world to which his concepts and words cannot be applied. He can only talk about it by "allusion" (*ishāra*), that is to say not symbolically, but by approximation, always aware that his language can only really be understood by those who have experienced that of which he talks (al-Kalābādhī, *Taʿarruf*, Cairo ed., 87-9). And thus it is, that by the very nature of the experience, the language of the *ishāra* tends, on the one hand, to become an *esoteric* language not understood by the uninitiated or deliberately made incomprehensible to them, and on the other hand, tends to destroy itself as inadequate and as a veil between the Ṣūfī and the object of his experience: God. The novice, remarked Djunayd, must find God at the same time as his allusion, but he who has attained the highest of mystical states (*aḥwāl*) must find God in the abolition of the allusion (*Lumaʿ*, 224). And al-Ḥalladj: "As long as you attempt an *ishāra*, you are not yet a *muwaḥḥid*,—not until the moment when God takes over your allusion by annihilating your self-consciousness. Then He leaves neither the subject of the allusion (*mushīr*) nor the allusion itself" (*Essai*, 361, no. 11).

Ishāra, which we have just described as the esoteric language of the inexpressible mystical experience, acquired this full and complex meaning about the 3rd/9th century, in the Baghdād and Khurāsān schools. Previous texts use it differently, in a way related to Ḳur'ānic exegesis. Thus when the *Tafsīr* attributed to Djaʿfar al-Ṣādiḳ (died 148/765) says that the Ḳur'ān is at once expression (*ʿibāra*) and allusion (*ishāra*), that the first is for the vulgar believers and the second for the privileged (*khawāṣṣ*), *ishāra* and *ʿibāra* refer to the *ẓāhir* and the *bāṭin* of the Book: the vulgar believer stops at the external beauty of the text, while the privileged goes beyond it towards the interiority of the text, towards the allusion which the heart discovers (see P. Nwyia, *Exégèse coranique*, 167). The definition of *ishāra* given by Ibn ʿArabī should also be noted. Replying to Ḥakīm Tirmidhī's question: "What is revelation (*waḥy*)?", he writes: "It is that in which is born the allusion which replaces the expression (*ʿibāra*) without expression. In the *ʿibāra*, one "passes" from it to the sense which it aims at; and this is why it is called *ʿibāra*, passage, while the allusion which is revelation is the very essence of that which is alluded to" (*dhāt-al-mushār ilayhi*; *Khatm al-awliyā*, ed. O. Yahya, 220). The *ishāra* is thus the language which effects the maximum reduction of the distance between the saying and what is said. This is why al-Shiblī could declare that the true allusion to God is God Himself, and this allusion eludes the mystic (see *Lumaʿ*, 223).

ISHBĪLIYA, the name used by the Arabo-Muslim authors to denote Seville, the ancient Romano-Visigothic Hispalis, situated 97 km. from the coast on the Guadalquivir.

1.—HISTORY

The Muslim geographers locate Ishbīliya at a distance of 60 miles from the sea, and describe it as a *madīna* and capital of the *kūra* which bore the same name or was sometimes known as Ḥimṣ, from the Syrian *djund* established there in 125/742-3. The boundaries of the *kūra* are fixed fairly precisely by al-ʿUdhrī, who said that the dependencies (*aḥwāz*) of Ishbīliya were contiguous 30 miles to the west with the *kūra* of Niebla, 25 miles to the south and south-east with that of Shadhūna, 40 miles to the east with the territories of Córdoba, the capital of which was 90 miles away, and that they extended for 50 miles to the north as far as the *kūra* of Mérida. The richness of its lands was particularly noted by al-ʿUdhrī, Ibn Ghālib, al-Idrīsī and al-Ḥimyarī, who call attention to the excellence and fertility of the soil, both for plantations and orchards and also for irrigated land

and pasturages. The name Aljarafe (al-Sharaf) applies to the natural region, both the district and the mountain (*iḳlīm* and *djabal al-Sharaf*), and it recurs constantly in descriptions of Ishbīliya; bordering on the *iḳlīm* of Shadhūna, it extends in all for 40 miles, according to al-Idrīsī, starting about three miles to the north of Ishbīliya and including the prosperous, densely inhabited territories situated between Ishbīliya, Niebla and the sea. The economy of Ishbīliya was based essentially on vast plantations of olive and fig trees, mainly in Aljarafe, and in particular on the production of oil of high quality, used throughout al-Andalus and also exported to the East. Of similar importance economically was the cultivation of cotton, here again of excellent quality, which was sent to other parts of al-Andalus and to Ifrīḳiya. Safflower (*Carthamus tinctorius*) was a product that was exported and also widely distributed within the country. Cereals, an abundance of fruit of varied kinds, herds of cattle and horses, game and fish of high quality, sugar cane, honey, medicinal plants and other vegetable produce, especially the *ḳirmiz* (*Quercus coccifera*), constituted other natural riches of the *kūra* of Ishbīliya, which included 12 *iḳlīms* or agricultural districts; the names of these are enumerated by al-ʿUdhrī and al-Bakrī, who record that the total figure of the *djibāya* at the time of the amir al-Ḥakam b. Hishām amounted to 35,100 *dīnārs*.

In the spring of 94/713, after occupying Medina Sidonia, Alcalá de Guadaíra and Carmona, Mūsā b. Nuṣayr [*q.v.*] annexed Ishbīliya to the other possessions of Islam, entrusting it to the protection and supervision of the Jews and of an Arab detachment. Shortly afterwards, the populace rebelled and had to be put down with severity by ʿAbd al-ʿAzīz b. Mūsā, who established his residence there as *wālī*; the town was the seat of the Arabo-Muslim government of al-Andalus until the time when the *wālī* al-Ḥurr transferred it to Córdoba in 99/717-8. During the period preceding the establishment of the Umayyad dynasty, Ishbīliya witnessed a modification of its social structure as a result of Arabo-Berber ethnic and religious influence, particularly after the Syrian *djund* of Ḥimṣ had been installed there. The original Visigothic nobility was replaced by an Arab nobility or military caste, mainly Yemenī, which began to dominate the town and countryside and to exploit the indigenous population and the agricultural wealth of the province. In his *Djamhara*, Ibn Ḥazm has left a very clear eye-witness account of the Arab families established in Ishbīliya and the region (Elías Terés, *Linajes árabes en al-Andalus*, in *al-And.*, xxii (1957), index, 376).

The history of Ishbīliya under the amirate is characterized by constant rebellions. The chronicles, and above all the account of al-ʿUdhrī, make particular reference to all those, whether Arab or *mawālī*, who revolted in the *kūra* of Ishbīliya. Under the administration of governors nominated by Córdoba, Ishbīliya had to endure revolts by members of the *djund* and of the "noble" families, which were repressed with severity by the amir's troops. One revolt, which broke out in 149/766 under the leadership of Saʿīd al-Yaḥṣubī al-Maṭarī in the Niebla district and then spread to Ishbīliya, is noteworthy, as is also the rebellion of the former governor of the town, Abu 'l-Ṣabbāḥ ibn Yaḥyā al-Yaḥṣubī, who had been disgraced. In 154/771 according to al-ʿUdhrī, or in 156/773 according to Ibn ʿIdhārī and others, Ḥaywa or Ḥayāt b. Mulāmis al-Ḥaḍramī, aided by the Yemenīs of Ishbīliya and acting in concert or almost simultaneously with ʿAbd al-Ghaffār al-Ḥimṣī (who started his activities to the north-west of Ishbīliya and in the neighbourhood of Córdoba), with other rebels overran the south-western districts of al-Andalus, claiming to enjoy complete autonomy in Ishbīliya and the adjacent territories. It seems that, until the amirate of ʿAbd Allāh, no other serious subversive movement occurred in Ishbīliya. After the revolts just referred to and those recorded by al-ʿUdhrī, Ishbīliya was to experience several decades of peaceful existence, disturbed only in 230/844 by the invasions of the Vikings (*Madjūs* [*q.v.*], concerning which new information is provided by the manuscript of the *Muḳtabis* of Ibn Ḥayyān utilized by E. Lévi-Provençal (*Hist. Esp. Mus.*, i, 218-25), and also by al-ʿUdhrī, whose statements have been collected by A. A. El-Hajji in his article *The Andalusian diplomatic relations with the Vikings during the Umayyad Period*, in *Hespéris-Tamuda*, viii (1967), 67-105. During the amirate of ʿAbd Allāh, from the start rebellion proved to be the keynote of the time, both in Ishbīliya and throughout al-Andalus. Apart from the early rebellions at the time of the nomination of Muḥammad, son of ʿAbd Allāh, as governor of Ishbīliya, the disturbances which most gravely threatened the peace of this *kūra* were those provoked by the ambitions of two powerful Arab families, the Banū Ḥadjdjādj and the Banū Khaldūn, who owned vast estates between Carmona and Ishbīliya in and Aljarafe and who were the instigators of the conflict between Arabs and *muladies*, which for several years brought bloodshed to the south-western territories of al-Andalus. From 276 to 301/889-913, the dynasty of the Banū Ḥadjdjādj set up a small independent state in Seville and Carmona, nominally subject to the amir of Córdoba. It is probable that complementary information on Muḥammad b. Ibrāhīm b. Ḥadjdjādj is to be found in volume v of the *Muḳtabis* of Ibn Ḥayyān, relating to ʿAbd al-Raḥmān III (cf. on the contents of this vol. M. ʿA. ʿInān in *RIEI*, xiii (1965-6), 127-38).

Under the caliphate, Ishbīliya, which had been conquered by ʿAbd al-Raḥmān III in 301/913, enjoyed some years of peace and prosperity, broken only in 363/974 by the revolt of a group in which some members of the Banū Ḥadjdjādj were implicated and during its course the prison was attacked. Then, at the time of the *fitna*, the nomination of the son of al-Ḳāsim b. Ḥammūd, Muḥammad, as the personal delegate of the caliph to the government of Ishbīliya, led the townsfolk, on hearing of the rising of the people of Córdoba against the Ḥammūdid caliph, to revolt in their turn against Muḥammad and besiege him in the Alcázar.

But the period of greatest prosperity for Ishbīliya, in the political, economic and cultural spheres alike, was that of the dynasty of the Banū ʿAbbād [see ʿABBĀDIDS] after the rising of the *ḳāḍī* Abu 'l-Ḳāsim Muḥammad b. ʿAbbād in the middle of Shaʿbān 414/early November 1023 (al-ʿUdhrī gives some particulars regarding his activities which Lévi-Provençal was unable to utilize in his article on the ʿAbbadids). After the death of Muḥammad b. ʿAbbād in Djumādā I 433/January or February 1042, his son ʿAbbād al-Muʿtaḍid undertook a vigorous policy of expansion which resulted in the annexation of Niebla, Huelva-Saltés, Carmona, Arcos, Ronda and other adjacent territories and in the considerable enlargement of his kingdom. On the death of al-Muʿtaḍid (461/1068-9), his son Muḥammad al-Muʿtamid, in face of the mounting military and economic pressure exerted by King Alfonso VI of

Castile, with the onerous system of *parias*, decided to seek the aid and intervention of the Almoravid *amīr* Yūsuf b. Tās͟hfīn; the latter finally dispossessed al-Muʿtamid of his kingdom, as a result of the military action of Sīr b. Abī Bakr, who captured Is͟hbīliya by storm on 20 or 22 Rad̲j̲ab 484/7 or 9 September 1091, and remained there as governor until his death in D̲h̲u 'l-Ḳaʿda 507/April-May 1114. Under Almoravid rule for 55 years and four months, Is͟hbīliya became crowded with new inhabitants who wore the veil—a foreign element in the social context—and the town developed a special atmosphere which is vividly described by Ibn ʿAbdūn in his treatise on *ḥisba*. Seville had fourteen governors, perhaps more, who were related to the Tās͟hfīn family, one of whom, Abū Ḥafṣ ʿUmar b. al-Ḥād̲j̲d̲j̲, tried to halt the invading force which, in the time of Alfonso VII, sacked the whole Is͟hbīliya region and killed the Almoravid governor in Rad̲j̲ab 526/May-June 1132. Is͟hbīliya was a place of assembly for troops arriving from the Mag͟hrib and for Andalusian soldiers recruited by the *fuḳahā'* and *ʿulamā'* of Córdoba and Seville, until the time when Barrāz b. Muḥammad al-Masūfī, acting in the name of ʿAbd al-Muʾmin, annexed the town to the Almohad empire (13 S͟haʿbān 541/18 January 1147). The Sevillans sent a delegation headed by the *ḳāḍī* Ibn al-ʿArabī to express their gratitude to ʿAbd al-Muʾmin. Abū Yaʿḳūb Yūsuf, who was governor of Is͟hbīliya from 551 to 558/ 1156-63, from the time when he became caliph and above all from 567/1171-2, made the town the second capital of his empire and the administrative centre of al-Andalus. He strengthened the city's fortifications and completed many other important undertakings; the population increased considerably, prosperity was enjoyed for several years, and the town took on a new appearance. However, Is͟hbīliya was destined to suffer various attacks, particularly in 553/1158, by forces from Avila under Ibn Mardānīs͟h [*q.v.*] and Ibn Hamus͟hk. These were a source of anxiety for the Almohad governor of Is͟hbīliya for two or three years. In the last quarter of the 6th/12th century, the town was subjected to raids by Alfonso Enriques and the Infante Sancho of Portugal, and also by Alfonso VIII of Castile, which caused considerable damage in Aljarafe and in the Vega. At the beginning of the 7th/13th century there were serious floods, an endemic danger from which Is͟hbīliya suffered frequently, as a result of the Guadalquivir overflowing its banks (D̲j̲umādā II 597/February-March 1200), and a great number of houses was destroyed by the inundations. This catastrophe, the pressure from the Christians and the political crisis in the Almohad empire brought about the start of a decline from which Abu 'l-ʿUlā' Idrīs, the son of Yūsuf I, succeeded in temporarily rescuing Is͟hbīliya in 617/1220-1. The last years of Muslim life in Is͟hbīliya are full of sad incidents, in particular the attack by forces from Léon in 622/1225, when heavy losses were inflicted on the Sevillans, the siege of the town by al-Bayyāsī, who held the castles of Tajada and Aznalcázar, and the rising of al-Maʾmūn, son of Yaʿḳūb al-Manṣūr. All these happenings coincided with the increasing military and economic pressure exerted by Ferdinand III, which compelled al-Maʾmūn to conclude honourable truces, and with the insurrection of Ibn Hūd against the Almohads. On 11 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 626/31 October 1229 the people of Seville renounced their obedience to the Almohad empire and accepted the authority of Ibn Hūd. Ferdinand III harassed Is͟hbīliya increasingly and kept the town under siege for 17 months, from D̲j̲umādā I 645/September 1247, according to the Almohad *Bayān*, until the moment when it fell into his hands on 1 S͟haʿbān 646/19 November 1248 or, more probably, according to the *Crónica general*, on 25 November 1248 (for all these events, see J. González, *Las conquistas de Fernando III en Andalucía*, in *Hispania*, xxv (1946), 98-121). The attempts made by the Marīnid sultans to restore Is͟hbīliya to Islam failed, though their devastations in the region caused much damage, especially in 674/1275, the year of the siege of the town, and in 676/1278, when Aljarafe was pillaged. After this unhappy chapter, Seville remained in Christian hands, never again to be placed in danger or even threatened. It had been in the possession of the Muslims for 535 years.

2.—Historic Buildings

From its long Muslim history, Seville has retained only a few historic buildings; nevertheless, it was one of the great art cities of al-Andalus. But the prosperity it has enjoyed during the modern period when, from the 16th century, it came to be the great port and commercial centre safeguarding the links between Spain and her empire in the New World, has endowed Seville with new buildings which have replaced those which adorned the city at the time of the Christian reconquest.

1). Fortifications.—a) *The town wall.* For Seville, situated in a plain on the banks of a large navigable river, a fortified enceinte was indispensable. The Arabic texts refer to this at a very early date: after the Norman invasion of 230/844, the wall had to be repaired, at the command of ʿAbd al-Raḥmān II who appointed one of his Syrian *mawālī*, ʿAbd Allāh b. Sinān, to direct the works. On several occasions the waters of the Guadalquivir damaged the south face of this wall, at the edge of the river. Moreover, after the deposition of ʿAbd Allāh, the Zīrid amir of Granada, al-Muʿtamīd had the ramparts strengthened, in view of the imminence of an Almoravid attack.

But this enceinte seems to have been repaired or completely reconstructed under the second Almoravid sultan ʿAlī b. Yūsuf. The geographer al-Idrīsī, who was writing between 541 and 548/1147-54 and who had seen Andalusia before the Almohad conquest, said that the town wall of Seville was very strong. It survived the Christian reconquest. After having surrounded the town for seven centuries, it was demolished between 1861 and 1869. It measured six kilometres in circumference and was flanked by 116 towers. One small section of the wall still survives, between Córdoba and the Macarena gates. The lofty curtain wall of solid concrete is constructed in courses 83 cm. high. Seven towers have been preserved, one of which is polygonal, the Torre Blanca, the other six being rectangular. All of them are decorated on their outer faces with bands of brickwork in relief. An outer wall stands 35 m. outside the main ramparts. The gates, in themselves strong and massive constructions, contained angled passages. When built, this Almoravid enceinte represented the latest development of Muslim fortifications in Spain, and it retained its efficacy throughout the Middle Ages. In 647/1239, after a siege, the town surrendered to the king of Castile; it was not taken by storm.

Under the Almohad Abū Yaʿḳūb, the wall along the bank of the river must have been repaired again.

In 617/1220-1, the governor of the town, the Almohad Abu 'l-ʿUlā', built an angled defensive outwork, a *coracha*, which extended from the Alcazar to the river and ended in a strong twelve-sided bastion, the Golden Tower. The two lower storeys of this tower have been preserved, but the upper lantern has been rebuilt. The walls are constructed of rough stone and concrete. Like all the great Almohad bastions, the Golden Tower contains vaulted rooms, in this instance roofed with groined arches, alternately triangular and rectangular in plan and occupying three storeys. The arched windows which give light to these rooms are ornamented on the outer side with blind arcades bordered with ceramics.

The Golden Tower greatly strengthened the defence of the Guadalquivir bank. Between this and another bastion built on the left bank, it was possible to fasten a chain, to bar the river.

b). *The Alcazar.* Like all large towns in al-Andalus, Seville had its citadel, the Alcazar, the residence of the sovereign or governor. Its rectangular towers, ornamented with a double band in relief at the top, led to the belief that this fortification was the work of the Almohads. But recent restoration work of the west face has revealed that, beneath their outer covering, the curtain wall and towers were built of cut stone, following the characteristic technique of the 3rd/9th century. In its oldest form, the Alcazar thus dates back to the construction works ordered by ʿAbd al-Raḥmān II. In the 4th/10th century, an alteration was made with a gate in this rampart, with a handsome facade of cut stone. The Almohads must have contented themselves with restoring the whole structure and repairing the upper part of the towers.

2). Palaces.—Of the Muslim palaces contained in the Alcazar, and particularly the one adorned by the ʿAbbādids, nothing remains from before the 6th/12th century. From the Almohads' buildings there only survive one section of the arches and interlaced lattice-work panels which surrounded the Patio de Yeso, and a ribbed vault in the Patio de Banderas. All the rest of the Alcazar was rebuilt and altered in the Christian period: today, as a whole, it represents a great monument of mudéjar art. However, in the Hall of the Ambassadors, the triple semicircular horseshoe-shaped archway, under a large arch of the same form, may represent an architectural arrangement dating from the caliphal period.

3). Mosques.—a). *The first chief mosque.* Although all that survives is a section of the minaret, which now forms the base of the clock-tower in the old collegiate church of S. Salvador, we are fairly well informed regarding the first chief mosque in Seville. The foundation inscription which was carved on a pillar has been discovered; the mosque was built in 244/829 under the direction of the *ḳāḍī* of the town, Ibn ʿAdabbās. With a width of 48.5 metres, it contained eleven aisles, at right angles to the wall of the *ḳibla*. Arches of brick-work rested on stone pillars. In 471/1079, the upper part of the minaret was repaired by al-Muʿtamīd.

Despite its handsome size, the mosque has become too small. In another quarter of the town, near the Alcazar, the second Almohad caliph, Abū Yaʿḳūb Yūsuf, had a new sanctuary built. Nevertheless, in 592/1195 his son Abū Yūsuf Yaʿḳūb ordered the restoration of the former chief mosque which, at the reconquest, was transferred into a church. In 797/1395, an earthquake undermined the top of the tower. Shortly afterwards, a bell-tower of cut stone

was erected, and this still forms the second section of the present bell-tower. The mosque underwent various alterations and was demolished in 1671.

The base of the minaret—the oldest Muslim building in Spain, after the mosque of ʿAbd al-Raḥmān I at Córdoba—measures 5.8 m. in width. It is built of rough stone, of large size. In the interior, a spiral staircase mounts round a cylindrical central shaft. This arrangement, unknown in the Muslim East, occurs again in two ancient minarets in Córdoba. This peculiarly Andalusian feature is perhaps of Roman origin.

b). *The Almohad chief mosque.* The Almohad caliph Abū Yūsuf Yaʿḳūb wished to endow his favourite town with an immense and beautiful chief mosque. The oratory and the *ṣaḥn* would appear to have been built during this sovereign's long visit to Andalusia, from 566 to 571/1171-6. It was a large building, measuring approximately 150 m. by 100 m. The prayer court had 17 aisles, in the shape of a T, and probably there were 5 domes in the bay along the wall of the *ḳibla*. In length, there were 14 bays. In its plan, it conformed with the earliest Almohad mosques, though the dimensions were increased.

The *ṣaḥn*, which extended for a distance of eight bays, has been preserved in part. It was surrounded by lofty arcades of brick-work. Rectangular buttresses occurred at intervals along the outside walls, their summits crowned with toothed merlons, as in the great mosque of Córdoba. Two of the doorways of this *ṣaḥn* have survived, the Puerta del Perdón, in the main axis of the building, and the Puerta de Oriente, on one side of the courtyard.

Although nothing now survives from one of the most immense prayer courts built by the Muslim West, the minaret of this Almohad chief mosque, now known as the Giralda, still dominates the town. This minaret was started in 551/1156 by the overseer Aḥmad b. Baṣo, who built the foundations and the base of the tower with cut stone which had been used before. The death of the caliph for a time suspended work, which was resumed on the orders of Abū Yūsuf Yaʿḳūb al-Manṣūr by the architect ʿAlī of Gomara. The *dja'mūr*, the work of Abū Layth al-Siḳillī, was erected in 589/1198.

This great Almohad minaret, second only to the Kutūbiyya of Marrākush, measures 16.1 m. in width, while the height of the tower is 50.85 m. It was built of brick; around a central block, occupied by seven rooms placed one above the other, a ramp—not a staircase—mounted at a gentle angle, giving access to the upper part of the tower. The lantern was remodelled and surrounded by a gallery for the bells, between 1520 and 1568. Each of the faces of the tower is divided vertically into three sections. In the centre, panels of blind arcades with floral spandrels frame the twin apertures which give light to the ramp. On each side, the wall, which is left plain at its base, is decorated for two storeys with a mesh design in brick-work. All this ornamentation is of great richness and rare subtlety of design.

Reminders of Marrākush, more distant echoes of Córdoba, the natural richness and the light colour of Seville—these were the features that were noted in the Almohad chief mosque. Today, the minaret still bears witness to Seville as a great centre of art, second only to Córdoba.

4). Mudéjar art in Seville. Further testimony, indirect but convincing, is provided by mudéjar art in Seville. The churches erected in the town until the end of the 15th century largely employed Muslim forms and techniques. They were almost always built of brick; the doorways are in the form of large projecting blocks, often decorated with Muslim motifs, and the naves are roofed with *artesenados*. In design and form, their bell-towers are so close to minarets that it has sometimes been thought that they dated back to the Muslim period. Their panels of blind arcades and their floral decoration reproduce, in a simpler style, the motifs of the Giralda.

The palaces of the Alcazar are almost mudéjar: but with the local traditions is also mingled the influence of the art of Granada. It is in the mudéjar churches and in the Giralda that the richness of the tradition of Seville is best appreciated.

(H. Terrasse)

ĪSHĪK-ĀḲĀSĪ, Ṣafawid administrative term = "usher". The *īshīk-āḳāsī*s were minor court officials who operated in two different branches of the administrative system, namely, the *dīwān* [*q.v.*] and the *ḥaram* [*q.v.*]. The officers in charge of the two sections were known as *īshīk-āḳāsī-bāshī-yi dīwān-i aʿlā*, and *īshīk-āḳāsī-bāshī-yi ḥaram* respectively. Both officers had categories of officials other than *īshīk-āḳāsī*s under their command. There was a great difference between the status and power of these two officers:

(1) *īshīk-āḳāsī-bāshī-yi dīwān-i aʿlā.* This officer, called by Kaempfer *supremus aulae Mareschallus*, is not listed among the officers of the early Ṣafawid state. The office is first recorded (985/1577-8) during the reign of Ismaʿīl II (Iskandar Beg Munshī, *Tā'rīkh-i ʿĀlam-ārā-yi ʿAbbāsī*, i, 163), and from then on is mentioned frequently in the sources. The holder of this office was usually a ḳizilbāsh *amīr*. During the time of ʿAbbās I (996/1588—1038/1629), when the composition of the central administration was changed, the *īshīk-āḳāsī-bāshī-yi dīwān-i aʿlā* was elevated to be one of the six principal officers of state, and consequently became a member of the supreme council of amirs (*dīwān*; *djānḳī*). Under ʿAbbās II (1052/1642—1077/1666), he was a powerful official indeed, and, although his position declined thereafter and his duties became largely ceremonial, he is still listed by the *Tadhkirat al-mulūk* (p. 47), written *ca.* 1138/1726, among the high-ranking (*ʿālī-djāh*) *amīr*s.

(2) *īshīk-āḳāsī-bāshī-yi ḥaram.* An officer of lesser rank, who was in charge of that category of officials known as *muḳarrab al-ḥaḍrat*, that is to say, those officials whose duties lay at the entrance to, or outside the *ḥaram*.

Bibliography: *Tadhkirat al-mulūk*, translated and explained by V. Minorsky, London 1943, index, *s.vv.*, and *passim*. (R. M. Savory)

ʿISHḲ (A.), love—passion. Although non-ḳur'ānic, this word attained a considerable importance in Arabic literature in the broad sense. In analysing it, we come to recognize the conditions in which Arabic-Islamic sensibility and thought evolved. As al-Daylamī says (*ʿAṭf*, §§ 5, 87 ff.), all kinds of minds have their opinions (*maḳālāt*) on love (*maḥab-*

ba) and on ʿ*i__sh__ḳ*, which is its most dynamic form. Desert Arabs, men of letters, great intellectuals (*al-fuḍalāʾ*), theologians, sages, mystics, etc., have all made statements on the causes, the manifestations, the degrees and the aims of love. One of the earliest attempts to define ʿ*i__sh__ḳ* is the *Risāla fi 'l-ʿi__sh__ḳ* of al-__Dj__āḥiẓ (*11 Risāla*, 161-9; *Rasāʾil*, ed. Sandūbī, 266-75), and the question so preoccupied men's minds that a discussion on this theme had already been held in the presence of Yaḥyā b. __Kh__ālid al-Barmakī; thirteen representatives of various religious tendencies, one of them a *mōbadh*, took part, according to al-Masʿūdī, who produces their definitions in the *Murū__dj__* (vi, 368-86), giving in addition quotations from Galen, Hippocrates and others; al-Daylamī repeats some of them.

In its most general acceptation, ʿ*i__sh__ḳ* describes the irresistible desire (*__sh__awḳ, ta__sh__awwuḳ*) to obtain possession of a loved object or being (*maʿ__sh__ūḳ*). It betrays, therefore, in one who experiences it (the ʿ*ā__sh__iḳ*), a deficiency, a want, which he must supply at any cost in order to reach perfection (*kamāl*). That is why it admits of hierarchical degrees (*marātib*), like the perfections aspired to by the soul and the body. Its apparently multiple motivations, however, all come down to one ideality, or consistency of meaning (*maʿnā*), which haunts all beings more or less insistently and clearly: it is the aspiration (*tawaḳān*) towards the Beauty (*al-ḥusn*) which God manifested in the world when He created Adam in His own likeness (ʿ*Aṭf*, §§ 18, 24). Because of this, the eyes and the ears are the noble organs, since they perceive the supports of the beautiful (*al-ḥasan*): a face, a head of hair, a heavenly landscape, melodious sounds, etc. If one adds, as the Greeks taught, that Beauty, Good (*__kh__ayr*) and Truth (*al-ḥaḳḳ*) go back to one indissoluble Unity (*waḥda*), all of the complexity of the convergences, interferences, and contaminations arising in the concept of ʿ*i__sh__ḳ* will be perceived. In the classical authors, from al-Daylamī to Lisān al-Dīn b. al-__Kh__aṭīb, three main lines of development may be discerned. In ascending order, they are: 1) natural love (*maḥabba ṭabīʿiyya*), 2) intellectual (ʿ*aḳliyya*) love, and 3) divine (*ilāhiyya*) love.

All natural beings (*maw__dj__ūdāt*) are moved by the desire to raise themselves to the degree of existence immediately above them. This dynamism, which runs through the whole of the universe, is the universal ʿ*i__sh__ḳ* (Miskawayh, *Tah__dh__īb*, 64 ff.). Between human beings, affection (*mawadda*) grows into passion-love (ʿ*i__sh__ḳ*), the most searching and realistic analysis of which is the *Ṭawḳ al-ḥamāma* of Ibn Ḥazm [*q.v.*]. It gives rise to psycho-physiological states, which are described with the aid of clichés used especially in poetry (cf. *ṣabāba*, ʿ*alāḳa*, *kalaf*, *__sh__a__gh__af*, *__sh__aʿaf*, *taṭayyum*, *tatabbul*, *walaʿ*, *__gh__arām*, *huyām*, *walah*, *tadalluh*, . . .). Purified of all carnal demands, this passion is sublimated into an attitude of adoration which provokes a mental imbalance (*i__kh__tilāṭ*). It is a state of spiritual servitude to an idealised female figure, upon which the "courtly" sentiments of a soul in ebullition (*__gh__alayān*) crystallize. The literary formalization of these sentiments in ʿIrāḳī circles in the 2nd/8th-3rd/9th centuries went so far that it is difficult to determine the differing roles, in their development, of social custom, an oppressive ethical system, and the basic impulse towards the beautiful.

With the *falāsifa*, ʿ*i__sh__ḳ* became intellectualised. It became the spontaneous, lucid, and methodical stretching out towards supreme happiness (*al-saʿāda al-ḳuṣwā*), which, for the intellect freed from the illusions of knowledge transmitted through the senses, takes on the meaning of the pure good (*al-__kh__ayr al-maḥḍ*). The more the wise man advances in his passionate quest for the one True One (*al-wāḥid al-ḥaḳḳ*), the more he feels growing within him the ineffable joy (*ibtihā__dj__*), the absolute pleasure (*al-la__dh__dha al-muṭlaḳa*), which are secured through the contemplation (*mu__sh__āhada*) of the perfection and beauty of the necessary Being (*wā__dj__ib al-wu__dj__ūd*).

With the Ṣūfīs the amorous ardour of ʿ*i__sh__ḳ*, in spite of some resistance, becomes a part of the life of faith as a natural development of the measured affection (*maḥabba*) mentioned in the Ḳurʾān (III, 31, XX, 39, etc.). The substitution of ʿ*i__sh__ḳ* for *maḥabba* to describe the "essential Desire" for God and the love of God as an essential attribute, which fills the heart of the mystic, seems to have been due to al-Ḥallā__dj__ (al-Daylamī, ʿ*Aṭf*, §§ 163-5). Love is no longer merely an expression of gratitude for the blessings of God; it is no longer content with rigorous ascetism and meticulous ritual observance. It becomes an absolute necessity, entailing neither enjoyment nor alleviation, but intensifying as the reciprocity of perspectives between the lover and the Loved comes into effect. This evolution of the pair ʿ*i__sh__ḳ/maḥabba* is not without echoes of that *erôs/agapè*, but in Islam the relationship between the two ideas is complicated by the concurrent development of the "courtly" and mystical tendencies. When contact with Greek texts came to an end, there was a return to a legalistic conception of love in the works of, for example, al-__Gh__azālī or Ibn Taymiyya, or to the exaltation of a perfect and pure Idea in, for example, al-Suhrawardī or even Ibn ʿArabī. Whatever the differences of opinion about its content, ʿ*i__sh__ḳ* is one of the characteristics of mediaeval self awareness, obsessed with the quest for the eternal, the transcendant and the sacred.

I__SH__KĀ__SH__IM [see BADA__KH__SH__Ā__N].

I__SH__KODRA [see Supplement].

I__SH__RĀḲ, the name given to illuminative Wisdom, advocated by __Sh__ihāb al-Dīn Suhrawardī (d. 587/1191) who himself indicated its sources (cf. table). By "sources" should be understood not so much the historical origins of his ideas as the springing forth of a Wisdom which, in the field of mysticism, has inspired lines of initiates comparable with the initiatory *isnāds* of the Ṣūfīs, though without the explicit granting of any "delegation" by the Masters to the disciples. However that may be, one can discern Western, Greek elements, as well as Eastern elements deriving from the traditions of classical Persia and ancient Egypt. As a result of this observation, H. Corbin has been enabled to resolve a

problem: we know that Ibn Sīnā had conceived the project of an "Eastern" philosophy, a very incomplete testimony to which has survived in his book on the "Logic of the Easterners" (*Manṭiḳ al-Mas̲h̲riḳiyyīn*), and that Fak̲h̲r al-Dīn al-Rāzī had written the *Mabāḥit̲h̲ al-Mas̲h̲riḳiyya*. Some read this as *mus̲h̲riḳ* and thought that it was concerned with an illuminative philosophy. Nallino has criticised this reading and shown that it was necessary to make a distinction between a Western philosophy and an Eastern philosophy. Neoplatonism was already charged with Eastern ideas, in contrast with pure Aristotelianism which was far more attached to rationalism. H. Corbin admits this criticism, but gives it a quite different interpretation. If this philosophy is "Eastern", this is so not merely because it is that of the peoples of the East, but primarily because it regards Being and Knowledge as irradiations of the Pure Light which rises in the East. "One may say that it is a question of a Knowledge which is Eastern because it is to the East of thought". There is thus a close link between illumination (*is̲h̲rāḳ*) and Eastern Wisdom (*Ḥikma mas̲h̲riḳiyya*). Here is a clear indication of the value of *is̲h̲rāḳ*: it is not reduced to the general notion of illumination which confers upon the spirit a Truth inaccessible to the abstract concepts of reason; it is, more fundamentally, a delight in the source of all light, whence proceed all beings and all authentic knowledge.

It is through Plato that one can best approach this philosophy which, by its nature, eludes any didactical exposition. In the *Republic*, the Good is presented under the symbol of the Sun, without which nothing which is would exist. This source of all being and all thought is ἐπέκεινα τῆς οὐσίας beyond the essence, beyond the Ideas themselves. To it, man should turn σὺν ὅλῃ τῇ ψυχῇ with his entire soul. It seems that the Wisdom of *is̲h̲rāḳ* is a meditation upon these two propositions. Being, in the sense of existence, is there presented in effect as the source of all reality. If it is not conceptualisable, and if it is not reduced to a purely equivocal denomination, as Aristotle saw clearly, it does not thereby follow that the solution necessarily lies in an analogical theory which would make substance the first analogue of being. To recognise that rational expressions cannot encircle existence, that one cannot define it as a concept, is not to imply that it can be grasped only when it is engaged in relations with the different categories of beings (in an analogy of proportionality), and that it is devoid of a for-self and an in-self. This is to recognise that there is a knowledge superior to reason, set apart from all the activities of definition and reasoning. It is here that the symbol of light comes into the question. On the physical plane, what is more universally *present* than light? But what is more indefinable, since in light all is clarity, and effulgence, without any shadow to trace recognisable contours upon it? Thus one is led to think of existence as a spiritual light, the Light of Light from which, by irradiation, emanate the *Anwār ḳāhira*, the "victorious" or "archangelical" lights. This rendering is by H. Corbin, who writes: "By this epiphany, the whole hierarchy of the *Anwār ḳāhira*, from degree to degree, illumines the presence of each lower degree". Authentic Knowledge too renders its object present while illuminating it, after being itself revealed, when every material veil has fallen away, as a Light-being. There is here an "illumination of presence" (*is̲h̲rāḳ ḥuḍūrī*) which makes a clear distinction between knowledge by representation of the object (*ʿilm ṣūrī*) and unitive knowledge (*ittiṣalī*) of intuitive experiences vision (*s̲h̲uhūdī*), that is to say *ʿilm ḥuḍūrī*. In this connection, one thinks of the part played by *Existenzerhellung* in the philosophy of Karl Jaspers, and of the very current ideal of knowledge through engagement experienced not merely by dry reason alone, but by "the entire soul". It is the Spirit (*rūḥ*), the Angel Gabriel, which illumines while dissipating the insoluble antinomies of reason which Suhrawardī, in his *Ḥikmat al-is̲h̲rāḳ*, is pleased to develop while criticising the Peripatetics, in a condensed style which recalls the opening of the *Parmenid*. Thus rational knowledge is not a preparation for illuminative knowledge, although negatively it can convey through teaching that the insoluble difficulties which it contains within itself melt away in *is̲h̲rāḳ*: the problems raised by conceptual thought remain ceaselessly and indefinitely (*tasalsul*) without ever finding a solution, or fall hopelessly into a vicious circle (*dawr*). But man cannot by himself emerge from this inextricable situation: he must have a revelation, a call, for "the Spirit proceeds from the Command of my Lord" (Ḳurʾān, XVII, 85).

Such seems to be the fundamental intuition of *is̲h̲rāḳ*. An exposition of the details of this Wisdom would be tantamount to an exposition of the details of Suhrawardī's thinking. The play of Light and shadow, the conception of *barzak̲h̲* (screen, separation, which is utter darkness), the modes of procedure, the production of the world, all these together form a whole which can be expounded, as by Suhrawardī himself, in the terminology of the Plotinian or Avicennian philosophy of emanation, Intellects and spheres. But in that there is merely a barren, discursive expression which remains divorced from Reality and which only becomes valid if it is gathered up into a higher unitive vision which makes it "cohere", when the *ʿaḳl* is assumed by the Spirit, in which it receives the *sakīna*, "the placing in the direct presence on the threshold of the transcendental Being" (H. Corbin).

(R. Arnaldez)

IS̲H̲RĀḲIYYŪN, adepts of illuminative Wisdom. The question arises whether this term can be applied to the representatives of the spiritual family to which Suhrawardī belonged, who preceded him in time. If that were so, the "Hermetists", the "Sethists" who, from the 4th century in Egypt, saw in Seth (S̲h̲īt̲h̲) the first *uriya* (from the Hebrew *ōr* = light), the sages of Persia, disciples of Zarathustra, and the Manichaeans would already be *is̲h̲rāḳiyyūn*. H. Corbin has recorded a text of Ibn Waḥs̲h̲iyya, relating to Hermes-Thoth of ancient Egypt, in which the word figures. The discovery is interesting, but it must be seen in the context of the author's preoccupation with alchemy. Here is a summary of the whole of this text:—the successors of Hermes form four groups; the first two, direct descendants of Hermes and his brother, have not mixed with any strangers and have preserved the pure secret doctrine so well that no one apart from themselves knows it. The third is that of the sons of the sister of Hermes; they have had contacts with strangers, and certain men are familiar with their *iṣṭilāḥāt* and can interpret their symbols (*wa-fakka rumūzahum*). Finally, the fourth group is composed of strangers who have mingled with the Harāmisa. To these last two groups, Ibn Waḥs̲h̲iyya gives respectively the names *is̲h̲rāḳiyyūn* (and *is̲h̲rāḳiyya*) and *mas̲h̲aʾiyya* (Peripatetics). These are the only ones to have come down to us. It seems that all that can be deduced from this text is that, in alchemical circles in the 4th/10th century, emphasis was placed upon a hermetic

TABLE

Hermes	Western part: Empedocles, Pythagoras, Plato / in Islam: Dhu 'l-Nūn, Tustarī	Suhrawardī
	Eastern part: Gayōmarth, Farīdūn, Kay-Khusraw / in Islam: Bisṭāmī, Ḥallādj, Kharrakānī	
tradition whose holders, while not claiming to have a perfect knowledge of the Great Work, had received some illumination which had placed their works above those of the Peripatetics, "worshippers of the astral forms", says the text. It therefore seems doubtful if Suhrawardī can be placed among the *ishrāḳiyyūn* of Ibn Waḥshiyya. Moreover, the *falāsifa* for their part had spoken of the irradiation of light and illumination. But in its technical sense, the term *ishrāḳī* can be applied with exactness only to the Master of *ishrāḳ* and his spiritual posterity. However numerous the sources upon which he has drawn materially, his conception of *ishrāḳ* is so personal that it seems it was first illustrated in him by the fact that he received it directly from that being of light which, for each man, constitutes his "Perfect Nature".

In addition, some thinkers may have undergone Suhrawardian influences, although one cannot properly speaking rank them as *ishrāḳiyyūn*. Thus, in Ibn ʿArabī, illumination seems to be reduced, as in Plotinus, to the symbol of the mode of procession of the beings forming the *khalḳ*, while the theory itself of Being is markedly dialectical. Ṭūsī was able to take inspiration from Suhrawardī to interpret Ibn Sīnā, though without thereby being *ishrāḳī*. To sum up, H. Corbin writes very justly: "It remains to discover the influence which the theories of *ishrāḳ* exerted for example on Naṣīr al-Dīn Ṭūsī, Ibn ʿArabī and the Iranian Shīʿī commentators on the last-named writer".

On the other hand, the term *ishrāḳiyyūn* will be applied without hesitation to all Suhrawardī's Iranian followers, whose numbers were very great until the 18th century and who still exist in Iran today. Two great names are outstanding, Shams al-Dīn al-Shahrazūrī (d. 1243) who, in his History of the Philosophers, gave the biography of his Master, commented on two of his treatises and wrote a personal work, and Mollā Sadrā Shīrāzī (d. 1840) who stated: "I have followed the doctrine of *ishrāḳ* of Suhrawardī, until God made me see its foundations clearly". It will be understood from these words that his fidelity to the *shaykh* did not prevent him from writing a most original work.

(R. Arnaldez)

ISHTIB (Štip), a town situated to the south-east of Skopje, in Macedonia, Yugoslavia. In antiquity, it was an important town in Paeonia, on the Roman road from Serdica to the Danube, known as Astibo; by the Byzantines it was called Stipion, by the southern Slavs Štip and by the Turks Ishtip. In the 14th century it was a fortress and district in the principality of Constantine Dejanovitch (Dragaš), in northern Macedonia (between the Vardar and the Strouma). After the battle of Čirmen (1371), the principality became tributary to the Ottomans. On the death of Constantine in 1394, at the side of the Turks at the battle of Rovine, the principality became a sandjaḳ (Kostand-ili = Küstendil). In the 9th/15th century it was the centre of a *vilāyet*, in the 10th/16th the centre of a *ḳaḍā*, attached to the *khāṣṣ* of the sanjakbey and administered by his voivoda. In Štip and its environs, Turkish colonization was not very extensive. Some *yürük*s of the "ovče pole" group were established there—81 *odjaḳ*s in the *ḳaḍā* of Štip in 1566. The population was principally Christian. In 1489-91 the non-Muslim families in the *ḳaḍā* of Štip and Novkerič numbered 8,434. In the 11th/17th century there were 24 Muslim *maḥalle*s in the town. Traces of islamization were insignificant.

A centre of commerce and craft-work, the town was famous for the manufacture of penknives and knives. Sheep-rearing was highly developed in the region, while in the town artisans devoted themselves to the preparation of the wool and to dairy and meat products. In the market there were local traders, as well as Jewish merchants and others from Dubrovnik. According to Evliyā Čelebi, there were 450 shops in the *čarshī*. The town's trading and craftwork activity was also served by a *bezestān*, caravanserai and seven inns (*khān*s).

The town had acquired a Muslim appearance owing to the public buildings—the numerous mosques, among them that of Sultan Murād (Fetḥiyye), the former Christian church of the Archangel Michael, transformed into a mosque, as was the case with the church of St. Elias; two public baths, and, in the 11th/17th century, a palace belonging to a local Turkish dignitary. There were also some Christian churches; Štip formed part of the diocese of the bishopric of Kolassia. In the 19th century the town was attached to the Bulgarian eparchy of Küstendil.

During the war of 1683-99, Austrian troops reached Štip. In the 19th century, Amy Boué found Štip to be a flourishing centre of commerce and craft-work, with 15-20,000 Turks and Bulgarians and a Jewish community. In about 1894 the population of Štip included 10,900 Bulgarians, 8,700 Turks, 800 Jews and 500 gypsies—in all, 20,900.

ISHTIĶĀĶ, a technical term in Arabic grammar, translated approximately as "etymology"; *shaḳḳa 'l-shay'* "he split the thing", *ishtaḳḳa 'l-shay'* "he took the *shiḳḳ*, half of the [split] thing" (Lane, *Lex.*, 1577a): *ishtiḳāḳ*, inf. of *ishtaḳḳa*, in the technical sense of etymology, derives from the first sense, a word being thought of, so to speak, as split open so that the *mushtaḳḳ*, the derivative that it contains, may be extracted. *Ishtiḳāḳ* in its general sense, in fact, signifies: *nazʿ lafẓ min ākhar*, "taking one word from another", under certain defined conditions (al-Djurdjānī, *Taʿrīfāt*, 17).

Many ancient authors wrote special studies of *ishtiḳāḳ*; al-Suyūṭī (*Muzhir*[3], i, 351, l. 4-6) lists twelve: al-Mufaḍḍal al-Ḍabbī (d. 170/786), Ḳuṭrub (d. 206/821), al-Aṣmaʿī (d. 216/831), al-Akhfash (d. 215/830), Abū Naṣr al-Bāhilī (d. 231/846), al-Mubarrad (d. 285/898), al-Zadjdjādj (d. 310/922), Ibn al-Sarrādj (d. 316/929), Ibn Durayd (d. 321/933), Ibn al-Naḥḥās (d. 338/949), Ibn Khālawayh (d. 370/980), al-Rummānī (d. 384/994). Since all these studies are lost, except that of Ibn Durayd (but which only contains examples of *ishtiḳāḳ*), we are obliged to have recourse to the data that are given in passing in various works: a chapter of the *Muzhir*[3] of al-Suyūṭī (i, 345-54), quoting Ibn Diḥya (d. 633/1236); the preamble of Ibn Djinnī to *al-Munṣif sharḥ Kitāb al-Taṣrīf li'l-Māzinī* (i, 3-4), the *Khātima* of the editors (Cairo 1373/1954, iii, 278-9); also the definitions of al-Djurdjānī (*Taʿrīfāt*, 17) and the account in the *Dict. of Technical Terms* (i, 766-70).

Ishtiḳāḳ: "etymology"; it must, however, be understood how the Arab grammarians practised this etymology. According to Ibn Djinnī, *taṣrīf* occupies a position intermediate between *lugha* and *naḥw* (*yatadjādhabānih*,"they tear it between them").There is considerable affinity (*nasab ḳarīb*) and connexion (*ittiṣāl shadīd*) between *ishtiḳāḳ* and *taṣrīf*, but *ishtiḳāḳ* has more to do with *lugha* (*aḳʿad fi 'l-lugha min al-taṣrīf*, *Munṣif*, i, 3, line 17-4, line 10). *Lugha* is concerned with vocabulary itself; *naḥw* deals with *iʿrāb*: it studies the variations of the *ḥarakāt* at the end of the words of the *lugha* and the morphological formations of the *taṣrīf* (as inacc. of the verb), in terms of the different *ʿawāmil* (things governing) [see iʿrāb]. *Taṣrīf* analyses the great number of forms (called *wazn*, pl. *awzān*, or *binā'*, pl. *abniya*, or *ṣīgha*, pl. *ṣiyagh*) found in the words of the *lugha* and in the morphological formations mentioned above. *Ishtiḳāḳ* deals with the same material as *taṣrīf*, but considers it from the point of view of its origin: *ukhidha min*... "it is taken from..." is the information that it gives.

To understand the great affinity and connexion that Ibn Djinnī saw between *ishtiḳāḳ* and *taṣrīf*, it is necessary first to be introduced to *taṣrīf*. *Taṣrīf* was practised in two ways. The first, that of Sībawayhi and the ancients, was concerned only with *masā'il al-tamrīn* "training questions", and its object was *al-riyāḍa wa'l-tadarrub* "practice and habituation". An *imaginary* word was formed on the pattern of an *existing* Arabic word, and the peculiarities of the form (*binā'*) of the existing word were exactly reproduced in the imaginary word; see Sībawayhi, title of ch. 511 (ii, 343) and ch. 557 (ii, 436-42). In order to carry out this operation it was necessary to know the morphological data, set out, interspersed with *naḥw*, in the *Kitāb*. The exercises in question were a means of remembering these and making oneself familiar with them.

The second method thought of *taṣrīf* as a discipline to be studied in its own right and made an independent science of it; this is done in the *K. al-Taṣrīf* of al-Māzinī (d. 247/861). This *taṣrīf* takes as its object existing Arabic words and studies their forms. It regroups the necessary data in this way; Ibn Djinnī, in the *Mukhtaṣar al-taṣrīf al-mulūkī* (ed. G. Hoberg, 8, l. 9-10), systematizes them according to the following divisions: *ziyāda*, *badal*, *ḥadhf*, *taghyīr bi-ḥaraka aw sukūn*, *iddighām* [see taṣrīf].

The affinity and connexion of *ishtiḳāḳ* with *taṣrīf*. We have seen above that Ibn Djinnī asserts that there is a great affinity and connexion between *ishtiḳāḳ* and *taṣrīf*. The method that he adopts to demonstrate the functioning of *ishtiḳāḳ* with respect to *taṣrīf* is instructive here; Ibn Djinnī considers then *taṣrīf* as did Sībawayhi and the ancients, working with imaginary words, and he uses for this conception of *ishtiḳāḳ* exactly the same examples as for the account of *taṣrīf* (see *Munṣif*, editors, iii, 278, l. 15-279). In *taṣrīf*, the object of these examples is to demonstrate the accidents that occur to *ḥurūf al-uṣūl* (the radical consonants) in roder to constitute the forms: *ziyāda*, *badal*, etc. *In ishtiḳāḳ*, the object of these examples is to show *how a form is taken from another* and they presuppose a knowledge (and a use) of the accidents referred to and the processes of *taṣrīf*. In these circumstances, Ibn Djinnī takes as his starting point the *maṣdar*, the origin of the verb, *ḍarb*, and he lists all that can be taken and formed from this *maṣdar*: *māḍī* (*ḍaraba*), *muḍāriʿ* (*yaḍribu*), active participle (*ḍārib*), etc. This is a good illustration of the affinity and the connexion that Ibn Djinnī sees between *ishtiḳāḳ* and *taṣrīf*. *Ishtiḳāḳ*, however, is less general then *taṣrīf* (see below).

Ishtiḳāḳ and *lugha*. Ibn Djinnī says, besides, that *ishtiḳāḳ* is based more than *taṣrīf* on *lugha*. A chapter of the *Muḳtaḍab* of al-Mubarrad (Cairo 1386, iii, 185) helps us to understand this; al-Mubarrad distinguishes first of all the nouns (*asmā'*) that are *ghayr* (non-) *mushtaḳḳ*, such as *ḥadjar* "stone", *djabal* "mountain". *Ishtiḳāḳ* is silent concerning these, for no original form is found from which their form can be taken; they are simply common nouns (*asmā' al-adjnās*). As far as the *Taṣrīf* is concerned, it places them in the form *faʿal*; *taṣrīf* is thus seen to be more general than *ishtiḳāḳ*, as the Arab grammarians state (*e.g.*, Ibn Diḥya, *Muzhir*[3], i, 351, l. 1); al-Mubarrad then gives the *mushtaḳḳ* nouns that are *naʿt* (qualifying); these are adjectives that are connected with a verb where their meaning is found again: *ṣaghīr* "small" with *ṣaghura*, *djāhil* "ignorant" with *djahila*, *aḥmaḳ* "stupid, foolish" with *ḥamiḳa*; then the *mushtaḳḳ* nouns that are not used as *naʿt* (qualifying); the examples given are proper names:

ḥanīfa, muḍar, ʿaylān. Their *ishtiḳāḳ* varies according to the semantic links to be found between these nouns and others from the same root; *ḥanīfa* is said simply to come from *ḥanīf* (the word is explained), *muḍar* from *maḍara 'l-laban* "the milk became sour" and *ʿaylān* from *ʿayla*, the inf. of *ʿāla* "to be poor", form *faʿlān*. Thus *ishtiḳāḳ* deals with vocabulary, seeking for the point of departure, the *mushtaḳḳ minhu*, while remaining, according to the rule, within one single root and its forms, whereas *taṣrīf* does not go beyond the word whose *wazn* it has to determine.—Other examples of *ishtiḳāḳ* are to be found in the indices to the *Muḳtaḍab*, iv, 149-50, in the discussion on the *ishtiḳāḳ* of the *ism* and the verb taken from the *maṣdar* (Ibn al-Anbārī *K. al-Inṣāf*, ed. Weil, disputed questions 1 and 28). Ibn Durayd devoted his *K. al-ishtiḳāḳ* (ed. Wüstenfeld, Göttingen 1854) to the names of the Arab tribes (but without any preliminaries about methodology).

The Arab grammarians practised *ishtiḳāḳ* only for *Arabic* words; see Ibn al-Sarrādj's warning as reported by al-Djawālīḳī (*K. al-Muʿarrab*, ed. Sachau, 3, l. 10-4, l. 3) and al-Suyūṭī (*Muzhir*[3], i, 351, l. 7-9). This Arabic *ishtiḳāḳ* introduces no historical perspective into the study of the language. The relations or origin that are detected form merely part of the revealed language and are given with it (cf. *Dict. of Technical Terms*, i, 766, l. 15-6). The explicative value of this *ishtiḳāḳ* is meagre; first, depending exclusively as it does on the Arabic grammatical system, it suffers from the deficiencies of this (*e.g.*, the two disputed Questions mentioned above); then, the derivation of one term from another is stated merely when the conditions are satisfied. Thus al-Djurdjānī gives the definition of *ishtiḳāḳ*: *nazʿ lafẓ min ākhar bi-sharṭ munāsabatihimā maʿnan wa-tarkīban wa-mughāyaratihimā fi 'l-ṣīgha* (*Taʿrīfāt*, 17) "taking one word from another, on condition that they are related in sense and in composition [of the radical consonants] and that they differ in form". There is no concern to demonstrate the linguistic processes that legitimate this derivation; al-Mubarrad says that *ṣaghīr* comes from the verb *ṣaghura* (see above), but how does this come about? The mind must be continuously alert to notice the cases in which this *ishtiḳāḳ* gives acceptable information. It is particularly useful, too, by reason of the studies on vocabulary that it has involved, as in the *K. al-ishtiḳāḳ* of Ibn Durayd.

Ishtiḳāḳ is called: a) *al-ṣaghīr* "the small", when, for the *tarkīb* of al-Djurdjānī's fore-going definition, the order of succession of the *same* radical consonants remains identical in the two terms; this is the normal *ishtiḳāḳ*. b) *al-kabīr* "the large", when the *maʿnā*, the actual sense of the root, is preserved, but not the order of succession for the *tarkīb*, *e.g.*,: *djabadha* [metathesis of *djadhaba*], taken from the *maṣdar*: *djadhb*. c) *al-akbar* "the largest", when neither the actual sense of the root nor the order of succession are preserved. This *ishtiḳāḳ* was invented by Ibn Djinnī and set out in the *Khaṣāʾiṣ* (Cairo 1371/1952, i, 5-17 and Cairo 1374/1955, ii, 133-9); he considered all the relative positions of the three consonants of a root, *e.g.*, for *ḳ w l*: *ḳ l w, w ḳ l, w l ḳ, l ḳ w, l w ḳ*, combinations existing in the language, with their special meanings, and he extracted from them a sense common to all: *al-khufūf wa-'l-ḥaraka* "haste and movement". The Arab world admired his force and ingenuity of mind but did not follow him in normal studies of the language (see Ibn Diḥya, *Muzhir*[3], i, 347, l. 4-348, l. 2).

Remarks: a) al-Djurdjānī sees *al-ishtiḳāḳ al-akbar* in the case in which the identity of the radical consonants in the two terms is reduced to that of their *makhradj*, as with *naʿaḳa*, derived from the *maṣdar*: *naḥḳ* (cf. *Dict. of Techn. T.*, i, 767, l. 6-8). b) For the difference between *al-ishtiḳāḳ al-ṣaghīr* and *al-ʿadl*, see *ibid.* 767, 2 ff.

Bibliography: in the text. ʿAbd Allāh Amīn, *al-Ishtiḳāḳ*, Cairo 1376/1956, a personal study, in order to regroup under one concept of *ishtiḳāḳ* the three divisions that have been discussed, and also *naḥt*. This study is useful, too, by reason of its full documentation of the denominative verbs and *naḥt*. Fuʾad Ḥannā Ṭarazī, *al-Ishtiḳāḳ*, Beirut 1968, application of *ishtiḳāḳ* to nouns and verbs, preceded by a criticism of the preceding and of the doctrines of the ancients. (H. Fleisch)

ISHTIĶĀĶ, rhetorical term [see TADJNĪS].

ISHTIRĀK [see TAWRIYA].

ISHTIRĀKIYYA, from *ishtirāk*, sharing, the modern Arabic term for socialism. The word seems to have been first used in this sense in 19th century Turkish, in the form *ishtirāk-i emwāl*, literally "sharing of property", whence *ishtirakdjī*, a socialist, and *ishtirākī*, socialistic. In Turkish the term fell into disuse, and was replaced by *Sosyalist*. Adopted in Arabic, it soon gained universal currency in the Arab lands. (Ed.)

The Ottoman Empire and Turkey: Among Turks interest in socialism began toward the end of the 19th century, but it was only after the 1908 revolution that this cause could be openly advocated in the Ottoman Empire. The European, particularly the French, socialist movement served as the inspiration and model for socialist activity in Turkey. Always small-scale and élitist, socialist organizations were not able to play much role in their own right in the turbulent politics of the Young Turk era. The Ottoman Socialist Party (*ʿOthmānlı Sosyalist Fırḳası*) set up by Hüseyn Ḥilmī in 1910 was suspended after three months; it re-emerged for a year in mid-1912 during a momentary lull in governmental repression. Its Paris branch under Dr. Refiḳ Nevzāt operated more freely and conducted a virtually independent liaison with the Second International until France entered the First World War.

More important than this organizational activity was the impact of socialist concepts on the Turkish nationalist movement that began to gather impetus after the 1908 revolution. Ziya Gökalp and his "Turkist" followers had connexions with the active multicommunal socialist current in Salonika during the years before 1911. Thereafter in Istanbul Parvus (Alexander Helphand) continued to indoctrinate the "Turkists" with socialist ideas, stressing anti-imperialism. Moreover, an acquaintance with Marxism was relatively common in both civil and military schools during the Young Turk era. Many nationalist leaders, including Muṣṭafā Kemāl [Atatürk] himself, showed the influence of socialist doctrine.

Turkey's defeat in the First World War stimulated renewed efforts to organize socialist parties. In 1919 Ḥilmī revived his old organization under the name of the Turkish Socialist Party (*Türkiye Sosyalist Fırḳası*), again with a Paris branch. This party was so successful in securing benefits for workers through strikes and demonstrations that in 1921 its membership numbered close to 7,000, including a branch in Eskişehir. But as a result of internal conflicts, the party had all but vanished by the time of Ḥilmī's murder in November 1922.

More lasting was the Turkish Worker and Peasant Socialist Party (*Türkiye Ishči ve Čiftči Sosyalist

Firkasi) set up in September 1919 as the continuation of a similarly named organization formed by Turkish students in Germany. Initially this party had far more in common with French radical socialism than with Bolshevism, and it drew much of its inspiration from Henri Barbusse's *Clarté* movement. But with the end of the Allied occupation of Istanbul in 1923, it fell under the direct influence of Moscow. The party published a monthly theoretical journal (until March 1920, *Ḳurtulush*; from 1921 to 1925, *Aydinliḳ*), which soon became the rallying point for elements who were later to play a major role in Turkey's ideological development. Dr. Shefīḳ Ḥüsnü [Deymer], a founding member of the Istanbul organization, was the acknowledged leader of the Turkish communist movement until his death in 1959. In 1923 the Turkish Worker and Peasant Socialist Party leaders were tried on charges of treason, but were soon acquitted. After the Law for the Maintenance of Order (*Taḳrīr-i Sükūn*) was enacted in 1925, Atatürk closed *Aydinliḳ* and prosecuted a number of the party's leaders for carrying on subversive activity.

The Turkish Communist Party (*Türkiye Komünist Partisi*) proper emerged from several diverse sources: the communists clustered around the Turkish Worker and Peasant Socialist Party, the emigré movement of Muṣṭafā Ṣubḥī in Russia, and the People's Communist Party of Turkey (*Türkiye Khalḳ Ishtirākiyyūn Firḳasi*), organized in Ankara in December 1920 by Nāẓim, the deputy for Tokat. Muṣṭafā Ṣubḥī's organization fell apart after his murder in January 1921 during his return to Anatolia. The Ankara communists from the first came into conflict with Atatürk, who had formed his own "Official" Communist Party in October 1920 in an effort to bring the burgeoning communist movement under his control. In February 1921 the People's Communist Party suspended its activity, though as a result of Soviet pressure it was permitted to revive. From March until October 1922 this party published the weekly *Yeñi Ḥayāt*, a periodical that became increasingly critical of the government. But with victory over the Greeks, Atatürk no longer felt the need to tolerate this opposition, and in October 1922 he suppressed the Ankara party. The remnants of this organization followed Ṣubḥī's supporters in joining the Turkish Communist Party, that was apparently organized clandestinely in Istanbul in the fall of 1920 by Deymer and Ṣadreddīn Djelāl [Antel]. This party was in contact with communists among the non-Turkish communities in Istanbul and sent representatives to gatherings of the Third International in Moscow. It attempted to organize youth groups and trade unions, but without much success. Since its leaders were arrested or forced to flee abroad in 1925, it carried on only underground activity inside Turkey. Deymer convened a party congress in Vienna in 1926; another seems to have been held in 1933 somewhere outside Turkey. The party's main overt activities consist of publishing pronouncements in Soviet and other communist publications and since the mid-1950s in broadcasting its views over "Bizim Radyo" located in Eastern Europe.

From 1932 to 1935 a group of former communists made important contributions to Kemalist ideology through debate in the monthly *Kadro*, which sought to adapt Marxist ideas to serve Turkish nationalism. Even though the government closed *Kadro* in 1935 at the urging of more conservative Turkish nationalists, the ideas espoused by *Kadro* undergirded the famous "Six Arrows" of the Republican People's Party (*Djumhūriyyet Khalḳ Firḳasi* [*q.v.*]), which were enshrined in the constitution in 1937.

With the relaxation of political restrictions after the Second World War came new efforts to form socialist and communist-oriented parties. The Turkish Socialist Worker and Peasant Party (*Türkiye Sosyalist Emekçi ve Köylü Partisi*) that Deymer set up in 1946 and the Turkish Socialist Party (*Türkiye Sosyalist Partisi*) of Esat Adil Mustacaplıoğlu were closed within the year by the government, however, on charges of promoting communism. In this atmosphere of suspicion, even moderate socialists met a chilly reception; until the end of the *Demokrat Parti* [*q.v.*] regime in 1960 socialism was generally regarded as virtually illegal by the Turkish élite.

The military revolt in 1960 stimulated ferment that gave socialism and communism new relevance. In the new constitution of 1961 a more favourable climate toward socialism was apparent. Also, for example, central planning by the government was ordained as the remedy for the excesses of the *Demokrat Parti* era; labour unions received the right to strike. Under these circumstances, the periodical *Yön*, which began in December 1961, attracted much attention in intellectual circles with its increasingly anti-(Western)imperialist pronouncements in favour of state-directed development. Books and publications on socialism flooded the market and were read especially by students, who were attracted by the emphasis on social justice. A Socialist Cultural Association (*Sosyalist Kültür Derneği*) was formed in Ankara in 1963 to propagate these views.

This activity saw the emergence on the political scene in February 1961 of the Turkish Labour Party (*Türkiye İşçi Partisi*) as the culmination of efforts in train even before the 1960 military revolt. When the small group of labour officials who dominated this organization were unable to arouse enough popular support to qualify to take part in the 1961 elections, they sought the co-operation of some prominent leftist intellectuals. In 1962 Mehmet Ali Aybar became President General of the party. By 1965 the Turkish Labour Party was able to run candidates in 51 provinces and received some 276,000 votes, electing 15 deputies to the lower house that year. While the party increased somewhat its percentage of the vote cast in the senatorial elections in 24 provinces in June 1968, it failed to elect a single senator.

The Turkish Labour Party promotes an essentially Marxist line, but seeks to come to power by exclusively parliamentary means. From the first it has been rent by factionalism. At its congress in February 1964 there was dispute over the balance between workers and intellectuals in the ruling organs of the party. This problem was intensified when the party leaders selected a preponderance of intellectuals as deputies in the 1965 elections. Differences within the party led to a revolt against Aybar's leadership at the party congress in November 1968, necessitating an extraordinary conclave at the end of December of the same year. This did not completely heal the rift. Moreover, the party is challenged on the left by individuals advocating a more revolutionary line.

2. *The Arab lands*: As early as the first decade of this century members of the Egyptian intelligentsia (*e.g.*, S͟hiblī S͟humayyil, Salāma Mūsā and Ismāʿīl Maẓhar) discussed aspects of Socialism in its European, and particularly British Fabian and French Continental sense and tradition. They considered it in the context of scientific rationalism, social reform and state welfare doctrines. A Socialist Party of Alexandria Workers was formed in 1920 by Maḥmūd Ḥusnī al-ʿArabī, followed by a Communist Party in Alexandria two years later. Several Communist parties also appeared in the Fertile Crescent and the Levant.

In the nineteen-thirties, the success of National Socialism in Europe (Nazism in Germany, Fascism in Italy, Spain, Greece and elsewhere) indirectly encouraged the rise of radical national socialist groups, parties and movements in the Arab countries. All of them, to one degree or another, proposed some form of "state socialism". Among these were the Young Egypt Association of Aḥmad Ḥusayn in Egypt, later renamed the Socialist Democratic Party; the *Parti Populaire Syrien* of Anṭūn Saʿāda in the Levant; the *Ahālī* group of Kāmil al-Chādirchī in ʿIrāḳ (many of its adherents or members coming from the Fascist-oriented *al-Mut͟hanna* Club), later renamed the National Democratic Party; the Progressive Socialist Party in Lebanon; and others.

After the Second World War, attention concentrated on what was called Arab Socialism (*al-is͟htirākiyya al-ʿarabiyya*) the main exponent of which was the Arab *Baʿt͟h* Party, founded by Michel ʿAflaḳ and Ṣalāḥ al-Dīn al-Bīṭār in 1941-3, which ten years later in 1953 merged with Akram Ḥūrānī's Arab Socialist Party. In the periods 1955 to 1961 and 1961 to 1967, Arab Socialism had two major advocates: President ʿAbd al-Nāṣir (Nasser) of Egypt, and the various *Baʿt͟h* party organisations and regimes in the Fertile Crescent countries, particularly Syria and ʿIrāḳ. In Egypt, under ʿAbd al-Nāṣir, even the official religious establishment of the Azhar was recruited (massively after the Azhar Reorganisation Law of June 1961) to the task of expounding, explaining and justifying the link between Arab Socialism and Islam. The slogan, "Islam, the religion of justice and equality," was followed by "Muḥammad, the first socialist". The Islamic religion was identified as a "revolution which first laid down the socialist principles of justice and equality". After 1967, new and violent revolutionary groups appeared especially among the Palestinians and South Arabians professing a Marxist-Leninist and Maoist-oriented Arab Socialism.

Algeria after independence in 1962 also adopted Arab Socialism as the political and economic basis of its revolution; so too did the Yemen after the Sallāl coup in September 1962; the new People's Republic of South Yemen under its National Liberation Front rulers; the Sudan after the coup led by Colonel D͟jaʿfar al-Numayrī in May 1969; and the new Republic of Libya when the military coup led by Colonel Muʿammar al-Ḳad͟hāfī overthrew King Idrīs in September 1969.

Arab Socialism as expounded by the *Baʿt͟h* Party or other so-called Arab revolutionary leaders and regimes has little in common with European or Marxist Socialism. Its principles are rather linked to those of pre-nationalist and radical nationalist ideologies, and particularly an interpretation of the ethical and moral teachings of Islam. Its emphasis is on social justice in a traditional Islamic sense, and on economic and social reform. It rejects both the materialist philosophy and historical determinism of Marxist Socialism. It is opposed to the class struggle and the dictatorship of the working class or the proletariat. Instead it proclaims the eradication of class divisions with a view to achieving a harmonious "democratic, cooperative society", in which classes cooperate with, not oppose or antagonise, one another. It does not share socialism's opposition to private property, even though it accepts and, in certain cases, practices state ownership of the major means of production and state control of the economy. Because the economies of many of these countries are mainly agricultural their socialists pay greater lip service to the impoverished masses of peasants and less to the urban working classes or proletariat. The latter group on the whole is still a small one in these countries, where industrial development is in its early stages. Finally, Arab Socialism rejects Marxist Socialism because the latter is theoretically opposed to nationalism.

It can be argued that Arab Socialism as articulated by the regime of ʿAbd al-Nāṣir and that of his successor in Egypt, or by the *Baʿt͟h* in the Fertile Crescent, is a primitive socialism: it is for the confiscation of wealth by its expropriation from the small wealthy landed and old official or governing classes, but not for its abolition. It wishes to eradicate poverty by the nationalisation of capital and other productive wealth and by its redistribution in order to level society; but so far it has only managed to further generalise poverty. Basically it claims that it wishes to share out property, not to abolish it. And as property in most Arab countries implies the ownership of land, there have been several, not very successful, agrarian reform measures in Egypt, ʿIrāḳ, Syria and Algeria.

If one examines the utterances and policies of President ʿAbd al-Nāṣir of Egypt (the nationalisation decrees of July-November 1961, his National Charter of 1962, and the Expropriation measures of 1963-4), or those of the *Baʿt͟h* (for example, ʿAflaḳ's writings, and the proceedings and resolutions of the Party Congresses, especially those of the Sixth Congress), one observes that Arab Socialism is the "radical" expression of Arab nationalism. It is also the justification of radical state economic policies, characterised by central planning and greater centralised state control over all aspects of national economic activity and life. Any structural social changes introduced by the so-called socialist measures of Arab rulers have not so far also envisaged changes in the power structure. Nor does the Arab Socialism of these states envisage any uniform regulation of the consumption of material goods on the basis of strict equality.

Arab Socialism is useful when one wishes to indicate and identify the domestic, regional or inter-Arab, and international policies of individual Arab states. In Egypt, for example, Arab Socialism became a term applied to President ʿAbd al-Nāṣir's domestic economic, Arab and international policies after 1955, and more so after 1961. By 1962, Arab Socialism in Egypt, as well as in other Arab states

which identified or associated their regimes with it, came to be an amalgam of nationalism, of involvement in inter-Arab state conflict, state political control by the military, state ownership and control of the economy, and an orientation in international politics towards the Soviet Union. Beginning as a protest movement against the concentration of political and economic power in the hands of a small governing class in *anciens régimes* in Egypt, ʿIrāḳ and Syria for instance, Arab Socialism under military regimes and in the conditions of inter-Arab and international events moved towards an association with the new influential superpower in the Middle East, the Soviet Union. At home, and in practice, it became a bureaucratic, police socialism in the service of the regimes in power, without a firm basis either in a working class proletariat, or its more populist aspiration for a base among the agrarian peasant masses. Socialist parties were proscribed, and local, or native, socialists were persecuted and politically neutralised. Single parties, such as the Arab Socialist Unions in Egypt and ʿIrāḳ or the *Baʿth* parties in Syria and ʿIrāḳ, and the FLN in Algeria were also at variance with socialism properly defined and understood. These single parties never controlled government; rather government controlled the parties which served the security and other purposes of the state.

It is difficult for example to adduce anything about the meaning of Arab Socialism from the voluminous writings of ʿAflaḳ or the proceedings and resolutions of the *Baʿth* Party Congresses beyond the suggestion that the Party considered economics important and relevant to politics; or that one of the Party's goals is the expansion of the economic opportunities for the lower classes of society and the enhancement of their social status.

Domestically then Arab Socialism has meant the opposition by military regimes and those who aspire to overthrow regimes in their respective countries to the dynastic or other governing and official classes, which are often identified as "feudalist". Arab Socialists link the interests of these classes to those of outside powers (mainly those they refer to as Imperialist, *i.e.*, the Western powers), so that their overthrow and dispossession are justified on the grounds that they are the agents of Imperialism. In the context of inter-Arab politics Arab Socialism also serves as the slogan of so-called radical rulers and regimes in their conflicts with so-called conservative and reactionary rulers and regimes for influence, primacy, prestige or domination in the Arab Middle East. Generally, therefore, on the level of international politics, Arab Socialism has been associated with the opposition of Arab states to what remained of Western influence in their area and with radical Arab nationalism and its manifestation in heightened inter-Arab struggle. This coincided with the entry of the Soviet Union into the Middle East in 1955 and its offers of massive economic and military assistance to several Arab states. Inevitably, the orientation of Arab Socialist regimes towards the Soviet bloc followed, gradually at first (1955-62), and rapidly after 1962.

ÎSHWAR-DÂS [see ĪSAR-DĀS].

AL-**ISKÂFÎ**, Abu 'l-Faḍl Djaʿfar b. Maḥmūd, official in the ʿAbbāsid administration and the first vizier of al-Muʿtazz (251/866); he held this post for only a short time, but the Caliph was obliged to give in to Turkish pressure and reinstate him in 255/869. He kept the post at the beginning of al-Muhtadī's caliphate, but real power was in the hands of Ṣāʿid b. Makhlad [*q.v.*]. Though al-Ḥuṣrī (*Zahr*, 873) lets it be understood that al-Iskāfī was friendly with al-Muʿtazz before the latter acceded to the caliphate, Ghars al-Niʿma (*Hafawāt*, 273) maintains that he was imposed on the caliph by the Turks. The *Fakhrī* (333-4, 335) confirms this point of view, adding that al-Muʿtazz did not like him at all, that it was suspected he had Shīʿī sympathies, that he was completely uncultured and only attracted sympathy by his generosity. Lines of poetry quoted by al-Djāḥiẓ (*Rasāʾil*, ed. Hārūn, ii, 58) suggest that he occupied important posts long before his accession to the vizirate.

(Ed.)

AL-**ISKÂFÎ**, Abū Djaʿfar Muḥammad b. ʿAbd Allāh, a Muʿtazilī of the Baghdād branch and a native of Samarḳand. The date of his birth is unknown, but he is known to have reached a great age and to have died in 240/854. He began life as a tailor, and his parents prevented him from continuing his studies, but Djaʿfar b. Ḥarb [*q.v.*] took him under his care and initiated him in the *Iʿtizāl*. Possessing a lively intelligence, knowledge of many subjects, and a lofty moral sense, he enjoyed the esteem and respect of al-Muʿtaṣim, who seems to have used him as a propagandist for the Muʿtazilī doctrine. In general, he adhered to the opinions of his master Djaʿfar, departing from these only over some details, but he certainly seems to have been one of the most productive of the Muʿtazilīs. Like the other members of the school, he maintained that the Ḳurʾān was created, but that it existed wherever it was read, written and heard. God existed outside time, and His existence could be deduced from the existence of things. In his view, bodies consisted of a combination of two elements. He established a distinction between the created action and the free action which derived directly from man's free-will. In politics, although he seems to have recognized the legitimacy of ʿUthmān as caliph and supported the imāmate of the *mafḍūl*, he declared himself in favour of the superiority of ʿAlī to Abū Bakr, and refuted at some length the *Kitāb al-ʿUthmāniyya* of al-Djāḥiẓ, in a text preserved in part by Ibn Abi 'l-Ḥadīd, *Sharḥ*

Nahdj al-Balāgha, and reproduced at the end of the refuted work (Cairo 1374/1955, 282-343). This text, which is not expressly referred to by Ibn al-Nadīm, seems to be the only one to have survived; the other works attributed to him are:— *K. al-Laṭīf*; *K. al-Badal*; *K. ʿala ʾl-Naẓẓām fī anna ʾl-ṭabʿayn al-mukhtalifayn yafʿal bi-himā faʿlan wāḥidan*; *K. al-Maḳāmāt fi tafḍīl ʿAlī*; *K. Ithbāt khalḳ al-Ḳurʾān*; *K. al-Radd ʿala ʾl-Mushabbiha*; *K. al-Makhlūḳ, ʿala ʾl-Mudjbira*; *K. Bayān al-mushkil, ʿalā Burghūth*; *K. al-Tamwīh, naḳḍ K. Ḥafṣ*; *K. al-Naḳḍ li-K. al-Ḥusayn al-Nadjdjār*; *K. al-Radd ʿalā man ankar khalḳ al-Ḳurʾān*; *K. al-Sharḥ(?) li-aḳāwīl al-Mudjbira*; *K. Ibṭāl ḳawl man ḳāl bi-taʿdhīb al-aṭfāl*; *K. Ḥaml ḳawl ahl al-ḥaḳḳ*; *K. al-Naʿīm*; *K. mā'khtalafa fī-hi al-Mutakallimūn*; *K. ʿalā Ḥusayn fi ʾl-istiṭāʿa*; *K. Faḍāʾil ʿAlī*; *K. al-Ashriba*; *K. al-Ḳuṭub* (?); *K. ʿalā Hishām*; *K. Naḳḍ K. Ibn Shabīb* (?) *fi ʾl-waʿīd*.

Bibliography: Masʿūdī, *Murūdj*, index; Malaṭī, 27, 30, 33; Khayyāṭ, *Intiṣār*, index; Baghdādī, *Farḳ*, 155; Ashʿarī, *Maḳālāt*, index; Khaṭīb Baghdādī, v, 416; Ibn Ḥadjar, *Lisān al-Mīzān*, v, 221; Ibn al-Nadīm, ed. Fück, in *Prof. Muḥ. Shafīʿ Presentation Vol.*, Lahore 1955, 66-7; Ṭūsī, *Fihris*, 254; Samʿānī, *Ansāb*, 35; Ibn al-Murtaḍā, *Muʿtazila*, index; A. N. Nader, *Le système philosophique des Muʿtazila*, Beirut 1956, index.

His son, ABU ʾL-ḲĀSIM DJAʿFAR B. MUḤAMMAD AL-ISKĀFĪ, was also a Muʿtazilī but he took up an administrative career and was appointed head of a *dīwān* by al-Muʿtaṣim. Regarded as a talented scribe, he is the author of a *Kitāb al-Miʿyār wa ʾl-muwāzana fi ʾl-imāma*. (Not to be confused with the vizier to al-Muʿtazz; see preceding art.).

Bibliography: Ibn al-Nadīm, in *Muḥ. Shafīʿ Pres. Vol.*, 67 (which calls him simply Ibn al-Iskāfī). (ED.)

AL-ISKĀFĪ, ABŪ ISḤĀḲ MUḤAMMED B. AḤMAD AL-KARĀRĪṬĪ secretary and vizier during the ʿAbbāsid era. Born in Iskāf on the Nahrawān, in ʿIrāḳ, he appears for the first time in 320/932 as the secretary of the police chief of Baghdād, Ibn Yāḳūt; he was arrested at the same time as his master, in Djumādā I 323/April 935, and had to pay a large fine. He was appointed vizier by the Caliph al-Muttaḳī in Shawwāl 329/July 941, but was dismissed by the great *amīr* Kūrankīdj as early as Dhu'l-Ḳaʿda 329/July-August 941.

Having regained his post under Ibn Rāʾik after the flight of the *amīr*, he was arrested soon afterwards in Dhu'l-Ḥidjdja 329/September 941. Al-Iskāfī regained his vizirate when the supreme emirate was entrusted by the caliph to the Ḥamdānid Nāṣir al-Dawla, who, on his arrival in Baghdād in Shawwāl 330/June-July 942, found the new vizier already installed. But, after eight months, al-Iskāfī was once more dismissed (Radjab 331/March-April 943) and obliged to pay a fine; he seems to have been the victim of intrigues woven in the *amīr*'s entourage by two Barīdī agents. We know little of the end of his career: it seems he was the secretary of Sayf al-Dawla in Aleppo in circumstances which have never been explained, and then that he returned to Baghdād in the time of the vizier al-Muhallabī and died in 357/968.

Bibliography: Ibn al-Athīr, viii, *passim*; Miskawayh, *Tadjārib al-umam*, i, 236, 318-9, ii, 28-9, 38 and n.; M. Canard, *Akhbâr ar-Râdi billâh*, Algiers 1946-50, i, 79 n. 3, ii, 26 n. 1; idem, *Histoire de la dynastie des H'amdanides*, Algiers 1951, 429. (D. SOURDEL)

AL-ISKANDAR, Alexander the Great. It is generally agreed both by Muslim commentators and modern occidental scholars that Dhu ʾl-Ḳarnayn, "the two-horned", in Sūra XVIII, 83/82-98 is to be identified with Alexander the Great. The story is told in reply to questioners, often said to be Jews. Dhu ʾl-Ḳarnayn was given power on earth, and made his way to the furthest west and furthest east; and in response to an appeal from oppressed people built a wall or rampart of iron and brass against the incursions of Yādjūdj and Mādjūdj [*q.v.*]. The origin and precise significance here of the name Dhu ʾl-Ḳarnayn has been much discussed (cf. al-Bayḍāwī, *ad loc.*; Nöldeke-Schwally, i, 140, note 5). The name had been previously applied to the Lakhmid al-Mundhir al-Akbar (III) ibn Māʾ al-Samāʾ (cf. Imruʾ al-Ḳays, 60.3; Ibn Ḥabīb, *Munammaḳ*, 340; J. Horovitz, *Koranische Untersuchungen*, 111-3, with further references). Dhu ʾl-Ḳarnayn was accepted as a believer or Muslim since he spoke to the people of the west about God's punishment of wrongdoers and his reward for the upright; but it was disputed whether he was a prophet. Al-Wāthiḳ is said to have sent a man to explore the wall (*BGA*, vi,1 62-70; quoted by G. von Grunebaum, *Medieval Islam*, 26, note 63).

Bibliography (in addition to works cited): commentaries on Ḳurʾān, XVIII, 83/82 ff.; Ibn Ḥabīb, *Muḥabbar*, 359, 365, 393; Ibn Ḳutayba, *Maʿārif*, 26; al-Masʿūdī, *Murūdj*, al-Thaʿlabī, *Ḳiṣaṣ al-Anbiyāʾ*, (Cairo, 1310), 226, (Singapore, 1382) 483-99. (W. MONTGOMERY WATT)

ISKANDAR NĀMA, the Alexander Romance. i. Arabic. Sura XVIII (59 ff.) shows that the Arabs have known of the Alexander Romance (pseudo-Callisthenes) from early times, since what is said about Mūsā in this Ḳurʾānic passage is in fact derived from this romance. On the earlier history of the Romance, see Nöldeke, *Beiträge zur Geschichte des Alexanderromans*, in *Denkschriften der Kais. Akad. d. Wiss.*, Vienna, xxxiii. According to this scholar, the source of the Syriac and Arabic stories is to be found in a primitive Pahlavi version, the author of which, according to Fraenkel (*ZDMG*, xlv, 319), may have been a Syriac Christian who wrote in Persian. The oldest Arabic versions, provided by the *ḥadīth*, have been collected by Friedländer in *Die Chadhirlegende und der Alexanderroman*, 67 ff. [see AL-KHAḌIR]. On more recent versions in Arabic, see Friedländer's article and also E. García Gómez, *Un texto arabe occidental de la leyena de Alejandro*, Madrid 1929. (ED.)

ii. Persian. The "Book of Alexander", consisting of two parts, the *Sharaf Nāma* and the *Iḳbāl Nāma*, is the fifth poem of the *Khamsa* of Niẓāmī [*q.v.*]. It constitutes the fullest synthesis of the image which Muslim Iran conceived and assimilated of the Macedonian conqueror, who at the start was regarded as the most odious of enemies and who, in the last analysis, became the model of the Muslim hero, the Iranian knight, through his own merits worthy of acceding to the rank of prophet of the One God.

The *Sharaf Nāma* (6,896 verses) is the story of the hero, in its main outlines conforming with the traditional accounts going back to the pseudo-Callisthenes, but altered in many of the details and, what is more, assuming a highly original character from the manner in which Niẓāmī treats it. The *Iḳbāl Nāma*, where the individual stamp of the author's genius is even more apparent, is a shorter work, with less embellishment but with a greater wealth of reflection, and in it the image of excellence of the hero is subordinated to that of the wise man, the

model ruler who through the constancy of his meditation deserves to be invested with a true prophetic mission. (For the Arab tradition, Iskandar—Dhu 'l-Ḳarnayn already combines [see above] the characteristics of the warlike hero with those of the prophet of universality).

For Iranian tradition, he is essentially "the wretched Mar, inspired by the Druj (the spirit of discord)", guilty of the destruction of the good religion, its altars and its books (M. Molé, *Culte, Mythe et cosmologie dans l'Iran ancien*, Paris 1963, 211; cf. Pagliaro, *Letteratura persiana*, Milan 1950, 38, 96). But in islamised Iran the idea, which was fixed by the commentary of al-Ṭabarī on the Ḳur'ān, XVII, 82 ff. (*Tafsīr*, xvi, 6 ff.) and by the same author's *Annales* (I, 692-702), of a universal mission made manifest through his conquests, is substituted for this pejorative image.

In the *Shahnāma*, Firdawsī already makes Iskandar an exemplary figure, whom the companionship of Aristotle helps to rise still higher, by the path of wisdom and moderation, in the direction of abstinence and contempt for this world. And Firdawsī laid stress on the defeat of Dārā (the Darius of the Greeks) as something desired by "the rotation of the Heavens".

Already, too, for Firdawsī, Alexander bears on his brow the marks of the Kayānids and, thereby, a quality of legitimacy which Niẓāmī emphasizes by making him, as his predecessor and as al-Ṭabarī had done, a son of Dārāb and consequently a half-brother of Dārā who is thus able to transmit power over Iran to him, and to see in him the just king, the successor of the Kayānids.

At the time of Niẓāmī, however, Islam is from then onwards well established in Iran, and it is the prophetic and ecumenical aspect of his destiny that the poet makes evident in his hero. As a learned Iranian poet, Niẓāmī, who demonstrates his eclecticism in the information he gives (he says, "I have taken from everything just what suited me and I have borrowed from recent histories, Christian, Pahlavī and Jewish . . . and of them I have made a whole"), locates the story of his hero principally in Iran. He makes him the image of the Iranian "knight", peace-loving and moderate, courteous and always ready for any noble action. Like all Niẓāmī's heroes, he conquers the passions of the flesh, and devotes his attention to his undertakings and his friendships. These features appear in the account, which follows ancient tradition, of his conduct towards the women of the family of Darius, in his brotherly attitude on the death of that ruler, in his behaviour towards queen Nushaba (the Kaydaf of Firdawsī, the Kandake of the pseudo-Callisthenes) whom he defends against the Russians. And if he subdues the king of China, the Khāḳan, and the Indian king Kayd (Porus), it is to establish a deep and lasting friendship with them.

In the *Sharaf Nāma* particularly, the itineraries of his expeditions are Iranian and Muslim. It is in Egypt that he introduces the rule of justice, after delivering the country from the threat of the Zandj, and it is the religion of the One God of Abraham that, in the *Sharaf Nāma*, he makes it his mission to spread, and for which he was to eliminate from Mecca the family of Khuzāʿa, who had distorted the religious tradition of the Kaʿba. And it is through Armenia that he starts his march to the East, on the way founding Tiflis and Bardaʿ, occupying the legendary castle of Dar Band, and finding in the castle of Sakīr the fabulous relics of Kay Khusraw. He traverses Rayy, Khurāsān and central Asia, to reach India and then China. He was to return to Bardaʿ, in this same Ādharbāydjān, the homeland of Niẓāmī, to rescue Queen Nushaba when she was attacked by the Russians (there was in fact an invasion in 946-7).

Niẓāmī did not fail, afterwards, to crown the *Sharaf Nāma* with the theme of the vain quest for the source of life, in which may be seen a foreshadowing of the nihilist philosophy which was to be that of the *Iḳbāl Nāma*.

The *Iḳbāl Nāma* is a hymn to wisdom—that of the Greeks, that which Iskandar would have derived from the old Iran—to that also which the hero, dedicated to Prophecy, was to elaborate, before his death in the company of the wise, and in regard to which Niẓāmī, after reviewing the final solutions of the old sages, was to recall the primordial role of celestial reason, *Khrat*, already sung by Firdawsī before him.

The encyclopaedic character of the *Iskandar Nāma*, far more than the treatment of the legendary subject, is perhaps what most strikes the reader: the passion for and justification of asceticism, for which on several occasions Iskandar emphasises his respect; the geographical and historical recollections relating particularly to the Byzantines; the pronounced taste for the mysterious sciences, where the episode of Mary the Copt and her authentic conception of speculative alchemy administers a corrective to the episodes where the hero creates a magic mirror or takes pleasure in conversations with the semi-legendary Bālīnās (Apollonius).

Study of the *Iskandar Nāma* is not yet wholly complete, and it holds in store rich and important discoveries, not only for historians of literature but also for those engaged in comparative studies, for historians of the history of religious ethics in Iran, and for students of folklore.

(A. ABEL)

iii. In classical Ottoman literature the Alexander legend was used relatively rarely, perhaps (as E. J. W. Gibb suggested, *HOP*, i, 284) because its subject-matter gave little scope for the allegorical treatment of the theme of love. The one famous and very popular poem on the subject is the *Iskendernāme* of Aḥmadī [*q.v.*] (d. 815/1412-3) (the story as related by Aḥmadī is summarized by Gibb, *HOP*, i, 270-84; for its character, as a kind of encyclopaedia, see Fr. Taeschner, in *Hb. der Orientalistik*, I. Abt., V/1, 1963, 276; for the most up-to-date list of Mss., see B. Flemming, *Verzeichnis der or. Handschriften in Deutschland*, xiii/1, Wiesbaden 1968, p. 36). Some Mss. are half in verse, half in prose (see, *e.g.*, Nihad Sami Banarlı, in *TM*, vi (1936-9), 110). There are also prose versions, some anonymous, some attributed to Aḥmadī's "brother" Ḥamzevī (*HOP*, i, 255; cf. Ḥādjdjī Khalīfa, ii, 1327; see also F. E. Karatay, *Topkapı Sarayı . . . Türkçe yazmalar kat.*, nos. 2744-69, some or all of which are presumably Ḥamzevī's prose version); their connection, if any,

with Aḥmedī's poem remains to be investigated.

A certain Fighānī of Karaman (flor. ca. 906/1500) is reported to have composed a verse *Iskendernāme* (Laṭīfī, 266-7), but it seems not to have survived. An *Iskendernāme* composed by Aḥmed Riḍwān (Sehī, p. 36; Laṭīfī, p. 88), *i.e.*, the *defterdār* "Tütünsüz" Aḥmed Beg (flor. under Bāyezīd II) and closely following Aḥmadī, survives in a single Ms. in Ankara (see Agâh Sırrı Levend, *Aḥmed Rizvān'ın İskendernāmesi*, in *Türk Dili*, vol. i, no. 3 (Dec. 1951), 23-31, where (p. 24) the author mentions another verse *Iskendernāme* in his private library, by a certain Ḥayātī). His contemporary Bihishtī [*q.v.*] completed an *Iskendernāme* in 909/1503-4 (Ushaw College MX).

In Čaghatay Turkish literature the Alexander-legend provided the theme for the fifth poem in the *Khamsa* [*q.v.*] of Navāʾī [*q.v.*], on which see J. Eckmann, in *Philologicae Turcicae Fundamenta*, ii, 346-8 and (bibliography) 355-7.

AL-**ISKANDAR** AL-**AFRŪDĪSĪ**, Alexander of Aphrodisias (about 200 A.D.), Peripatetic philosopher. In mediaeval Europe and at the time of the Renaissance he was regarded as the most authoritative of the ancient commentators of Aristotle. He had the same influence in Islamic countries. A certain illuminism, his concept of the active intellect coming from outside to the human soul, fitted in with the Neoplatonic trend prevailing in Arabic philosophy. On the other hand his materialistic arguments against the immortality of the human soul gave rise to wide discussions which spread from Islamic to Christian learned circles; the difference between Aristotle and Alexander over this question is a major theme in the correspondence between Emperor Frederick II Hohenstaufen and the Ṣūfī Ibn Sabʿīn [*q.v.*] (see *JA*, 7e série, xiv (1879), 404-49).

Little being known about Alexander's life, the Arabic biographical tradition considerably exceeds what can be derived from the Greek sources. It calls him al-Iskandar al-Afrūdīsī al-Dimashkī, thus identifying him with a certain Alexander of Damascus, who quarrelled in Rome with Galen [see DJĀLĪNŪS] and was afterwards appointed professor of Peripatetic philosophy at Athens (see Galen xiv, 627-9 and ii, 218, ed. Kühn). Just the same honour was awarded to Alexander of Aphrodisias, and we do not know whether the identification is due to some erroneous reasoning or is based on better information than we nowadays possess. Chronological considerations are of no value here: Alexander of Aphrodisias was called to Athens in or after 198 A. D., and though Galen wrote the chapter of *De anatomicis administrationibus* where the relevant remark on Alexander of Damascus is found before 180 A. D., he may have inserted this statement later, at the end of his life, for he often used to complete his earlier works with new references (cf. K. Bardong, in *Nachrichten von der Akad. d. Wissensch. in Göttingen, phil.-hist. Kl.*, 1942, 604, 631, 633). Besides Galen's account of his quarrel with Alexander of Damascus, the Greek sources reveal nothing about any such strife with Alexander of Aphrodisias; the Arab authors, however, even know the nickname "mule's head", which their Iskandar al-Afrūdīsī al-Dimashkī bestowed on the philosophizing physician (for some literary refutations of Galen as extant in Arabic see below). In this context it is interesting that the Arabic tradition gives Galen the same teacher of Peripatetic philosophy as Alexander of Aphrodisias, viz. Herminus, and this statement can surely be accepted as correct (cf. Heinrich Schmidt, *De Hermino Peripatetico*, Phil. Diss. Marburg 1907, 6; F. Rosenthal, in *Oriens*, vii (1954), 69, 79; S. Pines, in *Isis*, lii (1961), 23).

The works of Alexander were made accessible to the Arabs by various translators, such as Ḥunayn b. Isḥāḳ [*q.v.*], Isḥāḳ b. Ḥunayn [*q.v.*], Abū ʿUthmān Saʿīd al-Dimashḳī, Abū Bishr Mattā b. Yūnus, Yaḥyā b. ʿAdī, and others. The Arab bibliographers refer to most of his expanded commentaries on the writings of Aristotle, but only some quotations of them are still extant in Arabic translation (cf., *e.g.*, A. Dietrich, *Medicinalia Arabica*, *Abhandlungen der Akad. d. Wissensch. in Göttingen, phil.-hist. Kl.*, *Dritte Folge*, no. 66, 1966, 181 f.), the most voluminous being those preserved by Ibn Rushd [*q.v.*] (see J. Freudenthal, in *Abh. Pr. Ak. W.*, 1884; cf. M. Bouyges, in *Revue du moyen âge latin*, iv (1948), 280). On the other hand over 35 small treatises on various subjects are found in Arabic manuscripts the edition and study of which has begun only in the last decades. About 15 can be identified with the Greek text of the so-called *quaestiones* (ed. Bruns, ii/2) or parts of them (see Dietrich, *Differentia specifica*, 94-9; van Ess, 153; Gätje, *Überlieferung*, 261-4, 274-8). Three other tracts are found in the collection *De Anima Libri Mantissa* (*Fi 'l-ʿaḳl ʿalā raʾy Arisṭūṭālīs*, ed. Finnegan; *Fī kayfa yakūnu 'l-ibṣār ʿalā madhhab Arisṭāṭālīs*, see Gätje, *Überlieferung*, 267-70, 272 f.; *Fi 'l-radd ʿalā man yaḳūlu inna 'l-ibṣār yakūnu bi-'l-shuʿ-āʿāt al-khāridja min al-baṣar*, Ms. Tashkent 2385, lxxxv = Bruns ii/1, 127, 28-130, 12). The titles of these Arabic treatises are certainly not original; they also differ sometimes in the lists of the bibliographers and in the various manuscripts, where they may even be left out, the result being a confusion with the preceding tracts (see Gätje, *Überlieferung*, 261 f.—the same coherent text in Ms. Tashkent 2385, lxxxiv). A number of these secondary headings indicate a polemic against Galen (cf. J. Ch. Bürgel, in *Nachrichten der Akad. d. Wissensch. in Göttingen, I. phil.-hist. Kl.*, 1967, 282 f., 387), but it remains for further investigation to decide whether these refutations are really directed against him in each case.

Sometimes the Arabic version appears to be merely a shortened paraphrase of the Greek with occasional additions. In one case two Arabic tracts on the *differentia specifica* (ed. Dietrich) are so similar, that one of them seems to be the paraphrase of the other (cf. van Ess, 154-9). It is difficult if not impossible to get an idea when all these alterations were introduced, whether by Alexander himself or in which stage of the Greek-(Syriac-) Arabic tradition. A similarly puzzling problem is posed by the second part of the commentary to Aristotle's *Metaphysics*, as extant in Greek and commonly regarded as a forgery, and its relation to the quotations made by Ibn Rushd (cf. Moraux, *Alexandre d'Aphrodise*, 14-9). It should further be noted, that in the Arabic tradition passages of Proclus's *Elements of theology* [see BURUḲLUS] appear among Alexander's genuine writings and under his name

(see van Ess, 159-68). The bilbiographers give also the titles of two medical tracts ascribed to Alexander (*Fi 'l-mālīkhūliya* and *Fi 'l-ʿilal allati taḥduthu fi fam al-miʿda*); they are quoted, apparently, by al-Rāzī [*q.v.*] in his *al-Ḥāwī* (cf. Th. Puschmann, *Alexander von Tralles*, i, Vienna 1878, 94 f.).

ISKANDAR AGHA b. Yaʿḳūb b. Abkār, an Armenian of Beirut, better known by the name Abkaryus (d. 1885). Becoming devoted to the study of Arabic literature, he endeavoured to provide his readers with anthologies based upon works still unpublished and thereby rendered great service to orientalism in the 19th century. His best known work is the *Nihāyat al-arab fī akhbār al-ʿArab* (Marseilles 1852; revised ed. under the title *Tazyīn Nihāyat al-arab*, Beirut 1867). In Beirut he also edited (1864, 1881) the *Dīwān* of ʿAntara (*Munyat al-nafs fi ashʿār ʿAntar ʿAbs*), and published in the same town *Rawḍat al-adab fī ṭabaḳāt shuʿarā' al-ʿArab* (1858), and *Rayḥanat al-afkār...* (1880). His stay in Egypt from 1873 inspired several of his writings, notably a biography of Ibrāhīm Pasha, *al-Manāḳib al-Ibrāhīmiyya* (Cairo 1299/1882), and some articles published in *Djinān* in 1874; it was also in Cairo that he published, in 1883, his *Dīwān*, under the title *Nuzhat al-nufūs wa-zīnat al-ṭurūs*, in which he gave particular praise to the Khedives Tawfīḳ and Ismāʿīl.

Finally, he is the author of a narrative of the events which marked the history of Lebanon from 1860 to 1869, *Nawādir al-zamān fi waḳā'iʿ djabal Lubnān*; several Mss. of this work exist (see *D.M.*): the text has been published in 1920 in New Haven, by J. P. Scheltema, under the title: *The Lebanon in turmoil; Syria and the powers in 1860; Book of the marvels of the time concerning the massacres in the Arab country*. His brother Yūḥannā, d. 1889, was also interested in history and literature; his principal works are *Ḳaṭf al-zuhūr fī ta'rīkh al-duhūr* (Beirut 1883), *Nuzhāt al-khawāṭir* (Beirut 1877), and an English-Arabic dictionary printed several times in Beirut (wrongly attributed to his brother by Brockelmann, in EI[1], s.v. Abkāriūs).

Bibliography: F. Bustānī, in *Dā'irat al-maʿārif* ii, 258. (Ed.)

ISKANDAR BEG al-shahīr bi-**MUNSHĪ**, born *ca.* 968/1560, died probably *ca.* 1042/1632, author of the *Tārīkh-i ʿĀlam-ārā-yi ʿAbbāsī*, one of the greatest works of Persian historiography. The *muḳaddima*, on the origins of the Ṣafawids and the reigns of Ismaʿīl I and Ṭahmāsp I, is followed by a detailed history of the reign of Shāh ʿAbbās I. The bulk of the work (*Ṣaḥīfas* I and II, or, according to another reckoning, *Ṣaḥīfa* I and *Ṣaḥīfa* II, *Maḳṣad* i) was completed in 1025/1616. A later portion, variously termed *Ṣaḥīfa* III, or *Ṣaḥīfa* II, *Maḳṣad* ii, was completed in 1038/1629, the year of Shāh ʿAbbās's death. In the same year, Iskandar Beg, at the age of seventy, commenced a history of Shāh Ṣafī, but probably only the first four years of this chronicle are the work of Iskandar Beg. For a discussion on the authorship of this so-called *Dhayl-i Tārīkh-i ʿĀlam-ārā-yi ʿAbbāsī*, see Storey, i/I, pp. 312-14, and V. Minorsky's observations in *BSOAS*, x (1940-2), 540-1.

Iskandar Beg began his professional career as an accountant, but soon abandoned accountancy for *inshā'*. He obtained an appointment in the royal sec-

retariat, and rose rapidly to the rank of *munshī-yi ʿaẓīm*. From 1001/1592-3 onwards, he was an eye-witness of many of the events he describes.

Bibliography: Storey, i/I, pp. 309-313; Fr. von Erdmann, *Iskender Munschi und sein Werk*, in *ZDMG*, xv (1861), 457-501. Printed edition of the *Tārīkh-i ʿĀlam-ārā-yi ʿAbbāsī*, 2 vols. Tehran, 1334-5 s./1955-6. (R. M. SAVORY)

ISKANDAR BEG [see ISKENDER BEG].

ISKANDAR KHĀN [see Supplement].

AL-**ISKANDARIYYA**, the name of a great number of towns of which Alexander (al-Iskandar) was the founder, real or legendary, or for which he was chosen as eponymous protector when they were built after his death. The relevant ancient texts are listed in the *Real-Encyclopädie* of Pauly-Wissowa (i, 1377-98 and Suppl., i, 54) and, in less detail, by M. Besnier, *Lexique de géographie ancienne*, Paris 1914, 32-4. These towns are:

1. Alexandria in Egypt [see following article]. - 2. Alexandria Arion: Harāt (cf. Suhrāb, *Kitāb ʿAdjāʾib al-akālīm al-sabʿa*, ed. von Mžik, Leipzig 1930, 29). - 3. Alexandria in Margiana, in the region of Mraw. - 4. Alexandria Eschate: Khodjand; in this region, the permanence of the legendary memory of Alexander finds expression also in the name of the town of Iskander, 50 km. north-east of Tashkent (cf. *Times Atlas of the world*, ii, London 1959, map 43). - 5. Alexandria of the Paropanisades: Ghazna or, more probably, Begrām, to the north of Kābul. - 6. Alexandreia Opiane, on the east bank of the Indus (Besnier appears to confuse this with the last-named locality). - 7. Alexandria apud Oritas, on the coast of Gedrosia, near Cocala: Sonmiani, at the mouth of the Pourali. - 8. Alexandria in Macarene, in the Makrān, on the river Mashkil. - 9. Alexandria in Carmania: known to the Arab geographers as Walāsh-djird (cf. Yākūt, s.v.). - 10. Alexandria in Arachosia: Kandahār. - 11. Alexandria in Susiana (Alexandria ad Tigrim) between the Tigris and the Eulaeus (Kārūn). - 12. Alexandria in Troas: Eski Stabul. - 13. An Alexandria in Assyria (according to Pliny, *Histoire naturelle*, vi, 42). - 14. Alexandria in Syria: Alexandretta [see AL-ISKANDARŪN]. - 15. An Alexandroskene 16 km. south of Tyre. This Iskandarūna (Skandelion) was in fact built by Alexander Severus, but legend subsequently attributed it to Alexander, who was said to have set up his tent (*skene*) there during the siege of Tyre (cf. Besnier, 34; *Guide Baedeker Palestine-Syrie*, Leipzig 1893, 274; *Guide bleu Moyen-Orient*: *Liban, Syrie, Jordanie, Iraq, Iran*, Paris 1965, 160). On the other hand, alexandrine legend does not appear to have annexed the fortress of Alexandrium, to the south-east of Nābulus, built by Alexander Jannaeus (102-76), cf. Strabo, xvi, 2, 40, and *Guide bleu*, 480. 16. An Alexandria in Latmos, to the south of Magnesia ad Maeander. - 17. An Alexandria in Cyprus. - 18. An Alexandria in Thrace. - 19. An Alexandria in the Gulf of Saros (Melas sinus, to the north of the Chersonesus). - 20. An Alexandria in Armenia. - 21. An Alexandropolis in Thrace. - 22. An Alexandropolis in Parthia (Khurāsān), in the region of the Nasā of the Arab geographers. - 23. Alexandreia Boukephalos, on the right bank of the Hydaspe, near the modern Djalālpur, in the North of the Pundjāb. - 24. An Alexandria on the Acesines (Čenāb), near its confluence with the Indus. - 25. Alexandria of the Sogdians (of India), to the south of the preceding locality. - 26. An Alexandreia "para Sorianois" (perhaps that of Diodorus Siculus, xvii, 102 ?), in India. - 27. Alexandri portus, at the mouth of the northern arm of the Indus: Karāčī. - 28. Alexandria near Bactra (Balkh). - 29. Alexandreia Oxiane (on the Oxus: Djayḥūn). - 30. Alexandreia Eschate (different from No. 4, on the Upper Oxus, in the Khuttal; the Sikandara of the Arab geographers (cf. Ibn Ḥawkal-Kramers-Wiet, 432, 434; Mukaddasī, 291). - 31 to 35, or 31 to 39, according to the authors, various other Alexandrias in Bactria and Sogdiana.

The memory of these towns has been preserved in an erratic and uncertain manner: Ibn Rusta, for example, claims for his own city, Iṣfahān, the honour of having been founded by the hero (Ibn Rusta - Wiet, 186; Ibn Ḥawkal - Kramers - Wiet, 355; another trace of this onomastic tradition is in the name Eskandarī, a locality 110 km. west of Iṣfahān). Kudāma, for his part, names as towns built by Alexander (*BGA*, vi, 265): Samarkand, al-Dabūsiyya (modern Ziandin in the region of Bukhārā; cf. *Ḥudūd al-ʿālam*, 113, 352), al-Iskandariyya al-Kuṣwā (Khudjand), Bukhārā, Marw, Harāt, Zarandj, al-Rayy, Iṣfahān and Hamadhān. It is apparent that the Iranian tradition tends to monopolize the memory of the hero. But it is Ibn al-Fakīh who represents the starting-point of the most interesting links. No doubt, apart from the Alexandria in Egypt, he knew merely of Alexandretta (p. III) and the tradition of the founding of Marw by Alexander (71; al-Mukaddasī, 298). But Yākūt, who had at his disposal the complete version of Ibn al-Fakīh's work, states that in it he found traces of thirteen Alexandrias, out of all those that Alexander founded "almost everywhere" and to which he gave his name, a name "which was later to be changed". In fact, Yākūt's text enumerates twelve towns mentioned by Ibn al-Fakīh, to which he adds three others. The whole of this information is repeated by Muḥammad Murtaḍā (*Tādj al-ʿarūs*, iii, 276).

These Alexandrias are: - A. An Alexandria "on the bank of the great river" (*TA* defines this—"namely, the Djayḥūn") = 29. - B. An Alexandria "in the country of Babylon (Bābil)": this is Iskandariyya, a small township 68 km. South of Baghdād, according to popular tradition founded by Alexander; the same name is also borne, in the same region, by a canal (cf. *Guide bleu*, 626; *Iraq and the Persian Gulf, September 1944*, Geographical Handbook Series of the Naval Intelligence Division, Oxford 1944, s.v.; *Times Atlas of the world*, map 34). - C. An Alexandria "in the country of Sogdiana (Ṣughd): this is Samarkand" (*TA*: "in the Ṣughd of Samarkand") = 4. - D. An Alexandria which "is called Marghabulūs: this is Marw" (*TA*: "at Marw"). No doubt, in the name Marghabulūs we may detect the association of two traces, referring respectively to Margus (the river of Margiana: Murghāb) and *polis* = 3. - E. An Alexandria "called Kūsh, and which is Bactra (Balkh)" (*TA*: "this is the name borne by Balkh, for it was Alexander who founded it") = 28. - F. An Alexandria "in the basin of the rivers, in India" (*TA* adds: "which are five in number and known by the name Pundjāb") = 6, 23 or 24. - G. An Alexandria (*TA* gives the name al-Iskandara and adds: "large") "in the country of India", with no further details = 6 or 23-27. This onomastic tradition has remained strong in India (see the many occurrences of the name Sikandara in northern India: *Times Atlas of the world*, s.v. and map 30). - H. Alexandria in Egypt, known as "the Great". - I. Alexandretta, if this is indeed the town denoted by the poor description given by Yākūt, "a small town between Aleppo and Ḥamāt". *TA*, on the other hand, leaves no

doubt on the subject. - J. An Alexandria, "which is a small town on the Tigris, opposite al-Djāmida, 15 parasangs from Wāsiṭ", the home of the Shāfiʿī Abū Bakr al-Iskandarānī (for whom see Kaḥḥāla, *Muʿdjam al-muʾallifīn*, ii, 98) = 11. - K. An Alexandria which is "a small town between Mecca and Medina, mentioned by the *ḥāfiẓ* Abū ʿAbd Allāh b. al-Nadjdjār in his dictionary" (Kaḥḥāla, *op. cit.*, xi, 317).

The *Tādj al-ʿarūs* adds, without further details, that five other Alexandrias also exist, to make up the total number mentioned at the beginning of the passage, of sixteen towns "commemorating the name of Alexander". In fact, this figure takes into account the mistake made by Yāḳūt over the number of cities given by Ibn al-Faḳīh (twelve, not thirteen); the true total is therefore fifteen, the same as that of Yāḳūt.

The four towns which figure in Yāḳūt, and whose names disappear in *TA*, for the evident reason that they are more difficult to locate, are: - A. A town which Alexander founded *fī Bāūrnaḳūs*; at first sight indecipherable, this name may be read as Bārūnaḳūs, a possible corruption of Paro(pa)nisos, the land of the Paropanisades = 5. - B. A town called the Fortified (al-Muḥaṣṣana): cf. 26, where Diodorus says: *ektise polin Alexandreian* (Latin, *oppidum condidit Alexandriam*). - C. An Alexandria *fī Djaliḳūs*: the epithet Gallicus may here refer (cf. Propertius, 2, 13, 48) to the Gallus, a river of Phrygia or Galatia, or to the Glaucus, a small river in the North of Armenia or the gulf between Lycia and Caria (Strabo, xiv, 2, 2) = 20 or 16. - D. An Alexandria "in the country of al-Saḳūyāsīs": in this name it is possible to detect a corruption of Satnioeïs (Satniols, Saphnioïs: Strabo, vii, 7, 2, xiii, I, 50 and 3, I), a river which flows to the South of Alexandria of Troas = 12.

Bibliography: In the text. (A. Miquel)

AL-ISKANDARIYYA (also al-Askandariyya), the principal seaport of Egypt, in Ptolemaic times the second city of the world. One of the few important seaports on the African shore of the Mediterranean, Alexandria enjoys a particularly important position. With a population of about 1,576,234 (in 1960), the city lies at the Western angle of the Delta in latitude 30°11′N. and longitude 29°51′E. It was founded in 332 B.C. by Alexander the Great. When it came into Arab hands, though its glory had diminished, it was still a great and splendid city.

When Alexandria was surrended to the Arabs in 21/642 a considerable number of Greeks left the city. The new rulers, on taking possession, did not molest the inhabitants. The well-known story of the burning of the great library by order of the Caliph ʿUmar b. al-Khaṭṭāb, which is related by a 7th/13th-century Arabic author, cannot be accepted as historical. The Arab newcomers were at first overwhelmed by the city of Alexandria, whose buildings and monuments must have seemed to them the work of a superhuman power. Time and again we are told by the traditions that the city shone so brightly by night that the tailor needed no artificial light to thread his needle. The famous 12th-century Arab geographer, Yāḳūt, refuted this same assertion when he declared that the town was as dark as any other during the night. Its houses shone simply because they were coloured white, while the façades and throughfares were built of marble. Accounts by Arab writers of the 3rd/9th to 7th/13th centuries, when pieced together, give only a general description of Alexandria and materials for reconstructing the plan of the city are quite insufficient. It seems fairly certain, however, that the city retained its overall layout through the Middle Ages and up to the present time. Eight straight streets intersect eight more at right angles, producing a chess-board pattern of direct and continuous throughfares. The riches of antiquity were utilized by the new rulers as when, for example, during a monetary crisis at the beginning of the 2nd/8th century, the governor of Egypt allowed a copper statue to be melted down to provide metal with which to strike money. In the reign of the Sultan al-Nāṣir Muḥammad b. Ḳalāwūn, the government made use of lead from an underground tunnel, which still existed at that time in the city, in building the canal of Alexandria. A remarkable feature of medieval Alexandria, and one that was taken over from ancient times, was that the houses were built on columns, rising above one another in as many as three tiers. In this way, the city made full use of the land while securing its water supply by means of a carefully planned subterranean system of canals, cisterns and wells. In winter Alexandria had and still has a fairly considerable rainfall, while in summer the waters of the Nile were directed and stored there.

The city of Alexandria was well fortified. There is no precise information about the origins of the medieval fortifications. When ʿAmr b. al-ʿĀṣ met with resolute resistance to his siege of the city, after the invasion of Manuel in 25/645, he swore to destroy the city's walls after its reconquest. The authenticity of such reports, however, may well be doubted despite their widespread repetition. A soldier with the circumspection of ʿAmr b. al-ʿĀṣ could scarcely, seriously, have wished to leave a frontier city as important strategically as Alexandria without the protection of a wall. We learn, moreover, that the ʿAbbāsid Caliph al-Mutawakkil (234/848-247/861) had Alexandria furnished with a city wall. Since the Arabic word *banā*, in medieval times, meant restore as well as build, we can draw no firm conclusions from this. Similar statements are made about Ibn Ṭūlūn (254/868-270/884), Saladin (567/1172-589/1193), al-Ẓāhir Baybars (659/1260-674/1277), al-Ashraf Shaʿbān (764/1363-778/1376) and others after them. Hence we may well question the assertion that ʿAmr b. al-ʿĀṣ left the city walls razed and assume that al-Mutawakkil, Ibn Ṭūlūn and the other rulers gradually added improvements to them. At the same time, the view that the walls were built in pre-Islamic times gains credence. It is particularly important for the history of the city that the new walls, supposedly erected by al-Mutawakkil, included about half the area of those which dated from the Hellenistic-Roman period. About a hundred towers were built along the walls in the Middle Ages and fitted out with suitable equipment including cannon. In addition, the city was protected by a moat in front of the walls.

The medieval seaport of Alexandria consisted of an eastern and a western harbour. The original island of Pharos was flanked by these harbours and joined to the mainland by a causeway seven stadia in length, and hence known as the Heptastadium, which separated the harbours. On the north-eastern point of the island stood the Pharos, the great lighthouse begun in the time of Ptolemy Soter. This famous building, the prototype of all our lighthouses and one of the wonders of the ancient world, survived the Arab conquests by several centuries. The Arab writers call it the *manāra*, *manār* or *fanār* and we are indebted to al-Balawī for a precise

description of it dating from the year 561/1165. When the Pharos was destroyed in the course of various earthquakes, the port came, in the later Middle Ages, to be watched over from a knoll, Kom al-Nadura (*Kawm al-Nāẓūra*), where the arrival and departure of the ships was noted. In 882/1447, under Sultan Ḳā'it Bay [*q.v.*], a tower was built on the ruins of the Pharos which still bears his name.

It is worth remembering the remark of al-Masʿūdī that the imperial anchorage on the eastern side of the eastern harbour, renowned in ancient times, was not used in the Middle Ages. For closer supervision of the eastern harbour, a second lighthouse was built. Construction began in the time of Sultan Ḳalāwūn or in that of his son, al-Nāṣir Muḥammad b. Ḳalāwūn, and was completed in 767/1365.

The eastern harbour was strengthened by this addition. The western harbour, on the other hand, was protected by an iron chain. On grounds of security, the eastern harbour was reserved for Christian shipping and that from the *dār al-ḥarb*, while the western harbour was for Muslim vessels. Entering the eastern harbour required particularly careful navigation. To reach the anchorage protected from wind and rough sea, ships had to sail close by the Pharos and hold hard to the western bank of the eastern harbour lest they plunge into the danger zone of submerged rocks. It was impossible to avoid these rocks by sailing around the eastern side because of the shallow water. The harbour authorities had pilots and launches to accompany the great Frankish ships to their anchorage. A wooden landing-stage connected the anchorage to the shore, by means of which the vessels could be loaded and unloaded. Anchoring in the western harbour raised no technical difficulties.

Apart from al-Abdarī's book of travel (7th/13th century), none of the known oriental sources provides a detailed description of the city gates of Alexandria. Impressed by the achievement of the pre-Islamic period, al-Abdarī describes them as follows: "Their uprights and lintels, despite the extraordinary size of the gates, are made of hewn stone of wonderful beauty and solidity. Every door-post is formed of a single stone as is every lintel and step. There is nothing more astonishing than the collection of these stones in view of their immense size. The passage of time has not affected them or left any trace on them; they remain still in all their freshness and beauty. As for the panels of the gates, they are tremendously strong, clad inside and out with iron of the most delicate, most beautiful and most solid workmanship possible."

The city had four main gates: Bāb al-Baḥr led to the Heptastadium and the eastern harbour while Bāb Ras̲h̲īd (the Rosetta gate) was the eastern gate with the road leading to Rosetta and Fuwwa. The southern gate was called Bāb Sidra (also called Ṣadr in the late Middle Ages), known to the western sources as Port du Midi or Meridionale, also as the Gate of Spices, Bāb al-Bahar, or Gate of St. Mark. The caravans from the Mag̲h̲rib and the Egyptian hinterland came and went through this gate. The fourth, Bāb al-Ak̲h̲dar or Bāb al-K̲h̲idr, in the northern section of the wall led to one of the city's three large cemeteries and was opened only once a week for visitors, on Fridays. There were to be found innumerable places of pilgrimage (*mazārāt*) and the graves of scholars and pious men. In the western area of the city lay the royal buildings like the Dār al-Sulṭān (a magnificent complex going back to antiquity), Dār al-ʿAdl, Dār al-Imāra, Ḳaṣr al-Silāḥ and Dār al-Ṭirāz. Near the Dār al-Ṭirāz and opposite Bāb al-Baḥr lay the famous Arsenal of Alexandria which, however, by the later Middle Ages, no longer played any important part in the history of warfare. By this time it was used simply as a customs house.

Alexandria was at some distance from the Rosetta branch of the Nile and governments were faced with the difficult problem of linking the city with the river, of securing the supply of Nile water, and of permitting and maintaining traffic with the Nile valley. In 331 B.C. a canal was dug between Alexandria and Schidia (present day al-Nas̲h̲ al-Baḥrī) and, indeed, by using the Kanope branch of the Nile, joined Alexandria to the next branch of the Nile at the same time. Since the Kanope branch dried up, as a result, and could no longer supply the canal of Alexandria with water, the bolbitine branch took over this function. This means that this development was complete some time before the Arab conquest of Egypt. The mouth of the canal which opened into the Nile became silted up from time to time. The duty of the Muslim administration to keep the canal in good order was fulfilled only to a limited extent, and at times the people of Alexandria had to rely on their cisterns for their water supply as they had done in ancient times. In the 3rd/9th century, the canal was only twice cleaned out. Information about the canal of Alexandria during the Fāṭimid period is very scarce. We are rather better informed about the canal in the period of Ayyūbid rule. In this period too, however, no decisive steps were taken for the utilization of the canal throughout the year for irrigation and transport. The Sultan al-Ẓāhir Baybars, and, to a greater extent, Sultan al-Nāṣir Muḥammad b. Ḳalawūn, gave special consideration to the significance of the canal for Alexandria and for state trade as well as for the fertility of the surrounding area. In the reign of al-Nāṣir Muḥammad, from 710/1310 until 770/1368, the waters of the Nile flowed to Alexandria all the year round. Sultan al-As̲h̲raf Barsbay, too, took care to keep the canal in good condition and make it navigable throughout the year, partly with an eye to his own policy of trade monopolies. In the second half of the 9th/15th century, however, once again less attention was paid to the upkeep of the canal.

The journey by Nile from Cairo to Alexandria usually took seven days. During the flood season, the Nile boats plied between Alexandria and the other towns of the Nile valley, especially Cairo and Ḳūṣ-the assembly points for goods from the Orient.

It is difficult to give an estimate of the population of Alexandria. When the Arabs invaded the city some 40,000, or, according to other reports, 70,000, Jews were living there. Ibn ʿAbd al-Ḥakam puts the number of Greeks living there, after the conquest, at some 600,000 men (women and children not included), although he gave the total number of Greeks, without counting women and children, as 200,000, at the time of the conquest. Both these figures are unreliable. Bishop Arculf, who visited the city some 25 years after the beginning of Arab rule, wrote of the numerous population housed within the city, without giving any estimate as to its size. More reliable figures have come down to us from later times. The Jewish travellers, particularly, show a keen interest in establishing the number of their co-religionists in Alexandria. Benjamin of Tudela (5th/12th century) puts the number of Jewish residents, at this time, at 3,000, while E. Ashtor notes that this figure includes only those

from whom taxes were levied and assumes that the total number of Jews may be estimated at about 9,000. According to the writings of another traveller, dating from 886/1481, their number seems to have diminished to some sixty families. A few years later, another Jewish traveller put the number of the Jewish community at about 25 families (cf. E. Ashtor, *The number of Jews in mediaeval Egypt*, in *Journal of Jewish Studies*, xix (1968) 8-12).

In the 13th century, the total population of the city was estimated at 65,000, which, however, decreased sharply in the middle of the 8th/14th century. In the years between 748/1347 and 751/1350, on several days people died at the rate of one to two hundred a day and the number rose to seven hundred at the height of the plague. The Dār al-Ṭirāz and Dār al-Wikāla were closed because of the lack of manpower and the absence of commercial traffic. The markets and customs houses, too, ceased to function. The city, however, was able to survive this catastrophe and the population, once more, rapidly increased. Frescobaldi put its number at 60,000 (786/1384), while in the same year Simon Sigoli estimated the population at about 50,000. These figures, despite their variations show that the population was again on the increase. It is important to remember that the growth of the population of Alexandria was dependent, in the first place, on the development of the city's trade and was greater than that of any other city or region of Egypt, with the exception of Cairo where most of the army was stationed. As early as 788/1386, then, Alexandria was returning to prosperity after the plague.

In the medieval city, the central government, whose powers had accumulated in the course of time, was the source of authority. In the earlier Middle Ages, Alexandria had enjoyed a special position, as it had in former times before the Arab invasion. Henceforward, however, its governors were appointed by the central administration. Nevertheless, in these circumstances, the city remained either a polis, a self-contained administrative area, or was included in the western Egyptian coastal area (to which Libya also sometimes belonged). The governor of Egypt soon came to reside, for some of the time at least, in Alexandria. As a polis or provincial centre, Alexandria had a treasury which was usually administered by a Muslim. Not infrequently at this time, however, the financial and civil administration was given over to Copts. From the documents which date from the first century of Arab rule, it is apparent that Copts were also nominated as governors of Alexandria; thus, for example, the Christian Theodosius was appointed to this office by the Caliph Yazīd b. Muʿāwiya.

During the governorship of Aḥmad b. Ṭūlūn (from 256/870), Alexandria was "independent". The special position of Alexandria lasted from that time until the 3rd/10th century and Grohmann rightly recognizes in this some reflection of the position in Roman law whereby Alexandria, as a polis, lay outside the *kūra* of Egypt. It is in this light that we must understand the division of the ʿAbbāsid budget for Egypt in 337/958 into Miṣr and Alexandria, as reported by Ḳudāma.

Under the Fāṭimids, the governor of Alexandria went even further towards taking on the role of the erstwhile Augustalis by extending his authority over the province of Buḥayra. On this point, Grohmann's observations are at one with the historical development of the city. His view that the Crusades served so to diminish the importance of the city that an appointment as governor there should be understood as an indication of royal disfavour, is not, on the other hand, consonant with the facts. Certainly the city continued to lose its independent position after the fall of the Fāṭimids but from the commercial and strategic point of view it regained its earlier importance. Through the international transit trade the city became a market for East and West.

Some demonstration of all this is provided by the fact that up to about the 3rd/10th century a kind of public meeting was occasionally held in Alexandria concerning the acceptance of government precepts or to choose a Coptic Patriarch. In the first half of the 4th/11th century the Coptic Patriarch had to transfer his seat from Alexandria to Cairo. In the later medieval period it was not unusual for the city to be given as an *iḳṭāʿ* [*q.v.*]

The governor was a military official while the *ḳāḍī* was both a civil official and a judge in the religious sphere. He is sometimes referred to in the chronicles as *raʾīs al-madīna* (town chief) and in times of crisis had sometimes to govern the city himself, though this in no way altered the status of the city. In Mamluk times, the governor of Alexandria had the rank of an *amīr ṭablkhāna*. After the attack of Peter of Lusignan in 766/1365, the Mamluk government paid more attention to the city and established an *amīr miʾa* there; *i.e.*, the governor of Alexandria had the same rank as those of Tripoli, Ṣafad and Ḥamāt in Syria.

In Alexandria, the Mālikī school was prevalent. This resulted from the proximity to North Africa and the activity of the Maghribīs and Spanish Muslims who settled in Alexandria in the later Middle Ages, driven before the *Reconquista* in Spain and the upheavals in North Africa. In the later Middle Ages, the *ḳāḍī 'l-ḳuḍāt* was almost always a Mālikī. In a few instances the government choice fell on a Shāfiʿī. Nevertheless, the three schools, Mālikī, Shāfiʿī and Ḥanafī were all represented in the administration of justice. Several sultans saw to it, in addition, that foreign as well as native merchants had legal protection as far as their persons and goods were concerned. Thus, for example, it was said of the Sultan al-Nāṣir Muḥammad b. Ḳalawūn, with regard to the judge of Alexandria, Ibn Miskīn, that he supported a Frank in 735/1334 in opposition to his own official. Sometimes the diplomas of appointment for *ḳāḍīs* give prominence to these responsibilities in respect of the merchants as well as the usual stipulations about the just treatment of citizens. The *muḥtasib* was ranged alongside the governor and *ḳāḍī* with responsibility for the supervision of the market and those concerned in it, producers as well as retailers, though his powers were, *de facto*, restricted to the sphere of smaller transactions.

Alexandria was an important source of revenue for the state or rather for those in power. Besides the high duties paid by the Kārimīs and the foreign merchants, the state authorities made money from almost every transaction and every shop in the city. The state profited too from the mint, Dār al-Ḍarb, where native and foreigner alike had their metal coined. Particular groups of participants in trade, such as money-changers, sailors, brokers, interpreters, auctioneers and donkey-drivers made good profits in this city and paid high taxes. Camel-drivers, or rather the leaders of caravans, had to pay their tax, the so-called *Maks al-Manākh*, outside the city where their camels were halted. As we have no statistics regarding this tax, we must be content

with a single example. According to the Ḳāḍī al-Fāḍil, the annual revenue of the city from duties came to 28,613 *dīnārs*, not an exaggerated claim in view of other reports from the 14th and 15th centuries. The sultan's *dīwān* levied some 50,000 *dīnārs* in tolls, duties, etc. from ships entering Alexandria in 721/1321 and this, according to the text, did not even include all the ships that arrived. Fidenzio of Padua's observation (dating from the 8th/14th century) coincides with the information given by a governor of Alexandria in the 9th/15th, that Alexandria was worth 1,000 *frinti* or *dīnārs* a day to the sultan in the 8th/14th century. This, of course, was during the trading season. Al-Maḳrīzī writes of a Frankish vessel which paid 40,000 *dīnārs* duty on its cargo, in Alexandria, in 703/1303, an incredible sum when one thinks of the total naval fleet of a single Frankish merchant republic. It seems no exaggeration to estimate the total duties brought to Alexandria, for the state, by the foreign trade, at about 100,000 *dīnārs* a year.

Alexandria was always an important centre for cloth manufacture. Its products reached as far as India. It is believed that much of the fabric donated by the popes to Italian churches in the 8th and 9th centuries was produced by workers in Alexandria. Besides the looms (for linen, silk, wool and cotton), *buyūt al-g͟hazl*, there were also workshops for raw silk, *buyūt al-ḳazzāzīn*. The city housed a large public workshop for brocade, Dār al-Ṭirāz, which produced primarily for the luxury requirements of the court, not least for official gifts such as those to the Mongol K͟hān or for the annual clothing of the Kaʿba with costly material. In 767/1365, the Dār al-Ṭirāz was burnt down in a Crusader raid but was restored again by the government. Private individuals too played an important part in the commercial life of the city by virtue of the fabrics they produced. We have a representative example: an 8th/14th century loom owner, the *faḳīh* Badr al-Dīn Muḥammad b. ʿUmar b. Abī Bakr al-Damāmīnī, had invested his capital in the production of silk fabrics. Made bankrupt by a fire at his home, he fled to Upper Egypt for fear of his creditors and there was arrested and brought back to Cairo. His creditors met together to come to some arrangement. Al-Damāmīnī later went off to India to find better opportunities for advancement. He died there in 827/1423.

The outstanding achievements of the Alexandrian weavers were widely recognized. When the government of Yemen planned to expand their production of silk they asked for an Alexandrian weaver to be sent there. The authorities in Egypt agreed to this request and in 788/1386 sent a mission to Yemen. According to one report there were some 14,000 looms in Alexandria at the beginning of the 9th/15th century. By 837/1434, in the course of the general decline of the city, the number had fallen to 800. At that time, imports of cheaper fabrics rose, in particular those of cloth from Flanders and England from which the Venetians made considerable profit.

That glass was manufactured in Alexandria cannot yet be established from the medieval Arabic sources. Nevertheless, a page of the famous Atlas compiled by French scholars who accompanied Gen. Bonaparte's expedition to Egypt in 1789, shows that glass was produced in Alexandrian workshops. Excavations at Alexandria, at Kom al-Dikka, prove that besides local products, ceramics were imported from North Africa, Iran and elsewhere. Chinese porcelain too was brought to Alexandria. In contrast to Damietta, the production of Egyptian sugar had no place in Alexandria, though during the later Middle Ages sugar was exported by way of Alexandria to the West. Not all the wine handled in Alexandria was imported; Egypt's own wine production (namely in Cairo) developed to such an extent that in the 9th/15th century it came to occupy an important place in the state commerce of Alexandria. From Alexandria, the only Egyptian outlet for the substance, the Matd͟jar al-Sulṭānī exported about 5,000 *ḳanṭārs* of alum a year. Ibn Mammātī, in his capacity of inspector of the alum monopoly, sold some 13,000 *ḳanṭārs*, in 588/1192, to the Christian buyers who had come to Alexandria; a record in the selling of Egyptian alum. There was a state monopoly too on natron (sodium hydroxide), essential for cloth manufacture, which was sold to weavers in Cairo and Alexandria at prices which were kept very high.

Alexandria enjoyed a special place in international trade. While it is still difficult to establish the existence of this international trade with regard to Alexandria before the 5th/12th century, it can be seen quite clearly in this century itself. Natives of various Christian countries were to be found gathered there. Benjamin of Tudela names 28 Christian cities or countries alleged to have commercial representation there. William of Tyre says that Alexandria, in the second half of the 12th century, had become the emporium of East and West. Ibn Baṭṭūṭa wrote that Alexandria was one of the most important ports in the world: "In the whole world I have not seen its equal, save only those of Kaulam and Ḳālīḳūṭ in India, that of the infidels at Sudāḳ in the land of the Turks, and the harbour of Zayṭūn in China." Neither the establishment of the Crusader states nor that of the Mongol empire affected its position in world trade or detracted from it.

Close supervision was exercised over the three main gates of the city. Ibn D͟jubayr could only enter Alexandria after the harbour authorities had taken his name and his goods had been investigated by customs officials. Similarly, the foreign Christians had to be identified by the consul of their country. Their possessions too were examined by the authorities of Alexandria. Once the customs formalities were completed, the oriental merchant made for the *funduḳ* of his countrymen, whenever a particular *funduḳ* was assigned to them; otherwise, he might find accommodation in a private *funduḳ* or *k͟hān*. The western merchant was restricted to the *funduḳ* designated for his country and to which he could bring his merchandise. After the establishment of these *funduḳs* for foreign states, the trade of Alexandria was no longer simply a commerce of the coast. The foreign merchants enjoyed exterritorial privileges [see IMTIYĀZĀT]. As a result, these *funduḳs* were administered by officials or consuls of the friendly nations which stood under Egyptian protection. Venice, as the leading commercial power, gained a second *funduḳ* in the course of the 13th century. In addition, the merchants were able to rent shops and storerooms in the vicinity of their *funduḳs*. Besides Christians from the West, from the Byzantine Empire and from Ethiopia, there came to Alexandria Muslims from Spain, North Africa, Mesopotamia, Syria and the neighbourhood of India.

Al-Nuwayrī, who lived in Alexandria in the 7th/14th century, has left us the longest account of the city that has yet come to light. But he was not as concerned with the trade of this cosmopolitan city as was al-Maḳrīzī with that of Cairo. The short accounts which have come down to us, however, give us a clear and detailed picture of the markets of

the city. First of all, it must be noted that the customs house with its 30 storerooms was not simply concerned with the imposition of duties and with harbour control but was also used for public auctions. The Dār al-Wikāla, too, served business in a special capacity. Notices of this Dār in Alexandria can be traced back as far as the 4th/11th century. It is the Dār Wikālat Bayt al-Māl which is meant, a public administration which ensured the imposition and collection of taxes for the head of state, supported state trade and took a decisive role as an intermediary, selling only, in principle, imported merchandise to the Muslim entrepreneurs. As in every major Islamic city, in Alexandria each essential trade had its own market. Among the most important markets in the city were the Sūḳ al-ʿAṭṭārīn and al-Bahār, the pepper and spice market, probaby the centre of the Kārimī merchants in Alexandria. The Sūḳ al-Murdjāniya, the market of the coral-workshops and of the dealers in coral, was one of the most important coral markets in the whole of the Mediterranian area. The coral was worked in Alexandria: in its home port, a pound of coral cost 5 silver *dirhams*; after being worked in Alexandria its price rose to three or four times this amount. The chief outlets in the south were Aden and Ḳālīḳūṭ. The coral brought from Alexandria found good markets in the Ḥidjāz, in Yemen, in India, and, particularly, in the Far East.

The linen trade had its own special *sūḳ*, the Wikālat al-Kittān, where dealers handled large transactions. The slave market of Alexandria was no less important than that of Cairo. The money-changers, fruit-merchants, druggists (perfumers), sellers of sugared almonds or nuts, confectionary, dried fruits etc. always found a ready market. Alexandria had, in addition, like Cairo, a Sūḳ al-Kashshāshīn (flea-market = bric à brac bazaar), like the so-called Funduḳ al-Djawkandar and Funduḳ al-Damāmīnī, which were private *funduḳ* undertakings. The city's requirements of grain were met by imports supplementing home-grown supplies, as can now be shown from the documents. The bazaars of the candle and wax-dealers, like those of the dealers in wood, were especially important. Individual markets and bazaars were designated according to the race or nationality of the merchants. Thus, for example, the Sūḳ al-Aʿādjim was that of the Iranian merchants concerned, notably, with the import of silk fabrics and costly goods to Alexandria. Alongside these important and specialized markets and *funduḳs*, Alexandria was provided with a number of lesser, more general markets where pedlars with their tables and stalls, their cooking vessels and saucepans, sold their comestibles to the passers-by. Some dealers had old-established businesses on the Pharos peninsula and along the canal of Alexandria, where the ships entered, as well as in the town.

We should not overlook the fact that big business in the city was not completely monopolized by the state, nor confined to men; women too participated in commerce. We know of a woman of such standing among the merchants of Alexandria that she was known, as a result, by the nickname of Sitt al-Tudjdjār (lady of the merchants). She died of plague in 749/1348.

In Islamic history, political office and participation in business were by no means mutually exclusive. Leading members and high officials of the governments of Egypt were closely involved in big business. The organization of the *Matdjar al-Sulṭānī* (state trade), supposed to have been founded in the time of the famine which occurred under the reign of the Fātimid Caliph al-Mustansīr, had in fact already existed and played a particularly important part during the Ayyūbid and Mamluk periods. Besides slaves and wood, the *Matdjar* imported iron and sheet metal, tin, silver and copper (later gold as well), and offered in return monopoly goods such as alum, natron, corn, flax, and later spices, sugar and soap. Egyptian mummies, too, found a ready market in Alexandria. Still, the principal line of business was the pepper trade. Frederic C. Lane has established that, before the rounding of the Cape of Good Hope, Venetian vessels loaded, on average, about 1,500,000 pounds of pepper a year.

The merchant always made a good living. No less a person than the renowned *faḳīh* and ascetic, al-Ṭurṭūshī, came to Alexandria to preach against the money-lenders. It was not just by chance that the Alexandrian moneychangers were in a position to lend the Sultan al-Nāṣir Muḥammad b. Ḳalawūn the sum of 10,000 *dīnārs* in the year 737/1337: sufficient proof, in itself, of the profitable nature of the business conducted by these brokers whose operations were not restricted to the changing of money.

Lively trade and flourishing crafts allowed the city to amass wealth. The "guilds", or, more exactly, the social groups involved in trade, did not function as independent entities with certain rights, which would have permitted them to defend their rights against the aggression of the city governor or the central authority. In fact, it was the central government who kept the power of decision and solved their problems while promulgating the laws and the regulations according to the juridical principles of Islam. Although the form of government and religious ideology hemmed in the dynamic development of Alexandria, it was commerce, with its traditions, its methods and its "code of honour", which determined the rhythm of city life. It is possible to construct a picture of attitudes prevalent among foreigner and native in the city and in regard to the city, not simply from the chronicles and treaties but from references in the most belletristic forms of literature like, for example, *The Thousand and One Nights* and Boccaccio's *Decameron*, and hence to draw inferences as to forms of government, methods of taxation, and the sort of risks involved in business.

In Alexandria the state was the primary ruler and rule was exercised in the interest of the state rather than that of the community. There is no clearer demonstration of this than the revolt of 727/1326 and the events leading up to it. Heavy tax burdens led to a rebellion which was put down with the utmost severity. It is worth noting the penalties which the government inflicted on the Kārimī merchants (among them the sons of al-Kuwaik or al-Kawbak, a respected Kārimī merchant), as well as on the silk dealers and producers. In addition to the fines and confiscations which were exacted, totalling about 260,000 *dinars*, the leaders of the revolt were crucified.

The diminishing power of the ruler and the weakness of the army in the city, nevertheless, came to be felt to the disadvantage of business and the execution of trade for, in troubled times, soldiers and mercenaries had extended their protection, *ḥimā*, to those involved in business, for large sums of money. Alexandria came to concentrate primarily on long-distance trade. Those who conducted this trade, the government officials, the long-distance dealers or big businessmen, were far removed from the retail dealer with his shop in the bazaar supervised by the *muḥtasib*.

The early and later Middle Ages formed two clearly distinct periods in the religious and scholarly life of Alexandria. In the early Middle Ages, the Christian and Jewish elements were supreme. After the Arab conquest the Greek Patriarch was forced to leave the city, the Coptic Patriarch entered and the Copts supported the Arabs in their later struggle with the Byzantine Empire and fell in with their plans for expansion. This period prepared the ground in Alexandria for the development of Islamic science —here a centre was established for the translation of the cultural works of antiquity which were of immense value, providing a basis for Islamic culture and its spiritual achievements. In respect of purely Islamic science, which, as al-Sakhāwī maintained, began first with al-Silafī, Alexandria was dependent on Fusṭāṭ and Cairo. At that time, men journeyed to the capital of Egypt to study the Ḳur'ān and *ḥadīth*. The *wazīr* Riḍwān b. al-Walakhshī founded a Sunnī *madrasa* in Alexandria in 531/1137 (before the end of the Fāṭimid period) in which the *faḳīh* Abū Ṭāhir b. ʿAwf taught *ḥadīth*. Scarcely fifteen years later al-ʿĀdil b. al-Sallār established a second Sunnī *madrasa* in Alexandria for the famous al-Ḥāfiẓ al-Silafī. As is well known, Saladin himself later studied the *Muwaṭṭa'* of the *imām* Mālik with him. It was Saladin too who, after his assumption of power, had a school, a hospital and a hostel built for the Maghribīs, where they could find free lodging, teachers of various subjects, medical care and financial support.

The sources refer repeatedly to the names of various *ribāṭs* in the city, while the *faḍā'il* literature on Alexandria expounds the strategic importance for Islam of this border harbour.

It was not only statesmen and warriors, however, who contributed to Islamic culture, the merchant too played a part. Several wealthy merchants of Alexandria were famous by virtue of their generosity and donations. They built mosques, schools and other religious foundations and encouraged Muslim learning. From the circle of famous Muslim Kārimī merchants of Alexandria we may take as an example ʿAbd al-Laṭīf b. Rushayd al-Takrītī (d. 714/1314). He had a mosque and *madrasa* built, called after him Dār al-Ḥadīth al-Takrītiyya, a place of learning for *ḥadīth* and Shāfiʿī *fiḳh* (the school is known today as the Masdjid Abī ʿAlī). The contemporary sources write with delight of the Kārimī merchant family of Kuwayk who could provide the cost of building a mosque or school with the profits of a single day's business.

Alexandria can look back on many renowned legal and religious scholars, poets and poetesses, Ṣūfīs and *murābiṭūn* housed within its walls: Ibn Ḳalāḳis, Ibn ʿAṭā' Allāh, al-Sakandarī, al-Shāṭibī, Ibn al-Munayyar, Ibn al-Mudjāwir, Ibn al-Ṣawwāf, Ibn Sulaym, Ibn Ḳāsim al-Nuwayrī, Abu 'l-Ḥādjib, al-Ḳabbar and al-Būṣīrī.

Of the famous mosques of Alexandria, mention should be made of the Masdjid al-ʿUmarī or Djāmiʿ al-Gharbī (the former Theonas Church) and the Masdjid al-Djuyūshī or al-ʿAṭṭārīn (formerly the Church of St. Athanasius). Various details are known too about the *ribāṭs* of the city such as the Ribāṭ al-Wāsiṭī (d. 672/1274), to the east of the mosque of Abu 'l-ʿAbbās al-Mursī, (outside the city wall on the northern side), now a *zāwiya*, and also the Ribāṭ Siwār, where Muḥammad b. Sulaymān al-Shāṭibī (d. 672/1274), a *muḳri'* and *zāhid*, had his quarters. Outside the city and in the vicinity of the Rosetta gate the scholar and *mutawallī al-thaghr*, Ibn ʿAbd Allāh al-Hakkārī (d. 683/1284), built a *ribāṭ* which was called after him. He was also buried nearby. Towards the end of the 7th/13th century the *khānḳāh*, Bīlīk al-Muḥsinī, was built by the *darwīsh* order of the city.

Bibliography: The materials for a history of medieval Alexandria are widely scattered. Contributions are to be found in almost every one of the principal Arabic histories of Egypt: see the article MIṢR. To be noticed particularly are Ibn ʿAbd al-Ḥakam, *Futūḥ Miṣr*, ed. C. Torrey, New Haven 1922; al-Masʿūdī, *Murūdj*; *BGA*, i-viii; al-Idrīsī, ed. Dozy and De Goeje, Leiden 1866; Ibn Djubayr (*GMS*, v); Yāḳūt; ʿAbd al-Laṭīf, *Kitāb al-Ifāda wa 'l-iʿtibār*, Oxford 1800, Cairo 1232, tr. de Sacy, Paris 1810; al-Maḳrīzī, *Khiṭaṭ*; Ibn Iyās, *Badā'iʿ al-zuhūr fī waḳā'iʿ al-duhūr*; al-Balawī, *Kitāb Alif Bā'*, 2 vols., Cairo 1287; al-ʿAbdarī, *Al-Riḥla al-maghribiyya*, ed. Muḥ. al-Fāsī, Rabāṭ 1968 (see also W. Hoenerbach, *Das nordafrikanische Itinerar des ʿAbdarī*, in *Abhandlungen für die Kunde des Morgenlandes*, xxv/4 (1940)). The Christian writers Severus Ibn al-Muḳaffaʿ and al-Makīn [*qq.v.*] supply a few facts not to be found elsewhere. Benjamin of Tudela (many editions) has a brief but important notice. European travellers and accounts in European languages include Arculf (680), Bernard the Wise (870), Ludolf von Suchem (1350), all three in *Palestine Pilgrims' Text Society's Series*; M. Baumgarten (1507) in Churchill's *Travels*; Leo Africanus (1517), Hakluyt Soc. 92-4; various articles in Hakluyt's *Voyages*, vol. v, relating to the 16th century; Sandy's (1610) *Travels*; Blount (1634) in Pinkerton's *Voyages*, vol. x; Maillet (1692); Pococke (1737); Volney (1783); and others.

Modern works: *Description de l'Égypte, État Moderne*, tome ii (2e partie), 270 ff., contains a full description of Alexandria in 1800, and, Planches 84-91, map 1:10,000, views and plans, also *Antiquités*, tome ii; T. D. Néroutsos, *L'ancienne Alexandrie*, Paris 1888, with map; A. J. Butler, *Arab conquest of Egypt*, Oxford 1902, 308 ff. contains a careful and full description of Alexandria at the conquest, with remarks on the subsequent period; map of Alexandria by R. Blomfield in *Bulletin de la Societé Archéologique d'Alexandrie* (*BSA*), viii (1905); ʿAlī Pasha Mubārak, *al-Khiṭaṭ al-djadīda*, section vii; M. Asín Palacios, *Una descripción nueva del Faro de Alejandria*, in *al-Andalus*, i/2 (1933), 241-92; E. ISKANDARŪN, Alexandretta, a port in the eastern Mediterranean, the ancient Ἀλεξάνδρεια κατὰ Ἰσσόν, the Ἀλεξάνδρεια ἡ μικρά in Malalas (ed. Bonn, 297), known to the Arabs as al-Iskandariyys or Iskandarūna (diminutive Aramaic form); from this last form came the Ἀλεξανδρῶν of Skylitzes (ii, 677) which in its turn gave rise to ἡ Ἀλεξανδρός (Michael Attal., 120; Zonaras, iii, 691; Georgius Cyprius and the list of bishops in *Byz. Zeitschr.*, i, 248). The diminutive Romance form Alexandretta was already in use among western pilgrims during the Middle Ages. Iskandarūna (which must not be confused with another place of the same name, situated between Tyre and Saint-John of Acre) formed part of the *d̲j̲und* of Ḳinnasrīn; the castle is said to have been built under the caliph al-Wāt̲h̲iḳ (Abu 'l-Fidā', ed. Reinaud, ii, 2,33). During the wars between the Byzantines and the Arabs, the town was captured by the former on several occasions (Muralt, *Chronogr. Byz.*, a. 1068; Ibn Ḥawḳal, index) and in the time of Abu 'l-Fidā' it was deserted. Later it regained some importance as a port for the then flourishing city of Aleppo, though it was unable to develop on a very large scale. It was the centre of a *ḳaḍā'* and at the beginning of the 20th century it contained from 10 to 15,000 inhabitants. The population according to the census of 1960 was 62,061.

On 27 November 1918, the French military administration in Syria created the "Sand̲j̲aḳ of Alexandretta" from occupied territories over which Turkey had to abandon her rights under the Treaty of Lausanne; it included the towns of Alexandretta, Antioch and Kïrïk K̲h̲ān, and contained over 120,000 inhabitants. It had an autonomous regime providing, in particular, for the use of the Turkish language and the employment of Turkish officials. From 1928, national feeling began to develop among the Turkish community in the Sand̲j̲aḳ; in 1928 the *Genç Spor Klübü* (Sports Club for the Young) was founded, its aims being cultural and later political, rather than sporting. In the same year, some young joiners tried to transform the traditional guilds, in accordance with Kemalist ideas. In the spring of 1934, members of the Arab and Turkish communities reciprocally abstained from buying each other's produce; some Turks became bakers and butchers, traditionally trades of the Nuṣayrīs. On 26 March 1934, the visit to Antioch of a senior Turkish official triggered off a series of pro-Kemalist demonstrations—the celebration of Turkish national festivals, the wearing of the Turkish colours, etc. On 7 July 1936, Turkish d monstrators in Antioch clashed with Syrian troops of Nuṣayrī and Armenian origin. The Turkish press asserted that "deturkification" was in progress—restrictions in the teaching and the use of Turkish, in the employment of Turkish officials, etc.

The negotiations leading up to the Franco-Syrian Treaty and then its signature on 9 September 1936, and the statements by M. Hās̲h̲im al-Ātāsī (Ankara, 23 September 1936) confirming that Syria, now independent, would uphold the autonomy of the Sand̲j̲aḳ, unleashed a vigorous campaign in Turkey; national opinion refused to contemplate the idea that this Turkish community should pass under the exclusive domination of Syria. Negotiations between France and Turkey were then started, and the matter was brought before the Council of the League of Nations; a status for the Sand̲j̲aḳ was laid down in the Geneva Agreement of 29 May 1937 and brought into force on 29 November, although the Syrian Chamber had rejected it, and the Turkish flag was hoisted in Alexandretta. After some disturbances, a Turkish notable was elected president of the Sand̲j̲aḳ, which from then on took the name Hatay, and new Franco-Turkish negotiations finally led, on 23 June 1939, to the cession of the Hatay to Turkey.

ISKENDER BEG, Ottoman name for George (Gjergj) Kastriota (b. 808/1405, d. 872/1468), in Western sources Scanderbeg, etc., hero of the Albanian "resistance" to the Turks in the mid-9th/15th century.

By the first half of the 9th/15th century the Kastriota family, with their centre at Matia, had supplanted the Bashas as the most influential power of Northern Albania. They had acknowledged Ottoman suzerainty since 787/1385; Iskender's father John/Ivan (in Ottoman sources Yovan) had been a buffer between the Venetians installed in Scutari (Is̲h̲kodra [*q.v.*]) and the Ottomans, ready to flee to Venetian protection in the event of an Ottoman attack and

dependent upon Venetian goodwill for the crucial import of salt. A document in the archives of Topkapı Sarayı (E 6665) shows that he had attempted to seize Kruje/Croia (T. Akčaḥiṣār) to the south of his territories, which, for a time under Bāyezīd I and continuously since 818/1415, had been the centre of an Ottoman *subas̲h̲ilik*.

The statement of Barletius that his son George Kastriota had been sent to the Ottoman palace as a hostage (at the age of nine) is confirmed by Ottoman historians (Tursun Beg, Idrīs). During the war with Venice of 826/1423-833/1430 Ottoman pressure was increasingly put upon his father John (N. Iorga, *Notes et extraits* . . . , i, 435), who, in Rad̲j̲ab 831/April 1428, informed Venice of his growing anxiety that his Muslim son would be ordered by the sultan to occupy his territory The son, raised in the palace as an *ič-og̲h̲ani*, was, by the normal procedure of *čikma* [see g̲h̲ulām], granted a *timār* near to his father's territories of "Yuvan-éli" (Topkapı Sarayı Archives, E 6665), and in 842/1438 he was appointed *Subas̲h̲i* of Aḳčaḥiṣār (H. Inalcık, ed., *Sûret-i defter-i sancak-i Arvanid*, *timār* no. 314). In the same year nine villages of his in Yuvan-éli were made over to Andre Karlo (*ibid.*, no. 335). His father's centre of Mus (Mysja) was made a *zi*ʿ*āmet*, and Iskender asked for it to be granted to himself (Topkapı Sarayı Archives, E 6665, undated), but a *sand̲j̲aḳ-begi* (? of Okhri) objected to the granting of this important district, adjacent to the sea, to John's son. This refusal may have been one of the reasons for Iskender's throwing off his allegiance to the sultan. The extension to areas of Albania of the Ottoman *timār*-system had induced various prominent seigneurs in the south—Ghin Zenebissi, Andre Thopia and, especially, George Araniti—to revolt (from 835/1431), and Iskender joined them in S̲h̲awwāl 847/December 1444. After Ottoman authority was weakened by the battle of Izladi (Zlaticá) (3 Ramaḍān 847/25 December 1443), members of the former ruling families were encouraged to attempt to recover their lost lands and independence (Chalcocondyles, ed. Darko, ii, 96; Iorga, *op. cit.*, ii, 145). The story that Iskender, fleeing from the camp of Ḳāsim, the *beglerbegi* of Rūméli (who had been defeated near Niš), seized Aḳčaḥiṣār (Gegaj, 45-6) is probably true (cf. *G̲h̲azavātnāme-i Sulṭān Murād*); he certainly threw off Islām and re-embraced Christianity (see especially the contemporary historian Tursun Beg, ed. in *TOEM* p. 136), to be known henceforth to the Ottomans as "*k̲h̲ā*ʾ*in* (treacherous) Iskender". On 11 D̲h̲u 'l-Ḳaʿda 847/1 March 1444, under the patronage of Venice, he summoned the Albanian leaders to a meeting at Alessio (a typical *Kuvend* in accordance with Albanian tribal custom, see M. Hasluck, *The unwritten law in Albania*, Cambridge 1954, 148), and was there recognized as the leader of the struggle against the Ottomans. The pope later recognized him as a crusading hero; in the 19th century Albanian nationalists depicted him as a national hero working for the unification and the independence of his homeland; and Venice regarded him as a valuable *condottiero*. In reality, he was a combination of Albanian tribal chief and medieval feudal lord, the other Albanian leaders being bound to him primarily by links of kinship. The importance which he attached to his own family is revealed in the terms of his alliance with the King of Aragon, made with "Georgio Castrioti, S^re^ dela dita citate de Croya e de soi parenti, baruni in Albania" (Radonić, no. 38). Hence it is not surprising to find other Albanian lords frequently allied with Venice or with the Ottomans against him. Since 818/1415 the introduction of the Ottoman *timār*-system and tax-structure had caused widespread discontent among both the feudal families and the mountain tribesfolk; Iskender was merely taking over, in Northern Albania, the leadership of this movement of revolt, favoured, however, unlike his predecessors, by the support of the pope, the King of Naples, and Venice. He was able to muster a following of perhaps 8-10,000 men, his own numbering no more than 2-3,000 (Gegaj, p. 125); he owed his success to guerilla tactics, based on a few fortresses in remote mountain regions (Stelush, Letrella, and especially Kruje, his capital), these fortresses being held for him by troops, trained in the use of firearms, who were provided by his foreign allies, although he could rely on some revenue from his flocks of sheep and the trade in salt.

His long struggle with the Ottomans—maintained over a quarter of a century—falls into several phases.

Until 852/1448, the Ottomans were content to ignore him. In this period he fought against Venice over the possession of Dagno (851/1447), and indeed there are indications that he co-operated with local Ottoman forces (the sultan also claiming this territory) (Iorga, *op. cit.*, ii, 227; Venice, it should be noted, still regarded him as a vassal of the sultan: *op. cit.*, ii, 226). He abandoned his claim to Dagno by the treaty signed on 4 October 1448. In the summer of 852/1448 Murād II's army took Svetigrad (Ḳod̲j̲ad̲j̲ik Ḥiṣāri) (ʿAs̲h̲iḳpas̲h̲azāde 119 and the chroniclers dependent on him erroneously relate these events to Aḳčaḥiṣār), and so opened the way into northern Albania. Murād then laid siege to Kruje, but was obliged to withdraw to Sofya by Hunyadi's invasion of Ottoman territory.

In 853/1449 an attempt by Iskender and Mois Dibra to re-take Ḳod̲j̲ad̲j̲iḳ was repulsed, and in the following summer Murād again besieged Kruje. The fortress held out, and Iskender, retreating to the mountains, harried the besieging troops. The abandonment of the 4½ month siege made Iskender the hero of all Christendom, and Pope Nicholas V called on all the Christian powers to assist him. But Kruje was still under blockade (Iorga, iii, 260-1), and Iskender offered to hand it over to Venice. He finally won the effective support of Alfonso V of Naples: by the agreement of 26 March 1451 he acknowledged the suzerainty of the king and agreed to hand Kruje over to his forces, Neapolitan troops occupying Kruje in June. Alfonso was at this time attempting by diplomatic and military measures to establish a front against the Ottomans throughout Albania and Epirus. The Neapolitan troops consisted only of small detachments trained in the use of firearms, the mass of soldiery being composed of Iskender's Albanians (Iskender and other Albanian leaders were also receiving money subsidies from Alfonso, Iskender's share being 1500 ducats). This arrangement weakened Iskender's authority in Albania, and Alfonso's rival Venice and the Ottomans were able to induce some Albanian chieftains to come over to them; thus Pavlo Dukagin, who in 853/1449 had been proclaimed a rebel and deprived of his *timār*, recovered it in Ṣafar 855/March 1451 (see *Sûret* . . . *Arvanid*, no. 154), and other memberis of this family threw in their lot with Venice. Mois Dibra, Gjergj Balsha and Iskender's nephew Ḥamza went over to the Ottoman side. In 857/1453 Iskender visited Alfonso in Italy. In the summer of 859/1455, assisted by about 1000 Neapolitan troops, Iskender besieged Berat (Belgrade), but a relieving force under Evrenos-og̲h̲lu ʿĪsā Beg defeated them,

the Neapolitans being killed almost to a man (10 Shaʿbān 859/26 July 1455). Although Iskender's biographers speak of a great victory in the next year (the Ottomans losing 10,000? men), Mois Dibra and Ḥamza once more went over to the Ottomans and the fortress of Modric (in the Dibra region) was sold to the Ottomans. This disaffection probably arose from Iskender's attempts to win control of the territory of the other Albanian chieftains and to extend his authority over them. When in 861/1457 a certain ʿĪsā Beg (probably the son of Isḥāḳ Beg of Üsküp) marched against Kruje, Iskender attacked his camp at Albulena near Mount Tumenish and took Ḥamza prisoner; this success was celebrated in Italy as a great victory: the pope proclaimed him the "Captain-General of the Holy See" (Radonić, no. 163) and presented him with 500 ducats.

The death of Alfonso in 862/1458, however, deprived Iskender for a time of foreign support (the new king Ferdinand wanted him to come to Italy to aid him against rebels), so that in 864/1460 he and the other Albanian leaders were obliged to recognize Ottoman suzerainty. By his treaty with the sultan (which he called "treuga per tre anni", see V. Makušev, *Monumenta Hist. Slav. Merid.*, ii, Warsaw 1874, p. 123) he agreed to send troops to join Ottoman campaigns, to pay an annual tribute (in sheep) and to supply lads for the Janissaries (Critoboulos, Eng. tr. by C. T. Riggs, Princeton 1954, p. 147, where the date given is 1459; cf. Neshrī, ed. Taeschner, i, 201). In 865/1461 Iskender, as the loyal vassal of Ferdinand, went to aid him against the rebels, returning to Albania on 11 February 1462. His truce with the sultan was renewed on 7 Shaʿbān 867/27 April 1463 (see Gegaj, p. 132), but that summer, with the outbreak of the Ottoman-Venetian war, Iskender found a new patron and ally (for the text of his pact with Venice, of 20 August 1463, see Radonić, no. 248). The Ottoman sources (Tursun, p. 123; cf. Critoboulos, 147) emphasize Iskender's "breaking of faith" as the reason for the Ottoman operations against him from 868/1464 onwards. By permitting Venetian troops to garrison Kruje he had created a real threat to the Ottoman forces in Albania. In 868/1464 and 869/1465 the neighbouring *sandjak-begis*, and especially the governor of Okhri, Balaban, launched swift attacks; Iskender seems to have countered them by guerilla raids launched from the mountains, although the leading Albanian chieftains, including Mois Dibra, were taken. Meḥemmed II, who since 867/1463 had been intending to march against Iskender (Tursun, p. 123), finally moved in the spring of 871/1466. In the *fetḥnāme* which he sent to his son Bāyezīd (N. Lugal and A. Erzi, *Münşeât Mecmuası*, Istanbul 1956, 63-4), he announced that the campaign had been undertaken because of the Albanians' "breach of faith", that he had taken six important fortresses and that he had built a fortress (Elbasan) to ensure his hold over the land. In this year Meḥemmed did not press the siege of Kruje (defended by a Venetian commander), but left Balaban to continue the blockade. Elbasan [*q.v.*] was built in 25 days. Seeking help from Italy, Iskender visited Rome (12 December 1466; he received 5000 ducats from the pope) and Naples. On hearing that he was proposing to attack Elbasan, the Sultan wintered at Filibe (Tursun, p. 136). Iskender returned to Albania in early April 1467 and began to raid Balaban's blockading force at Kruje and his supply lines (it was reported in Italy that Balaban had been killed and the Ottoman force dispersed [Radonić, nos. 359, 360], but Balaban was still alive in September [Radonić, no. 379]). Meḥemmed II entered Albania with a great army in June 1467 and, by fierce pursuit in the steep mountain region of Buzurshek south of Elbasan, gained control of the pass. He marched against Durazzo, sending Maḥmūd Pasha against Ishkodra, and then advanced on Kruja, but did not undertake a determined siege (end of July). According to Tursun (who was on the campaign), Iskender fled to the coast: he had taken refuge in the Venetian fortress of Alessio, where he died on 21 Djumādā II 872/17 January 1468.

Ishkender's name lived on in Albanian folklore as the type of native heroism (see the articles of Q. Haxhihasani and A. Fico in *Studia Albanica*, iv/2 (1967), 135-55, and G. Marlekaj, in *Atti 5. convegno intern. di studi albanesi*, 221-38) and he is a leading character in the national literature of modern times inspired by Barletius's biography.

(H. İnalcık)

IṢLĀḤ (A.), reform, reformism.

i.—The Arab world

In modern Arabic, the term *iṣlāḥ* is used for "reform" (cf.: *RALA*, xxi (1386/1966), 351, no. 15) in the general sense: in contemporary Islamic literature it denotes more specifically orthodox reformism of the type that emerges in the doctrinal teachings of Muḥammad ʿAbduh, in the writings of Rashīd Riḍā, and in the numerous Muslim authors who are influenced by these two masters and, like them, consider themselves disciples of the Salafiyya (see below). *Iṣlāḥ* will be examined under the following general headings: A. Historical; B. Fundamental principles; C. The principal doctrinal positions; D. *Iṣlāḥ* in the contemporary Arab world.

A.—Historical.—1.—Background.—The idea of *iṣlāḥ*, so widespread in modern Islamic culture, is also very common in the vocabulary of the Ḳurʾān, where the radicals *ṣ-l-ḥ*. cover a very wide semantic field. Amongst the derivatives of this root employed in the Ḳurʾān are: a) The verb *aṣlaḥa* and the corresponding infinitive, *iṣlāḥ*, used sometimes in the sense of "to work towards peace (*ṣulḥ*)", "to bring about harmony", "to urge people to be reconciled with one another" and "to agree" (cf. II, 228, IV, 35, 114, XLIX, 9, 10), and at others in the sense of "to perform a pious act (*ʿamal ṣāliḥ*)", "to perform a virtuous act (*ṣalāḥ*)", "to behave like a holy man (*ṣāliḥ*, plur. *ṣāliḥūn*/*ṣāliḥāt*)" (cf. II, 220, IV, 128, VII, 56, 85, 142, XI, 46, 90); b) The substantive *muṣliḥ*, plur. *muṣliḥūn*: those who perform pious acts, who are saintly in spirit, who preach peace and harmony, who are concerned with the moral perfection of their neighbours, and strive to make men better. It is precisely in this sense that the modern Muslim reformists can be defined, reformists who proudly claim the title of *muṣliḥūn*, upon which Revelation confers a certain prestige (cf. Ḳurʾān, VII, 170, XI, 117, XXVIII, 19) The adherents of *iṣlāḥ* consider themselves in the direct line of the reformer-prophets whose lives are quoted as examples in the Ḳurʾān (cf. especially *sūras* VII, X, XI, XX); but they claim to be influenced above all by the example of the mission of the Prophet Muḥammad, whom they consider to be the Reformer par excellence (cf. *al-Shihāb*, May 1939, 183: *Muḥammad, al-muṣliḥ al-aʿẓam*). Thus *iṣlāḥ* is deeply rooted in the basic soil of Islam, and cannot therefore be viewed solely in relation to the intellectual trends that appeared in the Muslim world at the beginning of the modern period.

2.—The historical continuity of *iṣlāḥ*.—In so far as it is on the one hand an individual or collective effort to define Islam solely in relation to its authentic sources (*i.e.*, the Ḳurʾān and the *Sunna* [*q.v.*] of the Prophet) and on the other an attempt to work towards a situation in which the lives of Muslims, in personal and social terms, really would conform to the norms and values of their religion, *iṣlāḥ* is a permanent feature in the religious and cultural history of Islam. This two-fold approach characterizing *iṣlāḥ* is quite justified from a ḳurʾānic point of view. For a) Islam is simply that which Revelation contains, as it is transmitted and explained by the Prophet (see below: *The return to first principles*). b) To work for the Good, and aspire to improve (*aṣlaḥ*), is simply to attempt to restore Islamic values in modern Muslim society. From this point of view, *iṣlāḥ* can be seen as an intellectual, and frequently practical, response to the injunction of "commanding what is good and prohibiting what is evil" (see on this subject the two fundamental references, Ḳurʾān III, 104, 110). This canonical obligation (*farḍ*, *farīḍa*)—a major obligation on the head of the Community (*imām*)—is constantly invoked by the reformers, both as a justification for their action, and as an appeal to the faithful, who are also bound, each according to his social standing and means, to play his part in "commanding the good". (On this important question of Muslim ethics see the classic text of al-Ghazālī in *Iḥyāʾ ʿulūm al-dīn* chap.: *Kitāb al-amr bi 'l-maʿrūf wa 'l-nahy ʿan al-munkar*, trans. L. Bercher, *De l'obligation d'ordonner le Bien et d'interdire le Mal selon al-Ghazālī*, in *IBLA*, 1st and 3rd trim. 1955; the neo-Ḥanbalite doctrine (so illuminating for reformist teaching) in H. Laoust, *Essai sur les doctrines ... d'Ibn Taymīya*, 601-5; the position of Muḥ. ʿAbduh in: *Risālat al-tawḥīd*, 113 (Fr. trans., 121), and *Tafsīr al-Manār*, ix, 36; a complete account of the question by Rashīd Riḍā: *ibid.* iv, 25-47 on *sūra* III, 104, and 57-64, on *sūra* III, 110; L. Gardet, *Dieu et la destinée de l'homme*, Paris 1967, 445 ff.).

Like all Muslims who cherish an ideal of the pious and virtuous life (*ṣalāḥ*), the reformists like to refer to the many ḳurʾānic verses which praise "those who do works of *iṣlāḥ*" (VI, 42, VII, 170, XXVIII, 19) and particularly to XI, 90, which they hold to be the perfect motto of Muslim reformism: "Ô mon peuple! ... Mon unique désir est de vous rendre meilleurs" (trans. Savary)—"Je ne veux que réformer" (trans. Blachère)—"I desire only to set things right." (trans. Arberry). These scriptural statements are illustrated by the tradition that the Prophet intimated that Islam would need to be revitalized periodically and that in each century Providence would raise up men capable of accomplishing this necessary mission of moral and religious regeneration. (On this tradition, cf. Wensinck, *Handbook*, 204 b: "At the end..").

The Community has never lacked men willing to assume precisely this prophetic mission. In its early stages and also in its later developments, *iṣlāḥ* has been identified with the service of the *Sunna*, which is thought to provide the best model for the Islamic way of life (cf. Ḳurʾān, XXXIII, 21), as well as supplying the essential elements which lie at the base of the earliest orthodoxy of Islam. The Ḳurʾān is without doubt the most important point of reference for modern *iṣlāḥ*; yet, in its earliest manifestations, it appears to be above all the expression of a total allegiance to the Prophet's Tradition. This active, sometimes militant, allegiance is best expressed in its defence of the *Sunna* against "blameworthy innovations" (*bidaʿ* [*q.v.*]) which are judged incompatible with the objective facts of the Book, the unquestionable teachings of the Prophet, and the testimony of the "pious forefathers" (*al-salaf al-ṣāliḥ*). Upholders of strict primitive orthodoxy were particularly aware of the increase of *bidaʿ*: a) at the dogmatic level: cf. the speculation nurtured by the dawning rationalist theology (*kalām* [*q.v.*]); ḳurʾānic exegesis of Bāṭinī tendency; the theses of extremist Shīʿism; and b) in the sphere of worship: asceticism, excessive piety, paraliturgical practices inspired by Ṣūfism (*taṣawwuf* [*q.v.*]), all of which they believed indicated a spirit of exaggeration (*ghulū*) contrary to the essence of Islamic spirituality Such innovations were held to be blameworthy because they were looked upon as sources of error and seeds of heresy; they therefore seemed to constitute a serious threat to the confessional unity and moral and political cohesion of the *Umma*.

The historical development of *iṣlāḥ* must, it seems,

be related to that new spirit which gave rise to *bida*ʿ throughout the cultural evolution of the Community. The following are a few milestones:—1. The political and moral crisis following the battles of Ṣiffīn (37/657 [*q.v.*]) and Nahrawan (38/658 [*q.v.*]) engendered ardent political and religious polemics between the Khawāridj [*q.v.*] and the Shīʿa [*q.v.*] on the one hand and the supporters of the established authority on the other. In this climate of schism the doctrinal tendencies which classical Sunnism decried as heretical to a greater or lesser extent began to grow (cf. al-Shahrastānī, *Milal*, i, 27). The period of the Prophet's companions was hardly over (*ca.* 90/708) when the theologico-philosophical speculations which were to disturb the Muslim conscience for many years began to appear.—2. At the end of the 1st/7th century, the general evolution of the Muslim community was sufficiently advanced for the unity of faith and monolithic convictions of the first decades to be replaced by a diversity of intellectual and religious attitudes towards the ḳur'ānic revelation and the problems posed by it (predestination and free will, the problem of evil, the attributes of God, the nature of the Ḳur'ān, etc.). Despite its dominant position (at least in theory), official Sunnism was neither dynamic nor homogeneous enough to condition effectively the moral and religious behaviour of the new generations. Many factors (especially sociocultural and political ones) gradually weakened the religious and cultural impact of the *Sunna*, whose sociological base was anyway being diluted among the diverse populations of the vast empire. It is worth noting in this respect the geographical dispersion and gradual extinction of the main witnesses of primitive Islam, those who were later called the "pious forefathers". These were essentially the Prophet's Companions (*ṣaḥāba*)and the most eminent of their immediate successors (*tābiʿūn*) —3. Al-Ḥasan al-Baṣrī (died 110/728 [*q.v.*]) marks the end of the *Sunna*'s first era, before the spread of the great controversies which were to divide the Muslims (in the field of ḳur'ānic exegesis, and as a result of a free philosophical enquiry on the revealed Book). The famous break between al-Ḥasan al-Baṣrī and Wāṣil b. ʿAṭā (d. 131/748 [*q.v.*]) prefigures the doctrinal disputes and later conflicts which resulted above all in the creation of a Traditional Party (*ahl al-sunna*), the "pious forefathers" (*ṭā'ifat al-salaf*), as a reaction against the new sects and tendencies (Shīʿa, Khawāridj, Djahmiyya, Muʿtazila, etc.) which were judged more or less heretical (cf. H. Laoust, *Schismes*, 84 ff.).—4. Aḥmad b. Ḥanbal (d. 241/855 [*q.v.*]) represents a strongly entrenched Sunnism ready to fight the new schools of thought which questioned the dogma of the primitive orthodoxy (cf. his *Radd ʿala 'l-zanādiḳa wa 'l-djahmiyya*).

The desire to refute the errors of their century, to combat those sects believed to have introduced blameworthy innovations into Islam, to bring the faithful back to the purity of primitive faith and worship, and to restore the *Sunna* by the study and imitation of the Prophet's Tradition, these are the aspirations of many reformers who appear periodically in the religious history of Islam from the very beginnings of Sunnism. For Rashīd Riḍā, in each generation men emerge who are firmly committed to the defence of the *Sunna* and the struggle against *bidʿa* (*Tafsīr*, vii, 143); each century has produced a "regenerator" (*mudjaddid*) of the faith and the *Sunna*, men like "the *imām* Ibn Ḥazm [*q.v.*], the *mudjaddid* of the 5th century..., the doctor of Islam, Aḥmad b. Taymiyya [*q.v.*], the *mudjaddid* of the 7th century..., the great traditionist (*ḥāfiẓ*) Ibn Ḥadjar al-ʿAsḳalānī [*q.v.*] in the 9th century..., and the famous *imām* Muḥammad b. ʿAlī al-Shawkānī (1173/1760-1260/1834), the Yemeni *mudjaddid* in the 12th century." (*Tafsīr*, vii, 144-5). All these men, and each in his own way, were indisputable architects of *iṣlāḥ*; among the many others who share this honour, al-Ghazālī springs to mind. Rashīd Riḍā notes with regret (*Tafsīr*, vii, 143), however, that such exceptional men were generally alone (*ghurabā'*) in the world, like Islam itself. (Cf. the *ḥadīth*: "Islam was born alone, and will become alone again, as at its beginning. Happy the solitary men. Those are they who will come to reform that which will be debased after me" [cf. Wensinck, *Handbook*, 114 A: "·Originated"]). Although solitary, because of their opposition to the spirit of their times, and often the butt of authoritarian arrogance, worldly scepticism, and the hostility of conformist *ʿulamā'* and sycophants, the reformers nonetheless committed themselves to safeguarding the *Sunna* and, through it, the continuity of the original values of Islam. It is in this spirit, that of the reformers and renovators who animated the religiouis and cultural evolution of the *Umma*, and in tune with the defenders of the *Sunna* and the community's cohesion, that modern Muslim reformists are attempting to carry out their mission, over and above all ideologies, tendencies, and sectarianism. On the historical continuity of *iṣlāḥ* from the age of the Salaf to the dawn of the modern era, cf. ʿAlī al-Ḥasanī al-Nadawī, *Ridjāl al-fikr wa 'l-daʿwa fi 'l-islām*, Damascus 1379/1960 (ends with Djalāl al-Dīn Rūmī 672/1273); ʿAbd al-Mutaʿāl al-Ṣaʿīdī, *Al-Mudjaddidūn fi 'l-islām...* (100-1370 H.), Cairo 1382/1962; A. Merad, *Le Réformisme musulman...*, 29 ff.; H. Laoust, *Schismes*.

3.—*Iṣlāḥ* in modern Islam.—Viewed as part of the historico-cultural process outlined above, the modern reformism of the Salafiyya is an exceptionally fruitful period. In the breadth of its first manifestations, the diversity and stature of the talents it employed, the energy of its apostolate, and the relative speed of its diffusion in the Arab world and even far beyond, *iṣlāḥ* constitutes one of the most remarkable phenomena in the evolution of Islam since the end of the 19th century. It is a result of the cultural movement born of the renaissance (*nahḍa* [*q.v.*]) which marked the reawakening of the Arab East (along with that of the Muslim world in general) as a consequence of the influence of Western ideas and civilization. This awakening has been interpreted as a direct result of the actions of several forceful Muslim personalities living in the second half of the 19th century. Those most frequently mentioned are Djamāl al-Dīn al-Afghānī (1839-97 [*q.v.*]), Muḥammad ʿAbduh (1849-1905 [*q.v.*]) and Abd al-Raḥmān al-Kawākibī (1854?-1902 [*q.v.*]). However, the awakening of Arabo-Muslim consciousness was preceded by a period of gestation which was encouraged by a combination of internal and external factors; most decisive of these were:

a) *The pressure of Wahhābism* [*q.v.*], which aimed (initially in Arabia) at restoring Islamic piety and ethics to their original purity and cultivated a sort of idealization of the primitive Islamic social organization, that of the "pious forefathers" *al-salaf al-ṣāliḥ* (hence the tendency called Salafiyya). Despite their zeal (which sometimes seemed excessive) in defence of their conception of the *Sunna*, their intransigence and their occasionally intolerant strictness, the Wahhābīs never lost sight of the need for a moral and political renewal of modern Islam. While

appealing to their co-religionists to recognize only the authority of the Ḳur'ān and the *Sunna* in matters of religion (*dīn*), they urged them to abandon superstitions inherited from the Middle Ages and countered the general tendency to fatalistic resignation, reacting against the spirit of *taḳlīd* [*q.v.*] which predominated at that time (end of the 18th- beginning of the 20th century). Through these efforts and their attempt to modernize the values of primitive Islam, *djihād* [*q.v.*], in particular, in the hope of rousing Muslims to a political dynamism equal to their past greatness, the Wahhābīs played an important role in the evolution of modern Islam, thus deserving a place among "the first of those who worked together towards the Arab renaissance" (L. Massignon, in *RMM*, xxxvi (1918-19), 325).

b) *The development of the printed word* through the press and publishing, principally in the Arabic language. In this respect the remarkable role played by the Egyptian printing house at Būlāḳ [see MAṬBAʿA] must be stressed. From 1822 onwards, this became one of the most important tools of the Arab intellectual renaissance. The Egyptians and Syro-Lebanese contributed to the growth of a serious and informative press which reflected the political and cultural aspirations of the nationalist and pro-reformist sectors of the population. (Cf. ʿAbd al-Lāṭif al-Ṭībāwī, *American interests in Syria 1800-1901*, Oxford 1966, 247-53; Ph. K. Hitti, *Lebanon in History*[3], New York 1967, 452-64).

c) *The influence of Western culture.* European penetration of the Arab world in the first decades of the 19th century soon made itself felt, especially at an intellectual level. Cf. H. Pérès, *Les premières manifestations de la renaissance littéraire arabe en Orient au 19e siècle*, in *AIEO Algiers* (1934-5), 233-56; A. Hourani, *Arabic thought* (Bibl.); the succinct statement of the problem by Ḥusayn Mu'nis *La renaissance culturelle arabe*, in *Orient*, nos xli-xlii (1967), 16-27; J. Heyworth-Dunne, *An introd. to the hist. of education in modern Egypt*[1], London 1939, reprinted 1968, 96-287.

d) *The liberal evolution of the Ottoman regime.* This first occurred under the sultan ʿAbd al-Madjīd I [*q.v.*], who inaugurated a policy of reforms (*tanẓīmāt* [*q.v.*]) with the *Khaṭṭ-i sherif* of Nov. 3 1839 which granted his peoples the first imperial charter guaranteeing civil liberties. Despite the opposition of the traditionalists, these Western-inspired reforms were progressively put into effect, particularly after the *Khaṭṭ-i hümāyūn* of Feb. 1 1856, which finally opened the Near East to the ideas and influences of the modern world. Cf. TANẒĪMĀT; F. M. Pareja, *Islamologie*, 339 ff., 583.

e) *The structural renovation of the Eastern churches* and their awakening to Western spirituality and ideas. Cf., *e.g.*, on the exemplary case of the Uniate churches, the monograph by Joseph Hajjar, *Les Chrétiens uniates du Proche-Orient*, Paris 1962. As well as the renewal of local Christianity, thanks to a favourable concourse of religious and diplomatic events, the energy of Catholic and (above all) Protestant missions must be taken into account. On these missionary activities on Islamic soil, see the important material in *RMM*, xvi (1911), *A la conquête du monde musulman* (1 vol.); Kenneth Scott Latourette, *A hist. of the expansion of Christianity*, vi: *The great century* (1800-1914), London 1944, chap. II (*Northern Africa and the Near East*), 6-64; A. al-Ṭībāwī, *American interests in Syria*, 316-24).

This missionary activity did not simply provoke a defensive reaction in the Muslim world. In the eyes of many *ʿulamā'*, it was exemplary from two points of view: it was a remarkable example of zeal in the service of a faith, and the actual content of its preaching was of value. Thus, in imitation of the Protestants, the reformists attached paramount importance to the Scriptures, though without ever losing sight of cultural needs and working towards an ethical and spiritual renewal of Islam. At the same time they aimed at the social and intellectual emancipation of the Muslim population by tirelessly advocating the popularization of modern knowledge.

These different factors (which must be placed in the general context of the Eastern question) gave rise to the intellectual ferment which led to the *nahḍa*. After centuries of cultural stagnation, the Arab renaissance provoked a lively intellectual curiosity in the East. From the beginning of the 19th century, the Arab élites began to acquire modern knowledge, some through translations, others by direct contact with European scientific culture and techniques. A decisive role was played by Arab student missions in Europe, by Western schools (religious and secular) in the Near East, and by national institutions organized on the European model. Cf. on this subject: C. Brockelmann, S II, 730 ff.; Djurdji Zaydān *Ta'rīkh ādāb al-lugha al-ʿarabiyya*[2], Cairo 1914, iv 186-217; Jāk Tādjir, *Ḥarakat al-tardjama fī miṣr khilāl al-ḳarn al-tāsiʿ ʿashar*, Cairo [1944]: the important study by J. Heyworth-Dunne, *An introd. to the hist. of education in modern Egypt*; Ph. K. Hitti, *Lebanon in History*, chap. xxxi.

For Arab writers this intellectual activity was accompanied by a historical and sociological enquiry in an attempt to analyse their social and cultural situation in order to determine the exact causes of their backwardness, naturally with a view to remedying it. This is the dominant theme of articles in *al-ʿUrwa al-wuthḳā* (1884), then in *Manār* (from 1898 on), especially those by Rashīd Riḍā and Muḥammad ʿAbduh (cf. for instance, the series of articles in vol. v (1902), under the general title: *al-Islām wa 'l-Naṣrāniyya maʿa 'l-ʿilm wa 'l-madaniyya* (136 p.). This is also the central topic of *Umm al-ḳurā*, in which al-Kawākibī attempts a precise diagnosis of the evils and that sort of general indolence (*futūr*) which characterized the Muslim community at the end of the 19th century (cf. the 7th session, 109 ff. *passim*); on the theme of the "backwardness" of the Muslim peoples, see also two accounts: Muḥammad ʿUmar (d. 1337/1918), *Ḥāḍir al-miṣriyyīn wa-sirr ta'akhkhurihim*, Cairo 1320/1902; Shakīb Arslān, *Limādhā ta'akhkhara 'l-Muslimūn wa-limādhā taḳaddama ghayruhum?* (Cairo ed. 1939).

The situation of Islam in the modern world thus became one of the most important themes in reformist writings. After Ernest Renan's famous lecture on *L'Islamisme et la Science* (Sorbonne, March 29 1883) and the subsequent controversy between Renan and Djamāl al-Dīn al-Afghānī (cf. on this subject Homa Pakdaman, *Djamâl-Ed-Din*, 81 ff.), one of the major preoccupations of reformist authors was to refute the thesis that Islam is contrary to the scientific spirit and can thus be held responsible for the cultural backwardness of the Muslim peoples. "We wore out our pens and our voices", cries Rashīd Riḍā "through writing and repeating that the misfortunes of Muslims cannot be blamed on their religion, but rather on the innovations that they have introduced into it, and on the fact that they 'wear' Islam like a fur coat turned inside out" (*Manār*. iii (1900), 244). Cf. also the pleas of Muḥammad ʿAbduh, *al-Islām wa 'l-Naṣrāniyya*, and Muḥammad

Farīd Wadjdī, *Taṭbīḳ al-diyāna al-islāmiyya ʿala 'l-nawāmīs al-madaniyya*, Cairo 1316/1898.

Having established their view of the situation, the reformists planned ways to stir up a new spirit in their co-religionists and to arouse in the Community the will to break out of its cultural and social stagnation. For this purpose, they continually referred to the kurʾānic verse: "Allāh altereth not what is in a people until they alter what is in themselves" (cf. *al-ʿUrwa al-wuthḳā*, no. xvii (Sept. 1884), editorial reproduced by Rashīd Riḍā in his *Tafsīr*, x, 46-52; Muḥammad ʿAbduh, *Risālat al-tawḥīd*, 178 (Fr. trans., 121); Rashīd Riḍā, *Tafsīr* x, 41-5, on *sūra* VIII, 54). From this point of view, reformist thought seems to have crystallized around the idea of improvement (*iṣlāḥ*) of the existing situation. To achieve this goal, the adherents of *iṣlāḥ* advocated a struggle against those religious forces (in particular the brotherhoods) and social groups (conservative and traditionalist forces) which they saw as the incarnation of obscurantism. They also supported the reform of archaic teaching methods and courses and the popularization of scientific disciplines and modern techniques. Since they had no training in these last two fields, the reformists could do no more than stress the usefulness of Western sciences and techniques as essential instruments for the material and intellectual progress of the Muslim peoples. However, they devoted the greater and most effective part of their efforts to action in the moral and social fields, where they had more ready access to an adequate vocabulary.

Reformist appeals for social and intellectual evolution (*taḳaddum, taraḳḳī*) concentrated on the need to improve, correct, reorganize, renovate and restore: all these infinitives corresponding, *grosso modo*, to the different meanings of the *maṣdar, iṣlāḥ* (cf. Lane, i/4, 1714: *ṢLḤ*). From then on *iṣlāḥ* became a sort of leitmotiv in reformist literature. In the texts of Muḥammad ʿAbduh, for example, we frequently find this term used as the mark of an impelling idea even in his earliest writings; cf. his first articles in the paper *al-Ahrām* (1st year, 1876) reproduced by Rashīd Riḍā in *Taʾrīkh al-ustādh al-imām*, ii, 20, 22, 34; his articles in the official paper *al-Waḳāʾiʿ al-miṣriyya*, 1880-1 (*ibid.*, 175-81). *Iṣlāḥ* also appears at every opportunity and in its different meanings in the review *al-Manār* (whose first no. dates from 22 Shawwāl 1315/16 March 1898). We find, for example, the following usages: *al-iṣlāḥ al-dīnī wa 'l-idjtimāʿī* ("religious and social reform", i (1898), 2); *iṣlāḥ kutub al-ʿilm wa-ṭarīḳat al-taʿlīm* ("improvement of textbooks and reform of teaching methods", *ibid.*, 11); *iṣlāḥ dākhiliyyāt al-mamlaka* ("reform (or reorganization) of the internal affairs of the Empire", *ibid.*, 736); *iṣlaḥ al-nufūs* ("regeneration of souls", *ibid.*, 737); *iṣlāḥ al-ḳaḍāʾ asās al-iṣlāḥ* ("law reform, as a basis for general reform", *ibid.*); in the editorial of the 40th no. (1898), Rashīd Riḍā calls for a "renovation from the pulpit eloquence" (*iṣlāḥ al-khiṭāba*); in no. 42, p. 822, he proposes: *muḥāwara fī iṣlāḥ al-Azhar* ("exchange of views on the reform of al-Azhar").

These few references show the variety of uses to which the concept *iṣlāḥ* was put. However, the following areas seem particularly to have attracted the attention of reformist authors: a) *Teaching*. The question of the reorganization of Muslim teaching, especially in institutes of higher education like al-Azhar, occupied an important place in the work of Muḥammad ʿAbduh and Rashīd Riḍā (cf. the account of the action carried out in this sphere by *shaykh* ʿAbduh in *Taʾrīkh al-ustādh al-imām*, i, 425-567). This problem can be linked to that of the reorganization of the mosques and *waḳf* possessions. Better management of these would supply the educational system with increased means and new buildings. (Cf. Rashīd Riḍā, *op. cit.*, i, 630-45; *al-Manār wa 'l-Azhar, passim*). b) *Law*. The reform of the Muslim legal system was also one of the constant preoccupations of the reformists (see the numerous articles in *Manār* on this subject and the *Report* made by Muḥammad ʿAbduh, Muftī of Egypt, *Taḳrīr muftī al-diyār al-miṣriyya fī iṣlāḥ al-maḥākim al-sharʿiyya*, Cairo 1318/1900; cf. on this subject *Taʾrīkh al-ustādh al-imām*, i, 605-29). c) *The Religious Brotherhoods*. The reformists never ceased to press for the reform (if not for abolition pure and simple) of the brotherhoods, which they accused of maintaining blameworthy innovations in religious life, of encouraging the people in superstitious beliefs and practices, and of continuing to use a reactionary system of teaching in their educational establishments (cf. the articles in *Manār*, under the heading: *al-Bidaʿ wa'l-khurāfāt*; Rashīd Riḍā, *al-Manār wa 'l-Azhar, passim*). In their attempt to reform Muslim educational and legal systems and religious practice, the supporters of *iṣlāḥ* were aware that they were attacking the traditional structures of Muslim society, yet they felt it was essentially to renovate these structures so that a new much-needed social and cultural dynamism should be given to the Community. But their task did not stop there. For the *iṣlāḥ* advocated by Muḥammad ʿAbduh and his close supporters necessitated a vast movement of renovation which would embrace all sectors of Muslim life. Thus we see them advocating *iṣlāḥ* in purely secular domains (for example, language and literature, the organization of schools, the administration, the military regime, etc.). They believed that the *ʿulamāʾ* worthy of the name should devote themselves to an overall reform of Muslim social organization, and not just to a limited religions reformism.

These calls for a general *islāḥ* were fairly well received in Arab and Muslim intellectual circles at the end of the 19th and beginning of the 20th century. From the period of *al-ʿUrwa al-wuthḳā* (1884) on, the combined efforts of al-Afghānī and ʿAbduh, and other propagandists of the quality of al-Kawākibī, succeeded in definitively integrating the idea of *iṣlāḥ* into modern Muslim thinking. From then on, no intellectual in the Arab world could remain indifferent to the reformist phenomenon (cf. *al-Manār*, i, (1899), 949: *al-iṣlāḥ al-islāmī wa 'l-ṣiḥāfa*: *iṣlāḥ* had become one of the principal and most topical subjects in the Arab and Turkish press; *Umm al-ḳurā*, 3). In literary circles, many profoundly secular writers and poets joined forces with the advocates of *iṣlāḥ*. Their sympathies did not lie with the religious movement, but with the powerful ferment that it then represented for Muslim society and for Arabs in general. For them, *iṣlāḥ* signified an appeal for progress, a breath of renewal and the promise of a better future for the Arab nation. Its fundamental call for religious renovation and moral regeneration was blurred in the eyes of many intellectuals by its social and cultural implications. Gradually *iṣlāḥ* acquired the shape of a sort of myth which attracted all, believers and unbelievers, Muslims or not, who were struggling for the social and cultural emancipation of their people. (The impact of *iṣlāḥ* in non-Muslim circles is apparent in writers like Salāma Mūsā; cf. *Tarbiyat Salāma Mūsā*,

Cairo 1944, 52 [Eng. trans. Schuman, *The education of Salāma Mūsā*, Leiden 1961, 35]). This is why, concurrently with the religious reformists (the Salafiyya), some concerned secular intellectuals took up the cry for *iṣlāḥ*, though with a purely social and cultural connotation. The most typical figure of this secular reformist current is the ʿIrāḳī poet Djamīl Ṣidḳī al-Zahāwī (1863-1936 [*q.v.*]), who advocated a form of *iṣlāḥ* devoid of any religious content (his beliefs are expressed in: *nashartu fi 'l-nāsi arā'an urīdu bi-hā/iṣlāḥa dunyā-humū lā 'l-ṭaʿna fi 'l-dīni*).

The relative receptivity of Arab intellectual circles (more or less influenced by Western culture) was a determining factor in the diffusion of *iṣlāḥ*. The reformists found allies, if not true sympathizers, among publicists and men of letters who were exasperated by the conservatism of the "old turbans", the defenders of clerical and university tradition (of al-Azhar, al-Zaytūna, etc.), by the apathy of the masses, and by the sluggishness of the political and administrative machine. Thus in the East as in the Maghrib, the younger progressive intellectuals drew close to the reformists, who in their eyes represented a dynamic party which, in the face of different forms of foreign domination, proclaimed the right of their peoples to education, progress and national dignity.

But *iṣlāḥ* also benefited from a measure of support in liberal Sunnī circles. Frightened by the prospect of society drifting away from Islam in the more or less distant future, and by the dynamism of Christian missionary work in Muslim lands, they were happy to witness the birth of a movement which was profoundly attached to the *Sunna*, and firmly committed to the defence of the faith, while at the same time recognizing the need for social evolution and modern scientific and technical development in the Arab world.

Yet, despite the interest that it aroused in the young progressive generation and enlightened Sunnīs, *iṣlāḥ* encountered some difficulties at the outset. From its inception, the movement was suspect to the powers then ruling the major part of the Arab world (Turkey, England, France), because of its cultural and political orientation (exaltation of Arabism, Panislamism). Its social and political stand brought down on it the hostility of the ruling classes and the administrative authorities of the *status quo* (university, magistrates, religious hierarchy, brotherhoods). By its declarations of war on every sort of *bidʿa*, on magical and religious superstitions, on customs "worthy of paganism" (*djāhiliyya*), and by the rigorously monotheist theology (*tawḥīd*), which led it to see manifestations of *shirk* in many naive forms of popular piety, *iṣlāḥ* distressed conformist circles. For the same reasons is was mistrusted by ordinary people, who were attached to traditions and rites that they regarded as an integral part of religion.

Inevitably, *iṣlāḥ* was strongly attacked on several fronts (cf. for example, the long quarrel between supporters of *iṣlāḥ* against the defenders of the educational and doctrinal traditions of al-Azhar, in Rashīd Riḍā, *al-Manār wa 'l-Azhar*). After all, it was a movement vowed to political resistance (anti- imperialist, if not anti-Ottoman) and social change (aimed at the traditional framework of Muslim society), and geared to moral and spiritual reform, attacking in particular certain ecclesiastical structures which were held as sacred (notably the brotherhoods and religious orders) and certain aspects of popular religiosity. Lacking a single magistrature amongst the *umma* and unable to invoke the moral authority of a reforming Church, the Salafiyya were open to the charge that they were changing and destroying the holy Sunnī tradition. They had to wage an unceasing struggle for acceptance of the sincerity of their intentions and what they saw as the eminently Islamic character of their attempts at reform. Nevertheless, neither the traditionalist Sunnīs nor the members of the brotherhoods were disposed to recognize the legitimacy of their efforts (cf. *Manār*, i, 807, 822; Rashīd Riḍā attacked by his adversaries; Rashīd Riḍā, *Ta'rikh al-ustādh al-imām*, *passim*: the difficulties Muḥammad ʿAbduh met with when he was Muftī of Egypt; Ẓāfir al-Ḳāsimī, *Djamāl al-Dīn al-Ḳāsimī*, 594; the bad reception given to Rashīd Riḍā by the *ʿulāma'* of Damascus, 603-4; the lack of success of the Salafiyya in Syria; A. Merad *Le Réformisme musulman* . . . Book i: *the resistance of Algerian Sunnism and brotherhoods to reformist propaganda*). Whether presented as a "road to damnation" (*ḍalāla*) in the wake of the Wahhābī "heresy", or hastily assimilated to the progressive trends that were more or less favourable to the secularization of Muslim society, the Salafiyya movement met with strong opposition in Egypt and Syria, as in Algeria and Tunisia. Its adversaries rejected it in the name of the *Sunna*, which, in their eyes, could have no other form than that of classical Sunnism. The real meaning of *iṣlāḥ* appears when we examine its fundamental principles and its main doctrinal lines.

B.—Fundamental Principles.—In origin, *iṣlāḥ* is a religiously inspired movement. Yet an examination of the roots of the movement reveals that the arguments put forward by its proponents sounded a less profoundly moral and spiritual note than a social and cultural one. In the first reformist manifestos—the articles of Muḥammad ʿAbduh (and al-Afghānī) in the paper *al-ʿUrwa al-wuthḳā* (1884)—social, cultural and even political considerations are more important than religious ones. In his *Umm al-ḳurā* and in his *Ṭabā'iʿ al-istibdād*, al-Kawākibī made similar efforts. In the early stages of his review *al-Manār* (1898), Rashīd Riḍā also paid a great deal of attention to social and cultural questions. Like his masters, he wished to persuade Muslims that the improvement of their moral and material condition depended upon a regeneration of Islam; this was to be accomplished by a "return to first principles", in order to rediscover Islamic teachings and values in all their authenticity and richness. The whole of the later reformist debate hinges on this essential theme.

The Return to First Principles.—The theme of the return (*rudjūʿ*) to first principles is omnipresent in reformist literature. This constant reference to the beginnings of Islam is one of the most striking characteristics of *iṣlāḥ*, and the reason why the reformists of the Salafiyya have sometimes been accused of "addiction to the past". The need for a return to first principles is justified, in the doctrine of *iṣlāḥ*, by arguments of a canonical and historical nature. The former, drawn from the Ḳur'ān, can be resumed as follows: Islam in its entirety is contained in the Scriptures (Ḳur'ān, V, 3, VI, 38); the teaching of the Prophet—inspired by God (LIII, 3-4)—is the natural complement of revelation. The Religion can be received only from the hands of God and his Messenger (IV, 59), and Muslims must abide by what the Messenger of God has transmitted, in all matters of command and interdiction (LIX, 7). For the reformists, consequently, fidelity to Islam

is essentially defined by faithfulness to the two Sources, Revelation and the Prophet's *Sunna*.

The canonical argument, supported by an argument borrowed from historical tradition, is in fact a maxim attributed to Mālik b. Anas (d. 179/795 [*q.v.*]): "The later success of this Community will only ensue through those elements which made for its initial success" (*lā yaṣluḥu āk̲h̲iru hād̲h̲ihi 'l-umma illā bi-mā ṣaluḥa bihi awwaluhā*). Now, we are told, the objective basis of the historical success of the Arabs was Islam (that is the Ḳur'ān and the *Sunna*) authentically received and fully accepted (cf. Ras̲h̲īd Riḍā, *Tafsīr*, x, 437, xi, 210 (important) ix, 293; *S̲h̲ihāb*, March 1939, 58). Like their far-distant predecessors (*Salaf*), Muslims of today could achieve temporal power (*siyāda*) and know the happiness of moral well-being (*saʿāda*), provided that they armed themselves with those moral convictions that constituted the strength and grandeur of the Salaf, and that they strove to demonstrate to contemporary Muslim society the values of faith and the general teachings of Islam, in their authentic purity (cf. Ras̲h̲īd Riḍā, *Tafsīr*, ii, 339-41, x, 210; A. Merad, *Le Réformisme musulman*, 287 ff.). What exactly is this authenticity? The reformist reply is clear and simple: the whole of Islam is contained in the Scriptures and the *Sunna*, with the addition, solely as a guide and not as a canonical source, of the tradition of the Salaf. This position is not fundamentally different from that of traditional Sunnism. What distinguishes *iṣlāḥ* from the classical doctrine in this respect is the meaning given by the reformists to each of these three basic references.

1.—The reference to the Ḳur'ān.—On this point, *iṣlāḥ* has, in principle, the same position as the Salaf. This is true of the nature of the Ḳur'ān, its status as a canonical source, and the way of approaching its exegesis.

a) *Iṣlāḥ* identifies the Ḳur'ān with the Word of God, uncreated, intangible, unalterable (Ḳur'ān, XLI, 42, XV, 9), and affirms the eternity and universality of its message (XXXIV, 28, VI, 90; *Manār*, i, 1; Ras̲h̲īd Riḍā, *Tafsīr*, ii, 163, iii, 289). Holding stringently to the dogma of the "uncreated Ḳur'ān" it rejects the harmonizing synthesis of As̲h̲ʿarism, since this does not simply reaffirm the stance of the Salaf (cf. Ras̲h̲īd Riḍā, *Tafsīr*, ix, 178). This explains why the Salafiyya have never been able to supply the Muslims of their time with an original interpretation of the Ḳur'ān, despite the return to favour of reason in modern Islam (cf. R. Caspar, *Le renouveau du Moʿtazilisme*, in MIDEO, iv (1957), 141 ff.), and despite the historical investigations and psychological analyses made in the light of the *Sīra* by European orientalists and a few contemporary Muslim authors which have given us a better knowledge of the Prophet's personality. Their doctrine, immobilized by a desire to remain faithful to the past and to the positions—sometimes negative—of the Salaf, has prevented them from acquiring a deeper knowledge of the historical, sociological and psychological discoveries which would have given them a truer understanding of the problems of revelation and inspiration. (On the subject of the *waḥy* [*q.v.*], cf. the decisive statement by Ras̲h̲īd Riḍā, *Tafsīr*, xi, 146-94, in which he reaffirms the thesis of the revelation "that came down from God", without attempting to introduce any nuances into the traditional explanation; hence his long rebuttal (*ibid.*, 169-78) of the ideas expressed on this subject by certain authors, notably by E. Dermenghem (in *La Vie de Mahomet*, Paris 1929, chap. xviii)).

When discussing the nature of the Ḳur'ān, Muḥammad ʿAbduh attempted to go further than traditional dogma in the original edition of his *Risālat al-tawḥīd* (Būlāḳ 1315/1898). The original text (28, Fr. trans., 33, 1.2, to 34, 1.4), expurgated at this point by Ras̲h̲īd Riḍā (2nd ed., Cairo 1316/1908), is once more available in the ed. of the *Risālat al-tawḥīd* prepared by Maḥmūd Abū Rayya (Cairo 1966, 52-2). Ras̲h̲īd Riḍā himself vigorously affirmed the divine character of the Book (*Tafsīr*, i, 132-3, 220, vi, 71, viii, 10, 280, 303, ix, 178, xii, 499), wholly discounting any rationalist interpretation. The same stance is clear in the works of Ibn Bādīs, in his ḳur'ānic commentary on the *S̲h̲ihāb*: "The Ḳur'ān is the Word of God and His Revelation" (Jan. 1934, 55).

b) *The Ḳur'ān, primary canonical source.* The Ḳur'ān is "the foundation of the religion" (*asās al-dīn*, *Tafsīr*, i, 369, vii, 139, 198, ix, 326; Ibn Bādīs, *S̲h̲ihāb*, Feb. 1936, 95); more than that, it really constitutes religion in all its richness, *bal huwa 'l-dīn kulluhu* (*Tafsīr* vi, 154-67, vii, 139, 198, ix, 326). With the ḳur'ānic revelation, religion was accomplished, according to the divine proclamation: "Today I have perfected your religion . ." (V, 4). By "religion", explains Ras̲h̲īd Riḍā (taking up "the opinion of Ibn ʿAbbās and the majority of the Salaf"), is meant the following: "matters of faith (*ʿaḳā'id*), legal injunctions (*aḥkām*) and ethical ones (*ādāb*)" (*Tafsīr*, vi, 166, at the foot of the page).

The Ḳur'ān is thus the supreme source of the religion. Moreover, it contains, in prototypal form, everything needed for the historical life of the Community. Paraphrasing XVII, 13, Ibn Bādīs concludes: "All that the servants of God have need of to acquire happiness in the two worlds, that is true beliefs, solid moral virtues, just laws, generous sentiments, all this has been clearly expressed in the Ḳur'ān" (*S̲h̲ihāb*, Dec. 1929-Jan. 1930, 7). As far as the political organization of Muslim society and the running of its affairs are concerned, the Ḳur'ān only gives general indications, leaving to the lawful rulers of the Community, the *ūlu 'l-amr*, the task of making decisions according to circumstances and in the best interest (*maṣlaḥa*) of Muslims (cf. *Manār*, iv (1901), 210; *Tafsīr*, iii, 10-1, 12 (important), iv, 199-205 (important), vi, 123, vii, 140-1, 191, xi, 264). The Ḳur'ān is the supreme authority of Islam, and, as such, the problem of its understanding (and consequently of its exegesis) is of capital importance, for the way in which the Revelation is understood governs the manner in which the message is translated into action.

c) *The exegesis of the Ḳur'ān.* Linguistically, the content of the Ḳur'ān is presented in two categories (cf. III, 7). Most of the verses have a self-evident meaning (*muḥkam*) and pose no problems of interpretation. Certain other verses can be the cause of some uncertainty (*mutas̲h̲ābih*) if their apparent sense is adhered to. In this case, the Believer must accept the revealed fact as it is presented (*imrār*) in its most literal sense, showing a confident belief in the truth it contains, a truth which transcends the immediately perceptible linguistic message (cf. *Tafsīr* viii, 453, x, 141). God being the only one to know the reality of the *mutas̲h̲ābih*, the Believer must have the wisdom and humility to commend himself to Him (*tafwīḍ*, *taslīm*). In the eyes of Muḥammad ʿAbduh this act of faith acquires the value of a canonical obligation (*Tafsīr*, i, 252). This is also the position of Ras̲h̲īd Riḍā and Ibn Bādīs (cf. *Tafsīr*, iii, 167, iv, 256, vii, 472, viii, 453, ix, 513, x, 141, xii, 378; *S̲h̲ihāb*, Jan. 1934, 6 June 1939, 206).

The reformist doctrine on the subject of ḳurʾānic exegesis can be defined in relation to the problems of interpretation, *taʾwīl* [*q.v.*], and commentary, *tafsīr* [*q.v.*].

Iṣlāḥ severely condemns subjective interpretation *taʾwīl*), which claims to analyse a "hidden" sense beyond the literal sense, and a more or less gratuitous symbolism beyond the apparent images. On the subject of III, 7, Rashīd Riḍā clearly defines the reformist position (*Tafsīr*, iii, 166 ff.). *Taʾwīl* is a typical example of *bidʿa* (*ibid.*, x, 141), since it cannot be justified either by the *Sunna* or by the tradition of the Salaf, who avoided interpreting uncertain passages (*mutashābih*) of the Scripture by relying on their own understanding (see also Muḥammad ʿAbduh, *Risālat al-tawḥīd*, 7 [Fr. trans., 8]). The Salafiyya's distrust of *taʾwīl* includes all esoteric and mystical interpretations and those of the supporters of a rational explanation at any cost. Cf. *Tafsīr*, i, 252-3, iii, 172-96: an explanation of the reformist doctrine of the subject of the *taʾwīl*, with lengthy quotations from Ibn Taymiyya; criticism of the tendentious exegesis of the "men of *bidaʿ*" (Djahmiyya, Ḳadariyya, Khawāridj, Bāṭiniyya, Bābiyya, Bahāʾiyya, etc.), ix, 131-2; the "heretical" exegesis of the Bāṭiniyya and of excessive Ṣūfism; iv, 191; exegesis which is "orientated" in favour of one sect or another, and which in fact results in giving a purely arbitrary sense to the revealed statement. This is *taḥrīf* itself [*q.v.*], a concept applied in the Ḳurʾān to the "Possessors of the Scriptures" (*ahl al-kitāb*) and applied by the modern reformists to stigmatize the use of the ḳurʾānic exegesis for partisan ends (cf. *Tafsīr*, i, 430, iv, 97, 282, vii, 506; *Shihāb*, Sept. 1935, 344-5). Included in the term *taḥrīf* are pseudo-erudite commentaries which embroider the text with "false legends" (*abāṭīl wa-khurāfāt*), in the style of the *isrāʾīliyyāt* [*q.v.*] so frequently denounced by the reformist authors (*Tafsīr*, i, 8, 18, 347, ii, 455, 471, iv, 466, vi, 332, 355-6, 449, ix, 190, 414, x, 384, xi, 474; *Shihāb*, July 1939, 254). The same warnings were issued against interpretation of the ḳurʾanic passages dealing with the unknowable, *ghayb* [*q.v.*] (cf. *Tafsīr* i, 252, iii, 166 ff., iv, 254 ff. on III, 173, IX, 513; *Shihāb*, Oct. 1930, 534; Jan. 1934, 1-9).

Reformist exegesis tends to banish *taʾwīl* in favour of simple commentary, *tafsīr*, and lays down the principle that, apart from a few verses containing a certain mystery (particularly on the subject of divine attributes, *ṣifāt*, and the states of future life, *aḥwāl al-ākhira*), ḳurʾānic revelation can be made just as comprehensible to contemporary Muslims as it was to the Salaf. Thus, the function of *tafsīr* is revitalized. Freed from its historico-legendary husk and from commentaries of a largely grammatical and rhetorical nature, *tafsīr* becomes a preparation for reading and meditating upon the Ḳurʾān. Those commentators whose primary interest was in the didactic aspect of *tafsīr* have woven a veritable screen (*ḥidjāb*) between Muslims and their sacred book (*Tafsīr*, iii, 302). According to the reformists, the essential aim of *tafsīr* is to elucidate the moral values and spiritual "direction" (*hady*) which nourish religious feeling and guide the piety of the faithful (*ibid.*, i, 25); it must not be seen as a demonstrative discipline capable of establishing scientific and verifiable truths and satisfying the modern mind which is avid for rationality. The reformist commentators (and above all Rashīd Riḍā and Ibn Bādīs) were in no way tempted by scientific exegesis, and, with the odd exception, did not give in to the fashion for compromise which was widespread in their day (cf. the typical case of a Ṭanṭāwī Djawharī (1862-1940), in *MIDEO*, v (1958), 115-74). Consequently Rashīd Riḍā criticizes the lack of discernment with which Fakhr al-Dīn al-Rāzī [*q.v.*] appeals to the scientific culture of his time to pad out his important commentary. He deplores an identical tendency amongst "contemporary commentators [. . .] who display so much seemingly scientific erudition in their *tafsīr*s that they succeed in diverting the reader from the object of the Revelation" (*Tafsīr*, i, 75). Moreover, when speaking of the biblically inspired stories recounted in the Ḳurʾān, Rashīd Riḍā, quoting Muḥammad ʿAbduh, criticizes those who would like to base the truth of the Book on the veracity of the facts it offers to the meditation of the Believers. "The Ḳurʾān is no more a historical work (*taʾrīkh*) than a narrative work (*ḳaṣaṣ*): it is only a moral guide and a source of edification" (*Tafsīr*, ii, 471). The historicity of the ḳurʾānic story is less important than its moral content and its virtue as a source of inspiration. The role of the reformist commentator is above all to bring the ḳurʾānic message as close as possible to the minds and hearts of Muslims. In his task, his goal will of course be to establish the meaning of the verses as exactly as human understanding permits. This implies a profound knowledge of all the resources of Arab lexicography and philology. There are some verses whose message is readily apparent; in some cases, what is revealed can be made more explicit with the help of references and parallels found in the Ḳurʾān itself (*tafsīr al-Ḳurʾān bi 'l-Ḳurʾān*); in other cases it is necessary to employ early exegesis by returning to the versions given by the Great Companions and their principal disciples amongst the *tābiʿūn*, following the explanations supplied by the Prophet in person as part of the revelation. Any exegesis not based on proofs (*dalāʾil*) taken from the *Sunna* (in the absence of explicit scriptural reference) is suspect and thus unacceptab e (Muḥammad ʿAbduh, *Risālat al-tawḥīd*, 129 (Fr. trans., 137); *Tafsīr* i, 8, 174-5, iii, 327). Hence the idea of the fundamentally complementary nature of the Scripture and the *Sunna*.

2.—The Sunna.—From the standpoint of *iṣlāḥ* the *Sunna* must be placed next to Revelation as second canonical source. However, reformist teaching is not in complete agreement on whether it is a constitutive source, like Revelation, or simply an explanation of the latter. The following are the main doctrinal positions:

The Sunna is of the same essence as the Ḳurʾān.—This is the point of view of Ibn Bādīs, who affirms the profound unity that links the *Sunna* and the Scriptures. "The expression: 'Revelation of the Lord compassionate', [Ḳurʾān, XXXVI, 58] means that the religion is, in its entirety, a revelation from God . . . for the source of Islam . . . is the Ḳurʾān, which is a divine revelation, and the *Sunna*, which is also a revelation, as these words of the Almighty prove [quotation of LIII, 4]" (*Shihāb*, Feb. 1936, 95). This radical position is similar to that of the Ẓāhirite Ibn Ḥazm, who also held the *Sunna* to be on a par with Revelation (cf. his *Iḥkām fī uṣūl al-aḥkām*, Cairo 1345/1927, i, 121-2. *Ḥadīth* provides an argument in favour of this thesis (cf. Wensinck, *Handbook*, 223 A: "—revealed to Muḥammad by Djibrīl just as the Ḳurʾān was revealed"). It was only partially shared by Rashīd Riḍā, but he admits that "revelation is not limited to the Ḳurʾān" (*Tafsīr* . . ., ii, 139, v, 279, 470). Some of the Prophet's teachings, on the inspiration of the Holy Spirit (*al-rūḥ al-ḳudus*)

have the same importance as the Ḳur'ān, but their level of expression does not assume the inimitable nature of the latter (*ibid.*, v, 279, § 3).

The Sunna makes Revelation explicit.—All the reformist authors agree on this point. The Ḳur'ān clearly says that the Prophet's mission is to make manifest to men (*li-tubayyina li 'l-nās*) the true meaning of the Scriptures (*Tafsīr* . . ., ii, 30, vi, 159, 472, vii, 139, viii, 255, 309; *S̲h̲ihāb*, Oct. 1930, 532; Feb. 1932, 73). The *Sunna* is second in importance to the Book, since it is an explanatory instrument (*Tafsīr* . . ., iv, 18, on III, 101); the Ḳur'ān constitutes the totality of the religion, and the *Sunna* is an integral part of the latter only in the sense that it explains what was revealed (*ibid.*, ix, 326). Herein lies the status of the *Sunna* as the second canonical source.

By *Sunna* is meant only the texts of *Ḥadīt̲h̲* the authenticity of which has been duly established (cf. Muḥammad ʿAbduh, *Risālat al-tawḥīd*, 129 [Fr. transl., 132]), a very limited number of traditions which refer above all to the dogmas of faith and the forms of worship (e.g. prayer, pilgrimage). Beyond these descriptive traditions of holy acts, the remaining traditions about which there is no doubt (e.g. those with a moral content) "do not number more than a dozen" (*Risālat al-tawḥīd*, ed. Ras̲h̲īd Riḍā 202 note 2; *Tafsīr* . . ., v, 365). A tradition is not necessarily to be believed just because it is attributed to the Prophet, even if it carries the authority of an eminent traditionist or famous teacher. Ras̲h̲īd Riḍā cites the example of G̲h̲azālī, who gave as authentic traditions which were "insignificant or simply invented" (*Tafsīr*, vii, 31). He was also severely critical of the apocryphal traditions (*mawḍūʿ*), attributing their origin to various factors: *zandaḳa* [*q.v.*], sectarianism, flattery towards rulers, human error, and senile forgetfulness. Moreover, rigorism and puritanism encouraged the traditionists to incorporate into *Ḥadīt̲h̲* moral maxims which they considered just as edifying as certain traditions called "weak".

The problem of the authenticity of *Ḥadīt̲h̲* is extremely important from the reformist point of view, for the authenticity of a *sunna* is the basis of its authority as a canonical source. All that is transmitted by the Prophet originates from God and must therefore be an article of faith for Believers (Ḳur'ān, IV, 80: "Whoever obeys the Messenger has obeyed Allāh"). Thus Muslims have every right to reject any normative tradition the authenticity of which is not absolutely beyond doubt, as is the Ḳur'ān. Hence the necessity of great care in distinguishing between the *Sunna*, which carries the same authority as Scripture, and the traditions whose authenticity has not been completely established, even if they are in harmony with the "spirit" of the Salaf. In fact, the Salafiyya only recognize the normative value of a very small number of *ḥādīt̲h̲s* which are held to be rigorously authentic: *aḥādīt̲h̲ mutawātira, wa-ḳalīlᵘⁿ mā hī* (*Manār*, iii, 572). By stating that Muslims are obliged to follow "the Ḳur'ān and the *Sunna*, and them alone" (al-Kawākibī, *Umm al-ḳurā*, 73; Ras̲h̲īd Riḍā, *Tafsīr* . . ., *passim*; Ibn Bādīs, *S̲h̲ihāb*, Feb. 1936, 95), the reformists based their doctrine on the teachings of the Prophet (cf. Wensinck, *Handbook*, 130 A: "Clinging to Ḳur'ān and *Sunna* alone"; 223 A: "Confining oneself to Ḳur'ān and *Sunna*"). But, bearing in mind their very limitative conception of the *Sunna*, they maintain in fact that Islam as a religion (*dīn*) can essentially be reduced to the Ḳur'ān.

The doctrine of *iṣlāḥ* tends to attach a greater importance to the Ḳur'ān as a source than to *Ḥadīt̲h̲* as it has generally been accepted in classical dogmas. This trend is taken to its logical conclusion in the works of recent authors, who reduce the authority of *Ḥadīt̲h̲* almost out of existence in favour of the Ḳur'ān and *id̲j̲tihād* [*q.v.*] (cf. Maḥmūd Abū Rayya, a former disciple of Ras̲h̲īd Riḍā: *Aḍwā ʿala 'l-sunna al-muḥammadiyya*, Cairo 1958; and on present positions on the subject of *Ḥadīt̲h̲*: *REI*, 1954, *Abstracta*, 117-23; G. H. A. Juynboll, *The authenticity of the tradition literature*, Leiden 1969).

Logically, Islam could no doubt be defined exclusively in relation to the Ḳur'ān, a thesis upheld by another disciple of Ras̲h̲īd Riḍā, Muḥammad Tawfīḳ Ṣidḳī, in his work *al-Islām huwa 'l-Ḳur'ān waḥdahu* which is a programme in its own right (*Manār* ix (1906), 515-25, 906-25). For this author, the foundations of Islam are the Book of God and Reason. Any doctrinal element imputed to Islam which satisfies neither the criterion of the given facts of the Ḳur'ān nor the fundamental demands of reason must be declared unacceptable. Elsewhere, M. T. Ṣidḳī demands complete freedom in evaluating the *Sunna*. It must be limited in so far as it is in disagreement with the objective facts of the Book, but where it puts forward principles of wisdom (*ḥikma*) there is nothing to prevent the Believer from referring to it, as he might to any (profane) source. The Salafiyya certainly do not go to quite these lengths. The thesis of Muḥammad Tawfīḳ Ṣidḳī (presented with some reservations by Ras̲h̲īd Riḍā) was immediately refuted by a defender of the classical doctrine (cf. Ṭāhā al-Bis̲h̲rī, *Uṣūl al-Islām*: *al-Ḳur'ān, al-Sunna, al-id̲j̲māʿ, al-ḳiyās*, in *Manār*, ix, 699-711). In the eyes of the Salafiyya Islam cannot be reduced to matters of faith and canonical obligation (*ibādāt*) which can only be held to be true in so far as they originate from Revelation and the very small number of *ḥadīt̲h̲s* shown to be authentic (*mutawātir*). Islam is also a political and social system, a complex of ethical values, a culture. In matters of usage (*ʿādāt*) and human relations (*muʿāmalāt*) determined by a socio-cultural framework which is not ruled by scriptural dispositions (*naṣṣ*), the *Sunna* and the traditions of the Salaf are helpful and instructive; they are indeed exemplary and worthy of the attention of Muslims as an excellent reference for both action and moral life. Beside these two sources, *iṣlāḥ* attaches great value to the tradition of the Salaf, which it holds to be eminently representative of the Prophet's tradition and thus indispensable for anybody who wishes to grasp the authentic message of Islam at its source.

3.—The tradition of the Salaf.—To a large extent, *iṣlāḥ* appeals to the tradition of the Salaf as an explanatory source for the *Sunna* and an important reference point for understanding the general meaning of Islam. The term *salaf* designates a fact that is both historical and cultural. It implies firstly the idea of anteriority (cf. Ḳur'ān XLIII, 57), which in classical usage is naturally linked with the idea of authority and exemplariness. The Salaf are precisely the "virtuous forefathers" (*al-salaf al-ṣāliḥ*), the predecessors whose perfect orthodoxy, piety, holiness, and religious knowledge make them men worthy of being taken as models and guides. But, in the absence of sure and sufficient biographical references, these are difficult to ascertain. It is not so much their personal qualities, however striking, that make for the authority of the Salaf, but rather their historical experience, their contact with the

Prophet in some cases and with his Companions and Successors in others. Among the innumerable witnesses of primitive Islam, the Salaf are exemplary. They represent a certain form of Islamic orthodoxy at a given period of history. Hence the need to sketch the historical context of the Salaf. The chronological points of reference are inexact and often contradictory. By *salaf* was meant, for example:—a. the "Mother of the Believers", ʿĀʾis̲h̲a, and the Patriarchal Caliphs, as well as Ṭalḥa and Zubayr (Lane, Book iv, 1408 C);—b. the principle *tābiʿūn* (*ibid.*);—c. the Prophet's Companions (al-Ṭabarī, *Tafsīr*, ed. Maʿārif, i, 93);—d. The Companions and their successors (*tābiʿūn*, on the one hand in relation to the founders of the four *mad̲h̲habs* (cf. Aḥmad b. Ḥanbal who talks of "our pious forefathers", *salafūna al-ṣāliḥ*, Wensinck, *Concordances* . . . ., i, 505 B); and on the other the latter and their immediate disciples in relation to succeeding generations (al-Tahānawī, *Kas̲h̲s̲h̲āf iṣṭilāḥāt al-funūn*, ed. K̲h̲ayyāṭ, iii, 676-7). In the works of modern reformist authors the definition of the Salaf is just as vague. For Ras̲h̲īd Riḍā they are the most eminent representatives of the primitive Islamic community, *al-ṣadr al-awwal* (*Tafsīr*, ii, 81, vii, 143, 198), those of the "first epoch", *al-ʿaṣr al-awwal* (*ibid.*, vi, 196, iii, 572), which covers the first three generations, *ḳarn* (this term is not to be taken in the modern sense of "century" but in that of a "generation of men" (*d̲j̲īl*) who lived during the same period of seventy to eighty years [*ibid.*, xi, 314, xii, 190]). In the works of Ras̲h̲īd Riḍā and Ibn Bādīs we find the same traditional definition of the three first generations; *i.e.*, that of the Prophet and his Companions (*ṣaḥāba*), that of their Followers (*tābiʿūn*) and that of the Successors of the latter, *atbāʿ al-tābiʿīn* (*Tafsīr*, viii, 50; *S̲h̲ibāb*, April 1937, 434), generations "which surpass in excellence (*k̲h̲ayriyya*) all others, as is witnessed by the Impeccable [*i.e.*, Muḥammad]" (S̲h̲ihāb, Feb. 1932, 66, allusion to the *ḥadīt̲h̲*: "the best of generations is mine, then the following, then that which comes after", cf. Wensinck, *Handbook*, 48A, lg. 40: "the best. . .". This is worth comparing with the other *ḥadīt̲h̲*, quoted by al-S̲h̲āfiʿī, *Risāla*, ed. A. M. S̲h̲ākir, 474, no. 1315: "Honour my Companions and those who follow them and those who follow these; after which untruth will appear", cf. Wensinck, *Handbook* 48 B "Muḥammad admonishes. . .").

A few chronological points of reference will serve as rough definitions of the three groups which make up the Salaf:—a) The *ṣaḥāba* (or *aṣḥāb*), who date from the first conversions (at Mecca in 610 and Medina in June 621) until the death of Anas b. Mālik (91/710 or 93/712), considered to be the last survivor of the Prophet's Companions (cf. Ibn Ḥad̲j̲ar al-ʿAsḳalānī, *Iṣāba*, i, 138; Ibn Ḥazm, *Iḥkām*, iv, 152);—b) The *tābiʿūn*: a large number of these were contemporaries of the Prophet's Companions; some might even have been alive during the Prophet's lifetime but without satisfying the conditions which would have permitted them to be classed among the *ṣaḥāba*. The last of the *tābiʿūn* died around 180/796 (*e.g.*: Hus̲h̲aym b. Bas̲h̲īr al-Sulamī, d. 183/799. He transmitted to Mālik and Sufyān al-T̲h̲awrī among others).—c) The *atbāʿ al-tābiʿīn*. There are no sufficiently precise criteria enabling us to define exactly this group of men; the reformists refer to them less frequently than to the other two, especially on the important question of ḳurʾānic exegesis (cf. *Tafsīr*, iii, 179, 208). In fact, they are essentially the most eminent disciples of the great *tābiʿūn*, *kibār al-tābiʿīn* (like al-Ḳāsim b. Muḥammad b. Abī Bakr, 101/720; al-S̲h̲aʿbī, d. 104/723; al-Ḥasan al-Baṣrī, d. 110/729; Ibn Sīrīn, d. 110/729). The middle of the 3rd/9th century can be taken as the *terminus ad quem* of this last group of Salaf. Also covered by the term Salaf are "the doctors of the second and third generations" (*Tafsīr*, ii, 82), notably the founders of the four Sunnī *mad̲h̲habs* and a certain number of their contemporaries, the strongest religious personalities from the early days of Islam, such as al-Awzāʿī (d. 157/774), Sufyān al-T̲h̲awrī (d. 161/778), al-Layt̲h̲ b. Saʿd (d. 175/791) and Isḥāḳ b. Rāhwayh (d. 238/853, cf. *Tafsīr*, vii, 552, viii, 453). Aḥmad Ibn Ḥanbal (d. 241/855) would appear to be one of the last representatives of the age of the Salaf.

In reformist usage, the Salaf are sometimes mentioned in opposition to the *K̲h̲alaf* or "later generations", under whose influence the message of Islam has been obscured, if not distorted, by innovation, the fanaticism of the Schools, and the mushrooming of sects (cf. *Tafsīr* viii, 269). This conception might appear simplistic, implying that reformists should cut themselves off from the cultural current which has never ceased to refresh the body of the *Umma* throughout the centuries. In fact the position of the Salafiyya is more subtle: outside the period of the Salaf defined above, the modern reformists do not refuse to take into consideration the contributions made by the "independent" (*mustaḳill*) doctors —independent of the Schools and Parties—who, following the example of the Salaf, were free from all sectarianism and all narrowmindedness, and whose only concern was to safeguard the integrity of the *Sunna* and the unity of the Community. Thus Abū Isḥāḳ al-S̲h̲āṭibī (d. 790/1388) is highly esteemed by Ras̲h̲īd Riḍā (cf. the eulogistic article that he devoted to him in *K. al-Iʿtiṣām*, Cairo 1332/1914, i, 1-9; *Tafsīr*, vi, 156-63, vii, 193). Moreover, the Salafiyya venerate a number of outstanding Sunnī teachers and mystics such as al-G̲h̲azālī (d. 505/1111), al-D̲j̲uwaynī (d. 438/1047), his son the Imām al-Ḥaramayn (d. 478/1085), and Ibn Taymiyya (d. 728/1328), even though they came later than the Salaf (cf. *Tafsīr*, xi, 378). These they consider as "guides to salvation" (*aʾimmat al-hudā*), seeing them as bearers of the light which brought about the periodic revival of Muslim spirituality. In the line of such men who rejuvenated Islam and faithful transmitted the ideas of the Salaf is Muḥammad ʿAbduh; to the supporters of modern reformism he is the master (*al-ustād̲h̲ al-imām*) the one who really inaugurated the renewal of Islam at the dawn of the 20th century.

Fidelity to the moral and religious tradition of the Salaf is a fundamental demand of *iṣlāḥ*. Besides the two sources, the reformists proclaim this tradition as their only basic point of reference, justifying their attitude by the following arguments:—a) *The Salaf received the sacred inheritance from the Prophet* (the dogmas of the faith, the form of worship), and transmitted it faithfully, in word and deed, *ḳawl^an^ wa-ʿamal^an^* (*Tafsīr*, vi, 277). They are the guarantors of the *Sunna* (*ibid.*, ii, 30, 82), and their liturgical tradition must be adhered to as an ideal norm, in the sense that it actualizes the spirituality of the Prophet, and to imitate this must be the highest ambition of every Muslim.—b) *The Salaf best understood and followed the ḳurʾānic message*, as it was handed down to them fresh from the Revelation (*g̲h̲aḍḍ^an^ kamā unzila*). After the Prophet, they are most qualified to interpret the Scriptures (*Tafsīr*, iii, 178, 182, vi, 196; cf. R. Blachère, *Introd. au Coran*, 225 ff.). Their reading and their meditations on the Book are indispensable for a modern understanding of the Ḳurʾān, which must avoid being both too literal or too subjective—and thus arbitrary—

approximate limit of the age of the Salaf

c) *The Salaf are the best source of information we have about the life* of the Prophet and about the way he put the Revelation into practice. On many factual points their unanimous accounts (*idjmāʿ*) are irreplacable, rounding off information given by the two sources. The Salaf thus provide the necessary framework for an understanding of the Revelation and the *Sunna*.

A complement to the *Sunna* and a source of inspiration in Islamic life (in spiritual matters as well as in secular acts), the tradition of the Salaf is more than an object of veneration for the modern reformists. The Salafiyya do not wish to be a group frozen in admiration of an ideal image of Islam reflected by the Salaf. They aspire rather to live Islam within modern society, in a simple and true manner, following the example of the Salaf. Moreover, for the theoreticians of *iṣlāḥ*, this ideal expresses their desire to rebuild the Muslim personality, not by copying foreign values and cultures but by drawing from the moral and cultural tradition of early Islam. It is this ideal that Ibn Bādīs defended in his column in *Shihāb*: *Ridjāl al-Salaf wa-nisāʾu-h* ("[famous] Men and Women in early Islam"): "Our aim is to make our readers aware of a number of our pious forefathers—men and women—underlining the eminent qualities they owed to Islam and the lofty acts they performed in its service; for their example can strengthen the hearts of Muslims, contribute to their moral improvement, inspire them with great projects, and breathe new life into them. There is no *life* for the generation of today without the *life* of the Salaf, which is nothing but their living history and the everlasting memory of them" (*Shihāb*, Jan. 1934, 14). In like manner, reformist authors tended to exploit systematically the historical and literary facts relating to the Salaf in order to point moral as well as social and political lessons. (Cf. the examples given in *Tafsīr*, iii, 92: ʿAlī b. Abī Ṭālib, 374: Abū Ṭalḥa Zayd b. Sahl; 375: ʿAbd Allāh b. ʿUmar; 376: ʿAbd Allāh b. Djaʿfar; vii, 21-23: ʿUthmān b. Maẓʿūn and ʿAlī b. Abī Ṭālib; viii, 225: Zayd b. ʿAlī and his companions, cited as martyrs (*fidāʾiyyūn*) of religious and political *iṣlāḥ*; x, 654-5: ʿAbd al-Raḥmān b. ʿAwf; see also the examples presented in A. Merad, *Le Réformisme musulman*, 287 ff.; ʿUbāda b. al-Ṣāmit and his wife Umm Ḥarām, Abū Dharr al-Ghifārī, Bilāl b. Rabāḥ, al-Nuʿmān b. ʿAdī al-ʿAdawī; 325-6: Laylā al-Shifāʾ bint ʿAmr). Biographical literature concerning the beginnings of Islam (beyond that of the *Sīra* itself) became an inexhaustible mine of historical and moral meditation for the reformists (cf. the column of *Manār*: *Āthār al-salaf ʿibra li 'l-khalaf*: that of *Shihāb* (already referred to): *Ridjāl al-salaf wa-nisāʾu-h* (from 1934 on); the lyrical and moralizing odes to the glory of the Patriarchal Caliphs like the *ʿUmariyya* (Feb. 1918, 190 lines) by Ḥāfiẓ Ibrāhīm (d. 1932) and the *ʿAlawiyya* (Nov. 1919, more than 300 lines) by Muḥammad ʿAbd al-Muṭṭalib (d. 1931); Muḥibb al-Dīn al-Khaṭīb, *Maʿa 'l-raʿīl al-awwal*[2], Cairo, 1378/1958).

The historico-cultural importance of the Salaf in the methodology of *iṣlāḥ* is considerable. Even though the Salafiyya give priority to the two sources, they put forward the principle that the Revelation and the *Sunna* inaugurated a new order in human history, and that that order became a complete living reality in and through the acts of the Salaf. Thus the reformist conception of Islam could be summarized in a statement of the following type: "The constituents of Islam are the ḳurʾānic revelation, Muḥammad's *Sunna*, and the tradition of the pious forefathers (*wa-mā kāna ʿalayh al-salaf al-ṣāliḥ*)", viewing this tradition from the aspect of its moral and dogmatic content (*Tafsīr*, vii, 143, 198, ix, 132, xi, 378; Ibn Bādīs, *Shihāb*, Feb. 1934, 99). Because they felt it was the concrete expression of the ideal "way" of Islam, the reformists continually cite the tradition of the *Salaf* in support of their missionary activity (*daʿwa*) and their teaching in matters of ḳurʾānic exegesis or social and political ethics. This fidelity to the Salaf governs one of the main doctrinal premises of *iṣlāḥ*.

C.—The Principal Doctrinal Positions.— *Iṣlāḥ* aims at a total reform of Muslim life.

1.—*For the reform of worldly matters*, *iṣlāḥ* employed oral teaching (*waʿẓ*, *irshād*) in mosques and through cultural circles well-disposed toward the Salafiyya movement. Screened by their educational and scholastic (*al-tarbiya wa 'l-taʿlīm*) or charitable (*khayriyya*) works, these associations attempted to implement the great aims of the reformists. In addition, *iṣlāḥ* was diffused by means of many publications and periodicals, some of which, like the *Manār* in the East (1898-1935), run by Rashīd Riḍā, or the *Shihāb* in the Maghrib (1924-39), edited by ʿAbd al-Ḥamīd b. Bādīs, had a deep and lasting influence.

The general reformist themes propagated among the masses can be summarized as follows: the restora-

tion of worship to its original form (which entailed certain liturgical changes, minor in themselves, but extremely irritating to traditionalist Sunnīs); preaching against a host of practices which seemed religious but had no foundation either in the Prophet's *Sunna* or in the tradition of the Salaf (funeral rites such as the public recitation of the Ḳur'ān over the tomb, the celebration of the *mawlid* [*q.v.*] etc.); and warning against pious beliefs and practices which the Salafiyya felt bore traces of the survival of paganism or the manifestation of *s̲h̲irk* [*q.v.*] (cult of the saints, invocation of the dead, etc.). The reformers also exhorted the faithful to unite, to worship in solidarity aside from the divergences of Schools and to overcome the traditional opposition between Sunnism and S̲h̲īʿism; and they encouraged the development of a moral censorship designed both to ensure the canonical obligation to obey God and eliminate Evil, and also to cleanse Muslim society of vice, gambling, the use of alcoholic beverages and drugs, etc. The education of Muslim men (and especially women) in elementary hygiene and domestic economy (including the encouragement to save) was important, as was the cultivation of a taste for order and work well done. Other educational aims were the awakening of the Muslims' intellectual curiosity, so that they might study modern science and foreign languages; and the support of projects for youth such as scouting, artistic activities, cultural activity within the many circles (*nādī*) and associations of Young Muslims (*d̲j̲amʿiyyat al-s̲h̲ubbān al-muslimīn*). All this comprised an attempt to hasten the birth of new Muslim men, capable of facing fearlessly—and without the risk of alienation—the problems of the contemporary world.

2.—*For theoretical reform.* It is important to stress that the principal reformist authors were above all men of action who did not have the time to elaborate well-developed doctrinal works. The main religious ideas of Muḥammad ʿAbduh are set out in his *Risālat al-tawḥīd*, in 133 small pages. The rest of his teachings can be found scattered piecemeal through the bulky *Tafsīr* by Ras̲h̲īd Riḍā, where his work cannot easily be distinguished from his disciples'. Al-Kawākibī (who died prematurely in 1902) produced no more than two essays: *Ṭabāʾiʿ al-istibdād* and *Umm al-ḳurā*, which contain only a small proportion of theoretical thought. The Algerian reformer, Ibn Bādīs, who, like ʿAbduh, introduced many new ideas throughout his life, left no more than a series of articles of ḳur'ānic commentary (that is, about 500 octavo pages), published in the *S̲h̲ihāb* (cf. A. Merad, *Ibn Bādīs, commentateur du Coran*). There remains the considerable work of Ras̲h̲īd Riḍā, in particular his *Tafsīr* (*Tafsīr al-Manār*), which is the most important source for the study of the dogmatic positions of modern *iṣlāḥ*. The many secondary reformist authors simply developed the ideas of their masters when they were not simply imitating their writings and teaching.

The efforts of the Salafiyya centered particularly on criticism of the fashionable doctrines of their time, either on the grounds that they were a rigid form of classical doctrine (that of the Sunnī schools), or that they were rash analyses and formulations, the result of a modernism that was dubious in principle and incompatible with the criteria of orthodoxy which *iṣlāḥ* had set up. At the same time, the reformists attempted to work out "ideal" Islamic positions, bearing in mind the objective facts given in the two sources and the fundamental conceptions of the Salaf; the latter were essentially viewed through the interpretation of Ibn Taymiyya and his pupil Ibn Ḳayyim al-D̲j̲awziyya (d. 751/1350), whom they considered the soundest authorities on the tradition of the Salaf (cf. *Tafsīr*, i, 253: it is thanks to these two that the author adhered so serenely (*iṭmaʾanna ḳalbī*) to the doctrines attributed to the Salaf). From the critical works and commentaries of the reformists (cf. *Bibliography*) we can distinguish the following doctrinal positions:

I.—*Methodology.*—The dominant Sunnī doctrine based canonical knowledge (*ʿilm*) on four fundamental sources (*uṣūl* [*q.v.*]): the Ḳur'ān, the *Sunna*, the *id̲j̲māʿ* and the *id̲j̲tihād* (cf. al-S̲h̲āfiʿī, *Risāla*, 478-9, nos. 1329-2; J. Schacht, UṢŪL, in *EI*[1]; idem, FIKH, in *EI*[2]). Starting from these four sources, juridical and moral rules (*aḥkām*) are deduced according to well-defined criteria which are the subject-matter of the science of the *uṣūl*. *Iṣlāḥ* adheres to the classical theory of the four sources (*Tafsīr* v, 187, 201, xi, 267), without accepting traditional criteria in their entirety (*ibid.*, v, 187, 201, 203, 208, 417). The reformist stance can be summarized under the following headings: the authority of the two Sources; the rejection of *taḳlīd*; a new conception of *id̲j̲tihād* and *id̲j̲māʿ*; and the necessary distinction between the *ʿibādāt* and the *ʿādāt*.

1.—*The two Sources* (Ḳur'ān and *Sunna*) constitute the basis of the whole legal system in Islam. Their authority frees Muslims from exclusive submission to traditional doctrinal authorities, thus effectively wiping out the divergences (*ik̲h̲tilāf*) between Schools (*mad̲h̲āhib*), the secular opposition between Sunnis and S̲h̲īʿism, and the hatred nurtured in Sunnī circles for sects felt to be heretical (particularly all K̲h̲arid̲j̲ism, in its present form of the Ibāḍiyya [*q.v.*]). By returning to first principles, Muslims will be able to overcome the divisive effect of the Schools but will still be able to take up all that is best from each of the many contributions (Ibn Bādīs, *S̲h̲ihāb*, March 1936, 654, Nov. 1938, 230). This would permit, for example, the possibility of an eventual unification of Muslim legislation. By preaching tirelessly for a return to first principles, the reformists were led to voice severe criticism of the orthodox Schools and their teachers, the *fuḳahāʾ* (cf. al-Kawākibī, *Umm al-ḳurā*, 72 ff.; Muḥ. ʿAbduh, *Risālat al-tawḥīd*, 15, 101, (Fr. trans. 19, 107); Ras̲h̲īd Riḍā, *Tafsīr*, ii, 258-9, iii, 9-11, iv, 49, 280, vii, 145 and following references). In their eyes, the Schools generally identified themselves with trends hostile to reason and science (*Tafsīr*, ii, 91-3); they hindered the research carried out by *id̲j̲tihād* and consequently helped to stop the cultural progress of the Community; they in fact gave priority to the study of *fiḳh* over knowledge based on the Ḳur'ān and on the Prophet's *Sunna* (*ibid.*, v, 106, 120, ix, 129-30, x, 429); they placed the authority of the "doctors" higher than the authority of the only legitimate and worthwhile *mad̲h̲hab*: that of the Salaf (*ibid.*, ix, 133). By encouraging the unconditional submission of the masses to their doctors, the Schools ignored ḳur'ānic teaching, which says that Muslims must cling together (*d̲j̲amīʿan*) to the one and only rope of salvation, the rope of Allāh (*ḥabl Allāh*), which is the Ḳur'ān (cf. the commentary of Ras̲h̲īd Riḍā on this ḳur'ānic ref. (III, 98): *Tafsīr*, v, 20 ff.). The return to the two sources (and to the tradition of the Salaf) would thus be a unifying and reconciling factor for Muslims. Freed of their fanaticism and mutual prejudices, Muslims could reunite in the fundamental unity of their *Umma*, rediscovering their original fraternity, over and above their ethnic and cultural ties. (The theme of the return to first principles was a powerful argument in favour of pan-Islamism, an idea dear to the reformist authors).

Can the return to first principles advocated by the Salafiyya be seen as reactionary? The reformists were not trying to restore to the old symbols (such as *sunna, umma, djamāʿa, imām, dār al-islām, idjmāʿ, idjtihād*) the exact same significance they had had at the time of the Salaf. Rather, such a return expresses their desire to take the two sources as an essential (but not exclusive) basis for their reflection, in order to solve the moral problems that the modern world poses to Muslims. The use to which they put certain symbols found in the Ḳurʾān or the *Sunna* sometimes corresponds to preoccupations arising from daily life in the modern world. Behind what appears to be a fundamentalist return to the sources of Islam, the Salafiyya are in fact attempting to work towards a moral and doctrinal renewal by searching for subtle concordances between the Scriptures and present-day realities (see, *e.g.*, the concepts of *shūrā* (Ḳurʾān, II, 233; III, 159) and of *ūlū 'l-amr* (Ḳurʾān, IV, 59) and their respective interpretations by Rashīd Riḍā, *Tafsīr* ii, 414, iv, 199-205, v, 180-190). A logical consequence of the principle of a return to the sources is the rejection of *taḳlīd* [*q.v.*] and the search for new ways of practising *idjtihād*.

2.—*Taḳlīd*. The reformists vigorously criticized the spirit of servile dependance upon traditional doctrinal authorities (notably in the orthodox Schools). The concept of *taḳlīd* obviously does not apply either to the pious imitation of the Prophet, which is held to be a canonical obligation (cf. Ḳurʾān IV, 59, XXXIII, 21), nor to the trusting acceptance of the tradition of the Salaf, whose moral and doctrinal authority is loudly proclaimed by the reformists (see above). In these cases, the word *ittibāʿ* (active fidelity) to the traditions of both the Prophet and the Salaf was used instead of *taḳlīd*. (Cf. in this respect the distinction made by Rashīd Riḍā, *Tafsīr*, v, 238). Such a fidelity regulates and inspires the general mission of *iṣlāḥ*, which offers the imitation of the Prophet as an "ideal of knowledge and action" (H. Laouist, *Essai*, 226). For Ibn Bādīs, the better the imitation the better is the reformist mission (*daʿwa*) accomplished (*Shihāb*, April 1935, 8). *Ittabāʿ* is the attempt to reach authenticity; it is the opposite of the spirit of speculation and innovation (*ibtidāʿ*), which is as reprehensible at a religious level as is the passive acceptance of the teachings of authority. In any case, *taḳlīd* is quite different from the attempt to model one's life on the exemplary lives (*iḳtidāʾ*) of people who, because of their piety or holiness, are worthy of imitation (*Tafsīr*, vi, 415). Finally, the considered acceptance of interpretations supplied by the most eminent *mudjtahid* cannot be described as *taḳlīd*, since they do not claim to be legislators (*shāriʿūn*) independent of God and His Prophet, but only sound guides to a better understanding of the divine Law and the *Sunna* (*ibid.*, v, 238). The same applies to the obedience which is normally due to the *ūlū 'l-amr* (Ḳurʾān, IV, 59), who work together in explaining the Law, in applying it and, generally, in putting ḳurʾānic values into practice at every level of Muslim life. The reformist criticism of *taḳlīd* is aimed both at mindless conformism and the deliberate support given to social and political structures which prevent progress and personal initiative in the name of a static vision of religion and culture. For the *muḳallid*, the reformists feel, religious life is merely the expression of acquired habits and the passive acceptance of the *status quo*; their worship is reduced to verbal formulae which have no profound meaning; and religious rites dwindle to mechanically repeated acts which have no reforming and sanctifying value. Looked at in this light, *taḳlīd* is the opposite of the spiritual and ethical demands made by the Ḳurʾān.

The Ḳurʾān contains many statements condemning mindless submission to those who went before, to the "fathers" (*ābāʾ*), a theme much used by reformist writers: *Tafsīr*, i, 425, iv, 63 (the refusal to see *taḳlīd* as the distinctive mark of Islam); viii, 21, (ref. to *sūra* XC), ix, 570, x, 428 (*taḳlīd* is condemned by the Ḳurʾān); i, 425, ii, 83, vii, 143 (it is strongly discouraged by the Salaf and the first great thinkers); v, 296, viii, 30, 144 (it is a source of error); i, 448, iii, 236, v, 296 (it is an obstacle to personal meditation on Revelation); ii, 76, viii, 169, ix, 179, x, 432 (it encourages a new form of idolatry: the excessive veneration of authorities and masters); i, 429, iii, 202, 258, iv, 49, vii, 145 (it leads to sectarianism and fanaticism); ii, 76, 108, viii, 399 (it is a cause of disunion and weakness in the Community). Since it sets greater store on arguments from authority than on personal thought and experience, *taḳlīd* is contrary to the spirit of Islam, which recognizes in reasoning beings the faculty of taking decisions in all conscience (*ibid.*, xii, 220-1; see also Muḥammad Iḳbāl's remarks in *The Reconstruction* . . ., 125-9 [Fr. trans., 136-41]). The reformist argument makes continual appeals to this sort of objection when denouncing the illegitimate (*buṭlān*) and illicit (*taḥrīm*) nature of *taḳlīd* and stressing its negative effects on Muslim teaching and ethics. *Taḳlīd* is also blamed for the cultural stagnation of Islam and the passive submission of the Muslim masses to traditional religious structures (*ʿulamāʾ* and *shaykh*s of the brotherhoods); cf. *Tafsīr*, iii, 325-7, x, 425-35, xii, 221; Rashīd Riḍā, *al-Waḥda al-islāmiyya*, *passim*; Ibn Bādīs, *Shihāb*, Nov. 1932, 552-57; A. Merad, *Le Réformisme musulman*, 275-6. In the reformist view, the concept of *taḳlīd* inevitably brings to mind that of *idjtihād*, with which it forms one of the antithetical couples (*tawḥīd*/*shirk*, *sunna*/*bidʿa*, *ittibāʿ*/*ibtidāʿ*, *salaf*/*khalaf*) around which the doctrine of *iṣlāḥ* is firmly articulated.

3.—*Idjtihād*. *Iṣlāḥ* affirms the necessity and legitimacy of the use of the *idjtihād*, which Rashīd Riḍā sees as "a life-force in religion" (*ḥayāt al-dīn*, *Tafsīr*, ii, 399). The fiction of the "closing of the gate" of *idjtihād* (from the 4th/10th century on) is thus abandoned and with it the whole heritage of interdictions and myths which weighed heavily on the Muslim conscience for so long. But the reformists did not regard the opening of the mind to *idjtihād* as absolute freedom for the critical spirit to call everything into question. Complete liberty of conscience in religious matters would lead to speculation without end (*ibid.*, viii, 317), which was not what the Salafiyya wanted. Conservative Sunnism nevertheless blamed *iṣlāḥ* for encouraging innovation and favouring doctrinal "anarchy" (*ibid.*, ii, 273, xi, 253). The theme of *taḳlīd* has been a constant source of misunderstanding between the reformists and their traditionalist adversaries, because neither agreed on the definition of this principle nor on the extent to which it can be applied. The traditionalists, who thought of religion (in its broadest sense) as a divine work which is perfectly complete (Ḳurʾān, V, 5), were afraid that modern criticism might use *idjtihād* to undermine the essential foundations of Islam. But the reformist conception of *idjtihād* also had its limiting conditions.

Firstly, *iṣlāḥ* defined an intangible sphere, which included the dogmas of the faith (*ʿaḳāʾid*), fundament-

al worship (*ʿibādāt*) and canonical prohibitions (*taḥrīm dīnī*), which are all based on the Scriptures, either because of their explicit and formal nature or because of the irrefutable authenticity of their interpretation (*mā huwa ḳaṭʿī 'l-riwāya wa 'l-dalāla*: *Tafsīr*, i, 118 (bis), xi, 268, 265; *al-Waḥda al-islāmiyya*, 136). In this domain there is no room for *idjtihād* (*Tafsīr*, v, 211, viii, 217, x, 432, xi, 268), for it would be intolerably presumptuous to attempt to question fundamental religious facts, which form "a divine institution, revealed by God" (*ibid.*, ii, 18, x, 432). Apart from these sacred matters, *iṣlāḥ* permits the use of *idjtihād*, while placing it on two distinct planes, each with a particular significance.

a)—As an effort to understand the two sources, *idjtihād* is part of the right—and duty—of every Muslim to seek to understand by himself Revelation and the *Sunna* (*ibid.*, ii, 399). One of the fundamental ideas of reformist preaching was that Muslims must feel personally concerned with the Word of God and the teaching of the Prophet which illuminates it. Constant meditation on the Scriptures, patient efforts to analyse and understand all the resources that it offers, should permit every Muslim to steep himself in the divine message and draw from it principles of moral and spiritual conduct (*hidāya*). This purely interior form of *idjtihād* helps to nourish the Muslim's spirituality and guide his conscience in his moral judgements and practical choices. Its implications are largely personal (cf. *Tafsīr*, i, 118,: the individual *idjtihād* in matters of worship, *ʿibādāt shakhṣiyya*). *Idjtihād* is also very important for the Community, which should employ a constant effort to interpret the two sources to determine the general principles of its "politics" (social, economic, foreign, etc.), in accordance with the fundamental commands of the Ḳur'ān and the *Sunna*.

b)—In so much as it is a constructive effort with implications both for the Community and in practical affairs, at a legislative rather than dogmatic level, *idjtihād* comes under the authority of the *ūlū 'l-amr* [*q.v.*]. These latter are the legitimate holders of authority (Ḳur'ān, IV, 59) and because of their responsibilities, their religious knowledge, and their particular abilities are in charge of "binding and unbinding" (*ahl al-ḥall wa 'l-ʿaḳd*), that is the right to decide in the name of the Community and in its best interests. (On the definition and role of the *ūlū 'l-amr*, cf. H. Laoust, *Essai*, 596, and *Traité de Droit Public d'Ibn Taymiyya* (on the latter's point of view); al-Kawākibī, *Umm al-ḳurā*, 58; Rashīd Riḍā, *Tafsīr* ii, 492, iii, 11-12, iv, 199-205 (important), v, 180-1 Muḥammad ʿAbduh's position), 211-2, vii, 140, 198, viii, 102, xi, 164). The acts of the *ūlū 'l-amr* should aim to bring about the moral good (*iṣlāḥ*) and material welfare (*maṣāliḥ*) of the Community. Their competence extends to affairs that are normally the responsibility of political leaders, but does not include matters of worship and personal status (*ibid.*, v, 211). In these matters, *idjtihād* would constitute a veritable heresy (*ibid.*, xi, 253). Muslims could refuse to recognize the *ūlū 'l-amr* (political and religious chiefs) who attempted to use their *idjtihād* in the sacred domain (*ibid.*, viii, 308), which is the "right of God" (*ḥaḳḳ Allāh*) over men (*ibid.*, viii, 288). Hence those attempts at *idjtihād* suggested by some Arab heads of state in order to reform certain aspects of Muslim personal status which they considered incompatible with the spirit of contemporary civilization were invalid. In all that concerns canonical prescriptions which are authentically founded on the two sources, the role of the *ūlū 'l-amr* is essentially to safeguard orthodoxy, by making sure that the *Sunna*, as it was formulated by the Salaf, is respected in its entirety (*ibid.*, iii, 11-12). This is a natural corollary of the reformist doctrinal principle maintaining that *idjtihād* is incompatible with certainty (*yaḳīn*) emanating from the absolutely evident facts of the Scriptures (*ibid.*, ii, 18, 109). The Salafiyya only allow the use of *idjtihād* in the absence of any explicit scriptural reference (*naṣṣ*), prophetic tradition (*sunna*) or general consensus (*idjmāʿ*)—in this case the consensus of the Prophet's Companions—that would resolve a given problem (*ibid.*, viii, 219).

Given this important restriction, we can distinguish two types of problems to which the *idjtihād* of the *ūlū 'l-amr* is normally applicable. i)—Purely secular business (administrative organization, scientific and technical questions, military and diplomatic affairs, etc.). In these fields, the *ūlu 'l-amr* are quite free to chose and decide, in so far as their choices are governed by the overriding interests of the Community, in line with the specific goals of Islam. ii)—On the other hand, in business which has some connection with canonical doctrine, the *idjtihād* of the *ūlū 'l-amr* could necessitate the interpretation of ḳur'ānic texts whose apparent sense is not certain, *ẓannī al-dilāla* (*Tafsīr* ii, 109). In this case, to be acceptable, the interpretation must lead to conclusions that are in agreement with the two sources in spirit and letter, for it is understood that *idjtihād* can only be used in the context of the two sources and can only refer to the textual sources and different indications (*dalā'il, ḳarā'in*) that they offer. It is a basic principle in *iṣlāḥ* that consideration of the best interests of the *Umma* would never result in solutions incompatible with the spirit, and even more, the objective facts of the Ḳur'ān and the *Sunna*.

In this light, *idjtihād* is not unlike the method of *ḳiyās* [*q.v.*] as it is defined, for example, in the *Risāla* of al-Shāfiʿī (cf. J. Schacht, *Origins*, 122 ff.). *Iṣlāḥ* denounces the "false *idjtihād* and the bad *ḳiyās*" (*Tafsīr*, iii, 238, v, 203), which would allow the incorporation into religious law (*sharʿ*) of elements based merely on individual opinion (*ra'y* [*q.v.*]) or on more or less arbitrary preferences (*istiḥsān* [see ISTIḤSĀN and ISTIṢLĀḤ]). In religious matters *ra'y* is held to be a sort of "calamity" (*baliyya*), for it only serves to hide dangerous innovations (*ibid.*, viii, 398). While the reformists are very suspicious of *ḳiyās*, *ra'y* and *istiḥsān* according to the technical use of the *fuḳahā'*, they nevertheless accept these very modes of reasoning and judgement in certain clearly laid-down conditions (*e.g.*, the *ra'y* of the most eminent religious men among the Companions (*ʿulamā' al-ṣaḥāba*); explanatory *ra'y* on the subject of ḳur'ānic exegesis; the *ra'y* of the members of the *shūrā* (*djamāʿat al-shūrā*), those responsible for the temporal affairs of the Community (*ibid.*, vii, 164)). On the different aspects of this question cf. *Tafsīr* vii, 164 (on the recommended *ra'y*, *maḥmūd*); vii, 190 (on the acceptable *ḳiyās*, *ṣaḥīḥ*); vii, 167 ff. (on the evil of rejecting *ḳiyās* totally [cf. Ibn Ḥazm, *Iḥkām*, vii, 53 ff., viii, 2 ff.] or of using it without restriction or intelligence). Throughout this debate, Rashīd Riḍā adopts—*grosso modo*—the neo-Ḥanbalite point of view, according to Ibn Ḳayyim al-Djawziyya (*Iʿlām al-Muwaḳḳiʿīn*). In short, *ra'y* and *ḳiyās* are only particular aspects of *idjtihād* and, like the latter, are only acceptable in matters outside worship (*ʿibādāt*). When determining rules and legal statutes (*aḥkām*), *idjtihād* in all its forms is only to be used when there are no antecedents in either the Ḳur'ān or the *Sunna* nor in the irrefutable

practice of the Patriarchal Caliphs (*Tafsīr*, vii, 164). Beyond the attempt at personal interpretation of the divine Word, and the desire to be open to the grace (*hudā*) which flows from it, reformist doctrine limits *idjtihād* to the type exercised by the *ūlū 'l-amr* in public affairs of a secular nature. But so that it should not be a source of quarrel and conflict, the *idjtihād* of the *ūlū 'l-amr* must be derived from mutual consultation (*shūrā*) in accordance with the ethical demands of the Ḳur'ān (XLII, 36). The Community is not bound by the personal and maybe even contradictory opinions of individual *mudjtahids*. Its acceptance by the *ūlū 'l-amr* is a condition *sine qua non* of the validity of their *idjtihād*. Moreover, from the reformist point of view, this represents the most perfect form of *idjmāʿ* [*q.v.*], by means of which the *Umma* will be able to solve the innumerable problems of its adaptation to the realities of the modern world.

4.—*Idjmāʿ*. On this point (as on *idjtihād*), the reformist position is very different from the doctrine of the classical theoreticians of the *uṣūl* (cf. al-Shāfiʿī, *Risāla*, 471 ff.; Ibn Ḥazm, *Iḥkām*, iv, 132-235 (a criticism of Ḥanafī, Mālikī, and Shāfiʿī ideas on the subject); H Laoust, *Contribution à une étude de la méthodologie canonique d'Ibn Taymīya*, Cairo, 1939; idem, *Essai*, 139 ff.; J. Schacht, *Origins*, 82-94; Muḥammad Iḳbāl, *Reconstruction*..., 164 ff.; L. Gardet, *Introduction*..., 403 ff.; idem, *La Cité Musulmane*, 119-29; see also: IDJMĀʿ). *Idjmāʿ* is recognized as third of the fundamental sources of Islam (and not only of the "Law"; cf. al-Kawākibī, *Umm al-ḳurā*, 104; *Tafsīr*, v, 187, xi, 267); but the reformists do not accept the traditional classification and formulations which arose from it (*Tafsīr*, v, 203-9). For them, classical conceptions of the subject are not justified by the two sources, (*ibid.*, v, 213) even though the idea of *idjmāʿ* is implicitly contained in the Ḳur'ān (IV, 115) and the *Sunna* (cf. Wensinck, *Handbook*, 48A; Ibn Ḥazm, *Iḥkām*, iv, 132 ff.). This methodological principle must not be defined in terms of the concept of "unanimity" (*idjmāʿ*) but rather in terms of that of "community" (*djamāʿa*), the latter being understood as "the legitimate custodians of authority" (*ūlū 'l-amr*) instead of in the usual sense of the Muslim community as a whole (*Tafsīr*, v, 213-4). Thus the reformists do not confer on *idjmāʿ* the status of either a general consensus of the Community (cf. al-Shāfiʿī, *Risāla*, 403, no. 1105 and 471 ff.), or that of a unanimous agreement of the *mudjtahids* of a given period on a given question (*ibid.*, v, 417). Like the doctrinal line of Aḥmad b. Ḥanbal and the neo-Ḥanbalite school, the Salafiyya limit (*ḥaṣara*) *idjmāʿ* at a canonical level to that of the Prophet's Companions (al-Kawākibī, *Umm al-ḳurā*, 67, 103; *Tafsīr*, ii, 108, 454, v, 187, 206, vii, 118, viii, 254, 428). Any *idjmāʿ* later than the era of the Companions is without value, particularly if it ratifies doctrines that contradict the tradition of the latter: *idjmāʿ al-mukhālifīn* (*Tafsīr*, v, 206, vii, 198). Just as matters concerning worship (*ʿibādāt*) are to be judged with reference to the consensus of the Companions (including, if need be, that of the *tābiʿūn*,), which is the sole criterion of orthodoxy, the agreement of the *ūlū 'l-amr* on secular matters is a criterion of legality, for they are the custodians of the Community's legitimacy (*ibid.*, iii, 12: the *ūlū 'l-amr* are those whom the *Umma* recognizes as having controlling power over the leaders and their public acts, *tadjʿaluhum musayṭirīn ʿalū ḥukkāmihā wa-aḥkāmihā*). The obediance due to the *ūlū 'l-amr* (by virtue of sūra IV, 59, constantly invoked by the reformists) is justified not by the argument of infallibility (*ʿiṣma* [*q.v.*]) but by considerations of public interest (*maṣlaḥa*; *ibid.*, v, 208). To summarize reformist thought on the matter, Rashīd Riḍā defines the consensus of the *ūlū 'l-amr* as the "true *idjmāʿ* that we hold to be one of the bases of our Law (*sharīʿa*)" (*ibid.*, v, 190).

In the absence of any consultative system in Islam that would enable the function of the *shūrā* to be exercised at Community level, most reformist authors have felt the need to fill the gap by using *idjmāʿ*, modernizing its form and content. But the thinking of the Salafiyya on this theme was never sufficiently elaborated for us to be able to define a coherent reformist doctrine on the practical application of *idjmāʿ* in the contemporary Muslim world. Muḥammad Iḳbāl (1934) expressed the wish that the *idjmāʿ* should be organized in the form of "a permanent legislative institution" (*Reconstruction*.., 164). Rashīd Riḍā (1922) considered the idea of using the *Djamāʿa*, a consultative body appointed to assist the supreme head (*al-imām al-aʿẓam*) of the Community (cf. H. Laoust, *Le Califat dans la doctrine de Rashīd Riḍā*, 1938, 21 ff.), but such a notion has meaning only within the perspective of a restoration of the Caliphate. With greater realism, Ibn Bādīs sets aside the problem of the Caliphate ("that vain fancy") and suggests the establishment of a *Djamāʿat al-Muslimīn*, a sort of permanent assembly composed of men of learning and experience, which would be designed to study specifically Muslim problems in order to find Islamic solutions. This important moral and religious body, acting in the name of the whole Community, would serve no one state and would be of a totally apolitical nature, so that its essential independence and liberty would be guaranteed (cf. A. Merad, *Réformisme*, 376 ff.; idem, *Ibn Bādīs Commentat.*, Chap. IV).

Though they never managed to agree on the practicalities of its establishment, the reformists did tend to see the institutionalization of *idjmāʿ* as a decisive step in the evolution of the *Umma* in accordance with Islamic principles and the ideals of the Salafiyya All who wrote on these lines held in common the idea that the *Djamāʿa* would be the privileged setting of the Community's *idjmāʿ*. It would play two roles: at a religious level, it would effect regulations by stating the orthodox position on matters that gave rise to serious disagreement (*ikhtilāf*); in secular affairs, it would be the instigator of action, through applying the principle of *idjtihād* in the vast area within its competence. It would thus work towards preventing any confusion between the respective levels of the *ʿibādāt* and the *ʿādāt*, and would contribute to encouraging the free enquiry that the Community requires in the spheres of applied science and material progress.

5.—*The distinction between the* ʿibādāt *and the* ʿādāt. Following the neo-Ḥanbalī school (cf. AḤMAD B. ḤANBAL; H. Laoust, *Essai*, 247-8, 444), modern *iṣlāḥ* tends to make a clear distinction between the concerns of the *ʿibādāt* [*q.v.*] and those of the *ʿādāt*. Once again they justify their stand by the principle that in matters of worship everything has been completely and definitely decided by God (Ḳur'ān) and the Prophet (*Sunna*); for the rest, that is to say everything concerned with the organization of material life, the *ūlū 'l-amr* are free to come to their own decisions (see above: *idjtihād*).

a)—The *ʿibādāt* come under commands (or interdictions) originating from the Ḳur'ān or from formal prescriptions laid down by the Prophet. They cover

all acts (including those of worship) and observances (of *ḥalāl* and *ḥarām* [*q.v.*]) which constitute the service of God (*ta*ʿ*abbud*). It is out of the question for anybody to introduce the slightest innovation, either because of an *idjtihād* or out of simple religious zeal. The fact of recognizing the inalterable quality of the ʿ*ibādāt*, the very centre of faith, is itself an act of fidelity in what the Believers hold in certainty from God and his Prophet; it is the sign of a sincere and total belief in the latter's *Sunna*.

b)—The ʿ*ādāt* (habits, customs, usage) cover a vast field of "earthly affairs" (*umūr dunyawiyya*) "which are individual or communal, particular or general" (Rashīd Riḍā, *Tafsīr*, vii, 140), and above all affairs of a political and legal nature (*ibid.*, iii, 327, vii, 140, 200) which vary according to time and place. It is thus not a matter merely of the traditional legal rules (*mu*ʿ*āmalāt*) or matters of "customary right", as the term ʿ*āda* [*q.v.*] is understood in the usual classical sense of *fiḳh*. In the domain of the ʿ*ādāt*, the reformists counsel tolerance (ʿ*afw*) and claim for the *ūlu 'l-amr*, if not for private individuals, freedom of decision and the free exercise of *idjtihād* (al-Kawākibī, *Umm al-ḳurā*, 67; *Manār*, iv, 210, vii, 959; *Tafsīr*, iii, 327, vii, 140-41, 191).

By virtue of this distinction, the reformists showed a prudent reserve about everything that has not been expressly decided by God or prescribed by the Prophet. For Rashīd Riḍā that which has not been prohibited by God cannot be prohibited by Man; that which God has made licit, Man cannot make illicit (*Tafsīr*, vii, 169); that which God has passed over in silence must be held to be tolerable, ʿ*afw* (*ibid.*, iii, 328, vii, 169). The "wise men" of the religion have no right to make things permitted or forbidden. Their role is simply to put into practice the revealed Law (*sharī*ʿ*a*): in this function only is obedience due to them. As for the ḳur'ānic or prophetic references to certain secular matters (the use of food and remedies, etc.), they cannot be taken as binding: they are simply "suggestions" about what is preferable and not canonical prescriptions, *irshād lā tashrī*ʿ (*ibid.*, vii, 201).

The distinction between the ʿ*ibādāt* and the ʿ*ādāt* permitted the Salafiyya to condemn the proliferation of devotional practices and interdictions propagated throughout the centuries in the name of Ṣūfism and eventually adopted by popular religion, even though they are not based on the Ḳur'ān and the *Sunna*. It enabled them, moreover, to point to their pruning of classical judicial and moral doctrine (by means of *fatwās*) and the reduction of traditional observance, in support of their claim to be the apostles of a disciplined and discreet religious temper, which they believed to be closer to the spirit of moderation that had characterized authentic Islam (the "gentle religion", *al-ḥanifiyya al-samḥa*), and more in harmony with the modern world. This distinction would also encourage a more tolerant view of local legal and social usage through classifying them as ʿ*ādāt*, and permit the toning down of doctrinal differences (*ikhtilāf*) between the important currents in the Islamic world; perhaps it would also weaken the religious quarrels inherited from old schisms. Taken to its logical conclusion, this attitude would make it possible to envisage calmly the coexistence—in the bosom of the *Umma*—of different political, socio-economic and idealogical systems, provided that the fundamental unity of Muslims in faith and worship was safeguarded and their common attachment to the essential content of Islamic law (*sharī*ʿ*a*) unimpaired.

However, such a distinction between the ʿ*ibādāt* and ʿ*ādāt* has more of an apologetic value than any real practical implication. The fragmentary (and rather vague) notions on this subject put forward by Rashīd Riḍā and al-Kawākibī do not enable us to make an exact analysis of which aspects of traditional Muslim legislation must be considered fundamental, and thus untouchable, and which can be subsumed under the ʿ*ādāt*. The postulated tolerance in matters of ʿ*ādāt* is itself ambiguous, because of the restrictive conditions—derived from the Ḳur'ān—which were put forward by the Salafiyya each time they were obliged to define their political, economic, social or cultural standpoints (although these are, in theory, the field in which ʿ*ādāt* can be used). In the reformist perspective, indeed, there are few matters that can be envisaged independently of the moral commands and general principles contained in Revelation and the *Sunna*; and whatever creative activity is envisaged, its goal must be examined in the light of the ethical and religious criteria of the two sources. *Iṣlāḥ* admits of the possibility of adapting Muslim institutions and life to the realities of the modern world, so long as this adaptation does not result in the destruction of the fundamental values contained in the two sources. Thus, on the subject of feminism and the relations between the two sexes, the Salafiyya declare themselves favourable to the emancipation of Muslim women, but not to the extent that the liberalization of their legal status would come into conflict with the legal dispositions established in the Ḳur'ān, or the family and sexual ethics of Islam (cf. on this subject, *Tafsīr*, xi, 283-87: "Islam confers on women all human, religious and civil rights"; Rashīd Riḍā, *Nidā' li 'l-djins al-laṭīf*, Cairo 1351/1932; A. Merad, *Le Réformisme musulman*, 315-31 ("Les Réformistes et le Féminisme")).

Although they claim the necessity of distinguishing between profane and religious matters, between man's relations with God and merely human activities (which are not ruled by scriptural commands), the Salafiyya did not make any decisive contribution to the separation of theology and law. From their point of view, the ambiguity of the relationship *dīn*/*sharī*ʿ*a* (which they never really attempted to clarify) makes any systematic criticism of traditional legal and moral doctrine that attempts to establish a clear-cut distinction between purely religious and social matters extremely difficult and *a priori* suspect. (It is worth noting the vigorous reaction of the reformists against the attempts made by ʿAlī ʿAbd al-Rāziḳ (1888-1968), in his *al-Islām wa-uṣūl al-ḥukm*, Cairo 1343-44/1925, to dissociate institutional and political problems from moral and theological ones; cf., Kerr, *Islamic Reform*, 179 ff.). Rashīd Riḍā notes in passing the respective values of the concepts *dīn* and *sharī*ʿ*a*, which he considers it unjustifiable to confuse (*Tafsīr*, vi, 147), but he does not draw any logical conclusion from the distinction. The distinction *dīn*/*sharī*ʿ*a* (which is no less vital than that between the ʿ*ibādāt* and the ʿ*ādāt*) could have had important consequences had it been the point of departure for serious research into the possibilities of rigorously limiting the field of application of "religious law", and thus removing from the "sacred" domain everything that did not have a fundamental link with belief or worship and should therefore come under *idjtihād*. It was left to Modernism (*tadjdīd* [*q.v.*] to undertake this research (cf., *e.g.*, the essays of Muḥammad Aḥmad Khalaf Allāh, in particular his *al-Ḳur'ān wa-mushkilāt ḥayātinā al-mu*ʿ*āṣira* (Cairo 1967), in

which he proclaims the legitimacy of "a new interpretation of the fundamental principles of the s̲h̲arīʿa, in the light of modern experience" (31)). Incomplete though it be, the distinction between the *ʿibādāt* and the *ʿādāt* suggests a need for rationality and a desire to be pragmatic, which served the Salafiyya as an argument against the stubborn conservatism of the traditionalists (*d̲j̲umūd*) and in support of the broadmindedness of *iṣlāḥ* on the subject of progress and the modern world. At the same time it is a reply to those who preach out-and-out modernism, to the detriment of fidelity to authentic Islam (as it was illustrated by the tradition of the Salaf). The reformists see in this modernism a renunciation of the "spirit of compromise" which their apologetics present as the ideal tendency of Islam.

II—Apologetics.—Alongside criticism of the traditional aspects of Islam as they appear in conservative Sunnism, in the magical and superstitious beliefs of popular religion and in the religious systems of the brotherhoods, apologetics form an important part of the principal reformist works. Though centred on internal problems of Muslim society, and often argued with missionary zeal, reformist apologetics are also addressed to the "adversaries" of Islam either directly (cf. Muḥammad ʿAbduh, *al-Islām wa 'l-radd ʿalā muntaḳidīh*, art. of 1900, Cairo 1327/1909 (Fr. trans., Ṭalʿat Ḥarb, *L'Europe et l'Islam*, Cairo 1905); idem, *al-Islām wa 'l-Naṣrāniyya*, art. of 1901, in *Manār*), or indirectly, in the form of warnings to Muslims against the seductions of Western civilization and ideologies. In both cases, the reformists attempted to demonstrate the excellence of Islam, as a "religion", as an ethical code, and as a legal, social and political system. Such apologetics develop along the following broad lines:

1.—*The liberating message of Islam.*—a. As a spiritual message. Here the argument is confined essentially to the exaltation of *tawḥīd* [*q.v.*] as a principle of human liberation. Moral liberation: the affirmation of divine unity abolishes all worship that is not directed to God (the Unique), and all pretension to infallibility, since the only infallible source is the Revelation and the Prophet, who is inspired by God (this argument is elsewhere used to refute *taḳlīd* [*q.v.*], to the extent that the latter supposes submission to an authority which is believed, or pretends to be, infallible). On the other hand, the affirmation of divine transcendance condemns any domination based on the principle of intercession (*s̲h̲afāʿa* [*q.v.*]). Consequently, *tawḥīd* denies any legitimacy to intermediary structures between man and God (as in institutional Churches), and destroys any need for the belief in the mediating function of certain categories of men (saints, mystics, etc.). Social Liberation: belief in the omnipotence of God is the basis of men's equality, for all men are equally subject to God and all men participate equally in the eminent dignity of their condition (cf. Muḥammad ʿAbduh, *Risālat al-tawḥīd*, 155-6; Fr. trans., 106; Eng. trans., 125); it emancipates minds from all resigned or passive submission, either to arguments based on authority (*taḳlīd*), or to a status of inferiority or slavery imposed by the "great" (cf. *Ḳurʾān*, XXXIII, 67, XXXIV, 31-4,; *allad̲h̲īn ustuḍʿifū*). The form of worship itself (common prayer, pilgrimage, etc.) underlines the egalitarian character of Islam.—b. The liberating message of Islam is also illustrated by the ethics of the Ḳurʾān and the *Sunna* which accept the fundamental unity of mankind and reject all discrimination based on differences of race or social condition (cf. Muḥammad ʿAbduh, *Risālat al-tawḥīd*, 172; Fr. trans., 116-7; Eng. trans., 135; *Tafsīr*, 448 ff.; an identical position in Muḥammad Iḳbāl, *Reconstruction* 89; Fr. trans., 103).

2.—*The universal quality of Islam.*—a. *As a religion* (*dīn*). Reformist apologetics merely take up the traditional theme of the universality of Muḥammad's mission (*ʿumūm al-baʿt̲h̲a*). For the Prophet was "elected to guide all nations towards Good (. . :) and call all men to a belief in the One God" (Muḥammad ʿAbduh, *Risālat al-tawḥīd*, 139; Fr. trans., 95; Eng. trans., 114; cf. also, *Tafsīr*, vii, 610, on sūra VI, 90). Like many other Muslim thinkers in our own time, reformist authors believe that Islam is the perfect universal religion, since it incorporates what is essential in previous revelations (and especially Judaism and Christianity) and perfects their message (cf. Muḥammad ʿAbduh, *Risālat al-tawḥīd*, 166 ff., Fr. trans., 112 (bottom) ff.; Eng. trans., 132 ff.; *Tafsīr* . . . , x, 448-456).—b. *As a social, legal and political system* (*s̲h̲arīʿa*). The reformists proclaim the excellence, eternal nature and universal character of Islamic law, in opposition to human legislation, which is always imperfect, despite constant revision and correction. The *s̲h̲arīʿa*—at least in those parts that are based on the Revelation—draws its essence from divine wisdom; it is thus the legislation best suited to the needs (*maṣāliḥ*) of men (*bas̲h̲ar*) in all places and at all times (Ibn Bādīs, *S̲h̲ihāb*, Jan. 1934, 57; *Tafsīr*, vi, 146) for it envisages man's well-being from two points of view, those of earthly happiness and of their future salvation (an idea dear to the reformists and developed at great length by Ras̲h̲īd Riḍā, *Manār*, i, (1898), 1, v, (1902), 459-65; *Tafsīr*, i, 11, ii, 330-41, x, 210, 437; cf. also Muḥammad ʿAbduh, *Risālat al-tawḥīd*, 124, 169; Fr. trans., 84, 115; Eng. trans., 104, 134). This does not mean that the Salafiyya think of Muslim legislation as a closed system, sufficient unto itself in its definitive truth and perfection. Though they believe that certain rulings of the *s̲h̲arīʿa* (*e.g.*, the personal status of woman) are ideal norms, which neither the old legislations (of the biblical sort for example), nor modern legislation (inspired by western concepts) are capable of matching, they do not dismiss the idea that Muslims can copy certain doctrines upheld in advanced countries. However, the Salafiyya refuse to admit that all aspects of western progress are good, and that one has to accept *en bloc* the triumphant civilizations of Europe or America, for fear of seeming reactionary (Ibn Bādīs, *S̲h̲ihāb*, Jan. 1932, 11). Moreover, the *ūlu 'l-amr* ought to co-operate in the adaptation of Muslim legislation (by means of reciprocal consultation (*s̲h̲ūrā*) and *id̲j̲tihād*), taking into account new realities, but respecting absolutely the fundamental aspects of the Law and observing the general ethics of Islam. The Salafiyya constantly repeat that in areas of every-day life, Islam gives man entire freedom (*fawwaḍ*) to act according to his well-being in the world (*Tafsīr*, ii, 205: ref. to the *ḥadīt̲h̲*: "You are best placed to judge worldly affairs", vi, 140; Ibn Bādīs, *S̲h̲ihāb*, Oct. 1930, 70). From the preceding, the reformists drew arguments to establish the liberal nature of Islam and to justify its ability to adapt (not, of course, as a *dīn*, but as *s̲h̲arīʿa*) to all human situations at any time and in any place.

3.—*The liberal spirit of Islam.*—Outside matters of faith and the unalterable elements of the *s̲h̲arīʿa* (both of which were expressly laid down in Revelation), Islam assigns no limit to the exercise of reason. This aspect of reformist apologetics, which has been amply dealt with by Muḥammad ʿAbduh

(*Risālat al-tawḥīd, passim*), Rashīd Riḍā (cf. J. Jomier, *Le Comment. coran. du Manâr*, chap. III), and Ibn Bādīs (cf. A. Merad, *Ibn Badis, Commentat. du Coran*, chap. II, Vth), will not be discussed in detail here. On the problem of faith and reason (*ʿaḳl*), the reformist position is that the ḳurʾānic message addresses itself both to the conscience (*wudjān*) and to the mind (*fikr*), and requires not only acceptance by faith but understanding by means of reason. If the Ḳurʾān limits reason, it is only in those areas which are part of the unknowable (*ghayb* [*q.v.*]), and to prevent man from falling into inevitable errors and attributing to God things which are not part of His Being.

The reformists frequently invoke the argument of reason in order to maintain not only that Islam puts no obstacles in the way of intellectual research and the exercise of *ʿaḳl*, but even that it positively encourages both and incites men to cultivate the gift of intelligence, which is a God-given privilege (Ibn Bādīs, *Shihāb*, March 1931, 78 ff., ref. to sūra XVII, 70). *ʿAḳl* in reformist usage is not exactly the knowing consciousness or reasoning reason, which seeks to reach truth independently of faith and revelation. Orthodox reformist writers understand *ʿaḳl* in opposition to blind passion (*hawā*), which smothers the voice of "healthy nature" (*fiṭra* [*q.v.*]), and doubtless in opposition to the (hyper-) critical mind. The *ʿaḳil* is not a man who can perform speculative exercise with ease and is dedicated exclusively to the cult of reason, but a man capable of judicious balanced thinking, which implies a spirit of moderation, even a certain reluctance to attempt to submit everything to one's judgment, and to explain everything solely by the light of one's intelligence.

The debate on the subject of faith and reason points to one of the contradictions of reformist thought: *i.e.*, its desire to adopt a language, and sometimes even intellectual methods, that are in conformity with the modern mind, while at the same time clinging to principles and positions which they feel are in perfect agreement with the doctrines of the Salaf. It is notable in this respect that the liberal tendencies of certain reformist writers are held back by the fear that reasoning reason will encroach on areas reserved to faith, and the temptations of human passion (*hawā*) will conquer progressively the directing principles (*hudā*) of Revelation (cf. *Tafsīr*, v, 416: opposition *hudā*/*hawā*).

However, the reformists are not particularly interested in theological and philosophical speculation. Apart from the *Risālat al-tawḥīd* by Muḥammad ʿAbduh (which describes a fundamental schema rather than a theological totality), and the *Risālat al-shirk* by Mubārak al-Mīlī (which is a refutation of Maraboutic beliefs), no truly elaborated theology can be found in the doctrinal system of the Salafiyya. They were satisfied with massive affirmations, based on texts in the Ḳurʾān, which are, from their point of view, decisive arguments. Thus they never fail to underline everything in the Ḳurʾān which seems to encourage intellectual research and constitutes an incentive for the exploration of nature and its exploitation in the service of man. They underline those parts of the Revelation that encourage men to think, to understand things, to persuade others by means of demonstrative proofs (*burhān*); they make the utmost use of all the resources of the ḳurʾānic vocabulary which deal with knowledge and the activity of the mind (cf., the *Concordantiae* by G. Flügel, in which we can see the richness of the themes formed from the radicals *ʿbr*, *ʿḳl*, *ʿlm*, *ḥkm*, *fkr*, *fḳh*); in short they attempt to show that Islam lets human reason play an important role, and that it encourages (in theory, if not in practice) human progress in the domains of knowledge and civilization (cf. the particularly vigorous doctrinal statement by Rashīd Riḍā in *Tafsīr*, 244 ff., under the eloquent title: *al-Islām dīn al-fiṭra al-salīma wa 'l-ʿaḳl wa 'l-fikr wa 'l-ʿilm wa 'l-ḥikma wa 'l-burhān wa 'l-ḥudjdja*).

The theme of knowledge and civilization plays an important role in reformist propaganda (cf. J. Jomier, *Le Comment. coran. du Manār*, chap. IV; A. Merad, *Ibn Bādīs, commentat. du Coran* chap. IV, IIIrd). Thanks to the intelligence with which God has endowed him, man can rise above erroneous belief and superstition, cultivate the sciences and adopt healthy beliefs: using it, he should also be able to increase his power over nature, to profit by the various resources of Creation, in order to achieve material power (*ʿizz, ḳuwwa*) and know a happy moral well-being. Presented in this way by the reformists, Islam appears as a religion which is particularly attentive to the moral and material progress of humanity. It was therefore an effective refutation of arguments of the type put forward by Renan (Islam is contrary to the scientific spirit) and useful in revealing the inadequacy of Marxist-orientated criticism (Islam is a reactionary doctrine). The reformists deplore the judging of Islam by the behaviour and excesses of some of its followers who distort its image through their innovations, by superstitious beliefs born of ignorance, by the imposture of false "scholars", and by the immorality of its politicians (cf. the objections enumerated by Muḥammad ʿAbduh, *Risālat al-tawḥīd*, 195-9; Fr. trans., 132-5; Eng. trans., 151-3). For when traced back to its authentic expression, to the Revelation and the *Sunna*, Islam is a religion compatible with science and civilization (*Tafsīr* . . . , ix, 23); it encourages progress and science (*ibid.*, iii, 26, 34, 106); and exalts science and freedom of research, which are the conditions of man's greatness (*ibid.*, v, 258); Islam is capable of regenerating civilization in the East and saving that of the West (*ibid.*, ix, 22). What is more:

4.—*Islam is the reforming principle of mankind* (*iṣlāḥ nawʿ al-insān, Tafsīr*, xi, 206). As a *dīn* and as a *sharīʿa*, Islam is a progression beyond previous religions (*ibid.*, 208-88: the enumeration of the various domains in which Islam has been beneficial to mankind). Hence the Muslim duty to reveal the truth of Islam: this is part of the canonical obligation to "invite to Good" (Muḥammad ʿAbduh, *Risālat al-tawḥīd*, 171; Fr. trans., 116; Eng. trans., 135; *Tafsīr* iv, 26-46, on sūra III, 104) and to "call to God" (Ibn Bādīs, *Shihāb*, April 1935, 6, ref. to sūras XVI, 125 and XII, 108). To call to God, in this case, consists in proclaiming the values of Islam, refuting, through its "proofs", the false ideas ascribed to it, and in making known its "beauties"; all this in order to fortify Muslims in their faith and to enlighten non-Muslims, less perhaps in order to convert them than to dissipate their prejudices and fanaticism. However, the notion of missionary work is not foreign to the reformists (cf. J. Jomier, *Le Comment. Coran. du Manâr*, chap. X). Nevertheless, Muḥammad ʿAbduh gives priority to the duty of Islamic tolerance over conversion: "Islam is capable, through its own light, of penetrating the hearts of men" (*Risālat al-tawḥīd*, 172). In practice, the act of calling to God leads to a certain number of religious, moral and cultural attitudes, towards both Muslims and non-Muslims.

—a. Calling to God consists above all in leading a life that is in perfect agreement with the general commands of Islam. This is the best way to ensure that the influence of the ideals contained in the Ḳur'ān will grow. On a spiritual as well as a moral level, the Prophet's example, and that of the "pious forefathers", must inspire believers: "the more perfect their imitation, the more perfect their accomplishment of the mission of calling to God" (Ibn Bādīs).—b. Preaching the truths contained in the Ḳur'ān and thus helping to transmit the revealed message (*tablīgh al-risāla*) is also "calling to God": since this message has universal implications, each part of it must be made comprehensible to all men. This theme can be related to that of the *djihād* through the Ḳur'ān (cf. *Shihāb*, April 1932, 204 ff.): for Ibn Bādīs, this ḳur'ānic expression seems to justify a militant theology and an energetic conception of religious preaching, both to rouse the masses from their inertia and indifference and to denounce the blindness of "bad religious teachers" (*'ulamā' al-sū'*) in the face of the spiritual riches of the Revelation and their reluctance to make them manifest to men.—c. Calling to God also implies the attempt to bring back to the Islamic fold those Muslims who, seduced by secular ideologies or intoxicated with modern scientific knowledge, regard Islam as "a worn-out piece of clothing that a man would be ashamed to be seen wearing", and deride its dogmas and precepts (Muḥammad 'Abduh, *Risālat al-tawḥīd*, 198; Fr. trans., 134-5; Eng. trans., 153). —d. The idea of calling to God also implies a struggle against the corruption (*fasād*) spread in Muslim society in the name of "so-called modernism" (*Tafsīr*, x, 45) and against atheism like that of Kemāl Atatürk (*ibid.*, ix, 322-3); warning against excessive individual freedom, which generates all sorts of abuse (*ibid.*, viii, 530-1) and is more or less directly responsible for the "moral crisis of the West"; enlightening people on the dangers inherent in the separation of science and religion, the cult of science *per se*, and the frantic quest for material goods without any moral goal (*ibid.*, xi, 243).—e. It also means unmasking professional politicians who may not be sincere and practising Muslims, but nevertheless use Islam for demagogic ends, either in subservience to government, or to serve their own personal ambition (*ibid.*, ii, 440). Similar strictures could be passed on recent tendencies to use religious arguments in support of some socio-economic ideology (cf. "Muslim Socialism" to which some theoreticians of "Arab Socialism refer) or political doctrine (cf. *e.g.* Khālid Muḥammad Khālid, *La Religion au service du peuple*, in *Orient* xx, (1961), 155-61). —f. In opposition to the type of nationalism encouraged by jingoistic modernists, and beyond particular fatherlands, the call to God gives pride of place to the religious link above ethnic and political ones (*ibid.*, ii, 304). It means stressing the fraternity of Islam (*ibid.*, iv, 21) and persuading Muslims that greatness and pride do not lie in the insistence on particularities of race or nationality—that new form of the age-old clan-spirit (*'aṣabiyyat al-djāhiliyya*)—but in belonging to the "Islamic human community" (*ibid.*, xi, 256). This is one aspect of the ideology of panislamism (*al-djāmi'a al-islāmiyya*) which corresponds to the political and cultural doctrine of the Salafiyya. Since Djamāl al-Dīn al-Afghānī and 'Abd al-Raḥmān al-Kawākibī, reformist authors have unceasingly called for not only the elimination of doctrinal disagreements above all in matters of the interpretation of religious Law) between orthodox Schools and even between the Sunnī and Shī'ī worlds, but, by reminding Muslims of their duty to confessional solidarity, they have pleaded the cause of a policy of strengthening political ties and interislamic co-operation. Thus would the unity of the *Umma* be recreated, even if only symbolically, through the mediation of a supreme moral assembly that would represent every Muslim country —for example in the form of the permanent assembly (*djamā'at al-muslimīn*) which Ibn Bādīs suggested (cf. A. Merad, *Le Réformisme musulman*, 376 ff.). Even this would be second best compared with the organic unity of the Community under the banner of one supreme *Imām*, which had been Rashīd Riḍā's dream (cf. his *Khilāfa*; trans. H. Laoust, *Le Califat dans la doctrine de R.R.*).—g. In reply to those who proclaimed the social and cultural values of the West, the reformists exalted the values specific to Islamic ethics, if need be by referring to the "accounts" (*shahādāt*) of Western thinkers who were sensitive to the virtues of Islam and perturbed by the moral degradation that they perceived in the materialist civilization of the Western world (cf. *Tafsīr*, x, 412, 420; xi, 243).

Reformist apologetics reveal the attitude of the Salafiyya in the face of two realities: on the one hand the material and cultural seduction of Muslim intellectual élites and ruling classes by the West; and on the other the modernists' attempt at a systematic renewal of Muslim society so that it could face, as immediately and effectively as possible, the necessities of modern life. It is thus not simply a defensive reaction against, or even rejection of, certain aspects of western civilization, but a way of replying to Muslims who believed in progress and modernism (*tadjdīd*) and who wanted to look for a compromise between the fundamental demands of Islam and the necessary adaptation of Muslim life to the realities of the modern world.

The apologetic work of the Salafiyya was not simply episodic, for it demanded that they make an effort to understand their adversaries' point of view and develop a measure of cultural open-mindedness (often, it is true, timid), and sometimes led them to moderate those aspects of their theological and moral doctrine which might have seemed too fundamentalist. But at the same time it revealed the diversity of their temperaments and attitudes in the face of practical problems, especially when they had gone beyond discussing the place of absolute fidelity to the two sources in the liturgical and dogmatic spheres, and to the tradition of the Salaf in the general ethics of Islam. Apart from the more or less favourable historical and cultural conjuncture, the success of *iṣlāḥ* in the different parts of the Arab world has been linked, to some extent, to the way in which the Salafiyya have been able to cope with the concrete problems facing Muslim society as a result of its progressive entry into the social, economic, technical and cultural norms of the modern world.

D.—IṢLĀḤ IN THE CONTEMPORARY ARAB WORLD.—At the end of almost a century of development, we can assess the ground covered by the Salafiyya reformist movement from the time of *al-'Urwa al-wuthḳā* (1884) to the present day; at this moment the Arab world is the scene of important debates on the methods of interpreting the Ḳur'ān and the authenticity of *Ḥadīth* on the one hand, and the function and autonomy of religion on the other. This is particularly true in countries in which research and cultural activity are more or less "orientated" toward—if not "mobilized" in the service of—politic-

al and social objectives that are held to be sacred, and in which national energy is often geared primarily toward social reorganization and economic construction in an attempt to overcome underdevelopment. The development of *iṣlāḥ* in a changing Arab world can be divided into three important stages:

1. — *The heroic stage*, during which Djamāl al-Dīn al-Afghānī, Muḥammad ʿAbduh and ʿAbd al-Raḥmān al-Kawākibī laid the essential foundations of a total reform of Islam (cf. the programme defined in *Umm al-ḳurā*). Reformist action during this period aimed above all at the material and moral improvement of the Community, which had barely emerged from the Middle Ages. The social, political and cultural demands made by the three leaders of modern *iṣlāḥ* had more effect than their doctrinal intervention (with the exception of Muḥammad ʿAbduh's *Risālat al-tawḥīd* which is a sort of guide for a basic theology). The reformists' written and oral propaganda thus contributed to the Community's growing awareness of notions of evolution, progress and creative effort (*idjtihād*) on a spiritual and practical plane. It is true that the cultural climate of the period—end of the 19th and beginning of the 20th century—was favourable to the adoption of these ideas in Muslim thought, for this was the era of scientism, the optimism brought about by technical progress, and the growth of the idea that efficiency was an essential element of economic prosperity and social success. Yet the function of the Salafiyya was to confer on these notions—and at first the idea of *idjtihād*—a legitimacy that would satisfy the *Umma*, by assimilating them to authentic principles of Islam (seen from an ethical and cultural angle). In its initial form the reformist current of contemporary Islam hastened the birth of Arabo-Muslim awareness of the modern world, but also gave rise to aspirations (of a socio-cultural nature etc.) and questions which the succeeding Muslim generation had to face.

2. — *The second stage* (approximately 1905 to 1950).—This period saw the emergence of a doctrinal system in which Rashīd Riḍā and *shaykh* Ibn Bādīs played a vital part. The example of these two strong personalities inspired writers whose numerous essays (in reviews like *al-Manār*, *al-Shihāb*, *Madjallat al-shubbān al-muslimīn*, *al-Risāla*, *al-Madjalla al-zaytūniyya*) enriched the thought of *iṣlāḥ* and consolidated its doctrinal positions. The principal reformist authors during the first half of the 20th century will now be briefly examined.

a) In Syria Djamāl al-Dīn al-Ḳāsimī (1866/7-1914) was a faithful disciple of the neo-Ḥanbalī tradition. His compatriot Ṭāhir al-Djazāʾirī (1851-1919) put his vast erudition at the disposal of *iṣlāḥ* (notably in the publishing field).—ʿAbd al-Ḳadir al-Maghribī (1867-1956), who in his youth was influenced by direct contact with Djamāl al-Dīn al-Afghānī, made a very fruitful contribution to *iṣlāḥ* in Syria.—Shakib Arslān (1869-1946) a brilliant writer (called *amīr al-bayān*, "Prince of Eloquence") and politician, was a firm believer in Arabism (cf. his monthly revue, *La Nation Arabe*, Geneva 1930-9); a personal acquaintance of the editor of *al-Manār*, he made a greatly appreciated contribution to that review.—Muḥammad Kurd ʿAlī (1876-1953), ex-president of the Arab Academy at Damascus (1920-53), although not properly speaking a reformist author, was a firm believer in Muḥammad ʿAbduh's ideas and can be counted among the literary and political personalities of the Arab world whose moral support of *iṣlāḥ* was greatly valued.

b) In Egypt there were many "spiritual sons" of Muḥammad ʿAbduh, who were more or less faithful to the original ideas of their master: Muḥammad Farīd Wadjdī (1875-1954), the author of a ḳurʾānic commentary with concordist tendencies, was the energetic editor of the review *al-Risāla* (founded in 1933) and a fervent propagandist for Islam.—Muḥammad Muṣṭafā al-Marāghī (1881-1945) was twice (1928, 1935) principal of al-Azhar, where he contributed to the spread of reformist ideals and struggled to strengthen the links between the orthodox schools; he attempted reforms in the spirit of Muḥammad ʿAbduh, of whom he was a worthy successor.—Maḥmūd Shaltūt (1893-1963): another grand master of al-Azhar (cf. *Djamāʿat al-taḳrīb bayn al-madhāhib* and his trimestrial revue *Risālat al-Islām*, Cairo, 1949-). —Aḥmad Amīn (1886-1954), author of an immense fresco of Islamic culture and history (*Fadjr-*, *Ḍuḥā-* and *Ẓuhr al-Islām*), was one of the principal artisans of the Arab-Islamic cultural renewal to which the promotors of modern *iṣlāḥ* aspired. By his teaching and his writing (cf. his revue *al-Thaḳāfa*, Cairo 1939), he attempted, like Muḥammad ʿAbduh, to guide Muslim thought towards a doctrine that was a sort of neo-Muʿtazilism.

c) In Tunisia the main representatives of orthodox reformist thought were Bashīr Ṣfar (d. in 1937), the much respected teacher of Ibn Bādīs, the two *shaykhs* Muḥammad al-Ṭāhir b. Āshūr (born in 1879) —author of a ḳurʾānic commentary (now being published, i-iii, Tunis 1956-71)—and his son Muḥammad al-Fāḍil b. ʿĀshūr (1900-1970) (cf. Muḥammad al-Fāḍil b. ʿĀshūr: *al-Ḥaraka al-adabiyya wa 'l-fikriyya fī Tūnis*, Cairo 1956).

d) In Algeria, besides Ibn Bādīs, notable reformists were Mubārak al-Mīlī (1890-1945), the theologian of the Algerian reformist school (see *Biblio.*); Ṭayyib al-ʿUḳbī (1888-1962), a supporter of *iṣlāḥ* who was greatly influenced by Wahhābī tendencies (he had spent his childhood in the Ḥidjāz), and owned a newspaper, *al-Iṣlāḥ* (Biskra 1927-) which appeared irregularly; Muḥammad al-Bashīr al-Ibrāhīmī (1889-1965) [see AL-IBRĀHĪMĪ]; Aḥmad Tawfīḳ al-Madanī (born in 1899), historian and politician, who was very active in the cause of Algerian national culture in the context of the reformist movement.

e) In Morocco, where the orthodox reformism of the Salafiyya was diffused at a relatively late date, few important names and workes emerged (cf. J. Berque, *Çà et là dans les débuts du réformisme religieux au Maroc*, in *Etudes... dédiées à la mémoire d'E. Lévi-Provençal*, Paris 1962, ii, 471-94).

Amongst the representative personalities of *iṣlāḥ* in the Sherifian empire, we might mention: Abū Shuʿayb al-Dukkālī (d. 1937); Ibn al-Muwaḳḳit (1894-1949), who was more interested in censuring public morality than any real renewal of Islam (cf. the art. by A. Faure on Ibn al-Muwaḳḳit in *Hespéris*, 1952, 165-95); ʿAllāl al-Fāsī (born in 1910), a writer and political leader (Independence Party, *ḥizb al-istiḳlāl*) who claims to be a Salafī (cf. his *Autocritique*, *al-Naḳd al-dhātī*, Cairo 1952).

These various authors would seem to be continuators of the doctrinal and pedagogic work of the first teachers of *iṣlāḥ*. It is nevertheless worth noting that numerous writers and poets, such as Ḥāfiẓ Ibrāhīm (1872-1932), Muṣṭafā Luṭfī al-Manfalūṭī (1876-1924), ʿAbbās Maḥmūd al-Aḳḳād (1889-1964), Muḥammad al-ʿĪd (born in 1904) etc., indirectly helped to spread *iṣlāḥ* by employing its moral and social themes in their works.

Despite its undeniable fertility (which Brockelmann only partially describes in S III, 310-35, 435-6), the

fifty-year-long work of the reformists brought no solutions which satisfied the problems of all social classes within the Community. Their doctrines—social and political as well as theological and moral—seemed to correspond more closely to the aspirations of the newly emergent urban middle class. As a group, it was relatively enlightened, and sometimes combined a minimum Arab-Islamic culture with a gloss of modern culture in one of the European languages. It wished to demonstrate its allegiance to a particular form of tradition—that of the Salaf as defined above —and at the same time to show a certain interest in things modern. The ideals of this class were expressed in terms of moderation and compromise; in the religious sphere they sought "reasonable" positions that excluded popular traditionalism (which they saw as the sign of ignorance or a reactionary spirit), as well as intransigent fundamentalism (represented by certain Muslim Brothers (*al-ikhwān al-muslimūn* [*q.v.*]). They also rejected modernism which they judged excessive (such as the advocacy of a completely secular state). The orthodox reformism of the Salafiyya was thus assured of a fairly wide public which believed in order and prudent evolution, which respected the moral authority of the religious leaders, and was convinced that the Community needed "guides" to take it along the road of a progress that would be compatible with reformist faith. But the apparently harmonious development of *iṣlāḥ* was to suffer from the political upheavals and social and moral changes reulting from the Second World War.

3. — *Recent developments* (*since the '50s*).—The post-war period marked the beginning of a complete change in the religious make-up of the Arab world. The make-up of the reformist camp underwent profound qualitative and quantitative changes. The spokesmen of *iṣlāḥ* were no longer of the calibre of Rashīd Riḍā (d. 1935) or ʿAbd al-Ḥāmid b. Bādīs (d. 1940), and at the same time the Muslim Brothers movement came to the forefront. It attracted attention by means of political action and through the doctrinal works of several remarkable personalities, like Ḥasan Ismāʿīl al-Huḍaybī, leading guide and successor of Ḥasan al-Bannā [*q.v.*]; Muḥibb al-Dīn al-Khaṭīb, a publicist of Syrian origin, ex-director of al-Maṭbaʿa al-Salafiyya (in Cairo); the Syrian Muṣṭafā al-Sibāʿī (d. 1965); Sayyid Ḳuṭb (executed in 1966), author of a ḳurʾānic commentary, *Fī ẓilāl al-Ḳurʾān*; Muḥammad al-Ghazālī, whose apologetic and doctrinal works amcunt to more than 7,000 pp. (cf. *REI*, *Abstracta*, 1961, 105-6); and Saʿīd Ramaḍān, founder and still editor of the revue *al-Muslimūn* (Cairo-Damascus, 1951- ; Geneva, 1961-).—b. The reformist movement lost that place in society which was its strength between the wars: the supporters of the main current of *iṣlāḥ* (in direct line from Rashīd Riḍā, for example) were quickly regarded as inheritors and supporters of a moral and social order already described as "traditional"—c. Paradoxically, the historical success of the reformist movement—in Algeria and, up to a point, in Egypt—contributed to its disintegration and fall. Attracted by power (and some actually absorbed into public office), many missionaries of *iṣlāḥ* abandoned their former zeal for the triumph of Islamic values and settled for a prudent opportunism. Forced by events to supply "official" religion with structures and a doctrine, they in their turn became a conformist force. The defence of pure Islam, which had been the aim of *iṣlāḥ* in opposition, was taken up by men who were enemies of any compromise with regimes which they held to be unjust or illegal, the same men whom their opponents happily called fascist or reactionary. —d. The younger generation, less and less restricted by the ability to speak Arabic only, succeeded in discovering a new vision of social and moral realities around the world (through the cinema, the illustrated press, and foreign literature); new philosophies (cf. the success of Existentialism after the War and the increasing dissemination of Marxism—which followed Communist penetration—in Arab countries); new more or less revolutionary ideologies (anti-colonialism and anti-imperialism, Arab Scoialism and unity); and a new political ethic inspired by the "Spirit of Bandung" (1955). All these factors made the young generation sceptical about the virtues of *iṣlāḥ* and doubtful of its fundamental principles, principles which had seemed as satisfying to the mind as they were reassuring to the faith of the preceding generation.—e. The rise to power of new social forces in the newly independent countries (Syria-Lebanon: 1946; Libya: 1952; Sudan: 1955; Morocco and Tunisia: 1956; Algeria: 1962), or those whose monarchies were supplanted by republican regimes (Egypt: 1952; ʿIrāḳ: 1958; Tunisia: 1957; Libya: 1969), relegated to the background the notables and national bourgeoisie, who had held power in the shadow of the previous regime. In taking over the apparatus of state, the younger generation naturally sought to extend its power to different sectors of public opinion, in order to gain control of the "national orientation". As a result, religion, wooed to an increasing extent by politics, found itself involved in a struggle—if not in a "revolution"—whose objectives were beyond its scope. Religious leaders (*muftī*s, *ʿulamāʾ*) can hardly constitute an independent class, as they did in the past, which formulates doctrines (for example about political ethics) in the name of an ideal Islam and independently of the ideology in power, or of its directives.—f. In those Arab societies engaged in a process of political liberation and social and economic transformation, *iṣlāḥ* ceased to be a reformist and progressive ideology. Its doctrinal positions on social and economic matters seemed out of date. Its calls for constant meditation of the Ḳurʾān as a source of inspiration for Muslims, in both their private and their public acts, went unheeded by young people, who were presented by modern states with more important (and in some ways obligatory) terms of reference in the form of programmes, charters, etc. The tradition of the Salaf, which *iṣlāḥ* attempted to present in an exalted light, was received by the young people without enthusiasm. For them concrete reality with its social, professional and material problems, the collective tasks it imposes, the needs that it creates (for consumer goods, leisure etc.), the amusements it offers (entertainment, sport, travel) was much more important. Reflecting the moral and aesthetic aspirations of their age, young people preferred to seek happiness in this world rather than to aim at the reformist goal of felicity in this world and the next. In its values and in the problems it posed, *iṣlāḥ* gave the appearance of being out of harmony with the rising generation, who tended to see economic, political and cultural problems as more important than ethical and spiritual ones. The younger generation willingly identified with the principles of liberalism and secularism, seeing them the ideal guiding forces of human relations and life in Muslim society today. If young people considered religion at all, it was as a secondary factor in the political strategy of the regime, especially applicable in questions of the civic and political education of the masses and as a means of sanctifying national unity. *Iṣlāḥ* was thus often

invoked in support of official ideology, not for the religious values it represented or for its references to Islamic authenticity.

This complex of phenomena which has become apparent throughout the Arab world over the last few decades clearly shows two things: the striking weakening of *iṣlāḥ* as a "driving force" in Muslim society, and its replacement by politics, which is now becoming the moving spirit on every level of national life. Politics is the most important factor of life today, for, considerably helped by the mass media and propaganda techniques, it seizes public attention, concentrating it on the acts of its rulers; in this way the life of a whole nation hangs on the "historic" speeches and oracular utterances of national leaders, those heroes and demi-gods of modern times. (Thus it is that it is possible to talk of the charisma of such and such an Arab chief of state who has become idolized by the masses). Political language itself has acquired such prominence over other forms of expression (literature, religion, etc.) that it impregnates them with its concepts and its dialectic. (In many cases the religious vocabulary seems to be nothing more than the simple transposition of the political). New powers—the state, the party—have taken over the primary role in the life of the *Umma*, and have directed its social and cultural orientations. Sometimes these powers, armed with totalitarian might, try to force the citizen's duties and beliefs on him. From this moment, religion ceased to be the most important factor in Muslim life and found itself dispossessed of its traditional function as interpreter of symbols and record of the community's conscience.

In this social and cultural context, the voice of *iṣlāḥ* lost much of its strength and effectiveness. The reformist public itself moved in the direction of modernism and atheism or became reformist groups whose concept of the role of *iṣlāḥ* in the modern world differed from that held by the Salafiyya. Such tendencies seem to be the logical result of the ideas implicit in the two main strands of reformist thought since the beginning of the 20th century—the liberal trend, which favoured a global realignment of Muslim life to the modern world, and a strictly orthodox current that hoped to preserve the initial message of Islam in its entirety within contemporary civilization, despite all opposition and obstacles.

1.—The liberal tendency was already latent in several authors of the inter-war period. Claiming more or less explicitly to be the heirs to the spirit—if not the religious thinking—of Muḥammad ʿAbduh, they had some success after the war, during a period in which the differences between reformism and modernism made themselves felt more and more acutely. The *de facto* separation of political and religious affairs resulting from the institutional and cultural development of many Arab (and Muslim) countries—a development influenced by a certain liberal spirit—led some people to examine Islamic problems and subjects which until then had been taboo. This sort of free inquiry no longer exposed them to the vengeance of the administration or to persecution at the hands of conservative religious and university circles, as had been the case for ʿAlī ʿAbd al-Rāziḳ in 1925, and Ṭāhir al-Ḥaddād in 1930. (Some delicate problems like the nature and mode of interpretation of the Ḳurʾān or the authenticity of *Ḥadīth* nevertheless continued to provoke violent arguments between orthodox *ʿulamāʾ* and avant-garde representatives of Muslim thought (cf., for example, J. Jomier, *Quelques positions actuelles de l'exégèse coranique en Egypte . . . (1947-51)*, in *MIDEO* (1954), 39-72, on the subject of a thesis by Muḥammad Aḥmad Khalaf Allāh, *Al-Fann al-ḳaṣaṣī fi 'l-Ḳurʾān al-karīm*, Cairo 1951). The idea of a social and cultural modernism that would respect personal belief was gradually accepted. This liberalism included matters of political organization, but attempted to reform traditional teaching to eliminate those aspects of religion that were holding back the evolution of Muslim society. On the religious plane, this trend supported a more flexible interpretation of the Scriptures, which, while satisfying reason and the scientific spirit, would permit the resolution of difficulties arising between practical life and the principles of the *sharīʿa*, as they were formulated by traditional orthodoxy and taken over by the Salafiyya. Taken to its logical conclusion, this trend is identical to secular modernism, which had once been combatted vigorously by Rashīd Riḍā, Ibn Bādīs and their respective schools.

2.—At the same time, the partisans of energetic reformism, worried by the success of secular tendencies and by the growth of laxity in Muslim society, reacted in the direction of an Islamic renewal on the part of the individual and the state. By reinvigorating the doctrinal positions of moderate *iṣlāḥ*, they provided sympathizers and followers for the Muslim Brothers, whose fundamental principles (discounting the political activism of some of them) are very close to the strict orthodoxy professed by the Salafiyya (cf. the brief account of their doctrine by the first supreme guide of the Muslim Brothers, Ḥasan al-Bannāʾ (1906-1949 [*q.v.*] in his pamphlet: *Ilā ayy shayʾ nadʿu 'l-nās?*, Cairo, 1939 (?). Because it attempted to restore Islamic values in their original purity, and gave the appearance of deliberately ignoring the new values of modern culture and civilization, this trend did not gain the sympathy of either the modernists—fervent defenders of social and cultural liberalism and freedom of conscience—nor that of the young who were still attached to Islam, but aware of the social and political changes taking place around them. Fully committed to the "logic of history" and hoping to avoid both the ambiguities of a reformism that was not progressive enough for them and the intransigent fundamentalism of the religious movements, which they felt to be reactionary, the young opted for a populist *iṣlāḥ*, and, taking the part of the mass of the population which previous regimes had for so long ignored, fought for social justice (one of the dominant themes in the politico-religious literature of the post-war years; cf. Sayyid Ḳuṭb, *Al-ʿadāla al-idjtimāʿiyya fi 'l-Islām*, Cairo 1952; Eng. trans. J. H. Hardie, *Social Justice in Islam*, Washington 1953). They pleaded for the socialization of culture (cf. the Egyptian "Cultural Library", aimed at the popularization of science and making it accessible to the common people). They attempted to establish a new Arabo-Islamic humanism, based on a socialist state which would put and end to exploitation and oppression, without itself employing terror (cf. in this respect the principles set down by one of the theorists of Arab Socialism (*Baʿth*), Ṣalāḥ al-Dīn al-Bayṭār, *Al-Siyāsa al-ʿarabiyya bayn al-mabdaʾ wa 'l-taṭbīḳ*, Beirut 1960; Fr. trans. by Marcel Colombe, in *Orient*, xl (1966), 173 ff.). Finally the reformist writers of this avant-garde group refused to adhere not only to social and political forms that they considered to be decisively condemned by History, but also to collective representations and ideas that they felt were the product of a medieval mentality. On the other hand, to the extent that they express, in the language of our day, something that is essential to the ḳurʾānic

message, they attempted to integrate with Muslim thought the leading concepts of contemporary culture (notably in relation to the Third World), even in the case of ideas that are the product of nominally aetheistic ideologies such as socialism (*ishtirākiyya* [*q.v.*]) and the revolution (*thawra* [*q.v.*]).

In conclusion, even though *iṣlāḥ* no longer appears to be a religious and cultural current with the force, homogeneity and unity of tone that it had had in the inter-war period, it continues to evolve different forms, some vehement, others more moderate. Whether we consider the liberal *iṣlāḥ* of the moderate intellectuals who claimed for Islam tolerance and freedom of investigation, preached the emancipation of peoples through education and instruction, and based their optimistic vision of human evolution of the triumph of Reason and Science; or the militant *iṣlāḥ* of the Muslim Brothers, with their mystique of fidelity to the Muḥammadan mission and their desire to give Islam an effective presence in the world; or the *iṣlāḥ* of the idealistic youth, expressed in "left-wing" terms and motivated by a desire for social justice and political morality; each of these trends represents one of the fundamental options preached by Djamāl al-Dīn al-Afghānī, Muḥammad ʿAbduh, and ʿAbd al-Raḥmān al-Kawākibī, and carried on by their faithful followers in the East and in the Maghrib.

At a time when cultures interact more rapidly than ever before, when the spirit of oecumenism is developing not merely in a Christian context, Muslim reformism could no longer remain enclosed within the static universe of the Salafiyya. By the very diversity of its current trends *iṣlāḥ* can escape from the rigid dogmatism which always haunts monolithic movements. In this way *iṣlāḥ* becomes the meeting-ground where many thinkers and university teachers who feel personally concerned with the future of Islam in the modern world can attempt to give Islamic culture a "new start". This has given rise to a proliferation of essays and critical works, claiming to be inspired by *iṣlāḥ*, everywhere in the Arab world (Egypt, Lebanon, Tunisia etc.), and even in Pakistan, where the ideas of Muḥammad Iḳbāl, for example, continue to be a fertile source of inspiration.

3. The main representatives of the modern reformist trend: a vast quantity of literature treats the subject from a general point of view. Cf.: Aḥmad Amīn, *Zuʿamāʾ al-iṣlāḥ fi 'l-aṣr al-ḥadīth*, Cairo 1368/1949 (on ten reformist personalities of the Arab world and the Indian subcontinent). Special studies: a) Djamāl al-Dīn al-Afghānī (1838-1897): *EI*[2], s.v.; Brockelmann, S III, 311-5; Aḥ. Amīn, *Zuʿamāʾ al-iṣlāḥ*..., 59-120; Nikki R. Keddie, *Sayyid Jamāl ad-Dīn "al-Afghānī": a political biography*, Los Angeles 1972; E. Kedourie, *Afghani and ʿAbduh*, London 1966; Homa Pakdaman, *Djamal ed-Dīn Assad Abadi dit Afghani*, Paris 1960, Bibliogr... 369-82 (tends to demystify the character by underlining the weakness in the man). Complementary study: A. Albert Kudsi-Zadeh, *Sayyid Jamāl al-Dīn al-Afghānī. An annotated Bibliography*, Leiden 1970.—b) ʿAbd al-Raḥmān al-Kawākibī (1854?-1902): Brockelmann, S III, 380; R. Riḍā, *Muṣāb ʿazīm*... (*In memoriam*), in *al-Manār*, v (1902), 237-40, 276-80; Aḥ. Amīn, *Zuʿamāʾ al-iṣlāḥ*..., 249-79; Muḥ. Aḥ. Khalaf Allāh, *Al-K., ḥayātuh wa-āthāruh*, Cairo 1962; Khaldūn S. al-Ḥuṣrī, *Three Reformers*, Beirut 1966, 55-112.—c) Muḥammad ʿAbduh (1849-1905): *EI*[1], s.v.; Brockelmann, S III, 315-21; the basic ref. still remains: R. Riḍā, *Taʾrīkh al-ustādh al-imām al-shaykh M. ʿA.*, 3 vols. Cairo, i, 1350/1931 (essentially biographical, with autobiographical notes by Muḥ. ʿAbduh, 20-5), ii, 1344/1925 (list of works and diverse writings), iii, 1324/1906 (funerary orations; obituary notices); H. Laoust, *Essai*..., 542 ff.; Aḥ. Amīn, *Zuʿamāʾ al-iṣlāḥ*..., 281-338; J. Jomier, *Le Comment. coran. du Manâr*, chap. I. The personality of Muḥ. ʿAbduh has been the object of numerous studies, unequal in interest and often in the nature of an apologia (cf. ʿAbbās Maḥmūd al-ʿAḳḳād, *ʿAbḳarī al-iṣlāḥ wa 'l-taʿlīm al-ustādh al-imām Muḥ. ʿAbduh*, Cairo n.d.). A general bibliogr. on the life, work and thought of Muḥ. ʿAbduh still remains to be compiled.—d) Muḥammad Rashīd Riḍā (1865-1935): Brockelmann, S III, 321-3; autobiographical notes in his *al-Manār wa 'l-azhar*, 129-200; Shakīb Arslān, *al-Sayyid R.R. aw ikhāʾ arbaʿīn sana*, Damascus 1356/1937; H. Laoust, *Essai*..., 557 ff.; J. Jomier, *Le Comment. coran. du Manâr*, chap. I.—e) ʿAbd al-Ḥamīd b. Bādīs (1889-1940). *EI*[2]. s.v.; A. Merad, *Le Réformisme musulman en Algérie de 1925 à 1940*, 79-86 and *Index*; idem, *Ibn Bādīs, Commentateur du Coran*, Paris 1971.—f) On secondary characters whose names are still linked to the history of the reformist trend in contemporary history, see above (*D*).

4. Works on doctrine. We will restrict ourselves here to the major works. For the rest, see the refs. mentioned in the article. a) Afghānī and Muḥ. ʿAbduh, *al-ʿUrwa al-wuthḳā*, Beirut 1328/1910, (new ed., Cairo 1958); Fr. trans. Marcel Colombe, *Pages choisies de Dj. al-D. al-A.*, in *Orient*, xxi-xxiv (1962), and xxv (1963).—b) Afghānī, *Ḥaḳīḳat-i madhhab-i nayshari wa-bayān-i ḥāl-i naysharīyān* (directed against Aḥmad Khān [*q.v.*]), Ḥaydarābād 1298/1880 (Arabic trans. by the author, same date and place); another Arabic version, based on the original Persian, by Muḥ. ʿAbduh: *Risālat al-radd ʿala 'l-dahriyyīn*, Beirut 1303/1886, then Cairo 1321/1903 (Fr. trans. based on the Arabic text): A. M. Goichon, *Réfutation des Matérialistes*, Paris 1944; (Eng. trans. based on the original Persian): Nikki R. Keddie, *An Islamic Response to Imperialism—Polit. and Relig. Writings of Sayyid J. al-D. "al-Afghānī"*, Berkeley-Los Angeles 1968.—c) ʿAbd al-Raḥmān al-Kawākibī, *Umm al-ḳurā*, [Cairo 1899], fragments in *al-Manār*, v (1902), Cairo 1350/1931, Aleppo

1959: this little work gives a summarized form of all the main themes of reformist propaganda to be developed by R. Riḍā and Ibn Bādīs.—d) Idem, *Ṭabā'iʿ al-istibdād*, Cairo 1318/1900, enlarged re-ed., Aleppo 1957. This essay was to have less impact in reformist cirles than the preceding work. —e) Muḥ. ʿAbduh, *Risālat al-tawḥīd*, Cairo, 1315/1897; new ed. (expurgated as far as the question of the "created Ḳur'ān" is concerned), with notes, by R. Riḍā, Cairo 1326/1908. This ed. was considered as definitive for more than half a century (17th. reprint 1379/1960). A new ed. by Maḥmūd Abū Rayya uses the text of the original ed. revised and corrected by the author, Cairo, Maʿārif, 1966). Fr. trans. based on the 1st. ed. by B. Michel and Moustapha Abdel Razik, *Rissalat al-Tawhid—Exposé de la religion musulmane*, Paris 1925; Eng. trans.: [Isḥāḳ] Musaʿad and K. Cragg, *The Theology of Unity*, London 1966.—f) Idem, *Ḥāshiya ʿalā sharḥ al-Dawānī li 'l-ʿaḳā'id al-ʿaḍudiyya*, Cairo 1292/1875; re-ed. in Sulaymān Dunyā, *Al-shaykh, M. ʿA. bayn al-falāsifa wa-'l-kalāmiyyīn*, Cairo 1377/1958, 2 vols. In the Introduction (64 pp.) the ed. situates the thought of M. ʿA. in relation to the problems of faith and reason, and criticizes the "excessive" rationalism of ʿAbduh. For the same sort of approach note his *Risālāt al-wāridāt* (written in 1294/1877), 1st ed., Cairo 1299/1882. According to R. Riḍā the author reconsidered, towards the end of his life, a large part of his youthful work (which deals with *kalām*, Ṣufism and the *falsafa*). —g) Idem, *Al-Islām wa 'l-Naṣrāniyya maʿa 'l-ʿilm wa 'l-madaniyya*, Cairo 1320/1902 (replies and apologetic refutations).—h) Rashīd Riḍā, *Tafsīr al-Ḳur'ān al-ḥakīm al-shahīr bi-Tafsīr al-Manār*, in 12 vols., Cairo 1346-53/1927-34 (this commentary stops at verse 52, sūrah XII, and thus only covers 2/5 of the ḳur'ānic text).—i) Idem, *Ta'rīkh al-ustādh al-imām al-Shaykh Muḥammad ʿAbduh* (see above, 3, c).—j) Idem, *Al-Khilāfa aw al-imāma al-ʿuẓmā*, Cairo 1341/1922-23 (Fr. trans. H. Laoust, *Le califat dans la doctrine de R.R.*, Beirut 1938. —k) Idem, *al-Manār wa 'l-azhar*, Cairo 1353/1934 (polemics with the conservative circles at *al-Azhar*). Many pamphlets which gather together the art. extracted from *Manār*, above all: l) *Al-Waḥda al-islāmiyya wa 'l-ukhuwwa al-dīniyya*, Cairo 1346/1928 (on the themes of *taḳlīd* and *idjtihād*).—m) ʿAbd al-Ḥamīd b. Bādīs, *Madjālis al-tadhkīr min kalām al-ḥakim al-khabīr*, part. published with *Introd.* by M. B. Ibrāhīmī, by Ahmed Bouchemāl, Constantine 1948, 96 pp.; complete, but not critical ed., by Muḥ. Ṣāliḥ Ramaḍān and ʿAbd Allāh Shāhīn, Cairo 1384/1964, 496 pp.—n) Mubārak al-Mīlī, *Risālat al-shirk wa-maẓāhirih*, Constantine 1356/1937 (a theologico-moral work strongly influenced by Wahhābī doctrine).—o) M. al-Bashīr al-Ibrāhīmī, *ʿUyūn al-Baṣā'ir*, Cairo 1963 (editorials from the paper *al-Baṣā'ir*, Algiers 1947-56, on questions of relig., soc., polit., and culture, in pure reformist tradition. —p) Maḥmūd Shaltūt, *al-Islām ʿaḳīda wa-sharīʿa*, Cairo n.d. [1959].—q) Principal reformist papers and revues: *al-Manār* (monthly, Cairo, 1898-1935; ed. Rashīd Riḍā); *al-Fatḥ* (weekly, Cairo, founded in 1926; ed. Muḥibb al-Dīn al-Khaṭīb); *Madjallat al-shubbān al-muslimīn* (monthly, Cairo, founded in 1928; organ of the *Society of Young Muslims*); *al-Shihāb* (Constantine, 1925-39; monthly from 1927 on; ed. Ibn Bādīs); *al-Baṣā'ir* (weekly, Algiers 1936-9; ed. Ṭayyib al-ʿUḳbī; new series. 1947-56; ed. Bashīr Ibrāhīmī).

5. Analytical and critical studies: Besides the names of Muḥ. Iḳbāl, H. Laoust, H. A. R. Gibb, L. Gardet, J. Jomier, quoted above, cf.: I. Goldziher, *Die Richtungen der islamischen Koranauslegung*, Leiden 1920, repr. 1970 (Arab trans. ʿAbd al-Ḥalīm al-Nadjdjār, *Madhāhib al-tafsīr al-islāmī*, Cairo 1374/1955; The *Introduction* to the Fr. trans. of *Risālat al-tawḥīd* (p. IX-LXXXV); Osman Amin, *Muḥ. ʿAbduh: Essai sur ses idées philos. et relig.*, Cairo 1944 (Eng. trans., Ch. Wendell, *Muḥammad ʿAbduh*, Washington 1953. Cf. the corrections made to this trans. by Fr. Rosenthal in *JAOS*, lxxiv (1954), 101-2); idem, *Rā'id al-fikr al-miṣri, M. ʿA.*, Cairo 1955 (enlarged version of preceding title); R. Caspar, *Le Renouveau du Moʿtazilisme*, in *MIDEO*, iv (1957), 141-202 (very thorough study, indispensable ref. on the question); P. Rondot. *L'Islam et les Musulmans d'aujourd'hui*, Paris, i (1968), ii (1960) (work of popularization based on personal experience); J. Berque, J.-P. Charnay and others, *Normes et valeurs de l'Islam contemporain*, Paris 1966 (some interesting judgements on reformist currents of Muslim thought in the 20th C.); M. Kerr, *Islamic Reform (The Polit. and Legal Theories of Muh. ʿAbduh and R. Riḍā)*, Berkeley-Los Angeles 1966 (underlines certain contradictions in reformist thought); A. Merad, *Le Réformisme musulman en Algérie de 1925 à 1940* (Book II, p. 211-432, is an examination of the doctrine); idem, *Ibn Bādīs, Commentateur du Coran* (thematic analysis of the ḳur'ānic commentary of the *Shihāb*).

6. Periodicals which frequently deal with the problems of reformism in an Arab context: *L'Afrique et l'Asie*; *Cahiers de l'Orient Contemporain*; *IBLA*; *Islamic Culture*; *JAOS*; *MIDEO*; *Orient*; *OM*; the old *Revue du Monde Musulman*; the *Revue des Etudes Islamiques* and its *Abstracta*, etc. (A. Merad)

ii.—Iran

Islamic thought and expression bearing a distinctively modern stamp has been of less quantity and importance in Iran than either the Arab lands or the Indo-Pakistan subcontinent. No figure has emerged comparable in influence or literary output to, for example, Sayyid Ḳuṭb or Muḥammad Iḳbāl [*qq.v.*]. This may be attributed in part to the relative isolation of Iran from intellectual currents in other parts of the Muslim world by virtue of its profession of Shīʿism, and in part, too, to the very nature of Shīʿism, which being in its essence an esoterism, is less susceptible to those storms of historical change that have provoked modernist reaction elsewhere. Traditional learning and institutions have, moreover, been unusually well preserved in Iran, and while Islamic modernism in other lands has frequently arisen from "lay" impatience with *ʿulamā'* attitudes to the faith and a desire to expound and implement its dictates independently of them, the Iranian *ʿulamā'* have, by contrast, maintained a high degree of influence and prestige. There have nonetheless been certain currents of modernist expression in Iran, elicited in large part by the western impact and tending to the presentation of Islam above all in terms of social and political reform and compatibility with modern science and rationality.

The beginnings of such expression are to be traced to the reign of Fatḥ ʿAlī Shāh (1797-1834), when the crown prince ʿAbbās Mīrzā invoked ḳur'ānic sanction for the introduction of certain military reforms of western provenance. The depiction of social and

political reform as deriving from religious precept and duty thereafter became a commonplace of reformist thought. It received little systematic exposition, however, and was frequently voiced by persons themselves lacking in substantial religious belief and concerned above all with the forging of a tactical device for gaining *ʿulama'* and mass upport for reform and westernization. Most prominent and influential among this class was the Perso-Armenian Mīrzā Malkum Khān (1834-1908). On the basis of his private statements (particularly to his friend and confidant, Ākhūndzāda), it may be concluded that he was a freethinker; yet he belongs to the history of Islamic modernism in Iran by virtue of his expedient and influential exposition of the Islamic acceptability, even necessity, of reform. This theme he put forward in a number of treatises, especially *Kitābča-yi Ghaybī*, and above all in the celebrated journal *Ḳānūn*, published in London from 1890 to 1898.

In the identification of religious duty with the need to reform, the question of law played a crucial part: whether the law of a regenerated state was to be the *sharīʿa* or a code of western inspiration. The problem was solved — if only in the most immediate sense — by the equation of both on the basis of allegedly shared fundamentals: the just and orderly functioning of society for the increase of prosperity. This equation, implicit in the very title of Malkum's journal, was set forth more clearly (and probably with a greater degree of inward conviction) by Mīrzā Yūsuf Khān Mustashār al-Dawla in his treatise entitled *Yak Kalima* (1870). The "one word" of the title is law, which constitutes the sufficient solution to all of Iran's problems, and the law in question consists of the French legal codes, which Mīrzā Yūsuf Khān attempts to prove compatible with Islam by means of quotation from the Ḳur'ān and *Ḥadīth*. He wrote another work in similar vein, *Rūḥ-i Islām*, in which he stated: "I have found proofs and evidences from the Glorious Ḳur'ān and reliable traditions for all the means of progress and civilization, so that none shall henceforth say, 'such-and-such a matter is against the principles of Islam,' or, 'the principles of Islam are an obstacle to progress and civilization'."

The influence of Sayyid Djamāl al-Dīn Asadābādī (Afghānī) [*q.v.*] in Iran tended in a similar direction of westernizing reform, although the religious tone and content of his thought was far more considerable than in the case of either Malkum or Mīrzā Yūsuf Khān. It is now fully established that he was of Iranian birth; yet his impact upon his homeland was almost certainly of less importance than his role in other parts of the Muslim world. His major work in "defence" of religion, *Ḥaḳīḳat-i madhhab-i nayčirī*, was written and first published in Ḥaydarābād (1881), largely in response to certain local Indian conditions, and the Arabic version of the work, *al-Radd ʿala 'l-dahriyyīn*, was probably more widely read than the Persian orignal. Nonetheless, during Djamāl al-Dīn's two trips to Iran in 1886-1887 and 1889-1891, he came into contact with a variety of persons upon whom he appears to have made a considerable impression. Among these may be mentioned Sayyid Ṣādiḳ Ṭabāṭabā'ī, father of Sayyid Muḥammad Ṭabāṭabā'ī, one of the most prominent *mudjtahids* active in support of the constitutional revolution, and Mīrzā Naṣr Allāh Iṣfahānī Malik al-Mutakallimīn, the celebrated constitutionalist preacher. While taking refuge at the shrine of Shāh ʿAbd al-ʿAẓīm to the south of Tehran in 1890, he also met many lesser persons, and he may in general be presumed to have strengthened the current of Iranian modernism, although to a degree inferior to that claimed by posthumous legend.

Foremost among the themes traditionally associated with the influence of Sayyid Djamāl al-Dīn was Pan-Islamism [*q.v.*], which did indeed come to occupy a certain place in Islamic modernism in Iran, despite the separateness resulting from Shīʿism. It was felt that both the Ottoman Empire and Iran were exposed to the same danger of extinction at the hands of western imperialism, and that union under the Ottoman ruler, as sultan thought not caliph, was a desirable measure of defence. While in Istanbul in 1892, Sayyid Djamāl al-Dīn formed a circle of Iranian exiles—Azalīs for the most part, strangely enough—to conduct propaganda with a view to strengthening such feelings. Letters were sent to the Shīʿī *ʿulamā'* both in Iran and at the shrine cities of ʿIrāḳ which elicited a favourable response. Contacts between Istanbul and the Shīʿī *ʿulamā'* survived Djamāl al-Dīn's death and played a role of some importance in the affairs of Iran for a number of years, particularly from 1900 to 1903. The only substantial treatment of Pan-Islamism in Persian was the tract entitled *Ittiḥād-i Islām* by the Ḳadjar prince Mīrzā Abu 'l-Ḳāsim Shaykh al-Ra'īs (published at Bombay in 1894). In recent years aspirations towards Islamic solidarity have received renewed expression in Iran, but with Sunnī-Shīʿī rapprochement as their aim rather than political union or federation.

Certain modernist themes, in particular the religious desirability of social and educational reform and the duty of acquiring modern scientific learning, were adumbrated in works not primarily religious in tone and intention: *Kitāb-i Aḥmad* (1896) and *Masālik-i Muḥsinīn* (1905) of the Ādharbāydjānī Ṭālibov, and the *Siyāḥatnāma-yi Ibrāhīm Bīg* (3 vols., 1903-1909) of his compatriot Zayn al-ʿĀbidīn Marāgha'ī.

None of the works or tendencies indicated so far emanated from the *ʿulamā'*, although they may have been influenced by some among them to various degrees. It is not until the years of the constitutional revolution (1905-1911) that we find a coherent and serious statement on questions of political and social reform, inspired by genuine concern and expressed in scholarly terms, issuing from the *ʿulamā'* class. The work in question is a treatise on constitutional government from the viewpoint of Shīʿī Islam, entitled *Tanbīh al-umma wa tanzīh al-milla dar asās wa uṣūl-i mashrūtiyat* (first published 1909, reprinted with an introduction by Sayyid Maḥmūd Ṭāliḳānī in 1955). The author was Shaykh Muḥammad Ḥusayn Nā'īnī (1860-1936), a *mudjtahid* resident in Nadjaf who had been a pupil of the celebrated Mīrzā Ḥasan Shīrāzī, author of the *fatwā* so effective in the tobacco boycott of 1891-1892, and who enjoyed the close friendship of the great constitutionalist divines, Mullā Kāẓim Khurāsānī and Mullā ʿAbd Allāh Māzandarānī. The participation of a large and significant number of the Iranian *ʿulamā'* in the constitutional revolution has often been regarded as a result of confusion and circumstantial pressure, as the continuation of traditional *ʿulamā'* hostility to the state in a situation the novelty of which they failed to recognize. Nā'īnī's book delineates the positive doctrinal reasons for their support of constitutionalism, firmly grounded in the Ḳur'ān and *Sunna*. He defines the functions of the state as the establishment of equilibrium within society and its defence from external attack. The power enjoyed by the state should be limited to that necessary for fulfilling these functions; any excess tends inevitably in the direction of tyranny, which in turn tempts the ruler to usurp the divine attribute of sovereignty, and thus to commit the cardinal sin of *shirk*.

Such perversion can be fully prevented only by the *ʿiṣma* of the ruler, his freedom from sin and error, and it was for this reason that legitimate rule belonged to the Imāms during their lifetime. After the occultation of the twelfth Imām, legitimacy has withdrawn from the earthly plane, and a degree of usurpatoriness is bound to haunt all existing regimes. It is nonetheless both possible and desirable to reduce that degree to a minimum by limiting the power of the ruler and instituting an assembly (*madjlis*) of representatives which shall implement the consultative principle enunciated in the Ḳurʾān. Such an assembly may act as a legislature only with regard to matters not already covered by the *sharīʿa*, or by giving specific implementation to items legislated for in general manner by Ḳurʾān and *Sunna*. The functioning of the assembly is to be regulated by a constitution, and objections that the constitution somehow vies with the *sharīʿa* as a new, comprehensive code are ill-informed or mischievous. There results from conceding to the assembly a limited legislative power a duality of religious and secular law; but the innocuity of secular law will be guaranteed by the presence in the *madjlis* of a number of *mudjtahids*, and in any event, perfect implementation of the *sharīʿa*, with all aspects of life integrated according to its ordinances, will be possible only with the return of the Imām to the plane of manifestation. Nāʾīnī's statement of the desirability of constitutional rule in Shīʿī terms indicates not only how the *ʿulamāʾ* were able, in later decades, to refer to both the Ḳurʾān and the constitution as sources of authority for political life, but also how it was possible for them to ally themselves with secular elements in the pursuit of common political objectives.

Modernist thought and expression, in Islamic terms, remained dormant throughout the reign of Riḍā Shāh (1926-1941), under whose auspices a nationalist ideology with secularist and anti-Islamic tendencies was fostered, although not as energetically as in neighbouring Turkey. After his deposition and the succession to the throne of Muḥammad Riḍā Shāh, a certain freedom of expression came into being of which use was made by various religious circles, and although the possibilities of uninhibited expression have since suffered a sharp decline, Islamic modernism in Iran has continually developed in the post-war period. During the last decade in particular, a large body of religious literature has made its appearance, modern in its tone of thought and its preoccupation with socio-economic problems, the interrelations of science and religion, and the task of restating Islam in a manner comprehensible to secularly educated youth.

In the period between the accession of Muḥammad Riḍā Shāh and the overthrow of prime minister Muḥammad Muṣaddiḳ in July 1953, the resurgence of Islam as a visible factor in public affairs was marked by an extreme degree of political activism, largely unaccompanied by intellectual or literary activity. This observation applies both to the organization of the Fidāʾīyān-i Islām [*q.v.*], under the leadership of Nawwāb Ṣafavī, and to the figure of Āyat Allāh Abu 'l-Ḳāsim Kāshānī. The Fidāʾīyān never evolved a consistent ideology or any serious programme for reshaping the life of state and society in Islamic terms. Their organ, *Zilzila*, consisted largely of commentaries on questions of the day, with more permanent questions receiving only fragmentary treatment. Kāshānī, although temporarily co-operating with the Fidāʾīyān, represented the tradition of the constitutionalist *mudjtahids* of the early part of the century and had indeed been one of the foremost pupils of Mullā Kāẓim Khurāsānī in Nadjaf. In his speeches and correspondence, Kāshānī reflected the thinking of this earlier generation of *ʿulamāʾ*, accepting, like Nāʾīnī, the Ḳurʾān and the constitution as dual sources of political authority. His expression of the theme had an abrasive polemical edge that reflected the extreme tensions of the period.

At this time, the dominant figure in the religious life of Iran was not Kāshānī, but Āyat Allāh Ḥusayn Burūdjirdī (1875-1962), a figure universally acknowledged to have exceeded Kāshānī in piety and learning, while quietist—and even occasionally loyalist—in his political attitudes. Burūdjirdī cannot, in any important sense, be called a modernist, for he did not concern himself to any remarkable degree with political or social problems. Nonetheless, during the one-and-a-half decades that he functioned as sole *mardjaʿ-i taḳlīd* [*q.v.*] of the Ithnā ʿasharī Shīʿī community, he initiated a process of renewal and self-criticism within the religious institution which has gathered momentum after his death and largely contributed to the contemporary spate of religious concern and thought in Iran. Burūdjirdī established a network of communication reaching out from Ḳum to all regions of the country to regularize the collection of *sahm-i imām*, a measure that later proved useful for the dissemination of religious guidance and directives. In the field of pure scholarship, he revived the independent study of *ḥadīth* and instigated a critical revision of the fundamental Shīʿī manual, Muḥammad b. Ḳasan al-Ḥurr al-ʿĀmulī's *Waṣāʾil al-shīʿa ilā taḥḳīḳ masāʾil al-sharīʿa*. He demonstrated a serious concern for a Sunnī-Shīʿī rapprochement, and to this end entered into correspondence with successive rectors of the Azhar. With their co-operation, there was established in Cairo, with a branch in Ḳum, an institution called *Dār al-taḳrīb bayna'l-madhāhib al-islāmīyya*, issuing an organ under the title of *Risālat al-Islām*. This concern of Burūdjirdī has survived his death, and while the absence of diplomatic relations between Tehran and Cairo for a number of years made it difficult to pursue contacts with the Azhar, this obstacle was removed in September 1970, and the rector of the Azhar, Muḥammad al-Faḥḥām, paid an extended visit to Iran in the summer of 1971 in the course of which he met a number of leading *mudjtahids*, including Ayat Allāh Muḥammad Hādī Mīlānī in Mashhad. Another initiative of Burūdjirdī which has continued to bear fruit was the dispatch of Shīʿī emissaries to western Europe, both to cater to needs of Iranians abroad and to propagate Shīʿī Islam among interested Europeans.

The death of Burūdjirdī deprived the Shīʿī community of its sole *mardjaʿ*, and the problem of leadership and direction posed itself in an unusually acute manner. It was widely felt that the traditional process whereby one or more of the *mudjtahids*, qualified by piety and pre-eminence in religious learning, had emerged to be sources of guidance, was defective and incapable of answering the true needs of the community. For all the deep respect that Burūdjirdī had enjoyed, his failure to provide authoritative guidance during the events that had convulsed Iran in the Muṣaddiḳ period was felt to be a defect from which his successors should ideally be free. It was recognized, moreover, that the mastery of the traditional religeous disciplines was by itself no longer an adequate training for the effective guidance of society and the application of Islamic solutions to contemporary problems. On the other hand, acquisition of the various branches of specialized knowledge that seemed necessary for the task was clearly beyond the capacities

of a single individual. Some therefore concluded that a collective *mardja*ʿ was desirable. Many of these considerations, together with suggested solutions, were adumbrated in a collective volume entitled *Baḥt͟hī dar bāra-yi mardjaʿiyat wa rūḥānīyat*, first published in 1963 and since reprinted with supplementary material. This book, the work of seven authors, including both *ʿulamā*ʾ and lay writers, was probably the most influential and substantial piece of religious writing to appear in Persian since Nāʾīnī's discussion of constitutional government. It concluded a brief and clear exposition of certain fundamental concepts such as *taḳlīd*, *idjtihād* and *walāyat* (treated by Sayyid Muḥammad Ḥusayn Ṭabāṭabāʾī and Murtaḍā Muṭahharī), and of the proper social function of the religious classes in general and the *mardja*ʿ in particular (discussed by Mahdī Bāzargān and Sayyid Muḥammad Bihis͟htī). Possibly the most important sections were those in which Muṭahharī discussed the need to provide an independent financial basis for the religious institution, thus freeing it of subservenience to either state or populace, and those in which Bāzargān and Sayyid Murtaḍā Djazāʾirī proposed the replacement of an individual by a collective *mardja*ʿ (termed by the latter *s͟haurā-yi fatwā*).

In addition to such discussion of problems peculiar to S͟hīʿism in the present age, the postwar religious scene in Iran has also witnessed the translation into Persian of modernist works produced elsewhere in the Islamic world. Some of the authors most frequently translated are Sayyid Ḳuṭb, Muḥammad Ḳuṭb ,Yūsuf al-Ḳarḍāwī and others associated with the Ik͟hwān al-Muslimīn [*q.v.*], and Mawlānā Abu 'l-Aʿlā Mawdūdī, leader of the Pakistani Dhamāʿat-i Islāmī. Among the more influential of the works translated, special mention may be made of Sayyid Ḳuṭb's *al-ʿAdāla al-idjtimāʾiyya fī 'l-Islām*. The translations are occasionally supplied with footnotes to indicate S͟hīʿī divergent opinions when deemed necessary.

The most prolific and influential writer of original modernist literature in Iran today is Mahdī Bāzargān, one of the contributors to the collective volume already mentioned. His work is characterized by the clear influence of certain Sunnī modernists, a concern with demonstrating the confluence of scientific fact with religious truth, and a fluent and persuasive style. His first book was *Muṭahhirāt dar Islām* (1943; later reprinted), a detailed demonstration of the biological and hygienic utility inherent in the Islamic prescriptions for ritual purity. Of his later production, totalling some twenty titles to date, mention may be made of *ʿIshḳ wa parastis͟h* (1963), a work subtitled "the thermodynamics of man"; *Duʿā* (1964), discussing the psychological benefits of prayer; and *Dars-i Dīndārī* (1965), stressing the continuing need of man and society in the modern world for religion. Bāzargān has also been politically active as one of the moving spirits behind the Nihḍat-i Āzādī, a religiously orientated component of the proscribed oppositional National Front. One of his associates in this venture has been Sayyid Maḥmūd Ṭāliḳānī, author of a number of works including the significant treatise *Djihād wa S͟hahādat* (1965).

Most of the works of Bāzargān and Ṭāliḳānī have been published by a Tehran house known as S͟hirkat-i Intis͟hār, which continues to put out an ever-increasing volume of modernist religious literature. A few specimens may be cited by way of example: ʿAlī G͟haffūrī's *Islām wa iʿlāmīyya-yi djahānī-yi ḥuḳuḳ-i bas͟har* (1964), aiming to show how Islam has prefigured the notion of universal human rights; Muḥammad Taḳī S͟harīʿatī's *Tafsīr-i Nuvīn* (1967), a commentary on the last *djuz*ʾ of the Ḳurʾān, markedly rationalist in tendency; and Muḥammad Mudjtahid S͟habistarī's *Djāmiʾa-yi insānī-yi Islām* (1969), a work stressing the universalist and fraternal aspects of Islam.

There are too certain special classes of religious literature worthy of note. One is the popular religious biography, of which the chief exponent is Zayn al-ʿĀbidīn Rahnamā. His immensely successful biography of the Prophet, *Payāmbar*, first published in 1937, has gone through more than fifteen editions and been translated into French (Paris 1957). Rahnamā's work is characterized by skilful narrative technique and a free use of invented dialogue. A two-volume *Zindagānī-yi Imām Ḥusayn* (new edition 1966) has enjoyed similar popularity. Also deserving of mention in the same genre is the Persian translation of C. V. Gheorghiu's French biography of the Prophet under the title of *Muḥammad, payg͟hambarī ki az nau bāyad s͟hinākht* (1964).

Polemical literature forms another notable division of contemporary religious writing. Numerous works have been written stressing the unique identity of the S͟hīʿa, partly as an adjunct to and partly in contradiction of, moves towards a Sunnī-S͟hīʿī rapprochement. Probably the best work in this category is Sayyid Muḥammad Ḥusayn Ṭabāṭabāʾī's *S͟hīʿa dar Islām* (1969). The vast work in Arabic on the supposed appointment of ʿAlī as successor to the Prophet at the pool of K͟humm, S͟hayk͟h ʿAbd al-Ḥusayn Amīnī's *al-G͟hadīr*, has been partially translated into Persian. A more popular treatment of the same subject is the anonymous and collective work *Ḥassāstarīn farāz-i tārīk͟h yā dāstān-i g͟hadīr* (1969). Other works are aimed at refuting the attacks made on S͟hīʿī Islam by the radical anti-clerical Aḥmad Kasravī in his frequently reprinted *S͟hīʿagarī*. In this category mention may be made of Ḥādjdj Sirādj Anṣārī's *S͟hīʿa chi mīgūyad* (third edition, 1966), and Muḥammad Taḳī S͟harīʿatī's *Fāʾida wa luzūm-i dīn* (1965). Finally, there exists an extensive literature in refutation of Bahāʾīsm, chiefly in pamphlet form.

In addition to the printed word, the broadcast lecture on religious subjects has played a part of importance in the diffusion of contemporary Islamic thought, particularly in an era of decreasing mosque attendance. The names of Muḥammad Taḳī Falsafī and Ḥusayn Rās͟hid stand out among the especially celebrated preachers; the texts of their lectures have been collected and published in book form.

Another innovation of the postwar period has consisted of societies and organizations devoted to *tablīg͟h*, to the propagation of the faith by means of the printed and spoken word. The earliest of these was the Andjuman-i Tablīg͟hāt-i Islāmī, founded in 1943 by Dr. ʿAṭā Allāh S͟hihābpūr with headquarters in Tehran and branches in a number of provincial cities. It published a number of booklets on the fundamentals of religion, as well as a magazine entitled *Nūr-i dānis͟h* and a yearbook bearing the same name. The activities of the organization seem to have faded out in the late 1950s.

In 1965 there was established in Ḳum an institution called the Dār al-Tablīg͟h al-Islāmī, the fulfilment of the wishes of the late Burūdjirdī and under the auspices of another *mudjtahid*, Āyat Allāh Muḥammad Kāzim S͟harīʿatmadārī. The institution trains students in the religious science, not, like the traditional *madrasas*, for the sake of pure knowledge, but with a view to the effective propagation of religion among the masses. English is among the subjects taught, and it is intended to institute missionary activity abroad. On the occasion of the fourth anniversary

of the institution, a lavish volume entitled *Sīmā-yi Islām* was published, containing contributions by leading contemporary religious writers. Closely associated with the activities of the Dār al-Tablīgh is an author by the name of Sayyid Hādī Khusraushāhī, a figure well-known in international Islamic circles and editor of the popular religious magazine *Maktab-i Islām* (appearing since 1958).

More recently still, there has been founded in Tehran the institution known as Ḥusayniya-yi Irshād, a centre where well-attended lectures on religious subjects are given by prominent figures both from the *ʿulamāʾ* and the world of learning. It too has publications to its credit, the most notable being a two-volume collection of papers entitled *Muḥammad, khātam-i payghambarān* (1969). During the *ḥadjdj* season, the Ḥusayniya establishes a temporary branch at Minā, where Iranian pilgrims go to receive guidance and hear lectures on the significance of the pilgrimage.

(Hamid Algar)

iii.—Turkey

Within the Ottoman-Turkish context *iṣlāḥ* seldom meant modernism in religion. The word has more often been associated with political reform which, in turn, meant at first (during the 11th/17th and 12th/18th centuries) the restoration of the old political order, and later (approximately after 1800), a reconstitution of the political system on the basis of principles more and more remote from those of sultanate and caliphate. There is no word consistently used to denote the idea of religious modernism, as distinct from the modernization of religious institutions such as the *madrasas*, where again the term used was *iṣlāḥ*. There is no major movement of religious modernism comparable with those found elsewhere in the Islamic world.

The absence of a concept and movement of religious modernism seems to be a result of the characteristic Ottoman fusion of religion and state, symbolized by the frequent use of the term *dīn-u-devlet* by Ottoman writers. In an institutional or in a theological sense, very little scope was left for the rise of a religious modernism independent of political reform movements. The Ottoman polity had succeeded more than any other in maintaining Islam and its representatives, the *ʿulamāʾ*, within the framework of the state organization. The religious institution, which represented no spiritual or ecclesiastical authority, was merely a segment of the ruling institution, and was organized into an order or *odjaḳ* [*q.v.*]. Its role lay mainly in the cultivation of jurisprudence (*fiḳh*), the giving of opinions on legal matters (*iftāʾ*), and the execution of the *sharīʿa* law and the *ḳānūn* (*ḳaḍāʾ*). The *madrasa* was not primarily a school of theology, but was chiefly a training centre of jurisprudence. Through its judiciary, the state had adopted Sunnī orthodoxy, with an emphasis on Māturīdī theology and the Ḥanafī school of jurisprudence, and thus limited the possibilities for theological controversies.

However, besides the orthodox religious institution, with its educational and judicial regimentation and hierarchy, scope was also given to another stream of religious institutionalization which came closer to what might be regarded as an autonomous spiritual institution. These were the mystic orders or *ṭarīḳas*, of which there was a rich variety as a result of their tendency to split and multiply. Most of them, however, adhered, at least ostensibly to one or other of the main conservative, moderate, and extremist trends in terms of their attitudes toward the world and the state. It was only when a clash took place within the accepted limits of discrepancy between the *ʿulamāʾ* and Ṣūfī orders that there was the possibility of some kind of religious controversy. When such a clash extended to the basic tenets of orthodoxy, the *ʿulamāʾ* tended to view it more in political than religious terms and treated the exponents of such views as heretical. In all such cases the *ʿulamāʾ* easily obtained the support of the political power. The majority of the *ṭarīḳas*, however, avoided open antinomianism and maintained their position within the framework of the Ottoman polity. They adopted quietism or indifferentism on theological-political matters and were inclined more and more to ritualism and incantation or to poetry and art. This tendency not only safeguarded their existence, but also added prestige and enhanced their popularity among various classes of society, particularly among the artisans, the military, and the bureaucracy. The *ṭarīḳa* thus represented another example of the union between religion and state, attracting the participation not only of the *ʿulamāʾ* but also of high ranking statesmen, often even of the rulers themselves. Furthermore, the Ottoman state succeeded, in the later period, in making the *ṭarīḳas* a semi-official pillar of the state by recognizing the *mashāyikh* alongside the *ʿulamāʾ* in various ceremonial affairs.

After a fairly long period of partnership between the state, the *ʿulamāʾ*, and the *ṭarīḳas*, religious and spiritual controversies arose when in the 11th/17th century all of them faced the earliest challenges of the modern world. The objects of their controversies, such as coffee-drinking, smoking, intoxication, the use of silk or jewellery, emotional extravagance in daily life or in religious observance, belief in powers above or beyond the state and God may seem unimportant, but they were innovations partly introduced by the material affluence of the ruling class and the monetary and fiscal crises caused by the advent of an inflated economy and the concomitant disruption of the traditional orders of the Ottoman polity, accompanied by the impoverishment of the masses. The confluence of these factors made the problem of innovation (*bidʿa*) the central theme of religious controversies. The *ʿulamāʾ* and the *mashāyikh* accused each other of such innovations while the state, perhaps the real culprit, took the occasion to tighten its grip upon both.

However, no basic change in the traditional outlook of the *ʿulamāʾ* and Ṣūfī orders took place before the challenge of the modern world, although one should not conclude that the *ʿulamāʾ* always took a negative attitude toward innovations. Because of their vested interest in the maintenance of the Ottoman system, their attitude to change was dictated by their principle of *maṣlaḥa*, political expediency. Only in a few cases did the *ʿulamāʾ* openly oppose government policies and attempts at reform. In periods of tension the *ʿulamāʾ* turned against the Ṣūfīs rather than against the state, and under their attacks, the *ṭarīḳa*s became more docile. This was an important stage on the road towards their later decline and discredit. The *ʿulamāʾ* as a whole stood firmly on the side of the state, although with a relative degree of elasticity, but they survived the first phase of the crisis only with a tangible loss of religious vitality and initiative. Both of these religious institutions were thus in decline, long before 1800. Already in the middle of the 11th/17th century Ḳoči Beg [*q.v.*], in his *Risāla*, had described the corruption of the corps of *ʿulamāʾ*, and later Ḥādjdjī Khalīfa (Kātib Čelebi [*q.v.*]) in his *Mīzān al-ḥaḳḳ fī ikhtiyār al-aḥaḳḳ* (English translation by G. L. Lewis, *The balance of truth*, London 1957) ridiculed the nonsensical controversies raging between the *ʿulamāʾ* and the *shaykh*s and deplored the depth of ignorance in rational and religious sciences in the *madrasas*. While the *ʿulamāʾ* had become thoroughly worldly, the *ṭarīḳa*s tended to become more removed from reality.

The reign of Selīm III (1789-1807), as the first period of serious attempt at comprehensive reforms, found the *ʿulamāʾ* more active in worldly affairs than interested in religious reform. Among the reform projects submitted to this ruler the best one was prepared by ʿAbd Allāh Molla, a high ranking member of the *ʿulamāʾ*. None of his recommendations for the reforming of the religious institution, however, had any effect upon the *Shaykh al-Islām*, the head of the *ʿulamāʾ*, nor upon his colleagues, and produced nothing tangible which could be called modernism in religion. The *ṭarīḳa*s fell into further disrepute and, at least one of them, the Bektashiyya, received a deadly blow from the *ʿulamāʾ*-supported destruction of the Janissaries under Maḥmūd II in 1826, because of the alleged association between the two. Since then, the *ṭarīḳa*s have never recovered, with the exception of two intervals, the first during the reign of ʿAbd al-Ḥamīd II (1876-1909) and the second from the 1940s on.

The earliest sign of a fundamental change in the position of the religious institution only appeared when some of the provisions of the *Tanẓīmat* charter were implemented. At first, the *ʿulamāʾ* managed to ignore the implications of the *Tanẓīmat* reforms for religious modernism. While the *Tanẓīmat* proved to be a new step in further involving the religious institution in politics, at the same time it marked the first split between religion and state. For example, while the *Shaykh al-Islām*, as the head of the religious institution, was given a permanent and prominent position in the cabinet, half of the judiciary was reserved for the new Ministry of Justice, the regulation of all pious foundations was assigned to the jurisdiction of the Ministry of *Awḳāf*, and all newly formed schools were put under the Ministry of Education [see BĀB-I MASHĪKHAT].

Despite this trend of laicization of the institutions which were traditionally under the control of the religious institution, the *Shaykh al-Islām*, the *ʿulamāʾ* and the *madrasa*s continued to play conspicuous roles in wordly affairs. That these activities varied from combating the laicized institutions, or sabotaging the codification of the *Medjelle*, to backing the state against the interference of the European Powers aimed at further secularizing reforms and participating in secret conspiracies for the deposition of rulers, is an indication of the fact that the *ʿulamāʾ* had lost their internal unity, and their association with the state had become tenuous.

During the *Tanẓīmat*, as well as the constitutional movement of the young Ottomans, the *ʿulamāʾ* produced no prominent religious thinker. The only outstanding figure who came from the *ʿulamāʾ* class was Aḥmad Djewdet Pasha (1822-1895 [*q.v.*]), but he became prominent only after he left the religious institution and became a secular statesman. Djewdet was perhaps the greatest reformer of the period, but as a legal reformer and not as a religious thinker. He succeeded in curbing the tendency of the *Tanẓīmat* statesmen toward a wholesale adoption of new codes from France on the one hand, and, on the other, recognized the inability of the *ʿulamāʾ*, as the spokesmen of the *sharīʿa*, to fulfil the requirements of a modern legal system. The *Medjelle* [*q.v.*] (1870-77) and the *Ḳānūn-u-Erāḍī* (1858) were the major products of his attempts at the modernization and codification of Islamic law. His englightened modernism, however, did not extend to constitutionalism. While he received the acclaim of the Young Ottomans as a modernist on matters of *fiḳh*, he sided with ʿAbd al-Ḥamīd II against the constitutionalists, although it was the very same ruler who interrupted Djewdet's work in codification under pressure of the famous reactionary *Shaykh al-Islām*, Ḥasan Fehmī [*q.v.*].

The reign of ʿAbd al-Ḥamīd II (1876-1909 [*q.v.*]) was a period of total eclipse for any type of religious reform. It became instead a period of resurgence for the *ṭarīḳa*s, particularly for those which had no historic position in the Ottoman empire but were imported, mostly from North Africa, and which ʿAbd al-Ḥamīd seems to have encouraged in order to renew Ottoman influence in Arab countries. These *ṭarīḳa*s became centres of obscurantism, and the attempt to use them for political purposes sealed the fate of these once vigorous foci of popular religiosity. It is to be noted that during the reign of ʿAbd al-Ḥamīd, who espoused pan-Islamism, no trace of the modernist ideas of men like Muḥammad ʿAbduh [*q.v.*] is discernible, although there was an abundance of the literature of the "Refutation of the Materialists" type inspired by Djamāl al-Dīn al-Afghānī [*q.v.*].

Some influence of Muḥammad Abuh's modernism was found, on the other hand, in pre-1908 writings of the secular intelligentsia who were at war with ʿAbd al-Ḥamīd. Dr. ʿAbd Allāh Djewdet, who is regarded as one of the most extreme atheists among the Young Turks, was the first to give space to Muḥammad ʿAbduh's ideas in his review *Idjtihād*, published in exile. After the restoration of the constitutional regime in 1908, the first modernist review, *Sirat-ı Mustaḳīm* (later *Sebīl ul-Reşad*), appeared as the organ of the younger *ʿulamāʾ*, who no longer constituted a clerical order in the Old Ottoman sense. The leading figures of this modernist review, however, were handicapped by the complications created by the impending clash between the Pan-Ottomanism of the Young Turks and the Islamic-Arab nationalism of the Egyptian modernists. The review appeared to be more in the footsteps of Rashīd Riḍā than Muḥammad ʿAbduh. In reality, very little space was given to ʿAbduh in *Sirat-ı Mustaḳīm*; only two arti-

cles were published about him, both being translations. What was believed to be modernism in Arab countries thus appeared in Turkey to be a religious reaction against the Ottoman caliphate. The secular Westernists also denounced these modernists as reactionaries. A controversy between the two poets of the two camps, Tewfīḳ Fikret and Meḥmet ʿĀḳif [Ersoy], has remained ever since as the model of the conflicting views of the secularists and the modernists.

While the modernists of the *Sirat-ı Mustaḳim* steadily turned conservative in *Sebīl ul-Reşad* as they were challenged by Westernists and nationalists, the cause of religious modernism was taken up more strongly by the secularist intelligentsia. ʿAbh Allāh Djewdet [see DJEWDET] and Kïlïçzāde Ḥaḳḳï, both writing in *Idjtihād*, launched attacks against the traditional *ʿulamā*ʾ as well as the modernists. The most prominent and influential figure, however, appeared from among the ranks of the Turkist nationalists. This was Ziya Gökalp (1876-1924 [see GÖKALP]). Unlike his contemporay Mūsā Djār Allāh or Bigief (1875-1949), the theologian and reformer of the Turkish Muslims of the Russian Empire, Gökalp was neither a theologian nor a religious thinker. As a romantic populist and nationalist sociologist he developed a three-principled ideology, in which Islam was significant only within the limitations of westernizing modernism and of the cultural revival of the Turkish nationality. In the scattered writings of Gökalp (ed. and trans. by N. Berkes) we find his views on Islamic modernism inseparable from his ideas of the secular state and national culture.

The religious modernism of Gökalp paved the way for the more radical secularism of the Kemalist era (1923-1938). Kemal Atatürk (1881-1938) was even more remote from the tradition of the "Islamic sciences", the *ʿulamā*ʾ, the *madrasas* and the *ṭariḳas*, which he always associated with backwardness, ignorance, superstition and conspiracy, and he saw no place for them in the increasingly laicized political and social institutions. The most spectacular of his revolutionary changes were the abolition of sultanate, caliphate, and Islamic law. The *ʿulamā*ʾ organization, the *madrasas*, and *zāwiyas* of the *ṭariḳas* were closed and their properties transferred to the *waḳf* administration, which had already become a department of government.

It would be misleading to regard the Kemalist reforms as a total eradication of Islam in Turkey. What was really eradicated was Islam in its entanglements with the Ottoman pattern of state and religion. To the extent to which Islam had been institutionalized within this historic polity, within which it had always suffered from formalism and sterility, it inevitably suffered from the disestablishment of that polity. Islam was now made dependent upon the voluntary adherence of the believer; the places of worship were kept open and their administration put under a department of religious affairs financed by the state, but deprived of any prerogative of theological or dogmatic authority. While the recognized religions (Islam, Christianity, and Judaism) were taken under the protection of the law, any political formation in association with any of these religions was banned, and the establishment of any new sect or *ṭarīḳa* was prohibited. The decline, stagnation, and corruption of the old religious institutions, which were nothing but aspects of the decline and fall of the Ottoman Empire, made the Kemalist reforms easier and more acceptable than we are some imes led to believe.

It was only after the cooling of the national fervour (which had greatly facilitated the implementation and acceptance of the Kemalist religious reforms) after World War II that a new interest in Islam re-appeared. Here again we see no sign of *iṣlāḥ* in the sense of modernism, as was always the case in the Turkish tradition. Four lines of development may be distinguished. (1) Scholarly interest in Islam. Works of a historical nature, editions or translations of texts, and some sociological studies. (2) A growing interest of the rising bourgeoisie in religion, mainly expressed in raising funds for repairing old religious buildings or for the construction of new mosques, and in various manifestations of religiosity such as the observance of religious holidays, recitals of the Ḳurʾān or *Mawlid* poetry, alms-giving, pilgrimage, and fasting (3). The rise of new illegal *ṭarīḳas*, mostly of non-traditional types, as sectarian protest groups, favoured on the whole by artisans, small shopkeepers and traders. (4) Anti-secular ideological tendencies clamouring for the restoration of the *sharīʿa* and even of an Islamic state. This decidedly anti-Kemalist trend is mostly favoured by dissatisfied groups of Westernized intelligentsia and a faction of the nationalist youth. The fact that all of these were given a free hand, partly because of the rise of the multi-party system in opposition to single party rule, and partly because of the relative consolidation of democratic freedoms, has led those who took them as signs of a religious modernism and those who believed that they are the signs of a reactionary return to the past to attach an exaggerated importance to them as representing a stage going beyond the Kemalist conception of religious reform. That all appear to have class, occupation, region, and party motivations and alignments indicates that the Kemalist reforms succeeded in changing the Ottoman polity into one in which religion can become a point of political conflict as it is in all modern democracies.

iv.—India-Pakistan

Indian Muslims were among the first Muslim peoples to come in contact with Western civilization; but it was only after the establishment of the rule of the British East India Company in the wake of the Battle of Plassey (1757) that the direct impact of western institutions came to effect their lives and minds. The reform of the civil and criminal, but not the personal branches of the *sharīʿa* law into the form of Anglo-Muhammedan law, which developed in the last decades of the 18th century [see SHARĪʿA], was the first major injection of reformism affecting the legal and social life of the Indian Muslims. But in the formulation and development of this reformism they played no part.

The direct impact of Europe was felt by some Indo-Muslim travellers during the late 18th and early 19th centuries. These included Iʿtiṣām al-Dīn, Yūsuf Khān Kammalpūsh, and Mīrzā Abū Ṭālib Khān. Of these the last [*q.v.*] was by far the most receptive and analytical. The influence, if any, of these travellers on the formation of opinion among the Indo-Muslim élite was insignificant.

The apologetic formulation of modernism is traced usually to Sayyid Aḥmad Khān [*q.v.*], whose writings are, no doubt, the foundation of its subsequent development; but the actual pattern of this apologetic was formulated a decade or so earlier by Karamat ʿAlī Djawnpūrī (d. 1873) in his *Maʾākhidh al-ʿulūm* (Eng. tr. ʿUbaydī and Amīr ʿAlī, Calcutta 1967). He presents the later quite familiar apologetic thesis that modern scientific discoveries not merely coincide with, but have actually resulted from the inspiration of the Ḳurʾān, transmitted to Europe through Spain; and that in absorbing the discoveries of modern Western sciences, Muslisms would really be reverting to the truth implicit in their own religion.

The towering figure of Sayyid Aḥmad Khān dominates the entire edifice of Indo-Muslim modernism. He equates the implied and interpreted truth of ḳurʾānic revelation with his understanding of two 19th-century criteria of judgement, "reason" and "nature". Revelation is the word of God, and "nature" the work of God; between the two there can be no contradiction. Of the four traditional sources of Islamic law, he rejects *idjmāʿ* (consensus) [*q.v.*]; substitutes *ḳiyās* (analogy [*q.v.*] by *idjtihād* (use of individual reasoning) [*q.v.*], which he considers to be the right of every educated and intelligent Muslim; doubts the authenticity, and therefore the validity, of much of the corpus of *ḥadīth* [*q.v.*]; and concentrates almost exclusively on a re-interpretation of the Ḳurʾān. In his ḳurʾānic exegesis he denies the validity of *naskh* (abrogation) [*q.v.*], considering it relevant only to the historical sequence of Jewish, Christian and Muslim scriptures, the later scriptures abrogating the earlier ones. His eschatology, angelology and demonology is non-material and based on rationalizations. In his interpretation of the social structure of Islam he argues against the permissibility of either slavery or polygamy. On the other hand, he justifies interest on capital and property, equating the forbidden *ribā* (usury) with compound interest.

Sayyid Aḥmad Khān's work was supplemented by that of his associates, of whom Čirāgh ʿAlī, who wrote extensively of the possibilities of reform in a modern Muslim state and on *djihād* [*q.v.*], was more radical. Mahdī ʿAlī Khān Muḥsin al-Mulk, who was also Sayyid Aḥmad Khān's successor in implementing his educational and political policies, was comparatively more moderate in his religious views. The apologetics of Sayyid Aḥmad Khān and his colleagues were only partly accepted by the Indo-Muslim upper middle class élite; they were rejected in various details, but on the whole broadened the horizon and liberalized the concept of religious faith. They were totally repudiated by the *ʿulamāʾ*.

Amīr ʿAlī [*q.v.*], who wrote exclusively in English, with a mixed Muslim and western readership in mind, did not belong to Sayyid Aḥmad Khān's Aligarh movement, but was very considerably influenced by it, and propagated its apologetic and reformist formulations.

Whereas Sayyid Aḥmad Khān was opposed to revivalism as backward-looking, it became a recurrent theme in the drama of modernization with the *Musaddas* and other poems of his associate Ḥālī [*q.v.*]; this element reached its zenith in the pan-Islamic verse of Iḳbāl [*q.v.*].

Muḥammad Iḳbāl (1875?-1938) is the most outstanding figure of 20th-century Indo-Muslim modernism; but compared to Sayyid Aḥmad Khān his modernist orientation and analysis is more subtle, vague, less easy to grasp in its totality and at times even contradictory. His appeal is primarily poetic, to some extent intellectual, but not effectively theological.

The set of values which Iḳbāl more or less arbitrarily selects as necessary for the development of the individual self and the community are not directly derived from the Ḳurʾān, but traced to it apologetically. These values are movement, power and freedom, which form the recurring leitmotifs of his poetic work and of much of his sustained writing. In his religious thought intuition is a basic concept and defined as a higher form of intellect; at certain stages it is equated with prophethood; and it plays an important role in Iḳbāl's Bergsonian view of evolution, which is basically moral despite its reliance on the value of power. In law Iḳbāl also places a great deal of emphasis on *idjtihād*; but unlike Sayyid Aḥmad Khān he accepts the validity and broadens the concept of *idjmaʿ* equating it with democracy or a parliamentary system of government; at the same time making some concessions to the view that the *ʿulamāʾ* have also a role to play in any movement aimed at reformism in order to balance it—a view which to a great extent has influenced the pattern of constitution-making in Pakistan. For Indian Islam he proposes a role of conservatism which may counter-balance the secularism adopted by Turkey.

His contemporary Abu'l-Kalām Āzād (1888-1958) is not exactly a modernist; but he liberalizes and humanizes Islamic belief, in his exegesis of the Ḳurʾān, by stressing the attributes of God as the Nourisher, the Provider, the Merciful One and the Beautiful One. Whereas Iḳbāl had placed man at the centre of the universe as God's viceregent with limitless potentialities, Āzād again restores God to the supremely authoritative position in the scheme of the universe, and leaves man little choice but to admire, obey, worship and follow Him.

Both Iḳbāl and Āzād influenced the thought of

Ghulām Aḥmad Parwīz (Parwez) whose modernism is, on the whole, this-worldly and pragmatic, but based on an untenable extravangant and far-fetched interpretation of the ḳur'ānic terminology. Because of his exegetical extravagance his influence on the modernist élite has been minimal.

These landmarks of the intellectual history of modern Islam in India had some effect on the social modernization of the Muslim upper classes up to 1947. Only after that date did the great debate between westernization and orthodoxy begin in Pakistan, and it still continues. In terms of social reform the one precarious gain so far made by modernism in Pakistan has been confined to the revision of Muslim family law, which has made polygamy a little more difficult and divorce a little less easy. The élite which created Pakistan and which has been ruling it subsequently is, on the whole, modernist and westernized in social outlook as well as in the processes of administrative decision-making; but in politics and in constitution-making modernism is heavily under the pressure of orthodoxy, especially of the fundamentalist movement of Abu 'l-Aʿlā Mawdūdī.

v.—CENTRAL ASIA [see Supplement]

ISLĀM, submission, total surrender (to God) — *maṣdar* of the IVth form of the root *S L M*.

I. DEFINITION AND THEORIES OF MEANING.

1.—Ḳur'ānic references.—The "one who submits to God" is the *Muslim*, of which the plural *Muslimūn* occurs very often throughout the sūras. *Islām*, on the other hand, occurs only eight times there; but the word must be considered in conjunction with the fairly common use of the verb *aslama* in the two meanings which merge into one another, "surrender to God" (an inner action) and "profession of *Islām*", that is to say adherence to the message of the Prophet. The eight occurrences of *Islām* are as follows:—

a). Three verses stress its quality of interiority: "Whomsoever God desires to guide, He expands his breast to Islam" (VI, 125); *Islām* is a "call " from God, which must prohibit falsehood (LXI, 7) and which places whoever receives it "in a light from his Lord" (XXXIX, 22).

b). Three other texts, constantly quoted through the centuries, stress the connection between *islām* and *dīn* [*q.v.*]. It is certainly appropriate in this context to translate *dīn* as "religion", though without forgetting the idea of debt owed to God which it connotes. "Today, I have perfected your religion (*dīn*) for you; I have completed My blessing upon you; I have approved *islām* for your religion" (V, 3), and "the religion, in the eyes of God, is *islām*" (III, 19). The surrender of the whole Self to God can alone render to Him the worship which is His due; whosoever should seek for another religion, his search would not be approved (cf. III, 85).

c). The action which operates *islām* supposes a "return" to God, *tawba*, a conversion. The Ḳur'ān speaks of "conversion to *islām*"—to condemn the unbelief (*kufr*) of those who had nevertheless made a profession of faith (IX, 74). Similarly it condemns the complacency of the Bedouins who boast of their *islām* "as if it were a favour on their part" (XLIX, 17). In addition: "Say: 'Do not count your *islām* as a favour to me; nay, but rather God confers a favour upon you, in that He has guided you to belief, if it be that you are truthful" (*ibid.*). A little earlier, the very important verse XLIX, 14 had made a clear distinction between *islām* and *īmān*: "The Bedouins say: 'we believe'. Say: you do not believe; rather say, 'We surrender' (*aslamnā*). Faith has not yet entered into your heart".

It would therefore be an exaggeration to state, with A. J. Wensinck (*The Muslim Creed*), Cambridge 1922, 22), that "in the Ḳur'ān the terms *islām* and *īmān* are synonymous". It is true that to recognize oneself as a Muslim and to be a believer are two existential realities which together take possession of a man's whole being to ensure his salvation (*ibid.*). But the Ḳur'ān (XLIX, 14 and 17, and still more IX, 74) evokes an explicit profession of *islām* which is in no way a guarantee against the sin of *kufr*, and has no saving value unless it is the expression of faith. On comparing these verses with III, 19 and V, 3 (insistence on the idea of *dīn*), we see that the ḳur'ānic statements themselves urge men to make *islām* not merely a (general) act of submission and surrender to God, and not merely obedience to God's commandments, but also an affirmation which grants

admission to the *ummat al-nabi*, the "people of the Prophet", whatever their inner dispositions. These diverse connotations were to recur throughout the ages, as a result of the self-awareness brought about by the *umma*.

2. — Some *ḥadīth*s. — In the collections of *ḥadīth*s the emphasis, in defining *islām*, will be placed upon submission to God, expressed by deeds: above all, the prescribed acts of worship, including adoration of the One God, but also the *khayrāt*, "good works". Thus, by way of example: in al-Bukhārī, ii, 37 (*ḥadīth* of Gabriel), after defining *īmān* by its content ("to believe in God, in His angels, in the future life, in the prophets, in the resurrection"), the Prophet, in reply to the question "What is *islām*?", replies: "*islām* is to adore God without associating anything with Him, to observe the ritual prayer (*ṣalāt*), to pay *zakāt*, to fast during the month of *Ramaḍān*" (similar text in Muslim). But it is also "to give food (to the hungry) and to give the greeting of peace (*salām*) to those one knows, just as to those one does not know" (al-Bukhārī, ii, 5). And the best *islām* will be that of the *Muslim* of whom one has to "fear neither the hand nor the tongue" (*ibid.*, 4).

The *Musnad* of Ibn Ḥanbal (iii, 134; cf. A. J. Wensinck, *op. cit.*, 23) states: "*islām* is external, faith belongs to the heart". The act of "surrender to God" is therefore expressed by holding fast to the ritual observances and social behaviour prescribed by the religious Law. God alone judges men's hearts, and hence the reality of faith; the judgement of men may concern itself with *islām*. The "science of *fiḳh*" has been called *maḳām al-islām* by the Ṣūfīs.

3. — The relations between *islām* and *īmān*. — The essential question of a theological order, which was discussed at a very early time and upon which the schools of *fiḳh* and *kalām* were divided, was that of the distinction or non-distinction between *islām* and faith, and of their connection. The answers will depend upon the view taken of each of these concepts. We shall not go again into the question of the various definitions of *īmān* [*q.v.*]. Here, very briefly, are the principal positions adopted.

a). The Muʿtazilī schools, who identify faith and prescribed works, similarly identify faith with *islām*: it being clearly understood that the right intention, the *niyya*, is necessary for the validity of the deed —"actions are valid only through the intentions," says the *ḥadīth* (al-Bukhārī, ii, 41). Whoever commits a grave transgression of the prescriptions of the Law loses the status of *muʾmin* and *Muslim*, and reverts to the status of *kufr* according to the Khāridjīs, to an "intermediate status" (between faith and unbelief) according to the Muʿtazilīs.

b). Many Ḥanafīs (Ḥanafī-Māturīdīs) similarly consider *islām* and *īmān* to be synonymous, but define each of them essentially as verbal confession (*iḳrār*), sometimes linking this with intimate adherence, or at other times, following the Murdjiʾīs, with knowledge of the heart, or both of these. The Ḥanafī-Māturīdī texts of the *Fiḳh Akbar I* (doubtless 2nd/8th century) and of the *Waṣiyyat Abī Ḥanifa* (3rd/9th century) ignore the question. Towards the end of the 4th/10th century, however, the *Fiḳh Akbar II* was to draw an at least nominal distinction. It was to state (a. 18) that current language distinguishes between *īmān* and *islām*, and that *islām* is defined as "total surrender (*taslīm*) and total obedience (*inḳiyād*) to the divine commandments". The text adds: "there is no faith whatever without *islām*, and *islām* could not exist without faith; the one and the other are like the outside and the inside ["back and belly", in the literal translation of A. J. Wensinck]; and religion (*dīn*) is a name which covers both of them, and all the commandments of the Law". Here then *īmān* is as it were the inner, hidden reality of *islām*, from which it could not be separated.

c). In its definition of faith, the Ḥanbalī line insists upon affirmation by the tongue (*ḳawl*) and by deeds (*aʿmāl*), either with or without the addition, according to the texts, of adherence of the heart (*taṣdīḳ*). So much so that al-Barbahārī (d. 329/941) was to say, according to the *Ṭabaḳāt al-Ḥanābila*: "We cannot testify to the reality of the faith in a man so long as he does not carry out the totality of the laws of *islām*" (quoted by H. Laoust, *La profession de foi d'Ibn Baṭṭa*, Damascus 1958, 82, n. I). *Islām* in the sense of observance becomes the guarantee of faith. The Ḥanbalīs however were to remain faithful to the text of the *Musnad* cited above, and to the *ʿAḳīda VI* of Ibn Ḥanbal, who affirms the distinction between *islām* and *īmān*. Accordingly, in the 4th/10th century, Ibn Baṭṭa returns to the Ḳurʾān, XLIX, 14 and affirms: "The term *islām* does not have the same meaning as the term *īmān*. *Islām* is a word which denotes the community of religion (*milla*), and *īmān* is a word which expresses an adherence of faith (*taṣdīḳ*)" (from the translation of H. Laoust, *op. cit.*, 50/82). The choice of *milla*, and not *dīn*, in this text is characteristic: *islām* is "religion", no longer solely in the sense of a debt due to God, but in the sense of a "religious community" attached and connected to a prophet (cf. below). Thus, in the 4th/10th century, we find the use of *islām* to denote the Muslim religion as an organized and differentiated religion. A century later, Ibn ʿAḳīl in the same way was to make *islām* obedience to the commandments of God. But he who commits a great transgression "does not lose his status of *muʾmin* to become merely *Muslim*, for *islām* forms part of *īmān*" (G. Makdisi, *Ibn ʿAqīl et la résurgence de l'Islam traditionaliste au XIe siècle*, Damascus 1963, 527).

d). The Ashʿarīs and the Shāfiʿī jusrists also made a distinction between *islām* and *īmān*. After defining faith as words and deeds, and then by its content according to the "*ḥadīth* of Gabriel", al-Ashʿarī, in the *credo* of the *Maḳālāt al-Islāmiyyīn* (ed. ʿAbd al-Ḥamīd, Cairo n.d., i, 322, identifies *islām* with the two constituent parts of the *shahāda*, in other words with the verbal testimony which grants admission to the Community of the Prophet, and concludes: "*islām* is different from *īmān*". The *credo* of the *Ibāna* (ed. Cairo 1348, 10), without defining *islām*, states that it is "wider than faith" and specifies "that all *islām* is not faith". If we compare these views with the text of the *Lumaʿ* which above all regards faith as inner adherence (*huwa taṣdīḳ bi-llāh*; cf. R. J. McCarthy, *The Theology of al-Ashʿarī*, Beirut 1953, 75/104), we understand that the later Ashʿarīs were able to claim that *islām*, the observance of the prescriptions ordained by the Law, and above all the explicit profession of the *shahāda*, can be "practised" without faith, and that faith (inner *taṣdīḳ*) can exist without *islām* (here contradicting the Ḥanbalī line, for whom every believer is a Muslim). But *islām* without faith is the way of hypocrites (*munāfiḳūn*), consigned to God's chastisement; faith without *islām* need not be culpable, in the event of some invincible external obstacle; it would become so if the testimony to *islām* was not given through cowardice, weakness or half-heartedness. It would then be a fault not of unbelief (*kufr*) but of grave prevarication (*fisḳ*).—When he summarizes the Shāfiʿī theses (which he contrasts with the identification made by the Ḥanafīs),

al-Djurdjānī says that "*islām* is the verbal profession of faith without the agreement of the heart, while faith is the agreement of the heart and the tongue" (*Taʿrifāt*, ed. Flügel, Leipzig 1845, 23).—This thesis was later to be generally accepted.

Whatever definition of faith might be proposed, it remains true however, for the Ḥanbalīs and the Ashʿarīs alike, that *īmān* and *islām*, without becoming identical, imply one another. *Islām*, says H. Laoust in summarizing the philosophy of Ibn Taymiyya (*Contribution à une étude de la méthodologie canonique de* (...) *Ibn Taimīya*, Cairo 1939, 74, n. 3), is the "external and so to speak social application of the Law", and *īmān* in the "interiorization of *islām*". (Thus once again, despite the difference of the conceptions involved, we come across "the outside" and "the inside", *ẓahr* and *baṭn*, of the *Fiḳh Akbar II*). —An outline of the most usual teaching is provided in the 19th century by the Ashʿarī al-Bādjūrī (*Ḥāshiya* ... *ʿalā Djawharat al-tawḥid*, ed. Cairo 1352/1934, 28-9), who says: "*Īmān* and *islām* are different in their significance but not in truth, that is to say in the subjects (who profess them) ... But it is a question here of faith which assures salvation, and of *islām* also, otherwise there would be no reciprocal connection". The same nuances occur in the 20th century, for example in the *Ḥayāt Muḥammad* of Muḥammad Ḥusayn Haykal (Cairo 1358/1939, 506).—It should be noted finally that only certain Ashʿarīs and Shāfʿīs applied the term *muʾmin*, but not *Muslim*, to the man who has faith in his heart and who dies without having been able to profess *islām*. In general, it was considered preferable to call him *Muslim*, not before men but in the eyes of God.

4. — The "world of *islām*". — In this way, therefore, *islām* is "to give oneself *unconditionally* to God" (G. Makdisi, *op. cit.*, 324); so much so that, as the Ḥanbalīs were to take pleasure in saying, "the religion of all the prophets is *islām*". Abraham, Moses and Jesus are true *muslimūn*. But it is the "seal of the prophecy", manifested in the Ḳurʾān, which was to "perfect the religion". According to the first part of a much quoted *ḥadīth*, "the best of all things is *islām*; the foundation of *islām* is the ritual prayer" and, with the *ṣalāt*, all the other obligations (*ʿibādāt*) prescribed by the Law. Now, it is the observance of the Law, its "external and so to speak social application" (H. Laoust), which is the binding force of the Community of the Prophet. And so wherever the ḳurʾānic prescriptions are observed communally, there *islām* will be; such will be "the lands of *islām* (*bilād al-islām*), "the world, the house, of *islām*" (*dār al-islām*).

Such expressions are traditional. It was in this way that, at the beginning of the 5th/11th century, al-Māwardī examined the various categories into which the *bilād al-islām* are divided (*al-Aḥkām al-sulṭāniyya*, beginning of chap. xiv, ed. Cairo. n.d., 151 ff.). The implication remains that *islām*, practised in this way, is the testimony, rendered socially, to faith in the One God and to free adherence to the prophetic mission of Muḥammad. The Ḥanafī Sibṭ Ibn al-Djawzī (d. 654/1256) in his *Mirʾāt al-zamān* mentioned the "purchased" conversions of Jews and Christians, which the Ashʿarīs sought to make in Baghdād in the 5th/11th century, and he repeats the protests of the supporters of the *sharīf* Abū Djaʿfar, a Ḥanbalī: "This is the *islām* of gifts, not the *islām* of conviction" (quoted by G. Makdisi, *op. cit.*, 356). Abū Ḥamid al-Ghazālī was similarly to question the degree of validity of a forced conversion to *islām*.

"There is no compulsion in religion" (Ḳurʾān, II, 256), and "religion, in the eyes of God, is in truth *islām*" (III, 19). Even in the writings of those who distinguish most sharply between *īmān* and *islām*, at no time will this reference to inner conviction be found absent. But the point of first importance, for the jurist who is studying and formulating the statutes and laws of the *bilād al-islām*, is not so much the degree of invidual interiorization of the *muḳābal* of reciprocal relationship *islām-īmān*, as the communal observance of those prescriptions which make *islām*, those *shaʿāʾir al-islām* "the blazon of Islam" (L. Massignon), which are symbolized by the banners of the *imāms*, the guides of the Community.

This is so true that a synonym of *dār al-islām* was to be *dār al-ʿadl* "the world of justice", in which "the rights of God and of men", ordained by the Ḳurʾān are observed and protected. On the other hand there was to be the *dār al-kufr* "world of unbelief", which is the *dār al-ḥarb* "world of war". The jurists analyse the circumstances in which it can become "obligatory" to abandon the *dār al-kufr* in order to enter the *dār al-islām* or at least the *dār al-ṣulḥ*, which has concluded a treaty of "reconciliation" with the *dār al-islām*.—Anyone who describes himself as a *Muslim* means to affirm thereby not so much his care for the practice and personal observances (although certainly not neglecting such matters) as for adherence to a Community of those who acknowledge the Ḳurʾān and Muḥammad. It is here perhaps, far more than in any "sacral" conception of the political organization, that this specific spiritual-temporal fusion of the Muslim City has its root.

5. — From *islām* to Islam.— In European languages, it has become customary to speak of Islam to denote the whole body of Muslim peoples, countries, and states, in their socio-cultural or political as well as in their religious sphere. And it is in a similar sense that modern Arabic often uses *al-islām*. What connection does this very general meaning retain or not retain with the etymological significance of the word, and its evocation of "surrender to God"?

This question, an important one if we wish to avoid misconceptions and misunderstandings, has been discussed recently in a well-documented and apposite manner by Professor Wilfred Cantwell Smith in *The Meaning and End of Religion* (New York 1964, chap. iv "The special case of Islam", 75-108). As the author indicates, it is only recently (19th-20th centuries) that Islam has incontestably become the chosen term to signify both a religion and a politico-social area (fortunately replacing "Mohammedanism" "Islamism" and other such terms). Religious and cultural history thereby adopts the very name by which the *bilād al-islām* designate themselves, as with a title of honour. And it is merely since the beginning of the 19th century, probably under the influence of Western ideas, that writers in Arabic have employed it in an equivalent way.

W. Cantwell Smith emphasises, by reference to Brockelmann's *Geschichte der arabischen Litteratur*, that this term *islām*, though comparatively rare in the Ḳurʾān, with the passage of time appears more and more frequently in the titles of works in Arabic. In the classical period (the Western Middle Ages) it was already used more commonly than *īmān*, and often in correlation with *niẓām*, system, organization; in the 19th century, the relative figures for *īmān* and *islām* are 7% and 93% respectively. It is this that Prof. Cantwell Smith calls "reification in Islam". The emphasis thus appears to be placed on Islam as the organization and self-defence of the Community which is its expression, and much less on the inner

personal values which the etymology of the word connotes. It appears however that our present brief examination of the use of *islām* according to Muslim formulations and usage itself may suggests a few remarks here, which do not invalidate, but which limit and qualify the slightly different perspective of Prof. Cantwell Smith.

a). If it strue that *islām* signifies primarily the action and state of the man who surrenders himself totally (to God), nevertheless it would be erroneous to regard it, in this etymological sense, as a kind of synonym for *tawakkul bi-llāh*, the (interiorized) "abandoning" of oneself entirely into the hands of God. As the Ḳur'ān understands the word, *islām* is indeed, as the *Fiḳh Akbar II* says, a surrender (*taslīm*) to the divine Will as *expressed* by the ḳur'ānic teaching, and an obedience (*inḳiyād*) to His commandments; and, by this very means, admission to the Community, "the best to have arisen among men" (Ḳur'ān, III, 110). Quite soon, admission to the Community was to be the aspect preferred. If the requisite inner attitude does not correspond to it, there is some grave individual failing (*fisḳ*), there is no abandonment of *islām*.

b). Prof. Cantwell Smith observes that, in the classical age, the diversity of religious beliefs was to express itself by *milal* rather than by *adyān*. But we have already noted that the Ḥanbalī Ibn Baṭṭa, in the 4th century, defined *islām* as a *milla*, hence a community, the Community of Muḥammad. The difference between *dīn* and *milla*, al-Djurdjānī said (*Taʿrīfāt*, iii), is that "*dīn* relates to God, and *milla* to the Prophet".

c). The Ḳur'ān however defines *islām* as religion, *dīn* (III, 19; V, 3); but not as *a* religion, Prof. Cantwell Smith justly notes. The plural of *dīn*, *adyān*, he further notes, does not occur in the Ḳur'ān. But if the religion, *al-dīn*, which renders to God that which is due to Him, is indeed *islām*, it is, through that very fact, *millat al-nabī* and *ummat al-nabī*. For the Muslim, Islam is not one religion among others, it is *the* religion, and the other religions (*al-adyān*) are such only in so far as they participate in Islam. Each prophet sent from God has his *milla*; but the *dīn* is unique, accomplished by surrender to God and obedience—the very definition of *islām*— already lived by the prophets that preceded it, and expressed accordingly to all its needs by the "seal" of the revelation, the Ḳur'ān.

We do not think that these various connotations are absent from the Muslim works of the contemporary period. To take one example only, we find them in the *Risālat al-tawḥīd* of Muḥammad ʿAbduh. "The religion of Islam, or Islam", says ʿAbduh, "is the religion brought by Muḥammad" (Cairo 1353, 152). And the whole final section of the *Risāla* constantly speaks in this sense of Islam, its principles, its spirit and its extension in the world (*ibid.*, 152-206, French trans., Paris 1925, 104-40). As soon as the *ummat al-nabī* began to expand in space and time in the face of other religious communities, what Prof. Cantwell Smith calls "reification" was found to be inscribed in the original fundamental data. Historical realities on the one hand, and the progress of the phenomenology of religions on the other, have not ceased to confront Muslim thought with this twofold fact: the existence of non-Muslim religions, established in their faith and their ritual observances, and, moreover, the uncertain faith and the failure to "practise" by certain men who none the less continue to invoke the help of the *umma*. Hence the anxiety to defend Islam as a religion and a community, while nevertheless the old Ḥanbalī and Ashʿarī distinction between *imān* and *islām* is repeated and emphasized.

But this distinction, however generally admitted it may be, is in no way intended to justify the proclamation of *islām* by one who denies *īmān* or who even does not bother to appreciate the true values of faith. Those who are Muslims simply through having heard the call of Islam, or because they were born of Muslim parents, but who do not have faith in their hearts, then, according to what Muḥammad Ḥusayn Haykal more or less says (*loc. cit.*), their *islām* is feeble and sickly. Only those who seek for a sincere faith (*īmān ṣādiḳ*) hear the call to *Islām* with regard to God alone.

At the present time there are three meanings of the word *islām* says Prof. Cantwell Smith (*op. cit.*, 107): 1) the immediate existential meaning of personal surrender of oneself entirely to God; 2) the empirical reality of the "world of Islam", as it exists sociologically; 3) the ideal Muslim community—"a concrete historical ideal" we would gladly say—as it must tend towards its realization. These three meanings in fact remain closely bound together in Muslim thought, today as in the past, and no study of Islam, no analysis of the Muslim Community or of the world of Islam should separate them.

Bibliography: in the article. (L. Gardet)

ii.—Diffusion of Islam

In our present state of knowledge, the diffusion of Islam can only be studied in broad outline. In the first place, with regard to numbers, we often have to be content with approximations; nor should it be forgotten that, with the world population increasing at an accelerated pace, even the most accurate statistics prove to be out of date within a few years. Moreover it sometimes happens that in certain countries Muslims and non-Muslims adopt different sets of figures, particularly when these figures serve as the basis for political claims or considerations of honour. In the second place, such figures do not reflect the qualitative aspect of this diffusion. It is possible for conversions on a massive scale to be produced within the space of a few years (as in the case of the Galla tribes in Ethiopia, to the west of Harar, in about 1930-50). But it must not be forgotten that, for these conversions, the way had sometimes been prepared over a long period, by a whole process of maturing and by favourable circumstances which, in themselves, cannot be statistically expressed.

A. — General Survey. The diffusion of Islam has been the consequence of a certain number of factors which are more or less easily discernable; over and above the particular attraction this religious movement has exerted upon men, the personality of its first leaders and the economic circumstances of Arabia at the time, among other things, there is a further point which requires to be examined—the part played by wars. Even if, in the vast majority of cases, the conquered remained free not to change their religion, the introduction by force of arms of a Muslim régime which took upon itself the administration of their country represented the first stage of a process which was bound to end in their gradual conversion.

The conquest itself was not brought about suddenly. It was often achieved in waves, with ebb and flow, but it was governed by a tide which, save in Europe, proved to be rising ever higher. Thus Damascus, reached as early as 13/634 by reconnaissance units, was attacked and conquered much later; recaptured by the Byzantines, it finally fell into the Arabs' hands

in 636. Similarly Tunisia, where a first raid in 26/647 was followed by a respite of more than twenty years before the final conquest and the founding of Ḳayrawān (50/670). So too Transoxiana to which, after an initial invasion in 52-4/672-4, the Arabs returned at the beginning of the following century; or Chinese Turkestān, reached in 93/713, and to which they returned in 133/751. Kābūl in Afghānistān was reached by the end of the 1st/7th century, without being occupied, and two centuries were to pass before the Muslims came back in strength to stay. Muslim warfare had been a war of movement, a war of wide spaces, steppes or deserts.

The first period of expansion extends from the death of Muḥammad to the end of the Umayyad caliphate of Damascus. One century was enough for the Muslims to achieve an extraordinary epic feat. The dynamism of the new community combined with favourable circumstances to allow their success. The weakness of the Persians and the Byzantines after decades of war between them, their exhaustion, which caused them to underestimate the newcomers' strength, the internal conditions within the Roman empire of Byzantium which was then in difficulties, with its territory being engulfed by the barbarian invasions, the resentment of the various peoples ruled by Byzantium, the divisions among the Christians, all these considerations worked in favour of the Muslims. But the new fact, as compared with the multiple barbarian invasions of the time, is that the barbarians were assimilated by the countries they conquered, whereas Islam on the contrary imposed itself upon the old civilizations. The most remarkable point about the diffusion of Islam is not so much the fact of the conquests as that of their permanence. When Islam became the religion of a territory, it never thereafter ceased to be so, except in Europe (and even then under armed pressure), and except in the centre and south of India, where many of the Hindu sultanates were revived after the first Muslim conquests.

In this way, we can trace the conquests of Syria-Palestine (13/634-19/640), Egypt 18/639-22/642), the Maghrib (49/699-85/705), Spain and Narbonnese Gaul 92/711-85/705), and, in the east, of ʿIrāḳ (15/636-20/641), Armenia and then Iran (21/642), as far as Transoxiana and Chinese Turkestān. The river Indus was reached in 91-4/710-3, but these advanced positions were afterwards abandoned.

In the direction of Byzantium, which was besieged without success, the Muslim advance was blocked in Asia Minor where a state of flux for long prevailed.

In East Africa, colonies of Muslim merchants are recorded at a very early date at trading depots on the shores of the Indian Ocean.

Under the ʿAbbāsids, these conquests were rounded off with the capture of Mediterranean islands such as the Balearics and Sicily. But, most important, Muslim culture was gradually taking shape, increasing the spread of Islam, and the populations, while left free to retain their faith, little by little adhered to the new religion, the religion of the ruling class and of the new society. In Spain, however, Islam was confronted by the Reconquest, which started early and eventually culminated in the fall of Granada in 1492.

Everywhere else, however, expansion continued, sometimes by force of arms, sometimes by peaceful proselytism. Towards the year 1000, the first stage in the conquest of India began: finally the whole Ganges valley was conquered in about 488/1192-606/1209. Various raids during the 8th/14th century succeeded in bringing almost the whole peninsula under the domination of the Muslims. They were however obliged to withdraw from many regions, especially in the centre and south. Islam came to Indonesia by way of a Muslim centre situated in the north-west of Sumatra, at the end of the 7th/13th century; in the 8th/14th century, Java was governed by Muslim rulers.

In sub-Saharan West Africa, it was shortly after the year 1000 that Islam was established. There is mention of a Muslim prince at the head of the Sonraïs at Gao on the Niger as early as 400/1009-10. Islamic rulers are found at Kanem (north of Lake Chad) in about 473/1081-90/1097. Little by little, Muslim kingdoms appeared (in particular Mali, in the 7th/13th century); but their Islam was still a religion of the court of the warlike or literate aristocracies, which had no contact with the masses. It was later, with the military activities (especially of the Fulanis) and the activities of the brotherhoods that the islamization of the masses was brought about, during the 18th and 19th centuries. Under colonial rule the process of conversion was extended still further.

In East Africa, Islam began to spread from Zaylaʿ (a port situated opposite Aden) a centre of islamization even in the 6th/12th century. Climbing up to assail the high Ethiopian plateaux, where they never succeeded in gaining a real foothold, the Muslims established themselves firmly in the less elevated regions to the east and south (especially in Harar).

In the Nile valley, the Christian kingdoms of Nubia held out until the 8th/9th-14th/16th centuries, when they disappeared. The islamization of Nilotic Sudan was followed by that of the minor kingdoms situated between the Nile and Chad. In the 18th century, Islam came to predominance to the south of the Sahara, from the Atlantic to the Red Sea, except only in the Ethiopian Highlands.

Along the Gulf of Guinea, the impenetrable equatorial forest—even when not infested with tsetse flies—for a long time halted the shepherds who were the Muslim conquerors of the territory. But with the modern age the situation has changed. With the conversion of a section of the Yorubas (near Lagos) and penetration into other tribes hitherto reputed to be impossible to convert, with the movements of populations characteristic of countries today, this forest no longer forms a boundary, and many Muslims intermingle with the inhabitants of the coastal towns.

The commercial centres on the African coast of the Indian Ocean, which remained isolated in their world of business transactions, gradually became stronger (especially in the 4th/10th century). But it was in the 19th and 20th centuries that they became centres of islamization; the suppression of slavery and the opening of the hinterland had swept away the barriers that confined them to their trading-ports. Consequently there has been a considerable, though recent, advance by Islam in these zones during the last half-century (Kenya, Tanzania and even to the eastern Congo).

In all these conquered lands in Asia or Africa, or in all the sultanates ruled by Muslims, a special world was created, the Muslim world, where life, art and thought were marked by Islam, even though many traces of the past still survived. The simple imposition of a foreign political framework was very quickly followed by the adoption inwardly of Muslim values.

Finally, to conclude this general survey, it should be noted that the attack launched by the Ottoman Turks finally, in 1453, swept away the barrier of

Constantinople. Europe was invaded as far as Vienna which was twice besieged, in 1529 and 1683, though without success. The ebb then followed, particularly in the 19th century and at the start of the 20th.

B. — Present characteristics. If we attempt to trace on a modern map the distribution of Muslims throughout the world, it becomes apparent that Islam is a religion which is almost confined to Asia and Africa. The only exceptions to this rule are some millions of Muslims in Turkey in Europe and in the Balkans, migrant and transient workers in western Europe, and immigrants in North and South America.

In the countries where Christian minorities remain, as well as in pagan countries, Islam is making progress, above all because, in order to be truly integrated into Muslim society, it is necessary to be a Muslim. Since this integration alone permits certain marriages, the proportion of the conversions to Islam undertaken on the occasion of marriages is very high. This integration also facilitates the finding of employment and advancement to higher posts. In certain countries, questions of social castes sometimes enter, since conversions take place particularly in certain strata of the population. But however that may be, in view of the simplicity of the Muslim dogma which places man face to face with God the Creator and Providence, and in view too of the aspect of fraternity which Islam presents to the newcomer (especially when he is received into a brotherhood), man's fundamental religious sense is satisfied. Thus the step to be taken does not deter anyone who is no longer greatly attached to his old religion.

Tolerance for ancient customs has also played a part in many countries, since Islam requires merely a profession of faith for a convert to be able to enter the community. Then, little by little, islamization has been effected in depth. Moreover, Muslim society, which gave the new member the satisfaction of belonging to a vast community covering the entire world, with its own military, cultural, religious and political renown, has always exerted effective control over him. While leaving those who served it very free, from the moment they made their profession of faith, it has always been at pains to protect its members from any possible proselytism and, above all, to prevent them from leaving Islam once they have adopted it. Until recently, the apostate was put to death; even now, proselytism is still strongly disapproved, and the man who deserts Islam cuts himself off from his own people, save in exceptional cases, even though modern jurists no longer authorize the death penalty for apostasy.

Paradoxically, among the features which have favoured the expansion of Islam during these last decades must be included colonial occupation. In many cases the occupying powers relied on Muslim elements possessing a higher degree of civilization than the pagans, in the countries where these still survived. Alternatively, it placed without discrimination under the same legal system inspired by Islam, both Muslims and those who were neither Muslim nor Christian. In the same way, by destroying the tribal framework of African paganism, colonialism created the great numbers of rootless people who have found in Islam a justification for social existence. All the more since Islam has presented itself as a native religion, not as a colonial importation, while the difference in the standard of living, so obvious in the case of Christians newly arrived from Europe, did not arise between Muslims and pagans, who all sprang from the same soil. Peace too has assisted the movement of preachers or merchants belonging to brotherhoods.

In Black Africa, the ḳur'ānic schools have been centres of Muslim expansion, both through the scope they have given for zeal to have effect, and also through the number of future propagators of Islam who have been formed there. The poverty of the material equipment in the great majority of these establishments, like that of the curricula, must not be misinterpreted. Thanks to these, the values which the children there have learnt to respect, above all the sense of dedication and pride in belonging to the Muslim community, have profoundly marked whole regions. The story of David and Goliath is repeated in these schools in the triumph of poor resources. At the present time, incidentally, in many Muslim countries the official school has replaced the ḳur'ānic school.

The conditions affecting the expansion of Islam are extremely variable, according to the countries concerned, and we should not make any attempt to systematize them. There are large organizations working through pamphlets (like the Aḥmadiyya in Pakistan); there is the sending out of teachers and preachers; there is a whole system of instruction by radio. But the Muslim missionary apparatus is infinitely less cumbrous than that of the Christians. It is the natives of the country concerned who open schools, after having been sometimes (though not always) educated at centres abroad. It is the Muslims themselves, especially the merchants, who bear the chief responsibility for the missions. Finally, the brotherhoods have played a very great part in this movement. But whatever the differences, it is striking to observe wherever Islam is established, the same pride in the community, with as a consequence a certain number of common basic attitudes, affecting the manner of life and thought. This pride and its consequences, by favouring a certain impermeability to foreign influences, have been powerful weapons in resistance to colonialism.

For some thirty years, the Muslim world has been evolving very rapidly. Universities have been founded [see DJĀMIʿA]. The instability of the world economy has made itself felt everywhere. Travels and contacts have multiplied. Socialism has changed the face of many societies. But, above all, Islam has adopted modern methods of communication—pamphlets, radio, relevision, etc. The number of people who listen on their transistors to sermons in *Ramaḍān* is now vast.

C. — Statistical outline. Basing themselves on the figures for world population valid in about 1960, some good authors privately estimated that there might be 435 million Muslims in the world. At the present time, with the increase in population, they now exceed 500 millions.

The figures which follow will indicate a total based upon the statistics for the populations of individual countries (in 1966), as contained in the *UNESCO Statistical Yearbook* (1967). After that, the article will provide details, so far as it is possible to do so, of the proportion of Muslims within the different countries. Figures given without further details signify the number in terms of *thousands*.

1.—AFRICA (perhaps 130 million Muslims out of 318 million inhabitants).

a) *Arabic speaking Africa* (perhaps 70 million Muslims)
— Morocco 13,451 (Muslims only)
— Mauritania 1,070
— Algeria 12,102 (total population)
— Tunisia 4,458 (id.)
— Libya 1,676 (id.)

— E.A.R. (Egypt) 30,083, two million of whom are Christian
— Sudan (Khartoum) 13.940, 70% of whom are Muslim

b) *Africa south of the Sahara*, excluding the Sudan (perhaps 60 million Muslims)
— Somalia 2,580, of whom 99% are Muslim
— Nigeria 58,600 (?), of whom 43% are Muslim
— Ethiopia 23,000 (?), of whom 40 to 50% are Muslim
— Senegal 3,490, of whom 75% are Muslim
— Niger 3,433, of whom 72% are Muslim
— Mali 4,654, of whom 65% are Muslim
— Guinea 3,608, of whom 62% are Muslim
— Chad 3,361, of whom 55% are Muslim
— Upper Volta 4,955, of whom 26% are Muslim
— Tanzania 10,717, of whom 23% are Muslim
— Ghana 7,945, of whom 20% are Muslim
— Cameroon 5,350, of whom 20% are Muslim
— Kenya 9,643, of whom 10% are Muslim

Smaller numbers of Muslims are found in the following countries, in which they represent respectively the proportion of the population as indicated:
— Sierra Leone 33%, Gambia 73%, Portuguese Guinea 26%, Ivory Coast 25%, Dahomey 15%, Liberia 15%, Mozambique 11%, Malawi 7%, Botswana 5%, Togo 5%. Elsewhere the proportion is still smaller.

N.B. A better knowledge of the countries to the south of the Sahara made it possible, in about 1945, to assert the existence of numerous isolated pagan communities in regions thought to be wholly islamized (certain zones of Chad, North Cameroon, North Nigeria). Since then, a movement has been started among these pagans for conversion to Islam; in north-western Nigeria, this was vigorously supported by the political authorities, in the years preceding the disturbances of 1965.

For Nigeria, the reader will note a very clearly marked break in the rate of growth of population. As, until 1952, this was following a regular increasing curve, the figures given since that date correspond with an acceleration which requires to be explained before it can be accepted.

For Ethiopia, to which Eritrea has since been added, the *Annuaire du Monde Musulman*, 1954, accepts only half the figure officially given (cf. p. 389).

2.—Asia (perhaps 390 million Muslims out of 1,868 million inhabitants)

a) *Arab countries of Asia* (perhaps 29 million Muslims), the principal centres being:
— Saudi Arabia 6,870
— Yemen 5,000
— Irak 8,338, of whom 95% are Muslim
— Syria 5,450, of whom 88% are Muslim
— Lebanon 2,460, of whom 50% are Muslim
— Jordan 2.040, of whom 92% are Muslim

b) *Islam in the USSR*, 30 million (?) Muslims

c) *Islam in the Middle East* (perhaps 72 million Muslims), in
— Turkey 31,880, of whom 99% are Muslim
— Iran 25,781, of whom 98% are Muslim
— Afghanistan 15,960 (almost all Muslim).

d) *Islam in Pakistan, India, Ceylon and Burma* (perhaps 145 million Muslims), the two major groups being
— Pakistan 105,044, of whom 86% are Muslim
— India 498,680, of whom perhaps 11% are Muslim

e) *Islam in China*, 15 million (?) Muslims

f) *Islam in South East Asia* (perhaps 100 million Muslims), chiefly located in
— Indonesia 107,000, of whom 87% are Muslim
— Malaysia and Singapore 10,212, of whom 44% are Muslim
— Philippines 33,477, of whom 5% are Muslim.

3.—Europe.

A little less than 5 million Muslims in the Balkans, to whom must be added the Muslim workers in western Europe, so far as they have not been included in the figures for their respective countries of origin.

To conclude this survey, the figure of 525 million Muslims might be suggested for the year 1966, a year during which the total world population has been estimated at 3,356 million inhabitants. The Muslims would represent about one-sixth of all human beings, or slightly less.

Bibliography: Since the list of books concerning this subject is too long to be given in full, the reader is referred to the bibliographies relating to the different countries dealt with above. A general survey of the expansion of Islam will be found in some historical atlases, such as the *Historical Atlas of the Muslim Peoples*, Djambatan-Amsterdam 1957. See also: L. Massignon, *Annuaire du Monde Musulman*, Paris 1955; U.N.E.S.C.O., *Statistical Yearbook*, 1967 (giving the figures for 1966). Some statistics are published by a number of countries: *Religion in the Middle East*, ii, London 1969; *Bilan du Monde 1960*, *Encyclopédie du Monde Chrétien*, ed. Casterman, ii, 1964; J. Ducruet and M. Martin, *Statistiques Chrétiennes d'Egypte*, in *Travaux et Jours*, Beirut no. 24 (July-Sept. 1967), 65-75.

(J. Jomier)

ISLAM, Encyclopaedias of [see mawsūʿa].

ISLĀMĀBĀD, the name given by the emperor Awrangzīb [*q.v.*] to several towns in India, for reasons not precisely known. All these towns were already included in the Mug̲h̲al territories and were not freshly conquered from the Hindus to provide an excuse for their rechristening. Of these Čittāgong [*q.v.*], now in E. Pakistan, at the head of the Bay of Bengal, is still known occasionally in religious circles as Islāmābād, the official name remaining the original Čittāgong. Mathurā, on the river Yamunā, known for its numerous temples and Hindu shrines, was given the name Islāmābād after a serious insurrection by Gokalā D̲j̲āṭ, a leading zamindar of the area, had been suppressed by the imperial forces under Ḥasan ʿAlī K̲h̲ān, in 1080/1669-70. The name never became popular and the town continued to be known as Mathurā, although coins of gold, silver and copper were struck there with the mint name of Islāmābād from the time of Awrangzīb till the reign of S̲h̲āh ʿĀlam II (reg. 1173/1759-1221/1806). Amantnāg in the Kashmir valley, situated at 33° 44′ N. and 75° 12′ E. about a mile from the Nīlāb (Jhelum), also received the name Islāmābād and is still known to the Muslims of the area by this name. Known for its shawls, spas and springs, it is not known when this new name was given to Anantnāg or why. The fort of Čākana, near Poona, one of the strongholds of Sīvād̲j̲ī, the Mahratta chief, was named Islāmābād after it had been taken by Awrangzīb's general S̲h̲āʾista K̲h̲ān in 1073/1662-3, after bitter fighting.

(A. S. Bazmee Ansari)

ISLĀMĀBĀD, the new capital of Pakistan [*q.v.*], was set up in 1960 on the recommendation of a special commission, headed by General Yaḥyā K̲h̲ān, then (1971) president of Pakistan. Situated between 33° 19′ and 33° 50′ N. and 72° 34′ and 72° 23′ E.,

some 8 miles from Rawalpindi, the general headquarters of the Pakistan army, the site elected "answers all questions relating to climate, landscape, communication, defence...". Off the road to Murree, a nearby hill station, and spreading over an area of 351 sq. miles, consisting mostly of natural terraces, rising from 1700 to 2000 ft. above sea level, it is divided into 40 sectors, each measuring 800 acres, reserved for residential purposes. The climate is extreme, the temperature reaching 115° F in summer and dropping down to 27° F in winter. Rainfall is plentiful, but the area around is mostly arid and the town depends on supplies of fruit and vegetables from the plains. Construction work, started in 1961 under the Capital Development Authority, a statutory body, still continues and will take many more years to complete. In early 1970, 8,000 houses of various types had been constructed, accomodating more than 60,000 people, mostly government officials and their families. Schools and colleges, markets and shopping centres, hospitals and dispensaries, post and telegraph offices, cinemas, hotels and restaurants, public parks and other civic amenities have been provided. The Islāmābād University, meant for advanced post-graduate studies in science and technology, has started functioning. A grand mosque, designed by a Turkish architect, will be built at the foot of the Margalla hills, the backdrop of Islāmābād, out of the funds provided by Saudi Arabia. The court-yard and the pyramidal sanctuary roofed by tilted flat slabs, supported on double beams, will accommodate 100,000 persons.

The plan of the town is based on the principle of "dynapolis", *i.e.*, allowing for growth in scale and size. Practically all the government offices and ministries, including diplomatic missions, are now housed in Islāmābād. The president of Pakistan, however, still lives in Rawalpindi.

A fast expanding town, the population is expected to reach the half million mark by 1980. Besides the President's House and the National Assembly building, two major landmarks, provision has been made for setting up a national library, archaeological and war museums, national archives etc. Over a million trees have been planted all along the 125 miles of roads and boulevards to give colour to the landscape.

ISLĀM GIRĀY, the name of three Khāns of the Crimea.

Islām Girāy I (938/1532) was the son of Mengli Girāy [*q.v.*]. As the leader of the party wishing to follow an independent policy, he embarked on a struggle with his brother, the khān Saʿādet Girāy, the appointee of the Ottoman sultan, enjoying the support of the Crimean tribal aristocracy, who wished to wage unrelenting war on the Russians. With this following, in 933/1527 he ravaged the region of Ryazan and threatened Moscow. In 938/1532, Saʿādet Girāy, assisted by the Ottoman governors of Kefe and Azak, brought him to battle but was defeated and fled to Istanbul (May). Islām Girāy did not dare, however, to defy the sultan, and so consented to serve as *ḳalghay* [*q.v.*] to the new khān sent from Istanbul, Ṣāḥib Girāy. As such, he made overtures of friendship to Moscow. Two months later he rebelled against the khān and withdrew into the steppe region of Or-Kapî. Defeated by Ṣāḥib Girāy, he asked for pardon and was allowed to settle at Or-aghzî. Soon afterwards he was killed in a raid by one of the *mīrzā*s, Bāḳī Beg.

Islām Girāy II (992/1584-996/1588). Having lived as a hostage in Istabul under Süleymān I and Selīm II, he fell from favour upon the accession of Murād III and withdrew to Konya, where he devoted himself to Mevlevī mysticism, but after the rebellion of Meḥmed Girāy he was appointed khān, being escorted to the Crimea by an Ottoman squadron under the Ḳapudan Pasha. The *mīrzā*s acknowledged him as khān, and Meḥmed Girāy, while attempting to take refuge with the Nogāys of the steppe, was taken and executed (Dhu 'l-Ḳaʿda 992/end of 1584). But Meḥmed's son Saʿādet Girāy, with his Nogāy followers, defeated him, and he took refuge, wounded, in Kefe. With Ottoman support he defeated his rival (battle of Andal, 992/1584) and entered Baghčesarāy. A second uprising having failed, Saʿādet Girāy finally fled to the Volga region. His brother Murād, however, had gone to Moscow and returned, with Nogāy and Cossack followers, planning to attack the Crimea. The Ottoman sultan warned the czar against intervening and preparations were made for a campaign against Astrakhan, where Murād's force was gathered; but Murād unexpectedly died. Thenceforward Islām Girāy made repeated raids into Russian territory (Krapivna taken, 995/1587). During Islām Girāy's reign Ottoman suzerainty over the Crimea was strengthened, and the practice began of mentioning the sultan's name before the khān's in the *khuṭba*. He died in Ṣafar 997/December 1588, and was buried by the Ulu Djāmiʿ at Aḳkermān.

Islām Girāy III (1054/1644-1064/1654), the eldest son of Selāmet Girāy, was, as a young man, taken prisoner by the Poles during a raid. Released after seven years, he settled at Yanbolu. In 1045/1635 Bahādîr Girāy made him *ḳalghay*; and with this office he helped to preserve the khānante's influence over the Manṣūr tribe. When, on the death of Bahādîr Girāy, Meḥmed Girāy was appointed khān, Islām Girāy lost the office of *ḳalghay*, and was banished, first to Ḳalʿa-i Sulṭāniyye and then to Rhodes. Finally, thanks to the backing of Djindji Khodja, [see ḥusayn djindji], he procured the khānate in Rabīʿ II 1054/June 1644. He applied himself first to restoring control over the Circassians by eliminating Hakshumak, the *beg* of the Zhana. He came into conflict with the *ulugh-agh*a (*i.e.*, vizier) Sefer Ghāzī, who had helped procure his elevation to the khānate, and the *mīrzā*s, who wished to engage in a policy of raids into Russian and Polish territory. In the first trial of strength (Radjab 1055/August 1645) they were defeated, but not crushed; and in 1057/1647 they succeeded in procuring Sefer Agha's re-appointment as *ulugh-agha*.

Successful raids made in 1055-6/1645-6 forced the czar to sign a treaty by which he undertook to send the annual "tribute" of *ulugh-khazīne* and *bölek*s and to put an end to Cossack raids on Azak and other Ottoman territory (text in V. Velyaminov-Zernov, *Matériaux pour servir à l'histoire du Khanat de Crimée*, St. Petersburg 1864, no. 104). A raid led by the *beg* of the Shīrīn tribe into Russian territory in 1057/1647 was a failure, and there ensued a long period of peace between Russia and the Crimean Khānate.

As for Poland, a critical situation arose when the Cossacks of Zaporozh under Boghdan Khmelnitsky rebelled against the King of Poland and sought Crimean protection. In spite of protests from the Ottoman authorities, who wished to maintain the state of peace with Poland, Islām Girāy could not let this opportunity slip: he granted Khmelnitsky the rank of *hetman* and put at his disposal a Crimean force of 4000 men under the Ur-begi Tughay.

These Cossack and Tatar troops won several victories over the Poles in Rabīʿ II 1058/May 1648, and the mediation of the k͟hān enabled the Cossacks to conclude a very favourable treaty with the King of Poland (Treaty of Zborov, 1059/1649). Under pressure from the k͟hān, Lupul, the *voyvoda* of Bog͟hdān (Moldavia) concluded an alliance with K͟hmelnitsky (1060/1650), and in the following year the Ottoman sultan took him overtly under his protection; but in that year K͟hmelnitsky and a Tatar army commanded in person by the k͟hān were defeated by the Poles (there is no justification for attributing the defeat to treachery by the k͟hān: *Cambridge History of Poland*, Cambridge 1950, 514). The Cossack-Tatar alliance was maintained until the conclusion of peace between Poland and the k͟hānate on 24 Muḥarram 1064/15 December 1653: in 1064/1653 K͟hmelnitsky, while negotiating with the Ottoman sultan (who sent him a horsetail and standard, see Naʿīmā, v. 278), was also seeking the protection of the czar.

Islām Girāy died in S͟haʿbān 1064/June 1654.

ISLAMBOL [see ISTANBUL].

ISLAND [see D͟JAZĪRA].

ISLY, a river on the Algero-Moroccan borders, a sub-tributary on the left bak of the Tafna. Of little importance in itself, this river was the scene of several battles, since it constitutes an obstacle on the East-West route between Algeria and Morocco. Battles occurred here between the Marīnids and the ʿAbd al-Wādids in 648/1250 and 670/1271, and above all there was the battle between the French troops under Marshal Bugeaud and the Moroccan troops commanded by Mawlāy Muḥammad, the son of Sultan Mawlāy ʿAbd al-Raḥmān.

Bugeaud's army consisted of some ten thousand men, the Moroccan army of about 30,000, more than two-thirds of whom were tribal cavalry. The vital part of the battle was fought during the morning of 14 August 1844 on the right bank of the river. The tactics and discipline of the French troops soon triumphed over the spirited but disorderly attacks of the Moroccan cavalry. The Moroccan camp fell almost entirely into the hands of the French. This victory earned for Bugeaud the title of Duke of Isly.

(R. LE TOURNEAU)

ISM (A.), name. In Arabic-Islamic usage the full name of a person is usually made up of the following elements: 1) *kunya*; 2) *ism*; 3) *nasab*); 4) *nisba*. A certain number of persons are also known by a nickname (*laḳab*) or a pejorative sobriquet (*nabaz*) which, when the name is stated in full, comes after the *nisba*. From the end of the 3rd/9th century, the use of an honorific before or after the *kunya* became more and more frequent with persons of some importance.

1) The *kunya* [*q.v.*], usually a name compound with *Abū* ("father of") or *Umm* ("mother of"): Abu 'l-Faḍl, Umm al-Ḥasan.

2) The *ism*, also called *ʿalam*, *ism ʿalam*, is the name properly speaking. It can be of several types: a) Ancient Arab names, mostly of pre-Islamic origin, and in the form of adjectives, elatives, substantives, participles or verbs of uncompleted action: *e.g.*, (al-) Ḥasan, Aḥmad, Asad, Muḥammad, Yazīd. Some are normally used with the article (*e.g.*, al-Namir), others sometimes with sometimes without (*e.g.*, ʿAbbās/ al-ʿAbbās), but the majority are without it. It is not always easy to know a priori whether they are diptotes or triptotes (*e.g.*, ʿUmar^u and ʿAmr^{un}); a proper name being by its nature definite, the tendency has always been to treat them as diptotes, and in present usage the case-ending itself tends to be suppressed. Furthermore, the usual indication of the feminine is not necessarily taken as such, and Tazīd, for example, or D͟jāriya are men's names. In general only the names of the Prophet (Muḥammad, al-Muṣṭafā etc.) or of some of the figures of the early Islamic period (ʿUmar, ʿAlī, ʿUt͟hmān, etc.) have survived from among these ancient names, specimens of which will be found in Caskel, *Ğamharat an-nasab des Ibn Kalbi*, Leiden 1966. b) Biblical names in their ḳurʾānic forms: Ibrāhīm = Abraham; Isḥāḳ = Isaac; Mūsā = Moses; Ismāʿīl = Ishmael. c) Compound names in two main patterns: i. ʿAbd (slave [of]) followed by Allāh or one of the divine names [see AL-ASMĀʾ AL-ḤUSNĀ]; the ancient theophorous names made up of ʿAbd and the name of a pagan divinity (ʿAbd Manāt etc.) have disappeared with Islam. ii. Allāh preceded by a construct substantive (*e.g.*, Hibat Allāh "gift of God"). d) Persian names drawn from old Iranian history and legend (*e.g.*, K͟husraw, D͟jāms͟hīd, Rustam). e) Turkish names (Arslān, Tug͟hrul, Timur). These were common in the period of the first Turkish migration into the Middle East and regularly appear (though much distorted in the orthography) as the names of military commanders in the medieval Arabic chronicles of Syria and Egypt. Thereafter they fell into disuse, but they were revived in modern Turkey under the influence of nationalist movements. They frequently consist of, or comprise, names of predatory animals and birds: Babur, (Bay)bars, (Alp)arslan, Lačin, Sonkur, (Er)toghrıl. They sometimes express the parents' wishes: Yeter ("enough"-after a succession of girls), Ṭursun ("may he survive"—after a series of stillborn babies; the same root probably appears in Ṭur-ʿAlī, Ṭur-Ḥasan), Satılmıs͟h ("he has been sold" —by a hitherto barren mother through a vow to a saint). f) Names of diverse origins, especially Berber (e.g. Yidder "he lives"). g) Names based on abstract nouns, sometimes with the suffix ī (Tawfīḳ, Ḥikmet, Fikrī). These became common in Ottoman times. h) Names based on honorific titles (see *laḳab*, below).

3) The *nasab* or pedigree, a list of ancestors, each name being introduced by the word *ibn* [*q.v.*], "son of". The second name of the series is preceded by *bint*, "daughter of", if the first name is that of a woman. Muslim historians quote as many generations as they feel to be necessary and som times go back a very long way when dealing with an important person or in order to avoid confusion, but the usual practice is to limit the *nasab* to one or two ancestors. It is not uncommon for one or more of the ancestors in the list to be mentioned by a name other than his *ism* (*e.g.*, ʿAlī b. Abī Ṭālib). If, in the genealogical series, two persons bearing the same *ism* are known in history, the elatives *al-akbar* and *al-aṣg͟har* are sometimes used: Marwān al-aṣg͟har b. Abi 'l-D͟janūb Yaḥyā b. Marwān al-akbar b. Abī Ḥafṣa. Converts whose natural fathers had not embraced Islam were conventionally given, especially in the Ottoman

period, the *nasab* Ibn ʿAbd Allāh (or ʿAbd and one of the divine names); but such a *nasab*, known to be fictitious, was employed only when custom demanded the use of one, *e.g.*, in a legal attestation or epitaph.

In Persian the word *ibn* is usually omitted and replaced by the genitive particle *-i*: *e.g.*, Ḥasan-i Ṣabbāḥ. In the Muslim lands generally, with the exception of Arabia and the Maghrib, *ibn* is no longer used, and the name and father's name are simply juxtaposed: Aḥmad ʿAlī=Aḥmad, son of ʿAlī. The Persians, followed by the Turks, often use *zāde* (son), added as a suffix to the father's name, nickname or title, which is placed before the *ism*: *e.g.*, Ḳāḍīzāde ="son of the judge"; Shāriḥ al-Manār-zāde="son of the commentator on *al-Manār*"; Pīrīpashazāde= "son of Pīrī Pasha". The Turkish word *oghlu* is also used in the same way, but usually for noble or ruling families, rather than *ʿulamāʾ*: *e.g.*, Mikhaloghlu= "son of Mikhal". Many of these names in *zāde* and *oghlu* have become surnames of a sort, borne by whole families and referring to a common ancestor rather than to an immediate progenitor: *e.g.*, Köprülüzāde, a name borne by a family claiming descent from the famous Ottoman viziers. In the same way the Arabic *ibn* may sometimes refer to an ancestor rather than a parent, and be used as a kind of a surname: *e.g.*, Ibn Khaldūn, Ibn Baṭṭūṭa, Ibn Sīnā, Ibn Kemāl (also Kemālpashazāde).

4) The *nisba* is an adjective ending in ī, formed originally from the name of the individual's tribe or clan, then from his place of birth, origin or residence, sometimes from a *madhhab* or sect, and occasionally from a trade or profession. A man may thus have several *nisbas* which are normally given progressing from the general to the particular and in chronological order of residence: *e.g.*, al-Ḳurashī al-Hāshimī al-Baghdādī *thumma* al-Mawṣilī al-Sayrafī="of the tribe of Ḳuraysh, of the clan of Hāshim, of the city of Baghdād and then Mosul, the moneychanger". The speciality is often indicated at the end without the suffix ī: al-Ḥāfiẓ. In Arabic the *nisba* is always preceded by the definite article (*al-*) which in Persian disappears. Among the Turks the place-*nisba*, with the ending *li* (or *lu*), is normally placed at the beginning of a name; *e.g.*, Izmirli ʿAlī Riḍā, "the Smyrniot Ali Riza". The *nisba* may be arbitrarily handed down from father to son, though its original relevance is lost.

These are the elements which normally make up a name. The *laḳab*, an honorific or descriptive epithet which is usually placed after the *nisba* and sometimes represents a nickname, often a title, might be added. In its original and simplest form it is a descriptive nickname usually referring to a physical characteristic: *e.g.*, al-Ṭawīl, "the tall", al-Aʿwar "the one-eyed", al-Aṭrash "the deaf". It follows the *ism*. These nicknames are felt to be less pejorative than the sobriquets (*nabaz*) such as al-Ḥimār "the ass" (=Marwān I).

Laḳabs of a different sort were adopted as regnal names by the ʿAbbāsid Caliphs of Baghdād (see B. Lewis, ***The regnal titles of the first Abbasid, Caliphs***, in ***Dr. Zakir Husain Presentation volume***, New Delhi 1968, 13-22), and after them by most other Muslim rulers: *e,g.*, al-Rashīd "the rightly guided", al-Mutawakkil ʿala 'llāh "who entrusts himself to God". At a later date Persian and Turkish *laḳabs* are encountered, as well as Arabic: *e.g.*, Djahāngīr "world seizer", Yīldīrīm "thunderbolt".

Independently of the names of the Kings of the Yemen, consisting of Dhū followed by a substantive [see AL-ADHWĀʾ], early on there appeared in Arabic nicknames composed of Dhū (fem. Dhāt) and a noun in the dual commemorating a notable trait or deed: *e.g.*, Dhāt al-Niṭāḳayn "the woman with the two waistbands" (=Asmāʾ bint Abī Bakr); Dhu 'l-Hidjratayn "the man who has been made the two *hidjras*" (=Djaʿfar b. Abī Ṭālib); Dhu 'l-Yamīnayn "the ambidextrous" (=Ṭāhir b. al-Ḥusayn). Under the ʿAbbāsids honorifics of the same type were given to high personages: *e.g.*, Dhu 'l-Ḳalamayn "the man of the two pens", Dhu 'l-Wizāratayn "the man of two vizierates".

From the end of the 3rd/9th century and especially from the 4th/10th *laḳabs* of honour were bestowed by the Caliphs upon princes, statesmen, generals an high officers of state. These were usually compounds with *Dawla* ("State"), *Dīn* ("Faith") or both: *e.g.*, Badr al-Dīn "full moon of the Faith"; Nāṣir al-Dawla "Defender of the State". Similar compounds may be formed with *Mulk* "Kingdom" (Niẓām al-Mulk "Order of the Kingdom"), with *Islām* (Sayf al-Islām "Sword of Islam") etc. Many persons are known principally by their *laḳabs*, *e.g.*, Saladin (=Ṣalāḥ al-Dīn).

In the course of time many of these *laḳabs* ceased to be titles borne only by ruling princes and their officers, and became little more than personal names. In the Ottoman period the members of the *ʿulamāʾ* were usually known by a combination of *laḳab* and *ism*, with a tendency for each *ism* to be linked with a specific *laḳab*: *e.g.*, Sinān al-Dīn Yūsuf, Muḥyī al-Dīn Muḥammad (see F. Babinger, in *Isl.*, xi). The carefully graded honorifics employed in Islamic chanceries in addressing members of the "religious" and "secular" institutions and foreign rulers and ambassadors, corresponding to the *inscriptio* of European diplomatic practice, were known by the plural of *laḳab*, *alḳāb* (Turkish *elḳāb*). These, understandably, became progressively more elaborate, so that manuals drawn up for the guidance of chancery clerks usually contain a section devoted to them (*e.g.*, Ferīdūn, *Munshaʾāt al-Salāṭīn*², i, 2-13) (see DIPLOMATIC).

The use of nicknames of various types was encouraged in the Ottoman Empire by the fact that so many prominent personages—not to speak of the whole corps of Janissaries, etc., for whom payrolls had to be kept—were of non-Muslim origin, so that a dozen men with the same *ism* could not be distinguished, as could the Muslim-born, by their *nasabs*. By Turkish syntax, a nickname usually precedes the *ism*, while a title, arising from the individual's actual rank or employment—Pasha, Agha, Müteferriḳa, Reʾīs (for sea-captains), Čawush, etc.—usually follows it. The apparent exceptions are Sulṭān, which invariably precedes the name of the ruler (but follows the name of a princess or of a few conspicuous saints), and Shehzāde, "prince"; but here too the word when preceding may be in origin a nickname and when following a "title of honour".

Nicknames may be *nisbas*, either referring in the strict sense to a town (Filibeli, Edirneli, etc.) or family (Sokollu) or vaguely "ethnic" (Arnavud, Ungurus, Čerkes, ʿArab [which in Turkish usually means "negro"]); they may refer, sometimes, unkindly, to personal characteristics: Uzun ("tall"), Sarī ("fair"), Tabanī-yassī ("flat-footed"); they may be bestowed posthumously by chroniclers: Maḳtūl ("the executed"), Khāʾin ("the traitor"), Hezārpāre ("hacked to pieces"); they may refer to the individual's position or employment: Nishāndjī, Miʿmār, Dāmād, and frequently (and somewhat confusingly) may survive from a former employment, for example in the

Palace service: Lala ("tutor [to a prince]"), Siliḥdār ("sword-bearer" [to the sultan, while a page]); they may be a religious appelation Ḥādjdjī, Akhī, Ṣofu, Gâvur, etc.

Even the sultans are usually distinguished by nicknames rather than regnal number: "Fātiḥ" Meḥemmed [II], "Genč" ʿOthmān [II], "Avdjī" Meḥemmed [IV]. When the nickname follows the *ism*, contrary to the usual rule in Turkish, we probably have a suppressed Persian *iżāfet*: Meḥemmed [-i] Fātiḥ, Bāyezīd [-i] Welī [II].

In the late 10th/16th century there was a transitory fashion, especially in the chancery, for the adoption of "Iranian" names (2d, above) (thus the famous Ferīdūn is called in his *waḳfiye* "Aḥmed Agha... al-shahīr bi-Ferīdūn Agha"), and also for the use of just one letter of the personal name, *e.g.*, Dāl Efendi, for Dāl-i Meḥmed, cf. ʿAyn-i ʿAlī, Lām-i ʿAlī (U. Heyd, *Ottoman documents on Palestine*, Oxford 1960, 16 and note).

A Turkish custom is the *göbek adï*, "navel name". This is a name given to a new-born child by the midwife as she cuts the umbilical cord; it is invariably a good "Muslim" name, such as Meḥmed or ʿAlī for boys, Fāṭma or ʿAyshe for girls. The explanation for it may be that since it is considered unlucky to choose a name before the birth this provisional name is given at the very inception of the infant's independent existence in order to ensure that if it does not live it will have died a Muslim. The *göbek adï* is in practice not used, being superseded by the *ezan* (< *adhān*) *adï*, the regular *ism*, which, having been chosen at leisure by the family, is bestowed, with a recitation of the *adhān*, a few days later (usually after three days, but avoiding the inauspicious Tuesday). Another Turkish custom is to change a baby's name if it does not thrive or is fractious. In Turkey, and particularly in the country districts, regular Islamic names may take on barely recognizable hypocoristic forms: Muṣṭafā > Mïstïk, Fāṭima > Fadik, Meḥmed > Memo or Memi, Süleymān > Sülü, Ibrāhīm > Ibish, etc.

Among other onomastic elements the most important is the *takhalluṣ* or pen-name adopted by a poet or writer, *e.g.*, Firdawsī "the Paradisiac".

A person may be mentioned by one or more of these components, or by several of them at the same time; there are no fixed rules, and only usage seems to decide, although there is not always unanimity upon a single appellation. Thus the poet usually called Abū Nuwās is sometimes referred to by the name al-Ḥasan b. Hāniʾ or by the *nisba*, al-Ḥakamī. In the biographical works the authors class persons according to their *ism* in order to avoid confusion, and indicate the *kunya*, the *nisba*, and the *laḳab* after the *nasab*, specifying at the same time the name most commonly used. Thus the biography of Ibn al-Ḳalānisī, the author of the Damascus Chronicle of the Crusades, whose full name is Abū Yaʿlā Ḥamza b. Asad b. ʿAlī b. Muḥammad al-Tamīmī al-Dimashḳī al-ʿAmīd ibn al-Ḳalānisī (the father of Yaʿlā, Ḥamza the son of Asad the son of ʿAlī the son of Muḥammad, of the tribe of Tamīm, of the city of Damascus, the Chief (of the Chancery), the son of the hatter), will be found under Ḥamza b. Asad.

None of these components strictly speaking amounts to a surname, though in practice the *laḳab* or *nisba* or *maʿrifa* (as in the case of Ibn al-Ḳalānisī [see IBN] is sometimes so used.

In the contemporary Orient the custom is to use two names the first of which is a sort of personal name, the second being usually the father's name. It may, however, be equally the name of a grandparent or remoter ancestor, or a second personal name adopted by choice or given in the family, at school, in the army, etc., or one of the above mentioned categories. The use of surnames is spreading among the upper classes, and the introduction of compulsory registration in several Islamic countries will accelerate their adoption. In Turkey (1934) and Persia the adoption of a surname was imposed by law. (ED.)

ISM (A.), "name", is the technical term used in Arabic grammar to signify the noun. *Ism* is a biliteral and, as such, belongs to a very ancient linguistic stock (see H. Fleisch, *Traité de la philologie arabe*, i, § 52 b) it has been given a *w* as a third radical consonant so that it may be included in the scheme of morphological formations: broken pl. *asmāʾ*, denominative verb: *samā, yasmū*, more frequently *sammā, yusammī*, "to call, name". Of the Arab grammarians, the Kūfans derive *ism* from *wasm* "sign" ($\sqrt{\overline{w\ s\ m}}$). The Baṣrans from *sumuww* "elevation" ($\sqrt{\overline{s\ m\ w}}$) (see their discussions, Ibn al-Anbārī, *K. al-Inṣāf*, ed. G. Weil, first question discussed).

Ism is the first term of the great tripartite division: *ism, fiʿl, ḥarf*, which begins the *Kitāb* of Sībawayhi: on its origin, [see FIʿL and in E.I.[1] ISM].

Sībawayhi gives no definition of *ism*; he merely gives examples: *radjul* "man", *faras* "horse", *ḥāʾiṭ* "wall". Ibn Fāris (d. 395/1004) records (*al-Ṣāḥibī*, 82-3, ed. Beirut 1382/1963) the definitions suggested by the masters who followed: al-Akhfash (disciple of Sībawayhi), al-Kisāʾī (d. 189/865), al-Farrāʾ (d. 207/822), Hishām al-Ḍarīr (d. 209/824), al-Mubarrad (d. 285/898), al-Zadjdjādj (d. 310/922). None satisfies Ibn Fāris. In fact, these masters, except the last, do not give a true definition, but a description of the noun in its grammatical relationships; thus al-Farrāʾ says: "the noun (*ism*) is that which admits the *tanwīn*, the *iḍāfa* (construct) or *alif* and *lām* (the article)". Ibn al-Anbārī also records another definition of al-Mubarrad (op. cit., 2, l. 10) and the definition of Thaʿlab (d. 291/904) (*ibid.*, l. 4). As Ibn al-Anbārī himself says (*ibid.*, ll. 10-11), concerning al-Mubarrad, their dicta might serve for an etymology (*ishtiḳāḳ*) but not for a definition. With al-Zadjdjādj (d. 310/922), on the contrary, we find a true definition of the noun, but here it is under the influence of Greek logic.

Aristotle, in the *Organon*, in the *Peri Hermēneias* (the *De Interpretatione*, ed. L. Minio-Paluello, Oxford 1966), gives the two following definitions: for the noun (16a, 19-20): *onoma* (a noun) *esti* (is) *phonē* (a sound) *sēmantikē* (with meaning) *kata sunthēkēn* (by agreement) *aneu khronou* (without time), and he adds: "no part of which has meaning in isolation"; for the verb (16b, 6-9): *rhēma* (a verb) *esti* (is) *to prossēmainon* (that which indicates also) *khronon* (a time) [*i.e.*,: that which, in addition to its proper meaning, contains the indication of a time], and he adds the same remark as for the noun.

The Aristotelian definition of the noun is found in that of al-Zadjdjādj: *ṣawt muḳaṭṭaʿ mafhūm dāll ʿalā maʿnā, ghayr dāll ʿalā zamān wa-lā makān*: *phōnē*, here *ṣawt*, is qualified by *muḳaṭṭaʿ* "cut off [from others]", *mafhūm* "understood", *dāll ʿalā maʿnā* = *sēmantikē*; for *aneu khronou*, the exclusion of place is added to that of time; *kata sunthēkēn* is omitted; it refers to the large question of the origin of language, whether by institution (*tawāḍuʿ wa-ʾṣṭilāḥ*) or by revelation (*waḥy wa-tawḳīf*).

The Arab definition that, with some variants, subsequently became the general one is given by al-

Sīrāfī (d. 368/978) in the *Sharḥ* of the *Kitāb* (Ms Cairo², ii, 134): *kullshayʾ dalla lafẓuh ʿalā maʿnā ghayr muḳtarin bi-zamān muḥaṣṣal min muḍiyy aw ghayrih fa-huwa ism* (1st part, 7 end), "everything the expression of which indicates a meaning unconnected with a specific time, past or otherwise, is a noun".

This defitiniton qualifies the preceding one by indicating a *zamān muḥaṣṣal* "a specific time", but that is not enough to satisfy Ibn Fāris's objection, (*al-Ṣāhibī*, 84, l. 13-15), that al-Zadjdjādj's definition of the noun is equally valid for the *ḥarf*. Al-Zamakhsharī (d. 538/1143) omits the qualification *muḥaṣṣal* (*Mufaṣṣal*, ed. J. P. Broch, § 2) [see FIʿL], but adds *fī nafsih* "in itself": *al-ism mā dalla ʿalā maʿnā fī nafsih dalālatan mudjarradatan ʿan al-iḳtirān*. Al-Djurdjānī (d. 816/1413) (*Taʿrīfāt*, 15) explains simply what is to be understood by this absence of *iḳtirān*: *al-ism mā dalla ʿallā maʿnā fī nafsih ghayr muḳtarin bi-aḥad al-azminat al-thalātha*.

Remarks: the philosopher al-Fārābī (d. 339/950), in the *Sharḥ Arisṭūṭālīs fi 'l-ʿibāra* (the *Peri Hermēneias*) (ed. W. Kutsch and S. Marrow, Beirut 1960), 29, ll. 25-6, prescribes, concerning *aneu khronou* (translated: *mudjarrada min al-zamān*, "deprived of time"), the addition of *bi-dhātih wa-bi-shaklih* "by itself and its form", if it is necessary because of the fear of *maṭāʿin al-mughāliṭīn*, "attacks of the 'Sophists' "; if not, it should be omitted. But, in the definition of al-Zamakhsharī, *fī nafsih* was introduced in order to separate *ism* from *ḥarf*.

It is, incidentally, strange to note that grammarians such as Abū ʿAlī al-Fārisī (d. 377/987) and Ibn Djinnī (d. 392/1002), who must have been aware of al-Sīrāfī's *Sharḥ* to the *Kitāb*, adhered, as far as the noun (and the verb) were concerned, to definitions of the type of those of al-Zadjdjādj's predecessors: Abū ʿAlī *Iḍāḥ* (Ms Cairo², ii, 81) 3; Ibn Djinnī, *Lumaʿ* (Ms Berlin 6466) 2.

The definitions of the noun and verb that became general in the Arab grammarians appear to derive from Greek logic. It has, besides, been adequately shown under FIʿL how unjustified the tense-system (introduced following Aristotle) is in Arabic. These definitions were difficult to establish. Long discussions about them have taken place in modern linguistics (see H. Fleisch, *Traité*, i, § 53 a and add. p. 525-6; *BSLP*, liv/i, XXVII-XXVIII). The *Lexique de la terminologie linguistique* by J. Marouzeau, 3rd ed., gives a definition of the verb (236), but not of the noun (156).

Because of the great tripartite division referred to above, Arab grammarians included under the *ism* first the noun proper: *ism al-djins* "common noun", *al-ism al-ʿalam* or *ism al-ʿalam* "proper noun" [see ʿALAM], *ism al-ʿayn* "concrete noun", *ism al-maʿnā* "abstract noun", then *ism al-fāʿil* "*nomen agentis* (active participle)" and *ism al-mafʿūl* "*nomen patientis* (passive participle)". These two are, strictly speaking, *ṣifa* [see ṢIFA]; the adjective (*ṣifa mushabbaha*) is assigned to the *ṣifa*; the *ṣifa* and its extensions are called *naʿt*, in its use as epithet. Then *al-maṣdar* "infinitive", and all the nomino-verbal derivatives: *ism al-zamān wa-'l-makān* "noun of time and place", etc. Then the pronouns: the personal pronouns: *al-muḍmarāt* [see MUḌMAR], the demonstrative pronoun: *ism al-ishāra*, the relative pronoun: *al-ism al-mawṣūl*, collectively called *al-mubhamāt*. Then the numerals, the noun of number: *ism al-ʿadad*. All these categories will be found in the *Tables* of the *Mufaṣṣal* referred to above (212-3), with references to the text and a still further developed nomenclature in Wright's Ar. Gr.³ (i, 104-10).—The Arab grammarians found an *ism* in the interrogatives: *kayfa* "how?", *ayna* "where?", *kam* "how much?", *matā* "when?", in *idh*, *idhā* (generally conjunctions), in *ḥaythu* "where" (Ibn Fāris, *ibid.*; for *kam*, Sībawayhi, i, 250, l. 13, ed. Paris; for *matā*, Ibn Hishām, *Mughnī 'l-labīb*, s.v.). Finally, they included in the *asmāʾ al-afʿāl* "verbal nouns" expressions that would seem to us to be interjections or exclamatory locutions, or even onomatopoea, when they perceived in them some verbal action, particularly an imperative sense, see §§ 187-99 of the *Mufaṣṣal*.

Bibliography in the text; in addition: *Dict. of Techn. Terms*, i, 710, l. 24-715, l. 18; the *K. al-masāʾil al-khilāfiyya fi 'l-naḥw* of Abu 'l-Baḳāʾ ʿAbd Allāh al-ʿUkbarī (d. 616/1219) (Ms Cairo², ii, 158) contains a discussion of the definition of *ism* (2nd question) and of the etymology (*ishtiḳāḳ*) of *ism* (4th question); in the latter, like the Baṣrans, he derived *ism* from *sumuww*, in the former, he attributes to Ibn al-Sarradj (d. 316/929), a contemporary of al-Zadjdjādj (d. 310/922), a definition of *ism* so sophisticated that it appears improbable: *huwa kull lafẓ dalla ʿalā maʿnā fī nafsih, ghayr muḳtarin bi-zamān muḥaṣṣal* (93 r, lines 4-5). As a matter of fact, in *al-Mūzadj fi 'l-naḥw*, Beirut 1385/1965, 27, Ibn al-Sarrādj simply gives a definition of *ism* of the type of those of al-Zadjdjādj's predecessors. (H. FLEISCH)

ʿIṢMA, as a theological term meaning immunity from error and sin, is attributed by Sunnīs to the prophets and by Shīʿīs also to the imāms. In early Islam moral failures and errors of Muḥammad were freely mentioned, although there was an inconsistent tendency to minimize the shortcomings of the Prophet and in particular to deny that he had ever participated in the worship of idols. The term and the concept of *ʿiṣma* do not occur in the Ḳurʾān or in canonical Sunnī *Ḥadīth*. They were first used by the Imāmī Shīʿa, who at least since the first half of the 2nd/8th century maintained that the imām as the divinely appointed and guided leader and teacher of the community must be immune (*maʿṣum*) from error and sin. This doctrine has always remained a cardinal dogma of Imāmism. While the early Imāmī theologian Hishām b. al-Ḥakam (d. 179/795-6) restricted this impeccability to the imāms, holding that prophets might disobey the commands of God and then would be criticized by a revelation, later Imāmī doctrine always ascribed it equally to prophets and imāms. The extent of the immunity was gradually expanded. Ibn Bābūya (d. 381/991), representing the view of the tradionalist scholars of Ḳumm, affirmed that prophets and imāms, though fully immune from major (*kabāʾir*) and minor (*ṣaghāʾir*) sins, were liable to inadvertence (*sahw*), which God might induce in them in order to demonstrate to mankind that they were merely human. His opinion was refuted by Shaykh al-Mufīd (d. 413/1022), who held that prophets and imāms after their vocation were immune from inadvertence and forgetfulness (*nisyān*), while admitting that they (except for the Prophet Muḥammad) might have committed minor, not disgraceful (*ghayr mustakhaffa*) sins before their vocation. Al-Mufīd's disciple al-Sharīf al-Murtaḍā (d. 436/1044), who wrote a book on the impeccability of the prophets and imāms, held that they were fully immune both before and after their vocation. This has become the accepted Imāmī doctrine, later expressly including immunity from inadvertence. It is, however, admitted that imāms may chose the less com-

mendable alternative or neglect commendable supererogatory acts. *ʿIṣma* is commonly defined as a kindness (*luṭf*) bestowed by God and, as in Sunnī doctrine, is not a natural quality of prophets and imāms. It does not cause incapacity to commit acts of disobedience and thus does not invalidate the right of prophets and imāms to reward.

The Imāmī doctrine of the *ʿiṣma* of imāms and prophets is shared by the Ismāʿīliyya. The Zaydiyya do not consider *ʿiṣma* a qualification of the imām, though some later Zaydī authorities have attributed it to ʿAlī, al-Ḥasan and al-Ḥusayn specifically.

Outside Shīʿism the *ʿiṣma* of the prophets was first and most consistently upheld by the Muʿtazila. Already al-Naẓẓām in the late 2nd/8th century taught the impeccability of the prophets, and by the time of al-Ashʿarī immunity from unbelief and from major sins both before and after the prophetic mission was considered the unanimous doctrine of the Muʿtazila. There was some dispute as to whether prophets might commit minor sins consciously or not. While al-Naẓẓām held that the sins of prophets reported in the Ḳurʾān could arise only from inadvertence or erroneous interpretation (*taʾwīl*) of God's commands, al-Djāḥiẓ maintained that they must have been committed knowingly, since unconscious infraction of the divine law in his view was not sinful. In the classical doctrine since the two al-Djubbāʾīs the extent of the immunity was defined as including all major sins and minor sins "causing aversion" (*munaffira*). This definition resulted from the premise that prophecy was an act of kindness incumbent on God for the guidance of mankind and must be protected by Him from any impediments to its effectiveness. Abū ʿAlī al-Djubbāʾī (d. 303/915-6) asserted that even minor acts of disobedience, if intentional, must be considered as causing aversion and admitted only sins by inadvertency or erroneous interpretation. Abū Hāshim (d. 321/933) and the majority of later scholars held that intentional minor sins were not necessarily "causing aversion". The immunity applied equally to the time before and after the mission, though Abū ʿAlī al-Djubbāʾī was not quite consistent in rejecting major sins before it.

Ashʿarī doctrine on the *ʿiṣma* of the prophets varied, generally moving from a negative attitude toward wider affirmation. Scholars with traditionalist leanings were more reserved in affirming the sinlessness of the prophets, since this conflicted with a literal acceptance of passages in the Ḳurʾān and *Ḥadīth*. The view later ascribed to al-Ashʿarī, that prophets were immune from error and sin after, but not before, their mission is probably not authentic. It reflects, however, the later common Ashʿarī doctrine, which restricted the immunity to the time after the mission, admitting both major and minor sins, though not unbelief, before it. Concerning the extent of immunity after the mission the views differed. Al-Bāḳillānī (d. 403/1012), against the Muʿtazilī doctrine, denied any rational basis for the claim of *ʿiṣma* of the prophets beyond immunity from intentional lying in the transmission of the divine message, admitting the possibility of errors by inadvertence or forgetfulness. The latter admission was rejected by his contemporary Abū Isḥāḳ al-Isfarāyīnī and the later school doctrine. Al-Bāḳillānī's denial of a rational basis of the claim of immunity from sin was commonly accepted by later doctrine, though major sins were excluded on the basis of revealed texts (*samʿ*) or consensus. Ibn Fūrak (d. 406/1015) held that prophets may commit minor sins intentionally, but not major sins. It is thus evident that ʿAbd al-Ḳāhir al-Baghdādī (d. 429/1037) expresses his wish rather than the fact in claiming an Ashʿarī consensus affirming the immunity of prophets from all sins after their mission. After him al-Djuwaynī (d. 478/1085) stated as his personal view that prophets commit minor sins, and al-Djuwaynī's disciple al-Ghazālī affirmed that prophets commit sins and are obliged to ask God for forgiveness. Even Fakhr al-Dīn al-Rāzī (d. 606/1209), who argued at length for the *ʿiṣma* of prophets on rational grounds, admitted unintentional minor sins after, and major sins before, their mission. Against the Ashʿarī school tradition, full immunity of the prophets was upheld by the Ḳāḍī ʿIyāḍ (d. 544/1149) and al-Subkī (d. 771/1370), the former expressly including the time before the mission.

Māturīdī doctrine generally was more positive in claiming sinlessness for the prophets. Although some Māturīdī scholars admitted minor sins in prophets, others, especially those of Samarḳand, strictly denied all sins including "slips" (*zallāt*). No difference was made between the time before and after the mission. The importance given to the doctrine of *ʿiṣma* is reflected by the fact that it is usually included in Māturīdī creeds in contrast to Ashʿarī and Ḥanbalī creeds. Under the Saldjūḳs the charge of imputing sins to the prophets figured among the accusations against Ashʿarism which were used to justify its suppression in favour of Māturīdī Ḥanafism.

The doctrine of the sinlessness of the prophets was opposed by traditionalists upholding the literal meaning of the passages in the Ḳurʾān and *Ḥadīth* mentioning their failures. Ibn Karrām (d. 255/840), the founder of the Karrāmiyya [*q.v.*], expressly affirmed that prophets may commit sins, without qualifying their nature. Later Karrāmī doctrine excluded sins requiring legal punishment (*ḥadd*) or impairing probity. The Ḥanbalīs did not adopt the doctrine of impeccability of the prophets. Ibn Baṭṭa (d. 387/997) in his profession of faith emphasizes that the prophets have committed sins, citing relevant passages of the Ḳurʾān. Later Ḥanbalī scholars like Ibn Taymiyya (d. 728/1328) and Ibn Ḳayyim al-Djawziyya (d. 751/1350) stressed the *ʿiṣma* of the prophets in respect to their transmission of the revelation, but did not include immunity from sins.

Particular views on *ʿiṣma* were developed in Ṣūfī circles in connection with their doctrine of mystical sainthood. Some Ṣūfīs from al-Djunayd (d. 298/910) to Ibn al-ʿArabī (d. 638/1240) have attributed virtually complete impeccability, far beyond the common Sunnī doctrine, to Muḥammad as the ideal Ṣūfī saint.

ʿIṣma was also often, against some dissent, attributed by Sunnī, Muʿtazilī, and Shīʿī theologians to the angels.

ʿIṣma denotes also infalibillity, in "the total knowledge of the meaning of the revelation and its prescriptions" and, consequently, in absolute authority for instruction. In Shīʿism, it is recognized in the imāms, in whom it is innate. It is recognized in Sunnism also, but in respect of the community (*ʿiṣmat al-djamāʿa*) in its general *consensus* or *idjmāʿ*—infallibility in the interpretation of the law, and even in the establishment of new juridical solutions. In both meanings, *ʿiṣma* was carried to its most extreme limits in the Shīʿī (*ghulāt*) doctrines from the time when they deified the imāms, in varying degrees.

ISMĀʿĪL, the biblical Ishmael, is already mentioned in four places in the Ḳur'ān which date from before the Hidjra, in a list of holy men of antiquity: in Sūra XIX, 54 f. it is said of him: "He was one who spoke the promise truly, and he was a messenger and a prophet. He enjoined upon his people the prayer and the almsgiving, and was in his Lord's eyes approved"; in Sūra XXXVIII, 48 he is mentioned together with Elisha (al-Yasaʿ) and Dhu 'l-Kifl as "one of the good"; in Sūra XXI, 85 f. together with Idrīs and Dhu 'l-Kifl as "one of the patiently enduring and the righteous, whom God caused to enter into his mercy"; in Sūra VI, 86 it is said of Ismāʿīl, Elisha (al-Yasaʿ), Jonas and Lot, that "God gave each one preference above the worlds". These references to Ismāʿīl and others are, in each case, part of a larger context in which more holy men of antiquity are mentioned. Each time, at either a lesser or greater distance before Ismāʿīl, Abraham (Ibrāhīm) is also praised as one of the earlier holy men. Nowhere, however, is a direct link established between Abraham and Ismāʿīl, so that it must be assumed that originally Muḥammad was not well informed about the family relationship between Abraham and Ishmael, as at that time he seems to have counted Jacob, not Ismāʿīl as another son of Abraham together with Isaac (Sūra XIX, 49; XXI, 72; XXIX, 27; VI, 84; XI, 71).

In other places, which, on the whole, are to be attributed to the Medinan period, the isolation of Ismāʿīl has given way to an intimate connexion with Abraham. At this period Ismāʿīl stands alongside his father in the attempt to build up the Kaʿba in Mecca as a centre of pilgrimage and make it a place of the pure monotheistic faith (Sūra II, 127-9). In so far as Isaac is also named, Ismāʿīl is given precedence as Abraham's son (Sūra XIV, 39; II, 132 f.; II, 136 = III, 84; II, 140; IV, 163). In the interpretation of the relevant passages, chronological difficulties indeed arise. Sūra XIV, 35-41, in which Abraham champions the security of the holy territory of Mecca and (verse 39) praises God for having given him Ismāʿīl and Isaac in spite of his great age, is usually attributed to the third Meccan period. And in Sūra XXXVII, which is even attributed to the second Meccan period, the birth of Isaac is first mentioned in verses 112 f., so that it must be assumed that the preceding verses 100-7, which also deal with a son of Abraham and with his (intended) sacrifice, refer to Ismāʿīl Consequently there would already be evidence for the connexion between Ismāʿīl and Abraham from the period before the Hidjra in two passages. Edmund Beck, however, who has critically examined the problem, takes Sūra XIV, 39 to be a Medinan interpolation and he supposes that even in the two verses II, 125 and 127, which are no doubt Medinan, the name of Ismāʿīl is a later addition. Thus he concludes that Ismāʿīl was first connected with Abraham in the Medinan period (*Le Muséon*, lxv (1952), 80-3). Beck does not commit himself concerning Sūra XXXVII (see above); Richard Bell, however, does: he considers the section which deals with the sacrifice of Abraham's son (verses 102-7) as a later Medinan addition, and further concludes that verse 101 ("So we felicitated him with a mild-tempered youth") "probably referred to Isaac, but when Ishmael began to assume importance to Mohammed, it was taken as referring to him, and verses 112 and 113 (Annunciation of Isaac) added". However these explanatory attempts by Beck and Bell may now be regarded, Ismāʿīl in any case takes a subordinate part in the ḳur'ānic legend concerning the foundation and purification of the cult of the Kaʿba. It is true that he is numbered among the patriarchs who have been given revelations (Sūra II, 136 = III, 84; IV, 163), but the leading part remains reserved for Abraham; for these matters, therefore, see IBRĀHĪM. Remarkably enough, there is in the Ḳur'ān—if we disregard the brief hint in Sūra XIV, 37—still no reference to the genealogical role which, according to Genesis XVI and XXV (and later also according to Arabic-Islamic tradition), fell to Ismāʿīl as a connecting link between the Israelites (Jews) and the Arabs. He is considered only as the son of Abraham, and in Sūra II, 133 is mentioned together with Araham and Isaac as one of the "Fathers" of Jacob.

The commentaries on the Ḳur'ān, the "stories of the prophets" (*Ḳiṣaṣ al-anbiyā'*), and the universal histories give various details concerning the part played by Ismāʿīl in the building of the Kaʿba and the introduction of the pilgrimage ceremonies (here Ismāʿīl plays the same subordinate role as in the Ḳur'ān). The story of the sacrifice of Abraham's son also is further elaborated, whereby the question of whether this son is to be identified with Ismāʿīl or Isaac remains open. The information on a few episodes from Ismāʿīl's early youth and married life is more detailed. The expulsion of Hagar and her child Ismāʿīl is described in accordance with Jewish tradition (which for its part goes back to Genesis XXI). According to Islamic tradition, Abraham does not simply send them both into the desert, but accompanies them himself as far as Mecca. There of course, he leaves them to their fate, since he has to go back to his wife Sarah. Hagar, full of pity for the

thirsty child, runs back and forth between the two hills al-Ṣafā and al-Marwa—the origin of the later pilgrimage ceremony of the Saʿy [*q.v.*]. Meanwhile, however, the little Ismāʿīl scratches the sand and thus helps the spring of Zamzam to break through. Thereupon the Arab tribe of Djurhum settles in the neighbourhood with the permission of Hagar, and, after Ismāʿīl has grown up, he takes a girl of the Djurhum as his wife. Abraham, who with Sarah's permission shortly comes on a visit, meets her while her husband is away, is treated inhospitably, and leaves behind for his son the order, cryptically expressed, that he should divorce her. On a later visit, Abraham meets, again in the absence of Ismāʿīl, the latter's second wife, is hospitably welcomed by her, and leaves behind for his son the request, similarly coded, that he should maintain the marriage with her. On a third visit Abraham calls on Ismāʿīl to help him in the building of the Kaʿba (see above). After his death Ismāʿīl is buried near his mother Hagar in al-Ḥidjr inside the Ḥaram.

By the post-ḳurʾānic tradition Ismāʿīl becomes linked with Mecca and the Arab world even more closely than by the Ḳurʾān. He is said to have learned Arabic (from the Djurhum). In the genealogical trees which the Arab genealogists have drawn up, he is counted as the ancestor of the northern Arabs and in consequence of the (subsequently) Arabized tribes. These are, without exception, traced back to ʿAdnān, but the connecting links between ʿAdnān and Ismāʿīl are—partly in accordance with Genesis XXV—variously related.

(RUDI PARET)

ISMĀʿĪL (IZMAIL), an Ottoman fortress town situated in the Budjak [*q.v.*] region of Bessarabia, on the left bank of the Kilya arm of the river Danube. Ewliyā Čelebī states that a certain *ḳapudān* named Ismāʿīl brought this area under Ottoman domination in 889/1484 at the time when Sultan Bāyazīd II took Kilya and Aḳ-Kermān from Moldavia. Evidence dating from 997/1588-9 (cf. Uzunçarşili, IV/i, 576, note I) indicates that a small fort (palanka) was built at Ismāʿīl in that year, craftsmen from Wallachia and Moldavia being summoned to share in the work of construction. In 1003/1595, during the long war of 1001/1593-1015/1606 between the Ottoman Empire and Austria, Ismāʿīl fell to a mixed force of Transylvanians, Moldavians and Wallachians under the command of "Andrea Barzai" (cf. Hurmuzaki, III/ii, 95). A few years later Georgius Dousa was to describe the town as noted for its trade in fish—*Smieli uberrima est optimorum piscium captura, atque ex eo vilitas*. Ismāʿīl suffered from Cossack raids in 1010-1011/1602 and in 1033-1034/1624. Ewliyā Čelebī, recounting his travels in the year 1067/1657, gives some details of interest about Ismāʿīl. He notes that it had a superintendent of customs (*gümrük emini*), but no fortress commandant, since there was no fort there (*ḳalʿe olmadighından dizdārı yoḳdur*). The town contained two thousand houses (*khāne*), with a population of Muslims (located in three distinct areas—*üç islām maḥallesi*), Greeks, Armenians and Jews. Tatars inhabited the regions adjacent to the town. Ismāʿīl conducted a flourishing trade in such products as butter, cheese, salt from Wallachia (*eflāḳ ṭuzu*), grain, sturgeon and caviar. Some two thousand waggon loads of fish pickled in brine (*balık salamurası*) went each year, through Ismāʿīl, to Poland and to the territories of Moscow. State-owned fisheries existed along the banks of the Danube. Ismāʿīl had also a market where white slaves of either sex might be found for sale. A little more than a hundred years later de Tott, passing through the Budjak in 1182-1183/1769, observed that Ismāʿīl was an *entrepôt pour la traite des grains par le Danube* and also a centre for the manufacture of *chagrins de Turquie*, *i.e.*, of shagreen. Ismāʿīl, standing at the intersection of routes from Galatz, Khotin (Choczim), Bender and Kilya, became a fortress of importance during the 11th/17th and 12th/18th centuries as a result of the confrontation between Russia and the Ottoman Empire in the lands bordering the Black Sea. Russian troops took Ismāʿīl in 1184/1770. The town was restored, however, to the Ottomans at the Peace of Küçük Kaynardja in 1188/1774. Employing the services of foreign experts, the Turks now fortified Ismāʿīl anew, transforming it into an *ordu ḳalʿesi*—a stronghold designed to function as a base controlling large forces. The Russians, under the command of Suvorov and in the face of a desperate resistance, stormed Ismāʿīl in Rabīʿ II 1205/December 1790, an event which was celebrated in the verse of Byron and Deržavin. At the Peace of Iaşi (Jassy) in 1206/1792 Ismāʿīl was handed back to the Ottomans, who soon began to repair its defences. The town, in 1224/1809, came once more into the hands of the Russians. General Tučkov, in the following year established near Ismāʿīl a settlement named after himself, but destined, in the course of time, to be merged into Ismāʿīl. The Peace of Bucharest concluded in 1227/1812 gave Ismāʿīl to Russia. In 1272/1856, at the Peace of Paris, which brought the Crimean War to an end, southern Bessarabia, with Ismāʿīl (its fortifications now demolished), was transferred from Russia to Moldavia. Russian forces re-occupied Ismāʿīl in 1294/1877, the town being ceded to Russia at the Congress of Berlin in 1295/1878. It came under Rumanian control at the close of World War I and under Soviet rule at the end of World War II. Ismāʿīl is included now in the Ukrain-

ian Republic of the U.S.S.R. The town, with a population, in 1956, of some 43,000 inhabitants, amongst them Rumanians, Ukrainians, Turks, Bulgarians, Russians and Jews, functions as a river port and commercial centre dealing above all in grain, timber and hides.

(T. MENZEL—[V. J. PARRY])

ISMĀʿĪL I (ABŪ L-MUẒAFFAR), born 25 Radjab 892/17 July 1487, died 19 Radjab 930/23 May 1524, shah of Persia (907/1501-930/1524) and founder of the Ṣafawid dynasty [see ṢAFAWIDS].

1. *Biographical and historical*: Under Ismāʿīl, Iran became a national state for the first time since the Arab conquest in the 1st/7th century. An important factor in this process was the proclamation by Ismāʿīl of the Ithnā ʿAsharī (Djaʿfarī) form of Shīʿism as the official religion of the Ṣafawid state. By this action, Ismāʿīl decisively differentiated his dominions from those of the Ottomans, who were threatening to absorb Iran into their empire, and imparted a sense of unity among his subjects in the face of their arch-enemies, the Ottomans in the west and the Özbegs in the east.

Although Ismāʿīl was related, through both his mother and his grandmother, to the Aḳ Ḳoyunlu rulers, the Ṣafawid-Aḳ Ḳoyunlu alliance had broken down during the lifetime of his father Ḥaydar [*q.v.*], and Ismāʿīl, while still an infant, was arrested with his elder brothers ʿAlī and Ibrāhīm, and imprisoned for 4½ years in the fortress of Iṣṭakhr in Fārs (end of Rabīʿ II 894/March 1489—end of Shawwāl 898/August 1493. Civil war broke out between rival Aḳ Ḳoyunlu princes, and one of them, Rustam, made use of Ṣafawid support to defeat one of his rivals (Shawwāl 898/August 1493). In 899/1494 Rustam, realizing that rising popular support for the Ṣafawids constituted a threat to his own position, had ʿAlī killed. Ismāʿīl fled to Ardabīl and thence to Gīlān.

For nearly five years (899/1494-905/1499), Ismāʿīl remained in hiding at Lāhīdjān, where he had been given sanctuary by the local ruler. During this time he maintained close contact with his *murīds* in Rūm, Ḳarādja-dāgh, Ādharbāydjān and elsewhere. Since these *murīds*, also known as *ḳizilbāsh* [*q.v.*], were mainly Turcoman tribesmen, Ismāʿīl in order to make the Ṣafawid *daʿwa* more effective, addressed to them simple verses in their own Turkish dialect, using the *takhalluṣ* of Khaṭāʾī [see below]. In 905/1499 Ismāʿīl emerged from Gīlān to make his bid for power, and the following year some 7,000 Ṣūfīs of the Ṣafawid *ṭarīḳa* assembled at Erzindjān. After a campaign in Shīrwān in which Ismāʿīl avenged the deaths of his father and grandfather [see DJUNAYD; ḤAYDAR], he defeated a large Aḳ Ḳoyunlu army under Alwand at the decisive battle of Sharūr. This victory gave Ismāʿīl control of Ādharbāydjān, and in 907/1501 he was crowned at Tabrīz.

Ismāʿīl spent the next decade extending the Ṣafawid empire: Fārs and ʿIrāḳ-i ʿAdjam were conquered in 908-9/1503; Māzandarān and Gurgān, and Yazd, in 909/1504; Diyār Bakr in 911/1505-913/1507; Baghdād and ʿIrāḳ-i ʿArab in 914/1508 (the local rulers of Khūzistān, Luristān and Kurdistān acknowledged his suzerainty); Shīrwān in 915/1509-10. Finally, on 30 Shaʿbān 916/2 December 1510, Ismāʿīl routed the Shībānī Özbegs in a great battle at Marw. A few days later, Ismāʿīl entered Harāt, and proceeded to consolidate his conquest of Khurāsān.

The following year, 917/1511, Ṣafawid troops penetrated as far eastwards as Samarḳand, in support of the Tīmūrid prince Bābur, who was hoping, with their aid, to recover his Transoxanian dominions. Any idea Ismāʿīl may have entertained of annexing Transoxania to the Ṣafawid empire was dashed in 918/1512, when a powerful Özbeg army swept the Ṣafawid expeditionary force back across the Oxus. This was followed by an uneasy truce with the Özbegs which lasted some eight years, but Ismāʿīl proved himself unable to arrive at a permanent solution to the problem of the defence of the north-east frontier.

By 916/1510, therefore, the whole of Persia was in Ismāʿīl's hands, but the establishment of a militant Shīʿite state on the Ottoman border constituted a challenge which Sultan Selīm could not afford to ignore, and in 920/1514 he invaded Persia and inflicted a crushing, but not decisive, defeat on Ismāʿīl at the battle of Čāldirān [*q.v.*]. His aura of invincibility dispelled, Ismāʿīl never again led his troops in battle. During the last ten years of his life, he took a less and less active part in political affairs, and gave his viziers virtually a free hand in administrative matters.

After his defeat at Čāldirān, Ismāʿīl became more interested in exploring the possibilities of an alliance with European powers, in order to attack the Ottomans on two fronts. In 921-2/1516 he received an

envoy from Louis II, King of Hungary, in the person of a Maronite monk named Fr. Peter, and an ambassador from Charles V of Germany also reached him about the same time. In Shawwāl 929/August-September 1523, Ismāʿīl sent a letter to Charles, expressing his astonishment that the Christian powers, instead of devoting all their energies to fighting the Turks, were squabbling among themselves (details from unpublished material made available to me through the courtesy of Dr. L. Lockhart). The Ṣafawids thus carried on the series of diplomatic exchanges with the West, which had begun in Aḳ Ḳoyunlu times, and which had as their chimerical objective the organizing of joint military operations against the common foe, the Ottomans.

Ismāʿīl's achievements have been overshadowed, perhaps unfairly, by those of his illustrious descendant, ʿAbbās I [*q.v.*]. Ismāʿīl possessed the charismatic appeal, the powers of leadership, and the personal valour, to bring to a successful conclusion more than half a century of active revolutionary endeavour. In addition, he displayed a high degree of political acumen and statecraft. On his accession, he was faced by complex problems of great urgency. There was the problem of how to incorporate the Ṣūfī organization of the Ṣafawid *ṭariḳa*, of which Ismāʿīl was the ***murshid-i kāmil***, in the newly established Ṣafawid state, of which he was the ***pādishāh***. There was the problem of how to reconcile the "men of the sword", the Turcoman military élite which had brought him to power, with the "men of the pen", the Persian bureaucrats on whom he depended for the efficient functioning of his empire. There was the problem of imposing doctrinal uniformity as rapidly as possible, while at the same time maintaining political control of the religious institution, in order to prevent the *ʿulamāʾ* from assuming a dominant position in the state (the undue growth of the power of the ***mudjtahids*** was later to become one of the principal causes of Ṣafawid decline). The fact that Ismāʿīl's policies, original and ingenious though they frequently were, ultimately failed to solve these problems, indicates not so much the inadequacy of his policies as the insolubility of the problems.

On his death in 930/1524, Shāh Ismāʿīl was buried in the Ṣafawid family mausoleum at Ardabīl. He had four sons: Ṭahmāsp [*q.v.*], who succeeded him; Sām; Alḳāṣ [*q.v.*], and Bahrām; and five daughters.

(R. M. Savory)

2. *His Poetry*: The founder of the Ṣafawid dynasty was also a poet who wrote under the pseudonym (*takhalluṣ*) of Khaṭāʾī. His poems, with few exceptions, are in the Turkish language of Ādharbāydjān, or Ḳizilbashī (a term used in the indigenous sources, as distinct from Čaghatāʾī and Rūmī). Khaṭāʾī's poetical output consists of: (a) The ***Dīwān***, the oldest and most authentic Ms. of which was completed in 948/1541, eighteen years after Shāh Ismāʿīl's death. This *Dīwān* contains 254 ***ḳaṣīda-ghazal***s, three ***mathnawī***s, one ***murabbaʿ*** and one ***musaddas***. The first twenty-four religious and didactic poems are, however, not in alphabetical order. Some of the poems of this Ms. contain outspoken utterances such as "I am the absolute Truth", and "I am God's eye (or God himself)", etc. These poems and a number of technically imperfect poems together with a poem in syllabic metre are omitted in the later Mss., which have apparently undergone a process of "expurgation". The great part of the content of Khaṭāʾī's *Dīwān* consists of the lyrical poems. (b) The ***Dah-nāma***, which was composed in 911/1506 in the ***mathnawī*** form, and in the ***hazadj*** metre. The subject of this poem is the exchange of ten letters between the lover and the beloved, which ultimately leads to their union. It includes a number of ***ghazal***s in the same metre. This ***Dah-nāma*** belongs to a literary genre which was very popular in the Persian and Turkish literatures of the 8th/14th and 9th/15th centuries. (See T. Gandjeï; *The Genesis and Definition of a literary composition*: *The Dah-nāma ("Ten love-letters")*, in *Der Islam*, xlvii (1971), 59-66).

A collection of poems in syllabic metre, which bear the *takhalluṣ* Khaṭāʾī, and exist, not in the Mss. of the *Dīwān*, but in various miscellaneous Mss., can with confidence be ascribed to poets of ʿAlawī-Bektashī circles, in which the royal poet was venerated (see T. Gandjeï; *Pseudo-Khaṭāʾī*, in *Iran and Islam*, Edinburgh 1971, 263-266). The songs called χαται ∼ *catai* in praise of Shāh Ismāʿīl and Shāh Ṭahmāsp, which Michele Membré mentions (*Relazione di Persia (1542)*, Naples 1969, 48), were most probably the syllabic poems bearing the pseudonym of Khaṭāʾī.

Khaṭāʾī was greatly influenced in his poems by the work of the Ḥurūfī poet, Nesīmī [*q.v.*]. Khaṭāʾī's poetry, besides its literary merit, which is far from negligible, is important, in that it contains data concerning the true nature of early Ṣafawid Shīʿism. Although the poets who composed Turkish poems in Ṣafawid Persia were for the most part influenced by Nawāʾī and Fuḍūlī, there is evidence of a certain influence by Khaṭāʾī on some poets of this period, such as Amānī, Ẓafar and Ṣāʾib. But it was in ʿAlawī circles that the poems and the person of Khaṭāʾī exercised a lasting influence. His poems were recited for centuries in ʿAlawī-Bektashī circles of Anatolia. In his native Ādharbāydjān, the Ahl-i Ḥaḳḳ, who incorporated him in the syncretic pantheon of their sect, considered him to be the ***pīr*** of Turkestān (*i.e.*, Ādharbāydjān and the neighbouring Turkish-speaking lands), in whose person God spoke in Turkish, *Khaṭāʾi de türki dedi*, and finally the adepts of the extremist Shabak sect in ʿIrāḳ included the poems

ascribed to Khaṭā'ī in their sacred book, the *Buyruḳ*.

ISMĀʿĪL II, born 940/1533-4 (this is conjectured from the available evidence; no chronicle gives his date of birth), died 13 Ramaḍān 985/24 November 1577, second son of Shāh Ṭahmāsp [*q.v.*], shah of Persia (984-5/1576-7) of the Ṣafawid dynasty.

After the rebellion of his uncle Alḳāṣ [*q.v.*], Ismāʿīl was appointed governor of Shīrwān (954/1547), and conducted several successful campaigns against the Ottomans in the Caucasus and eastern Anatolia. In 962/1555 he married a daughter of the marriage between a sister of Ṭahmāsp and Shāh Niʿmat Allāh Walī [*q.v.*]. The following year, in Shaʿbān 963/June 1556, he was appointed governor of Khurāsān.

After only a few months at Harāt, Ismāʿīl was suddenly arrested (Ṣafar 964/December 1556), and taken to the fortress of Ḳahḳaha in Ādharbāydjān, where he remained a prisoner for nearly twenty years. Various reasons are put forward to account for Ṭahmāsp's action. Some sources point out that Ismāʿīl's arrest followed closely upon the signature of the Treaty of Amasya (962/1555), which ushered in more than thirty years of peace with the Ottomans, and that Ṭahmāsp feared that Ismāʿīl's bellicose nature might endanger this peace; but the transference of Ismāʿīl, from Shīrwān, adjacent to the Ottoman frontier, to Harāt, would seem designed to obviate just such a danger. Other sources declare that the puritanical Ṭahmāsp could no longer tolerate Ismāʿīl's dissolute way of life. The real reason for Ismāʿīl's sudden fall from favour, however, seems to have been Ṭahmāsp's fear that Ismāʿīl might be nursing an ambition to supplant him, a fear which was assiduously played upon by the powerful *wakīl* Maʿṣūm Beg Ṣafawī, who was a bitter enemy of Ismāʿīl. Ismāʿīl's high-handed behaviour on his arrival at Harāt gave colour to Ṭahmāsp's suspicions, and moved Ṭahmāsp, for whom the defection of his own brothers Alḳāṣ and Sām was a recent and vivid memory, to take action against him. This situation may, then, be reflected by what at first sight appears the vague statement in *Tārikh-i ʿĀlam-ārā-yi ʿAbbāsī* (i, 125), that Ismāʿīl was imprisoned "in the best interests of the state, and because of various improper acts which displeased the shah".

On the death of Shāh Ṭahmāsp (984/1576), 30,000 *ḳizilbāsh* assembled at Ḳahḳaha and swore fealty to Ismāʿīl, who was enthroned as Shāh Ismāʿīl II at the capital, Ḳazwīn, on 27 Djumādā I 984/22 August 1576. Ismāʿīl's mind, however, had been unhinged by his long imprisonment, and, on attaining power, his sole idea was to maintain his position at all costs. To this end, he carried out a widespread purge of *ḳizilbāsh* officers of the Ustādjlū tribe, which had supported an abortive coup in favour of his brother Ḥaydar. He then began systematically to murder, or blind, any prince of the blood royal who might conceivably become the centre of a conspiracy against him. Five of his brothers and four other Ṣafawid princes perished in this way. When Ismāʿīl began to put to death officers whose only crime was that of having held important positions under his father, the *ḳizilbāsh* regretted that they had placed him on the throne, and conspired to assassinate him. Ismāʿīl is alleged to have been a less than enthusiastic Twelver Shīʿite. This gave the *ḳizilbāsh* both an added incentive to remove him, and also a plausible excuse for their action. Ismāʿīl's addiction to narcotics made it easy for the *ḳizilbāsh* both to carry out the murder and to give it the air of death by misadventure. With the connivance of Ismāʿīl's sister, Parī Khān Khānum, the conspirators placed poison in an electuary containing opium, which was consumed by Ismāʿīl and one of his boon-companions. Ismāʿīl was succeeded by his elder brother Muḥammad Khudābanda [*q.v.*].

Bibliography: W. Hinz, *Schah Esmāʿīl II, Ein Beitrag zur Geschichte der Ṣafaviden*, in *MSOS*, xxxvi (1933), 19-100, with full details of the European and Persian sources at pp. 20-24. (R. M. SAVORY)

ISMĀʿĪL, MAWLĀY [see ʿALAWIDS and MAWLĀY ISMĀʿĪL].

ISMĀʿĪL B. ʿABBĀD [see IBN ʿABBĀD].

ISMĀʿĪL B. AḤMAD, ABŪ IBRĀHĪM, called al-Amīr al-Māḍī or al-Amīr al-ʿĀdil, the first member of the Sāmānid family effectively to rule all Transoxania and Farghāna as an independent sovereign. Born in 234/849, he spent 20 years as governor of Bukhārā on behalf of his brother Naṣr, who himself resided at Samarḳand (260/874-279/892). The unsettled conditions in Khurāsān during the years between the fall of the Ṭāhirids and the final establishment there of ʿAmr b. al-Layth [*q.v.*] were reflected in Transoxania also. Ismāʿīl had in Bukhārā to fight off an invading army from Khwārazm under one Ḥusayn b. Ṭāhir al-Ṭā'ī (who was not necessarily, *pace* Barthold, a member of the Ṭāhirid family, cf. Vasmer in *Num. Zeitschr.*, lxiii (1930), 148), and to maintain relations with his mistrustful brother Naṣr, who twice sent armies against Bukhārā.

When Naṣr died in 279/892, Ismāʿīl became master of all Transoxania, transferring the capital to Bukhārā, where it was to remain till the end of the dynasty, and securing recognition from the ʿAbbāsid Caliph. In the following year he led an expedition into the Turkish steppes against the camp of the Ḳarluḳ Ḳaghan at Talas (modern Djambul), capturing an immense booty of slaves and beasts and converting the principal church of Talas into a mosque; he also subdued the local Iranian dynasty of rulers of Ushrūsana in the Syr Daryā valley. In view of the claim of the Ṣaffārids [*q.v.*] to be successors in the east of the Ṭāhirids, ʿAmr b. al-Layth's attempt to assert his suzerainty over Khwārazm and Transoxania was predictable. Ṣaffārid might in Persia was such that in 285/898 the caliph al-Muʿtaḍid was forced to issue a decree deposing Ismāʿīl and awarding an investiture diploma to ʿAmr for Transoxania and Balkh. ʿAmr marched

northwards to take possession of his new territories, and summoned Ismāʿīl, the Abū Dāʾūdids of Ṭukhāristān and the Farīghūnids of Gūzgān to allegiance. There was considerable fighting south of the Oxus between the Sāmānids and Ṣaffārids, until in 287/900 ʿAmr was defeated near Balkh and captured. Although Ismāʿīl was technically in rebellion against the ʿAbbāsids, the caliph was overjoyed at the removal of so dangerous a rival as ʿAmr. Ismāʿīl's victory gave the Sāmānids the preponderance in Khurāsān, and they held the province all through the 4th/10th century until it passed to Maḥmūd of Ghazna.

In the last years of his life, Ismāʿīl halted a Turkish invasion from the steppes (291/904), and was busy extending Sāmānid power into nothern Persia and the Caspian region. The Shīʿī ruler of Ṭabaristān, Muḥammad b. Zayd, was repulsed from Khurāsān, and an offensive launched against Ṭabaristān itself. By 287/902 the Sāmānids held territory as far west as Rayy and Ḳazwīn, although Ismāʿīl's successors were unable to hold this in face of the resurgence of Daylamī peoples. Ismāʿīl died in 295/907. The historical and anecdotal sources unanimously praise him for his moderation and justice; influenced by his victory over the Ṣaffārids, they commend his faithfulness to the Caliphs and his Sunnī piety. His tomb is still shown in Bukhārā (cf. Schroeder in *Survey of Persian art*, iii, 946-9), but the mausoleum seems in fact to belong to the later Sāmānid period.

Bibliography: See the long section on Ismāʿīl in Narshakhī, tr. R. N. Frye, 77-94, to be supplemented by such historical sources as Ṭabarī and Ibn al-Athīr; amongst *adab* works, those of Niẓām al-Mulk and ʿAwfī; Barthold, *Turkestan*[2], 222-6; R. N. Frye, *Bukhara, the medieval achievement*, Norman, Okla., 1965, 38-49.

ISMĀʿĪL b. BULBUL, Abuʾl-Ṣaḳr, vizier of the ʿAbbāsid Caliph al-Muʿtamid [*q.v.*]. Of Persian or Mesopotamian origin, he was born in 230/844-5 and claimed to belong to the Arab tribe of the Shaybān. Abu 'l-Ṣaḳr, who had been a secretary and had been in charge of the dīwān of the Royal Domains, appeared on the political scene in 265/878, when the regent al-Muwaffaḳ had him appointed vizier, a post which he had to abandon shortly afterwards only to regain it at the end of the year. But Ismāʿīl played a minor role while the regent had Ṣāʿid b. Makhlad [*q.v.*] as his personal secretary, and it was only from the year 272/885-6 that he really exercised the functions of vizier. Though not responsible for military affairs, he ran the administration and was in charge of the appointments to the various state offices. It was then that he appointed the Banu 'l-Furāt brothers to the financial offices. These brothers, whose Shīʿī convictions he shared, helped him in his attempt to face the difficulties that beset him at the time. But he came up against the hostility of al-Muwaffaḳ's son, the future al-Muʿtaḍid, whom his father had prevented from going off on an expedition against the Ṭūlūnids and whom Ismāʿīl himself attempted to eliminate from public affairs first during his absence and then during the regent's illness. After the death of the latter, in Ṣafar 278/May 892, al-Muʿtaḍid, who had become regent, hastened to arrest Ismāʿīl who died shortly afterwards, a victim of his attachment to the Caliph, but also of the support he had lent the Shīʿīs and perhaps of his unorthodox opinions.

(D. Sourdel)

ISMĀʿĪL b. al-ḲĀSIM [see Abu 'l-ʿAtāhiya].

ISMĀʿĪL b. NŪḤ, Abū Ibrāhīm al-Muntaṣir, the last of the Sāmānids of Transoxania and Khurāsān. When in 389/999 the Ḳarakhānid Ilig Khān Naṣr occupied the Sāmānid capital Bukhārā, Ismāʿīl and other members of the family were carried off to Uzkend. He contrived, however, to escape to Khwārazm, and for the next four years kept up a series of attacks on the Ghaznavids in northern Khurāsān and the Ḳarakhānids in Bukhārā. In 393/1003 he obtained the help of the Oghuz, traditional allies of the Sāmānids, and according to Gardīzī, it was at this point that the leader of the Saldjūḳs became a Muslim. Ismāʿīl's attempts to restore his dynasty's power all ended in failure; he took refuge in the Ḳara Ḳum desert, where he was killed in Rabīʿ I or Rabīʿ II 395/Dec.-Jan. 1004-5 or Jan.-Feb. 1005 by a group of Arabs of the Banū ʿIdjl. According to ʿAwfī, Ismāʿīl was the most gifted of his dynasty in regard to poetry and its transmission, and his short-lived courts at Bukhārā attracted many literary figures.

Bibliography: ʿUtbī-Manīnī, i, 320-46; Gardīzī, ed. Nāẓim, 63-5; ʿAwfī, *Lubāb al-albāb*, ed. S. Nafīsī, Tehran 1333/1954, 23-4; Barthold, *Turkestan*[2], 269-70; Nāẓim, *Sulṭān Maḥmūd of Ghazna*, 45-6.

(C. E. Bosworth)

ISMĀʿĪL b. SEBÜKTIGIN, Ghaznavid amīr, third son of the founder of the Ghaznavid empire and last of the family to recognize the suzerainty of the Sāmānids. When Sebüktigin died in Shaʿbān 387/August 997, he left the provinces of Ghazna and Balkh to Ismāʿīl, and command of the army in Khurāsān to his eldest son Maḥmūd; this allocation of Ghazna to Ismāʿīl was probably influenced by the fact that he was Sebüktigin's son by a daughter of Alptigin [see Alp-Takīn], the original commander of the Turks in Ghazna. Maḥmūd refused to accept these arrangements, and demanded recognition as supreme overlord in the Ghaznavid dominions. He obtained the help of his brother Naṣr, governor of Bust, and of his uncle Bughračuḳ, governor of Harāt, and in a battle outside Ghazna defeated Ismāʿīl (Rabīʿ I 388/March 998). Thus after a reign of only seven months, Ismāʿīl was deposed and imprisoned for the rest of his life in Gūzgān.

ISMĀʿĪL b. YASĀR al-Nisāʾī, Medinan poet, who died at a very advanced age some years before the end of the Umayyad dynasty (132/750). The descendant of an Ādharbaydjānī prisoner, he was a *mawlā* of the Taym b. Murra of Ḳuraysh and it is said that he owed his *nisba* to the fact that his father prepared meals—or sold carpets—for weddings, but this interpretation should be treated with caution. At Medina, where he lived, he had become a supporter of the Zubayrids, but his friendly relations with ʿUrwa b. al-Zubayr [*q.v.*] (in whose company he went to the court of ʿAbd al-Malik b. Marwān after the fall of ʿAbd Allāh b. al-Zubayr (73/692)) gained him access to the caliph, to whom he addressed a panegyric; in spite of his secret hatred of the Marwānids, he later wrote in praise of several Umayyad caliphs and princes, up to al-Walīd b. Yazīd (125/743). To judge from the notice in the *Aghānī*, Ismāʿīl

b. Yasār's poetical work contained hardly any satires but consisted of panegyrics, *marthiyas* (notably of his brother Muḥammad and of a son of ʿUrwa b. al-Zubayr) and *ghazals*, which were set to music. However, the most striking feature of his poetry seems to be a clearly expressed desire to disparage the Arabs and to glorify the ʿAdjam; one verse refers to the *waʾd* of new-born girls, others to the poet's own illustrious origin; it is said that he was even bold enough to recite before Hishām b. ʿAbd al-Malik, at al-Ruṣāfa, a poem in which he omitted to praise the caliph but held forth at length on his own glorious ancestors; he was punished for this audacity by being thrown fully-clothed into a pond and then banished to the Ḥidjāz. In this respect, Ismāʿīl b. Yasār al-Nisāʾī may be considered as one of the first Shuʿūbīs; his son Ibrāhīm followed him in this, according to the *Aghānī*, which however devotes to him only a few lines. His brothers Muḥammad and Mūsā, known as Shahawāt, were also poets [see MŪSĀ SHAHAWĀT].

Bibliography: Ibn Ḳutayba, *Shiʿr*, 366 = 559; Ibn Sallām al-Djumaḥī, 345-6; *Aghānī*, iv, 119-27 (Beirut ed., iv, 409-26); Baghdādī, *Khizāna*, i, 144 (Cairo ed., i, 271); Ṭ. Ḥusayn, *al-Adab al-djāhilī*, 176; Goldziher, *Muh. Stud.*, i, 160; Rescher, *Abriss*, i, 186-8; Nallino, *Letteratura*, 139-40 (Fr. tr., 214-5); Brockelmann, S I, 95.

(CH. PELLAT)

ISMĀʿĪL RUSŪKH AL-DĪN ISMĀʿĪL B. AḤMAD AL-**ANḲARAWĪ**, (?-1041/1631-2), a commentator of the *Mathnawī* of Djalāl al-Dīn Rūmī. His date of birth is unknown, but it is known that he was born in Ankara, received a good education, was active in trade and entered the Khalwatiyya order of dervishes (cf. *Sharḥ-i Mathnawī*, i, 11, introduction). Having contracted an eye disease, Ismāʿīl went to Ḳonya where he became a follower of the Mawlawī *shaykh* Bostān Čelebī (d. 1040/1630), who named him *khalīfa*. Ismāʿīl then went to Istanbul, where he became *shaykh* of the Mawlawī-khāne (Mevlevī dervish house) of Galata, a position which he kept until his death. He lies buried in the *turba* in the courtyard of his Mawlawī-khāne.

Ismāʿīl was proficient in both Arabic and Persian, and became known for his commentaries on works written especially in these two languages (cf. M. Ṭāhir, *ʿOthmānlı Muʾellifleri*, i, 24 ff.; Khwādja-zāde Aḥmad Ḥilmī, *Ziyāret-i Ewliyā*, Istanbul 1325 A.H., 71). His main works are:

1. *Fātiḥ al-abyāt*, a commentary on the first 18 couplets of the *Mathnawī*, and of certain difficult terms.

2. *Djāmiʿ al-āyāt*, a commentary on the ḳurʾānic verses, *ḥadīth*s and Arabic verses in the *Mathnawī*.

3. *Sharḥ-i Mathnawī*, written after the two preceding works. This commentary, on which Ismāʿīl's fame rests, and which until recent times was the most popular work explaining the *Mathnawī*, is largely inspired by the ideas of Ibn al-ʿArabī (d. 638/1240). It dwells on the mystical rather than the grammatical significance of Rūmī's couplets. It was, nonetheless, criticized by the Mawlawīs because it included a commentary on an apocryphal seventh volume of the *Mathnawī* (see A. Gölpinarli, *Mevlânâ'dan sonra Mevlevîlik*, Istanbul 1953, 143). Ismāʿīl's seven-volume commentary was printed in Istanbul in 1289/1872-3. It was also translated into Arabic, in a somewhat abridged form, under the title *al-Minhādj al-ḳawī sharḥ al-Mathnawī*, by Djangī Yūsuf Dede of Tripoli (d. 1080/1669), and published in Cairo in 1289/1872-3. Ismāʿīl's work also forms the basis of R. A. Nicholson's *Commentary on the Mathnawi of Jalaluddin Rumi*, London 1937. It was finally translated into Persian by Dr. ʿIṣmat Sattār-zāde (*Sharḥ-i Kabīr-i Anḳarawī dar Mathnawī-yi Maʿnawī-yi Mawlawī*, Vol. i, Tehran 1348 solar).

4. *Zubdat al-fuḥūṣ fī naḳṣ al-fuṣūṣ*, a commentary consisting of an abridgment of Ibn al-ʿArabī's *Fuṣūṣ al-ḥikam*.

5. *Sharḥ hayākil al-nūr* (or *Iḍāḥ al-ḥikam*), a commentary on the work of that name by Shihāb al-Dīn Suhrawardī al-Maḳtūl (d. 587/1191).

6. *Sharḥ ḳaṣīda-i tāʾiyya*, a commentary on Ibn al-Fāriḍ's famous *ḳaṣīda* of that name.

In addition to these commentaries, Ismāʿīl composed independent treatises (for full list see M. Ṭāhir and Aḥmad Ḥilmī, *op.* and *loc. cit.*), the best known being:

1. *Miftāḥ al-balāgha wa miṣbāḥ al-faṣāḥa*, written in Turkish, but based on Arabic and Persian manuals of rhetoric. It was printed in Istanbul in 1284/1867-8.

2. *Minhādj al-fuḳarāʾ*, an explanation of Ṣūfī terminology, based largely on the *Manāzil al-sāʾirīn* of ʿAbd Allāh Anṣārī (d. 481/1088-9). It was published in Istanbul in 1286/1869-70.

3. *Ḥudjdjat al-samāʿ*, a brief treatise in defence of the *samāʿ* dance of the Mawlawī Whirling Dervishes. This has been published both separately and also together with the preceding work.

Finally, Ismāʿīl's poetry was collected in a *Dīwān* (see catalogue of *Dīwāns*). He himself was the subject of a eulogistic *ḳaṣīda* by the poet Shaykh Ghālib, a proof of the wide respect in which he was held for his religious and mystical knowledge (see Aḥmad Ḥilmī, *op. cit.*, 73-6).

Bibliography: In addition to the works cited, Ṣāḳib Dede, *Safīna-i Hafīsa-i Mawlawiyān*, Cairo 1283/1866-7, ii, 37-44, which corresponds to *Sharḥ-i Mathnawī*, i, 1-11, introduction; Esrār Dede, *Tadhkira-i Shuʿarā-i Mawlawiyya*, Ist. Univ. Lib., TY 89, 125-7; ʿAlī Anwar, *Samāʿkhāna-i Adab*, Istanbul 1309/1891-2, 80-83. (TAHSIN YAZICI)

ISMĀʿĪL ʿĀṢIM EFENDI [see ČELEBI-ZĀDE].

ISMĀʿĪL GASPRINSKI [see GASPRALĪ].

ISMĀʿĪL GHĀLIB, (1848-1895), noted Turkish historian and numismatist. Son of the grand vizier Ibrāhīm Edhem Pasha [*q.v.*], brother of Ḥamdī Bey [see ʿUTHMĀN ḤAMDĪ], director of the Imperial Museum, and of the historian Khalīl Edhem [see ELDEM], he was born in Istanbul, entered government service at an early age, became a member of the Council of State and in 1894 was appointed a special assistant to the governor of Crete. Taken seriously ill there, he returned to Istanbul and died the following year. His grave is in the cemetery of the Iskele Djāmiʿa in Usküdar. Ismāʿīl Ghālib's lasting reputation as a scholar rests on his accomplishments in the field of Islamic numismatics. During and after Ḥamdī Bey's administration he was responsible for putting in order and expanding the museum's great collection of Islamic coins. His private collection was bought after his death by the Imperial Mint. His principal works, models of meticulous cataloguing and description, were: *Taḳwīmi meskūkāti ʿothmāniye* (1307/1890), *Taḳwīmi meskūkāti seldjūḳiye* (1309/1892), *Meskūkāti türkmāniye ḳatālōghī*, also in a French edition (1311/1894), *Essai de numismatique turcomane* (his private collection) (1311/1894), *Meskūkāti ḳadīmeyi islāmiye ḳatāloghī* (1312). For several monographs and articles by him see L. A. Mayer. *Bibliography of Moslem Numismatics*, 2nd ed., and Halil Ethem, *Islâmî Nümismatik için bir bibliografi tecrübesi* (Ankara 1933).

Bibliography: J. H. Mordtmann in *EI*[1], s.v. GHĀLIB (Turkish translation in *IA*, s.v. GĀLIB); Ibrahim Alaeddin Gövsa, *Meşhūr Adamlar Ansiklopedisi* (Istanbul 1933-1935). (G. C. MILES)

ISMĀʿĪL ḤAḲḲĪ ʿĀLĪSHĀN (also ʿALĪSHĀNZĀDE ISMĀʿĪL ḤAḲḲĪ, in modern Turkish ISMAIL HAKKI ELDEM), 1871-1944, Turkish writer and diplomat. Educated in the Imperial School of Political Science (*Mülkiye*), he joined the Ministry of Foreign Affairs and served as director of Consular Service and as consul general in Marseilles, Zurich and Munich. Soon after his retirement in 1923, he joined the staff of ʿAbd Allāh Djewdet's *İdjtihād* [see DJEWDET] to which he contributed literary, social and economic articles regularly until 1932. He had married ʿAzīze Hanim, a grand-daughter of the former grand vizier Ibrāhīm Edhem Pasha (1818-1893 *q.v.*). Ismāʿīl Ḥaḳḳi began his career as writer when still a student and published a number of books and pamphlets and many articles, mainly literary biographies, monographs on literary topics and translations from French literature. In the 1890s he began to publish two series of literary biographies under the general titles *On dördün-djü ʿaṣīr Türk muḥarrirleri* and *ʿOthmānlī meshāhīr-ı üdebāsi*. Only five booklets of about hundred pages each were published: *Aḥmed Midḥat Efendi* (1308/1892), *Djewdet Pasha* (1308/1892), *Redjā ʾizāde Ekrem Bey* (1308/1892), *Muʿallim Nādjī Efendi* (1311/1895), *Shems ed-Dīn Sāmī Bey* (1311/1895). These biographies are early examples of modern Turkish literary criticism which remained almost unnoticed as the author did not belong to any active literary grouping of the period. His *Müntakhabāt-ı terādjim-i meshāhīr* (1307-1891) is an anthology of French literature in translation made by various Turkish writers. Among his many translations from the French (André Maurois, Pierre Benoît, etc.), his prose rendering of Charles Baudelaire's *Les Fleurs du mal, Elem čičekleri* (Istanbul 1927), helped to make the French symbolist poet a favourite of Turkish poets of the 1930s.

Bibliography: F. E. Karatay, *Istanbul üniversitesi Kütüphanesi Türkçe basmalar alfabe Kataloğu*, Istanbul 1956, i, 183-84; *Idjtihād, passim*; *Istanbul Ansiklopedisi*, s.v. (S. H. Eldem); written communication of his son Sadi Eldem, Turkish ambassador in Madrid (1971).

(FAHIR İZ)

ISMĀʿĪL ḤAḲḲĪ, SHAYKH ISMĀʿĪL ḤAḲḲĪ AL-BRŪSAWĪ or AL-USKUDĀRĪ (1063/1652-1137/1725), Turkish scholar, mystic and poet, born at Aydos near Edirne, where his family had moved after a fire destroyed their house in Istanbul. His *Kitāb al-Silsila* (Ms Beyazid Library No. 3384), the ultimate source for all subsequent biographies, gives his grandfather's name as Bayram Čawush, the son of Shāh Khudā-bende, and his father's name as Muṣṭafā. He lost his mother at an early age and, on the suggestion of Shaykh ʿOthmān Faḍlī, was sent to Edirne for his education, where a scholar named ʿAbd al-Bāḳī, relative of the Shaykh, guided his training in grammar, syntax, rhetoric, logic, *fiḳh*, theology, *tafsīr* and *ḥadīth*. In the meantime he had acquired a substantial library with the money left to him by his mother. Completing his studies in 1084/1673, he went to Istanbul to attend the lectures of ʿOthmān Faḍlī who, after fifteen years' teaching in Filibe, had settled in the capital. ʿOthmān Faḍlī initiated the young Ismāʿīl Ḥaḳḳī in the order of the Djilwatiyya, of which he was the head. Ismāʿīl Ḥaḳḳī also attended the lectures of many other scholars in Istanbul; he learnt Persian and studied the great masters of Persian literature, particularly ʿAṭṭār, Rūmī, Ḥāfiẓ and Djāmī. He also studied calligraphy and music and set to music many hymns of the 11th/17th century mystic Hudāyī [*q.v.*]. In 1086/1675 ʿOthmān Faḍlī sent him to Üsküb (Skopje) to preach, where he founded a convent of the Djilwatiyya order and married the daughter of Shaykh Muṣṭafā ʿUshshāḳī. There he fought the intolerance and bigotry of ignorant imāms and "apparent" shaykhs for six years. Constantly encouraged by his master's letters, he wrote there his most brilliant sermons (for a good Ms copy of his sermons see: Bayezid library-Veliyeddin No. 1901). Ismāʿīl Ḥaḳḳī preached also in Köprülü and Usturumča (Stroumitza); when ʿOthmān Faḍlī's representative in Bursa died in 1097/1685, the Master asked him to go there and to become the head of the Djilwatiyya convent. His first years in Bursa coincided with the difficult period after the disastrous Austrian campaign of 1095/1683 and Ismāʿīl Ḥaḳḳī had to sell his books to survive. He made occasional journeys to Mecca for the Pilgrimage and to Famagusta in Cyprus to visit his master ʿOthmān Faḍlī (who had been exiled there because of his insistent criticism of Ottoman foreign policy) and participated in various campaigns; he resided for a few years in Damascus, and later in Usküdar, to settle eventually in Bursa (whence his surname Brūsawī). On the death of his master in 1103/1691 he succeeded him as the head of the order. He built a mosque and a convent in Bursa and founded a library to which he left all his books. He died in Bursa in 1137/July 1725 where he is buried in his convent near Tuzpazarı.

Ismāʿīl Ḥaḳḳī was one of the most prolific Ottoman scholars. Of his 106 books and pamphlets, 60 are in Turkish, the rest in Arabic. The autograph copies of most of his works are kept in the Ismāʿīl Ḥaḳḳī Library in Bursa. He wrote on the whole in comparatively simple Turkish and avoided the flowery style of many contemporaries.

He is the author of the following main works: (1) *Rūḥ al-bayān*, in 4 volumes, Būlāḳ 1276, a Ḳurʾān commentary with, at times, original mystic interpretations; (2) *Rūḥ al-Mathnawī*, 2 volumes, Istanbul 1287-89, a commentary on the introductory part of Djalāl al-Dīn Rūmī's *Mathnawī* on traditional lines; (3) *Faraḥ al-Rūḥ*, a commentary on Yazīdjīoghlu Meḥmed's *Muḥammadiyya*, Būlāḳ 1252; (4) *Sharḥ-i Pand-i ʿAṭṭār*, a translation with grammatical notes and commentary of Farīd al-Dīn ʿAṭṭar's *Pand-nāma*, Istanbul 1250; (5) *Silsila-i ṭarīḳat-i Djilwatiyya*, a treatise on the order, with biographies of the leading shaykhs including his own, Istanbul 1291; (6) *Dīwān* followed by *Maḳālāt* in the same volume, Būlāḳ 1257, Istanbul 1288; (7) *Kanz-i Makhfī*, where he expounds his approach to pantheistic Ṣūfism, Istanbul 1290; (8) *Tuḥfa-i Khalīliyya*, a collection of moral admonitions, Istanbul 1256; (9) *Miʿrādjiyya*, a verse narrative of Muḥammad's ascent to Heaven, Istanbul 1269; (10) *Kitāb al-natīdja*, his last work, written in 1136/1724, not printed (for a good Ms see Atıf Efendi Library, No. 1483). His short commentaries to various poems by Yūnus Emre, Ḥādjdjī Bayram and Niyāzī-i Mıṣrī are to be found in many *medjmūʿas* containing his various treatises. See bibliography.

(Günay Kut)

ISMĀʿĪL ḤAḲḲĪ, MANASTIRLI [see Supplement].

ISMĀʿĪL PASHA, khedive of Egypt, 1863-79, second son of Ibrāhīm Pasha [*q.v.*] and grandson of Muḥammad ʿAlī [*q.v.*], was born in Cairo on 31 December 1830. He received his early education in the private palace school founded by his grandfather for his family, where he studied Arabic, Persian and Turkish. At fourteen, he spent some time in Vienna, where he was sent for treatment of an eye complaint. Two years later, in 1846, he was sent to Paris to join one of the Egyptian educational missions under the preceptorship of the Armenian Istifān Bey. There he studied French, some of the modern sciences and certain aspects of engineering. He returned to Egypt in 1848.

Upon the death of Ibrāhīm Pasha in 1848, Ismāʿīl's cousin, ʿAbbās Ḥilmī I [*q.v.*] (son of Ṭūsūn Pasha) succeded to the pashalik. After the death of his grandfather, Muḥammad ʿAlī, the following year, ʿAbbās I reportedly distrusted his uncle Saʿīd Pasha and his cousins, with all of whom he disputed the disposition of Muḥammad ʿAlī's inheritance. Consequently, Ismāʿīl, along with other princes of the House, went to live for a time in Istanbul and to solicit the assistance of the sultan against ʿAbbās I. Sultan ʿAbd al-Madjīd appointed Ismāʿīl a member of the State Judicial Council. A few years later, upon the accession of his uncle Saʿīd Pasha to the viceregal throne in 1854, Ismāʿīl returned to Egypt, and was appointed president of the State Judicial Council. The following year (1855), he was entrusted with a mission to the court of Napoleon III in Paris in connection with Saʿīd Pasha's policy of seeking greater independence from the Porte, for this purpose taking advantage of Egypt's participation in the Crimean War (1854-6). He also headed another diplomatic mission on behalf of Saʿīd Pasha to the Vatican. In 1861, Saʿīd appointed him sirdar (commander in chief) of the army at a time when the tribes in the Sudan had been rebellious

By the time Ismāʿīl became viceroy of Egypt on 18 January 1863, he had thus had relatively wide experience in the administrative, diplomatic and military affairs of the country. Moreover he had first-hand experience of Europe and of the politics and administration of the Porte in Istanbul.

In contrast to the relatively unimaginative and uneventful rule of his two predecessors, ʿAbbās Ḥilmī I (1848-54) and Saʿīd Pasha (1854-63), Ismāʿīl's reign brought Egypt material prosperity, and economic, social and cultural advancement. But is also brought financial bankruptcy and domestic and international difficulties. As ambitious as his illustrious grandfather, the founder of the dynasty, yet operating in changed circumstances and without his grandfather's military resources or force of personality and character, Ismāʿīl attempted to accomplish too many things too quickly. His policy, disastrous though it turned out to be for himself and Egypt, had three major objectives. One of these was to secure greater autonomy, and ultimately complete independence, for Egypt from the Ottoman sultan. The second was to accelerate the commerical, military and cultural modernization of the country. The third was to acquire an African empire. All three objectives entailed complex and hazardous relations with ambitious European powers (Britain and France for example); a risky confrontation with the Ottoman suzerain of the country; and a huge—and in the end ruinous—financial outlay. Domestically, this policy of vast, radical and rapid Europeanization involved grave dangers to the ruler, because it sowed the seeds of economic, social and cultural dilocation. This policy, directed against the Ottoman sultan, was dependent on European powers for money and political support and thus led inevitably to foreign intervention in the affairs of Egypt and eventually to its occupation by British forces. These consequences, in turn, aroused the resentment and opposition of the Egyptians to Europe and to their own rulers, who were associated with the coming of European control, that is, with the forfeiture of the autonomy Egypt enjoyed before 1875.

In seeking to achieve the first objective of his policy, that of greater independence, Ismāʿīl purchased from the sultan the firman of 27 May 1866, by which the order of succession was changed to one of primogeniture in his own line. He also secured the right to increase the size of his army, coin his own money and confer titles. Another firman of 8 June 1867 granted him the title of khedive, autonomy in the conduct of his internal and financial affairs, the authority to conclude treaties with other sovereign states regarding customs, ports, trade transit and the regulation of foreign community affairs. A brief interlude of strained relations with the Porte, arising out of the Egyptian involvement in the Cretan uprising of 1866 and Ismāʿīl's financial extravagance over the opening of the Suez Canal, as well as his intrigues with foreign powers, led the sultan to issue a firman on 29 November 1869 practically rescinding Ismāʿīl's gains from that of 1867. However, Ismāʿīl's visit to Istanbul and lavish bribery of Turkish officials secured him two more firmans: one of 10 September 1872, abrogating and superseding that of 1869, restored to him the right to borrow from and raise loans in Europe; another of 8 June 1873 ratified and recognized its conditions.

At home and in Europe Ismāʿīl affected the trappings of a modern ruler. The participation of Egypt in the Paris Exhibition of 1867 was followed by the gala opening of the Suez Canal two years later. Despite the fact that the American Civil War (1861-5) had produced a great boom in the export of Egyptian cotton, Ismāʿīl's pusuit of an African empire involved expensive military campaigns in the Sudan, Ethiopia and Uganda. In the meantime his expensive extraction of firmans from the sultan coincided with the decline of French influence in Egypt after the fall of Napoleon III in 1871. Ismāʿīl began to look towards England for financial and other assistance.

Added to these ventures were the vicissitudes of his domestic policies. Ismāʿīl reorganized the army and navy as well as army education. He also built new schools and allowed more Europeans to found their own in the country; subsidized newspapers and journals; expanded and improved the government press at Būlāḳ [*q.v.*]. He founded a national library (later, Dār al-Kutub), a geographical society and a museum under the direction of the French archaeologist Mariette Pasha. He signed a convention outlawing the slave trade in his dominions, and organized the first state postal service in Egypt. His organization of the country into fourteen provinces, or districts, became the basis of the administration of Egypt for the next one hundred years.

During Ismāʿīls reign the country's exports doubled

in a decade, and the annual revenue of the state rose from £ 5,000,000 in 1864 to £ 145,000,000 in 1875.

The telegraph and railway networks were extended in Egypt and the Sudan. The town of Ismāʿīliyya was built, and the new major irrigation canals of Ibrāhīmiyya in Upper Egypt and Ismāʿīliyya between Suez and Cairo were constructed. Ismāʿīl developed further the sugar refining and textile industries. Moreover, the municipal edification of Cairo and other major towns attracted foreign investment and commerce, while some Egyptian companies and banks were also founded.

By 1870, however, Ismāʿīl was in great financial difficulties. At home, he tried to raise money through the notorious *Muḳābala* Law of 1871, by which the government invited landowners to pay six times the annual land tax in advance in return for a perpetual reduction of one half of the tax. His borrowing in Europe had raised the Egyptian public debt to nearly £ 90,000,000. In 1875, he was forced to sell his 176,602 shares in the Suez Canal Company to the British government for an immediate cash payment of £ 4,000,000.

Ismāʿīl's financial difficulties led to the setting up of a European Control Commission over Egyptian finances, the institution in 1876 of a *Caisse de la Dette Publique* with representatives from European creditor states. The previous year, 1875, the Mixed Tribunals, empowered to adjudicate disputes between Egyptians and foreigners, as well as between foreigners resident in Egypt, were established, further diluting Egyptian autonomy and eroding the authority of the khedive and his government.

Inevitably, the financial crisis of the years 1875-9 had repercussions within Egypt, and particularly in the relations between Ismāʿīl and his ministers, landed notables, religious leaders and army officers. Attempts to associate all of these with his policy of independence and Europeanization began with his experiments in representative institutions. A Consultative Assembly of Deputies was instituted in 1866. A diluted and weak form of cabinet government was tried in 1878-9, shortly before Ismāʿīl's deposition, by making the khedive's government responsible to the Assembly. But all of these measures were of no avail in salvaging the deteriorating financial condition of the country, or in saving Ismāʿīl's own position. Instead, sedition in the army was accompanied by mounting pressure from his foreign creditors who suspected his insolvency. His desperate attempts to use a national Egyptian base against the European control of his finances failed. Moreover, his expensive promotion and subvention of an incipient native press served to undermine his position further. Nor did his participation in the Russo-Turkish war of 1877 on the side of his Ottoman suzerain prevent the latter from deposing him at the insistence of the European powers on 25 June 1875. The next day, Ismāʿīl left Egypt for Europe. He died in Istanbul on 6 March 1895.

Even though the social and economic changes which occurred during Ismāʿīl's reign came to constitute the foundations of the further development and modernization of the country, the khedive's impatient Europeanization programme was politically a superficial one Together with the financial problems and their international repercussions, it is fair to suggest that the reign of Ismāʿīl generated complex problems for Egypt, with which its inexperienced leaders and emerging élite of modern administrators could not adequately cope. These led to the occupation of the country by Britain and the subsequent political difficulties which this event generated for the next seventy-five years.

Nonetheless, by his ambition and financial recklessness, Ismāʿīl forcefully stimulated and induced the emergence of modern Egypt, and outlined its future development. To this extent, he cannot be viewed facilely as the disastrous khedive of Egypt, but as one of the country's creative rulers.

ISMĀʿĪL PASHA, BAGHDĀDLĪ [see Supplement].

ISMĀʿĪL PASHA, NISHĀNDJĪ, Ottoman grand vizier, came from the township of Ayash, now in the *il* of Ankara. Since he was over 70 at the time of his death in 1101/1690, he was born towards 1030/1620. Nothing is known of his family or his antecedents. He was somehow introduced into the Palace and brought up in the Enderūn-i humāyūn. On 13 Rabīʿ I 1078/3 September 1667, at Edirne, he was promoted from *Khāṣṣ-oda eskisi* to *Kiler ketkhudasî*, and soon afterwards became *Čokhādar*. On 13 Dhu 'l-Ḥidjdja 1079/25 May 1668 he was retired to the Kapucrtasî with the status (*pāye*) of Rumeli and a daily stipend of 250 *aḳčes*. On 20 Muḥarram 1089/15 March 1678 he was made *nishāndjî*, holding this post for years. From 20 Shaʿbān 1089/8 October 1678 he acted as temporary *ḳāymaḳām* in Istanbul with the rank of vizier, until Köprülü-zade Fāḍil Muṣṭafā Pasha, promoted from *muḥāfiẓ* of the Straits to the post of *ḳāymaḳām*, could come to the capital. During this period he was instructed to arrest the former grand vizier Süleymān Pasha and Firārī Ḳāymaḳām Redjeb Pasha. A week later he resumed the post of *nishāndjî*, with the rank of vizier of two *tughs*. On 2 Muḥarram 1099/8 November 1687 he entered the Dīwān as fifth vizier. As a result of further disturbances in Istanbul at the end of February 1688 caused by the execution of the notorious rebel leader Bash-čavush Ḥüseyn Akha (known as *fetwādjî*), he was appointed *ḳāymaḳām* by Süleymān II (27 Rabīʿ II 1099/1 March 1688). As such he had to deal with further disturbances: the killing of the grand vizier Siyāvush Pasha (son-in-law of Köprulü Meḥmed Pasha) and the sacking of his mansion, the summoning of the townsfolk under the Holy Banner by a certain Yaghllkčî Emīr to put down the rebel citizenry, and the massing of crowds at the Imperial Palace. At a meeting of the Dīwān at which Ismāʿīl Pasha was present, the townsfolk protested to the sultan against the excesses of the rebels. The rebels were sending threatening messages to the Palace and demanding that (since there was no grand vizier at the time), Ismāʿīl Pasha and the Kapu Aghasî should prevent the Holy Banner from being brought out. Finally, as representatives of the townsfolk gathered under the Holy Banner in front of Orta Kapu, Seyyid ʿOthmān Efendi entered the sultan's presence and urged that a new grand vizier be appointed immediately (instead of the *muḥāfîz* of Özi, who had not yet assumed office). The Kapu Aghasî Ḥadjdjî Meḥmed Agha's proposal that Ismāʿīl Pasha be appointed was

supported by the Dīwān and accepted by the sultan. But the grand vizier's seal was in the hands of the Shaykh al-Islām Faḍl Allāh Efendi, who was supporting the rebels. The rebel leaders were placated by being granted various offices: Faḍl-Allāh came to the Palace and handed the seal to the sultan; and Ismāʿīl Pasha was finally officially installed. Thereupon all the high-ranking members of the *ʿulemā'* (including the Shaykh al-Islām and the ḳāḍī of Istanbul) were dismissed. The crowds at the Palace approved the new appointees and dispersed, so that on 26 Rabīʿ II 1099/2 March 1688 Ismāʿīl Pasha embarked on office with his authority unquestioned. The rebel leaders and their supporters were apprehended and immediately put to death, and numerous changes were made in Palace posts and in provincial governorates. But these measures led only to new friction between the townsfolk and the Kapīkullarī and between the *ʿulemā'* and the grand vizier. Furthermore the loss of various strong points in the Eğri-Kīrka region and the fortress of Kanin increased the tension at the capital. The grand vizier now made the capital error of appointing Yeğen ʿOthmān Pasha, governor of Rumeli and one of the rebels, as *Serdār*, on the Austrian front with the rank of vizier. ʿOthmān Pasha rallied to his side some of the dissidents who had managed to escape from Istanbul and the Sarīdjas and Segbāns of Rumeli, and demanded the Grand Vizierate, obliging Ismāʿīl Pasha to proclaim a call to arms (*nefīr-i ʿāmm* [see NAFĪR]) in Rumeli and Anatolia against his supporters. The hostility which the Shaykh al-Islām Debbāgh-zāde Meḥmed Efendi had felt from the first towards Ismāʿīl Pasha now spread to all the *ʿulemā'*. On the ground that they had accepted bribes, Ismāʿīl Pasha wished to dismiss the sultan's *Khodja* ʿArab-zāde ʿAbd al-Wahhāb Efendi and the Dār al-Saʿada Aghasī Muṣṭafā Agha, who made common cause with the *ʿulemā'* and began making secret complaints to the sultan. The sultan, persuaded by his intimate Muṣṭafā Agha, finally dismissed Ismāʿīl Pasha on 28 Djumāda II 1099/30 April 1688.

Ismāʿīl Pasha was ordered to stay in seclusion in his *yalī* at Anadoluḥiṣār and then, on 10 Radjab 1099/11 May 1688 was banished to Kavala. When in August the Venetian fleet besieged Eghriboz, Ismāʿīl was removed to Rhodes, where, during the Grand Vizierate of Köprülü-zāde Fāḍil Muṣṭafā Pasha, he was executed (Shaʿbān 1101/May 1690). The main reasons for his death were his differences with Fāḍil Muṣṭafā and other members of the Köprülü family; the complaints of the sons of Zaun al-ʿĀbidīn Pasha, who had allegedly been unjustly executed during his Grand Vizierate; and the allegation that he had extorted money from the heirs of Siyāvush Pasha. His head was sent to Istanbul and his body was buried in Rhodes. He is described as a covetous and irritable man, who, though intelligent, often took rasher measures than he really meant to.

(MÜNIR AKTEPE)

ISMĀʿĪL ṢABRĪ, an Egyptian poet (1886-1953), distinguished by his *kunya* of Abū Umayma from another and better known Ismāʿīl Ṣabrī. His earliest poetic works date from 1910, and his writings as a whole were collected and published after his death. His "love songes" (*Ghazal al-aghānī*, p. 183-258 of the *dīwān*) deserve especial attention for the technique of his prosody and a certain purity of language and style; some of these songs, of remarkable lyrical inspiration, have been set to music and are a worthy addition to the legacy of the most romantic and pathetic sentimental songs of the period. While it is of no great importance that, in the writings of his maturity, Ismāʿīl Ṣabrī succeeded in redeeming the intellectual inconsistency of some of his youthful *ḳaṣīdas*, it should be emphasized that this author, who possessed a very good knowledge of an admiration for classical Arabic poetry, sometimes yielded to the temptation to insert in his own poems hemistichs from al-Buḥturī, al-Mutanabbī and other celebrated ʿAbbāsid poets; where this has happened, the editors of the *dīwān* have indicated this idiosyncrasy with a note.

The two poems entitled respectively *al-Nūniyya al-kubrā* and *al-Hamziyya al-kubrā* (p. 27-75 and 76-104 of the *dīwān*) contain compositions of various lengths, in which the poet has expressed in verse his meditations on certain hymnological, apologetical and eschatological subjects of frequent occurrence in the historical and religious tradition of Islam. But along with glorification of God, exaltation of Muḥammad and celebration of the prophets, regarding whom the Ḳur'ān provided more or less legendary information, we find, here and there, sententious and parenetic themes, also perhaps deriving from the Ḳur'ān. In this work few descriptive passages occur, but on the other hand there is more occasional verse, inspired by purely contingent social events, a feature which the author shares with other more celebrated contemporary poets such as Aḥmad Shawḳī [*q.v.*] and Ḥāfiẓ Ibrāhīm [*q.v.*]. Ismāʿīl Ṣabrī was also the author of works for the theatre, "school hymns", and translations, some extracts from which are contained in the last section of the *dīwān*.

Bibliography: The edition of the *dīwān*, which contains little information regarding the author's life and professional activities, is the work of Aḥmad Kamāl Zakī, ʿĀmir Muḥammad Buḥayrī and Muḥammad al-Ḳaṣṣāṣ; it was published in Cairo (n.d.) by the Ministry of Culture and National Guidance. (U. RIZZITANO)

ISMĀʿĪL ṢABRĪ PASHA, Egyptian poet and statesman, was one of those who contributed

to the awakening of national consciousness in Egypt at the end of the nineteenth century. Born in Cairo on 16 February 1854, Ismā'īl Ṣabrī benefitted from the influence of two cultures, classical Arabic and French, with which he came into direct contact when he was sent away to Aix-en-Provence in order to complete his legal studies. On his return to Egypt in 1878 after obtaining a degree in law, he turned first to the magistracy, taking a post at al-Manṣūra, then became governor of Alexandria (1896-9) and later nnder-secretary of state at the Ministry of Justice. He died on 16 March 1923.

Ismā'īl Ṣabrī's poetic talent manifested itself early in life, as can can be seen from the youthful compositions which he published in the review *Rawḍ al-Madāris al-Miṣriyya* at the age of sixteen. These admittedly simple exercises in poetry nevertheless already displayed that admiration for classical models of the 'Abbāsid period which the poet was to retain even in his mature years. However, the beneficial contact with modern French poetry as it evolved at that time not only helped to enrich his mind, but especially to make keener his perception in regard both to the contingent social and political problems of his country, and the reflections of a more general nature and meditations on the destiny of humanity.

Opposed to the occasional poetry to which many of the writers of his time applied their talents, Ismā'īl Ṣabrī was a patriot of exemplary rectitude, incapable of lending himself to easy compromises with the two powers who at time controlled the policies of Egypt, Turkey and England. His *dīwān* contains no *ḳaṣīda* dedicated to the sultan 'Abd al-Ḥamīd, nor to other dignitaries in his services. Love, death, and the fatherland were the themes of his poetry, the brilliance of which is due to the loftiness of style and profundity of thought expressed in unlaboured imagery. His poetic works are not numerous, especially when compared with the production of his contemporaries, probably because he wrote to please himself, refusing all demands other than those of inspiration.

Bibliography: The *Dīwān* was published fifteen years after the poet's death by Aḥmad al-Zayn, Cairo 1938; the preface to the work by Ṭāhā Ḥusayn is interesting from the critical standpoint. Abundant source material can be found (in essays and articles published in reviews) in the works of Dj. A. Dāghir, *Maṣādir al-dirāsa al-adabiyya*, ii/1: *al-Rāḥilūn 1800-1955*), Beirut 1956, 534-6, and 'Umar Riḍā Kaḥḥāla, *Mu'djam al-mu'allifīn*, Damascus 1376/1957, 272-3; Muḥ. 'Abd al-Mun'im Khafādjī, *Ḳiṣṣat al-adab fī Miṣr*, v, Cairo 1956, 138-47; 'Umar al-Dasūḳī, *Fi 'l-adab al-ḥadīth*, ii, Cairo 1950, 117-25; some differences concerning certain events of his life in Brockelmann, S III, 18-21. It should also be added that Aḥmad Shawḳī dedicated a long elegy to him (*al-Shawḳiyyāt*, iii, Cairo 1936, 113-8). (U. Rizzitano)

ISMĀ'ĪL ṢAFĀ (1867-1901), Turkish poet of the transition period between the Tanẓīmāt and the *Therwet-i Fünūn* schools. Born in Mecca where his father, Meḥmed Behdjet, a native of Trabzon and a minor poet of the old school (see Ibnülemin Mahmud Kemal, *Son asır Türk şairleri*, Istanbul, 1930, i, 177-178), was chief secretary (*mektūbdju*) of the Ḥedjāz province, he lost his mother Sāmiye 'Ā'ishe at the age of seven. On his father's death in 1880, Ismā'īl Ṣafā and his two brothers moved to Istanbul. His happy life in Arabia and the desert left a strong impression on his memory which is reflected in many of his early poems. In Mecca his father had taught him Arabic and Persian. In Istanbul he passsed, with his two brothers, the entrance examination, as a boarder, to the Dār al-shafaḳa, a well known high school for gifted orphans. On his graduation in 1890 he served for a short time in the Telegraph Office and later taught literature in various secondary schools. He married very young but lost his wife and contracted tuberculosis himself. After a short stay in the island of Midilli (Mytilene), where he went in the hope of a recovery, he returned to Istanbul. Because of his liberal ideas, which he did not care to hide (see below), he was marked down as a suspect by the Hamidian secret police. His house in Gedik Pasha, where he and his progressive friends frequently met, was constantly watched. At the suggestion of Ismā'īl Kemāl (a deputy for Berāt in Albania after the 1908 constitution), a group of prominent intellectuals, including Ismā'īl Ṣafā and the leading *Therwet-i Fünūn* poet, Tewfīḳ Fikret, went to the British Embassy to congratulate Britain on her victory over the Boers. Unaware of the contradiction with their own professed ideals, they claimed later that they did this as a gesture against the sultan. This was used as a pretext to round them up and to send them into provincial exile. Ismā'īl Ṣafā was banished to Sivas where he succumbed to the harsh climate a year later (1901).

Ismā'īl Ṣafā published his first poems in Nādjī's *Memdjū'a-i Mu'allim* and later in the periodical *Mirṣād*. At the age of twenty he was a well known poet in literary circles. Verses poured from his pen with such ease and spontaneity that Nādjī "the Master" (*Mu'allim*), whose influence on these early poems is obvious, gave him the nickname of *Shā'ir-i Māderzād* ('the born poet'). He soon became leader-writer of the *Mirṣād* until it was closed by the censor. Gradually Nādjī's literary influence was replaced by those of Redjā'i-zāde Ekrem, 'Abd ül-Ḥaḳḳ Ḥāmid and particularly Tewfīḳ Fikret with whom he had become close friends and regularly contributed to his *Therwet-i Fünūn*. Critics of both old and new schools were unanimous in recognizing his unusual poetical gift. Owing to his early poems, which are mostly sentimental reminiscences of his childhood, Ismā'īl Ṣafā is generally accepted as a fine sensitive poet who wrote, with a spontaneous style, simple melancholic poems of nostalgic, lyric and religious inspiration. This early and incomplete judgment of his work strongly influenced later criticism, but leaves out most of his posthumously published work, which reveals him as a poet with unusual gifts of humour and social and political satire. In particular his poem *Taẓallum* ('Complaint of injustice'), first published in Aḥmed Riḍā's Young Turk organ *Meshweret* in Paris (supplement to No. 9, 1893) and reproduced with minor variants and omissions in 'Abd Allāh Djewdet's *Idjtihād* (No. 105, 8 May 1330), is a true forerunner of the political satire of the later Eshref and Fikret tradition: "You gathered around you a few vile individuals and tyrannized people on their advice.. You gave power to the corrupt, ignorant and unpatriotic, you ennobled informing into a profession, you made great men suffer in banishment, you insisted on the execution of a very great man (*i.e.*, Midḥat Pasha), tell, o Khalīfa, are you any different from an exectutioner? They informed you of unjust acts, you ignored it; your slaves harmed people, you ignored it; foreigners made profit out of the country, you ignored it; friends warned you about everything, you ignored it. You preferred delator's reports (*jurnals*) to guiding sermons... The treasure of the state is in the hands of a few thieves... The country is in ruin, the

people hungry... The day of your fall will be a feast day for the people...". In the circle of close friends Ismāʿīl Ṣafā used further to expound his naive projects of plots to overthrow ʿAbd al-Ḥamīd (Halid Ziya Uşaklıgil, *Kırk Yıl*, Istanbul 1936, iv, 79).

Another important poem which seems to have passed almost unnoticed is his *takhmīs* of the Dāmād Maḥmūd Pasha's *ḳaṣīda*, an ironical eulogy of Ḥasan Pasha, the Minister of the Navy during the Greco-Turkish war of 1897. It is a biting satire, full of pungent wit, inspired by Ziya (Ḍiya) Pasha's famous *Ẓafer-nāme* against ʿAbd al-Ḥamīd who had kept the Turkish fleet perpetually at anchor in the Golden Horn, during his reign, thus causing its utter decline. Ismāʿīl Ṣafā describes, with vivid images, the sorry plight of the decaying ships, and expresses in vitriolic terms the indifference of the irresponsible and corrupt minister and his staff.

Ismāʿīl Ṣafā is the author of the following published works: (1) *Khudh mā ṣafā*, Istanbul 1308 (includes his father's unpublished poems); (2) *Maghdūre-i Sevdā*, Istanbul 1308 (a verse narrative); (3) *Sünūḥāt*, Istanbul 1308; (4) *Mensiyyāt*, Istanbul 1312; (5) *Mevlid-i Pederi ziyāreti* (a short poem about his first visit to his father's native town, Trabzon), Istanbul 1312; (6) *Intāḳ-i Ḥaḳḳ'ın Takhmīsi*, Istanbul 1328; (7) *Hissiyyāt* (with an important introduction by his brother ʿAlī Kāmi (Akyüz), Istanbul 1328.

Bibliography: Ismail Hikmet, *Ismail Safa*, Istanbul 1933; Halid Ziya Uşaklıgil *Kırk Yıl*, Istanbul 1936, iv, 79 ff.; Hüseyin Cahid Yalçın, *Edebî Hatıralar*, Istanbul 1933, *passim*; see also most monographs on Tewfik Fikret [*q.v.*] where there are frequent references to Ismāʿīl Ṣafā.

(FAHİR İZ)

ISMĀʿĪL SHAHĪD, MUḤAMMAD, the only son of Shāh ʿAbd al-Ghānī, youngest son of Shāh Walī Allāh al-Dihlawī [*q.v.*], was born at Phulat (dist. Muẓaffarnagar, India) on 12 Rabīʿ II 1193/29 April 1779. His father having died in Radjab 1203/April 1789, when he was only ten years old, he was adopted by his uncle Shāh ʿAbd al-Ḳādir [*q.v.*], the first Urdu translator of the Ḳurʾān, who had no male issue and who later married his grand-daughter Kulthūm to him. Educated by ʿAbd al-Ḳādir, he also drew upon the vast learning of his uncles Shāh Rafīʿ al-Dīn, another Urdu translator of the Ḳurʾān, and the celebrated Shāh ʿAbd al-ʿAzīz. A child prodigy, he completed his education in both rational and traditional sciences at the age of 16. He often surprised his contemporaries by answering even the most abstruse problems of *fiḳh* and logic without referring to books. He began his career as a preacher in the Djāmiʿ Masdjid at Delhi, and soon established himself as a forceful orator. He preached mainly against vices like saint- and grave-worship, innovations and other heretical and idolatrous practices which were common among the Muslims of India of those days. For almost a quarter of a century he continued to preach in the Djāmiʿ Masdjid. His preaching aroused bitter controversy, and he was once officially silenced by the city *kōlwāl*, at the instance of Faḍl-i Ḥaḳḳ [*q.v.*], court reader to the British Resident at Delhi, who did not see eye to eye with him. In 1235/1819 he came into contact with Sayyid Aḥmad of Rāe Bareilly [*q.v*], who had received his religious and spiritual instruction from his uncle Shāh ʿAbd al-Azīz and soon afterwards became his disciple, along with his kinsman ʿAbd al-Ḥayy, a son-in-law of Shāh ʿAbd al-ʿAzīz. The three were destined to play an important role in the religious history of Indian Muslims. In 1236/1820 he went on the pilgrimage to Mecca along with Sayyid Aḥmad and a large number of his followers. On their journey from Delhi to Calcutta they were accorded a very warm reception at the numerous places where they stopped. Collecting money and gifts en route in the name of Islamic revival, the party reached Djidda in 1237/1821. They returned to India in 1239/1823 after an absence of fourteen months, having performed the ḥadjdj, visited the holy places in the Ḥidjāz and met there scholars from Istanbul, Egypt, Syria and Bulgaria.

Fresh from his visit to the Ḥidjāz, he openly began to preach *djihād* in the congregational mosque at Delhi. This must have been only against the Sikhs who were oppressing their Muslim subjects, and not against the British as Ghulām Rasūl Mihr (cf. *Sayyid Aḥmad Shahīd*, Lahore 1952, i, 250 ff.) and others have unsuccessfully tried to establish. The British, being politically influential at Delhi, could not watch with complacency such an open incitement to insurrection and also later allow money and material to be collected within their sphere of influence and sent to the *mudjāhidīn*, as the followers of Sayyid Aḥmad later came to be commonly known, in their strongholds in the northern parts of the country. In 1241/1824-25 he left, along with his leader Sayyid Aḥmad, for Yāghistān via Sind. Passing through Bahāwalpūr [*q.v.*], Ḥaydarābād [*q.v.*] and Shikārpūr (Sind), this voluntary force, which had considerably swelled on the way, reached Kābul from Ḳandahār, from where the volunteers slipped into Peshāwar. Making it their general headquarters they launched a holy war against the Sikhs, fighting the first battle at Akōṛa, near Nowshera, on 20 Djumāda II 1242/21 December 1826 and defeating the enemy with considerable losses. A number of other engagements followed bringing victory after victory to the *mudjāhidīn*. Flushed with their success they set up their own government in the areas under their occupation with Peshāwar as the seat of administration. Certain reforms introduced by them in the social sphere conforming to the laws of the *Sharīʿa*, for instance the remarriage of widows and the collection of *ʿushr*, resulted in the disaffection of the local population, who, at the instigation of the tribal chieftains, deposed and dispossessed by Sayyid Aḥmad, rose against the *mudjāhidīn* and in a secret night-attack killed all the tax-collectors and sub-administrators appointed by the Sayyid. This massacre was a serious set-back to the movement, and practically the whole of the territory around Peshāwar slipped out of the control of the *mudjāhidīn*. The Sikh ruler of the Pandjāb, Randjīt Singh, a shrewd politician and skilled statesman, took full advantage of the situation and inflicted a series of reverses on the rapidly dwindling forces of the Sayyid, who now also faced financial difficulties, for practically all the routes through which money came had been cut off either by the invading Sikhs or the hostile Pathan tribes—mainly the Yūsufzaʾīs.

The *mudjāhidīn*, now led by Ismāʿīl, were driven out of Peshāwar, which they had occupied in 1246/1830 by ousting Sultan Muḥammad Khān, a brother of the amīr of Afghanistan, who ruled Peshāwar as the tributary of the Sikh chieftain Randjīt Singh. Considering it a challenge to his sovereignty, Randjīt Singh marched in person and with the help of his European mercenaries, Generals Ventura and Avitabille, re-occupied the city, entrusting subsequent operations to his son Shēr Singh. Better equipped, better trained and numerically superior, the forces of Shēr Singh inflicted the final defeat on the *mudjāhidīn* at the battle of Balakote (24 Dhu 'l-Ḳaʿda 1246/6 May 1831), in which Ismāʿīl and his leader Sayyid

Aḥmad lost their lives. He was buried on the edge of the battlefield where his tomb still exists. No attention was paid to his grave during the Sikh or the British rule. It has now been renovated and the government of Pakistan has paid due attention to its upkeep and maintenance.

In spite of his pre-occupation with *dj̲ihād*, travelling and delivering sermons, S̲h̲āh Ismāʿīl yet found time for writing books and small tracts. His writings include: (1) *Taḳwiyat al-īmān* (ed. Cawnpore 1343/1924), deals mainly with the unity of God and deprecates idolatrous practices such as the invocation of saints, angels etc. Its supplement *Tazkīr al-Ik̲h̲wān* was composed by Muḥammad Sulṭān in 1250/1834. English trans. by Shahamat Ali in *JRAS*, xiii, 316 ff.; (2) *Manṣab-i imāmat* (in Persian), deals with the concept of *imāma* in Islam and its various kinds (ed. Karachi[2] 1962, Urdu trans. Lahore 1949); (3) *Risāla Uṣūl al-fiḳh* (in Arabic, ed. Delhi 1311/1893), a short treatise of 36 pp. on the principles of Islamic jurisprudence; (4) *Tanwīr al-ʿaynayn fī it̲h̲bāt rafʿ al-yadayn*, (in Arabic, ed. Lahore n.d.) in support of raising the hands in prayers as practised by the Ḥanbalīs; (5) *Risāla Yak Rūza* (still in Ms.) composed as a rejoinder to the criticism offered by Faḍl-i Ḥaḳḳ [*q.v.*] of K̲h̲ayrābād on the *Taḳwiyat al-īmān*; (6) *Īḍāḥ al-ḥaḳḳ al-ṣarīḥ fī aḥkām al-mayyit wa 'l-ḍarīḥ* (in Persian, on the burial of the dead), denouncing many of the funerary innovations current among the Muslims of the sub-continent; (7) *ʿAbaḳāt* (in Arabic, ed. Karachi 1380/1960, Urdu trans. by Manāẓir Aḥsan Gēlānī, Hyderabad n.d.) deals mainly with abstruse problems of *taṣawwuf*; the aim was to reform the Ṣūfīs of the day who wielded exceptionally strong influence with the illiterate and simple masses of Indian Muslims, mainly residing in backward rural areas; (8) *Al-Ṣirāṭ al-Mustaḳīm* (in Persian, Meerut 1285/1868, Delhi 1322/1904), of which only the first part was composed by Ismāʿīl; it comprises the *dicta* of his spiritual guide Sayyid Aḥmad and helps understand his teachings and the tenets professed by him; an exposition of what he and his followers stood for (for its contents see *JASB*, i (1832), 479 ff.); (9) *Radd al-is̲h̲rāḳ* (in Arabic), Asafiyya; 666; (10) *Irs̲h̲ād al-ʿibād ilā sabīl al-ras̲h̲ād*, (Br. Mus. Ms. Arabic); (11) *Madj̲mūʿat al-K̲h̲uṭab* (Br. Mus. Ms. Arabic); His minor works include a short treatise on logic, a lengthy letter in Arabic addressed to one Mullā Bag̲h̲dādī (ed. Cawnpore 1343/1924), and another letter in Persian addressed to Nawāb Wazīr al-Dawla of Tonk, formerly a princely state in India, exhorting the ruler to help the *mudj̲āhidīn* in every possible way in their struggle against the Sikhs. He also tried his hand at poetry but this is not of a high order.

Bibliography: Dj̲aʿfar ʿAlī Naḳwī, *Manẓūrat al-suʿadāʾ fī aḥwāl al-g̲h̲ūzāt wa 'l-s̲h̲uhadāʾ*, (in Urdu, still in Ms.); written in 1272/1855 it is the firsthand account of the movement (Naḳwī was on the personal staff of S̲h̲āh Ismāʿīl); *Waḳāʾi-ī Aḥmadī* (in Urdu, still in Ms.), dictated by various persons who were witnesses of the events at the instance of Nawāb Wazīr al-Dawla, ruler of Tonk; Muḥammad ʿAlī, *Mak̲h̲zan-i Aḥmadī*, (Ms. in the Pandjab University Lib.); Muḥammad Nuʿmān, *Sīrat-i ʿalamiyya ua tad̲h̲kirat al-abrār* (Ms.); ʿAbd al-Dj̲abbār, *Kitāb al-ʿIbrat* (Ms.); ʿAṭāʾ Muḥammad K̲h̲ān S̲h̲ikārpūrī, *Rūznāmče* (in Persian, Ms. in the private collection of Ḥusāmuddīn Rās̲h̲idī, Karachi); Amar Nāth, *Ẓafar-nāma-i Randj̲īt Singh*, ed. Sītā Rām Kohlī, Lahore 1928; Muḥammad Dj̲aʿfar Thānēsarī, *Tawārīk̲h̲-i ʿadj̲ība* or *Sawāniḥ-i Aḥmadī*, Sādhawra 1914; Mirzā Ḥayāt Dihlawī, *Ḥayāt-i ṭayyiba*[2], Lahore, n.d.; Ṣiddīḳ Ḥasan K̲h̲ān, *Tiḳṣār dj̲uyūd al-aḥrār min tid̲h̲kār d̲h̲unūd al-abrār*, Bhopal 1295/1878; idem, *Tardj̲umān-i Wahhābiyya*, (not seen); idem, *It̲h̲āf al-nubalāʾ al-muttaḳīn*, Cawnpore 1289/1872, 416; G̲h̲ulām Rasūl Mihr, *Sayyid Aḥmad S̲h̲ahīd*, Lahore n.d., extensive bibliography and pp. 13-26 for a critical appraisal of the original sources; Abdullah Butt (ed.), *Shah Ismaʿil Shaheed*, Lahore 1943; W. W. Hunter, *The Indian Musalmans*[4], Calcutta 1945; *Gazetteer of the Hazara District*, London 1908; S. M. ISMĀʿĪL ṢIDḲĪ, Egyptian politician and statesman, was born in 1875 into a family of Egyptian notables. Both his father and maternal grandfather enjoyed high positions in the official hierarchy of khedivial administration. Like most of his contemporaries who aspired for a political career, he studied law and took part in the anti-British student agitation encouraged by the khedive. Upon completing his studies in 1894, he was appointed a minor official in the Ministry of Justice. He rose quickly, partly through his own effort and initiative but mainly through the wide circle of friends his family had, to be come the permanent under-secretary at the Ministry of Interior in 1908. In 1914 Ṣidḳī had his first cabinet appointment in the government of Rus̲h̲dī Pas̲h̲a, from which he resigned soon after.

When the First World War ended in 1918, Ṣidḳī joined the Wafd movement and was exiled with Saʿd Zag̲h̲lūl to Malta in 1919, but when the Wafd was allowed to proceed to the Peace Congress he was among its members. In Paris differences arose among the delegates and Ṣidḳī, forseeing the futility of Wafdist demands, left for Cairo. His departure from the Wafd marked a turning point in his career, for he became the moving spirit of the anti-Wafdist element in Egyptian politics. He played a leading role in the drafting and implementation of the Declaration of 1922 which granted Egypt her independence, as well as the Constitution of 1923, both documents abhorrent to the Wafdists. Henceforward and until his retirement in 1946, Ṣidḳī was tireless in his confrontation with Wafdist policies in the conduct of Egypt's public affairs. He did not hesitate to employ armed force, including the use of British troops, to suppress Wafdist opposition and silence their publications. It was this that earned him the doubtful distinction of being the strong man of Egyptian politics. His reputation as a financial expert, however, was justly deserved.

Ismāʿīl Ṣidḳī became prime minister of Egypt twice, in 1930 and 1946, each time in the wake of nationalist ferment and public disturbances caused by the Wafdist failure to reach agreement with Britain on her position in Egypt and the Sudan. In 1931 Ṣidḳī amended the Constitution, restricting suffrage, and he formed the People's Party to give him support in Parliament. Ṣidḳī's terms of office were unhappy and unpopular. He failed to obtain sufficient concessions from Britain to normalize the relationship between the two countries, and he did not succeed in marshalling the support of Egyptian moderates to contain the extremism of the Wafd. In 1946 an agreement was initialled in London between Ṣidḳī and Ernest Bevin, British foreign secretary at the time, but once more Wafdist opposition made ratification impossible. Upon his return from Eng-

land, a sick and broken man, he retired from public life. Ismāʿīl Ṣidķī died in 1948.

Zayid, *Egypt's Struggle for Independence*, Beirut 1965; P. J. Vatikiotis, *The Modern History of Egypt*, London 1969. (A. Kelidar)

ISMĀʿĪLIYYA, a major branch of the Shīʿa with numerous subdivisions. It branched off from the Imāmiyya [see ithnā ʿashariyya] by tracing the imāmate through Imām Djaʿfar al-Ṣādiķ's son Ismāʿīl, after whom it is named.

History: Pre-Fāṭimid and Fāṭimid times. After the death of Djaʿfar al-Ṣādiķ in 148/765 a group of his followers held fast to the imāmate of his son Ismāʿīl, who had been named by him as his successor but had predeceased him. Some of them maintained that Ismāʿīl had not died and would reappear as the Ķāʾim or Mahdī. Others recognized Ismāʿīl's son Muḥammad as their imām. Nothing is known about the history of the Ismāʿīlī movement developing out of this nucleus until after the middle of the 3rd/9th century, when it appeared as a secret revolutionary organization carrying on intensive missionary efforts in many regions of the Muslim world. In the area of al-Kūfa its propaganda was spread from about the year 264/877-8 by Ḥamdān Ķarmaṭ [*q.v.*], who was later aided by his brother-in-law ʿAbdān [*q.v.*]. Ḥamdān's followers were named after him Ķarmaṭī, a name which came to be applied derogatorily also to other sections of the movement. In the area of al-Rayy the mission was started about the same time by Khalaf, whose followers became known as the Khalafiyya. In Fārs a brother of ʿAbdān was active. In Khurāsān Nīshāpūr and later Marw al-Rūdh became centres of Ismāʿīlī activity (see S. M. Stern, *The early Ismāʿīlī missionaries in North-West Persia and in Khurāsān and Transoxania*, in *BSOAS*, xxiii (1960), 56-90). A convert of al-Nasafī [*q.v.*], one of the *dāʿīs* of Khurāsān and Transoxania, was the first to carry the propaganda to Sidjistān, probably in the early decades of the 4th/10th century. Presumably in the first half of the 4th/10th century, the Ķufṣ tribe in Kirmān was converted by *dāʿīs* from Khurāsān. In the Yemen two missionaries, ʿAlī b. al-Faḍl and Ibn Ḥawshab, known as Manṣūr al-Yaman [*q.v.*], in 268/881 established themselves in the area of the Djabal Maswar and succeeded in gaining strong tribal support. In 270/883 Ibn Ḥawshab sent his nephew al-Haytham as a missionary to Sind. Later he sent Abū ʿAbd Allāh al-Shīʿī [*q.v.*] to the Maghrib, where he arrived in 280/893 and won the support of the Kutāma Berber tribe in western Algeria, thus laying the foundation for Fāṭimid rule. In 286/899 Abū Saʿīd al-Djannābī [*q.v.*], a follower of Ḥamdān Ķarmaṭ and ʿAbdān, founded a Ķarmaṭī state in al-Baḥrayn, from where he later conquered al-Ķaṭīf, ʿUmān and al-Yamāma. The whole movement was centrally directed, at first probably from al-Ahwāz and al-Baṣra and later from Salamiyya in Syria. Muḥammad b. Ismāʿīl was acknowledged as the imām, who had disappeared and was about to reappear as the Ķāʾim and to rule the world. The leaders of the movement in the absence of the imām claimed the rank of *ḥudjdjas* [*q.v.*].

In the year 286/899, after the succession of the future Fāṭimid Caliph ʿUbayd Allāh al-Mahdī to the leadership in Salamiyya, a schism split the movement, provoked by the claim of ʿUbayd Allāh to the imāmate for himself and his ancestors. Ḥamdān Ķarmaṭ and ʿAbdān, who may have previously drifted slightly away from the doctrine propagated by the leadership, broke off their support. ʿAbdān consequently was murdered by a subordinate *dāʿī*, Zikrawayh b. Mihrawayh [*q.v.*], who at first pretended to be loyal to the leadership. Zikrawayh and his sons organized the "Ķarmaṭī" revolts among Syrian bedouin tribes from the year 289/902 until his capture and execution in 294/907. Doubts concerning Zikrawayh's loyalty, which soon turned out to be justified, induced ʿUbayd Allāh to leave Salamiyya for the journey which ended with his establishment as caliph in Raķķāda in 297/910.

Though information concerning the attitude of the various Ismāʿīlī groups following the split of the movement is scanty, the results can be summarized with some degree of probability as follows: The community in the Yemen at first remained faithful to ʿUbayd Allāh. ʿAlī b. al-Faḍl, however, in 299/913 renounced his allegiance to him and made war on Ibn Ḥawshab, who remained loyal. After ʿAlī's death in 303/915 his party disintegrated rapidly. The *dāʿīs* in the Maghrib and probably in Sind, having been sent by Ibn Ḥawshab, also remained loyal. There are indications that the *daʿwa* in Khurāsān generally maintained its allegiance to ʿUbayd Allāh, who was able to appoint some *dāʿīs* there, but there were probably also counter-currents. The communities in ʿIrāķ, al-Baḥrayn, and western Persia refused to recognize the Fāṭimid claim to the imāmate. Among the Ķarmaṭīs of ʿIrāķ ʿĪsā b. Mūsā, a nephew of ʿAbdān, continued the latter's work propagating the imāmate of Muḥammad b. Ismāʿīl, who would return as the Ķāʾim. After 320/932 he was active in Baghdād. He and other *dāʿīs* in ʿIrāķ ascribed their writings to ʿAbdān, thus stressing the doctrinal continuity. The *dāʿīs* of al-Rayy were in close contact with those in ʿIrāķ and with the Ķarmaṭīs of al-Baḥrayn and like them were expecting the reappearance of the Mahdī-imām for the year 316/928. At least in the twenties of the 4th century (1030-9) they controlled the missions in Mosul and Baghdād. They worked successfully among the Daylamīs and won at least the temporary allegiance of Daylamī leaders like Asfār, Mardāwīdj and later of some rulers of the Musāfirid dynasty. The Ķarmaṭīs of al-Baḥrayn, led by Abū Ṭāhir al-Djannābī, were predicting the appearance of the Mahdī-imām for the year 316/928. In 319/931 they accepted a Persian prisoner of war as the Expected One, and Abū Ṭāhir turned the rule over to him. The early disastrous end of the affair weakened the ideological vigour of the Ķarmaṭīs of al-Baḥrayn and their influence among the *dāʿīs* in ʿIrāķ and Persia, but did not generally lead to an expansion of Fāṭimid influence. Soon afterwards the great revolt of the Khāridjī Abū Yazīd [*q.v.*] under the Fāṭimid Caliphs al-Ķāʾim and al-Manṣūr stifled any Fāṭimid activity among the eastern Ismāʿīlī communities. Only the fourth Fāṭimid, al-Muʿizz (341/953-365/975), was in a position to lead an intensive campaign to regain the allegiance of the schismatic Ismāʿīlīs. His efforts were partially successful, but failed in regard to the Ķarmaṭīs of al-Baḥrayn, whose hostility erupted, after the Fāṭimid conquest of Egypt in 358/969, in open warfare against the Fāṭimid armies. After concluding a peace with the Fāṭimid al-ʿAzīz in 369/979-80 and a severe defeat by a bedouin tribe in 378/988, the Ķarmaṭīs of al-Baḥrayn were reduced to a local power unable to exert any ideological influence beyond its boundaries. The movement still supporting the doctrine of the return of Muḥammad

b. Ismāʿīl rapidly disintegrated about the same time. The Karmaṭī state in al-Baḥrayn survived until 470/1077-8. (See M. J. de Goeje, *Mémoire sur les Carmathes du Bahraïn*², Leiden 1886; idem, *La fin de l'empire des Carmathes*, in *JA* 9th ser. v (1895), 5-30; W. Madelung, *Fatimiden und Baḥrainqarmaṭen*, in *Isl.* xxxiv (1959), 34-88; S. M. Stern, *Ismāʿīlīs and Qarmaṭians*, in *l'Élaboration de l'Islam*, Paris 1961, 99-108).

In the time of al-Muʿizz a Fāṭimid vassal state was established in Multān in Sind. The Ismāʿīlī *dāʿī* there succeeded before 348/959 in converting a local ruler. Multān became an Ismāʿīlī stronghold where the *khuṭba* was read in the name of the Fāṭimid caliph. This success probably strengthened the Fāṭimid cause also in the neighbouring regions, for in Mukrān the *khuṭba* was also read for the Fāṭimids about the year 378/988. The *dāʿī* Abū Yaʿḳūb al-Sidjistānī [*q.v.*], who supported the Fāṭimid doctrine at least from the time of al-Muʿizz on, probably was active in Sidjistān before his death in the second half of the 4th/10th century. In Djīruft in Kirmān a Fāṭimid *dāʿī* was residing toward the end of the 4th/10th century. The Ismāʿīlī state in Multān lasted until 401/1010-1, when Maḥmūd of Ghazna annexed the town, took its ruler prisoner and massacred many Ismāʿīlīs (see S. M. Stern, *Ismāʿīlī propaganda and Fāṭimid rule in Sind*, in *IC*, xxiii (1949), 298-307).

During the last years of the reign of al-Ḥākim (386/996-411/1021) extremist Ismāʿīlīs in Cairo began to proclaim the divinity of this Fāṭimid caliph. Their leadership soon passed to Ḥamza b. ʿAlī [*q.v.*], who became the founder of the Druze religious doctrine. The official Fāṭimid *daʿwa* organization remained adamantly opposed to this movement, although al-Ḥākim at times showed it favour. After al-Ḥākim's death it was persecuted by the Fāṭimid government and wiped out in Cairo, but succeeded in solidifying its hold over the mountainous regions in Syria which, with some modifications, became the permanent home of the Druze community. The Druze religion [see DURŪZ], though derived from Ismāʿīlī doctrine, transformed its basic ideas to such a degree as to be usually considered as falling outside the range of Ismāʿīlism.

In Ifrīḳiya the Ismāʿīlī communities were practically exterminated by popular riots after the accession of al-Muʿizz b. Bādīs, Zīrid vassal of the Fāṭimids, in 407/1016. The missionary efforts of the Fāṭimids during their residence in Ifrīḳiyya had achieved the conversion of only small groups of the urban population, while the masses, led by the Mālikī *ʿulamāʾ*, were solidly opposed to Fāṭimid rule and Shīʿism. Large numbers of Kutāma tribesmen, who traditionally furnished the main body of the Fāṭimid army, left for Egypt with the Fāṭimid al-Muʿizz. Most of the leading *dāʿī*s also departed at that time. The Ṣanhādja tribe, which supported Zīrid rule, only superficially adhered to Ismāʿīlism. During the year 407/1016-7 the Ismāʿīlīs in al-Ḳayrawān, al-Manṣūriyya, al-Mahdiyya, Tūnis, Tripoli, and other towns were attacked and massacred by the populace with the countenance of the government. Sporadic massacres took place also during the following years. The Ismāʿīlī communities were thus extinguished long before al-Muʿizz in 440/1049 renounced his allegiance to the Fāṭimids and recognized ʿAbbāsid suzereignty (see H. R. Idris, *La Berbérie orientale sous les Zīrides*, Paris 1962, 143-9).

During the reign of the Caliph al-Mustanṣir (427/1036-487/1094) the Ismāʿīlī cause achieved new successes in the Yemen and India. In the Yemen the *daʿwa* after the death of Ibn Ḥawshab had suffered major setbacks and survived only precariously, though in the period 379/989-387/997 it had gained the allegiance and support of the Yaʿfurid amīr ʿAbd Allāh b. Ḳaḥṭān, ruler of Ṣanʿāʾ and conqueror of Zabīd from the Ziyādids. In 429/1038 ʿAlī b. Muḥammad al-Ṣulayḥī, Fāṭimid *dāʿī* and founder of the Ṣulayḥid dynasty, rose in Masār in the Ḥarāz region. Through the activity of the Ṣulayḥids [*q.v.*] Fāṭimid sovereignty came to extend over all of the Yemen and temporarily over other parts of Arabia like ʿUmān and al-Baḥrayn (see H. F. al-Hamdānī, *al-Ṣulayḥiyyūn*, Cairo 1955). The Ṣulayḥids also furthered renewed efforts at spreading Ismāʿīlism on the Indian subcontinent. Although parts of the Ismāʿīlī community in Sind evidently had survived the persecution under Maḥmūd of Ghazna and Ismāʿīlism seems to have been espoused by the Sūmra dynasty of local Hindu origin (see A. H. al-Hamdani, *The Beginnings of the Ismāʿīlī Daʿwa in Northern India*, Cairo 1956), contacts with the Fāṭimid *daʿwa* faded. The Ismāʿīlīs in Sind may have drifted partially back to Hindu practices and beliefs. A new Ismāʿīlī community was now founded by Yemenite *dāʿī*s in the area of Cambay, Gudjarāt, which had close commercial ties with the Yemen. According to the traditional account an Arab *dāʿī*, ʿAbd Allāh, arrived with two Indian assistants in Gudjarāt in 460/1068, sent by the Yemenite chief *dāʿī* Lamak b. Mālik. Less than a decade later the existence of a flourishing Ismāʿīlī community is confirmed by official letters of the Fāṭimid chancery. This new Ismāʿīlī community remained closely tied to, and controlled by, the Yemenite *daʿwa* and was the nucleus of the modern Bohorā [*q.v.*] community.

After the middle of the 5th/11th century the Persian poet and philosopher Nāṣir-i Khusraw [*q.v.*] was active as a Fāṭimid *dāʿī* in Yumgān in the Upper Oxus area for over 15 years. Expelled from Balkh because of Ismāʿīlī activity, he came to Yumgān before 453/1061 and remained there until his death. Several of his extant philosophical and religious works were composed there. He became the founder and patron-saint of the Ismāʿīlī community of Badakhshān in the wider sense, though it may have been changed in composition by later Ismāʿīlī refugees (see W. Ivanow, *Problems in Nasir-i Khosraw's Biography*, Bombay 1956; A. E. Bertel's, *Nasir-i Khcsrov i Ismailizm*, Moscow 1959).

In the last years of the reign of al-Mustanṣir the Ismāʿīlī cause in Persia was reinvigorated by the activity of Ḥasan-i Ṣabbāḥ [*q.v.*]. After travelling widely and carrying on propaganda in various regions of the country, he seized the fortress of Alamūt [*q.v.*] in the mountains of Daylam in 483/1090, thus opening a new phase in the Ismāʿīlī activity in Persia. The clandestine missionary work to which the *daʿwa* in Persia had mostly been restricted was replaced by a policy of open revolt which, in the face of the overwhelming military strength of the Saldjūḳ government, was based on the seizure of impregnable mountain fortresses and spectacular political murder aimed at intimidating the enemy's leadership. In the following years other rock fortresses were occupied in the Elburz range. In 484 or 485/1091-2 Ḥasan-i Ṣabbāḥ sent the *dāʿī* Ḥusayn Ḳāʾinī to Ḳuhistān to raise the revolt there. In short order the Ismāʿīlīs seized control of several towns in eastern Ḳuhistān, Ṭabas, Ḳāʾin, Zūzan, Tūn, and others. Another *dāʿī*, Abū Ḥamza, captured two castles near Arradjān in the border region between Fārs and Khūzistān. After the death of al-Mus-

tanṣir in 487/1094, a major split occurred in the Ismāʿīlī movement concerning the succession to the imāmate. Al-Mustanṣir had originally designated his eldest son, Nizār [*q.v.*], as his heir. Later his youngest son, Aḥmad, found the support of the vizier al-Afḍal [*q.v.*], who after the death of al-Mustanṣir placed him on the throne with the title al-Mustaʿlī [*q.v.*]. Nizār fled to Alexandria, where he rose in revolt, was defeated, seized and immured. Ḥasan-i Ṣabbāḥ and the Persian Ismāʿīlīs upheld the right of Nizār to the succession and refused to recognize al-Mustaʿlī. In the absence of the imām, Ḥasan-i Ṣabbāḥ became the supreme chief claiming the rank of *ḥudjdja*. After his death the leadership continued with the rulers of Alamūt. Beginning with the fourth ruler, Ḥasan *ʿalā dhikrihi ʾl-salām* (557/1162-561/1166), they came to be recognized as imāms. Against numerous Saldjūḳ attacks the Nizārīs were able to hold and expand their territories in the Elburz mountains and Ḳuhistān. The fortress Shāhdiz near Iṣfahān, which they seized about the year 494/1100, was lost again in 500/1107. Some time afterwards the Nizārī fortresses near Arradjān were overcome. Among the Ismāʿīlīs in Egypt and Syria there were also partisans of Nizār. In Egypt they were gradually suppressed. In Syria, which fell largely outside the Fāṭimid territory, they were soon organized by emissaries from Alamūt and and seriously rivalled the supporters of the Fāṭimid caliphate, especially in Damascus and Aleppo. The Djabal al-Summāḳ and surrounding area north of Ḥamāt soon became a stronghold of the Nizārīs. As in Persia they aimed at acquiring fortresses, but failed in their first attempts, and practised political murder. In 520/1126 Tughtagīn, ruler of Damascus, ceded to them the fortress of Bānyās on the frontier with the Franks and gave them official recognition in Damascus. His son Būrī in 523/1139 encouraged anti-Ismāʿīlī rioting in Damascus in which the Nizārī community was virtually wiped out. The fortress of Bānyās was consequently surrendered by the Nizārīs to the Franks. Soon afterwards they achieved lasting success in the Djabal Bahrāʾ area west of Ḥamāt. In 527/1132-3 they acquired the fortress of Ḳadmūs, and other fortresses came into their possession during the following decade. Maṣyāf, the most important stronghold, was seized in 535/1140-1. The Syrian Nizārīs continued to be ruled by agents sent by the lords of Alamūt. The most famous one, Rāshid al-Dīn Sinān [*q.v.*] (557/1162-588/1192), showed signs of independence, and there are reports that agents were repeatedly sent from Alamūt to kill him. A complete break was avoided.

The imāmate of al-Mustaʿlī was recognized by most Ismāʿīlīs in Egypt, many in Syria, and by the whole community in the Yemen and that in India dependent on it. A new schism developed, however, among the Mustaʿlian Ismāʿīlīs after the assassination of al-Mustaʿlī's son and successor al-Āmir [*q.v.*] in 524/1130. Eight months before al-Āmir's death a son, al-Ṭayyib, had been born to him and had immediately been proclaimed as his heir. After al-Āmir's death his cousin ʿAbd al-Madjīd was put on the throne in Cairo as regent, officially in expectation of the delivery of a pregnant wife of the late caliph Mention of the infant al-Ṭayyib was suppressed, and nothing is known about his fate. Four days later ʿAbd al-Madjīd was overthrown and imprisoned by al-Afḍal Kutayfāt [*q.v.*], who declared the Fāṭimid dynasty deposed and proclaimed the sovereignty of the Twelfth Imām of the Imāmiyya. Kutayfāt was overthrown and killed in Muḥ. 526/Dec. 1131, and ʿAbd al-Madjīd returned to the throne as regent. In Rabīʿ II 526/Feb. 1132 he was proclaimed imām with the caliphal title al-Ḥāfiẓ [*q.v.*]. The succession of al-Ḥāfiẓ, though in violation of the accepted rule that the imāmate could be inherited only by a direct descendant, was supported by the official *daʿwa* organization in Egypt and accepted by the majority of the Mustaʿlian Ismāʿīlīs in Egypt and Syria. They were known as the Ḥāfiẓiyya or Madjīdiyya. There were, however, some Mustaʿlian communities in Egypt and Syria which continued to support the rights of al-Ṭayyib and were known as Āmiriyya. In the Yemen most of the leaders of the established *daʿwa* organization upheld the rights of al-Ṭayyib. Encouraged by the Ṣulayḥid queen al-Sayyida they founded the independent Ṭayyibī *daʿwa* in the Yemen headed by a *dāʿī muṭlaḳ*. The first of these was al-Dhuʾayb b. Mūsā, who was succeeded in 546/1151 by Ibrāhīm al-Ḥāmidī [*q.v.*]. The Ṭayyibī *dāʿīs* worked successfully despite the fact that after the death of the Ṣulayḥid queen in 532/1138 they did not have the support of any of the rulers in the Yemen. The Ḥāfiẓī *daʿwa* was supported by the Zurayʿids of ʿAdan, who, beginning with Muḥammad b. Sabaʾ, were officially appointed Fāṭimid *dāʿīs* in the Yemen, and by at least some of the Hamdānid rulers of Ṣanʿāʾ (see S. M. Stern, *The succession to the Fatimid Imam al-Āmir, the claims of the later Fatimids to the Imamate, and the rise of Ṭayyibī Ismailism*, in *Oriens*, iv (1951), 193-255). There are no reports as to whether the Ḥāfiẓī *daʿwa* ever had adherents in India. In any case the community in India, which continued to be closely tied to the Yemenite *daʿwa*, soon was solidly Ṭayyibī.

The post-Fāṭimid period. Ḥāfiẓiyya: After the overthrow of the Fāṭimid caliphate in 567/1171 the Ḥāfiẓiyya, no longer enjoying official support, gradually disintegrated. Al-ʿĀḍid, the last Fāṭimid caliph, had appointed his son Dāʾūd as his successor with the title al-Ḥāmid li'llāh. Dāʾūd was generally recognized by the Ḥāfiẓīs as the imām after al-ʿĀḍid. He and all other members of the Fāṭimid family were permanently detained as prisoners by the Ayyūbids. As a result of a pro-Fāṭimid conspiracy in Cairo in 568/1172-3 many of the supporters of the deposed dynasty were exiled to Upper Egypt, which became a hotbed of pro-Fāṭimid activity. In 572/1176-7 a pretender claiming to be Dāʾūd found wide support in Ḳifṭ. When the real Dāʾūd died as a prisoner in Cairo in 604/1207-8, the Ḥāfiẓīs asked the Ayyūbid al-Malik al-Kāmil for permission to mourn him in public. Al-Kāmil granted them permission, but used the occasion to arrest their *dāʿīs* and confiscate their property. After Dāʾūd his son Sulaymān mostly seems to have been recognized as the imām. Sulaymān died without child as a prisoner in 645/1248, but some of his partisans claimed that he had a son who was hidden (see P. Casanova, *Les derniers Fâṭimides*, in *MIFAO*, vi (1897), 415-45). In 697/1298 a pretender appeared in Upper Egypt who claimed to be Dāʾūd b. Sulaymān b. Dāʾūd. Still later, about the year 723/1324, Ismāʿīlīs are mentioned in ʿUṣfūn in Upper Egypt. In Syria a Ḥāfiẓī community is mentioned at the same time in the Baḳīʿa mountains near Ṣafad. In the Yemen the Ḥāfiẓī cause also lost all official backing with the Ayyūbid conquest. The Ṭayyibī *dāʿī muṭlaḳ* ʿAlī b. Muḥammad al-Walīd (d. 612/1215) still composed polemical treatises and poems against the "Madjīdiyya", but they were already becoming a rare minority.

Ṭayyibiyya [*q.v.*]: The insignificant Ṭayyibī communities in Egypt and Syria, known as Āmiriyya, are only rarely mentioned in the sources. Toward the end of the 6th/12th century there is a vague reference

to the presence of Āmiriyya in Egypt. In Syria a community of Āmiriyya is still mentioned about the year 723/1324 in the Baḳīʿa and Zābūd mountains near Ṣafad. These isolated communities probably did not survive much longer. Only in the Yemen and India could the Ṭayyibī *daʿwa*, under the undisputed leadership of the *dāʿī muṭlaḳ*, establish itself permanently. After Ibrāhīm al-Ḥāmidī the position of *daʿi muṭlaḳ* remained among his descendants until 605/1209, when it passed to ʿAlī b. Muḥammad of the Banu 'l-Walīd al-Anf family, which was named after his ancestor Ibrāhīm al-Anf, who was a prominent supporter of the Ṣalayḥids and a descendant of the Umayyad al-Walīd b. ʿUtba b. Abī Sufyān. It remained in this family, with only two interruptions in the 7th/13th century, until 946/1539. The traditional stronghold of the Ismāʿīlī *daʿwa* in the Yemen was in the Ḥarāz [*q.v.*] mountains, though there were scattered communities in other parts of the country. The *dāʿīs* generally enjoyed the support, or at least protection, of the Hamdānids [*q.v.*], who permitted them to reside in Ṣanʿāʾ and later, in the 8th/14th century, in the fortress of Dhū Marmar. Their relations with the Ayyūbids and the Rasūlids were fair, but the Zaydī imāms were mostly hostile. The Zaydī pretender al-Manṣūr ʿAlī b. Ṣalāḥ al-Dīn expelled them from Dhū Marmar in 829/1426 after a prolonged siege, and they established their residence in the Ḥarāz mountains. The Zaydī Imām al-Muṭahhar b. Sharaf al-Dīn in the 10th/16th century relentlessly persecuted the Banu 'l-Anf and seems to have practically extirpated the family. The relations with the *daʿwa* in India remained close. There the Ṭayyibī community grew mostly undisturbed, though in the first half of the 9th/15th century persecution under the Sultanate of Gudjarāt resulted in mass conversions to Sunnism. In 946/1539 the position of *dāʿī muṭlaḳ* passed to an Indian, and after his death in 947/1567 the headquarters were transferred to Gudjarāt in India.

After the death of Dāʾūd b. ʿAdjabshāh, the 26th *dāʿī muṭlaḳ*, in 999/1591, the succession was disputed. While in India Dāʾūd Burhān al-Dīn was established, Dāʾūd b. Adjabshāh's representative in the Yemen, Sulaymān b. al-Ḥasan al-Hindī, claimed to have been designated successor by the deceased *dāʿī muṭlaḳ*. The dispute was not resolved and led to the permanent schism between the Dāʾūdī and Sulaymānī factions which accepted separate lines of *dāʿīs*. Among the Sulaymānīs, whose cause had only few adherents in India, the position of *dāʿī muṭlaḳ* in 1050/1640 passed to the Yemenite Ibrāhīm b. Muḥammad b. Fahd of the Makramī [*q.v.*] family, in which it has remained since with few interruptions. The Makramī *dāʿīs* established themselves in Nadjrān [*q.v.*], where they were supported by the Banū Yām [*q.v.*]. Before 1131/1719 they conquered the Ḥarāz region in the Yemen and held it against all attempts of the Zaydī imāms to expel them. The Dāʿī al-Ḥasan b. Hibat Allāh (d. 1189/1775) conquered Ḥaḍramawt and unsuccessfully fought the rising Suʿūdī dynasty in Central Arabia. From Ḥarāz the Makramīs were expelled in 1289/1872 by the Ottoman general Aḥmad Mukhtār Pasha, who took their fortress ʿAttāra and treacherously killed the Dāʿī al-Ḥasan b. Ismāʿīl Āl Shibām al-Makramī. The present *dāʿī muṭlaḳ* of the Sulaymānīs is Djamāl al-Dīn ʿAlī b. al-Ḥusayn al-Makramī, who succeeded his father in 1939 (see A. A. A. Fyzee, *Three Sulaymānī Dāʿīs: 1936-1939*, in *JBBRAS*, xvi (1940), 101-4). Besides the Banū Yām in Nadjrān, the people of the Djabal Maghāriba in Ḥarāz are Sulaymānīs. In India the Sulaymānī *dāʿīs* are represented by *manṣūbs* residing in Baroda. Sulaymānīs live mainly in Bombay, Boroda, and Ḥaydarābād, Dekkan.

The Dāʾūdī *dāʿīs* after the split continued to reside in India, where the great majority of their followers live. The *daʿwa* generally was able to develop freely, though there was another wave of persecution under Awrangzīb (1044/1635-1118/1707). Since 1200/1785 the headquarters of the *dāʿīs* have been in Sūrat. The present *dāʿī muṭlaḳ* is Muḥammad Burhān al-Dīn, who succeeded his father Ṭāhir Sayf al-Dīn in 1966. Dāʾūdī Ismāʿīlīs live chiefly in Gudjarāt, Bombay, and Central India. In Yemen there are Dāʾūdīs in the Ḥarāz region. (For minor secessions from the Dāʾūdīs [see BOHORĀS]).

Nizāriyya [*q.v.*]: The imāmate of the Nizārīs remained vested in the lords of Alamūt until the surrender of the fortress to the Mongol conqueror Hulāgū in 654/1256 and the consequent execution of the imām Rukn al-Dīn Khurshāh. Practically nothing is known about the imāms following him. Later lists of the imāms differ widely concerning their names, number, and sequence. The list now considered official in the Āghā Khānī branch has come to be generally accepted only since the later 19th century. There are vague indications that the imāms after the fall of Alamūt resided in Ādharbāydjān. A split occurred in the line of imāms after Muḥammad Shams al-Dīn, usually considered the son of Khurshāh, or his son Muʾmin-Shāh, who is omitted in some lists. One line continues with Ḳāsim-Shāh, the other with Muḥammad-Shāh. The Ḳāsim-Shāhī imāms in the latter part of the 9th/15th century resided in Andjudān, a village near Maḥallāt, where the tombs of some of them are preserved. From this time until the 19th century the imāms were usually affiliated to the Niʿmat Allāhī Ṣūfī order. After a lapse of nearly one and a half centuries there are further tombs of imāms in Andjudān dating from 1043/1634 to 1090/1680. It is unknown where the family lived in the intervening period. Imām Shāh Nizār, who died in 1134/1722 is buried in Kahak, a village near Andjudān (see W. Ivanow, *Tombs of some Persian Ismaʿili Imams*, in *JBBRAS*, xiv (1938), 49-62). In the time of Nādir Shāh (1148/1736-1160/1747) Imām Sayyid Ḥasan Beg moved to Shahr-i Bābak and acquired a winter residence in Kirmān. The imāms now rose from their previous obscurity to involvement in political life. Imām Abu 'l-Ḥasan Shāh was governor of Kirmān from 1169/1756 until his death in 1206/1791-2. His son Shāh Khalīl Allāh, who enjoyed the favour of the Ḳādjār Fatḥ ʿAlī Shāh, returned to Kahak and later moved to Yazd, where he was killed by a mob in 1232/1817. Khalīl Allāh's son, Ḥasan ʿAlī Shāh Maḥallātī, was granted by Fatḥ ʿAlī Shāh the title Āghā Khān [*q.v.*], which has remained hereditary among his successors. After a vain attempt at gaining independent rule of Kirmān, Ḥasan ʿAlī Shāh moved to India in 1259/1843 (see H. Algar, *The Revolt of Āghā Khān Maḥallātī and the Transference of the Ismāʿīlī Imamate to India*, in *SI*, xxix (1969), 55-81). Bombay became the permanent seat of the imāmate. The present (1971) Āghā Khān, Karīm Khān, succeeded his grandfather, Sulṭān Muḥammad Shāh, in 1957.

The branch of Muḥammad-Shāh apparently was closely associated with the Nizārī community in Daylam. In 776/1374-5 Khudāwand Muḥammad, who may be identical with Muḥammad-Shāh, gained possession of the fortress of Alamūt with the support of the local Nizārīs. He was consequently expelled and sought refuge with Tīmūr, who sent him

to confinement in Sulṭāniyya. The family continued to live in Sulṭāniyya until after 894/1489. Members of it, however, were repeatedly active among the Nizārīs in Daylam until the middle of the 9th/15th century. The most famous imām of the Muḥammad-Shāhī line, Shāh Ṭāhir Ḥusaynī Dakkanī, because of his religious following aroused the suspicion of the Ṣafawid Shāh Ismā'īl, was exiled to Kāshān and later forced to leave Persia. In 928/1522 he came to Aḥmadnagar in the Dekkan, where he was instrumental in bringing about the proclamation of Shī'ism as the official religion by the ruler Burhān Niẓām Shāh. Shāh Ṭāhir probably died in 956/1549. His descendants lived in Aḥmadnagar and later in Awrangābād (see W. Ivanow, *A forgotten branch of the Ismailis*, in *JRAS*, 1938, 57-79). The last imām of this branch, so far as is known, was Amīr Muḥammad Bāḳir, whose last contact with his Syrian followers was in 1210/1796. As well as in Daylam, the Muḥammad-Shāhī line had supporters in Badakhshān and the Kabūl area in the 10th/16th and 11th/17th centuries, though by the beginning of the 13th/19th century the Ismā'īlīs there seem to have generally adhered to the Ḳāsim-Shāhī line. The community in Syria generally recognized the Muḥammad-Shāhī line. In a period of troubles contact with the Imām Muḥammad Bāḳir was lost after the year 1210/1796. In 1304/1887, after a vain search for descendants of Muḥammad Bāḳir, a section of the Syrian community recognized the Āghā Khānī line. In 1957 about 30,000 Syrian Nizārīs, living in Salamiyya and the villages of al-Khawābī, adhered to the Āghā Khānī line. About 15,000, known as Dja'fariyya and living in Ḳadmūs, Maṣyāf, and some villages near Salamiyya, continued to adhere to the Muḥammad-Shāhī line (see 'Ā. Tāmir, *Furū' al-shadjara al-Ismā'īliyya al-Imāmiyya*, in *al-Mashriḳ*, li (1957), 581-612).

The Nizārī communities, widely dispersed territorially and partially separated by language barriers, developed largely independently of each other, especially after the fall of Alamūt. They were led by local leaders, *shaykhs* or *pīrs*, who alone could claim access to the hidden imāms. The Syrian Nizārīs during the later Alamūt period continued to be ruled by Persian agents sent by the imāms. After the fall of Alamūt they at first preserved their political independence and joined the Muslim efforts to expel the Mongol invaders in 658/1260 from Syria, but later were gradually subdued by the Mamlūk Sultan Baybars I. By the end of the year 671/1273 Baybars controlled all their fortresses. The Ismā'īlīs remained subjects of the Mamlūks and later of the Ottomans, paying a special tax. During the late 18th and the 19th centuries they were frequently involved in clashes with their neighbours, especially with the numerically stronger Nuṣayrīs, who repeatedly occupied their fortresses. About the middle of the 19th century the Ismā'īlīs restored the town of Salamiyya [*q.v.*] and settled the surrounding area east of Ḥamāt, where now approximately two thirds of the community live. The last Nuṣayrī attack and occupation of Ḳadmūs took place in 1920, causing much damage to property and manuscripts (see N. N. Lewis, *The Ismā'īlīs of Syria today*, in *Royal Central Asian Studies Journal*, (1952), 69-77).

In Persia the Ismā'īlī communities were decimated by massacres but survived after the surrender of Alamūt and the other fortresses in Daylam and Ḳuhistān. Alamūt was briefly reoccupied in 674/1275, but lost again in the next year. In the second half of the 8th/14th and the first half of the 9th/15th centuries it was repeatedly, though only for short spans of time, in Nizārī hands. The Nizārī community in Daylam was still a force in the local power struggle in this period, though it was usually on the defensive, especially against the Zaydī rulers of Lāhīdjān. After this time it gradually disappeared. In Ḳuhistan small Ismā'īlī communities have survived in the area of Ḳā'in and Bīrdjand. Other Nizārī communities are found in the area of Nīshāpūr in Khurāsān, around Kirmān, in Sīrdjān and the Djabal Bāriz, and in the area of Maḥallāt and Yazd.

The Ismā'īlīs of the Upper Oxus region seem to have accepted the Nizārī imāmate before the end of the Alamūt period, though the exact date and circumstances are unknown. Local tradition in Shughnān [*q.v.*] mentions two *dā'īs*, Sayyid Shāh Mālang and Shāh Khāmūsh, who were sent by the imām and became the founders of the dynasties of *pīrs* and *mīrs* ruling Shughnān. In 913/1507-8 Shāh Raḍiyy al-Dīn, who is perhaps to be identified with the imām of the Muḥammad-Shāhī line of that name, the father of Shāh Ṭāhir Dakkanī, came from Sīstān to Badakhshān and with the support of the local Ismā'īlīs established his rule over large parts of the region. In consequence of quarrels among his supporters he was killed in spring 1509. In the 11th/17th century another imām of the Muḥammad-Shāhī line, Khudaybakhsh, seems to have taken up residence in Badakhshān and died there in 1074/1663-4. The Ismā'īlī communities continued to be guided by local dynasties of *pīrs*. There are Nizārī communities recognizing the Āghā Khāns also in the area of Ghazna, in Chitral, Gilgit, Hunza, where they are known as Mawlā'īs, and in the area of Yārkand and Kāshghar.

The date and circumstances of the introduction of Nizārī Ismā'īlism in India are obscure. A continuity of Ismā'īlī activity in Sind, especially the Multān area, ever since the early *da'wa* there, is attested by sparse notices in the sources. In the first half of the 7th/13th century this activity extended to Dihlī. It may at this time well have been inspired by emissaries of the imāms of Alamūt, but definite evidence is lacking. The first *pīrs* mentioned in the religious literature of the Indian Nizārīs cannot be dated with any degree of certainty. The shrine of the earliest one, Satgur Nūr, is in Nawsari in Gudjarāt, where the religious texts place his activity. The presence of non-Ṭayyibī Ismā'īlīs in Gudjarāt is vaguely attested for the first half of the 7th/13th century. Pīr Shams al-Dīn according to the texts came from Persia to Sind and became the founder of the dynasty of *pīrs* there. If the traditional pedigree of *pīrs* is reliable, he may have lived in the first half of the 8th/14th century, as some sources suggest. Other sources date him one or two centuries earlier. His mausoleum is in Multān. Pīr Ṣadr al-Dīn and Pīr Ḥasan Kabīr al-Dīn of the 9th/15th century are buried near Uch, south of Multān. Ṣadr al-Dīn is traditionally considered the founder and organizer of the Khodja [*q.v.*] community, which consists mostly of converts of the Hindu Lohana caste. Kabīr al-Dīn's son Imām-Shāh after about the year 875/1470-1 was active in Gudjarāt where he converted numerous Hindus.

Imām-Shāh died in 926/1520 and is buried in Pīrāna near Aḥmadābād. His son and successor Nar (Nūr) Muḥammad-Shāh (d.940/1533-4) repudiated the recognition of the imām in Persia and claimed the imāmate for himself, thus founding a separate sect whose adherents are known as Imām-Shāhīs or Satpanthīs. The sect later split further around different lines of *pīrs*. It has tended to revert toward Hinduism. Its followers, who are to be found chiefly in Gudjarāt

and Khandesh, consider themselves mostly as Imāmī Shīʿīs or Sunnīs rather than Ismāʿīlīs, though they recognize the Ismāʿīlī imāms before the split (see W. Ivanow, *The sect of Imam Shah in Gujrat*, in *JBBRAS*, xxii (1936), 19-70). Other Nizārīs in Gudjarāt remained faithful to the imāms in Persia. The great majority of Nizārīs on the Indian subcontinent belong to the Khodja community. There are, however, other Nizārī groups, such as the Shamsīs, followers of Pīr Shams al-Dīn in Pandjāb and others. The Khodjas live chiefly in lower Sind, Cutch, Gudjarāt, Bombay, and in diaspora in East and South Africa, Ceylon, and Burma.

Doctrine. Pre-Fāṭimid and Fāṭimid times: Nothing definite is known about the doctrine of the early supporters of the imāmate of Ismāʿīl and his son Muḥammad. Imāmī sources maintain that the Khaṭṭābiyya [*q.v.*], the followers of the extremist Shīʿī Abu 'l-Khaṭṭāb [*q.v.*], constituted the bulk of the early Ismāʿīliyya. Later Ismāʿīlī doctrine, however, generally condemns Abu 'l-Khaṭṭāb and does not appear to be substantially influenced by the heresies ascribed to him and his followers (see W. Ivanow, *Ibn al-Qaddāḥ*, Bombay 1957). The *Umm al-kitāb* preserved by the Ismāʿīlīs of Badakhshān, in which Abu 'l-Khaṭṭāb appears as a saintly disciple of Imām Muḥammad al-Bāḳir and his sons are called the founders of Ismāʿīlism, is a syncretistic compilation written not earlier than the beginning of the 4th/10th century and perhaps as late as the early Alamūt period. The ideas of the Shīʿī *ghulāt* [*q.v.*] represented in it are for the most part not specifically Ismāʿīlī and evidently not derived from Ismāʿīlī sources. The work thus must not be considered "proto-Ismāʿīlī".

The doctrine propagated by the pre-Fāṭimid Ismāʿīlī revolutionary movement of the second half of the 3rd/9th century can be derived in its outlines from later Ismāʿīlī works and reports of anti-Ismāʿīlī authors. It embodied already the basic framework of the later Ismāʿīlī religious system, though it was consequently modified in some important respects. Fundamental was the distanction between the *ẓāhir* exterior or exoteric, and the *bāṭin* [see BĀṬINIYYA], inward or esoteric, aspects of religion. The *ẓāhir* consists in the apparent, generally accepted meaning of the revealed scriptures and in the religious law laid down in them. It changes with each prophet. The *bāṭin* consists in the truths (*ḥaḳāʾiḳ*) concealed in the scriptures and laws, which are unchangeable and are made apparent from them by the *taʾwīl* [*q.v.*], interpretation, which is often of a cabalistic nature relying on the mystical significance of letters and numbers. These truths form a gnostic system comprising a cosmology and a cyclical hierohistory. At the basis of the pre-Fāṭimid cosmology was a myth, only imperfectly reflected in the later sources, according to which the divine imperative *kun*, consisting of the letters *kāf* and *nūn*, through duplication formed the two original principles *kūnī ḳadar*. *Kūnī* was the female and *ḳadar* the male principle. The seven letters of *kūnī ḳadar* were known as the seven higher letters (*al-ḥurūf al-ʿulwiyya*), which are the archetypes of the seven messenger prophets and their revealed messages. From the two first principles proceeded three spiritual powers, *djadd*, *fatḥ*, and *khayāl*, identified with the three archangels Djibrāʾīl, Mīkāʾīl, and Isrāfīl, which mediate between the spiritual world and man in the physical world (on this triad see H. Corbin, *Le livre réunissant les deux sagesses*, Tehran-Paris 1953, *Étude préliminaire*, 91-112). The cyclical history progresses through seven eras, each inaugurated by an enunciator (*nāṭiḳ*) prophet bringing a revealed message. Each of the first six *nāṭiḳ*s, Ādam, Nūḥ, Ibrāhīm, Mūsā, ʿĪsā, and Muḥammad, was followed by a fundament (*asās*) or silent one (*ṣāmit*), who revealed the *bāṭin* of the message, and by seven imāms. The seventh imām in each era rises in rank and becomes the *nāṭiḳ* of the following era, abrogating the law of the previous *nāṭiḳ* and bringing a new one. In the era of Muḥammad, ʿAlī was the *asās* and Muḥammad b. Ismāʿīl the seventh imām. Muḥammad b. Ismāʿīl on his reappearance in the near future will become the seventh *nāṭiḳ*, the Ḳāʾim or Mahdī [*q.v.*], and will abrogate the law of Islam. His message will, however, consist in the full revelation of the *bāṭin* truths without any *ẓāhir* law. He will rule the world and then end the physical world, sitting in judgment over humanity. During his absence he is represented by twelve *ḥudjdja*s residing in the twelve regions (*djazāʾir*) of the earth. The cyclical history was sometimes coupled with astrological speculations, and astrological predictions were made specifically concerning the date of the coming of the Ḳāʾim.

Before the coming of the Ḳāʾim the *bāṭin* must be kept secret and can be revealed to the neophyte only on swearing an oath of initiation with a vow of secrecy and on payment of a due. The initiation, known as *balāgh*, was no doubt gradual, but there is no evidence of a strictly fixed sequence of grades generally followed as described by anti-Ismāʿīlī sources. Beneath the imām and the *ḥudjdja*s a hierarchy of *dāʿī*s was in charge of the initiation and instruction (*daʿwa* [*q.v.*]). Little is known about the actual organization of the *daʿwa* in the pre-Fāṭimid and Fāṭimid age. The widely differing enumerations of the grades (*ḥudūd*) of the hierarchy given in Ismāʿīlī religious texts serve mostly ideal functions and cannot be taken as corresponding closely to the actual organization (see W. Ivanow, *The organization of the Fāṭimid propaganda*, in *JBBRAS*, xv (1939), 1-35).

From about the beginning of the 4th/10th century onwards the early cosmology was superseded and partially replaced by a cosmology of Neoplatonic origin, apparently first propounded by the *dāʿī* al-Nasafī [*q.v.*]. In this cosmology God is described as absolutely beyond comprehension, beyond any attribute or name, beyond being and non-being. Through his divine Order or Volition (*Amr*) he originated (*abdaʿ*) the Intellect (*ʿAḳl*). The *ʿAḳl* is the First Originated Being (*al-Mubdaʿ al-Awwal*), since the *Amr* is united with it in existence From the Intellect the Soul (*Nafs*) proceeds through emanation. From the Soul proceed the seven spheres with their stars and move with its movement. Through the revolution of the spheres the single elements (*al-mufradāt*) or natures, humidity, dryness, cold, and warmth, are mingled to form the composites (*al-murakkabāt*), earth, water, air, and ether. As the composites mingle, the plants with the vegetative (*nāmiya*) soul develop From them the animals with the sensitive (*ḥissiyya*) soul develop, and from the latter, man with the rational (*nāṭiḳa*) soul. Al-Nasafī's cosmology was generally adopted in its essentials, though refined and elaborated by the later authors. Some minor points aroused controversy among them. The principles of the spiritual world in this cosmology were identified with terms of the religious sphere. Thus the Intellect in religious terminology was equated with the Pen (*Ḳalam*) and the Throne (*ʿArsh*), and the Soul was identified with the Tablet (*Lawḥ*) and the Footstool (*Kursī*) etc. Much stressed were the analogies between the spiritual, astral, and physical worlds and between man as the

microcosm and the physical world as the macrocosm. The official Fāṭimid *da'wa* apparently did not accept this cosmology until the time of the Caliph al-Mu'izz.

A somewhat different cosmological system was propounded by the *dā'ī* Ḥamīd al-Dīn al-Kirmānī [*q.v.*] (d. about 411/1021). Instead of the duality of the Intellect and the Soul his system comprises ten intellects in the spiritual world. The Soul is replaced by the Second Intellect or First Emanation (*al-Munba'ith al-Awwal*), proceeding from the higher relation (*al-nisba al-ashraf*) of the First Intellect. The Third Intellect or Second Emanation and First Potential Being, proceeding from the lower relation (*al-nisba al-adwan*) of the First Intellect, is equated with matter and form (*al-hayūlā wa 'l-ṣūra*). From the First and Second Intellects proceed seven further intellects. The tenth one is the Active Intellect (*al-'Aḳl al-Fa''āl*) or demiurge governing the physical world. The structure of the astral and the physical worlds and of the religious hierarchy were similarly modified by al-Kirmānī in close analogy to the spiritual world. The system of al-Kirmānī was not adopted by the Fāṭimid *da'wa*. Only among the Ṭayyibīs in the Yemen did it replace the earlier traditional system.

Fāṭimid doctrine, because of the Fāṭimid claim to the imāmate, was forced to modify the early doctrine concerning the role of Muḥammad b. Ismā'īl as the final imām and Mahdī and the restriction of the number of imāms to seven. 'Ubayd Allāh al-Mahdī at first radically broke with this earlier doctrine by asserting that the imām after Dja'far al-Ṣādiḳ had been his son 'Abd Allāh rather than Ismā'īl and that the imāmate continued to be handed down among his descendants without restriction in number. Soon, however, attempts were made to accomodate the Fāṭimid claim to the imāmate with the earlier theory. Muḥammad b. Ismā'īl was again recognized as imām and as ancestor of the Fāṭimids. His return as the Ḳā'im was sometimes interpreted spiritually, as being realized in the rise of the Fāṭimids, who would gradually fulfil the predictions concerning the Ḳā'im. A second heptad of imāms, often called the deputies (*khulafā'*) of the Ḳā'im, was admitted in the era of Muḥammad as a special privilege of the latter. The eschatological expectations in respect to the Ḳā'im were to be fulfilled after the expiration of the second heptade of imāms. This theory also had to be abandoned as the Fāṭimid caliphate continued, though even then the eschatological events generally were expected in the near future (see W. Madelung, *Das Imamat in der frühen ismailitischen Lehre*, in *Isl.*, xxxvii (1961), 43-135).

Fāṭimid doctrine, in contrast to the pre-Fāṭimid attitude which tended to depreciate the *ẓāhir*, invariably insisted on the equal importance of the *ẓāhir* and the *bāṭin* and made every effort to suppress antinomian trends, which, however, often came to the surface among more radical Ismā'īlī groups. The Ismā'īlī *fiḳh* was elaborated chiefly by the Ḳāḍī al-Nu'mān [*q.v.*] (d. 363/974), whose work *Da'ā'im al-Islām* became the most authoritative exposition of it. Ismā'īlī law agrees in general with Imāmī law, but does not permit the *mut'a* [*q.v.*] temporary marriage and nullifies bequests to a legal heir except with the consent of the other heirs (see A. A A Fyzee, *Compendium of Fatimid Law*, Simla 1969). In the ritual, Ismā'īlī *fiḳh* also agrees generally with Imāmī doctrine (see R. Strothmann, *Recht der Ismailiten*, in *Isl.*, xxxi (1954), 131-46). It gives, however, full authority to the imām for determining the beginning of a new month rather than requiring the sight of the new moon. In practice the beginning of the month was fixed by astronomical calculation. Thus it fell often one or two days earlier than for the other Muslims. This often led to friction in particular in respect to the beginning and end of the fasting month of Ramaḍān.

Post-Fāṭimid times. Ṭayyibī doctrine: The Ṭayyibī community in the Yemen and India preserved a large part of the Fāṭimid religious literature and retained the interest in the gnostic cosmology and cyclical history of the Fāṭimid age. Ṭayyibī doctrine, however, from the beginning adopted the cosmological system of al-Kirmānī in place of the traditional Fāṭimid system, and modified it by introducing a mythical "drama in heaven", first described by the second *dā'ī muṭlaḳ* Ibrāhīm al-Ḥāmidī [*q.v.*], which profoundly shaped the Ṭayyibī gnosis. According to this myth, the two emanations from the First Intellect, the Second and Third Intellects, were rivals for the second rank after the First Intellect. As the Second Intellect reached this position by his superior efforts, the Third Intellect refused to recognize his superiority in rank. In punishment for this failure he fell from the third rank behind the following seven intellects and, after repenting, became stabilized as the Tenth Intellect and demiurge (*mudabbir*). The physical world was produced out of the spiritual forms (*ṣuwar*) which together with the Tenth Intellect refused to recognize the superiority of the Second Intellect and out of the darkness generated by this sin. The Tenth Intellect, also called the Spiritual Ādam (*Ādam al-Rūḥānī*), tries to regain his original rank by calling the fallen spiritual forms to repentance. The first representative of his *da'wa* on earth was the First and Universal Ādam (*Ādam al-Awwal al-Kullī*), owner of the body of the *ibdā'* world (*al-djuththa al-ibdā'iyya*), who opened the first cycle of manifestation (*dawr al-kashf*) and is distinguished from the Partial Ādam (*Ādam al-Djuz'ī*), who opened the present age of concealment (*dawr al-satr*). After his passing he rose to the horizon of the Tenth (Intellect) and took his place, while the Tenth rose in rank. Similarly the Ḳā'im of each cycle after his passing rises and takes the place of the Tenth, who thus gradually rises until he will join the Second Intellect. Countless cycles of manifestation and concealment succeed each other until the Great Resurrection (*Ḳiyāmat al-Ḳiyāmāt*) which consummates the megacycle (*al-kawr al-a'ẓam*), sometimes specified to last 360,000 times 360,000 years.

The soul of each believer on his initiation is joined by a point of light, which grows as he advances in knowledge. On his passing it rises to join the soul of the holder of the rank (*ḥadd*) above him in the hierarchy. It continues to rise from *ḥadd* to *ḥadd* until it is gathered together with the souls of all other believers in the light temple (*haykal nūrānī*) in the shape of a human being which constitutes the form of the Ḳā'im (*ṣūra Ḳā'imiyya*) of his cycle, which then rises to the horizon of the Tenth. The souls of the unbelievers remain with their bodies, which are dissolved into anorganic matter which is consequently transformed into various harmful creatures and substances in descending order. Depending on the gravity of their sins they may eventually rise again through the ascending forms of life and as human beings may accept the *da'wa* or end up in Sidjdjīn in torment lasting as long as the megacycle.

Continuing the Fāṭimid tradition Ṭayyibī doctrine

maintained the equal validity of the *ẓāhir* and the *bāṭin* and repudiated antinomian trends. Ḳāḍī al-Nuʿmān's *Daʿāʾim al-Islām* remained the authoritative work of *fiḳh*.

Nizārī doctrine: Owing to the upheavals in the political history of the Nizārī communities, their wide dispersal, the language barriers between them, and the repeated loss of large parts of their religious literature, Nizārī doctrine is marked by major shifts in time and nearly completely independent local traditions.

Doctrine of Alamūt: The vigorous activism of the movement led by Ḥasan-i Ṣabbāḥ even before its break with the Fāṭimid caliphate was associated with a new preaching (*daʿwa djadīda*), most eloquently formulated, though perhaps not originated, by Ḥasan-i Ṣabbāḥ himself. The new preaching entailed an apologetic reformulation of the old Shīʿī doctrine of *taʿlīm*, *i.e.*, the authoritative teaching in religion, which could be carried out only by a divinely chosen imām in every age after the Prophet. Ḥasan-i Ṣabbāḥ reaffirmed the need for such a teacher as a dictate of reason and went on to prove that only the Ismāʿīlī imām fulfilled this need. In his argumentation he seems to have stressed the autonomous authority of each imām, independent of his predecessors, thus unwittingly authorizing the later shifts of doctrine. The doctrine of *taʿlīm* had a strong impact in the Sunnī world, as is reflected by its elaborate refutation by al-Ghazālī [*q.v.*] and others.

A religious revolution took place under the fourth lord of Alamūt, Ḥasan *ʿalā dhikrihi al-salām* (557/1162-561/1166), who on 17 Ramaḍān 559/8 Aug. 1164 solemnly proclaimed the resurrection (*ḳiyāma*) in the name of the imām, whose *ḥudjdja* or deputy (*khalīfa*) he declared himself to be. In consonance with the Ismāʿīlī expectations concerning the *ḳiyāma* he announced the abrogation of the *sharīʿa*, which so far had been strictly enforced by the lords of Alamūt. The resurrection was interpreted spiritually as the manifestation of the unveiled Truth in the imām which actualized Paradise for the believers who could grasp it, while it condemned the non-Ismāʿīlī opponents to spiritual non-being, *i.e.*, Hell. After the murder of Ḥasan by a brother-in-law opposed to the abolition of the *sharīʿa*, the doctrine of the *ḳiyāma* was further elaborated by his son and successor Muḥammad (561/1166-607/1210). Ḥasan before his death seems to have hinted that he himself was the imām at least spiritually. Muḥammad now maintained that his father had been the imām also by physical descent, apparently alleging that he was the son of a descendant of Imām Nizār who had secretly found refuge in Alamūt. The line of imāms thus continued through Ḥasan and Muḥammad in the lords of Alamūt. Muḥammad put the imām, and specifically the present imām, at the centre of the doctrine of the *ḳiyāma*. The resurrection consisted in viewing God in the spiritual reality of the imām. This doctrine entailed the exaltation of the imām over the prophet, which became characteristic of Nizārī thought. At the same time a new figure, the imām-ḳāʾim, was introduced in the cyclical history. The imām-ḳāʾim in the various eras was identified as Melchizedek (Malik al-Salām), Dhu 'l-Ḳarnayn, Khiḍr, Maʿadd, and, in the era of Muḥammad, as ʿAlī. He was recognized by the prophets in each era as the locus of the divinity. In the *ḳiyāma* the imām-ḳāʾim, i.e., the present imām, who is identical with ʿAlī, appears openly in his spiritual reality to the believer, who in his spiritual relationship to the imām is identical with Salmān [*q.v.*]. The ranks of the teaching hierarchy intervening between the imām and the believer have, also in agreement with the Ismāʿīlī expectations concerning the *ḳiyāma*, faded away. There are only three categories of men left: the opponents (*ahl al-taḍādd*) of the imām who adhere to the *sharīʿa*, the ordinary followers of the imām or people of gradation (*ahl al-tarattub*), who have gone beyond the *sharīʿa* to the *bāṭin* and have found partial truth, and the people of union (*ahl al-waḥda*), who see the imām in his true nature discarding all appearances and have reached the realm of full truth. The *ḳiyāma* doctrine was clearly influenced by Ṣūfī ideas and terminology and prepared the way for the close relationship between later Nizārī Ismāʿīlism and Ṣūfism.

The *ḳiyāma* doctrine was repudiated by Muḥammad's son and successor Djalāl al-Dīn Ḥasan (607/1210-618/1221), who proclaimed his adherence to Sunnī Islam, publicly cursed his predecessors, and imposed the Sunnī *sharīʿa* on his followers, inviting Sunnī scholars to instruct him. As he continued to be considered by them as the imām, his orders were accepted without opposition. There is evidence that at least before his death he acted towards his followers again in the fashion of an Ismāʿīlī imām. Under his son ʿAlāʾ al-Dīn Muḥammad (618/1221-653/1255) the enforcement of the *sharīʿa* was relaxed, though it was not officially abolished. The adjusted doctrine which now was developed to explain the new religious situation is expounded in the contemporary Ismāʿīlī works of Naṣīr al-Dīn al-Ṭūsī [*q.v.*]. The reimposition of the *sharīʿa* by Djalāl al-Dīn Ḥasan was interpreted as a return to precautionary dissimulation (*taḳiyya*) and a new period of concealment (*satr*), when the truth is hidden in the *bāṭin*, in contrast to the preceding period of *ḳiyāma*, when the unveiled truth was apparent and available to all. The *ḳiyāma* proclaimed by Ḥasan *ʿalā dhikrihi 'l-salām*, coming at about the middle of the millenium of the era of the Prophet Muḥammad, was merely anticipatory of the final *ḳiyāma* at the end of it. In the era of Muḥammad periods of *satr* and *ḳiyāma* may alternate according to the decision of each imām, since every imām is a potential imām-ḳāʾim. The state of spiritual union (*waḥda*) in the time of *satr* is restricted to the *ḥudjdja* of the imām, who partakes of the divine Support (*taʾyīd*) and possesses the truth of the imām, with whom he is consubstantial. The *ahl al-tarattub* are divided into the strong (*aḳwiyāʾ*) and the weak (*ḍuʿafāʾ*) according to their closeness to the truth.

Conditions in the post-Alamūt period favoured the adoption of Ṣūfī ways of life by the imāms and their followers also externally. Ismāʿīlī ideas were often camouflaged in Ṣūfī forms of expression, especially in poetry. Doctrinal works were written again from the 9th/16th century on, at a time when the victory of Shīʿism in Persia permitted the Nizārīs and their imāms to act somewhat more openly. The doctrine of the late Alamūt period as expressed by Nāṣīr al-Dīn al-Ṭūsī was essentially retained. Works of the Fāṭimid age, which still influenced al-Ṭūsī, were no longer available. Interest in the Ismāʿīlī cosmology and cyclical history waned. The role of the *ḥudjdja* as the revealer of the spiritual truth and only access to the essence of the imām, already stressed by al-Ṭūsī, was further elaborated.

A special literary tradition within Nizārī Ismāʿīlism in Persian was retained by the community of Badakhshān. Although many works of the Alamūt and post-Alamūt period found their way there, the community remained particularly attached to the works, genuine and spurious, of Nāṣir-i Khusraw.

Fāṭimid doctrine in the adaptation of Nāṣir, including the Fāṭimid cosmology, thus maintained their influence. The community of Badakhshān also transmitted and revered the *Umm al-kitāb* representing largely non-Ismāʿīlī thought.

Syrian Nizārī literature, written in Arabic, developed independently of the Persian literature, even during the Alamūt period. Persian works were not translated into Arabic or vice-versa. The Syrian community preserved a substantial selection of Fāṭimid religious literature, partially different from those preserved by the Ṭayyibīs. Even though the *ḳiyāma* was proclaimed, apparently with some delay, in Syria, the *ḳiyāma* doctrine had practically no impact there. The scholarly doctrine continued mostly in the Fāṭimid tradition. Syrian doctrinal works, while concentrating on the traditional cosmology and cyclical history, virtually ignore the current imām, the central figure in the Persian Alamūt and post-Alamūt doctrine. In religious literature of a popular type Rāshid al-Dīn Sinān is extolled as a saintly hero and his cosmic rank is described in terms appropriate to the imām. Much of the Syrian Ismāʿīlī literature was destroyed later during the feuds with neighbouring communities.

Among the Khodjas Ismāʿīlī literature, both Persian and Arabic, has been virtually unknown. Only a single Persian work, the *Pandiyāt-i Djavānmardī* containing a collection of religious and moral admonitions of the Nizārī Imām al-Mustanṣir (end of the 9th/15th century), was accepted as a sacred book, perhaps a century after his death. The traditional religious literature of the Khodjas and the Imām Shāhis is known as Satpanth [*q.v.*] literature, Sat Panth, *i.e.*, True Path, designating the religion preached in it. It consists of numerous writings in verse form, called *gnans*, written in, or translated into, several Indian languages. Most of them are ascribed to the medieval *pīrs*, but cannot be dated exactly and probably have undergone changes in the transmission. They contain hymns, moral and religious instruction, legendary histories of the *pīrs*, and descriptions of their miracles, but no formulated creed or theology. Their religious content is a mixture of Islamic and Hindu, especially popular Tantric, elements. While idol worship is condemned, Hindu mythology is accepted. ʿAlī is described as the Tenth Avatar or incarnation of the deity, and the imāms are identical with him. The Ḳurʾān is considered the last of the Vedas, which are viewed as holy scriptures whose true interpretation is known to the *pīrs*. The religious role of the *pīr* or *guru* is extolled. Acceptance of the true religion will free the believer from further rebirths and open Paradise for him, which is described in Islamic terms, while those failing to recognize the imāms must pass through another cycle of rebirths. The traditional Ismāʿīlī cosmology, cyclical history, and hierarchy are unknown (see W. Ivanow, *Satpanth*, in *Collectanea* I (The Ismaili Society), Leiden 1948, 1-54).

ISMĀʿĪLIYYA, town in Egypt on the western bank of the Suez Canal and on the northern shore of Lake Timsāḥ. The town originated from huts of workers and engineers engaged in excavating the Suez Canal. Its foundations were laid by the Inspector General of the Suez Canal Company on 27 April 1862. After the succession of the Khedive Ismāʿīl to the throne on 18 January 1863 it was called Ismāʿīliyya. In 1864 a network of streets and quarters, a central square (*maydān*), a government building (*sarāy*) and a pump for water-supply were established, and in 1868 the town was connected to the Egyptian railway network. When the digging of the Canal was completed, most of the personnel engaged on it moved to Port Saʿīd, and from 1870 onwards the number of Ismāʿīliyya's inhabitants was unchanged (about 3,000) for almost two decades. From the 1890s the town grew steadily to more than 15,000 inhabitants after World War I and more than 50,000 after World War II. From World War I until the final evacuation of British troops in the 1950s, a large British army and airforce base was situated near Ismāʿīliyya, and many foreign residents dwelt in the town. In 1928 Ḥasan al-Bannāʾ [*q.v.*] founded in Ismāʿīliyya the movement of al-Ikhwān al-Muslimūn [*q.v.*]. After the unilateral abrogation of the Anglo-Egyptian treaty of 1936 in October 1951, Ismāʿīliyya became the scene of frequent clashes between British troops and Egyptian police, culminating in a six-hour battle on 25 January 1952. This resulted, one day later, in the Cairo riots known as "black Saturday".

Until 1960 Ismāʿīliyya formed part of the Canal Governorate, but in that year it became the centre of a separate province (*muḥāfaẓa*) which included al-Ḳanṭara to the north and al-Tall al-Kabīr to the west. In 1966 the number of inhabitants of Ismāʿīliyya province amounted to 344,789, of whom 162,370 dwelt in rural settlements (*rīf*) and 182, 419 in urban ones (*ḥaḍar*). After the war of June 1967 most of Ismāʿīliyya's inhabitants left the city or were evacuated.

ISNA, Arabic name of a town in Upper Egypt (Egyptian Te-snet, Coptic Sne; Greek Latopolis, from the fish Latos worshipped there; in European accounts Esne, Esnèh), lying on the left bank of

the Nile halfway between Luxor and Edfu. It was for a time the capital of a *mudīriyya*, and is now a *markaz* in the *mudīriyya* of Ḳinā' [*q.v.*], with over 20,000 inhabitants. It is celebrated for the ruins of the temple of the god Chnum, which dates from the Ptolemaic period, in which a number of Roman emperors are depicted in the garb of the Pharaohs. In the Muslim period Isna was a flourishing provincial town. According to Edfūwī quoted by Maḳrīzī the town had 10,000 houses, and produced annually 40,000 *irdabb* of dates and 10,000 *irdabb* of *zabīb*. At the present time blue cotton fabric used throughout Egypt is woven there.

The most detailed account, which also takes account of economic conditions, is ʿAlī Mubārak, *Khiṭaṭ Djadīda*, viii, 59. See also Baedeker, *Egypt*[8]; Guide Bleu, *Égypte*, 1956, 439-40. (H. RITTER)

ISNĀD, chain of authorities, an essential part of the transmission of a tradition. Little need of this was realized in the earliest times, but as the first century of Islam advanced, the need for stating one's authority developed. The collections of traditions which were compiled mainly in the 3rd/9th century onwards give complete *isnāds*.

ISPAHBADH, Persian, "army chief", the Islamic form of a military title used in the pre-Islamic Persian empires and surviving in the Caspian provinces of Persia down to the Mongol invasions.

In Achaemenid times the *spādhapati* was the commander-in-chief of the army. In the Arsacid period, the office of *spāhpat* was apparently hereditary in one of the great Parthian families; the Armenian geographer Moses of Choren (8th century A. D.) says that when Koshm or Komsh, daughter of King Arshavir (sc. Phraates IV) married the commander-in-chief of the Parthian army, their descendants acquired the name of Aspahapet Pahlav (see Marquart in *ZDMG*, xlix (1895), 635-9; idem, *Ērānšahr*, 71-2; Christensen, *L'Iran sous les Sassanides*[2], 104). The term was in fact twice borrowed into Armenian: once in Arsacid times from the Old Persian, giving (*a*)*sparapet*, and again in early Sāsānid times from the Middle Persian form, giving *aspahapet* (which in the Armenian version of the Book of Genesis translates the Greek ἀρχιστράτηγος "supreme commander") (Hübschmann, *Armenische Grammatik*, i, 22-3, 240). In the Byzantine historians of the Persian wars, M. Pers. *spāhpat* is rendered as ἀσπαβέδης. The military title even travelled as far as Eastern Turkestan, and comes into the Saka language of Khotan as *spāta*, later form *spā* (H. W. Bailey, *Indo-Scythian studies. Khotanese texts iv*, Cambridge 1961, 7, 55); it does not, however, appear to be attested in Soghdian.

In the early Sāsānid period there was a supreme military overlord and war minister, the *Ērān-spahpat* "commander-in-chief of all the realm"; but one also finds *spahpats* appointed for specific regions, e.g. for the Sawād of Mesopotamia (Christensen, *op. cit.*, 130). After the Emperor Kawādh was forced to humble his over-mighty subject, the *Ērān-spahpat* Zarmihr or Sūkhrā, his son and successor Khusraw Anūshirvān introduced certain military reforms, whereby instead of one all-powerful commander, there were to be four *spahpats*, one for each of the quarters of the empire, north, east, south and west. In the table of precedence in the Sāsānid empire given by Yaʿḳūbī, *Historiae*, i, 202, the *Spahpat* comes after the chief minister (*Buzurg-framadhār*), the *Môbadhān-Môbadh*, the *Herbadhan-Herbadh* and the chief secretary (*Dibherbadh*); this seems to reflect the pre-reform position. The list in Masʿūdī, *Murūdj*, ii, 156, on the other hand, places the four *spahpats* after the ministers of state and the *Môbadhān-Môbadh*; although Masʿūdī says that this was the position under Ardashīr, it obviously reflects that under Anūshirvān and afterwards (see Nöldeke-Ṭabarī, 139, 155-6, 444; Marquart, in *ZDMG* (1895), *loc. cit.*; Christensen, 336, 370-1). In the Armenian kingdom, the *Sparapet* or commander-in-chief occupied a similar high rank, and his office, the (*a*)*sparapetʿiun*, was hereditary in the Mamikonian family (see Hübschmann, 240; Marquart, *Ērānšahr*, 165-7).

At the time of the Arab invasion of Persia, the Sāsānid *Spahpat* of the East established himself in the Caspian fastnesses of Ṭabaristān, where he invited the fugitive Emperor Yazdigird III to take refuge (Christensen, 507). We now have the New Persian form *ispahbadh*, defined in the *Mudjmal al-tawārīkh*, 420, as "Amīr" or "Amīr-Sipāhsālār". In Arabic this becomes *iṣbahbadh* (cf. Djawālīḳī, *al-Muʿarrab*, ed. Sachau, 99; *Lisān al-ʿarab*[1], v, 8; in *Tādj al-ʿarūs*, ii, 569, we have *iṣbahbadhān*, said to occur in a verse of Djarīr), or, more rarely, *iṣbāhbadh* (cf. Bīrūnī, *al-Āthār al-bāḳiya*, 101, tr. 109, following Marquart's correction of *anābadh*, the alleged title of the princes of Gurgān).

The Ispahbadhs of Gīlān are early mentioned in the Arabic accounts of the conquests. Thus in 22/643 Suwayd b. Muḳarrin wrote to al-Farrukhān "the Iṣbahbadh of Khurāsān over Ṭabaristān and the Djīl-i Djīlān" (Ṭabarī, i, 2659). Later in the century, the references become more frequent, e.g. in the story of Ḳaṭarī b. al-Fudjāʾa's revolt (Yaʿḳūbī, *Historiae*, ii, 329, years 78-9/697-9), and in that of ʿUmar b. Abi 'l-Ṣalt's revolt in Ray (Ibn al-Athīr, iv, 395-6, year 83/702). Coins of these Ispahbadhs, with Pahlavi legends, appear shortly after this (see A. D. Mordtmann, in *ZDMG*, xxxiii (1879), 110-12; R. Vasmer, *EI*[1], art. *Māzandarān*, appendix on coins). These Ispahbadhs are those of the Dābūyid family (40-141/660-758), a parallel line of which formed the long-lived Pādhūspānid dynasty of Rūyān and western Ṭabaristān [see DĀBŪYA and BĀDŪSBĀNIDS].

Another local line in the mountains of Ṭabaristān which used *Ispahbadh* as the title of its chiefs was that of the Ḳārinwand or Sūkhrāniyyān (572 to 225/839-40), who latterly recognized the Bāwandids (see below) as overlords. The last ruler of this line was the celebrated Māzyār b. Ḳārin [*q.v.*], who was executed during the caliphate of al-Muʿtaṣim for plotting a Zoroastrian revolt, and who claimed to be "Djīl-i Djīlān, Iṣbahbadh Khurāsān, al-Māzyār, Muḥammad b. Ḳārin, Muwālī (*sic*, not Mawlā) Amīr al-Mu'minīn" (Yaʿḳūbī, *Buldān*, 277, tr. 81, cf. idem, *Historiae*, ii, 582, and Ṭabarī, iii, 1298).

Lastly amongst these Caspian dynasties, the Bāwandids of Ṭabaristān used the title of *Ispahbadh*. This family can be traced from the time of the Arab invasions till well after the Mongol conquests; the second of the three lines of the dynasty (466-606/1074-1210) is specifically known as that of the Ispahbadhiyya [see BĀWAND]. As well as being thus used as a regnal title by the Bāwandids of the early 7th/13th century, we find *ispahbadh* used in this region

as a common noun meaning "local chieftain"; cf. Ibn Isfandiyār, *Taʾrikh-i Ṭabaristān*, ed. Iḳbāl, ii, 171, tr. Browne, 255, where Shams al-Mulūk Rustam II b. Ardashīr is greeted on his accession in 602/1206 by "the *iṣfahbadān*, the Bāwandān, the military leaders and the town notables".

However, the title was also known amongst the Daylamīs of the south-western corner of the Caspian, as well as in the south-eastern one; in the time of the Ziyārid Wushmagīr (mid-4th/10th century) there was an Ispahbadh of Mūghān, named as *pisar-i D. lūla* (A. Kasravī, *Shahriyārān-i gum-nām*, i, 57-8). During the first two centuries or so of Islam, the title also persisted to the east of the Caspian, on the northern and eastern marches of Khurāsān. The Ispahbadh of Balkh was amongst the local princes of Bādghīs and Ṭukhāristān who were persuaded by the Hephthalite Ṭarkhān Nīzak [see HAYĀṬILA] to throw off allegiance to Ḳutayba b. Muslim's Arabs in 90/709 (Ṭabarī, ii, 1206, 1218, cf. also 1300); and shortly afterwards, in 119/737, an Ispahbadh of Nasā, named as al-Ishkand (see Justi, *Iranisches Namenbuch*, 142), acted as commander of the Khāḳān of the Western Turks' army against the Arabs (Ṭabarī, ii, 1597-8). An interesting usage of the term is in an inscription on the Kaʿba dating from 200/815-16 in al-Maʾmūn's Caliphate. This commemorates the forwarding to Mecca from Khurāsān of the captured throne of "the Iṣbahbadh Kābul-Shāh" (Azraḳī, *Akhbār Makka*, ed. Wüstenfeld, i, 158; *Répertoire*, i, 92-3, No. 116); but the usage of this title by the Kābul-Shāhs is not attested elsewhere. It also appears as the personal name of a Turkish slave commander of the Saldjūḳs: in 487/1094 or 488/1095 the Amīr Iṣfabadh b. Sāwtigīn al-Turkumānī expelled the ʿAlid governor of Mecca and held the city for a while (Ibn al-Athīr, x, 163; Ibn al-Ḳalānisī, *Dhayl taʾrikh Dimashḳ*, ed. Amedroz, 130, cf. also 158).

Finally, one may note that in Georgian texts of the 6th/12th century, the loanword *spaspeti* "commander-in-chief" < *ispahbadh* is used as a synonym for *amir spaslari* (see the Georgian Academy of Sciences' *Dictionary of Georgian*, ed. A. S. Chikobava, Tbilisi 1950, vi, col. 1134; M. Andronikashvili, *Studies in Iranian-Georgian linguistic contacts*, Tbilisi 1966, 371-2; and also ISPAHSĀLĀR).

(C. E. BOSWORTH)

ISPAHSĀLĀR, SIPAHSĀLĀR, Persian, "army commander", Arabized form *isfahsalār*, *iṣbahsalār*: the title given to commanders-in-chief and general officers in the armies of many states of the central and eastern mediaeval Islamic world. On the component *sālār* and its Middle Persian origins, see SĀLĀR. The compound *spāhsālār* is already attested in Pāzand (i.e. Middle Persian transcribed from Pahlavi into Avestan script), e.g. in the 9th century *Shkand-gumānik vičār* (Hübschmann, *Armenische Grammatik*, 235).

i. THE ISLAMIC WORLD EXCEPTING INDIA

The Ispahsālār as a military leader appears to be the Islamic counterpart of the Sāsānid *Spāhpat* "commander-in-chief", the New Persian derivative *Ispahbadh* having in Islamic times a restricted application as the regnal title of certain Iranian families in the Caspian provinces and in certain localities of Khurāsān [see ISPAHBADH].

The use of the term *Ispahsālār* became widespread during the 4th/10th century as a concomitant of the political and military upsurge of Daylamī and other Iranian peoples. Amongst the Būyids, the Arabic sources normally use Arabic expressions like *Ḥādjib al-Ḥudjdjāb*, *al-Ḥādjib al-Kabīr* or *Ṣāḥib al-Djaysh* for the supreme commander of the Būyid army [see ḤĀDJIB. iii. Eastern dynasties], but *Ispahsālār* was also used and carried with it an especial honour. Thus in 360/971, ʿIzz al-Dawla Bakhtiyār conciliated the Turkish slave general Sebüktigīn al-Muʿizzī by ordering, amongst other things, that he should be addressed as "Isfahsalār"; after this commander's death, Bakhtiyār in 364/974-5 offered the title to the general Alptigīn, leader of his rebellious Turkish troops (Miskawayh, in *Eclipse of the ʿAbbasid Caliphate*, ii, 258, 293, tr. v, 273, 314; Ibrāhīm b. Hilāl al-Ṣābiʾ, *Rasāʾil*, Beirut 1899, 263; see also instances in Rūdhrāwarī, in *Eclipse*, iii, 81, 107, tr. vi, 82, 111). But as disorder grew in the Būyid provinces under ʿAḍud al-Dawla's weaker successors, the title became debased, and as appears from several citations in the sources it came merely to mean "commander" or even just "officer" as distinct from the rank-and-file; cf. Ibn al-Djawzī, *al-Muntaẓam*, viii, 72: *djamāʿa min al-ḳuwwād wa'l-iṣbahsalāriyya*, and on the whole topic of Būyid usage, M. Kabir, *The Buwayhid dynasty of Baghdad*, Calcutta 1964, 137-9.

Amongst other dynasties of the east, however, the title usually retained its original, more exalted meaning. It is attested in this sense for the Ṣaffārid army of Khalaf b. Aḥmad's time (reigned 352/963-393/1003), and is distinguished in the sources from the *Ḥādjib al-Ḥudjdjāb*, who may have been the commander of the slave troops only (C. E. Bosworth, *The armies of the Ṣaffārids*, in *BSOAS*, xxxi (1968), 547 n. 52). The Turkish dynasties who established themselves in the eastern and central lands of the Caliphate from the end of the 4th/10th century onwards adopted the existing Arabic and Persian military terminology just as they adopted much of the existing administrative practice. In Ghaznavid usage, *Sipahsālār* alternates with Arabic equivalents for "supreme commander" like *Ḥādjib al-Ḥudjdjāb* and *al-Ḥādjib al-kabīr* and with the Turkish one *Sübashi*, and these are used, for example, to denote the commanders-in-chief of the armies in Khurāsān or India; the simple term *sālār* or *ḥādjib* apparently denoted a step lower, that of "commander" or "general officer". Yet the compound and simple terms are both used for the commanders of special component divisions of the army as a whole; we hear of the commander of the Indian troops, the *Sipahsālār-i Hindūyān*, and the *Sālār* of the *ghāzī*s or volunteer fighters on the frontiers, this latter officer being normally stationed at Lahore, convenient for raiding into India (C. E. Bosworth, *Ghaznevid military organisation*, in *Isl.*, xxxvi (1960), 44).

Great Saldjūḳ military terminology frequently employed such expressions as *Ispahsālār-i Buzurg* or *Amīr-i Ispahsālār* for the commander-in-chief of the

whole Saldjūḳ forces (cf. İ. Kafesoğlu, *Sultan Melikşah devrinde büyük Selçuklu imparatorluğu*, Istanbul 1953, 158), or else for the commander of the army in an important region like Khurāsān (cf. Bundārī, *Zubdat al-nuṣra*, 56). These phrases were further used as general terms for "commander, general officer", alternating with such expressions as *Amīr al-umarā'*, *Amīr-i amīrān*, *Amīr-sālār*, *Muḳaddam al-djaysh*, *Sübashi*, etc.; this diversity of nomenclature was handed on to the Saldjūḳs of Rūm in the 7th/13th century (cf. İ. H. Uzunçarşılı, *Osmanlı devleti teşkilâtına medhal*, Istanbul 1941, 59-60). The *Amīr-i Ispahsālār* often appears in official letters and investiture diplomas emanating from both the Great Saldjūḳs and their eastern neighbours and initial vassals, the *Khwārazm-Shāhs*. This title was usually conferred on a newly-appointed *Shiḥna* [*q.v.*], military governor or commander of the police. One document in Muntadjab al-Dīn Djuwaynī's *ʿAtabat al-kataba*, ed. Ḳazwīnī and Iḳbāl, Tehran 1329/1950, 74 ff., emanating from Sandjar's chancery, describes how both the deceased amīrs ʿImād al-Dīn Ḳamač and his son ʿAlā' al-Dīn Abū Bakr were amīrs of Khurāsān with the title of *Amīr-i Isfahsālār*; this designation and the governorship of the Balkh region are now conferred on Abū Bakr's son ʿImād al-Dīn Abu 'l-Fatḥ. Especially interesting is the detailing of the insignia of a *Sipahsālār* and *Ṣāḥib-ṭaraf* (i.e. the governor of a strategically-situated frontier province): distinctive official robes; a horse with special saddle and accoutrements; a jewelled collar; a shield and sword-belt; the right to a salute of kettledrums in the military encampments; a standard; a tent of regal dimensions; etc. (see also H. Horst, *Die Staatsverwaltung der Grosselǧūqen und Ḫōrazmšāhs (1038-1231)*, Wiesbaden 1964, 116).

A peculiar expression found in the military titulature of the Khwārazm-Shāhs is that of *Ḳīr Isfahsālār*, apparently meaning "commander of a *thaghr* or frontier region" (*ḳīr*, Turkish "frontier region", roughly synonymous with *uč*, see Kāshgharī, *Dīwān lughāt al-turk*, tr. Atalay, i, 324-5: *ḳīr* "uncultivated, vacant land"). In 594/1198 at Hamadhān, the Khwārazm-Shāh Tekish made his general Mayačuḳ or Mayančuḳ governor of ʿIrāḳ ʿAdjamī, and amongst his titles were those of "Ulugh Ḥādjib, Ghāzī, Ḳīr Isfahsālār" (Rāwandī, *Rāḥat al-ṣudūr*, 396-7). Amongst the line of Atabegs of Yazd founded by Rukn al-Dīn Sām (d. 590/1194), we find *Isfahsālār* as the personal name of the fourth of the family to rule, Ḳuṭb al-Dīn Abū Manṣūr Isfahsālār (Djaʿfar b. Muḥammad Djaʿfarī, *Ta'rīkh-i Yazd*, ed. I. Afshār, Tehran 1338/1960, 23 ff.).

Use of the title was in the Mongol period somewhat eclipsed by the popularity of Mongol and Turkish military terminology, but it never went entirely out of use. In particular, we find it very much alive during the Mongol and Il-Khānid periods in the Caspian provinces, which were conservative in their usages and often pursued a path divergent from that of the major part of Persia. Many references to the title in the 8th/14th and 9th/15th centuries, and to the office of *sipahsālārī*, can be found in such local histories of Gīlān and Daylam as Ẓāhir al-Dīn Marʿashī's *Ta'rīkh-i Gīlān u Daylamistān*, ʿAlī Lāhidjī's *Ta'rīkh-i Khānī* and ʿAbd al-Fattāḥ Fūmanī's *Ta'rīkh-i Gīlān*. The title persisted, too, into Ṣafawid times, although the question of the position and powers of the *Sipahsālār* becomes extremely complex and confused at this time. It does not appear in the earliest Ṣafawid period at all, when it was the *Amīr al-Umarā'* who was commander-in-chief of the Ḳizilbāsh forces. It seems to have been revived during the reign of Shāh ʿAbbās I (996/1588-1038/1629), when we find a Georgian convert, Ḳarčaghāy Khān, as *Sipahsālār-i Īrān* in 1032/1622-3 and then finally becoming *Sipahsālār-i kull-i lashkar-i Īrān*, implying that the *Sipahsālār* was then superior to the *Ḳūrčībāshī* or commander of the remainder of the Ḳizilbāsh troops (Iskandar Munshī, *Ta'rīkh-i ʿālam-ārā-yi ʿAbbāsī*, iii, 1039-40). Under ʿAbbās's successor Shāh Ṣafī I, there was the famous *Sipahsālār* Rustam Khān, governor of Tabrīz and *Beglerbegi* of Ādharbāydjān, executed in ʿAbbās II's reign. When the latter ruler dismissed his *Sipahsālār* ʿAlī Ḳulī Beg, ʿAlī Ḳulī's office was divided into that of the *Sardār* and the *Ḳūrčībāshī*. This fact supports Chardin's observation that the post of *Sipahsālār*, till then usually held by the *beglerbegi* or governor of Ādharbāydjān, was in his time (sc. 1664-77) abolished, and a *sardār* appointed *ad hoc* in times of war (cited in Minorsky, *Tadhkirat al-mulūk*, introd., 36). Under the Ḳādjārs, *Sipahsālār-i Aʿẓam* appears as an honorific title granted to two high ministers during the second half of the 19th century. Mīrzā Muḥammad Khān Ḳādjār was appointed minister of war, with the title of *Sipahsālār-i Aʿẓam*, in 1275/1858 (Muḥammad Ḥasan Khān Marāghī, *al-Ma'āthir wa'l-āthār*, Tehran 1306-7/1889, 16, 29). The same honour was conferred on the Mushīr al-Dawla Mīrzā Ḥusayn Khān Ḳazwīnī when he in turn became minister of war in 1288/1871; it was he who built the Sipahsālār mosque in Tehran, next to the present Madjlis building, which was indeed originally his house. In present-day Iran the title is not in normal usage, H.I.H. the Shah being denoted, in his rôle as commander-in-chief of the Iranian Army, by such titles as *Farmāndih-i Kull*.

Usage of the title was in the mediaeval period by no means confined to the Iranian world, or even to the *Dār al-Islām*. It was probably Saldjūḳ influence which brought it into the Armenian vocabulary, where (*a*)*spasalar* "commander" occurs in the 12th-century historian Matthew of Edessa (Hübschmann, *Armenische Grammatik*, 239). Saldjūḳ example certainly explains how the term *Amir Spasalari* found its way into 12th- and 13th-century Christian Georgia; under Queen Tamara (1184-1212), this officer ranked as one of the four great ministers of state (cf. W. E. D. Allen, *A history of the Georgian people*, London 1932, 253, 260 ff.; the Georgian Academy of Sciences' *Dictionary of Georgian*, ed. A. S. Chikobava, Tbilisi 1950, i, col. 311: "minister of war, commander-in-chief"; M. Andronikashvili, *Studies in Iranian-Georgian linguistic contacts*, Tbilisi 1966, 371-2).

The prestige and military might of Iranian powers like the Būyids and Turkish-Iranian ones like the Great Saldjūḳs favoured the westwards spread of Persian military terminology. Ḳalḳashandī quotes Ibn al-Ṭuways as an authority on Fāṭimid administrative and military practice, that under the Fāṭimid Caliphs the commander-in-chief of the forces or Isfahsalār (a term which Ḳalḳashandī glosses as *Muḳaddam al-ʿaskar*) was equal in status to the Ṣāḥib al-Bāb or Wazīr al-Ṣaghīr, the Head Chamberlain [*q.v.*]; all questions of military organization came to these two officials (*Ṣubḥ al-aʿshā*, iii, 483, vi, 7). Historical and epigraphical sources demonstrate that amongst the Atabeg dynasties of 6th/12th century Syria and ʿIrāḳ, and then subsequently amongst the Ayyūbids, the title *Isfahsalār* and the abstract *isfahsalāriyya* "chief command" were extremely common. The Atabegs themselves used the title, and it was

further given to the commanders of provincial armies or town garrisons, especially when these were formed of mercenary troops (*ʿaskariyya*). Van Berchem's examination of Börid inscriptions indicated that the titles *al-Amīr al-Isfahsalār al-Adjall al-Sayyid al-Kabīr* were a set formula in the designation of these Atabegs of Damascus, from Ẓahīr al-Dīn Ṭughtigīn onwards; an interesting point is that though the lesser titles might be borne by subordinate members of the family, e.g. the Atabeg's *walī al-ʿahd* or heir, the exalted titles *al-Atabak* and *al-Isfahsalār* were reserved for the Atabeg himself. As examples of other leading figures of the period using the titles *al-Amīr al-Isfahsalār*, one may cite Aḳ Sonḳor al-Bursuḳī of Mosul; Shīrkūh when he was in the service of Nūr al-Dīn al-Zangī; the commander of Shīrkūh and Ṣalāḥ al-Dīn, Ḳara Ḳush; Ṣalāḥ al-Dīn's commander Ḳaradja; Ṣalāḥ al-Dīn himself as addressed in letters from Nūr al-Dīn; and by al-Malik al-Muʿaẓẓam Sharaf al-Dīn ʿĪsā's *Ustādh al-Dār* when he was governor of Ṣalkhat in the Ḥawrān, ʿIzz al-Dīn Aybak (M. van Berchem, *Épigraphie des Atabeks de Damas*, in *Florilegium Melchior de Vogüé*, Paris 1909, 32-9; idem, *Matériaux pour un Corpus inscriptionum arabicarum*. i. *Égypte*, Paris 1903, 638-42, No. 458; idem, *Eine arabische Inschrift aus dem Ostjordanlande*, in *ZDPV*, xvi (1893), 85-6, corrected in *Matériaux*, i, 640-1; Ibn al-Ḳalānisī, ed. Amedroz, 167, 193, 197, 327 and *passim*; Abū Shāma, *Kitāb al-Rawḍatayn*, Cairo 1287-8/1870-1, i, 161; Ḥasan al-Bāshā, *al-Alḳāb al-islāmiyya*, Cairo 1957, 156-7).

The title *Isfahsālār* and the *nisba* of *al-Isfahsalārī* both survived into the 7th/13th century and beyond amongst the Mamlūks of Syria and Egypt, the former term being found as a component in the titles of the great amīrs and the second term in their designations on objets d'art and in inscriptions (e.g. the inscription on the *madrasa* and mausoleum built in 715/1315 by the Amīr Sonḳor al-Saʿdī, see *Matériaux*, i, 733, No. 529). According to Ibn Faḍl Allāh al-ʿUmarī, cited in *Ṣubḥ al-aʿshā*, vi, 7-8, the honorific *al-isfahsalārī* was specially reserved for the *umarāʾ al-ṭablakhānāh*, but he goes on to say that its use had been abandoned in his own time (sc. the last decades of the 8th/14th century), perhaps because of the term's debasement, the common people were using the term *Isbahsalār* for all the guards around the sultan's circle.

Nevertheless, we still meet *Isfahsalār* in use as one of the titles of the Amīr Sayf al-Dīn Yashbak, the *Dawādār* and commander-in-chief of the Egyptian army, carved on his palace in 880/1475-6 (*Matériaux*, i, 452, No. 305).

This seems to be the end of its usage in the central lands of Islam. Although *sipahsālār* appears as a common noun in Ottoman sources, it was not a specific rank; in the Ottoman Empire the usual title of the commander-in-chief was Serdār or Serʿasker [*qq.v.*] (C. E. Bosworth)

ii. Muslim India

From Ghaznavid usage (see above), the term passed to the Ghūrids and thence to the Dihlī sultans in Muslim India. In the 7th/13th and 8th/14th centuries we can discern two or probably three usages of *Isfahsālār*. Firstly, it denotes the commander-in-chief of the Ghūrid army; in his inscription on the Ḳuwwat al-Islām mosque in Dihlī (587/1191), Ḳuṭb al-Dīn Aybak describes himself as *Amīr-i Isfahsālār-i Adjall-i Kabīr* (J. Horovitz, *The inscriptions of Muḥammad Ibn Sām*, in *Epigraphia Indo-Moslemica*, Calcutta 1911-12, 13). Secondly, it denotes in the 7th/13th century an officer who in theory commanded 100 cavalry, that officer below the rank of amīr (see the description of the decimal chain of command in Baranī's *Taʾrīkh-i Fīrūzshāhī*, ed. Syed Ahmad Khan, Calcutta 1862, 145); but in the 8th/14th century under the Tughluḳids, the *isfahsālār* had probably sunk to the command of 10 men only, the equivalent of a *sarkhayl* of the century before (Ibn Faḍl Allāh al-ʿUmarī, *Masālik al-abṣār*, Indian section ed. and tr. into Urdu by K. A. Fariq, Delhi 1961, 24, 26; Ḳalḳashandī, *Ṣubḥ al-aʿshā*, v, 91-2). Finally, it seems to be a general term denoting "commander of high rank, general officer"; the historian ʿIṣāmī refers to his grandfather ʿIzz al-Dīn ʿIṣāmī, who was *ʿĀriḍ* or chief of military affairs and *Wakīl-i Dar* under Balban (later 7th/13th century), as *Sipahsālār* (*Futūḥ al-salāṭīn*, ed. A. S. Usha, Madras 1948, 447-8). By a curious coincidence, the maternal grandfather of the historian Baranī also held the office of *Wakīl-i Dar* [and] *Bārbak* in the same reign, and is called the Sipahsālār Ḥusām al-Dīn (Baranī, op. cit., 41). The title [*Sipah*] *Sālār* is given already in the early 8th/14th century to the warrior-saint Masʿūd Ghāzī of Bahrāič, who allegedly flourished in early Ghaznavid times; this title is probably meant in a general sense, unless it is a reminiscence of the Ghaznavid title *Sālār* given to the commander of the Indian *ghāzī*s (see above, and also ghāzī miyān). Under the Lodī sultans of Dihlī in the 9th/15th and early 10th/16th centuries, *Sipahsālār* was possibly used in the sense of "general officer" (ʿAbbās Khān Sarwānī, *Taʾrīkh-i Sher Shāhī*, ed. S. M. Imām al-Dīn, Dacca 1964, i, 6).

In Mughal usage, the term *Sipahsālār* is sometimes applied to the Khānkhānān, being especially applicable when that officer took the field in the absence of his sovereign (see Niẓām al-Dīn Aḥmad, *Ṭabaḳāt-i Akbarī*, ed. B. De, Calcutta 1931, ii, 425-6, and Kāmgār Ḥusaynī, *Maʾāthir-i Djihāngīrī*, B. M. Ms. Or. 171, ff. 117b, 120a). Similarly in the Deccan, the historian Firishta appears to use *Sipahsālār* as a synonym for *Amīr al-umarāʾ* (see *Taʾrīkh-i Firishta*, Kānpūr 1290/1874, 279). In the Sultanate of Bengal during the 9th/15th century, *Sipahsālār* was evidently used for "supreme commander". The Chinese interpreter Mahuan, who visited Bengal with a Chinese embassy in about 811/1408-9, remarks that "they have a standing army which is paid in kind, the commander-in-chief of which is called *Pa-szu-la-urh*" (G. Phillips, *Mahuan's account of the kingdom of Bengala*, in *JRAS* (1895), 532, also in N. K. Bhattasali, *Coinage and chronology of the early independent Sultans of Bengal*, Cambridge 1922, 171).

(S. Digby)

ISPARTA, town in south-west Turkey (Pisidia), situated at an altitude of 1025 m., in a fertile plain between Burdur and Egridir, the Apollonia-Sozopolis of antiquity. The modern name preserves that of the Byzantine fortress Saporda (not Baris Pisidiae, see E. Honigmann in *Byzantion*, xiv (1939), 655); in Muslim sources of the 7th-8th/13th-14th centuries it appears as Sabarta. After its capture by the Saldjūḳs in 600-1/1203-4 it belonged to the Western frontier-province of their dominions. With the break-up of the Saldjūḳ empire, the Ḥamīd-oghullarï [*q.v.*], whose base was Egridir, incorporated Isparta in their principality. In 783/1381 the Ottoman ruler Murād I persuaded the Ḥamīd-oghlu Ḥüseyn Beg to cede most of his territory, Isparta included, in return for a cash payment, so that the town now belonged to the Ottoman Sandjak of Ḥamīd-ili, later becoming its *chef-lieu*. It was the native town of the

reformer Khalīl Ḥāmid Pasha (d. 1785) who erected there several public buildings and a library. As the seat of the Metropolitan of Pisidia (from the middle of the 8th/14th century) Isparta had several churches and a considerable number of Christian inhabitants, who were removed during the exchange of populations after the First World War. In earlier days its chief products were textiles and attar of roses; the carpet industry has become increasingly important since the end of the 19th century.

The town, which in later Ottoman times was called Ḥamīdābād, is now the capital of the *vilâyet* of Isparta, which comprises the *kazas* of Isparta, Eğridir, Uluborlu, Yalvaç, Sarkî Karaağaç and Sütçüler. The population of the town in 1960 was 35,981.

(B. Flemming)

ISPENDJE, Ottoman name of an *ʿörfī* (*ʿurfī*) tax levied on adult non-Muslim subjects, and amounting usually to 25 *aḳčas* a year. Neither of the explanations advanced for its etymology (*pendjik* [*q.v.*], Hammer-Purgstall, *Staatsverfassung*, i, 213; *spenza*: C. Truhelka, in *THIM*, i, 63) is convincing; in texts of the first half of the 9th/15th century (*e.g.* H. İnalcık (ed.), *Sûret-i Defter-i Sancak-i Arvanid*, Ankara 1954, p. 130) it is spelled *ispenče*. The oldest reference to this tax belong to the reign of Bāyezīd I (*Arvanid*, p. 103). According to this register (of 835/1431; see its introduction, p. xxxiii), *ispendje* of 25 *aḳčes* was collected from married males, whilst 6 *aḳčes*, under the name *bīve resmi*, was collected from widows. According to the *ḳānūnnāme* of Meḥemmed II (*MOG*, i, 28-9) every married non-Muslim was to pay 25 *aḳčes* to his *sipāhī*, and if he had an adult son living at home he was to pay *ispendje* for him too. The same amount usually is prescribed in *ḳānūns* of the 10th/16th and 11th/17th centuries (see Ö. L. Barkan, *Kanunlar*, Istanbul 1943, index); occasionally it is less (20 *aḳčes*: Kerkük) or more (30 *aḳčes*: Cyprus). A non-Muslim who embraced Islam became liable instead to *bennāk resmi* [*q.v.*].

The Ottomans regarded this tax as a poll-tax paid to the timariot or as the counterpart of *čift-resmi* [*q.v.*]. It is in origin very probably a poll-tax paid in the empire of Stefan Dushan and maintained under the Ottomans; the old *kapu-resmi* of Hungary was treated as *ispendje* by the Ottomans. The *ispendje* was introduced in Anatolia only in the 10th/16th century as a characteristic Ottoman tax. Christian troops who ranked as *ʿaskerī* (*voynuk*, *doghandjī*, *eflāḳ*, etc.) were exempt from *ispendje*, while peasantry serving mines or guarding passes were either totally exempt or paid only 6 or 12 *aḳčes*. Although usually belonging to the timariot's revenue, it was occasionally payable to the Imperial Treasury.

(H. İnalcık)

ISRĀʾ [see miʿrādj].

ISRĀFĪL, the name of an archangel, which is probably to be traced to the Hebrew *Serāfīm* as is indicated by the variants *Sarāfīl* and *Sarāfīn* (*Tādj al-ʿArūs*, vii, 375). The change of liquids is not unusual in such endings. His size is astounding; while his feet are under the seventh earth, his head reaches up to the pillars of the divine throne. He has four wings: one in the west, one in the east, one with which he covers his body and one as a protection against the majesty of God. He is covered with hair, mouths and tongues. He is considered to be the angel who reads out the divine decisions from the well-kept Tablet and transmits them to the Archangel to whose department they belong. Three times by day and three times by night he looks down into Hell and is convulsed with grief and weeps so violently that the earth might be inundated by his tears.

For three years he was the companion of the Prophet, whom he initiated into the work of a prophet. Gabriel then took over his task and began the communication of the Ḳurʾān.

Alexander is said to have met him before his arrival in the land of darkness; there he stood upon a hill and blew the trumpet, tears in his eyes. If he is called Lord of the Trumpet, it is mainly because he continually holds the trumpet to his mouth in order to be able to blow at once as soon as God gives the order for the blast which is to arouse men from their graves. It is however also said that Isrāfīl will be first aroused on the day of the Resurrection. He will then take his stand upon the holy rock in Jerusalem and give the signal which will bring the dead back to life.

In Egypt, in Lane's time, it was said that his music would refresh the inhabitants of Paradise.

ISRAEL [see banū isrāʾīl, filasṭīn, yaʿḳūb].

ISRĀʾĪLIYYĀT, an Arabic term covering three kinds of narratives, which are found in the commentators on the Ḳurʾān, the mystics, the compilers of edifying histories and writers on various levels.

1. Narratives regarded as historical, which served to complement the often summary information provided by the revealed Book in respect of the personages in the Bible (*Tawrāt* and *Indjīl*), particularly the prophets (*Ḳiṣaṣ al-anbiyāʾ*).

2. Edifying narratives placed within the chronological (but entirely undefined) framework of "the period of the (ancient) Israelites" (*ʿahd Banī Isrāʾīl*).

3. Fables belonging to folklore, allegedly (but sometimes actually) borrowed from Jewish sources. The line of demarcation between this class and the preceding one is difficult to establish.

The prophetic legends appeared very early in Muslim literature, although few if any traces still survive which in fact go back, in the form in which we have them, to the first century of the Hidjra.

The earliest sources of information were either converted Jews or, perhaps, Arabs who had had contacts, before their conversion to Islam, with the Jews and Christians of the Arabian peninsula and the neighbouring regions. Mention may be made of ʿAbīd/ʿUbayd b. Sharya al-Djurhumī [see ibn sharya], whose narrations concerning the ancient history of the kings of the Arabs and Persians and biblical

history (the confusion of languages, the dispersal of mankind) were said to have been recorded in writing by order of Muʿāwiya, ʿAbd Allāh b. Salām [*q.v.*], Kaʿb al-Aḥbār [*q.v.*] and, later, Wahb b. Munabbih [*q.v.*]; the last-named is believed to have written a *K. al-Mubtadaʾ*, entitled also *Isrāʾīliyyāt*; there is no reason to question the authenticity of this belief, and it may be accepted that authors like Ibn Hishām (d. 218/833) made extracts from it which in turn were passed on to later authors; however, the particular compilations which claim to relate certain traditions of these personages do not offer the smallest guarantee of their authenticity or antiquity, or of their earlier date in relation to the great compositions of *taʾrīkh*, *tafsīr* and *ḳiṣaṣ al-anbiyāʾ* produced from the 3rd/9th to the 5th/11th centuries.

Narratives of the second category were perhaps already utilized by al-Ḥasan al-Baṣrī [*q.v.*], d. 110/728, and thus contemporary of Wahb; they certainly formed part of the stock of edifying parenesis, at least from the time of Mālik b. Dīnār [*q.v.*], d. about 131/748; it may therefore be thought that this genre made its first appearance in devotional literature during the period of the *tābiʿūn*. Al-Muḥāsibī [*q.v.*] did not hesitate to have recourse to it (*Riʿāya*, ed. M. Smith, 234, l. 11-12, 242 f.); Ibn Abi 'l-Dunyā [*q.v.*] used it freely, and, of the later and very popular authors, besides Abū Nuʿaym al-Iṣbahānī (*Ḥilyat al-awliyāʾ*), Ghazālī (*Iḥyāʾ*) and Muwaffaḳ al-Dīn Ibn Ḳudāma (*K. al-Tawwābin*, ed. G. Makdisi, Damascus 1962).

The practice of introducing folklore themes (such as the motif of the "three wishes") into narratives set in the time of the Banū Isrāʾīl is one which the moralists and men of letters readily adopted.

It was the works of pure imagination of this kind, and also the extravagant flights of fancy of the *ḳuṣṣāṣ* in their over-loaded, embellished versions of the histories of the prophets which have caused the *Isrāʾīl yyāt* to be condemned by strict scholars such as Ibn Kathīr (cf. H. Laoust, in *Arabica*, ii (1955), 75, where the reference should be *Bidāya*, i, 6), a condemnation repeated in more specific terms by al-Sakhāwī (*Iʿlān*, trans. apud Fr. Rosenthal, *A History of Muslim Historiography*,² Leiden 1968, 335); however, the feeling of distrust and the warnings sounded on this subject go back to a very much earlier date; they are to be found in Ibn Ḳutayba [*q.v.*], in his *Taʾwil mukhtalif al-ḥadīth* (see G. Lecomte, *Le Traité des divergences du ḥadīth d'Ibn Qutayba*, Damascus 1962, 310-16), and they have left traces in the classical collections of *ḥadīth* (cf. G. Vajda, in *JA*, 1937, 115-20).

ISSÎK-KUL (Turkish "warm lake"), the most important mountain lake in Turkistan and one of the largest fresh water lakes in the world, situated in between 42° 11′ and 42° 59′ N. Lat. and between 76° 15′ and 78° 30′ E. Long., 1605 m. (5,116 feet) above sea level; the length of the lake is about 115 miles, the breadth up to 37 miles, the depth up to 702 m. (1, 381 feet), and the area 6,205 sq. km. (2,400 sq. miles). From the two chains of the Tʿien-Shan, the Kungey-Alatau (in the north) and the Ters-key-Alatau (in the south), about 80 large and small mountain streams pour into the Issîk-Kul, of which the most important, Tüp and Djergalan, flow into it from the east. Of the others there may be mentioned: on the south bank, the Karakol, Ḳîzîl-Su, Djuka (or Zauka), Barskoun and Ton, on the north bank, the two Aḳ-Su and three Ḳoi-Su. On the origin of the depression Kutemaldi, which now connects the Ču with the Issîk-Kul [see ČU], views differ. It is said that the Ḳočḳar, now the upper course of the Ču, previously flowed into the Issîk-Kul and the latter had an exit in the Ču. At present the Ḳočḳar sends an arm to the Issîk-Kul through the Kutemaldi only when it is flooded; at other times there are only a few ditches there filled with water, without any definite current. The question is only of importance for geology and physical geography; in the historical period the Issîk-Kul has, as all accounts show, always been a lake without an exit.

The oldest of these descriptions we owe to the Chinese writer Hüan-Čuang (7th century A.D.); the Chinese name (*Že-Hai* = warm sea; the lake never freezes) corresponds exactly to the Turkish name. The latter first appears in the *Ḥudūd al-ʿālam* (372/982-3, ed. Minorsky, 54, 62, 71); Kāshgharī, ed. K. Rîfat (Brockelmann, 244) has Isik Köl; in Ḳudāma (ed. de Goeje, 262) the lake is only mentioned, but not named. The Ms. of the *Ḥudūd al-ʿālam* has Iskūk or Iskūl; the form was probably the same in the *Mudjmil al-Tawārīkh* (the Ms. has S-kūk, cf. W. Barthold, *Turkestan* i, 19; ed. by M. Sh. Bahār, Tehran 1318 h.s., 100, l. 1); Gardīzī, *Kitāb Zayn al-Akhbār*, ed. Muhammad Nāzim, Berlin 1928, writes Isigh-Kūl; Djayhānī quotes Iskūl from al-Kharaḳī in Nallino, *al-Battānī*, 175, but with *tashdīd* over the *k*. In the history of Tīmūr's campaigns, in Sharaf al-Dīn (*Ẓafar-Nāma*, Ind. ed., i, 494, ii, 634), as well as in Ibn ʿArabshāh (Egyptian ed., 136) the form is Isī Kūl, in the *Taʾrīkh-i Rashīdī* (cf. the text in Barthold, *Otcet* etc., 50 note 1), Isîgh Kūl.

In the oldest Chinese accounts (from the 2nd century A.D.) the land appears in the possession of the nomadic people of the Wu-sun. But from the 7th century A.D. on, permanent settlements and even towns are mentioned. One of the trade routes from China to Western Asia at that time led through the Badal pass to the south bank of the Issîk-Kul and from there

into the valley of the Ču. The most important market on the Îssîk-Kul was Bars<u>kh</u>ān, the name of which is probably identical with the modern name of the river Barskoun. Gardīzī gives a legend due to a popular etymology about Alexander the Great and Persians left behind him on the Îssîk-Kul; this popular etymology makes certain the reading Bars<u>kh</u>ān against the form Nu<u>sh</u>d<u>j</u>ān given by Yāḳūt, iv, 823. According to Gardīzī, Bars<u>kh</u>ān could put 6,000 men in the field; according to Ḳudāma, the principal place on the shore of the lake could itself raise 20,000 men (Bars<u>kh</u>ān, according to Ḳudāma, consisted of nine towns, four of some size and five small ones; cf. *Ḥudūd al-ʿālam*, ed. Minorsky, 292 ff.; W. Barthold, *Zwölf Vorlesungen*, Berlin 1935, 94; *Mappae Arabicae* ed. K. Miller, Stuttgart 1926-9, Band IV = Arab II, 87, 89, 143, 145, 148 (al-Kā<u>sh</u><u>gh</u>arī). Three days journey west of Bars<u>kh</u>ān lay Tūnk, the name of which obviously corresponds to the name of the river Ton. Between Bars<u>kh</u>ān and Tūnk there were only to be seen tents of the nomad <u>D</u>jikil. Twelve *farsa<u>kh</u>*s west of Tūnk was the town of Yār, which could raise 3,000 men. In *Ḥudūd al-ʿālam*, 90, there is further mentioned "a prosperous place, visited by merchants", the town of Sīkūl, on the border between the settlements of two nomad peoples, the <u>D</u>jikil and the <u>Kh</u>alluk<u>h</u> (Ḳarluḳ); the town probably bore the name of the lake. A town "Yssicol" on the north shore of the lake of the name is still given in Carta Catalana of the year 1375 A.D. There was said to be an Armenian monastery with relics of the Apostle Matthew (*Notices et Extraits*, xiv/2, 132 f.).

Of this civilization, which was probably destroyed about the same time (8th/14th century) and under the influence of the same causes as the civilization on the Ču [cf. ii, 66 f.], only a few walls and mounds of brick, and some cemeteries have survived, including a Muslim cemetery on the Küngey-Aḳsu with inscriptions of the 6th/12th century (*Protokolî Turk. Kružka Ljub. ar<u>kh</u>*, xi, 5 f.) and a Nestorian cemetery discovered in 1907 on the <u>D</u>juka with inscriptions in Syriac and Turkish; one of these inscriptions (of 1330 A.D.) was published by P. Kokovtsov (*Bulletin de l'Académie, etc.* 1909, 774 f. 788 f.; cf. B. Spuler, *Die Morgenländischen Kirchen*, Leiden 1964, 155 [37] with note.).

The Turkish and Mongol nomads liked to use the shores of the Îssîk-Kul as a winter resort on account of the favourable weather conditions (the snow here rarely lies to any considerable depth), so that the Îssîk-Kul is several times mentioned in the military history of Central Asia. A fortress was built by Tīmūr "in the middle of the lake", *i.e.*, on an island, to which, amongst others, the Tatars deported from Asia Minor were banished. It is probably the same fortress as is called Ḳoi-su by Ḥaydar Mīrzā [*q.v.*], *Taʾrī<u>kh</u>-i Ra<u>sh</u>īdī*, tr. Ross, 78. A Mongol amīr is said to have sent his family there in the 9th/15th century, to put them in safety from the inroads of the Kalmucks. At the present day there are no islands in the lake; the disappearance of the island mentioned, with the fortress upon it was probably caused by an earthquake. Connected with this perhaps is the fact that pieces of bricks and other fragments are frequently washed up on the shores of the Îssîk-Kul. On the Îssîk-Kul itself it is said that a great town here was overwhelmed by the waves of the lake and its walls and buildings can be seen in clear weather; but this story has so far not been confirmed and is probably based on folklore about sunken cities (which is to be found in the most diverse countries). The catastrophe, if there was one, can only have happened comparatively recently. Ḥaydar Mīrzā, to whom we owe the latest and fullest account of the Îssîk-Kul in Muslim literature (*Taʾrī<u>kh</u>-i Ra<u>sh</u>īdī*, 366 f.), knows neither of the disappearance of an island nor of rubble being washed up, nor of any sunken town. What Ḥaydar Mīrzā has to say about the Îssîk-Kul corresponds in general to the facts, but there are a few peculiar assertions. He says for example that on account of the great proportion of salt in it the water is unsuitable for washing in; in reality the proportion of salt is very slight.

In the 17th and 18th centuries the shores of the lake were under the rule of Buddhist Kalmucks; Tibetan inscriptions in the country south-east of the lake still recall this period. The Mongol name of the Îssîk-Kul was Temurtu-Nor, "iron lake": many of the mountain streams flowing into the Îssîk-Kul carry ferriferous sand; small knives, etc. are made from this iron by the Ḳirgiz. Even in the Kalmuck period the Ḳirgiz [*q.v.*] had grazing grounds here. The land remained in their possession after conquest of the Kalmuck kingdom by the Chinese; Chinese rule was never firmly established here in spite of several attempts. About the middle of the 19th century the Russians advanced across the Ilī. The Îssîk-Kul was reached in 1856 by Colonel Khomentovskiy. A part of the Ḳirgiz was forced to submit to Russian rule as early as 1855 and the remainder in 1860. The Russians founded the town of Karakol, called Prževal'sk since 1888, so far the only town in the country round the Îssîk-Kul (according to the census of 1897, 7,987 inhabitants, now about 15,000), and several villages. All these settlements are in the eastern part of the Îssîk-Kul valley: the western part has been reached by the railway to Rîbač'e since May 1948. There is steamer traffic on the lake. The settlements are still, as in the Middle Ages, called after the rivers on which they lie. The official Russian names are rarely used, even by the Russians; even the Russian peasant always says "Tüp" for "Preobraženskaya" and "Ḳîzîl-su" (which is corrupted to "Kozeltzi") for "Pokrovskaya". Thanks to the fertility of the soil, the villages are in a flourishing condition, in spite of the frequent earthquakes.

(W. Barthold- [B. Spuler])

IṢṬABL and ISTABL (A.; pl. *iṣṭablāt* and rarely *aṣābil*, according to *LA*, *s.v.*), etymologically *stable*, that is to say the building in which mounts and baggage animals (equidae and camelidae) are kept tethered and, by metonomy, the actual stock of such animals belonging to one single owner. *Iṣṭabl* is the arabization of the low-Greek στάβλον/σταβλίον/σταυλίον (see Du Cange, *Glossarium ad scriptores mediae et infimae graecitatis*, Lyons 1688, *s.v.*), which

in turn derives from the Latin *stabulum*. This is one of the so-called terms "of civilization" which have been disseminated most widely, since it is to be found with the same meaning in all the western languages; well before Islam, Arabic had adopted it through the medium of the Ghassānids [*q.v.*] in Syria.

(i) The central Islamic lands: The practice of keeping horses under cover is peculiar to sedentary peoples, that is to say the idea of a stable was unknown to the nomadic Arabs, whose steeds were merely given the shade of a tent or bush to which they tethered them (*marbaṭ, marbiṭ*); incidentally this custom was to be perpetuated even within the towns, in caravanserais (*funduk, khān* [*qq.v.*]) where the shelter of a roof was reserved for men and merchandise, while the animals remained tethered in the vast central courtyard. In the same way, the Muslim cavalry in their encampments *extra muros* (*muʿaskar*) provided their horses with nothing more than some sort of light shelter (*miẓalla*) made of palm-leaves, which gave adequate protection from sun and rain and allowed the cavalry to move off rapidly, since they had to remain constantly on the alert. Thus, the term *iṣṭabl* applied only to permanent constructions of solid materials, such as only rulers and high dignitaries who owned many horses were able to have built near their palaces. Even so, such buildings were rather rare, and the pre-Islamic Arabs had almost no opportunity of seeing them, except at Ḥīra of the Lakhmids [*q.v.*] or at Damascus, in the Byzantine period; but the presence of the imposing ruins left from vanished civilizations, both in Mesopotamia and all along the eastern Mediterranean, gave credence to the legend of sumptuous ancient stables such as those of King Solomon which, in the light of recent archaeological discoveries, have proved to be merely vast granaries. The same is true, in an instance very much closer to us, of the stables of the sultan of Morocco, Mawlāy Ismāʿīl (see below), which seemed to Fr. Busnot "the finest part of the palace, with their two lines of arcades extending for three-quarters of a league and the canal which provided them with water. The horses, tethered by all four legs to two rings by means of a hair cord, were tended by Muslim grooms and Christian stable-boys" (Ch. A. Julien, *Histoire de l'Afrique du Nord*, Paris 1931, 504; Eng. tr., London 1970, 260). The missionary's account gives a perfect idea of the plan and arrangement of stables as conceived in Antiquity and as adopted by the Muslim world in the Middle Ages. These cloister-like galleries of arcades (*riwāḳ*) housed the stalls (low Latin *stallum* from *stabulum*, Ar. *shiḳḳa* pl. *shiḳaḳ*), separated from one another by low partitions of wood or netting; the animals were tethered in these by three legs (not four), by means of a flexible halter (*shikāl* pl. *shukul*) passing through two rings fastened to the wall to a wooden cross-bar in the corner (*ākhiyya* pl. *akhāwī*, *akhāyā* and *iry*, *ariy* pl. *awārī*). Their heads being left free, they were given their feed of barley in nose-bags, while hay (*ʿalaf*), mixed with straw, was provided as litter; there seems to have been no knowledge of the fixed manger or the wall-rack, upon which so much stress is laid in the entirely theoretical descriptions of the model stables to be found in various Arabic treatises on hippiatrics and hippology (such as that of Ibn Hudhayl [*q.v.*], see L. Mercier, *Parure*..., 365-6), which merely repeat the remarks of the Greeks on the subject (cf. Xenophon, *On equitation*, chap. iv).

The historians and chroniclers who wrote in Arabic in fact provided only the most scanty information regarding the stable buildings of the caliphs, sultans and high dignitaries of Islam. Among the very scattered and often laconic particulars that may be gleaned on this subject there is one description of the highest importance, relating to the stables in Baghdād belonging to the ʿAbbāsid Caliph al-Muḳtadir bi-llāh, which is contained in the *Kitāb al-Dhakhāʾir wa'l-tuḥaf* (Kuwayt 1959), attributed to al-Ḳāḍī al-Muhadhdhab (d. middle of the 5th/11th century), and of which al-Maḳrīzī made use for his *Khiṭaṭ*. It deals with the visit of an embassy from the emperor Constantine VII to the caliph, in 305/917, and the following passage occurs (*Arabica*, vii/3 (1960), 295, from the translation by M. Hamidullah who discovered and edited the manuscript): "... The envoys from the Ṭāghiya (the emperor of Byzantium) took horse, with their interpreter Ibn ʿAbd al-Bāḳī, on the Thursday, the sixth day before the end of Muḥarram (that is to say, the 24th of the month) and entered by the corridor of the great public gate (of the palace), to make their way into the building known as the Stables (*khān al-khayl*). The greater part of this building consisted of colonnades with marble pillars. On the one side were 500 horses, with an equivalent number of saddles (*markab*) of silver and gold, of different kinds, and without cloths. On the other side there were 500 horses, all with trappings of patterned silk and veils. Each horse was held by a man of the *shākiriyya* class (regular soldiers)". The reader will note the similarity of this description with that left by Fr. Busnot, mentioned above, despite the interval of eight centuries separating them and their location at opposite ends of the Islamic world; here is confirmation of the conservatism, referred to earlier, in architectural practices relating to stables. Whether privately owned or the property of the state, such buildings required large areas of land since, in addition to the actual quarters for the stabling of hundreds of animals, they also called for smithies, stores for harness and saddles, hay-barns, places for manure and paddocks for the daily exercise and rolling in the sand (*tamrīgh*) of the regular stock; in the absence of a paddock, resort was made to the hippodrome (*maydān*). When to all these is added the housing needed to lodge the various classes of employees, it is no exaggeration to regard such stables as a small city within the city. As such, it is obvious that one of their prime requirements was an abundant water-supply; for this reason, the locality selected was close to some water-course, from which a canal was excavated to bring water to it.

In the case of Damascus [see DIMASHK], it is still very difficult to locate the stables of the Umayyad caliphs since, according even to the testimony of al-Muḳaddasī (4th/10th century), "... their buildings were only of wood (*khashab*) and pisé (*ṭīn*) ..." (ed. De Goeje, 156; tr. Miquel, 165). In the toponymy of Damascus, however, the reader will note the *Dār al-khayl*, the inn reserved for ambassadors, situated alongside the former Ghassānid residence which became the residence (*al-Khaḍrāʾ*) of the first Muslims, Yazīd b. Abī Sufyān and his brother Muʿāwiya, and later of the caliphs. From this denomination, which is certainly Arab, it is very reasonable to suppose that the building replaced the old Byzantine stables whose name was translated, perhaps under the caliphate of ʿAbd al-Malik b. Marwān (65/685-86/705). As for the fortified residences which were built on the edge of the desert, on the orders of several Umayyad sovereigns, insufficient archaeological study has as yet been made to determine in what manner the stables were laid out.

When Abū Djaʿfar al-Manṣūr, the second ʿAbbāsid

caliph, founded his "Round Town" of Baghdād [*q.v.*] in 146/763, there was no provision for including stables for the ruler or his dependents, perhaps owing to lack of space, and these had to be erected on the outskirts: "... Another quarter extended from the Khurāsān gate, on the one side as far as the bridge of boats over the Tigris, and on the other to the point opposite the Khuld (palace). It is in the last-mentioned place that the royal stables were situated, and also the parade ground and a palace looking out on the Tigris: Abū Djaʿfar always lived there, and al-Mahdī also, until he moved to his palace of Ruṣāfa, on the east bank of the Tigris" (al-Yaʿḳūbī/Wiet, *Les Pays*, 31). Further to the south, facing the square opposite the Kūfa gate "... was located the concession granted to Yāsīn, the head of the dromedary staff, the dromedaries' stables being alongside it. On this side of these stables were the freedmen's stables" (*ibid.*, 20).

Once caliph, and having by then settled in Ruṣāfa, al-Mahdī organized a general removal of the administrative departments from the other side of the river; the stables also were transferred, and we then find them established in the Mukharrim quarter, under the direction of the *mawlā* Nāzī (*ibid.*, 40), and containing horses, dromedaries and elephants. From the last of these the *Dār al-fīl* was to take its name, and it was succeeded by the zoological park (*ḥayr al-wuḥūsh*). These State stables remained in the Mukharrim quarter until, apparently, it fell into ruin; al-Ṣūlī mentions them in his chronicle (*Akhbār ar-Rāḍī*, tr. M. Canard, 30 and n. 6) of the caliphate of al-Muttaḳī (329/940-333/944), in connection with the Daylamites' assault on Baghdād, under the leadership of Kūrānkidj, their aim being to dislodge Ibn Rāʾiḳ, and it was in the stables that, in the end, the assailants and their leader were massacred, on 25 Dhu'l-Ḥidjdja 329/20 September 941. It appears that, in due course, the buildings were demolished in 448/1056 by the Saldjūḳ Ṭughril Beg, in order to make way for the rampart surrounding Mukharrim and the *Dār al-fīl*, one part of which became a cemetery.

When al-Muʿtaṣim, an excellent horseman (see Kushādjim, *Maṣāyid* ..., Baghdād 1954, 5 and trans. F. Viré, *Art de volerie*, in *Arabica*, xii/2, 119), left Baghdād for Sāmarrā in 223/838, he was careful to take with him his own stables and those of his household. Thanks to al-Yaʿḳūbī (*op. cit.*, 52), we know that these were established along the main avenue of Sarīdja, the *decumanus* of the city: "... It was also in this avenue that the concessions of the Khurāsān officers were located ..., that of Ḥizām ibn Ghālib. Behind Ḥizām's concession were the stables for the caliph's horses, his own private horses and those for the government departments, the management of which was entrusted to Ḥizām and his brother Yaʿḳūb" (It is appropriate to call attention here to an error in the reading of the manuscript of al-Yaʿḳūbī, since it is in fact a question of one single personage, named Akhī Khazzām, whose functions were continued by his son Yaʿḳūb, as will be shown later; the misunderstanding is due to the "knightly" title of akhī [*q.v.*], already borne by the Turk Khazzām as "constable" (*comes stabuli*) to the caliph). These great stables were to survive until Sāmarrā was abandoned by the Caliph al-Muʿtamid (256/870-279/892). Besides the caliph's stables, Baghdād possessed many others, varying in size according to the rank of their owners. They were to be found particularly in the residential quarter and belonged to the luxurious dwellings which, following the example of al-Mahdī, the high dignitaries caused to be built along the east bank of the Tigris. In the 5th/11th century, Ibn ʿAḳīl (d. 463/1071) left (in *Manāḳib Baghdād* of Ibn al-Djawzī, Baghdād 1342/1923) a description of this wealthy quarter, with its boulevard running from *al-Ṭāḳ* to the banks of the river: "... As for its streets, there is one that closely follows the Tigris. On one of its sides, it has palaces overlooking the river, and disposed in such fashion as to spread all the way from the Bridge to the beginning of the Zāhir Garden. ... On the other side of the street are the mosques of the owners of these palaces and the dwellings of their soldiers, in between which they have their stables." (G. Makdisi, *The topography of eleventh century Baghdād*, in *Arabica*, vi/2, (1959), 186). The size of these stables may be judged when he notes specifically (idem, 187): "... and the castle of al-Wāfī, whose horses every day consume about a thousand rations of forage". Now, in the same period, the anonymous author of the *Kitāb al-ḥāwī*, an actual record made for the use of taxation officials, evaluates the monthly consumption for one horse at 40 *ḳafīz* [*q.v.*] of forage (see Cl. Cahen, *Problèmes économiques de l'Iraq buyide*, in *AIEO Alger*, x (1952), 337).

In Cairo, the stables of the Fāṭimid sovereigns were in no way inferior to those of the Baghdād rulers, and an idea of their extent is given in the description which Ibn al-Ṭuwayr (*Nuzhat al-muḳlatayn fī akhbār al-dawlatayn* ...), a source common to al-Maḳrīzī (*Khiṭaṭ*, i, 416), Ibn Taghribirdī (*Nudjūm*, iv, 79) and al-Ḳalḳashandī (*Ṣubḥ*, iii, 503), gave of the review of his own private horses held by the caliph, in the courtyards of the palace, on the eve of the procession at the New Year or that at the Ending of the Fast (see M. Canard, *La procession* ..., in *AIEO Alger*, x (1952), 376 f.); here too it was a matter of a thousand horses and more, which were made to parade before their sovereign. While we must allow for exaggeration, the fact remains that the stock of horses in these stables was considerable, and the same was true under the Ayyūbid and Saldjūḳid régimes. Often there was insufficient space to house so many animals, and the owners did not hesitate to tear down ancient palaces in order to build stables in their place (*Khiṭaṭ apud* De Sacy, *Chrestomathie*, ii, 44).

Besides these great stables in the cities, there were also *iṣṭablāt* in all the posting-houses (*sikka*), which came under the department of Posts and Information (*barīd* [*q.v.*]), all along the main routes in the Muslim empire; this department, active under the Umayyads and ʿAbbāsids, suffered a decline under the Ayyūbids, but it was thoroughly reorganized by the Sultan Baybars [*q.v.*] who rebuilt its stables (see J. Sauvaget, *La poste aux chevaux dans l'empire des Mamelouks*, Paris 1941). Moreover, all the fortresses or citadels (*ḥiṣn*, *ḳalʿa*) marking out the frontiers of Islam, and those in Syria which resisted the inroads of the Crusaders, contained their own stables of war-horses and pack animals (see Usāma b. Munḳidh, *Iʿtibār*, 46, 60).

It will readily be seen that all these establishments called for a numerous personnel divided into a hierarchy based on competence. At the bottom of the ladder was the stable-boy or lad (*ghulām*), whose duty it was to keep the stalls clean and remove the dung; above him was the groom (*saʾis* pl. *suwwās*, *sāsa*, *siyās* and *rāwī* pl. *ruwāt*), who was responsible for the grooming (*ḥass*) of one or more animals; the daily outings to the paddock and to the water were, it seems, the special province of the harnessman (*shaddād*) who in addition prepared the mount when the

master wished to make use of it. The general responsibility for the working of this domestic system fell upon the "constable" or master of the stables (*ṣāḥib al-iṣṭablāt* and, according to the regions and periods involved, *ḳayyim-*, *mudabbir-*, *mutawallī-*, *ustādh-*, *mushrif al-iṣṭablāt*), a high office which required its holder to possess a perfect knowledge of the study of the horse in all its aspects, besides skill as an administrator and controller in supervising purchases of provender, in regard to both quality and quantity, and also its correct distribution, since fraud and waste are vices common to all generations. If he was not himself qualified, the master of stables was assisted by a veterinarian (*bayṭār* [*q.v.*]) who must have been kept very busy with treating the various ailments from which horses suffer, the urgent surgical operations and the foaling of the mares. Every stable of importance in fact included a stud-farm, to ensure the continuance of the line of thoroughbreds [see FARAS] and the replenishing of the stock; the Muslim ethic did not permit the gelding of stallions, since the Prophet was formally opposed to the practice, according to certain traditions (see L. Mercier, *op. cit.*, 41 and note).

Management of the stables was a delicate and difficult task; for this reason, it could be entrusted only to specialists, some of whom succeeded in allowing their sons to benefit from their own experience, as in the case of the Khuttalīs (from the village of Khuttal, near Baghdād). The first of these to hold office, Akhī Khazzām b. Ghālib was constable to al-Muʿtaṣim, and in the same position we later find his son Abū Yūsuf Yaʿḳūb, and then his two grandsons Abū ʿAbd Allāh Muḥammad and Aḥmad, down to the caliphate of al-Muʿtaḍid (279/892-289/902). These members of one single family have left, as collective works, several remarkable treatises on the equestrian art, farriery and the handling of arms on horseback, which deserve to be collated and published (see Brockelmann, I, 243-4 and S I, 432-3, which needs to be amended: L. Mercier, *op. cit.*, xii-xiii, 433-6). Better known, since it has been published and translated, is the treatise of the Mamlūk Ibn al-Mundhir [*q.v.*], known as al-Bayṭār al-Nāṣirī, who controlled the stables and stud-farms of the sultan of Egypt al-Nāṣir Muḥammad b. Ḳalā'ūn (693/1294-741/1341).

The upkeep of these princely stables entailed the investment of enormous sums of money, both in wages for the staff and also to meet the costs of equipment, supplies, upkeep and purchases of animals from nomadic breeders; numerous local and private craftsmen profited from the lucrative source of business offered by the stables, with their constant and varying needs. For the financing of their private stables, the ʿAbbāsid caliphs generally drew upon their own personal treasuries which, under al-Manṣūr, al-Mahdī and al-Hādī, were supplied from the *bayt māl al-maẓālim*. Al-Rashīd and his successors had recourse to the *dīwān* [*q.v.*] *al-nafaḳāt al-khāṣṣa* (see D. Sourdel, *Vizirat*, 595-6), while the staff was paid by the *dīwān al-aḥshām* of the sovereign (see al-Yaʿḳūbī/Wiet, 15), and, later, under al-Mutawakkil, by the *dīwān al-mawālī wa'l-ghilmān*.

The state stables, for their part, were dependent upon the *dīwān al-barīd* and their provisioning was charged to the budget of the *dīwān al-ahrā'*. The Buwayhid period [*q.v.*] saw almost no far-reaching changes in this organization. In Egypt, under the Fāṭimids, we find almost the same budgetary division, though with different terminology; the caliph's private expenses were covered by the *dīwān al-madjlis* and the upkeep of the State stables was dependent on a special department, this time the *dīwān al-iṣṭablāt*, the 13th of the 14 departments of the financial administration (*dīwān al-amwāl*). With the Ayyūbid emirates [*q.v.*] the question of control remained somewhat imprecise, and it appears that the stables, as a whole, were given to the *dīwān bi'l-bāb*. Finally, the strongly militarized Mamlūk administration included the sultan's private stables within the competence of the *dīwān al-khāṣṣ*, while the State stables were the responsibility of the *barīd*, which was remodelled by Baybars (659/1261) for political and strategic reasons and placed under the control of the privy secretary (*kātib al-sirr*); this political organization then perished with the invasion of Timur (803/1400).

The leading part played by the horse and the dromedary in the eventful history of Islam seems, if not to have escaped attention, at least to have been neglected by all who have written on this subject, and thus one cannot be surprised at the poverty of information regarding Muslim stables during the Middle Ages, although they then flourished actively; the survival of the term *iṣṭabl* and its present-day use in Arabic speech in the Near East and in Egypt is a manifest proof of this fact (see Cl. Denizeau, *Dictionnaire* . . ., Paris 1960, s.v.).

Bibliography: In addition to the references given in the text, a few other scraps of information may be gleaned from encyclopaedic works and the main historical chronicles. (F. VIRÉ)

(ii) Spain and the Maghrib

The term *iṣṭabl* seems not to have survived in the vocabulary of present-day Arabic speech in North Africa; but it must have been current in the Spanish dialect. Indeed, the *Vocabulista in arabico*, edited by C. Schiaperelli (Florence 1871), which is based on the dialect of the kingdom of Valencia in the 7th/13th century, translates the Latin *stabulum* not merely by the classical *iṣṭabl*, but also by an alleged dialectal variant, *ṣabal*, plur. *ṣubūl*. Maltese has the word *stabal*, but this may be a direct borrowing from a romance vernacular.

As the equivalent of *iṣṭabl*, the same *Vocabulista* gives *riwā*, plur. *arwiyah*, with the gloss *domus magna stabuli*. As regards the Arabic spoken in Granada at the end of the 9th/15th century, P. de Alcalá recognizes only this last word, pronounced with the Granadine *imāla* [*q.v.*], *riwī*, plur. *arwiya* (ed. De Lagarde, 145, 245).

In the form *rwa* and with various plurals (*rwīya*, *rwāyāt*), this word is still employed in present-day Arabic dialects in the Maghrib, from Morocco to Tunisia; in these countries it always denotes a covered place, intended to provide shelter for valuable mounts, whether horses or mules.

For Spain under the Umayyads in the 4th/10th and 5th/11th centuries, we possess some details about the royal stables intended for saddle horses and beasts of burden (*al-iṣṭablāt li'l-ẓahr wa'l-kirā'*). Al-Ḥakam I had two stables built near his palace at Cordoba, each of which housed a thousand war-horses. Their riders were divided into squadrons of a hundred men, commanded by an officer with the title of *ʿarīf*. The cavalry as a whole were under the command of the *ḳā'id al-khayl*, known also as the *ḳā'id al-aʿinna*. The famous al-Manṣūr, the "mayor of the palace" of the "roi fainéant" Hishām II, had 12,000 regular cavalrymen under his command.

The general controller of the stables or master of stables was called *ṣāḥib al-khayl*. Another official (*ʿarīf*) was responsible for the beasts of burden,

mules and pack-horses (*zawāmil, khayl al-ḥumlān*). A different official dealt with camels used for transport.

Stud-farms existed on the grassy islands in the Guadalquivir, above Seville. Horses were also imported from North Africa (*khayl ʿidwiyya*), the famous *jinetes* which derive their name from that of the Berber tribe of the Zanāta [*q.v.*].

For Granada in the Naṣrid period, P. Alcalá (*op. cit.*, 245) gives the title *ḳāyid ar-riwī*. On the famous stables built by Mawlāy Ismāʿīl for his horses and mules in about 1089/1678 at Meknès, see above.

Until the beginning of the 20th century, in Morocco, the outside staff of the palace included a special corps, known as the *mwālīn er-rwā* "people of the stable", who were responsible for looking after the sovereign's horses and mules. Working with the grooms (sing. *ruwwāy*) were stable-men whose duty it was to clean out the stables (*kennās*) or to wash the animals in deep water (*ʿawwām*). Certain stable-men (*sāis* or *siyyās*) concerned themselves particularly with dressage. Throughout Morocco, the sovereign owned many vast stretches of pastureland, known as *ʿadhīrs*, where his horses were put out to grass after operations against rebel tribes; some of these lands were used as stud-farms.

With the corps of grooms properly speaking there were combined: — 1. the corps of muleteers (*ḥammāra*, sic), with responsibility for the transport of baggage; 2. the corps of cameleers (*jammāla*); 3. servants with the special duty of dealing with ceremonial carriages (*kōdshi*, from the Spanish *coche*, or *ʿaraba*) and travelling litters (*mḥaffa*), used by the sovereign and the women of the harem who accompanied him.

(iii) The Ottomans [see MIR ĀKHŪR].

(iv) Persia. The autonomous and latterly independent states which arose in Persia during the period of the disintegration of the caliphate generally endeavoured to imitate ʿAbbāsid palace administration as far as was suitable in the circumstances. Hence it is probable that dynasties like the Būyids [*q.v.*] in southern and western Persia and the Sāmānids [*q.v.*] in Transoxania and Khurāsān had royal stables attached to the court, although little specific is known about this. The institution of royal stables came into being for several reasons. Mounts had to be on hand for games like polo and for hunting, which last was not only a sport and a para-military activity, but also a significant means of adding to the court's comissariat (hence we hear of the *Amīr-Shikār*, Commander of the Hunt, under the Khwārazm-Shāhs, in charge of hunting animals and falcons, and in Ṣafavid times the *Amīr-Shikār-Bāshī* was a high-ranking commander who might combine his office with a provincial governorship, in one instance, that of Astarābād, see H. Horst, *Die Staatsverwaltung der Grosselǧūqen und Ḫōrazmšāhs (1038-1231)*, Wiesbaden 1964, 19, 102; K. M. Rohrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhunderts*, Berlin 1966, 27; *Tadhkirat al-mulūk*, ed. Minorsky, ch. xiii = tr. 51). The royal stables were further used as a source of mounts for the ruler's personal bodyguard which was, of course, normally made up of his own military slaves or *ghulāms* [*q.v.*]. Finally, a reserve of horses had always to be on hand, for fine horses (and in the case of some eastern Iranian dynasties, elephants) were often amongst the presents forwarded to other potentates or presented to governors, along with robes of honour, a standard, etc., as the insignia of office (see HIBA).

The officer in charge of the sultan's stables under the Ghaznavids [*q.v.*], the *Ākhur-Sālār* or *Amīr-i Ākhur*, was usually a general of the palace *ghulāms*. Elephants were used extensively for military purposes by the Ghaznavids (see FĪL As beasts of war.), and as well as stables for horses, there was at Ghazna a *pīl-khāna* with accommodation for 1000 elephants and a staff of Hindus to attend them (Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran, 994-1040*, 112, 113, 117). Officials from the royal stables were also to be found in the provinces of the empire, where horses were bred or sent out for pasture, for instance, in the horses-rearing regions along the upper Oxus in Khuttal and Ṭukhāristān, cf. Spuler, *Iran*, 392.

The Great Saldjūḳ sultans had such towns as Ray, Iṣfahān and Marw as fixed centres of government even though the *dargāh* or court accompanied the sultan in his progresses through the provinces and on his campaigns (cf. Lambton, in *Cambridge history of Iran*, v. 222-3). Sandjar, and presumably other sultans, seems personally to have had extensive herds of horses (*ibid.*, 226). The royal stables were doubtless located in these centres of government; certainly, Niẓām al-Mulk says that oversight of the stables was one of the duties of the *Wakīl-i Khāṣṣ*, Intendant of the Royal Household, although he complains that the office had fallen into desuetude in his time (*Siyāsat-nāma*, ch. xvi = text ed. Darke, 112, tr. 92). The Master of the Royal Horse in Saldjūḳ times, usually designated *Amīr-i Ākhur*, *Ākhur-Beg*, etc., was frequently a *ghulām* commander of the sultan, *e.g.*, the *Akhur-Sālār* Ḳïzïl, *Shiḥna* or military governor of Baghdād in 536/1141-2 and a former *ghulām* of Sultan Maḥmūd b. Muḥammad (Ibn al-Athīr, xi, 89; Ṣadr al-Dīn al-Ḥusaynī, *Akhbār al-dawla al-saldjūḳiyya*, 117).

It is uncertain whether a Turkish dynasty like the Ḳarakhānids of Transoxania (see ILEK-KHĀNS), whose khāns seem to have led a semi-nomadic existence during the summer months at least, had a permanent royal stable. One khān, Shams al-Mulūk Naṣr b. Ibrāhīm Tamghač Khān (460/1068-472/1080), built a palace complex at Shamsābād outside Bukhārā, and a continuator of Narshakhī mentions that adjacent to this was a walled enclosure (*ghuruḳ*, see Radloff, *Versuch eines Wörterbuches der Türk-Dialecte*, ii, 558-9) for the royal horses and other beasts (*Taʾrīkh-i Bukhārā*, tr. Frye, 29). Such royal preserves, *ghuruḳs* or *ḳoruḳs* (cf. the old Arabian institution of the *ḥimā*) were established later by the Mongol khāns, and the royal stables as a fixed building probably only re-appears after the Mongol interlude in Persian history.

The institution of the royal stables is certainly well-attested for Ṣafavid times, both by European travellers like Chardin and Kaempfer, and by the late Ṣafavid administrative manual, the *Tadhkirat al-*

Mulūk. This latter source (chs. xv, xvi, xc, xci = tr. 52, 87, commentary 120-1) distinguishes between two Masters of the Stables, the *Mīr-Ākhūr-Bāshī-yi Djilaw* and the *Mīr-Ākhūr-Bāshī Ṣaḥrā'*, the first official being the higher paid. The *Mīr-Ākhūr-Bāshī-yi Djilaw* (*djilaw* = Mongol "rein, halter", see G. Doerfer, *Türkische und Mongolische Elemente im Neupersischen. i Mongolische Elemente im Neupersischen*, Wiesbaden 1963, 296-7; hence *djilaw-dār*, the groom who rides ahead of his master and holds his bridle) was in charge of the royal stables in the capital. Chardin says that there were three such stables in Iṣfahān, with a very numerous staff; these comprised the subordinate marshals (*mīr-akhūrān*), grooms, watercarriers, farriers, saddlers, veterinary specialists, etc. Since the royal stables were an integral part of the court, appointments made by the *Mīr-Ākhūr-Bāshī-yi Djilaw* had to be confirmed by the *Nāẓir Buyūtāt*, the Chief Intendant of the Royal Household or *Khāṣṣa*. The second Master of the Horse, the *Mīr-Ākhūr-Bāshī-yi Ṣaḥrā'*, was in charge of equestrian establishments out in the countryside, the *ṣaḥrā'*, *i.e.*, the royal stud farms. An important part of his duties was to make an annual inspection, in company with the *Nāẓir-i Dawābb* or Overseer of the Animals, of the studs (the *ʿarḍ-i īlkhī*), and also to keep an eye on affairs in the royal reservations (*ḳuruḳāt*). Also mentioned in *ibid.*, chs. cxliii, clx = tr. 97, 100, are a *Ṣāḥib-Djamʿ* (*i.e.*, head of one of the *buyūtāt*, departments or workshops, of the royal household) of the saddlery (*zīn-khāna*), and one of the stables (*iṣṭabl*).

Bibliography: Given in the article.

(C. E. Bosworth)

(v) Muslim India: the term *iṣṭabl* is rather uncommon in Indo-Persian literature but is attested for the royal stables of the Indian Mughals (Abu 'l-Faḍl, *Ā'īn-i Akbarī*, i, 48-54) and for those of the 9th/15th- century sultans of Mālwa (Farishta, *Ta'rīkh*, Bombay 1832, ii, 474). In India stables are more usually designated by the Persian word *pāygāh*, which is also used for non-royal establishments: *e.g.*, the stables of a *khānaḳāh* where the travellers' horses are lodged (Sidjzī, *Fawā'id al-fu'ād*, ed. M. L. Malik, Lahore 1966, 344: cf. Baranī, *Ta'rīkh-i Fīrūzshāhī*, 554).

The nomenclature and organization of royal stables in Muslim India reflect the eastern Persian tradition transmitted through the Ghaznavids [see section (iv) above], though Indo-Muslim stables also inherited a body of veterinary lore and knowledge of certain breeds of horses — *e.g.*, the *t'angan* from the north east of the sub-continent — from the large and diversified stables of earlier Hindu rulers (for those of the 1st/7th- century ruler Harṣa, see Bana, *Harṣacarita*, tr. E. B. Cowell and F. W. Thomas, London 1897, 50, 201). The main purposes for which royal stables were maintained were similar to those which prevailed in Persia — to mount the sultan and his dependants, including considerable numbers of royal *ghulāms* or *čelās*, to supply a service of postal couriers and to provide horses for distribution as largesse or despatch as gifts. The main body of cavalry at all times consisted of troopers who maintained their mounts independently of the royal stables (for the sultanate of Dihlī, see Baranī, 303, 313; ʿAfīf, *Ta'rīkh-i Fīrūzshāhī*, 220-1, 301; for the Mughal period, W. Irvine, *The army of the Indian Moghuls*, London 1903, 47-51; see also istiʿrāḍ).

In the sultanate of Dihlī [*q.v.*] the *pāygāh* was an important department of state (*kārkhāna*: ʿAfīf, 339-40) presided over by the *mīr ākhur* (Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*, 232, 242), *Shaḥna-yi Ākhur* (Djūzdjānī, 252) or *ākhur beg* (Barnanī, 174, 241, 424, 537); at times this office was divided between an *ākhur beg-i maysara* and an *ākhur beg-i maymana* (of the left and right wings: Baranī, 24, 454). The term *pāygāh* embraced both the stables and the royal horses and might be said to accompany the sultan when he left the capital (Sihrindī, *Ta'rīkh-i Mubārakshāhī*, 109). ʿAlā' al-Dīn Muḥammad Shāh Khildjī (695/1296-715/1316) is said to have had 70,000 horses in his *pāygāh* (Baranī, 262). *Circa* 1340 A.D. the sultan of Dihlī (sc. Muḥammad b. Tughluḳ) is said to have distributed 10,000 Arab horses annually to his retinue and given away countless others (al-ʿUmarī, *Masālik al-abṣār*, ed. K. A. Fāriḳ, Dehli 1961, 28). Horses were presented by the sultan to visiting Mongol chieftains (Baranī, 462) and to foreign potentates: *e.g.*, 100 horses were despatched by Muhammad b. Tughlu to the emperor of China (Ibn Baṭṭūṭa, *Riḥla*, Paris 1853-7, iv, 2); 500 *Turkī* and *Tāzī* horses were bestowed by Fīrūz Shāh Tughluḳ on Sultan Sikandar of Bengal in 761/1360 (ʿAfīf, 159). Subject chieftains and provincial officers who were close to import routes despatched horses to the sultan (ʿAyn-i Māhrū, *Inshā'-yi Māhrū*, ed. S. A. Rashīd, Lahore 1965, 111). In some cases money was paid from one of the *dīwāns* for horses sent to the *pāygāh* (Māhrū, 204, 207). In other instances horses were to be sent as an annual tribute. When in 778/1376 Shams Dāmghānī took over the farming of the revenues of Gudjarāt (Sihrindī, 132) he undertook to send 200 horses annually. The Djāms of Thattha, Sind, agreed to provide each year 50 horses worth 100,000 *t'ankas* (Māhrū, 187).

In the later 8th/14th century the *pāygāh* was divided into five physically separated establishments. The "large" *pāygāh* and one other were probably more than 100 miles away from Dihlī in the east Pandjāb. The third *pāygāh* was within the palace precinct of the capital (*pāygāh-i maḥall-i khāṣṣ*); the fourth, with 1,200 horses, was attached to the royal falconry or department of the hunt (*pāygāh-i shikarakhāna-yi khaṣṣ*; while the fifth provided mounts for royal slaves and dependants (*pāygāh-i bārgīrdārān-i bandagān-i khāṣṣ*: ʿAfīf, 318, 340). A modern reference to the breeding of horses in the Dihlī *pāygāh* in this period (I. H. Qureshi, *The administration of the Sultanate of Dehlī*[4], Karachi 1958, 70) is not substantiated, but it is suggestive that in the east Pandjāb where the great *pāygāh* was now situated non-Muslim tribes had earlier been engaged in horsebreeding for the military needs of the Dihlī sultanate (Baranī, 52-3; S. Digby, *War-horse and elephant in the Dehli sultanate*, Oxford 1971, 27-8). As in later Indo-Muslim states, the *pīlkhāna* (elephant stable) was a different department from the *pāygāh*. It was headed by another great officer, the *shaḥna-yi fīl* ("with an *iḳṭāʿ* the size of a great clime like ʿIrāḳ" according to al-ʿUmarī, 51-2; see fīl, pīlkhāna). In the decade before Timur's invasion of 801/1398, possession of the *pāygāh* and *pīlkhāna* in the capital city were important assets in the struggle for power (S. Digby, 75-80).

Information regarding royal stables in the 9th/15th and early 10th/16th centuries is scarce. In 810/1407-8 a *Farasnāma* which adapted a Sanskrit work on farriery into Persian was dedicated to Aḥmad Shāh (I) Walī Bahmanī of the Deccan (r. 825/1422-839/1436), as was a similar work to Shams al-Dīn Muẓaffar (II) of Gudjarāt (r. 917/1511-932/1525) in 926/1520 (for these works and their textual tradition see M. Z. Huda in *JASP*, xiv, 2 (1969), 144-65). In the sultanate of Kashmīr, control of the royal stables

gave an advantage in power struggles on at least two occasions (Mohibbul Hasan, *Kashmīr under the sulṭāns*, Calcutta 1959, 201). The sultanate of Mālwa provides a possibly unique instance of a Muslim ruler turning horsedealer. Around 825/1422 Sultan Hūs͟hang (r. 808/1405-838/1435) led a valuable string of horses across the difficult terrain of central India to trade them for war-elephants with the Rāy of Jājnagar (evidently Bhānučandra IV of the Eastern Gangā dynasty of Orissa: Niẓām al-Dīn Aḥmad, *Ṭabaḳāt-i Akbarī*, iii, 295-6: Faris͟hta, *Taʾrīk͟h*, Bombay 1832, ii, 466), but there may be mythical elements in this story. When Sultan Hūs͟hang of Mālwa was on his deathbed, his son G͟haznīn K͟hān sent a demand for 50 horses from the *iṣṭabl*; this was refused by the *mīr āk͟hur* and the demand gave offence to his dying father (Faris͟hta, ii, 474). We have no information regarding the stables of the Sayyid and Lodī sultans of Dihlī and of the sultans of Djawnpūr and Bengal. Kālā Lodī, father of Sultan Buhlūl Lodī (r. 855/1451-894/1489), first rose to political power as a horsedealer importing from the hills of the north-west frontier (Muḥammad Kabīr, *Fisāna-yi s͟hāhān-i Hind*, B. M. Add. Ms. 24, 409, fols. 7-9).

From the end of the 10th/16th century we possess a detailed description of the regulation of the *iṣṭabl* of the Mug͟hal emperor Djalāl al-Dīn Muḥammad Akbar [see AKBAR] (Abu 'l-Faḍl, *Āʾīn-i Akbarī*, i, 140-6, tr. H. Blochmann and D. C. Phillott, ²Calcutta 1927 (1939), i, 140-50). As in the earlier period the most valued horses were imported, mainly from central Asia, Iran and the Persian Gulf. The *iṣṭabl* was divided into a number of *ṭavīla*, literally "strings", but probably lodged in separate stables. There were 12,000 horses in all, but this number probably does not include the Indian countrybreds, of which the better varieties were also collected. Accomodation was provided for horsedealers under an *amīn-i kāravānsarāy*. There were six *ṭavīlas* of *k͟hāṣṣa* horses ridden by the emperor himself, as well as *ṭavīlas* of the royal princes and a *ṭavīla* of central Asian post-horses (? *rahwār-i turkī nizhād*). Inferior horses were also grouped in *ṭavīlas* according to their value. The allowance of fodder was closely regulated (for the identification of foodstuffs see D. C. Phillott's notes to tr., i, 142-3). Annual sums were assigned for the maintenance of harness and saddlery, for shoeing and for stabling and grooming equipment. The department (*kārk͟hāna*) of the *iṣṭabl* was in the charge of the *atbegi* (also called *āk͟htabegi* in 17th-century sources). The office was filled by grandees of the highest ranks: *e.g.*, ʿAbd al-Raḥīm K͟hānk͟hānān, at that time premier noble of Akbar's court. The staff of a *ṭavīla* was headed by a *dārūg͟ha* (overseer), *mus͟hrif* (accountant) and *dīdavar* (inspector). Other employees were the *āg͟htačī* (responsible for the harness), *čābuksuvār* (who tested and reported the speed of the horses), *Hād'ā* (a Rādjpūt horsetrainer), *mīr daha* (in charge of ten grooms), *bayṭār* (horse-doctor) and *naḳīb*. There was one *sāʾis* (groom) for every two horses. The other classes of servant employed in the *ṭavīla* were *jilavdār* (see section (iv) above), *naʿlband* (farriers), *zīndār* (saddlers), *ābkash* (water-carriers), *farrāsh*, *sipandsūz* (burners of wild rue) and *k͟hākrūb* (sweepers).

Mounts from the *iṣṭabl* were issued to *bārgīr-suvārān* (inferior cavalry without their own horses) on the production of written orders to the effect. The horses were branded to prevent fraudulent exchange. Employees of the *ṭavīla* paid graduated fines if a horse in their charge died, was stolen or was injured through negligence. A rota of horses from the *ṭavīlas* was kept in readiness for the emperor and imperial couriers to mount. The *s͟huturk͟hāna* (camel stables), *gāvk͟hāna* (ox byres) and *astark͟hāna* (mule-stables) were subject to similar though less copious regulation(*Āʾīn-i Akbarī*, i, 146-53). The regulation of the *fīlk͟hāna* took precedence even over that of the *iṣṭabl*, but the *kārk͟hāna* lacked a head of corresponding rank to the *atbegi* (cf. the *S͟haḥna-yi pīl* of the Dihlī sultanate); this may reflect the idea that the command of elephants was an attribute of sovereignty (*Āʾīn-i Akbarī*, i, 127-40).

Two developments in Muslim principalities established in the Deccan during the 12th/18th century deserve further research. In the Āṣafdjāhī state of Ḥaydarābād [*q.v.*], the amirs of the *pāygāh* became a leading faction of the nobility which survived till recently. In the new Muslim state of Maysūr (Mysore), under its rulers Ḥaydar ʿAlī (r. 1174/1761-1197/1782) and Tipū Sulṭān (1197/1782-1213/1799) a large portion of the cavalry were mounted by the royal stable. This variety of *bārgīr* horse (troopers who do not provide their own mounts) is referred to in Tipū Sulṭān's terminology as *suvār ʿaskar* and by British sources of the period as "stable horse" and "regular cavalry" (M. H. Gopal, *Tipu Sultan's Mysore*, Bombay 1971, 28-62; W. Kirkpatrick, *Select letters of Tippoo Sultan*, London 1811; W. Miles, *A history of Hyder Naik*, London 1842, 173).

IṢṬAKHR, a town in Fārs. The real name was probably Stak͟hr, as it is written in Pahlavi; the Armenian form Stahr and the abbreviation S T on Sāsānian coins point in the same direction. The form with prosthetic vowel is modern Persian; it is usually pronounced Istak͟har or Iṣtaḥar, also with inserted vowel Sitak͟har, Siṭak͟har, Siṭark͟h; cf. Vullers, *Lex. Pers.-Lat.*, i, 94ᵃ, 97ᵃ, ii, 223, and Nöldeke in *Grundr. der Iran. Philol.*, ii, 192. The Syriac form is Iṣṭahr (rarely Isṭaḥr), in the Talmud probably Istahar (אסתהר, *Megilla* 13ᵃ, middle). According to the statements of Persian authors, the town received its name from the lakes or swamps there. Perhaps, however, it is better to be derived with Spiegel (*Erânische Altertumskunde*, i, 94, note I) and Justi (*Grundr. der Iran. Philol.*, ii, 448) from the Avestan *stak͟hra* "strong, firm"; for the latter word cf. Chr. Bartholomae, *Altiran. Wörterbuch*, p. 1591.

Iṣṭak͟hr lies in 29° 50′ N. Lat. and about 53° E. Long., a short hour's journey north of Persepolis, in the narrow valley of the Pulwar or Murghāb (also called Sīwand-Rūd). It may be assumed with certainty that its foundation took place very soon after the decline of the Achaemenid capital Persepolis, which was caused by Alexander the Great. The ruins of the latter in any case formed a quarry which was much used for the building of the new town. Iṣṭak͟hr was at first merely the chief town of the district of Fārs, the centre of which had probably always been in this neighbourhood. A few decades before the collapse of the Arsakid kingdom, it figures as the residence of local chiefs. The Sāsānians came from the region of Iṣṭak͟hr. Sāsān, grandfather of Ardas͟hīr I, was superintendent of the fire-temple of the goddess Anāhīd in the town of Iṣṭak͟hr (Ṭabarī, i, 814), the fire of which is said to have suddenly been ominously extinguished in the night of the birth of Muḥammad. After the foundation of the Sāsānian kingdom this town was also considered its religious centre and

Iṣṭak͟hr was henceforth considered the official capital of the New Persian monarchy.

The inhabitants of Iṣṭak͟hr in particular opposed a stubborn resistance to the advance of the Muslims. The first attempt to take the city, undertaken in 19/640 by al-ʿAlāʾ b. al-Ḥaḍramī, governor of Baḥrayn, with insufficient forces and against ʿUmar's express orders, failed completely and it was not till 23/643 that Iṣṭak͟hr had to capitulate to an Arab army commanded by Abū Mūsā al-As͟hʿarī and ʿOt͟hmān b. al-ʿĀṣ. But its citizens afterwards rebelled and slew the Arab governor set over them. The governor of Baṣra, ʿAbd Allāh b. ʿĀmir [*q.v.*], whom the caliph sent against the rebels, was only able to take the town after severe fighting. In the suppression of the revolution many Persians met their death. This second capture of Iṣṭak͟hr probably took place in 29/649 (cf. on this question J. Wellhausen, *Skizzen und Vorarbeiten*, vi (1899), 111 f. For other details of the Arab expeditions against Iṣṭak͟hr see: Balād͟hurī (ed. de Goeje), p. 389, f., Ṭabarī, i, 2546 f., 2549, 2696 f., 2830; Ibn al-At͟hīr, ii, 420 f., iii, 30 f., 77 f.; *Chronique de Ṭabarī* (Pers. vers., by Belʿamī), trans. Zotenberg, iii, 452-3; Weil, *Gesch. der Chalifen*, i, 86-7, 163, and thereon A. D. Mordtmann in *ZDMG*, vi, 455-6; Caetani, *Annali dell' Islām*, iv, 151 f., v, 19-27, vii, 219-20, 248-56).

Iṣṭak͟hr remained a fairly important place during the early centuries of Islam. However it gradually sank to be merely the chief town of a province and was the capital of the *kūra* bearing its name, the largest of the five districts into which the province of Fārs was divided, comprising its northern and north eastern parts. The heaviest blow suffered by the erstwhile Sāsānian capital was the foundation in 64/684 of S͟hīrāz (a day's journey south of Iṣṭak͟hr), which soon became the capital of the province of Fārs and attained great prosperity, particularly from the 3rd/9th century. Henceforth Iṣṭak͟hr declined visibly. From the description of the geographer al-Iṣṭak͟hrī, a native of the town, it was about the middle of the 4th/10th century a town of medium size of the area of an Arab (= Roman) mile; the wall around it was in ruins. Al-Muḳaddasī, writing about thirty years later (985), praises the splendid bridge over the river in Iṣṭak͟hr and the fine park. Concerning the chief mosque, situated in the bazaars, he mentions the remarkable pillars with "bull"-capitals. This probably refers not to an original Achaemenid building, but to a Sāsānian — al-Muḳaddasī mentions that the mosque was thought to have been previously a fire-temple — in the building of which pieces of carving from Persepolis had been used. Only a few years after the date of al-Muḳaddasī's account, a fatal catastrophe overwhelmed the town, brought upon it by the rebellious attitude of its citizens to their suzerain Ṣamṣām al-Dawla, a son of ʿAḍud al-Dawla [*q.v.*]. The latter sent against it an army under the amīr Ḳutulmis͟h, who laid it in ruins. This sealed the ruin of Iṣṭak͟hr. In a description of the province of Fārs dating from the beginning of the 6th/12th century, in the Persian *Fārs-Nāma*, it is described as a modest village with barely a hundred inhabitants.

As to the mint of Iṣṭak͟hr, coins struck here in the Sāsānian period bear the abbreviation ST (סט) in Pahlavi characters: this certainly means Iṣṭak͟hr. Numerous specimens of these coins exist from the reign of Yezded͟jird II (from 438 A.D.) to the end of the dynasty. In the Islamic period also the Pahlavi legend with the above abbreviation was retained for a considerable time. Such coins struck in the name of the caliph or of governors are known down to the year 78/697-8, cf. J. Walker, *A Catalogue of the Arab-Sassanian coins* (*A Catalogue of the Muhammadan coins in the British Museum*), London 1941, cxxix-cxxx, 116. Coins of post-reform type were struck at Iṣṭak͟hr during the Umayyad and ʿAbbāsid periods (see G. C. Miles, *Excavation coins from the Persepolis region, Numismatic Notes and Monographs* No. 143, New York 1959 and J. Walker, *A Catalogue of the Arab-Byzantine and post-reform Umaiyad coins*, London 1956, 112-4).

The present system of ruins at Iṣṭak͟hr has been excavated in 1935 and 1937 by a team from the Oriental Institute of the University of Chicago (see: E. F. Schmidt, *The Treasury of Persepolis* (Oriental Institute Communications, No. 21, Chicago 1939), 105-21; idem, *Flights over ancient cities of Iran* (Oriental Institute, Chicago 1940), plates 8-10; and G. C. Miles, *op. cit.*).The remains of the town are mainly recognizable in the mounds of earth of varying height. Here and there parts of the surrounding walls still exist. The most remarkable seems to be a place lying towards the village of Ḥād͟jd͟jī-ābād͟h — called Ḥarīm-i D͟jams͟hīd = "D͟jams͟hīd's Harem" (cf. below) by the travellers J. Morier and Ker Porter — where a column stands erect in the midst of an area covered with fragments of pillars. Its capital, composed of bodies of bulls, at once shows it to have been removed from Persepolis. The most detailed account of the ruins of Iṣṭak͟hr, aside from that of Schmidt, is that of Flandin and Coste, who spent two months in the neighbourhood about the end of 1840; cf. the pictures in the great volume of plates, *Voyage en Perse*, ii (Paris, 1843 f.), Pl. 58-62, and the archaeological text accompanying it, p. 69-72, and also Flandin's *Relation du Voyage*, ii, (1852), 137.

In the vicinity of Iṣṭak͟hr there are several other sites remarkable for their monuments of history. For example, about 700 yards north of the village of Ḥād͟jd͟jī-ābād͟h, there are natural caves, one of which contains an inscription of historical importance of Sapor I (241-272 A.D.); it is usually called S͟hayk͟h ʿAlī by the Persians, as a pious ascetic of this name is said to have ended his days in it; at the same time one hears it called Zindān-i D͟jams͟hīd, "D͟jams͟hīd's prison". Prominent buildings and monuments of antiquity are frequently attributed to D͟jams͟hīd, a mythical ruler of ancient Iran whom the Muslim Persians identified with the Salomon of legend.

Another place of historical importance is the Naḳs͟h-i Rad͟jab, "Sculpture of Rad͟jab" (a legendary personage), about ¾ mile S.W. of Iṣṭak͟hr. This is a ravine-like split in the wall of rock on the south bank of the Pulwar, which is adorned with three Sāsānian reliefs.

On account of their considerable remains from the ancient and mediaeval Persian periods, the best known sites are Tak͟ht-i D͟jams͟hīd and Naḳs͟h-i Rustam, the former a short hour's journey south of Iṣṭak͟hr on the south bank of the Pulwar, the latter on the north bank of this stream about 1½ miles from Iṣṭak͟hr.

Tak͟ht-i D͟jams͟hīd is the most usual name among Orientals for the complex of Achaemenid palaces of Persepolis. Besides Tak͟ht-i D͟jams͟hīd one also hears the older name Čihil, or abbreviated, Čil Minār (also Menāre), "the 40 pillars", which is found as early as the Persian historians of the 14th century. This name is taken from the most noteworthy parts of the whole site, the colonnade of King Xerxes I with its pillars, originally 72, now only 13 in number. The Arab geographers of the Middle Ages from about the 3rd/9th century know the ruins of the Persepolitan

terrace by the name Malʿab Sulaymān, "Sulaymān's playing-ground", with which we may compare the name Kursī Sulaimān, "Solomon's stool (throne)", found in the Persian history *Mud̲j̲mil-i Tawārīk̲h̲* (beginning of the 5th/11th century), which in its turn may have been the model for the present synonymous name Tak̲h̲t-i D̲j̲ams̲h̲īd.

The "Bench" or "Throne" of D̲j̲ams̲h̲īd (Salomon) is an artificial stone terrace of polygonal, almost rectangular shape, which lies at the foot of a steep, dark grey mountain of rock. The latter, according to the reports of modern travellers, now bears the name Kūh-i Raḥmat, "hill of mercy", but this is not to be found in literature; it apparently dates only from the post-mediaeval period (first mentioned by Sir Thomas Herbert in the beginning of the 17th century). The name still heard by Ouseley, S̲h̲āh Kūh, "royal hill", might be older; it coincides with the βασιλικὸν ὄρος of Diodoros (xvii, 71). At the same time, according to the same authority, the inhabitants also use the name Kūh-i Tak̲h̲t, "hill of the throne (of D̲j̲ams̲h̲īd)". The section of the Kūh-i Raḥmat which forms the back wall of the platform contains three tombs of Achaemenid kings. The people know these by the names of the "mosque", the "bath" and the "mill of D̲j̲ams̲h̲īd", according to Stolze (*Verhandl. der Gesellsch. f. Erdkunde in Berlin*, x., 1883, p. 273).

Iranian tradition varies regarding the founder of Persepolis-Iṣṭak̲h̲r; sometimes it is Kayūmarth, the mythical ancestor of the Persians, sometimes the builders or extenders are legendary rulers of the past like Kayūmart̲h̲'s descendants Hos̲h̲ang (Ūs̲h̲hand̲j̲), Taḥmūrat̲h̲, D̲j̲ams̲h̲īd, Kai K̲h̲usraw. Solomon also is named, for whom the spirits (*d̲j̲inn*) subject to him carried out marvellous works. A legendary princess, Humāy, who plays the role of Semiramis as a builder in Iran, is also mentioned. Persian tradition transfers to Persepolis-Iṣṭak̲h̲r the residence of the old Iranian kings and makes them be buried there also. According to Firdawsī's *S̲h̲āhnāma*, the town was the residence of the reigning dynasty from the time of Kai Ḳubād̲h̲. Muslim writers connect the origin of Persepolis with Solomon; the name given by them, Malʿab Sulaymān, has been mentioned above. According to their legend, this king dwelled alternately here and in Syria and was rapidly carried by the *d̲j̲inn* from one place to the other. Separate buildings on the terrace of Tak̲h̲t-i D̲j̲ams̲h̲īd bear in Arabic writings the names "mosque" and "bath of Solomon" (cf. with these the above mentioned names of two royal tombs of Kūh-i Raḥmat). Solomon — so the story goes — shut the wind up in a room there; Persian sources of the 13th and 14th centuries still speak of a "prison of the wind" here (Zindān-i Bād) (cf. the reports in Ousely, *op. cit.*, ii, 381, 387).

Unfortunately the Arab accounts of the monuments of Persepolis are rather defective and moreover in parts distorted into fairy tales; cf. especially the accounts of the geographers al-Iṣṭak̲h̲rī, al-Muḳaddasī and al-Ḳazwīnī (see Schwarz, *Īrān*); various not uninteresting information is given by Persian historians of the later Middle Ages, especially Ḥamd Allāh Mustawfī and Ḥāfiẓ Abrū (see Ouseley, ii, 380 f., 387 f.). According to these two, the pillars of the ruins there were celebrated as a source of zinc oxide (*tūtiyā*) important for medical purposes. The vandal disfigurement of the heads of the figures on the bas-relief of Tak̲h̲-i D̲j̲ams̲h̲īd (and still more so in Naḳs̲h̲-i Rustam) is primarily due to the fanaticism of the Muslims with its objection to the representation of human faces.

The caliph al-Manṣūr (754-775) wished to use the ruins of Persepolis, like those of al-Madāʾin-Ctesiphon, as a quarry, but was persuaded against it by the advice of his vizier K̲h̲ālid al-Barmakī, who said that Persepolis was used as place of prayer by ʿAlī; see *Fragm. Hist. Arab.* (ed. de Goeje), p. 256.

Various Muslim rulers have perpetuated their visits to the ruins of Persepolis by having inscriptions incised. Here are to be seen three Arabic inscriptions in Kufic characters by members of the Būyid dynasties (4th/10th century), three inscriptions, two Persian and one Arabic, of Abu 'l-Fatḥ Ibrāhīm, a grandson of Tīmūr (9th/15th century), also three inscriptions (2 Arabic and 1 Persian) of ʿAlī b. K̲h̲alīl, a grandson of Uzūn Ḥasan (9th/15th century). These inscriptions were thoroughly discussed by de Sacy in his *Mém. sur diverses antiquités de la Perse* (Paris 1793), p. 139 ff.. Some emendations thereon were given by Nöldeke in Stolze, *Persepolis*, ii, 6. H. Petermann, *Reisen im Orient*, ii, 188, also mentions an inscription of the Muẓaffarid Muḥammad b. al-Muẓaffar b. al-Muẓaffar b. al-Manṣūr (d. 765/1363), See also V. Minorsky, *Later Islamic Inscriptions at Persepolis*, in *BSOS* (1939), 177-8. The various verses scratched on the walls show the high respect in which Persepolis has always been held among the Persians; their modern poets often make allusions to the ancient capital of the country.

As to Naḳs̲h̲-i Rustam, its primary significance is only the steep south wall of the long, high mass of rock, Ḥusayn Kūh, which has in niches four Achaemenid royal tombs and Sāsānian reliefs. But the name is often extended to the whole of Ḥusayn Kūh. The name Naḳs̲h̲-i Rustam is due to the popular idea that the sculptured figures there represent the Iranian national hero Rustam. Before the wall of the tombs there rises a remarkable towerlike building, now called Kaʿba-i Zardus̲h̲t, "the Kaʿba of Zoroaster". Probably it has something to do with a former fire temple. Two other small buildings are perhaps to be similarly regarded, not far from the Kaʿba-i Zardus̲h̲t on the summit of a rock called Sang-i Sulaymān, "the stone of Sulaymān", cf. Ouseley, *op. cit.*, ii, 300. We may also mention that the Sāsānian sculptures of Berme Delek 5 miles E.S.E. of S̲h̲īrāz are also called Naḳs̲h̲-i Rustam. (But see now, E. F. Schmidt, *Persepolis* III, *The Royal Tombs and other monuments* (Oriental Institute, Chicago, 1970), 122 ff.; W. B. Henning, *The Great Inscription of Šāpūr* I, in *BSOAS* IX (1937-39); M. Sprengling, *Third-Century Iran. Sapor and Kartir* (Oriental Institute, Chicago 1953); E. Honigman & A. Maricq, *Recherches sur les Res Gestae Divi Saporis* (*Mémoires, Acad. Royale de Belgique*, xlvii, Brussels, 1953).

A stone platform in two layers on the south bank of the Pulwar (about 500 yards W. of Naḳs̲h̲-i Rad̲j̲ab) is called by the inhabitants of the district, Tak̲h̲t-i Rustam, "the throne of Rustam". The latter, in view of its limited dimension, can only have served as the pedestal of a sepulchral monument or of a fire temple. Cf. Flandin et Coste, *Voyage en Perse*, ii. 72-73 (and Pl. 63). Instead of Tak̲h̲t-i Rustam, the name Tak̲h̲t-i Ṭāʾūs, "peacock-throne", is also used. The name Tak̲h̲t-i Rustam is found elsewhere in Irān also: cf. Ouseley, *op. cit.*, ii, 522).

At a somewhat greater distance from Iṣṭak̲h̲r, about 3-4 hours journey N.W., on rocky peaks stand three forts within 1½ to 2 miles of each other. All three, which lie practically in a straight line, are frequently comprised under the name Ḳalʿa or Kūh-i Iṣṭak̲h̲r, "the citadel" or "the mountain of Iṣṭak̲h̲r", also Kūh-i Rāmd̲j̲ird, from a district of

this name on the left bank of the Kur (into which the above mentioned Pulwar flows). Firdawsī in a distich speaks of the Sih Diz-i Gumbadān-i Iṣṭakhr, "the three fortresses of Iṣṭakhr" (cf. Ouseley, *op. cit.*, ii, 386). At the same time the separate castles have each their own names, which have however changed frequently in course of time according to the reports of the older historians and travellers. The most important of the three, the Ḳalʿa-i Iṣṭakhr in the narrower sense, is also called Miyān Ḳalʿa, "the central fort" from its position between the other two. Flandin and Coste heard it called Ḳalʿa-i Sarw, "the cypress castle", from a single cypress tree standing there. For the two other citadels Persian authors, for example, give the names Ḳalʿa-i Shikastah, "the broken (ruined) castle", and Ashkunawān (Sakunawān and similar names).

In the Muslim history of Fārs, especially in that of Iṣṭakhr, these inaccessible fortresses played an important part. They were regarded as most essential military points d'appui for the holding of the surrounding country. The most prominent is the "citadel of Iṣṭakhr" proper, the origin of which Persian legend places in mythical times by assuming it was built by King Djamshīd. The old Iranian ruler Gushtāsp is said to have deposited the *Avesta*, written on cowhides with golden ink, in the castle of Iṣṭakhr, after his conversion to the doctrine of Zoroaster; the citadel is therefore also called Diz-i Nibisht (Castle of the writing) or Kūh-i Nibisht (Hill of the writing; so in Ḥamd Allāh Mustawfī); cf. Ṭabarī, i, 676; and Ibn al-Athīr, i, 182, 9, as well as the Persian reports in Ouseley, *op. cit.*, ii, 344, 364, 370-1, 375, 384. Under the caliphate the governor of the province of Fārs very frequently resided in this stronghold, which was easily defended by its natural situation. Thus the governor Ziyād b. Abīhi was able to hold out up here against Muʿāwiya for a considerable time after Alī's death; cf. Wellhausen, *Das arabische Reich*, etc. (Berlin 1902), 76. The Būyids, who not infrequently stayed in the region of Iṣṭakhr (cf. the inscriptions dating from their time mentioned above, at Takht-i Djamshīd; ʿImād al-Dawla [*q.v.*] was buried in Iṣṭakhr), paid particular attention to the citadel of Iṣṭakhr. ʿAḍud al-Dawla [*q.v.*] in the 4th/10th century built on it a great system of cisterns, taking advantage of a natural pond already there, which could provide water for several thousand persons for a whole year and which aroused the admiration of contemporaries and of later generations. In 467/1074 the rebel Faḍlūya, who had seized the government of Fārs, was besieged by the troops of Niẓām al-Mulk in the sulṭanate of Malik Shāh in the citadel of Iṣṭakhr. An earthquake which suddenly caused the cisterns to overflow forced the besieged to a premature capitulation. Faḍlūya was then kept a prisoner in the fortress and put to death next year after an unsuccessful attempt to escape. The castle was later much used as a state prison for high officials and princes. About 1590 the citadel was still in good condition and inhabited. Some time afterwards a rebel general of Fārs took refuge in it and it was besieged by Shāh ʿAbbās I, stormed and destroyed. Pietro delle Valle, who stayed here in 1621, therefore found it in ruins.

The citadel of Iṣṭakhr has so far been only rarely visited by European travellers, *e.g.*, by Morier, Flandin (and Coste), and Vambéry. According to the account by Flandin and Coste, to whom we also owe drawings and plans of the citadel, it stands on a plateau 300 yards round, about 1300 feet above the plain. Of the old defences there have survived the powerful ramparts solidly built of stone; the great system of cisterns of the Būyids, among which a well hewn deep into the rock is specially remarkable, is still to be seen. All the ruins that survive seem only to date from the Muslim period. Cf. on the castles of Iṣṭakhr the accounts from Persian sources in Ouseley, *op. cit.*, ii, 371, 376, 385 f., 389, 395-7, 399, 405-5, 407, 531; Ritter, viii, 863-5, 868, 877; Flandin and Coste, *Voyage en Perse*, ii, 71-72; *Flandin's Relation du Voyage*, ii, (1852), 140-2; Vambéry, *Meine Wanderungen und Erlebnisse in Persien*, Pest 1867, 250; Cl. Huart in *Revue sémitique*, i, (1893), 259 f., 337 f. and in *Hist. de Bagdad* (Paris 1901), 28, 31; G. Le Strange, *op. cit.*, 276; Herzfeld in Sarre and Herzfeld, *op. cit.*, 114-5 (Pl. xvi. and Fig. 45).

Schmidt, *Persepolis* i, *Structures, Reliefs, Inscriptions*, Oriental Institute, Chicago 1953, who includes earlier references. — On Sāsānid monuments and inscriptions see Schmidt, *op. cit.* — The best maps of Iṣṭakhr-Persepolis and its immediate neighbourhood are given by Schmidt, *Persepolis*, i and iii, and *Flights*.

(M. STRECK [G. C. MILES])

AL-IṢṬAKHRĪ, ABŪ ISḤĀḲ IBRĀHĪM B. MUḤAMMAD AL-FĀRISĪ AL-KARKHĪ, one of the first and most important representatives of the new trends adopted by Arabo-Muslim geography in the 4th/10th century.

His biography is unknown, or almost so. If the various forms of his *nisba* are to be believed, he was a native of Fārs and, more precisely, of Iṣṭakhr. Following Yāḳūt, orientalism has in fact accepted the *nisba* al-Iṣṭakhrī, but others, in particular Ibn Ḥawḳal, his direct continuator, designate him by the *nisba* al-Fārisī. Al-Muḳaddasī, who does the same, also adds the *nisba* al-Karkhī (ed. De Goeje, 475; compare with *ibid.*, 5, n. *a*), from which it might be supposed that, at some period in his life, the writer settled in Khūzistān or in ʿIrāḳ, and perhaps, to be more precise, in the quarter of Baghdād of that name (cf. Yāḳūt, s.v.).

One certain element at least in the life of al-Iṣṭakhrī is his meeting with Ibn Ḥawḳal. It is of little positive importance whether this took place in Sind, the description of which in Ibn Ḥawḳal (tr. Kramers-Wiet, 322) leads to the recalling of this meeting, though without any further details as to the place, or in Baghdād, bearing in mind that this would be the most probable place for a meeting between the old master who had retired there and the young geographer who stayed there (*ibid.*, 336), completed his training and decided to set out on his travels (*ibid.*, 3, 322).

The work of al-Iṣṭakhrī, the *Kitāb al-Masālik wa'l-mamālik* (another work, a *Risāla*, probably on Fārs, is recorded in connection with the description of that country: cf. ed. al-Ḥīnī, 67), at all events may be placed between that of al-Balkhī, by which it was inspired, and that of Ibn Ḥawḳal, which continues it: as Kramers writes very justly (*Analecta*, 196), "the manuscripts of al-Iṣṭakhrī and Ibn Ḥawḳal represent one single standard original text, which was revised and corrected several times." Written towards the end of the first half of the 4th/10th century, the *Kitāb* repeats, while it also develops, the "atlas of Islam" introduced by al-Balkhī. As in al-Balkhī, the *iḳlīm* [*q.v.*] is no longer the "climate" of Ptolemean geography but, in the Iranian tradition of the *keshwars*, is a geographical entity, a "country". As with al-Balkhī, in the Persian "national" spirit prevailing in Sāmānid Khurāsān where the original work made its appearance, Iran holds a favoured position, by length of the passages devoted to it. Lastly, as with al-Balkhī, the spirit and methods of the cartography are very close to Persian models; far closer, in any event, than Ibn Ḥawḳal was to be. This Iranism explains how it is that al-Iṣṭakhrī's work, unlike that of Ibn Ḥawḳal (and of al-Muḳaddasī who represents the last link in the chain) was the subject of Persian translations (and also Turkish: cf. V. Minorsky, *A false Jayhānī*, in *BSOAS*, xiii (1949-50), 156-9).

A further relationship exists: so far as one can judge, the cartographical representation, which for al-Balkhī was the essential feature, in the eyes of his successor remained the fundamental element of the geographical work, even if the commentary on the map was expanded considerably. This fact explains the reservations expressed by al-Muḳaddasī who described the *Kitāb* as "a book with very carefully prepared maps, but confused in many places and superficial in its commentaries, and it does not divide the provinces into districts (*wa-lā kawwara 'l-aḳālīm*)" (ed. De Goeje, 5, n. *a*).

Al-Muḳaddasī's severity towards his precursors is well-known. In essence, even if his basic principle is justified, it conceals the degree of progress between al-Balkhī and al-Iṣṭakhrī. Thanks to the commentary, not only does one pass gradually, as has been suggested, from the atlas to the descriptive atlas; in addition the scientific method is refined by the exercise of a critical judgement and by the desire to pass on information from oral or written sources, selected by personal observation (*ʿiyān*). These two principles are so closely interwoven in the work, and the author's modesty is so great in respect of the journeys he had had to undertake, that the map of al-Iṣṭakhrī's travels is difficult to reconstruct; in the case of Sind, for example, is the validity of the information provided due to the reliability of the informants or to travel notes? In any event, it is almost certain that al-Iṣṭakhrī visited Arabia (at least as far as Mecca), ʿIrāḳ, Khūzistān, Daylam and Transoxiana.

Al-Iṣṭakhrī's successors were not deceived as to the value of the work or the originality of his methods. Despite his criticism, al-Muḳaddasī did not fail to make use of it, as did the anonymous author of the *Ḥudūd al-ʿālam* and Yāḳūt. Even more than these writers, however, it is Ibn Ḥawḳal who appears as the privileged successor of al-Iṣṭakhrī, even as his designated heir: "I have met Abū Isḥāḳ al-Fārisī", wrote Ibn Ḥawḳal (trans. Wiet, 322); "this man had drawn this map of Sind, but he had made some mistakes, and he had also drawn Fārs, which he had done extremely well. For my part, I had drawn the map of Adharbaydjān, which occurs on the following page and of which he approved, as well as that of Upper Mesopotamia, which he considered excellent. My map of Egypt however he condemned as wholly bad, and that of the Maghrib as for the most part inaccurate. He then told me: 'I have made a careful study of your birth and have drawn up your horoscope. I ask you to make corrections in my work wherever you find any mistakes'. I made some alterations in more than one place, and wanted to publish them under his name. But I thought it good to leave my own name only on the edition of this work."

Ibn Ḥawḳal's decided views, and often his lack of constraint with regard to al-Iṣṭakhrī, have played in his favour; in reading him, one slightly forgets what the pupil owes to the master. But, whatever the just merits of the work of Ibn Ḥawḳal [*q.v.*], a careful study makes evident, on more than one page and far more than Ibn Ḥawḳal would have us to believe, how much he owes to his precursor (see an example in A. Miquel, *Géographie humaine*, 367-90). Thus the greatest prudence is called for when one starts to read a work which, in the final analysis, is a collective one, and in which the merits of al-Balkhī, al-Iṣṭakhrī and Ibn Ḥawḳal cannot be dissociated from one another.

The text of the *Kitāb al-Masālik wa 'l-mamālik* has been edited in part by J. H. Moeller (*Liber climatum*, Gotha 1839; trans. A. D. Mordtmann, *Das Buch der Länder*, Hamburg 1845); a partial translation (on Sidjistān) has been made by A. Madini (Milan 1842). Later came the edition of De Goeje (*BGA*, i, Leiden 1870 and 1927), and then that of M. G. ʿAbd al-ʿĀl al-Ḥīnī (Cairo 1381/1961).

(A. MIQUEL)

ISTĀN [see USTĀN].

ISTANBUL, the capital of the Ottoman Empire from 20 Djumādā I 857/29 May 1453 to 3 Rabīʿ II 1342/13 October 1923. In strict Ottoman usage the name is confined to the area bounded by the Golden Horn, the Marmara coast and the Wall of Theodosius, the districts of Ghalaṭa, Üsküdār and Eyyūb being separate townships, each with its own *ḳāḍī*; occasionally however the name is applied to this whole area.

NAME. In the period of the Saldjūḳ sultanate of Anatolia (see Kamāl al-Dīn Aḳsarāyī, *Musāmarat al-akhbār*, ed. O. Turan, Ankara 1944, index at p. 344) and under the early Ottomans (*Die altosm. anon. Chroniken*, ed. F. Giese, Breslau 1922, 8, 28, 33, etc.) the spelling استنبول ("Istinbol", "Istanbol" or "Istanbul") was used; the pronunciation "Istimboli" is attested by J. Schiltberger (Pauly-Wissowa, s.v. Constantinopolis Oberhummer) for the end of the 8th/14th century (cf., for the 6th/12th century, the Armenian form Stampol: H. Dj. Siruni, in *Studia et Acta Orientalia*, iii (1960), 164). The spelling ستنبول ("S(i)tinbol", "S(i)tanbol") occurs in Ottoman poetry (Laṭīfī [*q.v.*], *Evṣāf-i Istanbul* in Ms.).

Al-Masʿūdī (*Tanbīh*, 136) mentions, as early as the 4th/10th century, that the Greeks called the city "Būlin" and "Stanbūlin"; towards the end of the 10th/16th century F. Moryson (*An itinerary* ..., ii, 97) notes that the Greek inhabitants called the city "Stimboli", but the Turks "Stambol". It is no longer in question that the Turkish forms (Stinbol/Stanbol > Istin(m)bol/Istan(m)bol > Istan(m)bul) derive from the Greek εἰς τὴν πόλιν (for the arguments against the derivation Constantinupolis > Constandipol see Oberhummer, *loc. cit.*; D. J. Georgacas, *The name of Constantinople*, in *American Philological Association: Transactions*, lxxviii (1947), 347-67).

The punning name Islām-bol ("where Islam abounds") was, according to a contemporary Armenian source (see Siruni, *op. cit.*, 173), given to the city by its conqueror Meḥemmed II (for similar "meaningful" names invented by him, cf. Boghaz-Kesen, Elbasan, Bögür-delen); it is found in documents of the 9th/15th century (*e.g.*, Ayasofya Evkaf Defteri, Maliye no. 19; *Tarih Vesikaları*, ii/7, 37); in the 11th/17th century the educated classes regarded it as the "Ottoman" name of the city (Evliyā Čelebi, i, 55-6); and a firman of 1174/1760 decreed that it should be substituted for the mint name Ḳosṭantiniyye on coins (text in A. Refik, *İstanbul hayatı, 1100-1200*, p. 185). In popular usage however the forms Istanbul or Istambul prevailed. The present-day official spelling is İstanbul.

From 330 A.D. onwards, the official name in the Eastern Roman Empire was Constantinupolis (for the various forms, see Oberhummer, *loc. cit.*). Adopted by the Arabs and the Persians as Ḳu(n)sṭanṭīniyya in official and literary usage, this name continued to be used in Ottoman educated circles and in the Ottoman chancery, and appears in firmans and *waḳfiyya*s and upon coins (cf. too *Die alt. anon. Chr.*, ed. Giese, 28, 74, 78, etc.).

The original name Byzantion, of Thracian origin (Oberhummer, *loc. cit.*), is occasionally mentioned in Ottoman texts as the former name of the city, in various Arabic and Armenian forms: Byzantia, Byzandia, Buzantiye, Puzanta, Buzantis (see *EI*[1], i, 889; Evliyā Čelebi, i, 55; Siruni, *op. cit.*, 164).

The names *Rūmiyya al-kubrā*, *Takht-i Rūm* (cf. Μεγαλόπολις) and *Ghulghule-i Rūm* found in Muslim literary works (Evliyā Čelebi, *loc. cit.*) derive from the early Byzantine names (Nova) Roma, (Néa) Rhōme.

In Islamic chancery usage, cities, like human dignitaries, were accorded particular epithets and benedictory formulae (*duʿā*, *salutatio*). Those used for Istanbul by the Ottomans reflect old Iranian and Muslim concepts of centralized authority: Pāytakht-i Salṭanat, Takhtgāh-i Salṭanat, Maḳarr-i Salṭanat, Dār al-Salṭana, Dār al-Khilāfa; also, Dār al-Naṣr, Madīnat al-Muwaḥḥidīn (cf. Islām-bol). In continuation of the traditional notions that the ruler's authority and "fortune" are interlinked (cf. in Old Turkish titulature *Kut*, *Kutluğ*) and that justice is dispensed at the gate or threshold of the palace, Istanbul is often indicated by such names as Der-i Saʿādet (Der-saadet) Āsitāne. The usual benedictory formula Istanbul is *al-maḥmiyya* or *al-maḥrūsa*, *i.e.*, "the Well-Protected" (by God, against disaster; and also by the sultan, against injustice). A typical reference to Istanbul in chancery usage is: Dār al-Khilāfa al-ʿaliyya ve maḳarr-i salṭanat-i seniyyem olan maḥmiyye-i Ḳosṭanṭiniyye" (A. Refik, *op. cit.*, p. 110).

The ḳurʾānic phrase بلدة طيبة (XXXIV, 14/15), a chronogram for the date of the Ottoman conquest (857/1453), and the phrase *ḥasrat al-mulūk* (Evliyā Čelebi, i, 33, 55) are used for Istanbul only as literary conceits. As in Greek, so in Ottoman usage Istanbul was frequently referred to simply as "The City" ("*shehir*") (see, *e.g.*, İstanbul Vakıfları Tahrir Defteri, no. 727).

The following sections deal only with the Ottoman city. For Muslim attacks on the city before 1453, Muslim travellers' accounts of Constantinople, etc., see ḲUSṬANṬĪNIYYA. For the Bosphorus, see BOGHAZIČI. For the townships closely associated with Istanbul, see EYYŪB (in Supplement), GHALAṬA (in Supplement) and ÜSKÜDAR.

I. Results of the Conquest; Events up to 861/1457

The future development of the city was determined by the circumstances of the Ottoman conquest. When Meḥemmed II proclaimed the assault and promised his troops a three-day sack, he announced: "The stones and the land of the city and the city's appurtenances belong to me; all other goods and property, prisoners and foodstuffs are booty for the troops" (see H. İnalcık, in *Dumbarton Oaks Papers*, xxiii-xxiv (1969-70), 232-5). The result was that the city was denuded of its former inhabitants and the character which it had possessed in the Byzantine period was radically changed. The Ottoman troops entered the city through the breach opened in the walls at dawn, on 20 Djumādā I 857/29 May 1453, and fought their way towards Hagia Sophia (Aya Sofya), but some defenders continued to resist (the Cretan sailors in the towers of Alexius held out out until after midday, see Sphrantzes, tr. Ivanka, 80; cf. Braun-Schneider, *Bericht*, 32) and the fighting ended only towards the middle of the afternoon. Practically all the survivors were made prisoner and taken to the ships or to the Ottoman camp outside the walls (Tursun, 55; Critoboulos, tr. Riggs, 76; Tādjī-Beğ-zāde, 21). The sultan, wishing to prevent the further destruction of the city which he intended to be henceforth his capital, proclaimed that afternoon that the fighting was to cease and made a brief tour of the city (Ducas, ed. Grecu, 375; Sphrantzes records that the sack lasted for three days, but it is clear that from 30 May onwards there was no serious plundering or enslavement). On 30 May the sultan made his ceremonial entry (Tādjī-Beğ-zāde, 22); he

toured the city to inspect its buildings and visited the harbour district. Entering Aya Sofya, he proclaimed that it should be the Great Mosque (*djāmiʿ-i kebīr*) (Tādjī-Beğ-zāde, 23; Tursun, 56-7), and announced that henceforwards Istanbul should be his capital (*takht*) (İnalcık, *op. cit.*, 233). His first and principal concern was to encourage the repopulation of the city, so that on the third day after the conquest he proclaimed *amān*: any fugitive who returned within a specified time should freely re-occupy his home and practise his religion, and the Greeks were invited to elect a Patriarch as religious head of their community (Sphrantzes, tr. Ivanka, 85; cf. Zorzo Dolfin, ch. xviii).

Before returning to Edirne on 13 Djumādā II/21 June, the sultan appointed Karīshdîran Süleymān Beg as *subashî* (military prefect) of the city, with a garrison of 1500 Janissaries, and Khîḍr-beg Čelebi as *ḳāḍī*, and ordered the repair of the walls, the building of a citadel (Yedi Ḳule) by the Golden Gate, and the construction of a palace for himself at the Forum Tauri in the centre of the city (later known as Eski Sarāy). To commence the repopulation of the city, he settled the fifth of the prisoners falling to him as ruler, with their families, "along the shores of the city harbour", *i.e.*, along the Golden Horn. He gave them houses and "freed them from taxes for a specified time". Immediately after the conquest he had considered appointing the Megadux Lucas Notaras as city-prefect and entrusting him with the task of repopulation, but his viziers dissuaded him; Notaras and the other Byzantine notables were executed (İnalcık, *op. cit.*, 240). He permitted enslaved prisoners who had paid ransom or who undertook to pay ransom within a specified time to settle in the city, granting them houses and a temporary exemption from taxation; he encouraged such slaves to earn their ransoms by working on building projects (Critoboulos, 83, 93; Sphrantzes, *loc. cit.*; N. Barbaro, Eng. tr., New York 1969, 72). Before the siege began, many inhabitants had fled the city (Sphrantzes, 47); others had managed to conceal themselves during the sack or had fled to Ghalaṭa. These, with the ransomed prisoners, formed the first Greek population of the city; that they were numerically few is shown by the census (*taḥrīr*) of 860/1455 (for which, see below), which further confirms the tradition that some of these Greeks embraced Islam. (A great many of the prisoners had been sold, at Edirne, Bursa and Gelibolu.) The *amān* did not cover any Venetians: the *bailo* Girolamo Minotto and his son were executed; 29 other Venetian nobles were ransomed, but their male children were drafted into the corps of ʿAdjemī oghlans [*q.v.*]. The Venetians received permission to settle and engage in commerce only after the conclusion of the capitulations of 19 Rabīʿ II 858/18 April 1454.

The most effective measure taken to repopulate the city was certainly that of *sürgün* [*q.v.*], the compulsory re-settlement of people from various parts of the empire. Before leaving Istanbul, Meḥemmed II issued firmans ordering the sending of Muslim, Christian and Jewish families from Rūmeli and Anatolia (Critoboulos, 93; Ducas, ed. Grecu, 393: 5000 families by September; a document published by Jorga (*Notes et extraits*, iv, 67) speaks of 4000 families from Anatolia and 4000 from Rūmeli). In the autumn of 1453, the sultan returned to Istanbul; finding that the repopulation was proceeding only slowly because of opposition to the deportations, he moved to Bursa and set severe measures in hand (İnalcık, *op. cit.*, 237). It was at this time that he appointed George Scholarius patriarch (6 January 1454) (İnalcık, *op. cit.*, 236; Runciman, *Fall*, 155). In autumn 859/1455, when he again visited Istanbul, he was pleased to find the walls repaired and Yedi-Ḳule and the palace completed; but upon learning that Muslim settlers had left the city, he sent orders to Anatolia and Rūmeli that *sürgün*-families should again be sent without delay.

A fragment of a *taḥrīr defteri* for Istanbul and Ghalaṭa, dated Muḥarram 860/December 1455, has survived, the extant leaves covering the Fātiḥ district, part of Akserāy, and the areas along the land walls and the Marmara shore (see *Bibl.*). In the 22 *maḥalles*, 918 *khāne* (here: "houses") are listed, and 291 of them are noted as "empty" or "ruinous". The houses are distinguished as one-storeyed (*süflī*), two-storeyed (*ʿulvī*) and "large", "the sumptuous (*mükellef*) houses called by the Greeks *drapez*". Some houses are noted as being split into three or four, or as inhabited by more than one family. One- or two-storeyed *čardaks* are noted, especially in the courtyards of monasteries (for such habitations within monasteries, see the plans of Buondelmonte and Vavassore; Oberhummer, *Konst. unter Sultan Suleiman*, pp. 19, 22; F. Babinger, *Drei Stadtansichten ...*, 1959, p. 4). Of 26 monasteries listed, only one is still occupied by Greeks; the others are deserted or inhabited by Muslim immigrants. 42 churches are listed, many of them situated in monasteries. Only two still belong to the Greeks, but the Greeks of the *maḥalle* of Altî-Mermer use a big house there as a church. Five churches are inhabited by Muslim immigrants, one has been converted to a mosque, most of the others, having no congregations, are ruinous.

The first Great Mosque of Istanbul was Aya Sofya and the first stages in the development of Istanbul as an Ottoman city are revealed by the study of its *waḳf*s. These include, besides the mosque and *medrese* of Aya Sofya, other Byzantine religious buildings now converted to Muslim use: the Zeyrek Djāmiʿi and its *medrese* (Pantocrator) (see S. Eyice, *Istanbul*, 57), the Ghalaṭa Djāmiʿi/ʿArab Djāmiʿi (St. Dominic) (see Schneider and Nomidis, *Galata*, Istanbul 1944, pp. 25, 28), the mosque in the citadel at Silivri, the Eski ʿImāret Mesdjidi (St. Saviour Pantepoptes) (see Eyice, 68), the Mevlevī convent Ḳalenderkhāne (Schneider, *Byzanz*, 51; Eyice, 54; under Bāyezīd II it was made a *medrese* and then a mosque). Meḥemmed II's Great Mosque ("Fātiḥ") was completed only in 875/1471. The mosques constructed up to that date (Rūmeli-Ḥiṣārî; the Yeñi Kerbānsarāy/Čukhadjî Khānî mosque; the Debbāghlar Mesdjidi at Yedi-Ḳule; Yeñidje Ḳalʿe/Anadolu Ḥiṣārî) were all attached to the *waḳf*s of Aya Sofya.

In 861/1457 Meḥemmed II made over to the *waḳf*s of Aya Sofya the Byzantine buildings still standing in the city; these are noted in the documents as "*sulṭānī*" and "*muḳāṭaʿalî*". In 898/1492 the total of these *muḳāṭaʿalî* houses was 1428 (Aya Sofya Evkafı Tahrir Defteri, Maliye 19). (By this time many houses had of course fallen into ruin.) Since a survey of 895/1489 notes 1093 *muḳāṭaʿalî* houses in Istanbul and Ghalaṭa "apart from the Byzantine houses occupied by *ḳul*s of the Padishāh", these latter must have numbered 335; it was the practice that *muḳaṭaʿa* (in effect "rent") should not be levied on a house held by a *ḳul*, so long as the *ḳul* actually resided there. Similarly, in the reign of Bāyezīd II the attempt to levy *muḳāṭaʿa* on Byzantine houses granted as *mülk* ("freehold") before the *waḳfiyya* for Aya Sofya was drawn up (*i.e.*, before 861/1457) was finally abandoned; but under Meḥemmed II it had been imposed and

removed more than once (İnalcık, *op. cit.*, 241). The 502 such houses in Istanbul itself were located in the *maḥalles* of Aya Sofya, Sîrt Ḥanımâmî (near the Bedestān), Ḥādjdjî ʿAbdî, Ḥekîm Yaʿḳūb, Shahin Üskübî (between Unḳāpānî and Djibali), Edirne-Kapîsî, Üstād Ayās (at Sarrādjkhāne), Arslanlu Makhzen, and Top-Yîkîghî (Topkapu), a distribution which gives an indication of the pre-Ottoman centres of habitation.

Apart from these Byzantine buildings, Meḥemmed II donated to the *waḳfs* of Aya Sofya other revenue-producing establishments which would at the same time meet the economic and social needs of the population and encourage settlement, namely: the Bedestān, with the Büyük Čarshî built round it (see below); the Bodrum Kerbānsarāyî; the Eski Kerbānsarāyî and Yemish Kapanî Kerbānsarāyî at Takhtaḳalʿe; the Yeñi/Beg Kerbānsarāyî near the Bedestān; the Un-Kapanî, Yemish Kapanî, Tuz Anbārî, Mūmkhāne, Sābūnkhāne, Djenderekhāne, Debbāghkhāne, Sellākhkhāne, Boyakhāne, and Mūy-tābān Kārkhanesi. There were furthermore two baths, 46 butchers' shops, 41 cookshops, 28 *boza-khānes*, and bakeries, and, in various parts of the city, some 2000 shops. Many of these shops were built in rectangular blocks or in facing rows (see the miniature in *İA*, art. *Istanbul*, facing p. 1214), each devoted to a single craft or industry.

II. The Principles observed in the Development of the Ottoman Capital

The fundamental principle observed in the development of Ottoman Istanbul was that it should receive the character of a Muslim city, so that the Muslim community should be able to live in accordance with the prescriptions of their religion and enjoy the traditional facilities of Muslim city life. This principle was the continuance of the ancient Middle East tradition by which the city was created around a place of worship and the urban functions were harmonized with the religious obligations. Aya Sofya was the Great Mosque *par excellence*, where the ruler and the Muslim community met together at an accession and at every Friday prayer, where the ruler received petitions, and where the great religious ceremonies were held; and the social and economic institutions and establishments which fostered the life of the city and the well-being of its inhabitants came into existence first as *waḳfs* of this Great Mosque (cf. *Middle Eastern Cities*, ed. I. M. Lapidus, Berkeley 1969).

This "Islamic" character is demonstrated by the city's topographic development: its first *nāḥiye* is the *nāḥiye* of Aya Sofya. The other *nāḥiyes* grew up around the mosques (*djāmiʿ*) built later by sultans and viziers, whilst the smaller units, the *maḥalles*, constituting the *nāḥiye* each grew up around a local mosque (*mesdjid*). From the very first, also, attempts were made to give Istanbul the status of a sacred city of Islam. Immediately after the conquest, the holy region of Eyyūb (Eyüp) received its character with the building of the *türbe* of the Companion Abū Ayyūb al-Anṣārī (M. Canard, *Les expeditions des Arabes* ..., 70; its *waḳfiyya* in *Fatih Mehmet II. Vakfiyeleri*, Ankara 1938, 283-340. See also S. Ünver, *Istanbul'da Sahâbe Kabirleri*, Istanbul-Ankara 1953; P. Wittek, *Ayvansaray*, in *Ann. de l'Inst. de Phil. et d'Hist. orientales et slaves*, xi (Brussels 1951), 505-26). The profound Ottoman devotion to mystics and to dervish *sheykhs* led to the establishment of many *maḥalles* in the name of a saint or around his *zāviye* or tomb (already under Meḥemmed II: Sheykh Ebu'l-Vefā; Sheykh Ak Shemseddîn; Sheykh Sevindük Khalvetî, known as Kovadjî Dede; Sheykh Maḥmūd Resmī; etc.). A further indication of the desire to "Islamize" the city is the occasional use, already under Meḥemmed II, of the name "Islām-bol" (the city "full of Muslims") in official records (İnalcık, *op. cit.*, 246). Sporadically, under Meḥemmed II and later sultans, Muslim fanaticism was aroused and pressure would be brought on the authorities to close the churches and synagogues on the grounds that the city had been taken "by force", so that the Shaykh al-Islām himself would cast round for "evidence" to protect the *dhimmī* status of the non-Muslim inhabitants (İnalcık, *op. cit.*, p. 233, n. 11). For security reasons, Meḥemmed II's policy here, as in other conquered cities, seems to have been to ensure that the Muslims remained in the majority.

The Islamic ideal, as reflected in the tolerant outlook of Ottoman society, was easily reconciled with social and economic reality, so that from the very beginning Muslims and non-Muslims worked side by side in the commercial districts and even (at first) lived intermingled in residential areas; non-Muslims, in commercial dealings among themselves, would resort to the *ḳāḍī*, and a feeling of "fellow-citizenship" of the cosmopolitan capital transcended distinctions of religion and origin.

The "Ottoman" character of Istanbul sprang not only from the Muslim ideal but also from the traditional Middle Eastern view of state and society, a way of life characterized by the existence of a thriving class of merchants and craftsmen under the governance of a class of military administrators (see H. İnalcık, *Capital formation* ..., in *J. Ec. Hist.*, xxix (1969), 98-140). Thus the same patterns, based on the institution of the *waḳf*, which had been evident in all the cities of the Middle East began to appear in Istanbul. This tradition demanded the construction for the merchant class of a *bezzāzistān* (Ottoman: *bedestān*), near which were the caravansarais (*khān*) where the merchants lodged. The members of the principal crafts were gathered in the shops which constituted the great *čarshî* around the *bedestān*, each craft being concentrated systematically in one *sūḳ* or *čarshî* (as was easily ensured when blocks of shops were built together as *waḳf*). Various central "markets" for basic commodities were established, in order to ensure the authorities' control of the importation and distribution of the raw materials needed by the craftsmen and of the foodstuffs to provision the inhabitants, and in order to facilitate the collection of the tolls and taxes due to the state. These "markets" were called *kapan* (< Ar. *ḳabbān*, a public balance, a steelyard): the *yagh ḳapanî*, *un ḳapanî*, *bal ḳapanî*, *yemish ḳapanî* (for oil, flour, honey, fruit), etc., and in Istanbul these were situated in the harbour area (elsewhere, by the city gates). For goods imported by sea, there was in the harbour a customs' post called Gümrük-ḳapanî (later called, after the *gümrük emîni*, Emîn-öñü), while goods imported overland paid duty at the Kara-Gümrügü near Edirne-Kapîsî. The tannery and the slaughterhouse were outside the walls, while dye-works, fulling-mills, oil-presses, etc. were built near the appropriate craft centres; all these were set up as *waḳf* by members of the "ruling class". Other provisions, usually also set up as *waḳf* or forming part of elaborate *waḳf*-complexes (see below), had in view the welfare of the populace in general—water-supply, paving of roads, public security, hospitals, street-cleaning, the shelter and feeding of the poor and of travellers.

The interpretation that Istanbul's development as an oriental city can be viewed as originating from a

single nucleus (*Stadtkern*), consisting of the market-area, from which the main streets radiated and with the *maḥalles* stretching out in concentric circles (R. Mayer, *Byzantion, Konstantinupolis, Istanbul*, Vienna 1943, pp. 9, 20, 254) is true not of the city as a whole but only of each individual *nāḥiye* growing up around a "foundation". For in the Ottoman period, as in Byzantine days, the city's development was controlled by the special characteristics of certain districts and by its geographical features. The two basic features of the Ottoman city (as in Bursa, Edirne, etc.) were a Great Mosque and a central market-district, and these features appear in Istanbul at first with Aya Sofya and the Bedestān; later however come the Fātih complex, with the Sulṭān Pāzārî and Sarrādjkhāne nearby; and thereafter the city was to develop as a series of such "foundation complexes" created by sultans and by leading statesmen; whilst less prominent individuals brought into existence smaller complexes of the *mesdjid* with its school which was to serve as the centre of a new *maḥalle*. There was thus, as it were, a hierarchical gradation of complexes.

Nevertheless, whilst these complexes tended to make Istanbul a series of semi-independent communities, two features preserved its organic unity: (1) the harbour area on the Golden Horn, and (2) the main thoroughfare, the Dîvān-yolu, along which armies and caravans passed; it was along this thoroughfare that the principal complexes were built, and the great commercial buildings and the main market area were situated between this thoroughfare and the harbour. It is evident that the location of the principal complexes did not arise from any plan drawn up in advance; hence, with the exception of the few main thoroughfares, the network of streets grew up haphazard, as a jumble of crooked alleys and culs-de-sac (this confusion was not the result of fires, as is sometimes suggested, but had existed from the beginning).

iii. — The Formation of the Principal Urban Installations

Before the building of the Fātiḥ complex and the Sulṭān Pazarî, the two commercial centres of Istanbul were (A) the Bedestān and Büyük Čarshî, and (B) Takhtakalʿe and the harbour area.

(A). As early as 1456 it had been decided that a *bedestān* should be built in the *maḥalle* of Čakîr Agha (a *subashî* of Istanbul) (Critoboulos, 104). A *bedestān*, where valuable imported wares were sold and which was the centre for financial transactions, was the centre of a city's economic life as being the place of business of the leading merchants (termed at this period *khwādja*). The Büyük Bedestān of Istanbul (*bezzāzistān, dār al-bazzāziyya*; later Djewāhir-Bedestānî or Ič-Bedestān) with its 15 domes, constructed with the strength of a fortress to protect merchants' wares and wealthy citizens' fortunes against theft, plunder and fire, is a supreme example of a genre of Ottoman architecture which had flourished since the building of the *bedestān* of Bursa at the end of the 8th/14th century (see E. H. Ayverdi, *Fatih devri mimarisi*, 404-7; S. Eyice in *İA*, art. *İstanbul*, p. 1214/114; idem, *Les "Bedensten"s* ..., in *II Congresso Int. di Arte turca*, Venice 1963, 35-9). Neither its design nor the references to it in the sources give any hint to connect it with a Byzantine construction. In the Muslim world, as in the Byzantine, such a solid building for the storing and selling of valuable wares was a normal feature of the city (in the Byzantine Empire *basilike*, see Janin, *Const. byz.*, 97, 99, 157; in the Arab lands *ḳaysariyya*, see Lapidus, *Muslim cities*, 59-60). In the flourishing period of Constantinople's history, this area, between the Forum Constantini and the Forum Tauri, had been a thriving commercial district with a *basilike* and the *artopoleia* of the bakers' guild; it was the central site of the city, the meeting place of the roads leading in from the city gates and the roads leading up from the commercial quays of the harbour (between Neorion/Baghče-kapî and Porta Droungariou/Zindān-kapî). The main road leading from here down to the Basilike quay in Byzantine times (probably the Vasiliko Kapîsî frequently mentioned in Meḥemmed II's *waḳfiyya*, later Zindān kapî), the Markos Embolos Maurianon, was in the Ottoman period, with the name Uzun Čarshî, to be the busiest commercial district of the city.

The most detailed information on the Bedestān, the Kapalî Čarshî, and the tradespeople working there is to be found in the registers of the *waḳf*s of Aya Sofya. In the Bedestān there were originally 126 *ṣandūḳ* (in 893/1488: 140; a *ṣandūḳ* is a shop with a store-room behind it and having a safe for valuables, cf. C. White, *Three years in Constantinople*, i, 174: "strong fire-proof boxes sunken in a wall of masonry under the floor") and 14 "*köshe*" shops (the rent for the first was 20 *akče* per month, for the second, 3, 5 or 15 *akče*). In 898/1493 ten of the merchants in the Bedestān were Armenians, five Jews, three Greeks, and the rest Muslims. (For the Bedestān in the 10th/16th century, see Ramberti, *apud* Lybyer, 241; Dernschwam, 93, 113; Schweigger, 129-30; in the 11th/17th century, Evliyā Čelebi, i, 613-18; Mantran, 465-6; an excellent description for 1844 in White, i, 3-34).

Some time later, but before 878/1473 (Evliyā, i, 617; the *waḳfiyya* ed. O. Ergin, in *Fatih İmareti*, Istanbul 1945, 6), Meḥemmed II built, at the south-east corner of the Büyük Čarshî a "new" *bedestān* (*dār al-bazzāziyya al-djadīda*) for silks, later called the Sandal Bedestānî (now the auction hall), which was to remain the largest *bedestān* of the Empire; it contained 124 *ṣandūḳ* and there were 72 shops outside it, occupied by various craftsmen.

As in Ottoman cities created before the conquest of Constantinople (see *La ville balkanique*, in *Studia Balcanica*, iii, Sofia 1970; D. Kuban, *Anadolu Türk şehri*, in *Vakıflar Dergisi*, vii (1968), 53-74), on each side of the four main roads (*shāhrāh*) leading away from the four gates of the Bedestān and of the streets parallel to them, rows of shops were built in a checker-board pattern for merchants and craftsmen. In the 641 shops (*dükkān*) there were, according to the *waḳf*-register of 894/1489, 33 shoemakers, 33 slipper-makers, 44 cap-makers, 50 workers in felt and tailors, 76 jewellers and other craftsmen (for the description of a *dükkān*, see Dernschwam, 93-4; White, i, 174). Shops of Muslims, Armenians, Jews and Greeks were not in separate streets but mixed up together; the majority however, not only of the craftsmen but of the jewellers and bankers (*ṣarrāf*), were Muslim Turks.

This Čarshî was repeatedly extended, so that finally it contained about a thousand shops; it was roofed over, to become the "Kapalî" Čarshî, with 12 large and 20 small gates, and since the Bedestān regulations were enforced here too, it became in effect an extension of the Bedestān (S. Eyice, in *İA*, art. *İstanbul*, pp. 1214/114-5; S. Tekiner, *The Great Bazar of Istanbul*, *Türkiye Turing ve Otomobil Kurumu Belleteni*, no. 92).

The second great *čarshî* in this region was the block of shops known as *Maḥmūd Pasha Dükkānlarî*,

constructed near the ʿimaret of Maḥmūd Pas̲h̲a and containing, with the shops around and behind it, 265 shops. It was annexed by Meḥemmed II to the *waḳf*s of Aya Sofya but returned by Bāyezīd II to the *waḳf*s of Maḥmūd Pas̲h̲a's foundation (Aya Sofya register for 894/1489).

K̲h̲āns. The *k̲h̲ān*, which served as a lodging for the merchant engaged in trade between different regions and provided him with safe storage for his goods in the upper rooms or in the store rooms on the ground floor, and where also bulk sales of merchandise were made, was an essential element in Ottoman commercial centres (for *k̲h̲ān*s, see Mayer, *op. cit.*, 112-17; M. Erksan, *İstanbul hanları*, İst. Un. Edebiyat Fak., thesis, 1956). Meḥemmed II promoted the construction of four *k̲h̲ān*s, two in the commercial quarter of Tak̲h̲taḳalʿe, two near the Bedestān. The oldest is probably the so-called Bodrum Kerbānsarāyī near the Bedestān. With two storeys and 31 rooms, it had in its front wall 15 shops and 9 "*ḥüd̲j̲re*" (*i.e.*, a largish room used as a workshop or lodging) (for its situation, see S. Ünver, *Suyolu haritası*, pl. 3). The annual income from the *k̲h̲ān* was 15,500 *akče* and from the shops and "rooms" 3108 *akče*. The dealers engaged in the sale of cotton- and linen-cloths imported into Istanbul used this *k̲h̲ān* (A. Refik, *İstanbul hayatı, 1000-1100*, Istanbul 1940, doc. 77).

The *k̲h̲ān* called Süleymān Pas̲h̲a Odalarī (after the *beglerbegi* of Rūmeli, K̲h̲ādim Süleymān) became in 894/1489 the *Kerbānsarāy-i üserā'*, commonly known as Esīr Pazarī. It contained 52 rooms on two floors, with an 8-room annex, a bath, and a large stable; it brought in an annual income of 19,500 *akče* (about 400 gold ducats) (on the *Suyolu haritası* it is marked on Dīvān-yolu, by the ʿAtīḳ ʿAlī Pas̲h̲a mosque; a good description in White, ii, 280).

The Beg Kerbānsarāyī east of the Büyük Čars̲h̲ī (called in the *waḳfiyya* a *k̲h̲ān*, later Čuk̲h̲ad̲j̲ī K̲h̲ānī) was constructed before 878/1473 (see the *waḳfiyya*, ed. O. Ergin, p. 6). It is a typical Ottoman *k̲h̲ān* with 98 rooms on two storeys around a rectangular courtyard. There are 42 shops (in the *waḳfiyya*: 44) against its wall, formerly occupied by druggists. The income was 40,000 *akče* from the *k̲h̲ān* and 19,548 from the shops.

Before the creation of Meḥemmed II's foundation, the leather-workers were congregated in this district, at the Eski At pazarī, whilst near the Eski Sarāy were the arrow- and bow-makers and the mint for silver *akče*s.

(B). The second region where Meḥemmed II's earliest constructions were built was Tak̲h̲taḳalʿe, the harbour area on the Golden Horn. Before the Ottoman conquest, this area, between Porta Perama/Balīk Pāzārī Kapīsī and Porta Droungariou/Odun Ḳapīsī, was controlled by Latin colonists, in the last years the Venetians (Janin, *Const. byzantin*, 235-44); harbour activity extended even to the Neorion/Bag̲h̲če Kapīsī. In the negotiations following the Ottoman conquest, Venice endeavoured to recover the old palace of the *bailo*, the *lobia* where Venetian goods were stored, and the two Latin churches. By the capitulations of 858/1454 the new *bailo* Bartholomeo Marcello was apparently permitted to occupy the church and residence of the Anconans (Thiriet, iii, pp. 195, 201); the Aya Sofya register of 898 speaks of the "former" church of the Venetians (*al-kanīsa al-mansūba ila 'l-Vanadikiyyīn ḳadīman*) and the *bailo*'s palace, whilst the Arabic *waḳfiyya* (p. 60) mentions a "Venedik Lond̲j̲asī Maḥallesi" and the "Arslanlu Ev/Arslanlu Mak̲h̲zen Maḥallesi" (see the text, ed. T. Öz, p. 70; *İstanbul Vakıfları Tahrir Defteri*, ed. Ayverdi-Barkan, no. 570).

The quay at the Perama/Balīk Pāzārī gate continued to be the principal embarcation point for crossing to G̲h̲alaṭa, but later further landing-stages for transit were used (Yemis̲h̲, Limān, Balat, etc.). All early views and plans of İstanbul show masses of shipping in this area (see M. Lorichs, Tafel VII-IX; Le Bruyn, p. 39; F. Babinger, *Drei Stadtansichten*. . .). The slopes between this harbour area and the Bedestān were rapidly covered with commercial installations: Meḥemmed II built here, as *waḳf*-property for Aya Sofya, two *k̲h̲ān*s, a *gümrük ḳapanī*, a *yemis̲h̲ ḳapanī*, a salt-depot, a *mūm-k̲h̲āne*, three *boza-k̲h̲āne*s, 7 warehouses and 422 shops. The K̲h̲ān-i Sulṭānī was a square, roofed building, with 361 shops around it, the whole constituting an important *čars̲h̲ī*. The synagogue (M. Lorichs, Tafel VIII) and the *k̲h̲ān* of Murād Pas̲h̲a were nearby. East of it was the Yemis̲h̲ Ḳapanī (later Bal Ḳapanī) *k̲h̲ān*, with 11 store-rooms below and 16 rooms above (S. Eyice, in *İA*, art. *İstanbul*, 1214/115; T. Bertelé, *Il palazzo degli Ambassatori di Venezia a Const.*, Bologna 1932; R. E. Koçu, in *İstanbul Ansiklopedisi*, iv, 2053-6; its lower floor is probably Byzantine).

The principal *ḳapan*s of Istanbul were located here —for wax, salt, and soap—and the customs' house (M. Lorichs, Tafel VII; cf. also Grelot, p. 283). Firewood and timber were brought to the Ag̲h̲ač-Pāzārī at Bag̲h̲če-kapīsī (*waḳfiyya* publ. by Vakıflar Um. Müd., p. 249; this landing-place was still so used in the 19th century: M. Żiyā, *Istanbul*, 319). The city prison was at Vasiliko Kapīsī/Zindān Kapīsī (*waḳfiyya*, ed. O. Ergin, p. 83); it was later known as Baba D̲j̲aʿfer Zindānī.

The Aya Sofya register of 898/1493 records, in Istanbul and G̲h̲alaṭa, 2350 shops, 4 *k̲h̲ān*s, 2 baths, 21 *boza-k̲h̲āne*, 22 *bas̲h̲-k̲h̲āne* and 987 *muḳātaʿalī* houses, with an annual revenue of 718,421 *akče* (some 14,000 ducats; in 894/1489 the revenue had been nearly a million *akče*: Barkan, in *İkt. Fak. Mecm.*, xxiii, 344).

Elsewhere in the city, local *čars̲h̲ī*s were built: that of Aya Sofya (39 shops); the "Yeñi Dükkānlar" at Kemer (17 shops: *waḳfiyya*s, ed. Ergin, 43; Vakıflar Um. Müd., 84; T. Öz, 25); that of Dikilü Tas̲h̲/Čenberli Tas̲h̲ on Dīvān-yolu (77 shops, with the mint for copper coins nearby) and of K̲h̲ʷād̲j̲a Pīrī Mesd̲j̲idi (26 shops; these two are perhaps rather extensions of the Bedestān area); at Tavuk-pazarī, 24 shops of dyers (*waḳf* of Maḥmūd Pas̲h̲a). The first Janissary barracks ("Eski Odalar") were on the present Şehzadebaşı Caddesi (S. Ünver, *Suyolu haritası*, no. 3; Uzunçarşılı, *Kapukulu Ocakları*, i, 238-42), with a *čars̲h̲ī* of ten shops nearby (Tahsin Öz, 24); west of this were a *čars̲h̲ī* of 35 shops in Ustād Ayās Maḥallesi, the Ḳāḍīʿasker Dolabī Čars̲h̲īsī of 19 shops, and, by the Church of the Holy Apostles, the Karaman Pāzārī.

Another important commercial district occupied the area outside the wall between the modern Unkapanı and Cibali (the Byzantine Plateia). Meḥemmed II built here the Un-Ḳapanī (M. Lorichs, Tafel IX) and a *čars̲h̲ī* of 31 shops. Further up the Golden Horn were the city's first slaughterhouse and tannery, with the Debbāg̲h̲lar Maḥallesi (O. Ergin, pp. 12, 34). Further still, towards the Kynegion (Kinikoz) Gate, were fishermen's houses and imperial gardens (O. Ergin, 12; M. Lorichs, Tafel XII-XVII; Le Bruyn, p. 39).

The year 863/1459 was important in the city's development, for according to Critoboulos (tr. Riggs, 140), Meḥemmed II called his notables together and commanded them each to choose an area which should be called after him, anywhere in the city (cf. Vakı-

flar Um. Müd., p. 34), and build there a mosque, a *khān*, a bath and a market; he himself, selecting the site for the New Palace on Sarayburnu, also picked the finest area in the middle of the city for building a mosque "which should surpass Aya Sofya". Work on the mosque began only in the winter of 867/1462-3, the area (around the Church of the Holy Apostles) already having a large Muslim population. This construction encouraged the expansion of the city northwestwards towards the walls and north-east to the Golden Horn.

(C). The mosque and *ʿimāret* of Fātiḥ and its district (875/1470).

The mosque itself, begun in Djumādā II 867/February 1463, was completed in Radjab 875/January 1471 (inscription over the main door: Ayverdi, *Fatih devri mimarisi*, 143). The ancillary buildings were of two types: (1) *Khayrāt* around the mosque (*medrese*, hospital, *ʿimāret* (hospice), school, library, etc.), and (2) buildings of public utility to provide the income for the upkeep of the foundation. Such complexes had formed the nuclei of all Ottoman cities since Orkhān's foundations at Bursa (see O. Nuri, *İmaret sistemi*, Istanbul 1939; Ö. L. Barkan, *Quelques observations sur l'organisation économique et sociale des villes ottomanes*, in *Recueil Soc. Jean Bodin*, vii (1955), 289-311; Emel Esin sees their origin in Central Asia: *IV. Int. Congress of Turkish Art*, Aix-en-Provence 1970).

An area of about 100,000 m² is occupied by the following *khayrāt*: the mosque, with an extensive outer courtyard entered by eight gates; on two sides of it, 8 large and 8 small *medreses* (the Themāniyye and the Tetimme); to the east, in a separate court, a *tābkhāne*, a hospice and a *khān* (later Deve Khānī); and in a further court, a hospital. Between the two front entrances to the mosque-court were two smaller buildings, a children's school (*dār al-taʿlīm*) and a book-store (A. S. Ülgen and B. Kunter, *Fâtih camii ve Bizans sarnıcı*, Istanbul 1939; Ayverdi, *op. cit.*, 125-71). There were also residences for the *ʿulemā*ʾ employed in the *medreses*. The buildings of the second category were, principally, a great *čarshī* (Sulṭān Pāzārī), the Sarrādjkhāne, and a bath (Čukur Ḥamām or Irgatlar Ḥamāmī) north of the mosque. The Sulṭān Pāzārī, between the mosque and Sarrādj Khāne, on the site of the Djān-alldjī Church comprised 280 shops (so the register of 898/1493; in the *waḳfiyye* published by T. Öz: 286), and the Khīḍr-beg Čelebi Odalarī 32 workrooms and 4 storerooms. (On Vavassore's plan, the Sulṭān Pāzārī is shown surrounded by walls; in the registers it is called "*buḳʿa*".) Sarrādjkhāne (also a "*buḳʿa*") comprised 110 shops within a wall (S. Ünver, *Suyolu haritası*, Pl. 1); against its west and south wall were 35 shops and 19 "rooms", referred to as *Beglik dükkānlar ve odalar*. The register of 898/1493 lists 142 saddlers, all Muslims (some of them Janissaries), working here. The saddlers formerly working near the Bedestān were all brought here, henceforward the sole centre for that trade (*berāt* of 879/1475 publ. by Ç. Uluçay in *Tarih Dergisi*, iii/5-6 (1951-2), 151-2; renewal of 1119/1707 in A. Refik, *İstanbul hayatı, 1100-1200*, pp. 41). To the north were the horse-market and stables; round about were concentrated ancillary crafts—stirrup-makers, furriers, etc. In time of war this district was thronged with troops equipping their horses. (Schweigger, p. 129, comments that the Turks surpassed all nations in leatherwork.) Only in the 19th century, with the growing importation of European products, did this commercial centre decline (White, iii, 255 ff.).

South of Sarrādjkhāne, towards Aksaray, Meḥemmed II built new barracks for the Janissaries, the Yeñi Odalar in the Et Meydānī (replacing the Eski Odalar built probably in 864/1460); these, though often rebuilt after fires, remained the Janissary barracks until the destruction of the corps in 1826 (see also İ. H. Uzunçarşılı, *Kapukulu Ocaklari*, i, 241-3).

The following summary, for the Fātiḥ complex, illustrates the financial position of such a foundation (after Barkan, in *İkt. Fak. Mecm.*, xxiii, 306-41). The income in 894/1489 and 895/1490 was about 1½ million *akče* (30,000 ducats, far exceeding the income of the Aya Sofya *waḳfs*), arising from 12 baths in Istanbul and Ghalaṭa, the *djizya* of these two cities, the tax-income from over fifty villages in Thrace and various rents. The expenses for the *khayrāt* were:

stipends	869,280 *akče*
food for the hospice	461,417
expenses of the hospital	72,000
repairs, etc.	18,522
	1,421,219

The personnel of the mosque numbered 102 in all, of the *medreses* 168, of the hospice 45, of the hospital 30. There were further agents and clerks to collect the revenues (21), and builders and workmen (17). Besides these 383 persons, regular payments were made to indigent *ʿulemā*ʾ and their children and to disabled soldiers; these charities amounted to 202, 291 *akče* per year. 3300 loaves were distributed at the hospice each day and at least 1117 persons received two meals. Besides being a religious and educational centre, therefore, this complex—drawing some half of its revenue from outside Istanbul—was a nucleus for the economic and social prosperity of this area of the city.

IV. The Formation of Nāḥiyes and Mahalles in the 9th/15th century

In accordance with Meḥemmed II's orders issued in 863/1459, the *pashas* constructed complexes of their own in the various quarters of the city, each of which served to encourage settlement and prosperity, so that within seventy years of the conquest 13 *nāḥiyes* had come into existence and the Ottoman city had taken its shape. The whole city constituted one *ḳaḍā*ʾ; each *nāḥiye* comprised a number of *maḥalles* (represented by the *imām* of its local mosque). The establishment of a *djāmiʿ* or a *mesdjid*, with its appurtenances, in a sparsely populated area served to encourage settlement and the creation of a *maḥalle* (the process termed *shenlendirme*). The *mesdjids*, like the *djāmiʿ*s, were supported by *waḳfs*. The following table (after Ayverdi-Barkan, *Istanbul vakıfları tahrir defteri*, Istanbul 1970) shows the number of *waḳfs* recorded for each *nāḥiye*:

nāḥiye	number of *maḥalles*	*waḳfs* in 953/1546	*waḳfs* in 1005/1596
1. Aya Sofya	17	191	345
2. Maḥmūd Pasha	9	96	115
3. ʿAlī Pasha	5	44	76
4. Ibrāhīm Pasha	10	106	129
5. Sulṭān Bāyezīd	23	198	319
6. Ebu 'l-Vefā	12	165	306
7. Sulṭān Meḥemmed	41	372	681
8. Sulṭān Selīm	7	33	90
9. Murād Pasha	23	119	330
10. Dāvūd Pasha	13	84	264
11. Muṣṭafā Pasha	30	65	227
12. Topḳapī	7	13	39
13. ʿAlī Pasha	22	108	259
Totals:	219	1594	3180

(These registers do not record *maḥalles* of non-Muslims: the total was probably between 250 and 300, see below).

The first of these *nāḥiyes* to be established were presumably nos. 1, 2, 6, 7, 9, and 12. Of the *mahalles* within the walls in the 10th/16th century, some 30 % were established under Meḥemmed II, some 50 % under Bāyezīd II, and some 15 % between 1512 and 1546. This does not imply, however, that the population increase slackened in the 10th/16th century, for *maḥalles* founded earlier became more densely populated, as is apparent from 15th and 16th century plans: Vavassore's plan, derived ultimately from a plan of the period of Meḥemmed II (see Babinger), *Drei Stadtansichten* . . ., 5), shows the densest occupation east of a line drawn from the eastern side of the Langa Bostānlarī to Unkapanı (and along the southern shore of the Golden Horn); and by Ayverdi's map (*İstanbul mahalleleri*, Ankara 1958), the area east of the line contains 92 *maḥalles*, and that to the west —twice as extensive—98. But in plans of the 10th/16th and 11th/17th centuries (that of Velī-dj̲ān in the *Hünernāme*; of Pīrī Reʾīs, Oberhummer, Tafel XXII), the area within the walls is all inhabited, with the exception of a strip within the land-walls by Yedi-Ḳule, Bayram Pas̲h̲a Deresi, the Yeñi Bag̲h̲če area and the Langa Bostānlarī. An increase in population density is to be deduced also from the increase in the number of *waḳf*s, as under:

between:	*waḳf*s established:
857 and 927/1521	1163
927 and 953/1546-7	1268
953 and 986/1578-9	1193
986 and 1005/1596-7	407

In 1005/1596-7 3180 *waḳf*s were in existence (some having been extinguished). The first seventy years after the conquest saw the establishment of 1163 *waḳf*s, the next 78 years (927-1005) 2858 (Ayverdi-Barkan, *op. cit.*, table 1); but most of these later *waḳf*s are concerned not with the establishment of new *mesdj̲id*s and *maḥalles*, but with supplements to existing *mesdj̲id*s, the provision of prayers for founders, etc.

Maḥmūd Pas̲h̲a Nāḥiyesi (II on the plan). Maḥmūd Pas̲h̲a [*q.v.*] chose for his complex a very suitable site, on the road linking the Bedestān to Tak̲h̲taḳalʿe and the quays of Bag̲h̲če Kapīsī. The *k̲h̲ayrāt* are the mosque (inscription dated 867/1462), the *medrese* (only the *dersk̲h̲āne* survives), a hospice (beside his *k̲h̲ān*), a school (no longer extant) and his own *türbe* (inscription dated 878/1473). Most of the buildings supporting these are on the busy road to the harbour: a *čars̲h̲ī* of 265 shops (see above); a *k̲h̲ān* (later the Kürkčü K̲h̲ānī, still standing); a *ḥammām* (with a men's and a woman's side; inscription dated 871/1466); 14 dyers' shops at Tavuk-pāzārī; in various districts 139 shops, 67 houses, 47 "rooms" and 2 gardens. Outside Istanbul were: a *bedestān* at Ankara for the sale of mohair (now the Hittite Museum) with a *k̲h̲ān* beside it; a *k̲h̲ān* (Fidan K̲h̲ānī) and shops at Bursa; *ḥammams* at K̲h̲āṣṣköy and Gügerdj̲inlik; and 14 villages in Rūmeli (the *waḳf*s were all consolidated in a single *waḳfiyye* dated 878/1473, see Ayverdi-Barkan, pp. 42-5). The total revenue was 606,513 *akče* (over 13,000 ducats). The area where the *k̲h̲ayrāt* were built remained the most important commercial district until the 19th century. Maḥmūd Pas̲h̲a also built here two *mesdj̲id*s, leading to the establishment of two *maḥalles*.

Murād Pas̲h̲a Nāḥiyesi (IX on the plan). This consisted of 23 *maḥalles* around the mosque of K̲h̲āṣṣ Murād Pas̲h̲a (the Palaeologue), d. 878/1473 [*q.v.*]. The complex comprised the mosque at Aksaray (inscription dated 876/1471), a *medrese* and a hospice, supported by 45 shops, 2 *bozak̲h̲āne*, a *bas̲h̲k̲h̲āne*, and a bath at Aksaray, a *k̲h̲ān* and a *bas̲h̲k̲h̲āne* at Tak̲h̲taḳalʿe, and 9 shops at Yeñibāg̲h̲če. This *nāḥiye*, which now covers the modern Aksaray, Lâleli, Cerrâh Paşa, Langa and Yeni Kapı, was at first sparsely populated, but under Bāyezīd II eleven further *maḥalles* were formed.

Ebu 'l-Vefā Nāḥiyesi (VI on the plan). Even in early days thickly populated, it was situated between the Eski Sarāy and Unkapanı Caddesi, extending to the Golden Horn. A mosque and *zāviye* were built by Meḥemmed II for S̲h̲eyk̲h̲ Abu 'l-Wafā (d. Ramaḍān 896/July 1491). It was a residential area, with *mesdj̲id*s built especially by the *ʿulemāʾ* of the day (Mollā K̲h̲usrev, the first *Ḳāḍī* of Istanbul K̲h̲ıḍr Beğ, Mollā Gūrānī, etc.), but also by wealthy merchants. Under Bāyezīd II many members of the *ʿaskerī* class established rich *waḳf*s (among them Bāyezīd's daughter ʿAys̲h̲e Sulṭān and her husband Sinān Pas̲h̲a).

The reign of Bāyezīd II saw much economic expansion, and the establishment of six further *nāḥiyes* (nos. 3, 4, 5, 10, 11 and 13 in the list above). The areas of habitation stretched out from Fātiḥ and Aksaray towards the landwalls, so that several Byzantine churches and monasteries in this region were now converted to mosques (see Plan).

Sulṭān Bāyezīd Nāḥiyesi (V on the plan). The mosque, on the Forum Tauri south of the Eski Sarāy, was built between 906/1501 and 911/1505; there was also a *medrese*, a school, and a hospice, together with a *ḥammām* and a *k̲h̲ān* in the same area (Vavassore's plan shows the area before this building work was undertaken). This complex was the centre of a *nāḥiye* embracing 23 *maḥalles* and extending from the modern Bayezid Meydanı to Kum-Kapı on the Marmara (the complex of Nis̲h̲āndj̲ī Meḥmed Pas̲h̲a, nearer the sea had previously been a second nucleus in this area) and along Dīvān-yolu from the Büyük Čars̲h̲ī to Sarrādj̲k̲h̲āne. In the reign of Meḥemmed II, Bayezid Meydanı had been surrounded by the *mesdj̲id/maḥalle* foundations of Čakīr Ag̲h̲a (*waḳfiyye* dated 864/1459), Dīvāne ʿAlī Beğ (866/1461) and Balaban Ag̲h̲a (888/1483), while to the south of the modern road to Lâleli were the *maḥalles* of Emīn Beğ (868/1463), Segbān-bas̲h̲ī Yaʿḳūb and Miʿmār Kemāl. Many new *maḥalles* were established under Bāyezīd, mostly by members of the *ʿaskerī* class but some by craftsmen. The Eski Odalar (see above) were in this *nāḥiye*, as was the shipyard for galleys (Kadīrga Tersānesi); the Byzantine port of Sophia was used as a naval base immediately after the conquest (for its use as a galley harbour in the days of the Palaeologues, see Janin, *Const. Byzantine*, 223-4), and between 1459-61 Meḥemmed II made a shipyard here (Critoboulos, 140, 177). The *taḥrīr* register of 860/1455 shows that *ʿazebs* [*q.v.*] were living between Yeñi-kapī and Kum-kapī, a district originally called ʿAzebler Maḥallesi. The shipyard, with its great gate, built around the enclosed harbour is clearly shown in the plans of Vavassore and of Velī-dj̲ān. Later, probably in the 18th cent., the harbour silted up to become the modern Cündî Meydanı and Kadırga Bostanı.

A very important building, of the Conqueror's time, in this *nāḥiye* was the mint [see DĀR AL-ḌARB, pp. 117], in the *maḥalle* of Segbān-bas̲h̲ī Yaʿḳūb, the principal mint for silver and gold coins (later known as the Sīrmakes̲h̲/Sīmkes̲h̲ K̲h̲ānī); a small *čars̲h̲ī* of 8 shops was built near it.

ʿAlī Pas̲h̲a Nāḥiyesi (III on the plan). K̲h̲ādim

(ʿAtīḳ) ʿAlī Pasha [*q.v.*], twice Grand Vizier and killed in 917/1511, founded on Dīvān Yōlu in part of the Forum Constantini a mosque (902/1496), a *medrese*, a school, a hospice and a *khānkāh*, with a *khān* and shops. The *nāḥiye* (no. 3 above) contained 5 *maḥalle*s (see S. Eyice, in *Tarih Dergisi*, xiv/19 (1964), 99-114; R. E. Koçu, in *İstanbul Ansiklopedisi*, iii, 1281).

The same ʿAlī Pasha constructed a mosque (later Zindjirli-kuyu Djāmiʿi) near the Edirne Kapisi and converted the Khora monastery church into a mosque (Kilise Camii/Kariye Camii) (see S. Eyice, *op. cit.*). This *nāḥiye* (no. 13 above, VIII on the plan) embraced an extensive and sparsely populated area of 22 *maḥalle*s. These *khayrāt* were supported by a large *khān* and a "*köshk*" near his hospice at Çenberli Taş (see S. Eyice, *Elçi Hanı*, in *Tarih Dergisi*, no. 24 (1970), 93-130; in the early 10th/16th century this *khān* brought in a revenue of 13,000 *akče* per year); a bath at Yeñi-baghče; 178 shops, 246 "rooms", one bakehouse and one breadstore in the commercial districts of Istanbul; 44 villages, 4 baths, 7 mills and various shops in Anatolia and Rūmeli; and a *bedestān* at Yanbolu. The annual revenue (mostly from outside Istanbul) was 471,998 *akče*s (over 8000 ducats) in 915/1509. Most of the *maḥalle*s (15) in this *nāḥiye* were established under Bāyezīd II in the Balat-Edirne Kapı-Bayram Paşa Deresi area.

Ibrāhīm Pasha Nāḥiyesi (IV on the plan). Čandarli Ibrāhīm Pasha (*ḳādīʿasker* in 890/1485, Grand Vizier for one year from 904/1498) built at Uzun Čarshī a mosque (the roofed building shown in Lorichs, Tafel IX), a *medrese* and a school, supported by a bath, a slaughterhouse of 14 shops at Eyyūb, 5 shops, 28 houses and 40 "rooms" (together with 3 villages and 3 mills in Rūmeli and Anatolia, a *bedestān* at Serez, etc.). Although the foundation was relatively poor (annual revenue 135,880 *akče*), the *nāḥiye* included the busy commercial district between the Büyük Čarshī and the harbour, and some of its *maḥalle*s had been established by wealthy merchants in the reign of Meḥemmed II.

Dāvūd Pasha Nāḥiyesi (X on the plan). "Kodja" Dāvūd Pasha (Grand Vizier from 887/1482 to 902/1497) built a mosque, a hospice, a *medrese*, a school and a public fountain (inscription dated 890/1485) near the Forum Arcadii, with an extensive *čarshī* of 108 shops and 11 "rooms" around the mosque. He also brought into occupation the area now named after him on the Marmara coast (west of the former Port of Eleutherios), building there a palace, a bath, a *bozakhāne*, 11 shops and a landing-stage (Ayverdi-Barkan, p. 345). Six baths, in Istanbul and elsewhere, a *bedestān* at Manastir, shops at Üsküb and Bursa, and the revenue of 12 villages brought in an annual income of 378,886 *akče* (ca. 7,500 ducats). Although some *maḥalle*s had existed here before, it was particularly this foundation which promoted the growth of the area, 8 *maḥalle*s being set up under Bāyezīd II.

Kodja Muṣṭafā Pasha Nāḥiyesi (XI on the plan). It is evident that towards the end of Bāyezīd II's reign the Muslim population was increasing in the region towards Silivri Kapisi, and here, in 895/1489 (inscription), the later Grand Vizier Muṣṭafā Pasha converted the church of St. Andrew in Krisi into a mosque. According to the *waḳfiyya*, the complex comprised also a hospice, a *medrese*, a *khānkāh*, a school, and houses for the *imām*, etc. (for his *khayrāt* at Eyyūb and elsewhere, see Ayverdi-Barkan, pp. 366-9), supported by a large *ḥammām* (annual income 65,000 *akče*) and 81 shops near the complex, by numerous shops and two *khān*s in various parts of Istanbul, and by 27 villages in Rūmeli (details in Ayverdi-Barkan, 365-7). The annual income was over half a million *akče*s. No fewer than 17 *maḥalle*s were formed under Bāyezīd II.

The *maḥalle*s in the four *nāḥiye*s bounded by the landwalls—Muṣṭafā Pasha, Dāvūd Pasha, ʿAlī Pasha and Topḳapi—were relatively large but their *waḳf*s were few, an indication that the population was sparse; and many of the *mesdjid*s had to be supported from the sultan's treasury. Most of the new *maḥalle*s established under Süleymān were in this region—four in Topḳapi and three in ʿAlī Pasha. The foundation in 973/1565 of the complex by Mihrumāh Sulṭān at Edirne-Kapi (mosque, *medrese*, school and fountain, supported by a *khān* and a *čarshi*) promoted the settlement of the area (see below). The establishment of the mosques of Kara Aḥmed Pasha at Topḳapi (ca. 961/1554) and Khādim Ibrāhīm Pasha al Silivri Kapisi (958/1551) suggest a concentration of settlement near the city gates.

Nearly 90 % of the *maḥalle*s were named after the founder of the local mosque. The local people would make new endowments to ensure the repair of the mosque and the support of the mosque officials and teachers, but there are few cases where the local people clubbed together to build a mosque. Among the individuals who founded more than one *mesdjid* in the years after the conquest are the *subashi* Čakir Agha, the Ḳāḍīʿasker Mollā Khusrev, and some merchants (Elvān-zāde Khwādja Sinān, Üsküblü Ḥādjdjī Ibrāhīm, Khwādja Üveys, Khwādja Khalīl). According to the *waḳf* register of 953/1546, 65 % of the founders of mosques belonged to the "ruling" *ʿaskerī* class (palace officials, army officers, *ʿulemā* and "bureaucrats"). The distribution is as follows:

ʿulemā and *sheykh*s	46
merchants and bankers	32
tradesfolk	28
*agha*s of the Palace	18
*beg*s	16
pashas	14
officers of the Ḳapı-Ḳulu	12
"bureaucrats"	8
architects	6
others	39
Total	219

High-ranking members of the *ʿaskerī* class were, in fact, far richer than merchants and craftsmen, and were more inclined to found *waḳf*s, partly perhaps for reasons of social and political prestige, but also as a means of retaining within the family's control capital derived originally as income from the Public Treasury (see İnalcık, *Capital formation* . . ., 133-40).

V. Developments in the 10th/16th century

The 10th/16th century sees a rapid increase in the population dwelling within the walls, so that old *maḥalle*s become more densely populated, some *mesdjid*s are replaced by *djāmiʿ*s, new *mesdjid*s are built, and new complexes are erected and new *maḥalle*s are created in formerly deserted areas, especially towards the landwalls, along the Bayram Pasha Deresi (the Lycus) and even outside the walls; whilst around Ghalaṭa the inhabited area extends up the Golden Horn and down the slopes to Topkhāne, and the new districts of Findiḳli, Djihāngir and Ḳāsim Pasha come into being. The demand for new buildings which this increase in population produced led to a period of great activity by the Palace department of *Khāṣṣa miʿmārlari*, already directed by the great

architect Sinān [*q.v.*] (in 932/1525 the department had 13 architects, all Muslim; in 1013/1604 there were 23 Muslims and 16 Christians; for its organization see Ş. Turan, in *Tarih Araştırmaları Dergisi*, i/1 (Ankara 1963), 157-202), so that the finest monuments of Ottoman architecture and art belong to these years. The mosque of Rüstem Pa<u>sh</u>a [*q.v.*], twice Grand Vizier, was erected over warehouses and shops on the site of the *mesdjid* of Ḥādjdjī <u>Kh</u>alīl (see A. S. Ülgen, *Rüstem Paşa heyeti*, in *Mimarlık Dergisi*, ix (1942), 23-8). Pīrī Meḥmed Pa<u>sh</u>a (Grand Vizier 923/1517-929/1523) established an extensive *waḳf* with a mosque and *medrese* in the Zeyrek district, a mosque at Merdjān, a mosque and a *<u>kh</u>ankāh* at Mollā Gūrānī, and a complex of mosque, *medrese* and hospice at Silivri, supported by the annual income of 6000 ducats from a *<u>kh</u>ān* near the Bedestān, another *<u>kh</u>ān* in <u>Gh</u>alaṭa and shops at Ta<u>kh</u>taḳalʿe and Balïk-Pāzārï, while his garden north of the Golden Horn was the origin of the later quarter of Pīrī Pasa (Evliyā, i, 411)

In 946/1539 the sultan, Süleymān, built in the name of his wife <u>Kh</u>urrem a complex of mosque, *medrese*, hospital, hospice and school at ʿAvret-Pāzārï (the "women's market") in Aksaray, which was becoming an important market area (for this market, round the Column of Arcadius, and its prosperity at this period, see C. de Villanon, 306, and cf. Sanderson, 77); a <u>kh</u>ān, a *ḥammām*, a wood-store, a slaughterhouse, and various shops and warehouses in different areas of Istanbul brought in an annual income of half a million *akče* (8,400 ducats). In memory of his son Meḥmed, the sultan built on Dīvān-yolu, between Vefā and Sarrādjkhāne, a truly imperial (Evliyā, i, 162) complex (951/1544-955/1548; mosque, *medrese*, hospice, school, *türbe*; also a *kerbānsarāy*); whilst for his son Djihāngīr he built at Fïndïklï the mosque and school which gave its name to the Djihāngīr district (Evliyā, i, 442).

Finally, exploiting an area cleared by a fire in the centre of the city, Süleymān entrusted to Sinān the construction, on a hill overlooking the harbour, of the most elaborate building-complex of the capital. This, the Süleymāniyye (mosque begun Djumādā II 957/July 1550 and completed <u>Dh</u>u'l-Ḥidjdja 964/October 1557; for the inscription see C. Çulpan, in *Kanunî Armağanı*, Ankara 1970, 293), is composed of no fewer than 18 elements (S. Eyice, *İstanbul*, pp. 49-52, bibliography). Within the court are the mosque, the tombs of Süleymān and of <u>Kh</u>urrem Sulṭān and the house of the *türbedār*; outside, on two sides of the mosque are four *medrese*s and the *dār al-ḥadī<u>th</u>*, the highest institutes of learning of the Empire; the other large buildings are a hospital, a *dār al-ḍiyāfa* and a *tāb<u>kh</u>āne*; smaller buildings are a college for *mülāzim*s (students preparing to enter a *medrese*), a library, a pharmacy, and a children's school. The complex is completed by several houses near the mosque for teachers and mosque-servants, a *<u>kh</u>ān*, and shops in front of the *medrese*s, which constitute a *čar<u>sh</u>ï*. According to Evliyā Čelebi (i, 157) the Palace of the A<u>gh</u>a of the Janissaries (later the office of the <u>Sh</u>eyk<u>h</u> al-Islām) belonged also to this complex. (For the Süleymaniyye and the A<u>gh</u>a's palace, see M. Lorichs, Tafel X).

The registers of expenses for these constructions are valuable evidence for the procedures followed in such a major enterprise (see Ö. L. Barkan, *L'organisation du travail dans la chantier d'une grande mosquée à Istanbul au XVIe siècle*, in *Annales. Économies, sociétés, civilisations*, xvii (1962), 1093-1106; for similar registers relating to the Mosque of Aḥmed I, see T. Öz, in *Vakıflar Dergisi*, i (1938), 26; cf. also *Taʾrī<u>kh</u>-i Djāmiʿ-i <u>Sh</u>erīf-i Nūr-i ʿO<u>th</u>mānī*, *ʿilāve* to *TOEM*, no. 49). Materials and craftsmen were gathered from Istanbul and from other parts of the Empire, the workmen being kept under strict discipline. Of the craftsmen receiving pay over the whole period of 5 years and 7 months, 29 % were from Istanbul, 14 % from Rūmeli and the Islands, 13 % from Anatolia (with no indication for 44 %). 51 % of the 3,523 craftsmen were Christians, 49 % Muslims. The builders of walls, the ironworkers and the sewermen were mainly Christian, the stone-carvers, carpenters, painters, glassworkers and lead-workers were mainly Muslim. Of the total workforce 55 % were free men receiving a wage, 40 % were *ʿadjemī o<u>gh</u>lan*s and 5 % were galley-slaves.

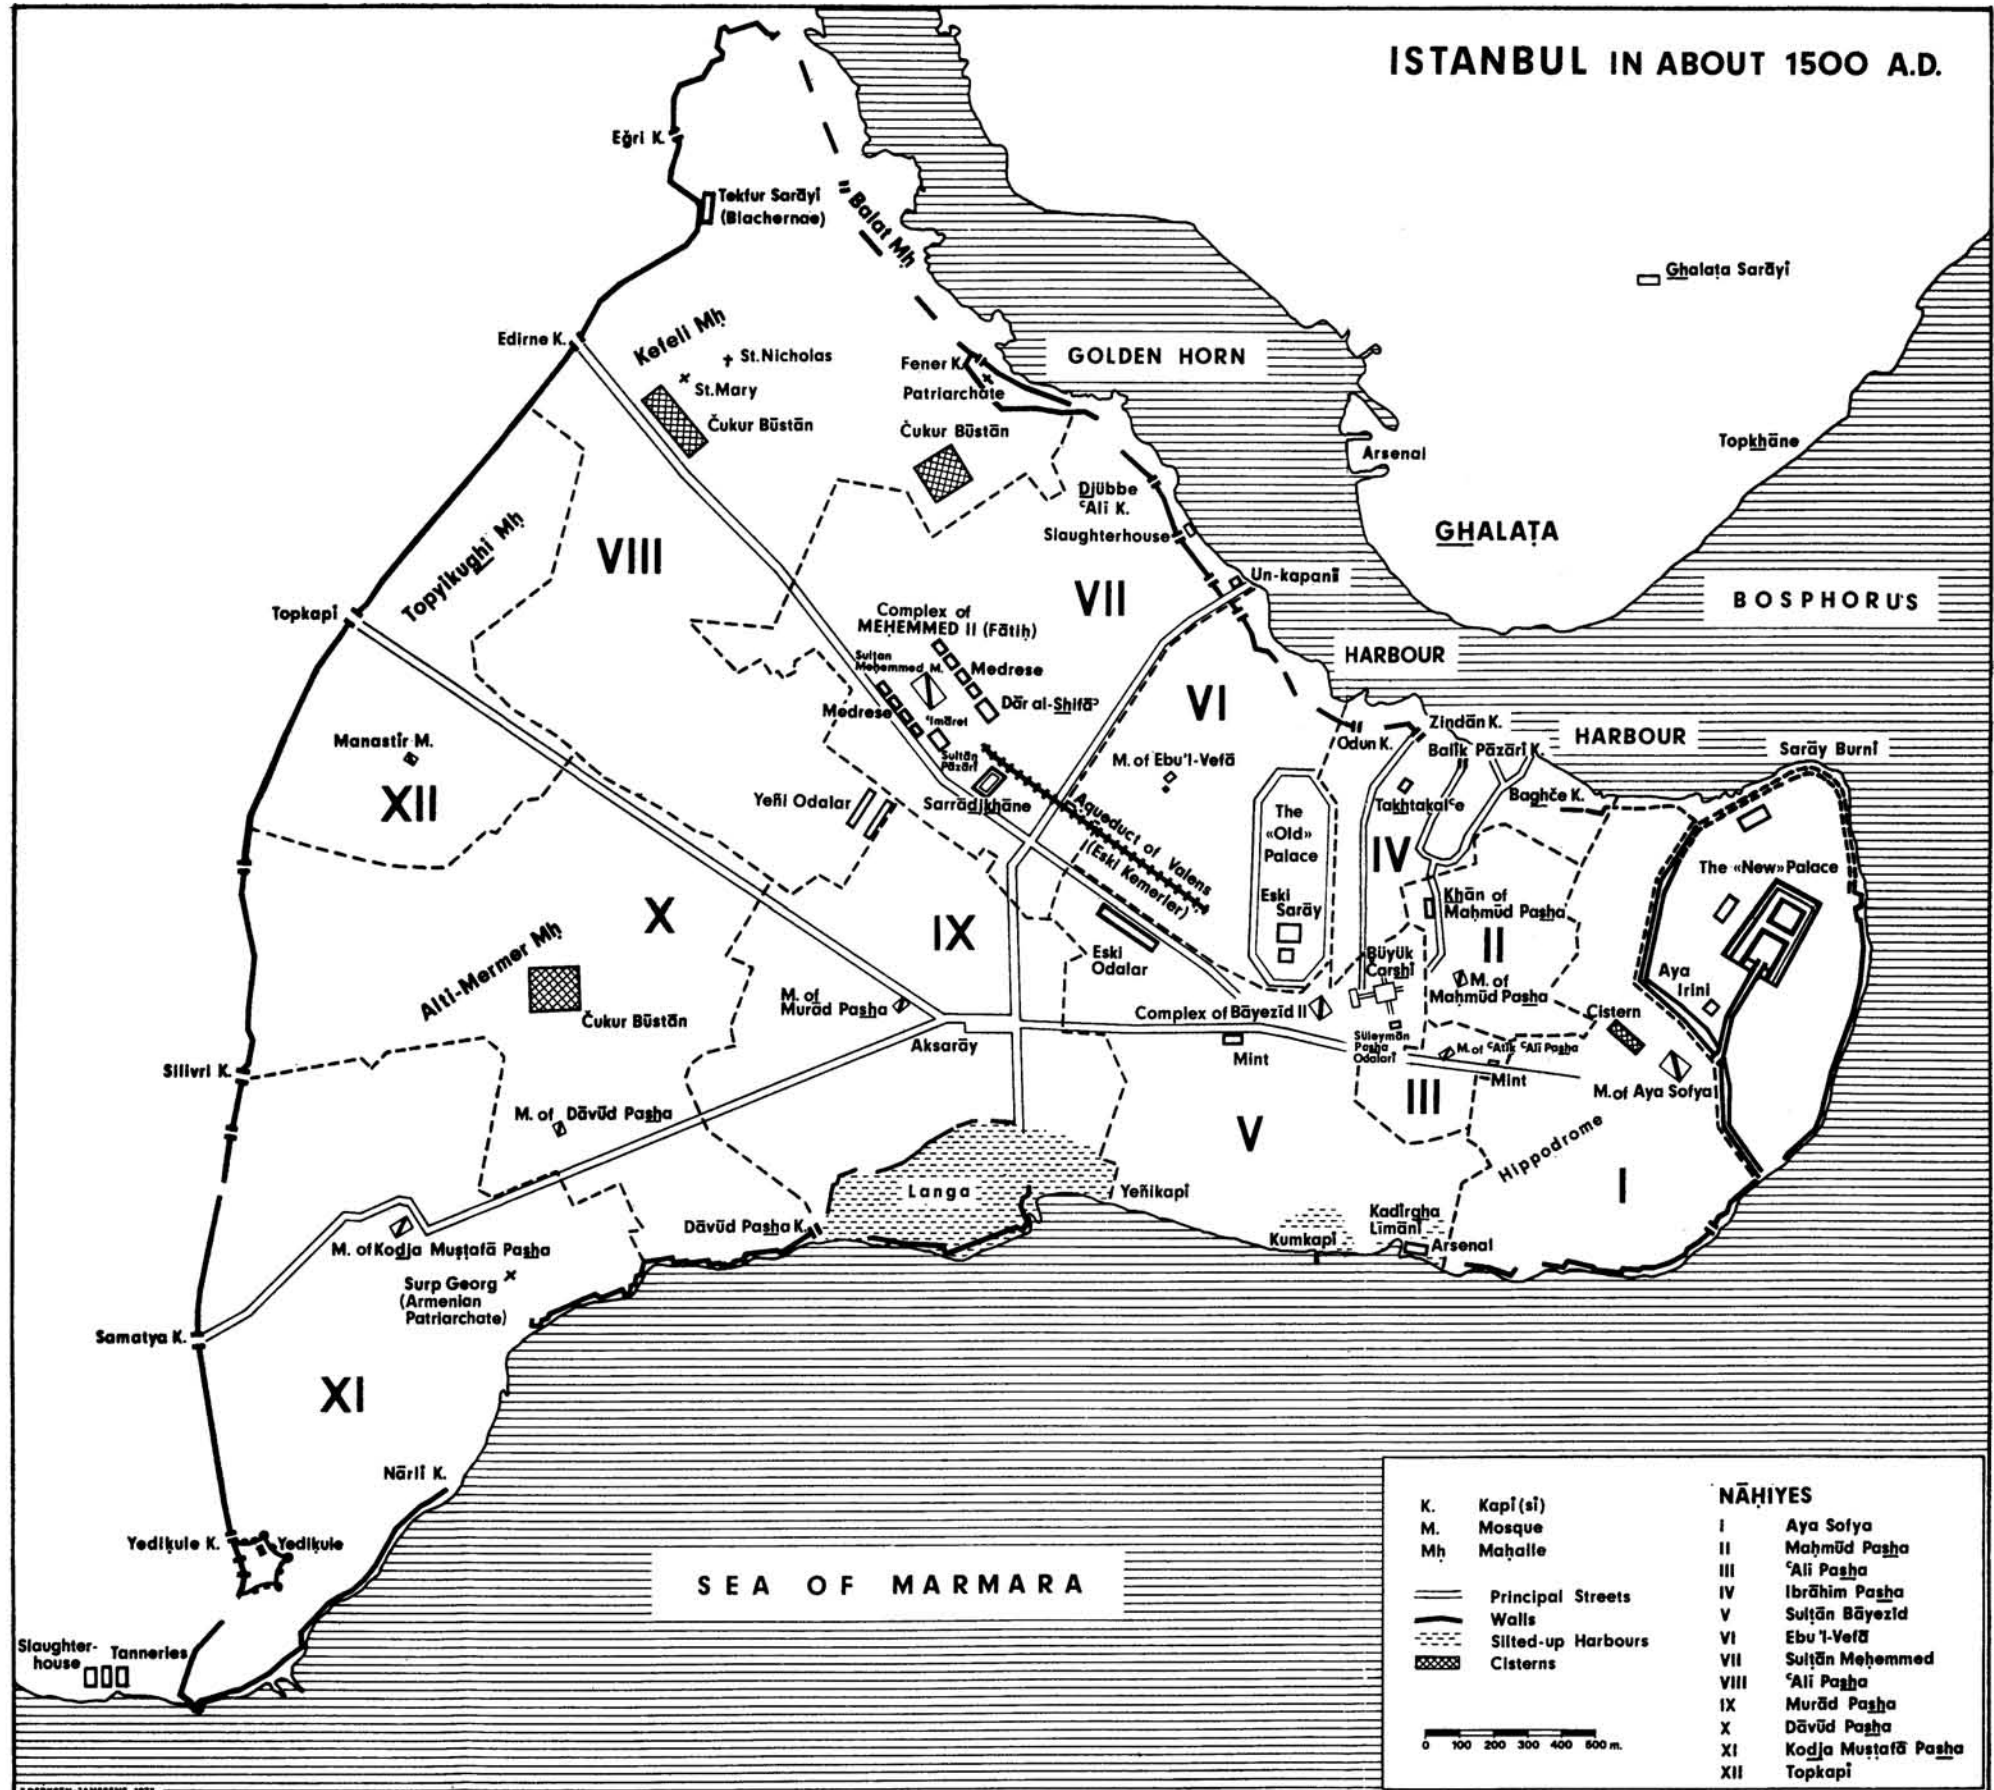
All the *waḳf*s of Süleymān (besides the foundations already mentioned, the *medrese* of Sultan Selīm and the *zāviye* in the *maḥalle* of Fīl-damï) were consolidated in one *waḳfiyya* (ed. K. E. Kürkçüoğlu, Ankara 1962). According to a *taḥrīr* made in the reign of Murād III (Ayverdi-Barkan, *op. cit.*, xvii, n. 31), the annual income was then 5,277,759 *akče* (88,000 ducats); it may be noted that 81 % of this income arose from the taxes of 230 villages in Rūmeli. The whole complex had a staff of 748, whose stipends amounted to nearly one million *akče* a year.

Foundations made during this century near the landwall gates and in the Lycus valley testify to an increase of population in these areas. In the region of Edirne-Kapïsï, besides the Mihrumāh foundation (see above), there were the mosque-complex of Mesīḥ Pa<u>sh</u>a between this gate and Fatih (inscription: 994/1586; see T. Bozkurt, *Mesih Paşa Külliyesi*, İst. Ün. Ed. Fak. thesis, 1964); the mosque of the dragoman Yūnus Beg at Balat (948/1541); the mosque of Ferru<u>kh</u> Ket<u>kh</u>udā (970/1562); and the mosque of Ḳāḍī Saʿdī.

At Topḳapï the Kara Aḥmed Pa<u>sh</u>a complex, the work of Sinān (962/1554: mosque, medrese, *dār-al-ḳurrāʾ*, school, fountain; see Ş. Yaltkaya and Ali Saim Ülgen, in *Vakıflar Dergisi*, ii (1942), 83-97 and 169-71), was an important factor in promoting the district's prosperity. The Arpa Emīni (Defterdār) Muṣṭafā mosque should also be mentioned.

The district of Yeñibag<u>h</u>če was evidently favoured by the ruling class, to judge from the foundation of the mosque and *medrese* of Sulṭān Selīm; the mosque of the Ḳāḍīʿasker ʿAbdurraḥmān Čelebi; the mosque of <u>Kh</u>urrem Čavu<u>sh</u>; the mosque and *medrese* of the Kapudan Pa<u>sh</u>a Sinān Pa<u>sh</u>a; the mosque of Miʿmār (Kodja) Sinān; the Yeñičeri Kātibi mosque; the mosque of the Grand Vizier (944/1537-947/1540) Luṭfī Pa<u>sh</u>a, together with the palace, fountain, bath and tomb of his wife <u>Sh</u>āh-i-<u>Kh</u>ūbān. The Palace of Maḥmūd A<u>gh</u>a was also here.

The Silivri Kapïsï district received the stimulus of the foundation of <u>Kh</u>ādim Ibrāhīm Pa<u>sh</u>a, which comprised a mosque (958/1551), a *medrese*, a school, 3 *ḥammām*s, 4 large residences and 7 houses (see A. Erdoğan, in *Vakıflar Dergisi*, i (1938), 29-33). The mosque and *ḥammām* of Ḥādjdjī Evḥad (by Sinān) were also founded near the walls, by Yediḳule.

Along the Marmara walls and the Golden Horn walls too, new foundations appeared: at A<u>kh</u>ur Kapï, the mosque of Maḥmūd A<u>gh</u>a; at Kum Kapï, the mosque of Ibrāhīm Pa<u>sh</u>a's wife; at Langa, the mosques of Bāzirgānzāde and <u>Sh</u>eyk<u>h</u> Ferhād; at Kadırga, the mosque, *medrese* and *zāviye* of Sokollu Meḥmed Pa<u>sh</u>a/Esmā <u>Kh</u>ātūn (see S. Eyice, in *İA*, art. *İstanbul*, p. 1214/68); at Un-Kapanı, the mosques of Süleymān Suba<u>sh</u>ï and of the Tüfenk<u>kh</u>āne are listed among the


works of Sinān (see R. M. Meriç, *Mimar Sinān*, Ankara 1965).

Indeed the period from 947/1540 to 996/1588 may justly be called the "period of Sinān", for he and his subordinates constructed in Istanbul, for the sultans and notables, 43 *djāmi*ʿs, 52 *mesdjids*, 49 *medreses*, 7 *dār al-ḳurrāʾ*, 40 *ḥammāms*, 28 palaces and *köshks*, 3 hospices, 3 hospitals, and 6 *khāns*. Other important constructions attributed to Sinān in the outlying districts are: at Eyyūb, the mosque of Zāl-oghlī Maḥmūd Pasha (fountain dated 958/1551), the mosque of Defterdār Maḥmūd Čelebi (948/1541) and the mosque of Shāh-Sulṭān; at Topkhāne, the mosque of Ḳīlīč ʿAlī Pasha (988/1580), and the mosque of Muḥyīeddīn Čelebi; at Fīndīklī, the mosque of Djihāngīr, and the mosque, school and *ḥammām* of the Ḳāḍīʿasker Meḥmed Vuṣūlī (Mollā Čelebi) (973/1565); at Beshiktash, the mosque of Sinān Pasha (963/1555); at Sütlüdje, the Čavush-bashī mosque; at Usküdār, the mosque of Mihrumāh Sulṭān (954/1548), the mosque of Shemsī Aḥmed Pasha (988/1580) and the Eski Vālide (Nūrbānū) Sulṭān mosque (991/1583); at Ḳāsīm Pasha, the Ḳāsīm Pasha complex of mosque and *medrese* (the value of the *waḳf* being 2,630,000 *akčes* in cash and 117,000 *akčes* in real estate); and towards Okmeydānī the Piyāle Pasha complex of mosque, *medrese*, school, *tekke*, fountain and *ḥammām* (*waḳfiyya* dated 981/1573).

The quarter of slaughterhouses and tanneries outside Yediḳule grew considerably: originally consisting of 27 shops of tanners, 32 of butchers, and 5 of catgut-makers (*waḳfiyyas* of Meḥemmed II and the Aya Sofya register of 898/1493), it was in the middle of the following century, according to Evliyā Čelebi (i, 391), a "flourishing township" with one *djamiʿ*, seven *mesdjids*, 300 tanners' shops, 50 glue shops and 70 catgut-makers. These tanners claimed the right to buy the hides of all animals slaughtered in Istanbul (see ʿO. Nūrī, *Medjelle-i umūr-i Belediye*, i, Istanbul 1922, 830-2; for a list of the Istanbul slaughterhouses in 1016/1607: A. Refik, *İstanbul hayatı, 1000-1100*, Istanbul 1931, pp. 30-1).

In the second half of the 10th/16th century and the first half of the 11th/17th, the inhabited areas extended outside the landwalls towards Eyyūb (*maḥalles* of Otakčīlar, Nishāndjī Pasha and Čömlekčiler, described by Evliyā Čelebi, i, 391-6). In the same period settlements grew up around mosques and convents built outside the principal gates: at Topkapī, the mosque of Taḳyedji Ibrāhīm Agha (d. 1004/1595-6: M. Ziyā, *Istanbul*, p. 128; foundation inscription dated 1000/1591) gave rise to the Taḳyedji *maḥallesi*; whilst at Yeñi-Kapī the mosque and *zāviye* of Merkez Efendi (d. 959/1551; see T. Yazıcı, in *İst. Enst. Dergisi*, ii (1956), 104-13) and the great Mevlevīkhāne founded by the Yeñičeriler Kātibi Malkoč Meḥmed Efendi in 1006/1597 (later much enlarged, see M. Ẓiyā, *Yeñi-Kapī Mevlevīkhānesi*, Istanbul 1329; idem, *Istanbul*, 115-8) both fostered a growth in population (see Evliyā Čelebi, i, 392).

The last great mosque-complexes to be constituted in the classical tradition of Ottoman architecture are those of Aḥmed I on the Hippodrome and the Vālide Djāmiʿi (Yeni Djāmiʿ) at Emīn-öñi.

The former, built between 1018/1609 and 1026/1617 at a cost of one million and a half gold pieces, comprised a mosque, a *medrese*, a hospital, a food-kitchen, a *dār al-ḍiyāfa*, lodgings (*misāfirkhāne*), a school, a public fountain, and an *ārāsta*-type *čarshī* (see Evliyā Čelebi, i, 216-19; Tahsin Öz, in *Vakıflar Dergisi*, i, 25-8; S. Eyice, in *İA*, art. 'Istanbul', p. 1214/59). The *djizya* of the inhabitants of Ghalaṭa was made over as *waḳf* for this mosque.

The Yeñi Djāmiʿ was begun in 1006/1597 by Ṣafiyye Sulṭān [*q.v.*], but the work was suspended for many years and completed only in the years 1071/1660-1074/1663 by Turkhān Sulṭān [*q.v.*], to comprise the mosque, a *dār al-ḳurrāʾ*, a school, fountains, the tomb of Ṭurkhān, and a market (*miṣr čarshīsī*) and shops (see S. Ülgen in *Vakıflar Dergisi*, ii, 387, and S. Eyice, p. 1214/60; detailed engraving of the area in Grelot, p. 283).

The 12th/18th century saw the construction of the Nūr-i ʿOthmāniyye complex beside the Büyük Čarshī (1161/1748-1169/1756); mosque, *medrese*, library, public water-point (*sebīl-khāne*); (see *Taʾrīkh-i Djāmiʿ-i Sherīf-i Nūr-i ʿOthmāniyye*, supplement to *TOEM*, Istanbul 1337; Doğan Kuban, *Türk Barok Mimarisi*, Istanbul 1954) and of the Lāleli complex (1174/1760-1177/1764; mosque, *medrese*, fountain): these are in a hybrid style influenced by European baroque, and no longer belong to the classical Ottoman tradition.

It is not without significance that in this period of decline hospices and hospitals, requiring a substantial annual expenditure, tend to be replaced as elements of a complex by libraries and fountains. This tendency is evident in the foundations of the Grand Viziers. Three viziers of the Köprülü family built complexes along Dīvān-Yolī (Meḥmed Pasha: tomb, *medrese*, library; Kara Muṣṭafā Pasha, 1101/1690: mosque, *medrese*, school, fountain; ʿAmdjazāde Ḥüseyn Pasha, 1112/1700: mosque, *medrese*, library, fountains). Here too were the foundations of Čorlulu ʿAlī Pasha (1120/1708: mosque, *medrese*), of Dāmād Ibrāhīm Pasha (1132/1720: *dār al-ḥadīth*, fountain), and of Seyyid Ḥasan Pasha (1158/1745: *medrese*, school, fountain, shops, bakehouse; see ʿO. Nūrī, *Medjelle* . . ., i, 1054-5). Another characteristic of this period is the foundation of new complexes, on the model of the old, in sparsely populated areas of the city (*e.g.*, that of Ḥekīm-oghlu ʿAlī Pasha in the *nāḥiye* of Kodja Muṣṭafā Pasha, of 1146/1733-1147/1735) or in newly settled districts at Üsküdār and along the Bosphorus.

The most important of such foundations are those of Kösem Vālide Sulṭān [*q.v.*] (mosque, *medrese*, hospice, bath, *khān*; for the *waḳfiyya* see W. Caskel, in *Documenta islamica inedita*, Berlin 1952, 251-62) and of Gülnūsh Sulṭān ("Yeni Vālide", of 1120/1708-1122/1710: mosque, fountains; see A. Refik, *op. cit.*, 42) in Üsküdār, the mosque of ʿAbd al-Ḥamīd I (1192/1778, with other properties in Istanbul at Baghčekapī) at Beğlerbeği, and the complex of Mihrishāh Sulṭān (1210/1795: hospice, fountain, school) at Eyyūb.

By and large, until the 17th century practically all the expansion of Istanbul took place within the walls. This area, of 17.2 km.², was not all built over even at the height of the Byzantine period (see *e.g.*, Schneider, Mayer, Jacoby). In 950/1543, in the middle of the reign of Süleymān I, there were numerous and extensive uninhabited tracts (Mayer, 63: M. Lorichs shows the area between the Süleymāniyye and the Golden Horn as an open space). Although in the course of that century complexes and palaces of notables were built along the Lycus Valley and near the land gates, these sections of the city continued to be sparsely populated, with numerous pleasure-gardens and market-gardens: in the 11th/17th century, for example, Yeñi-baghče (S.W. of Edirne Kapīsī) is described as a vast meadow with ten thousand horses out at grass (Hezārfenn, *Talkhīṣ al-*

bayān). So too (note the names) there were wide open spaces at Agha-čayïrï (between Silivri Kapïsï and Yedi-Ḳule), in the extreme southern corner of the city around Yedi-Ḳule, at Böstān-yeri on the Marmara shore between Samatya and Dāvūd-Pasha-Kapïsï, and further east the Langa Böstānlarï, the Ḳadırgha Bostānlarï, and the Djündī Meydānï. Near the landwalls were the enormous Byzantine open reservoirs (all called "Čuḳur Bostānï") at Altï-Mermer, Edirne Ḳapïsï and Sulṭān Selīm. Even in the thickly-populated areas of the city the courts and gardens of the Old Palace and of the New Palace (0.67 km.²), and the courtyards of the Great Mosques remained unoccupied (it was estimated that 100,000 people could be accommodated in the mosques: *Medical and surgical history of the British army*, London 1858).

These open spaces were not wasted. The mosque courtyards, with their attractive views and their shady trees, were favourite places of recreation (Evliyā Čelebi, i, 481), and were sometimes used for markets (*e.g.*, Bāyezīd). Conversely, shops and houses progressively intruded on the *fora* of the Byzantine city, to the extent that some of them entirely disappeared (forum Constantini = Čenberli Tash meydānï, or Tavukpāzārï Dikili-Tashï meydānï; forum Tauri = Bāyezīd meydānï; forum Arcadii = ʿAvret-Pāzārï; Forum Bovis = Aksaray) (Mayer, 16-20; Le Bruyn, 48). The Hippodrome (At Meydānï), however, though reduced in area, remained the most extensive and important public space of Istanbul (fine engraving in Grelot, 271); besides being a place of recreation, it was also a market and the scene of equestrian exercises. The ʿAvret-Pāzārï (restricted, like similar markets in other Ottoman cities, to women only) gradually disappeared (descriptions: Dernschwam, 98; Sanderson, 77; Le Bruyn, 47). Equestrianism and archery were practised not only in the Hippodrome but in Langa Meydānï and Djündī Meydānï (*TOEM*, ii, 547), which were also places of recreation (Evliyā Čelebi, i, 481), where the building of houses or the laying out of gardens was forbidden (A. Refik, *op. cit.*, 112).

VI. Structure of the *Mahalle*; Highways; Building Regulations; Domestic Architecture; Fires; Earthquakes

(a). The *mahalle.*

By the end of the reign of Meḥemmed II, Istanbul was reckoned to be composed of 182 *mahalles* (E. H. Ayverdi, *İstanbul mahalleri . . .*, Ankara 1958, 84), a figure which had risen to 219 by 953/1546 (*Istanbul vakıfları defteri*, ed. Ayverdi-Barkan, Istanbul 1970, p. 425) (non-Muslim *mahalles* being excluded). In 1044/1634 there was a total of 292 *mahalles* and also 12 *djemāʿat* ("communities") (M. Aktepe, in *İstanbul Enstitüşü Dergisi*, iii, 114). By 1083/1672 there had been a decline to 253 Muslim and 24 non-Muslim *mahalles*. In 1288/1871 the area within the walls contained 284 Muslim, 24 Greek, 14 Armenian and 9 Jewish *mahalles*, with a further 256 *mahalles* outside the walls, along the Bosphorus and the Golden Horn, in Üsküdār and in Ḳāḍīköy (A. Djevād, *Maʿlūmāt al-kifāya*, Istanbul 1289, 111).

The *mahalle* was an organic unity, a community with its own identity, settled around a mosque, a church or a synagogue. The individuals of this community were linked not only by a common origin (in many cases), a common religion and a common culture, but also by external factors making for social solidarity. The meeting-place of the community and the symbol of its unity was the place of worship, the repair of which and the maintenance of whose staff were the joint responsibility of the inhabitants, and after which the *mahalle* was named. Practically every *mahalle* had also its own school and fountain, and the wealthier inhabitants aided these foundations by *waḳf*-endowments (see, *e.g.*, *İstanbul vakıfları defteri*, *passim*).

Similarly too the authorities treated the *mahalle* as a unity having joint responsibility for the maintenance of order, the payment of taxes, and other obligations to the state. The *ʿawāriḍ* [*q.v.*] tax demonstrates this clearly, being collected from each *mahalle* according to the pre-determined number of its *ʿawāriḍ khāneleri*; many *mahalles* had a joint "*ʿawāriḍ* fund", supported by *waḳfs*, from which the *ʿawāriḍ* of the poor or of absconders were paid and from which loans, at a light interest, were made to applicants from the *mahalle* (O. N. Ergin, *Türkiyede şehirciliğin inkişafı*, Istanbul 1938, 27). Again, the *ketkhudās* of guilds and the *mütevellīs* of *waḳfs* were, like the *imām* of the mosque, officially recognized as intermediaries between the government on the one hand and the artisans and *waḳf* staff on the other.

Finally, the inhabitants of a *mahalle* bore a joint responsibility for the maintenance of order. It was not easy for an outsider to be recognized as belonging to a *mahalle*: the usual view was that four years' uninterrupted residence was necessary (Tash-Köprülüzāde, *Mawḍūʿāt al-ʿulūm*, ii, 654); the period for Istanbul was fixed at five years (A. Refik, *İstanbul hayātı, 1553-1591*, 145). In 987/1579 the inhabitants of each *mahalle* were declared to be *kefīls* (sureties) for one another, with the intention of preventing criminals of unknown antecedents from finding refuge from the law; for the same reason, in 986/1578 the idea of erecting gates between the *mahalles* was considered (A. Refik, *İstanbul hayati, 1553-1591*, 144). Each *mahalle* had its night-watchman, the inhabitants performing the duty in rotation in the 10th/16th century, while later a salaried night-watchman (*pāsbān*) was paid by the inhabitants. By a decree of 1107/1695, each *mahalle* was to support two watchmen, guaranteed by sureties, who were to patrol the *mahalle* with lanterns in their hands and to arrest any strangers found there after the bed-time prayer (*Medjelle*, i, 965). The "*bekči*", so important in the life of the *mahalle*, became a characteristic figure in the folklore of Istanbul. Similarly too each *mahalle* was obliged to pay two or three street-cleaners (firman of 1131/1718, in *Medjelle*, i, 965). In 1285/1868 certain *mahalles* were obliged to maintain fire-fighting equipment and some of the young men of each *mahalle* were appointed as *ṭulumbadji* to create a new "type" in the life of Istanbul, the colourful "*ṭulumbadji*" (*Medjelle*, i, 1188, 1195-1204).

The *imām* of its mosque was the representative of the *mahalle* in all dealings with the authorities. The sultan's decrees were passed on to the *imāms* in the *ḳāḍī*'s court or proclaimed by criers (*münādī*) in the streets, and the *imām* was responsible for seeing that the *mahalle* fulfilled all its obligations to the government: he could appeal to the authorities, particularly to the *ḳāḍī*, for assistance in dealing with refractory members of the community. The election of a *mukhtār* for each *mahalle* in 1242/1826 was the first step towards the "secularization" of the local authorities.

As time went on, the tendency increased for co-religionists and co-sectarians to settle together in separate *mahalles*, and for these *mahalles* to form distinct districts (for clashes between Muslims and Christians in a "mixed" *mahalle*, see A. Refik, *İstan-*

bul hayatı, 1000-1100, doc. 100; idem, *İstanbul hayatı, 1553-1591* 53; for the formation of distinct Greek, Armenian and Jewish districts, see below). This tendency was encouraged by government action. Thus when the Church of the Pammakaristos was converted into a mosque in 999/1591, attempts were made to create a Muslim *maḥalle* around it, by selling the vacant site in lots, each sufficient for building a house, exclusively to Muslims (A. Refik, *İstanbul hayatı, 1000-1100* 14; cf. also Stolpe's plan).

The tendency for each district to have its own traditions, occupation, even style of pronunciation, is reflected for the 11th/17th century by Evliyā Čelebi and Eremya Čelebi (see *Bibl.*), and in the 19th century by such novelists as A. Midḥat, Meḥmed Tewfīḳ and Hüseyn Raḥmī; see M. Kaplan, in *İA*, s.v. Istanbul, 1214/157-68.

(b) Streets.

Vavassore's plan shows quite broad streets leading to each region of the city, but these have disappeared in plans of the next (10th/16th) century (*Hünernāme*) (the street plan is shown clearly only in the map by the dragoman Konstantin of 1228/1813: Topkapı Sarayı no. 1858). Indeed in the 19th century, *Dīvān yolu*, the most important street of the city, was only 3.5-5.5 metres wide (*Medjelle*, i, 1067).

The streets of Istanbul were typically those of a mediaeval Eastern city (Mayer, *op. cit.*, 4-32), twisting and full of blind alleys, so that the delimination of the *maḥalle*s, far from being planned in advance, was a matter of pure chance (Mayer, 9-24, 104, 254). A study of the detailed city map of 1293/1876 (Ayverdi, *19. asırda İstanbul haritası*, Istanbul 1958) shows that streets still preserve the alignment they had had under Meḥemmed II, for the *miʿmār-bashî*, during rebuilding operations after fires, would try to preserve the old street-plan (*Medjelle*, i, 1066, 978). Occupants of property on a street, however, persistently attempted to incorporate areas of the highway into their properties and would, by erecting upper storeys projecting far over the street, cut down the light and air at ground-level. These difficulties of communication in the narrow streets meant that goods were usually transported by sea, from the various gates and landing-places on the Golden Horn.

Documents of the 10th/16th century attest that streets were paved (A. Refik, *İstanbul hayatı, 1553 1591*, 67), and Evliyā Čelebi claims (i, 446) that the streets of Istanbul, Eyyûb, Topkhāne and Ḳāsîm Pasha were all completely paved in the middle of the 11th/17th century. The construction and repair of the paving was carried out by contract with the *ketkhudā* of the guild of paviours (A. Refik, *op. cit.*, 66), the work being supervised by the *shehr-emīni*, the *miʿmār-bashî* or the *su-yolu nāẓiri*. For main roads the cost was met by the government, for side roads by the householders, shop-keepers and *mütevellī*s whose properties benefited (a document of 1087/1676 in *Medjelle*, i, 1147; A. Refik, *İstanbul hayatı, 1100-1200*, 30)

The cleaning of the principal squares and streets was carried out by the *ʿadjemī oghlanlarî* and other military units under the authority of the Yeñičeri *aghasî*, while each property-owner in a side-street was responsible for keeping the area in front of his property clean; street-sweepers (*süprüntüdjü*) were later employed in the *maḥalle*s. The removal of rubbish was the responsibility of the *čoplük subashîsî* (also termed *ṭāhir subashîsî*), who let out the work on contract to a group known as *arayîdjî* ("searchers", 500 in number; Evliyā Čelebi, i, 514). These would collect rubbish in baskets and throw it into the sea, after sifting through it for anything worth keeping; the usual area for the disposal of rubbish and rubble was Langa, or, on the Takhtaḳalʿe side, at the place near Odun Kapîsî known as Bokluk (see Oberhummer, Tafel XXII). Firmans repeatedly forbade the throwing of filth into the streets, the breaking-up of paving and the building of steps or stairways in front of houses (A. Refik, *İstanbul hayatı, 1000-1100*, docs. 25-38).

Except during Ramaḍān, everybody had to be within doors after the bed-time prayer (Dernschwam, 70; *Medjelle*, i, 964). There were no arrangements for lighting the streets, and anyone obliged to be out had to carry a lantern (*Medjelle*, i, 965-7; White, iii, 250). The first street to be lit by gas was Beyoghlu Djāddesi in 1273/1856, the main streets of Istanbul being lit by gas in 1879 (*Medjelle*, i, 971)

Inhabitants of Istanbul and foreign observers unite in reporting the neglected and dirty state of the streets in spite of the stringent decrees periodically issued. In 1839, for the first time, various plans were drawn up for modernizing the city by (*e.g.*) opening up blind-alleys and creating broad interesting streets and squares, but such measures began to be carried out only after the great "Khodja Pasha" fire of 1865 (details in *Medjelle*, i, 987-991).

(c). Building regulations.

Regulations issued to control building-styles, the streets, and the city's cleanliness had their effect on the appearance and plan of Ottoman Istanbul. Such regulations were issued by the *shehr-emīni* [*q.v.*] and his subordinates the *khāṣṣa miʿmār-bashî* and the *su-yolu nāẓiri*, and put into effect through the *ḳāḍī* and the *subashî*. In 1831 these duties passed to the *ebniye-i khāṣṣa Müdürlüğü* (*Medjelle*, i, 981-3).

In the first place, all building was under the control of the state. Before building could begin, the right to the site had to be acquired by an approach either to the public treasury (*mīrī*) or to the appropriate *waḳf* and by the payment of the *idjāre-i müʾedjdjele*. If the freehold was held by a *waḳf*, the consent of the state authorities was necessary. The *miʿmār-bashî* would grant permission for construction of the building according to the current regulations and the permitted dimensions, and check that these were observed (for an example of an *istidjāze* made when a *waḳf* was being established, see S. Eyice, *Elci Hanı*, *TD*, no. 24, plate 1 opposite p. 130; *Medjelle*, i, 1044-8). In 1196/1782 it was decreed that builders who erected buildings for non-Muslims without obtaining a firman of permission should be put to death (*Medjelle*, *loc. cit.*).

The government intervened in these matters for various reasons: to regulate land-tenure, to prevent fires, to avert water-shortage, and to protect the walls, mosques, and other public buildings. According to building regulations of 966/1559 (the time of Sinān), houses were not to be more than two storeys high, the upper storey was not to project over the street, and balconies and eaves were not to be made (A. Refik, *İstanbul hayatı, 1553-1591* 58-9). That these prohibitions had to be repeated so often (A. Refik, *op. cit.*, 66; *Medjelle*, i, 1052-4) shows clearly that they were not observed. After great fires it was ordered that houses, especially those adjacent to public buildings and *khān*s, should be constructed of stone or brick (A. Refik, *İstanbul hayatı, 1100-1200*, doc. 34) (yet after earthquakes construction in wood was decreed). Thanks to its cheapness, most of the houses of Istanbul were always built of wood. To limit the danger of fire and to facilitate approach to the city's gates and

landing-stages, orders were issued in 966/1558 to demolish all houses and shops abutting on the walls (an order later re-issued, see *İstanbul hayatı, 1100-1200*, 67), leaving a clear space of 4 *dhirā*ʿ (in 1131/1718, five *dhirā*ʿ, *i.e.*, 3.25 m.; see Oberhummer, Tafel XXII). To conserve water, the construction of new palaces and baths needed the sultan's permission; sometimes indeed the building of baths was forbidden. To prevent overcrowding, the building of "bachelors' quarters" (*bekār odalarî*) (see below) where newcomers would stay was strictly controlled and sometimes forbidden (*Medjelle*, i, 1052).

These regulations were rarely followed. The increase in population from the second half of the 10th/16th century meant an increased demand for housing, so that palaces with extensive gardens were pulled down to be built over with contiguous wooden houses and shanties (A. Refik, *İstanbul hayatı, 1100-1200*, 67-8).

Non-Muslims were subject to severer regulations: they could not build or occupy houses near a Muslim place of worship (*Medjelle*, i, 1071); their houses were not to be more than nine *dhirā*ʾ high or built of freestone, and they could not construct baths (*Medjelle*, i, 1056, 1090); it was forbidden to Muslims to sell houses or building-sites to *dhimmī*s or to non-Muslim foreign residents (*Medjelle*, i, 1072-4) (but a legal device (*ḥīla*) could usually be found to circumvent this). By the code of regulations of 1233/1817, the permitted height of houses for non-Muslims was increased to 12 *dhirā*ʿ, and for Muslims to 14 (in the 5th and 6th centuries A.D. the maximum height permitted in Constantinople had been about 33 m.: Mayer, 81). The old ban on building more than two "storeys" led to the construction of all sorts of "extensions" upwards—*čardak, bālākhāne, takhtapūsh, djihānnümā, čatî-ara* (see the views in M. Lorichs). After the Tanẓīmāt, the height limitations were abolished, for Muslims and non-Muslims alike.

It is very probable that these building restrictions —together with fear of plague—were the principal cause for the settlement of non-Muslims outside the walls, on the northern side of the Golden Horn and along the Bosphorus: as their houses grew in number, in 1160/1747 it was forbidden that non-Muslims should build on empty sites in these areas (A. Refik, *İstanbul hayatı, 1100-1200* 213).

(d). Domestic architecture.

The types of houses in Istanbul can be considered under five heads: (1) "Rooms" (*oda, hudjra*). Houses of one room only were built either detached, in rows, around a court (*muḥawwaṭa*), or in the style of a *khān*; they were often built over a shop. Such houses were usually built by a *waḳf*, to be rented out, and since they were generally occupied by unmarried men who had come to Istanbul in search of employment they were termed *bekār odalarî*. Such "bachelors' quarters" were not encouraged in a *maḥalle*, where only married households were permitted (firman of 1044/1634 in *Medjelle*, i, 1053). Unmarried workmen frequently used a single room in a *khān* or a caravanserai both as a workshop and as living-quarters, a *khān* occupied only by such residents being called *müdjerredler khānî*. In 950/1543 a "room" brought in an annual rent of about 100 *akčes*. In 1083/1672 there were reckoned to be 12,000 *bekār odalarî* in Istanbul (Hezārfenn, *Talkhīṣ*, Paris Ms., f. 13b; for the areas concerned see Evliyā Čelebi, i, 326).

(2). *Maḥalle* houses. Poor craftsmen and people in humble circumstances usually occupied primitive one- or two-storeyed houses of wood or mud-bricks (Ramberti, *apud* Lybyer, 239; Dernschwam, 63; Schweigger, 105; Alberi, iii/I, 393: "Le case delle città sono per la maggior parte di legno e terra"). In less densely populated areas the typical house, as in the towns of Anatolia, was a small wood and brick building, with a courtyard and garden shut off by a wall from the street (see Mayer, 106-12 and bibliography, 381-4; S. Eldem, *Türk evi plân tipleri*, Istanbul 1955); such a house covered about 400 square *arshîn* (A. Refik, *Istanbul hayatı, 1000-1100*, 14) and in the middle of the 10th/16th century cost about 100 gold pieces (*İstanbul vakıfları tahrir defteri*, no. 1346).

(3). Houses with gardens, walled about. The court of some of such houses was divided into two, an inner and an outer court; the residence comprised one house, or more than one, and also perhaps a "room" or more than one; there might also be a belvedere, a privy, a stable, a bakehouse, a bath, a shed, an arbour, a storehouse, a "cool room" (*serdāb*), a mill, quarters for servants or slaves, a hen-coop, a pleasure garden, a well, a fountain, and a *čerāghlîk* (a fire kept constantly burning); most houses had at least a garden, a stable, a bakehouse, a well and a privy (see, as examples, in *İstanbul vakıfları tahrir defteri*, nos. 732, 780, 1037, 1111, 1237, 1648). Larger houses known as *khāne-i kebīr* (*ibid*. no. 132) are less common: an example is the house of Miʿmār Sinān (İ. H. Konyalı, *Mimar Koca Sinan*, İstanbul 1948, 53; description of a 19th-century *ḳonaḳ* in White, iii, 176).

(4). Palaces and villas (*ḳaṣr*). The palaces of statesmen and rich merchants consisted of a large mansion in an extensive court with numerous subsidiary buildings; they are therefore merely a grander version of type (3) above. They usually had two courts, the whole site being surrounded by a high wall (Schweigger, 106) (Sinān Pasha bought up and demolished 300 houses to build his palace; see C. de Villalón, *Viaje de Turquia*, 74). The mansion, divided into *ḥarem* and *selāmlîk*, was usually built of wood and contained numerous rooms (there were 300 rooms in the famous palace of Siyāvush Pasha, cf. *Taʾrīkh-i Ghilmānī*, 66).

In the courts of such palaces there would be, beside kitchens, bakehouses, baths and stables, also a school for the dignitary's *ič oghlanlarî* [see GHULĀM, p. 1090], workshops for the craftsmen employed to supply the numerous household, and even shops (Evliyā Čelebi, i, 322-4) (for the organization of Kara Aḥmed Pasha's palace at Topkapı see *Vakıflar Dergisi*, ii, 88). The villas (*köshk, ḳaṣr*) in such a palace's gardens were monumental specimens of architecture (S. Eldem, *Köşkler*, Istanbul 1969; K. Altan, *Siyavuş Paşa Kasrı*, in *Arkitekt*, v, 268). Palaces built by viziers usually passed on death into the ownership of the sultan, who would present them to princesses or to other dignitaries. It was estimated in the middle of the 11th/17th century that the palaces of members of the royal house and of viziers numbered about 120 (*Taʾrīkh-i Ghilmānī*, 66, 69) and those of other notables and of merchants about 1000 (Hezārfenn, *loc. cit.*; Evliyā Čelebi, i, 322-4). The greatest and most famous palaces were built under Süleymān in the Ayasofya and Süleymāniyye districts (listed in Evliyā, *loc. cit.*).

(5). The villas and *yalî*s of sultans and dignitaries, built outside the land walls of Istanbul (at Khalḳalî, Florya, Dāvūd Pasha), on the northern side of the Golden Horn (at Kara aghač, Pīrī Pasha, Ḳāsîm Pasha, Kāghidkhāne), along the Bosphorus and at Üsküdār, situated in extensive and well-tended gardens and woods, became very numerous, and later formed the nuclei of select residential *maḥalle*s. They served for recreation, as hunting-lodges, and as summer residences, and also as alternative accommo-

dation after a fire or during an epidemic (details in the registers of the *bostāndjï-bashï*, see R. E. Koçu, in *Istanbul Enstitüsü Dergisi*, iv, 39-90; Fatih Libr., Ms Ali Emîrî 1033; for the royal palaces and gardens, the Khāṣṣa Baghčeler Maḥṣūlāt defterleri in the archives of Topkapı and of the Başvekâlet. See further Evliyā Čelebi, i, 391-486; Eremya Čelebi, 34-58; P. Inciciyan, *Istanbul*, tr. H. Andreasyan, Istanbul 1956, 95-113; Melling, *Voyage pittoresque de C.*, Paris 1819; J. von Hammer, *Constantinopolis und der Bosporus*, ii, Pest 1822; M. Rā'if, *Mir'āt-i Istanbul*, Istanbul 1314; T. Gökbilgin, in *İA*, art. "Boğaz-içi"; series of articles by H. Şehsuvaroğlu in the newspaper *Cumhuriyet*, 1947-9). In the 12th/18th century, sultans created new *maḥalle*s by giving or selling sections of their gardens and woods as building sites (*e.g.*, Muṣṭafā III, at Iḥsāniyye and Beğlerbeği).

(e). Fires.

The frequent conflagrations in this thickly populated city, with its narrow streets of houses mostly built of wood, had as great an effect on social and economic life as they did on the physical configuration (for fires in the Byzantine period, see F. W. Unger, *Quellen der byzantinische Kunstgeschichte*, i, Vienna 1879, 74 ff.; Mayer, *op. cit.*, 102). The number of fires was indeed abnormally high: Ergin calculated that in the 53 years between 1853 and 1906 there were 229 fires, with the destruction of 36,000 houses (*Medjelle*, i, 1333). The dates of the greatest fires are: Radjab 977/1569, 27 Ṣafar 1043/2 September 1633, 16 Dhu 'l-Ḳa'de 1070/24 July 1660, 3 Shawwāl 1104/7 June 1693, 18 Sha'bān 1130/17 July 1718, 13 Ramaḍān 1196/22 August 1782, 27 Dhu 'l-Ḥidjdja 1241/2 September 1826, 14 Rabī' II 1249/31 August 1833, 27 Rabī' II 1282/19 September 1865 and 1 Ramaḍān 1336/10 June 1918. (See A. M. Schneider, *Brände in Konstantinopel*, in *BZ*, xli (1941), 382-403; *Medjelle*, i, 1254-1356; M. Cezar, *İstanbul Yangınları*, in *Türk Sanatı Tarihi Araştırmaları ve Incelemeleri*, i (1963), 327-414).

Many of the worst fires began in the Djibali (Djübbe 'Alī) district, burning the whole centre of the city and reaching to the Marmara coast at Kumkapï, Yeñikapï or Langa. Djibali was particularly prone to the risk of fire because of the trades—such as caulking—carried out there, the exposure of the Djibali-Unkapanï valley to the north-east wind and the density of the housing on the slopes up to Fātiḥ (see the views in Lorichs and Le Bruyn). Fires starting here often swept in two lines, via Fātiḥ and Aksarāy to Langa, and via Vefā, Shehzāde-bashï and Lāleli to Yeñikapï. Fires breaking out in the Jewish quarter (Čufut Kapïsï) on the Golden Horn and liable, for the same reasons, to spread would extend in one direction to the walls of the palace and, in another, over Djaghaloghlu, destroying all the houses on the slope up to the Büyük Čarshï. Other districts frequently burnt down are Takhtaḳal'e, the Büyük Čarshï area, and the Fener-Balat region.

Although the reports of the damage caused are frequently exaggerated, yet they do indicate that there was very substantial damage. It was said that 20,000 houses were destroyed in the fire of 1043/1633 (both Kātib Čelebi in his *Fedhleke* and Knolles (*Generall historie*, London 1631, 47) speak of "a third of the city"); two thirds of the city in 1070/1660, with 4,000 deaths; 18 *djāmi'*s, 19 *mesdjid*s, 2547 houses and 1146 shops in 1104/1693 (Cezar, 344); one eighth of the city in 1142/1729 (Cezar, 353-5); two-thirds of the city in 1169/1756 (Mayer, 102); 20,000 houses in 1196/1782; and half the city in 1249/1833. More reliable figures are available for the second half of the 19th century: in the 30 odd years between 1854 and 1885 fires—minor as well as major—destroyed 27,000 houses and the single Fātiḥ fire of 1918 destroyed 7,500.

In the fires at Takhtaḳal'e and round the Čarshï stock and goods of great value were often lost. It was estimated that the goods lost in the Mïṣr Čarshïsï alone in the fire of 1102/1690 were worth three million *ghuru sh*(c. 2 million gold pieces); after a fire in the Bedestān in 922/1516 many merchants went bankrupt.

Fires caused various political, social and economic crises in the life of Istanbul. Many fires were deliberately started by dissident Janissaries and *'adjemī-oghlanlarï*, abetted by the riffraff of the city. In palace circles fires caused considerable anxiety as being a sign of unrest in the soldiery and in the lower classes (Djewdet, xi, 4), and might be a factor in the dismissal of leading government figures. It was often reported that the Janissaries, among whose duties was fire-fighting, had in fact encouraged the spread of fires (e.g., in 977/1569: 'Ālī, *Künh al-akhbār*, Ms.; Silāḥdār, ii, 349); and the Grand Vizier, the agha of the Janissaries, the *bostāndjï-bashï* and the *djebedji-bashï* would in person direct operations in fighting a large fire, while the sultan often felt it necessary to put in an appearance in order to sustain discipline and morale. Looting by troops and the mob could not be prevented (for looters who enriched themselves, see Cezar, 330, n. 6). Those made homeless would take refuge, with the goods they had managed to save, in mosque-courtyards, *medrese*s, and open spaces such as Langa Bostānï, but even here sometimes they could not escape. After a fire there would be shortages both of food and of building materials, with consequent rises in prices, compelling numbers of people to move away to neighbouring towns (*e.g.*, after the fire of 1196/1782, to Čorlu, Edirne, Izmīd, etc.; see Cezar, 365). Even buildings of stone, though not destroyed, would be made uninhabitable, involving the government in heavy expenditure and obliging *waḳf*s to draw on their reserve funds. A sultan would often instruct notables and wealthy individuals to undertake the repair of public buildings. In the period of decline, the poor could not be prevented from erecting shanties on the site of a fire, which thus was never restored to its former order; this, and the principle of *waḳf*s with "two rents" (*idjāratayn*: see WAḲF), which led to the erection of tumble-down booths around a *waḳf*, meant that in the 19th century Istanbul looked more ramshackle and neglected than it had ever done.

Fire-fighting was the responsibility of the Janissaries, the *Bostāndjï*s, the *Djebedji*s, and also, in return for exemption from certain taxes, the city's water-carriers and the guild of *baltadjï*s. After 1130/1718, fire-engines with pumps, introduced by a French convert named David, were recognized to be of great value (Rāshid, v, 306; Küčük-čelebi-zāde 'Āṣim, 255), and "fire-brigades" were formed: a unit of *tulumbadjï*s attached to the Janissaries in 1132/1719, *tulumbadjï*s for each *maḥalle* in 1285/1868, and a regular fire-brigade in 1290/1873; fire-insurance began only in 1890 (*Medjelle*, i, 1170-1219).

(f). Earthquakes too had their effect on the city's general appearance (Mayer, 98-101; Istanbul is one of the cities most subject to earthquake in the world, suffering 66 shocks between 1711 and 1894). Besides the great earthquakes of 1099/1688, 1180/1766 and 1894 (Cezar, 380-92), there was the major disaster beginning on 6 Djumādā I 915/22 August 1509, called by the chroniclers "Küčük Ḳïyāmet", when the shocks continued for weeks. The walls were seriously

damaged, all the minarets collapsed, and 109 mosques and 1070 houses were destroyed; estimates of the killed range from 5000 to 13,000. Many Byzantine buildings (*e.g.*, ʿIsā Kapîsî) were badly damaged. The authorities took emergency action to carry out the re-building, one person and a *ʿawāriḍ* [*q.v.*] of 22 *akče* being levied from each household in Istanbul, and workmen being conscripted from outside (37,000 from Anadolu and 29,000 from Rūmeli), so that the work was quickly completed (Cezar, 383).

vii. — The Inhabitants: Re-Population; Religious Minorities; the Military; Epidemics; Population Statistics.

(a) Re-population.

Throughout his reign, one of Meḥemmed II's main preoccupations was to re-populate Istanbul. Various methods were employed, particularly and especially in the early years, the deportation [see SÜRGÜN] of households from every part of his dominions; later, the useful elements of newly-conquered cities—the nobility, craftsmen and merchants—were transferred to Istanbul; and, always, immigrants of whatever religion or race were encouraged to come from anywhere in the world (see H. İnalcık, in *Dumbarton Oaks Papers*, xxiii-xxiv, 237-49).

The census of 860/1455 shows that many of the Muslim immigrants brought from Kodja-eli, Sarukhan, Aydîn, Balîkesir, etc. had fled *en masse*, to be replaced (*e.g.*) in the *maḥalle*s of Kir Nikola and Kir Martas by immigrants from Tekirdagh and Čorlu. One of the reasons for this "flight", besides the general difficulty of making a living in a ruined city, is certainly the sultan's attempt to levy *muḳāṭaʿa* on the immigrants' houses, as related by ʿĀshiḳpashazāde (H. İnalcık, *op. cit.*, 242-3). In about 860/1455 a numerous group of Jewish deportees from Rūmeli was settled in the city: 42 families from Izdin (Lamia) in houses at Samatya abandoned by Muslims from Balîkesir; 38 families from Filibe in houses in the *maḥalle* of Top Yîkughî abandoned by immigrants from Paphlagonia and Tekirdagh; others came from Edirne, Niğbolu, Trikkala, etc.

Among the Muslim immigrants there were tradesfolk (tailors, blacksmiths, etc.) and many men of religion, including adherents of dervish-orders. Soldiers (Janissaries, Doghandjîs, etc.) often became householders in various *maḥalle*s; the *ʿazeb*s of the navy settled together in *ʿAzebler maḥallesi*. Groups of immigrants usually settled together in one *maḥallesi* or monastery (though occasionally Greeks, Jews and Muslims are found living in the same building; and in 860/1455 there were at Samatya 42 Jewish, 14 Greek, and 13 Muslim families). The register shows that at this date the *maḥalle*s which it covers were sparsely populated, with only a few shops, the churches and monasteries deserted, and the houses empty and ruined. Soon afterwards, it seems, the sultan took up permanent residence in the now-completed palace and began the active promotion of building activity, of economic prosperity, and of new settlement. In 863/1459 he commanded all the Greeks who had left the city before or after the conquest to return (İnalcık, *op. cit.*, 237-8). It was in these years too that, with the aim of making his capital the centre of a world-wide empire, he appointed an Orthodox patriarch (6 January 1454), an Armenian patriarch (865/1461) and a chief rabbi (see below); and in line with old Islamic tradition he encouraged the settlement of craftsmen and merchants.

Enslaved peasants were settled, as the sultan's serfs (*khāṣṣ*, *ḳul*, *ortaḳči ḳul*), in the villages round about in order to restore their prosperity. In the 10th/16th century, by now being ordinary *raʿāyā*, they would form an important element of the population of the so-called *khāṣṣ-köy*s (for which see Ö. L. Barkan, in *İkt. Fak. Mecm.*, i (1940), 29 ff.). In 904/1498 of the 163 villages in the *Ḳaḍā* of Eyyūb (which was known as *Khāṣṣlar Ḳaḍāsî*), 110 contained about 2000 adult *khāṣṣ ḳul* (the rest of the inhabitants being ordinary *raʿāyā* or *sürgün*). The *khāṣṣ köy*s covered the area from the two Čekmedjes and Bakîr-köy to the Black Sea coast and to the Bosphorus and Beshiktash (but there were no *khāṣṣ kul*s actually in Istanbul).

The deportations from conquered cities are shown in the following list (see A. M. Schneider, in *Belleten*, xvi/61, 41-3; İnalcık, *op. cit.*, 237-8; Jorga, *Byzance après Byzance*, Bucharest 1972, 48-62):

863/1459 Armenian and Greek merchants from the two Fočas and Amasra
864/1460 Greeks from the Morea, Thasos, Lemnos, Imbros, Samothrace
865/1461 Greeks from Trebizond
866/1462 Greeks from Mytilene
867/1463 Greeks from Argos
873/1468-879/1474 Muslims, Greeks and Armenians from Konya, Larenda, Aksaray, Eregli
875/1470 Greeks from Euboea
880/1475 Armenians, Greeks and Latins from Kaffa.

The 1542 Greek households whose *djizya* was made over by Meḥemmed II to his *waḳf*s (Başvekâlet arşivi, Tapu defteri 240) are listed in "*djemāʿat*s" (of "people from Foča", "from Midilli", etc.), the most numerous of these being *djemāʿat-i Rūmīyān-i Midillüyān*. By the middle of the 10th/16th century these *djemāʿat*s were scattered over the various Greek *maḥalle*s of Istanbul and Ghalaṭa. The same register shows 777 households of Armenians in 24 *djemāʿat*s (from Larende, Konya, Sivas, Akshehir, etc.) and 1490 Jewish households (from Lamia, Salonica, Euboea, etc.).

*Waḳfiyya*s of Meḥemmed II show the Baghčekapî-Emînönü region almost exclusively inhabited by Jews, the *maḥalle* of Fīl-damî inhabited by Greeks, Jews and Muslims, and *maḥalle*s along the harbour (Khalīl Pasha Burghosî, ʿAdjemoghlu, Ḥādjdjī Khalīl) mainly inhabited by Jews. They give also the names of Muslim immigrants from Karaman, Ankara, Iznīḳ, etc., and of Greeks from Trebizond and Mytilene.

Intense voluntary settlement in Istanbul began later, when the first measures of recovery had been taken and the city started to prosper. In spite of the deaths by plague in 871/1466, a census of 882/1477 (Topkapı Sarayı Archives, D 9524) shows that Istanbul was already then as populous as any other Mediterranean city:

i. Istanbul

	households	= %
Muslims	8951	60
Greek Orthodox	3151	21.5
Jews	1647	11
Kaffans	267	2
Armenians of Istanbul	372	2.6
Armenians and Greeks from Karaman	384	2.7
Gypsies	31	.2
	14,803	

ii. Ghalaṭa

	households	= %
Muslims	535	35
Greek Orthodox	592	39
Europeans	332	22
Armenians	62	4
	1521	

Grand total: 16,324.

This total does not include soldiers, *medrese*-students, or slaves. Barkan, estimating these to amount to one-fifth of the population and taking five persons to the household, considers the total population to have numbered about 100,000 (*JESHO*, i/I, 21; Schneider, *op. cit.*, p. 44, estimates 60-70,000; Ayverdi's estimate, *Istanbul mahalleleri*, p. 82, is 167-175,000.

Later sultans continued the policy of settling deportees from newly conquered regions. Bāyezīd II settled 500 households from Akkerman at Silivri Kapïsï (Schneider, p. 44; the *djizya*-registers of 894/1489 show the settlers from Akkerman as 670 households, see Barkan, in *Belgeler*, i/I, 38, table 2). The Ottomans' readiness to welcome Jews expelled from Spain, Portugal and Southern Italy in 1492 and the following years led to an increase in the Jewish population of the city (estimated at 36,000 by von Harff, p. 244). Selīm I brought 200 households of merchants and craftsmen from Tabrīz (Luṭfī Pasha, *Taʾrīkh*, 237) and 500 from Cairo (some of whom were permitted to return by Süleymān). After his capture of Belgrade, Süleymān settled Christians and Jews near Samatya Kapïsï (later Belghrad Kapïsï) to form the Belghrad *maḥallesi* (Hammer-Purgstall, iii, 14; Uzunçarşılı, *Osm. Tarihi*, ii/2, 312; see also U. Heyd in *Oriens*, vi, 306). One other immigration deserving notice is that of the Moriscos from Spain after 978/1570 (referred to in Ottoman records as *Endülüslü* or *Müdedjdjel* (read *müdedjdjen*; see Dozy, Suppl., *s.v.* and MUDEJARES) *ʿArablarï* (see A. Hess, *The Moriscos*, in *Amer. Hist. Rev.*, lxxxiv/1); these settled together in Ghalaṭa around the Church of S. Paolo and S. Domenico (later called ʿArab Djāmiʿi; see, for the date, Belin, *Histoire de la Latinité de Constantinople*, Paris 1894, 217); they stirred up much anti-Christian feeling in Istanbul (Charrière, iii, 787; Hasluck, ii, 727).

The Ottoman authorities seem to have taken little account of the damage suffered by the cities subjected to deportations; the importance attached to centralization, and the conscious determination to make Istanbul the principal city not merely of the empire but of the world and the centre of world commerce overrode other considerations (see T. Stoianovich, *The conquering Balkan Orthodox Merchant*, in *JEH*, xx, at p. 239).

The deportees enjoyed a special status. They were exempt from *ʿawāriḍ* for a certain period, but could not leave the city without the permission of the *Subashï*. For some time after their arrival—either because of their own inclinations or because of their special status — each group was treated as a distinct *djemāʿat*, living together and named after their native region. Hence in the various censuses of the city new arrivals are separately listed as *djemāʿats*, not included in the residents of *maḥalles*. Thus the immigrants from Kaffa and Karaman are *djemāʿats* in the census of 882/1477, but have been absorbed in the general Christian population by 1489/894; in that year only the immigrants from Akkerman are listed as a *djemāʿat*. In the 11th/17th century there are listed besides 292 *maḥalles*, 12 Muslim *djemāʿats*, referred to as "of Tokat, of Ankara, of Bursa", who are presumably arrivals from those places (M. Aktepe, in *İstanbul Enstitüsü Dergisi*, xi, 116-24). The *djemāʿat* is either absorbed into *maḥalles* of its co-religionists or forms a new *maḥalle* under a different name (usually that of the founder of the *maḥalle*'s mosque). This process of assimilation worked most quickly on the Muslims, and most slowly on the Jews (U. Heyd, in *Oriens*, vi, 305-14).

In the first half of the 10th/16th century the population increased considerably, mainly for economic reasons. Registers of *waḳf*s show that many merchants and craftsmen immigrated from Edirne, Bursa, Ankara, Konya, Aleppo, Damascus, Cairo and even (though they were not numerous) from Persia; but the chief increase was caused by the immigration of young men or of whole peasant families (termed *ev-göčü*) from the poorer regions of the empire who had left their holdings to work in the city. Coming from central and eastern Anatolia, and from Rūmeli (especially Albania), they worked as porters, water-carriers, boatmen, bath-attendants, hawkers and labourers. Some returned home after saving a little money, but the majority stayed on.

In the 16th century the population of Ottoman cities in general increased by 80% (Barkan, *op. cit.*, 25-31), and Istanbul probably showed a still higher percentage. The authorities began to be aware of the problem of over-population in the middle of the century (yet as late as 935/1528 the laws encouraging immigration and granting exemptions to Christian settlers were still in force; see Barkan, *Kanunlar*, 24). The reasons they found for the movement from the countryside into Istanbul were these (see A. Refik, *İstanbul hayatı, 1553-1591*, 145; idem, *İstanbul hayatı, 1100-1200*, 110, 131, 199; Rāshid, iv, 120; *Medjelle*, i, 355; M. Aktepe, in *TD*, ix/13, 1-30) (1) the better facilities for making a living; (2) the absence of *raʿiyyet* taxes [see ČIFT RESMI]; and (3) freedom from exposure to the illegal *tekālīf-i shāḳḳa* and other exactions levied at all periods by soldiers and officials and in later times by *aʿyān* and *derebeğis* (see İnalcik, *Adâletnâmeler*, in *Belgeler*, ii/3-4). These peasant immigrants built houses for themselves in the outlying areas of the city (chiefly Ḳāsïm Pasha and Eyyūb; see A. Refik, *İstanbul hayatı, 1553-91*, 140) or lodged within the city in *bekār odalarï* or *bekār khānlarï* (see above). When the provinces were suffering abnormal dearth or disorder, the extent of the movement into Istanbul seriously alarmed the authorities. During the Djelālī disturbances of 1005/1596-1019/1610 many thousands of families fled to Istanbul (40,000 (?) families of Armenians alone, see *Polanyalı Simeon'un Seyahatnâmesi*, tr. H. Andreasyan, Istanbul 1964, p. 4; most or many of these were later sent back to their homes).

Not only was life more secure in Istanbul, no-one need starve. The religious foundations naturally attracted immigrants, and thousands lived on doles of food from a hospice (the hospice of Fātiḥ alone fed a thousand people a day) or on a minute income from a *waḳf* as a *medrese* student or as a "bedesman" in a mosque or at a tomb (see Ramberti, *apud* Lybyer, 240; Barkan, in *IFM*, xxiii, 281). A foreign visitor observed that if it were not for the hospices the inhabitants would be eating one another (Dernschwam, 67). When in 1026/1617, as a result of the disturbances created by *medrese* students (*sukhte*) in Anatolia, it was decreed that *medrese* education should cease except in a few principal cities and the provincial hospices were closed (Ç. Uluçay, *Saruhanda*

eşkiyalık, 24), the students flocked to Istanbul, where they offered a fertile soil for the incitements of bigoted preachers (the number of these students ranged at different times from 5-8,000). Beggars and dervishes were always a problem: particularly in Ramaḍān thousands of them came to Istanbul to throng the streets (A. Refik, *İstanbul hayatı, 1553-91*, 139); and under Süleymān measures of control were taken at Alexandria and Damietta to prevent Egyptian beggars from travelling to Istanbul (Mühimme Defteri, no. 16, p. 193).

Among the floating population of the city were, for example, *ʿazeb* troops coming from the provinces to serve in the fleet, deputations from various districts come to carry out local business, to lodge complaints about their local authorities or to appeal against taxes, and bodies of workmen brought in to build ships or do construction work for the state (Barkan, in *Annales*, xvii (1962), 1098, 1105).

The authorities considered that this over-population caused three principal problems: (1) the water-supply was becoming inadequate, it was more difficult to ensure the supply of food, and the cost of living was rising (Selānikī, 3; *Medjelle*, i, 1052); (2) security was breaking down, with an increase in robbery and murder (A. Refik, *İstanbul hayatı, 1553-91*, 145), and frequent fires and lootings; (3) as the number of unemployed vagrants increased in Istanbul, tax revenue from the provinces declined. From time to time therefore, and especially after the crisis of a riot, a fire or a food-shortage, the authorities would take such measures as these: (1) Since unmarried labourers were the chief cause of the troubles, all those who had come to Istanbul within a prescribed period (five years, ten years) were rounded up and expelled; similarly beggars were occasionally rounded up and set to work in nearby towns (A. Refik, *op. cit.*, 145; idem, *İstanbul hayatı, 1100-1200*, 110, 131, 194, 199). Since Albanian vagrants had played a main part in the rebellion of Patrona Khalīl in 1143/1730, stringent repressive measures were taken against them (A. Refik, *1100-1200*, 110-12). In 1829, during a food-shortage, it was decided to expel unmarried men who had come to the city within the past ten years, and 4000 were removed (Luṭfī, ii, 63). (2) Anyone proposing to come to Istanbul for a court case had to receive first a certificate of permission from his local *ḳāḍī*, and deputations were not to be too numerous. (3) Check points on immigrants, particularly on the *ev-göčü*, were set up on the roads and at the entrances to the city (A. Refik, *op. cit.*, 80-105). (4) The inhabitants of a *maḥalle* were ordered to stand surety for one another (A. Refik, *op. cit.*, 145) and *imāms* were instructed to keep strangers out A. Refik, *op. cit.*, 139-40). (5) No one was admitted to a *khān* or to a *bekār odasī* unless he had a surety. (6) The construction of new "bachelors' quarters" was forbidden.

But it was all in vain, as effective control was impossible; and in later years the defeats and losses of territory in Europe brought new waves of refugees to Istanbul (see A. Refik, *1100-1200*, 80-105), the last being the great migration of 1912 during the Balkan Wars.

(b) Non-Muslims.

The non-Muslims of Istanbul were in 1001/1592 classified in six groups: Greeks (*Rūm*), Armenians, Jews, Ḳaramānlī, Franks of Ghalaṭa and Greeks of Ghalaṭa (A. Refik, *İstanbul hayatı, 1000-1100*, 4). Only the Orthodox and the Armenian churches and the Jewish rabbinate were officially recognized.

The only Roman Catholic group within the walls were those families brought from Kaffa in 880/1475 (numbering, with the Armenians, 267), who were granted the churches of St. Nicholas and St. Mary at Edirne Kapīsī. Over the years they dispersed or moved to Ghalaṭa, and the churches were converted to mosques, to be called Kefeli Djāmiʿi (in 1038/1629) and Odalar Djāmiʿi (in 1050/1640) respectively (Belin, *op. cit.*, 112-19). Thereafter Catholic churches were found only in Ghalaṭa, protected by the Capitulations, and "Franks" were permitted to live only in Ghalaṭa: when some of them set up in business as doctors and drapers at Baghče Kapī and on Dīvān Yolu in the early 19th century, the sultan ordered their premises to be closed (*Medjelle*, i, 649).

The areas particularly inhabited by Greeks and Armenians were the Marmara coast of the city, the Fener-Balat district, and the Rūmeli side of the Bosphorus. Non-Muslims usually formed distinct *maḥalles*, each with its own church or synagogue; Muslims were reluctant to allow non-Muslims to settle among them, finding it repugnant to have to observe their practices (see A. Refik, *İstanbul hayatı, 1553-1591*, 46, 48, 50, 52; *1000-1100*, 29; *1100-1200*, 10, 88).

Occasionally popular feeling among the Muslim populace whould show that it wanted Istanbul to be an exclusively Muslim city, and the sultans were obliged to re-proclaim and to enforce the various regulations and restrictions imposed on *dhimmīs* (distinctive dress: see Djewdet, vii, 277; *Medjelle*, i, 502; A. Refik, *İstanbul hayatı, 1593-91* 47, 51; *1000-1100*, 20, 52; *1100-1299*, 182; not to ride horses or employ slaves: idem, *1553-91*, 43, 50; demolition of churches improperly built: idem, *1553-91*, 44, 45; *1100-1200*, 81, 139; not to sell wine: idem, *900-1000*, 49). Mistrust of and hostility to non-Muslims was brought to the surface by various incidents: the question of the occupation of *mīrī* houses under Meḥemmed II (İnalcık, in *Dumbarton Oaks Papers*, 240-9), fear of an attack by a Christian fleet (in 944/1537, 979/1571, 1066/1655), Austrian and Russian attacks after 1094/1683, and the Greek revolt of 1821. Such tensions, together with fires and the building of mosques near non-Muslim *maḥalles*, encouraged non-Muslims to move away and settle in the outlying *maḥalles* along the Marmara Coast and the Golden Horn and near the walls (A. Refik, *1000-1100*, 53-4).

On the other hand, Muslims and non-Muslim tradesmen and artisans, whose activities were controlled by the same *ḥisba* regulations, worked side by side in the bazaars; protection of non-Muslims was in the financial interest of the treasury and of the state dignitaries; and above all, the authorities appreciated their obligation to observe the tolerance prescribed by Islam. The government would therefore intervene to prevent attacks on non-Muslims by *medrese*-students, *ʿadjemī-oghlanlarī* or the mob (Dernschwam, 116; Charrière, iii, 262; A. Refik, *Rāfiḍīlik*, in *Edeb. Fak. Medjm.*, ix/2, doc. 11). The non-Muslims, particularly the Armenians from Anatolia, were strongly influenced by Turkish culture. Although each community used its own language, the common language of Istanbul was Turkish, and for motives of political or social prestige non-Muslims would try to live and dress like Turks. Conversely, however, the Turkish of Istanbul and its folklore were influenced by the minorities (see W. Hasluck, *Christianity and Islam under the Sultans*, Oxford 1929; M. Halit Bayrı, *İstanbul Folklore*, repr. Istanbul 1972; idem, *Halk âdetleri ve inanmaları*, Istanbul 1940; R. E. Koçu, *İstanbul Ansiklopedisi, passim*).

The Greek Orthodox, the Armenians and the Jews

were regarded as separate *millet*s or *ṭā'ife*s, under the authority of the Greek patriarch, the Armenian patriach and the chief rabbi respectively, and enjoyed autonomy in their internal affairs [see MILLET; PAṬRĪK]. The Greek patriarch and the *Rūm milleti ru'esāsī* took precedence over the two other groups of dignitaries (A. Refik, *1100-1200*, 28). The three religious leaders were elected by their communities but their authority derived from their *berāt*s (which had to be obtained, by payment of a "*pīshkesh*") granted by the sultan. The community could petition the sultan to dismiss its leader (C. Orhonlu, *Telhisler*, Istanbul 1970, 161) and the leader could ask the sultan to give effect to his commands (for the Greek patriarchate, see S. Runciman, *The Great Church in captivity*, Cambridge 1968; *Rūm Patrīkliği niẓāmātī*, in *Düstūr*, i, 902-38).

Until the 12th/18th century there were some 40 Greek churches in Istanbul, only three of which had existed before the conquest (listed in Schneider, *Byzanz*, 38-49). When the question was raised how it was possible for these churches to exist in a city taken by force, the fiction of a willing surrender was accepted to legalize the situation (see İnalcık, in *Dumbarton Oaks Papers*, 233; Runciman, 153, 157, 199, 204; for the Jews, see A. Refik, *1100-1200*, 13).

The patriarchate was obliged to make itself responsible for various civil matters relating to the Greeks of the city, and its duties increased as the treasury resorted more and more to the collection of taxes from the community *en bloc* (*maḳṭū'*). The patriarchate's bureaucracy therefore became increasingly influential (for the influence of the Logothete, see A. Refik, *1100-1200*, 13).

Economically the Greeks were far better off than they had been in the last decades of the Byzantine Empire (Jorga, *Byzance après Byzance*, repr. Bucharest 1971; T. Stoianovich, *op. cit.*; *The Greek Merchant Marine, 1453-1850*, ed. S. A. Papadopoulos, Athens 1972; A. E. Vacalopoulos, *Origins of the Greek Nation*, 1970-72; İnalcık, in *Isl.*, xliii, 153-5), and were satisfied with their lot (Runciman, pp. 180, 394). They held an important share of *iltizām* state contracts, they had supplanted the Italians in maritime trade in the Black Sea and the Aegean, and they controlled a large part of the city's food trade. In Fener, the new seat of the patriarchate, there grew up a genuine Greek aristocracy of eleven families made rich by trade and by *iltizām*-contracts, who claimed descent from the great families of the Byzantine Empire; they increased their power and influence by supplying the sultans with personal physicians and commercial agents and by filling the posts of Chief Interpreter of the Dīvān and of the Fleet in the 11th/17th century; and from them later the hospodars of Moldavia and Wallachia were chosen (Jorga, *op. cit.*, 226-47; J. Gottwald, *Phanariotische Studien*, in *Leipziger Vierteljahrschr: Südosteuropa*, v (1941), 1-58). In the census of 1833 the *Rūm millet* numbered 50,343 males in Greater Istanbul.

A group of Orthodox Christians deported from Ḳaraman, Turkish-speaking and ignorant of Greek (Dernschwam, 52), were under the authority of the Greek patriarch but preserved the character of a separate *djemā'at*. In the middle of the 10th/16th century they were settled near Yediḳule, but a century or more later Eremya Čelebi reported them as living at Narllkapı, inside and outside the city wall. They were skilled goldsmiths and embroiderers, and were rich (N. de Nicolay, *Navigations*. . . Anvers 1577, 239).

The Armenians first elected a patriarch, on the sultan's orders, in 1461. He made his residence the Church of Surp Kevork (Sulumanastlr; F. Babinger, *Ein Besitzstreit um Sulu Manastir* . . . , in *Festschrift für Jan Rypka*, Prague 1956, 29-37) at Samatya, where the most important Armenian community then dwelt (and where later Eremya Čelebi (p. 3) mentions over a thousand Armenian families living alongside Greeks). In the 11th/17th century the Armenians were most numerous at Kumkapl, and in 1051/1641 the seat of the patriarchate was transferred here, to the Church of Surp Asduadzadzin (H. Andreasyan, notes to Eremya Čelebi, pp. 87-90). The Armenians were concentrated particularly at Yeñikapl, Kumkapl, Balat and Topkapl. Many of the Armenian families of Ghalaṭa had been settled there since Genoese times. There were Armenians living among Jews at Beshiktash, Kuručeshme and Ortaköy (Eremya Čelebi, 43-52). In the 11th/17th century the Armenians controlled the silk trade between Persia, Turkey and Italy [see ḤARĪR, 214], and many of them made fortunes from *iltizām*-contracts and banking (Y. Çark, *Türk Devleti hizmetinde Ermeniler*, Istanbul 1953). From the early 19th century they ran the mint and came to control the state finances (see Djewdet, xi, 28: White, iii, 188, 287). Attempts by the banking families to control the patriarchate and the Armenian tradesfolk led to dissensions in the community (H. G. O. Dwight, *Christianity in Turkey*, London 1854, 131-2). Earlier, the activity of Catholic missionaries had aroused dissensions, which prompted vigorous action by the Porte after 1696/1108 (A. Refik, *İstanbul hayatı, 1100-1200*, 21, 32, 35, 160; Djewdet, ii, 93; xi, 8, 34); yet later a Catholic (Uniate) community was established composed particularly of the wealthier and educated Armenians: according to the census of 1826 (Luṭfī, 275) they numbered about a thousand (L. Arpee, *The Armenian awakening . . 1820-1860*, Chicago 1909). In the census of 1833 the Armenian *millet* in Greater Istanbul numbered 48,099 males.

The Jews of Istanbul, numbering 1647 households at the end of the reign of Meḥemmed II (see above), consisted of the following main groups: those that had survived the conquest; Karaites brought from Edirne and settled in the harbour area; Rabbanite and Karaite communities later brought, usually by force, from various towns of Anatolia and Rūmeli where they had been living, known as Romaniots, since Byzantine times (see Ankori, *Karaites in Byzantium*, New York 1959, 140); the *djizya* registers for the *waḳf*s of Meḥemmed II (Başvekâlet Arşivi, Tapu defteri no. 240 and no. 210) give the numbers and original homes of each. It seems that Meḥemmed II granted *amān* to the Jews living in Istanbul at the conquest (see Ankori, *op. cit.*, 59-64) and left them in their homes (for an alleged agreement, see Schneider, *in Belleten*, xvi/61, 40; Heyd, p. 305; A. Refik, *1100-1200*, 11). A *djizya*-register (Tapu defteri no. 240, 10) notes them as numbering 116 families. As a result of Rabbi Isaac Sarfati's letter urging the Jews of Europe to settle in Ottoman territory, some families migrated from Germany, Austria and Hungary (H. Graetz, *Gesch. der Juden*, Leipzig 1881, viii, 214; Heyd, 306); but the register just cited notes the *djemā'at-i Eskinas-i Alaman* as numbering only 26 families. By 894/1489 the number of Jewish households had risen to a total of 2027.

Jews settling in Istanbul were organized in *djemā'at*s, each with its own synagogue, as a spiritual and administrative unit (A. Galanté, i, 75, 99-101). In the middle of the 10th/16th century there were 40-44 synagogues and *djemā'at*s (Heyd, 303;

Dernschwam, 107-11 [42 schools, and further important details; total Jewish population, 15,035]). In 959/1552 the Marranos settled in Istanbul under the sultan's protection, and the Marrano banking family of Mendès acquired a dominating position in the state finances and in commerce with Europe (see İnalcık, *Capital formation*, *JEH*, xxix, 121-3; S. Schwarzfuchs, *Annales*, xii, 1957, 112-18). Jews from Spain and Italy brought various new techniques with them (Ramberti, 241; Villalón, 116; Dernschwam, 111).

The Romaniot, Sephardic and Karaite communities retained their separate identities until the 11th/17th century; but as a result of the changes of residence caused by the fires of 1043/1633 and 1071/1660 the communities became mixed (Heyd, 313) and finally there was only a single community; the Sephardim, being economically much the strongest, assumed responsibility first for the Ashkenazim and then for the Romaniots. Already in 990/1582 the three communities made a joint application to the sultan to open a new cemetery at Khāṣṣköy (A. Refik, 53). The Jews of Khāṣṣköy became very numerous (Evliyā Čelebi, i, 413). In 1044/1634 there were in Istanbul 1255 Jewish *ʿawāriḍ-khānesi* (Aktepe, 110) and at the end of that century 5000 Jews paying *djizya* (for their *maḥalle*s, see Heyd, 309-12).

When construction of the Vālide Djāmiʿi was begun (1006/1597), the Jews of Emīnöñü (about 100 houses, see Eremya Čelebi, p. 164) were transferred to Khāṣṣköy (Evliyā Čelebi, i, 413-4). In 1139/1727 Jews living outside the Balïk pāzārï gate near the mosque were ordered to sell their properties to Muslims and move to other Jewish *maḥalle*s (A. Refik, *1100-1200* 88-9). Khāṣṣköy became hereafter the main residential centre for the Jews of Istanbul (Galanté, 54). In the 19th century the Jews were estimated to number 39,000, in 12,000 households (White, ii, 230; official figures in 1833, 1,413 males; cf. L. A. Frankl, *Nach Jerusalem*, Leipzig 1858-60, 194-5, whose estimates are supported by the 1927 census figure of 39,199).

Individual conversions to Islam were frequent, new converts being particularly zealous to promote conversion (Villalón, 72; Dernschwam, 111). The Dīvān supplied funds (*nev-müslim akčasï*) to provide the convert with new clothes, and he was paraded on horseback through the streets. But the principle of abstaining from forced conversion was carefully observed, and the authorities appear to have taken little interest in promoting conversions. One example of a mass conversion is that of the Armenian gipsies at Topkapï (Eremya Čelebi, 23). Muslim men often married non-Muslim wives (this was regarded as commendable), and this led to much conversion. Slaves usually embraced Islam. Not only were there, as a result of the *ghulām* [*q.v.*] system, numerous slaves in the palace and in the houses of great men; anyone of any means owned one or several slaves for various domestic duties. To own slaves was a profitable investment: slaves or freedmen (*āzādlu*, *ʿatīḳ*, *muʿtaḳ*) were used also as commercial agents or as an industrial work-force, and were often hired out. The principle of *mukātaba* [*q.v.*] was common (for the treatment of slaves see esp. Villalón, 56 f.; Dernschwam, 111, 121, 129, 140-2, 161).

(c) The *ʿaskerī* class.

Since they paid no taxes, the personnel of the palace and the *ḳapï-ḳulu* troops do not figure in the various registers providing statistics for the population of Istanbul; but in numbers and in view of their duties, they played an important part in the life of the city.

Date	Palace personnel	Ḳapï Ḳulu troops	Fleet and arsenal	Total
880/1475(1)	12,800		?	12,800
920/1514(2)	3,742	16,643	?	20,385
933/1526(3)	11,457	12,689	?	24,146
1018/1609(4)	12.971	77,523	2,364	92,858
1080/1669(5)	c. 19 000	c. 80,000	1,003	c. 100,000

(Sources: (1) Iacopo de Promontorio-de Campis, ed. Babinger, Munich 1957, 48; (2) Barkan, *IFM*, xv, 312; (3) Barkan, *IFM*, xv, 300; (4) ʿAynī ʿAlī, *Risāle*, Istanbul 1280, 82-98; (5) Barkan, *IFM* xvii, 216, 227).

The above figures show that the number of *ḳapï-ḳulu* increased in the century after 920/1514 by about five times: this increase was mainly in the members of the Janissaries, and occurred particularly between 1001/1593 and 1015/1606 with the demand for infantrymen (see *CH Isl.*, i, 344-50); only 15,000 Janissaries took part in the campaign of 1006/1597, but there were 37,000 Janissaries by 1018/1609. Some of the Janissaries lived in Istanbul, some were stationed in provincial towns and on the frontiers, of 49,500 Janissaries, 20,468 were in Istanbul in 1076/1665 and 37,094 in 1080/1669 (*IFM*, xvii, 216). The Köprülüs attempted to reduce their number, so that in 1083/1672 the Janissaries numbered only 18,150 and the total *ḳapï-ḳulu* force only 34,825 (Silāḥdār, i, 499, 580). In the 12th/18th century, the Janissaries numbered 40,000, but it was estimated that throughout the empire 160,000 men were, or claimed to be, Janissaries (the distinction must be borne in mind, for many individuals who entered the corps to obtain its privileges were not effective troops). Conversely, as early as the reign of Meḥemmed II some Janissaries had been absorbed in the general population as tradesmen and artisans, and the numbers of these increased, for with depreciation a Janissary's daily pay, never more than eight *akče*s, became practically worthless, so that more and more of them became *eṣnāf*. At the end of the 10th/16th century the authorities had great difficulty in mobilizing these "trading" Janissaries for service (Selānikī, *passim*; Orhonlu, *Telhisler*, docs. 15, 19). In the 11th/17th century we encounter in Istanbul (as elsewhere) many individuals called "Janissary" (*rādjil*, *beshe*) or "*sipāhī*" (*djündī*) who are in fact very wealthy and influential. The penetration of Janissaries and other *ḳapï-ḳulu* into the economic life of the city was to have important effects, especially since they regarded themselves as outside the *ḥisba* jurisdiction.

Janissaries were widely used to supply the "police" forces of the city, with the duties of maintaining order and of providing guards in the markets, at the quays and in other public places, and this authority enabled them to impose various illegal exactions and even sometimes attempt to corner a commodity; the lives and property of non-Muslims were in effect at their mercy. During the ever more frequent Janissary mutinies after 1600 the city was in complete anarchy with the populace terrified, the shops shut, and the ever-present fear of fires and looting (see Hammer-Purgstall, x, index s.v. *Janitscharen-Aufruhr*). With so many nominal Janissaries engaged in trade, some of these disturbances may be regarded as popular risings against the state authorities (see Porter, *Observations*, p. xxviii).

The *ʿadjemi-oghlanlarï* [*q.v.*] also had a significant place in Istanbul social life. Those in the Istanbul barracks numbered at first 3000 (Uzunçarşılı, *Kapukulu ocakları*, i, 79), 7000 in 1555 (Dernschwam, 65).

They were an important labour force, employed in public works (Barkan, *L'organisation du travail* ..., *Annales*, xvii, 1094; A. Refik, in *Edeb. Fak. Medjm.*, v/1, 6-10, 12) and in the sultan's gardens (Dernschwam, 64-5). Their daily pay was very small (1/2-2 *akča* in 1555). Since they enjoyed the immunities of the sultan's slaves, they were a turbulent element in the population, over-bearing and always ready to make trouble.

Practically the whole palace and *ḳapîḳulu* establishment accompanied the sultan on campaign. At such a time, the life of the markets was completely disorganized: prices rose, commodities were cornered and shortages appeared (Selānikī, Ms.). Janissaries engaged in trade were obliged to close their businesses; a proportion of the members of various guilds were conscripted to accompany the army as *ordudju* (*Medjelle*, i, 619-36); so that a fair proportion of the townsfolk too left the city. This, of course, occurred practically every year until the reign of Selīm II; and the consequent disruption was one of the reasons why the statesmen became reluctant that the sultan should campaign in person (cf., for 1570, Hill, iii, 892; for 1596, Selānikī, Ms.).

(d) Epidemics.

Just as fires repeatedly destroyed habitations, so too great numbers of the inhabitants were frequently carried off by epidemics —of plague, cholera and smallpox. In the plague of 871/1466, 600 people died each day, and many fled the city for good: "the City was emptied of its inhabitants" (Critoboulos, tr. Riggs, 220-2), and four years later plague again put a halt to trade (W. Heyd, *Hist. du commerce du Levant*, ii, 341). Later serious epidemics occurred in 917/1511, 932/1526, 969/1561, 992/1584, 994/1586 (see *The Fugger Newsletters*, ed. V. von Klarwill, London 1928, 104), 998/1590, 1000/1592 (Selānikī, MS.), 1008/1599, 1034/1625, 1047/1637, 1058/1648 (Chalkokondyles, *Histoire de la décadence* ... tr. B. de Vigenère, Rouen 1660, 1013), 1063/1653, 1084/1673 (Galland, ii, 178), 1179/1765 (H. Grenville, *Observations*, ed. S. Ehrenkreutz, Ann Arbor 1965, 72, 74, 106), 1207/1792 (Djewdet, x, 94), 1812 (Andréossy, 178-84), 1837 (*Memoire of Mrs. Elisabeth S. Dwight*..., New York 1840), 1845-7 (M. P. Verrolet, *Du Choléra-morbus en 1845, 1846* et *1847*, Constantinople 1848), and 1865 (H. Leach, *Brief notes*..., London 1866). These outbreaks lasted for months and sometimes, becoming endemic, for years, giving rise to thousands of deaths: 1000 a day in 1592 and 1648, 3000 a day in 1792. The total deaths in the 1812 outbreak are recorded as 150,000 (Andréossy, 180)—and in another account (*Lettres écrites des missions étrangères*, Lyon 1819, p. 2) even 200-300,000. In 1837, according to von Moltke (letter 26) a twentieth of the population (25,000 people) perished. The principle of quarantine was adopted in 1838 (with a *Karantina Nāẓirlîghî* set up in 1839), but with little effect (S. Ünver, *Osmanlı tababeti ve Tanzimat*, in *Tanzimat*, i, 947-50; B. Şehsüvaroğlu, *Türkiye Karantine tarihine bir bakış*, Istanbul 1958). The plague helped in the decline of Istanbul's commerce, English quarantine regulations having the effect of diverting an important proportion of its trade to Leghorn in the 18th century (Porter; Grenville, p. 64).

(e) Population.

The most reliable sources for estimates of the city's total population at different periods are certainly the various Ottoman registers, but even these, being compiled for taxation purposes, do not cover all the inhabitants (women and children, the *ʿaskerī* class, students and others exempt from taxes do not appear), and the unit they employ is often the *khāne*, "household"; the *djizya* registers list only the adult males, and the *ʿawāriḍ* taxes are levied on the basis of another, fictitious, "*khāne*" comprising several households [see ʿAWĀRIḌ]. Nineteenth-century figures (see below) indicate that a household rarely numbered more than 3-4 persons on average (in Byzantine times, 2.6-5.2, see Jacoby, p. 102), and this figure is probably valid for earlier times, in a city where many of the inhabitants lived in miserable conditions of nutrition and hygiene, where the average expectation of life was only 25 years, and where unmarried men were so numerous (45,000 in 1856: workmen and *medrese*-students).

In the present state of research, the figures below must be taken as the basis for comparison.

Thus the 1477 population (Ghalaṭa included) of 16,326 *khānes* had increased nearly five times by about 1535. In about 1550 C. de Villalón (*Viaje de Turquia*, p. 306) estimated the population of Istanbul and its environs at about 120,000 households, which would represent an increase of 50% over 15 years. In fact Barkan (*JESHO*, i/I, p. 28) has shown that there was an increase of over 80% in Ottoman cities generally in the 10th/16th century. Modern authors estimate the total population in the 16th century at about

Year	Unit	Muslims	Christians	Jews	Total
882/1477(1)	*khāne*	9,517	5,162	1,647	16,326
894/1489(2)	*khāne*	[ ]	5,462	2,491	
c. 942/1535(3)	*khāne*	46,635	25,295	8,070	80,000
1044/1634	*ʿawāriḍ khānesi*	1,525	[ ]	1,255	
1102/1690(4)	*khāne*	[ ]	14,231	9,642	
1102/1690(5)	poll-tax payers	[ ]	45,112	8,236	
1242/1826(6)	males	45,000	50,000	[ ]	
1245/1829(7)	individuals	—	—	—	359,890
1249/1833(8)	males	73,496	102,649	11,413	
1273/1856	*khāne*	29,383	19,015 (Christians and Jews)		
1273/1856	individuals	73,093	62,383 (Christians and Jews)		
1918(9)	individuals	—	—	—	700,000
1927(10)	individuals	447,851	243,060		690,911

(Notes: (1) See above, p. 238; (2) Barkan, Belgeler, i, 39; 447 mixed Jewish and Christian *khānes* are included in the total for Christians; (3) Barkan's estimate in *JESHO*, i/I, 20; (4) Topkapı Sarayı Archives no. 4007, suburbs included; (5) Mantran, *Istanbul*, 46-7: a further 14,653 persons are exempt; Mantran estimates 62,000 *khāne* in all; (6) Luṭfī, i, 279; (7) Luṭfī, ii, 62; (8) Topkapı Sarayı Archives no. 750; (9) *Istanbul rehberi*, 1934, 163, foreigners excluded; (10) the first census).

700,000 (Lybyer, *Constantinople as capital*..., see Bibliography., 377; Braudel, *Méditerranée*, 272 Mantran's estimate for the next century (*Istanbul*, 44-7) is 650-750,000, or 700-800,000 with the suburbs included. Other estimates tend to bear out these figures: Sanderson, 1,231,000; G. Moro (Alberi, ser. 3, iii, 334), 800,000 (but the bailo Garzoni (Alberi, 389) says only "piu di trecento mila persone").

However, these figures for Ottoman Istanbul *intra muros* seem to be exaggerated. The population of Istanbul and Ghalaṭa together never exceeded 400,000 in the Byzantine period (see Jacoby, in *Byzantion*, xxxi (1961), 82-109). The reliable figures of the last fifty years are:

1927	245,000
1940	272,000
1950	350,000
1960	433,000
1965	482,000

and it is difficult to accept that the total for pre-19th-century Istanbul was higher than these (given that most houses consisted of a single storey, and there were such wide areas of garden and open space; building upwards, with several storeys, began slowly after the Crimean War). The 1927 figures (covering 17.2 km.²) give a density of 145 persons per hectare (the pre-15th century density for European cities being under 200, see Jacoby, 105). Garzoni's estimate of over 300,000 for 1573 and the 1829 count of 360,000 seem more probable. (Other estimates for Istanbul *intra muros*: J. E. Dekay (1833): 250,000; Hoffman: 380,000; Visquenel (1848): 321,000; Verrolot (1848): 360,000; for all these see V. Michoff, *La population*..., i-iv). The relative proportions for the population of Istanbul *intra* and *extra muros* can be seen approximately from these figures for bakeries:

	1083/1672	1169/1755	1182/1768
Istanbul	84	141	297
Ghalaṭa	25	61	116
Usküdār	14	22	65
Eyyūb	11	7	28

and for chandlers' premises (1083/1672):

Istanbul	24	
Ghalaṭa	5	
Usküdār	4	
Eyyūb	9	(high, in view of the slaughter-houses at Yediḳule).

Of imported groceries, in 1018/1609 three-fifths went to Istanbul and only two-fifths to the three "townships", who consequently complained (see A. Refik, *1000-1100*, doc. 74) One eighth of imported fruit went to Ghalaṭa at the end of the 9th/15th century (*iḥtisāb* regulation in *TV*, i/5, 339). Although the population increase was greater in Ghalaṭa in the 17th and 18th centuries, and Topkhāne, Beyoghlu and Ḳāsim Pasha expanded greatly, yet up to about 1840 "Istanbul" meant Istanbul *intra muros*.

Until 1945, the distribution of population between Istanbul *intra muros* and "Greater" Istanbul was similar to the 19th-century distribution. Since that date there has been some redistribution, as is shown by these figures:

Year	Population of Turkey	Istanbul *intra muros*	"Greater" Istanbul (including Beyoğlu, Beşiktaş, Şişli, Kadıköy and Eyüp
1927	13,648,000	245,982	694,292
1940	17,821,000	266,272	841,611
1950	20,947,000	349,909	1,035,202
1960	27,755,000	433,629	1,466,435
1965	31,391,000	482,451	1,541,695

While therefore the increase in the population of Greater Istanbul is proportional to that in the whole country, the increase for Istanbul *intra muros* is relatively less.

Bibliography: A. Ottoman Documents. (i) Documents relating to *waḳfs*. 1. *Waḳfiyyas*. Published: facsimile of the original *waḳfiyya* for Eyyūb, dated 861/1457, in *Fâtih Mehmed II vakfiyeleri*, publ. by Vakıflar Genel Müdürlüğü, Ankara 1938, 336-40; for Kalenderkhāne (Church of Akataleptos), in *Zwei Stiftungsurkunden des Sultans Mehmet II. Fatih*, ed. T. Öz, Istanbul 1935, 1*-15*. Individual *waḳfiyyas* such as these were all combined in a single *waḳfiyya* after the completion of the mosque and complex of Meḥemmed II. The oldest copy of this, in Arabic, originally preserved in the *türbe* of Meḥemmed II, is now in the Türk-İslâm Eserleri Müzesi (old no. 1872, new no. 667); it belongs to 877/1472 or 878/1473, and has been published in (poor) facsimile in O. N. Ergin, *Fâtih İmareti vakfiyesi*, Istanbul 1945, 1-68. Later in the reign a new comprehensive *waḳfiyya* was drawn up, and an official copy (*tughra* of Bāyezīd II) has survived; facsimile in *Zwei Stiftungsurkunden*..., pp. 1-149. In the mid 10th/16th century (see Ergin, *op. cit.*, 29-34) this *waḳfiyya* was translated into Turkish (with some rearrangement and stylistic expansion), facsimile in *Fâtih Mehmet II vakfiyeleri*, 14-198.—Süleymān I (facsimile): K. E. Kürkçüoğlu, *Süleymaniye vakfiyesi*, Ankara 1962.—Published in *Vakıflar Dergisi*: Kara Aḥmed Pasha, in i, 83-168 (Ş. Yaltkaya); Kaymak Muṣṭafā Pasha, in viii, 15-35 (M. Aktepe).—Most of the *waḳfiyyas* relating to Istanbul which are preserved in the archives of the Vakıflar Umum Müdürlüğü at Ankara are accessible in register copies in the *Istanbul* series.

2. Registers of inspection (*teftīsh*) and rents (*djibāyet*). These registers, drawn up to record the income of *waḳfs* and to be used by rent-collectors (*djābī*), are of great importance as detailing the properties that supported a *waḳf*. The oldest known is the *Djibāyet* register for Ayasofya of 895/1489 (Başvekâlet Arşivi, Maliyeden müdevver no. 19, 56 ff., Arabic; some of the leaves out of order; drawn up by the *ḳāḍī* Yūsuf b. Khalīl); a similar register had existed, drawn up in 874/1469. A similar detailed register was drawn up by Meḥmed b. ʿAlī al-Fenārī, *ḳāḍī* of Edirne, in 926/1519 (Belediye Libr., Ms Cevdet O 64, 444 ff.). Registers for all the *waḳfs* of Meḥemmed II in Istanbul: Başvekâlet Arşivi, Tapu defteri no. 210 (947/1540) and no. 240 (952/1545).

Other similar registers refer to the *waḳfs* of ordinary citizens. The most important of these (Başvekâlet Arşivi, Tapu defteri no. 251) has been published: *İstanbul vakıfları Tahrir defteri, 953 (1546) tarihli*, ed. Ö. L. Barkan and E. H. Ayverdi, Istanbul 1970. Two similar, unpublished, registers are: Başvekâlet Arşivi, Tapu defteri 670, drawn up by Ḥasan b. Yūsuf between 986/1578 and 988/1580, and Tapu ve Kadastro Umum Müdürlüğü, Ankara, Eski Kayıtlar nos. 542 and 543, drawn up after 1005/1596.

Registers of annual accounts also survive. The summary balances (*idjmāl*) for the mosques of Fātiḥ and Ayasofya for the years 894/1489-896/1491 have been published by Ö. L. Barkan (*İFM*, xxiii (1962-3), 342-79); see also, idem, *Süleymâniye Camii ve imareti tesislerine ait yıllık bir muhasebe bilânçosu, 993/994*, in *Vakıflar Dergisi*, ix, 109-62.

(ii) Documents relating to *ḥisba* (*iḥtisāb*). These

are of three main types: 1. regulations, lists of fixed prices; 2. registers of *rüsūm-i iḥtisābiyye*; 3. registers of guildsmen made for various purposes. 1. Regulations dated 907/1501, published by Ö. L. Barkan in *Tarih Vesikaları*, i/5 (1942), 329-40; Fr. tr. by R. Mantran, in *Les Cahiers de Tunisie*, no. 14 (1956), 213-41. Very similar provisions are found in later codes (Âtif Ef. Libr. Ms. 1734; Bayezid Libr., Ms Veliyüddin 1070; University Libr., Ms. T. 734; Sarajevo, Orientalni Institut, Ms. 1054). Firmans relating to *iḥtisāb* are preserved in records of daily business (see (*iii*) below) and price regulations (*narkh*) in *ḳāḍīs*' registers; for examples of the latter, see O. Nūrī Ergin, *Medjelle-i Umūr-i Belediyye*, Istanbul 1922. 2. These registers list the tradespeople of Istanbul in 15 sectors, giving for each the location of his business, his trade, the owner's name and the amount of tax payable. They give similar information regarding the ships importing provisions are found in later codes (Âtif Ef. Libr., det B 2 (of 1092/1681), B 10 and B 23; Başvekâlet Arşivi, Maliyeden müdevver nos. 514 and 526. Partial publication of such a document by R. Mantran, in *Mélanges Louis Massignon*, Damascus 1957, iii, 127-49; see also Nihat Gôl, *1763 tarihli esnaf tahrir defterine göre...*, Istanbul University, Edebiyat Fakültesi, tez 1971. 3. Register of the watermen (*kayïkčī*): Belediye Libr., Ms. Cevdet B 8; of the bakers: Topkapı Arşivi, D 9580.

(iii) Numerous documents relating to Istanbul are to be found dispersed in various collections in the Ottoman archives. As examples only, the following may be cited: 1. Mühimme Defteri. Many documents in this series have been published by Ahmed Refik [Altınay], in the series *Hidjri Onundju aşırda Istanbul ḥayātı*, 961-1000, Istanbul 1333 (2nd ed., Istanbul 1935); ... *1100-1200*, Istanbul 1931; ... *1100-1200*, Istanbul 1930; ... *1200-1255*, Istanbul 1932. Many documents from the Mühimme registers are given in Ergin's *Medjelle*, i.

2. *Maliye ahkâm defterleri*. Nos. 2775 and 9824 in the *Maliyeden müdevver* series are especially important for Istanbul.

3. *Ḳuyūd-i aḥkām al-shikāyāt* series. Registers relating to Istanbul start from 1155/1742. Much information on the tradespeople.

4. Registers of the *ḳāḍīs*. Most of the registers of the *ḳāḍīs* of Istanbul, Ghalaṭa and Üsküdār are lost, but some important examples survive in the archives of the Istanbul Müftülüğü and of Topkapı Sarayı. Some docs. published by Ergin, in *Medjelle*, i.

5. *Muḳāṭaʿa* registers (recording the income of the State Treasury). For an important example from the reign of Meḥemmed II, see *JESHO*, iii (1960), 132. Customs registers: Başvekâlet Arşivi, Maliye no. 312 (of 992/1585), no. 5227 (of 1098/1687), no. 3129 (of 1102/1690), no. 918 (of 1108/1696), no. 6164 (of 1138/1725); no. 2996 (of 1206/1791); also Kâmil Kepeci tasnifi nos. 4241-4368, 5207-66.

6. The *Muḥāsebe idjmāl defterleri* (the oldest is Belediye Libr., Ms. Cevdet O 91) record the expenses for official institutions in Istanbul.

7. The affairs of Istanbul fell within the purview of the Shïḳḳ-ï Sānī Defterdārı, so that documents emanating from his various offices, especially the *Istanbul muḳāṭaʿasï ḳalemi*, are of importance.

8. The most important assemblage of individual documents is that made by Cevdet, under the heads Belediye, İktisat, Sıhhiyye, Saray, Zaptiye and Maarif (see M. Sertoğlu, *Muhteva bakımından Başvekâlet Arşivi*, Istanbul 1955, p. 71).

Further sources for the later history of Istanbul are the official yearbooks (*sālnāme*) and various publications of the municipal authorities (*Belediyye*), *e.g.*, *Salnāme* series, 1847-1918 (see *İA*, art. Salnâme); *Istanbul Belediyyesi iḥṣāʾiyyāt medjmūʿasï*, 1328-1335; *I. B. Medjmūʿasï*, 1930-7; *İstanbul Şehri istatistik yıllığı*, 1930-3; *Belediye yıllığı*, Ankara 1949 (pp. 341-69 relating to Istanbul).

B. Ottoman narrative and descriptive sources. Ḳuṭb al-Dīn al-Makkī, ed. E. Kâmil, in *Tarih Semineri Dergisi*, i-ii (1937), 5; Evliyā Čelebi, *Seyāḥatnāme*, i, Istanbul 1314 (Eng. tr., J. von Hammer, *Narrative of travels...*, London 1846); A. S. Levend, *Türk edebiyatında şehrengizler ve şehrengizlerde İstanbul*, Istanbul 1958; Laṭīfī [*q.v.*], *Evṣāf-i Istanbul*; Yaḥyā, *Shehrengiz-i Istanbul*, see *TDED*, xvii (1969), 73-108; H. Wurm, *Der osmanische Historiker Huseyn b. Ǧaʿfer*, Freiburg 1971; Âsaf Hâlet Çelebi, *Divan siirinde İstanbul*, Istanbul 1953; *Hey'et-i sābiḳa-i Ḳosṭanṭiniyye*, Istanbul University Libr., Ms. Yıldız 612.

ISTANBUL-MONUMENTS [see SUPPLEMENT]

ISTANKÖY [see ON IKI ADA].

ISTĀR (στατήρ), a weight in the apothecary's or troy system, taken over from the Greeks and usually estimated according to two different scales. On the one hand we find the equations: 1 *istār* = 6 *dirham* and 2 *dānaḳ* = 4 *mithḳāl* (an apothecary's stater); on the other, we have 1 *istār* = 6½ *dirham* = 4½ *mithḳāl* (commercial *istār* in the East). The first equation will only be correct if the coined *dirham* and the *mithḳāl maiyāl* are taken ($\frac{2.97 \times 2 \times 2.97}{6} = 18.81 = 4.72 \times 4 = 18.88$). The second equation is approximately correct only if we take the coined *dirham* and the old *mithḳāl* (gold dinār) (2.97 × 6.5 = 19.3 = 4.24 × 4.5 = 19.125). In both cases the result is a much larger amount than that of the usual Greek stater. The further ratio that 20 *istār* go to the *raṭl* (pound) is only true of the *istār* of 6½ *dirham* and the Baghdād *raṭl* of 130 *dirham*.

(E. V. ZAMBAUR)

ISTIʿĀRA, term in rhetoric commonly used in the sense of metaphor. This term is among those most frequently discussed by authors of all periods and it is impossible to give a complete account of all definitions, systems of classification, and technical terms, many of which are found in texts that do not specifically deal with rhetoric. The following is an attempt to outline the views of some representative authors.

In the early period the term *istiʿāra* is used occasionally in the sense of "borrowing of a theme by one author from another" (see, for instance, Ibn ʿAbd Rabbih, *al-ʿIḳd al-farīd*, Cairo 1359/1940, v, 338-40) and the metaphor may be indicated by the term *mathal*, "figurative expression" (see, for in stance, *al-Mufaḍḍaliyyāt*, ed. Lyall, Oxford 1921, 173, l. 4; Sukkarī, *Sharḥ Ashʿār al-Hudhaliyyīn*, ed. ʿAbd al-Sattār Aḥmad Farrādj, Cairo 1383/1965, iii, 1200; Āmidī, *al-Muwāzana*, ed. Aḥmad Ṣaḳr, Cairo 1380/1961, i, 109; and cf. Bonebakker, *Notes on the Kitāb Naḍrat al-Ighrīḍ*, Istanbul 1968, 37) or simply *badīʿ*, "ornate style" (see Djāḥiẓ, *al-Bayān*, ed. ʿAbd al-
Plan of Istanbul, *circa* 1580, attributed to Velican (*Hünernâme*, Topkapı Palace Library, Istanbul, N° 1523, ff. 158b-159a).

Salām Muḥ. Hārūn, Cairo 1367/1948, iv, 55 [but cf. i, 153]; idem, *al-Ḥayawān*, ed. Hārūn, iii, 58-9; and the saying by ʿAttābī [d. beginning of third/ninth cent.] reported in Marzubānī, *al-Muwashshah*, Cairo 1343/1923, 271). In the sense of "metaphor" it is reported to have been common already with such early philologists as Abū ʿAmr b. al-ʿAlāʾ (d. around 154/770) (see Ḥātimī, *Ḥilyat al-muḥāḍara*, Ms Fez, Karawiyyīn 2934, f. 4b; Bāḳillānī, *Iʿdjāz*, ed. Ṣaḳr, Cairo 1374/1954, 108 [= G. E. von Grunebaum, *A tenth century document*..., Chicago 1950, 7]; Ibn Rashīḳ, *al-ʿUmda*, Cairo 1353/1954, i, 239), Ḥammād (d. 155/772 or 156/773), Abū ʿUbayda (d. 209/824-5), and Aṣmaʿī (d. 213/808) (see *Iʿdjāz*, 108), but since Aṣmaʿī is also said to have used the term *mathal* in speaking of the metaphor (see *al-Mufaḍḍaliyyāt*, 855, l. 13) it may be suggested that the term *istiʿāra* was substituted in later versions of these reports for some other expression. However that may be, it appears already in what is probably the first systematic treatise on poetics in Arabic, the *Ḳawāʿid al-shiʿr* (ed. Ramaḍān ʿAbd al-Tawwāb, Cairo 1966, 57-60) of Thaʿlab (Thaʿlab lived from 200/815 till 291/904; the date of composition of the treatise is unknown and there is some question about Thaʿlab's authorship) and is there defined as "to borrow for something the name of something else or [to attribute to it] a characteristic that is not its own" (*an yustaʿāra li-'l-shayʾi ismu ghayrihī aw maʿnan siwāhu*). The definitions offered by Ibn Ḳutayba (d. 276/889) in his *Taʾwīl mushkil al-Ḳurʾān* (ed. Aḥmad Ṣaḳr, Cairo 1373/1954, 102) and by Ibn al-Muʿtazz (wrote 274/887) in his *K. al-Badīʿ* (ed. Kratchkovsky, London 1935, 2) are hardly more precise. In fact the two last authors quote examples which later critics would have qualified as "trope" (*madjāz*), "simile" (*tashbīh*), or "metonymy" (*kināya*), though the majority of the examples would also be *istiʿāra*s according to later definitions of the term and are often repeated in later handbooks. The same is true of Ḳudāma b. Djaʿfar (d. after 320/932) who, moreover, in his *Naḳd al-Shiʿr* (ed. Bonebakker, Leiden 1956) gives examples of the metaphor under the headings *tamthīl* (pp. 90-2) and *istiʿāra* (pp. 104-5) without making sufficiently clear how the two figures are related. He sees the acceptable *istiʿāra* as essentially a simile and the *tamthīl* as the use of a figurative expression (*mathal*) to convey the idea the poet has in mind (see also the definitions and examples in the *Djawāhir al-alfāẓ*, Cairo 1351/1932, 5, 7-8, attributed to Ḳudāma). The often quoted example from the poetry of Imruʾu 'l Ḳays: *ḳayd al-awābid*, "shackles upon the legs of wild animals", for a horse that overtakes wild animals in chase is quoted (p. 88) in Ḳudāma's chapter on the "metonymy" (*irdāf*). The same confusion exists between the chapters on *istiʿāra* and *mumāthala* (= *tamthīl*) in the *K. al-Ṣināʿatayn*, (Cairo 1371/1952, 268-306, 353-6) of Abū Hilāl al-ʿAskarī (d. after 395/1004). Abū Hilāl, however, offers a more detailed explanation of the mechanism of the metaphor pointing out frequently, especially in examples taken from the Ḳurʾān, how the tropical expression is related to the concept the author wishes to put into words and why the metaphor is more effective than the conventional expression. His discussion of ḳurʾānic metaphors closely resembles that of his contemporary, Rummānī (d. 384/994), in his *K. al-Nukat fī iʿdjāz al-Ḳurʾān* (ed. Muḥ. Khalaf Allāh and Muḥ. Zaghlūl Salām in *Thalāth Rasāʾil*, Cairo n.d. 79-87), though Rummānī's formulations are somewhat more accurate. Both authors also indicate that the metaphor makes it possible to illustrate abstract concepts with concrete analogies and insist that a metaphor is acceptable only if it is more striking than the conventional expression. This last question is also the subject of a discussion by Ḥātimī (d. 388/998) who in his *al-Risāla al-mūḍiḥa fī dhikr sariḳāt Abi 'l-Tayyib al-Mutanabbī*... (ed. Muḥ. Yūsuf Nadjm, Beirut 1385/1965, 69-73, 90-4) distinguishes three types of *istiʿāra*: The first type conforms to the above standard and consists of metaphors that can be justified. He calls this type the "elegant metaphor" (*istiʿāra mustaḥsana*). The second is characterized by the use of terms applicable to animals instead of the corresponding terms used in speaking of human beings, *e.g.*, *ḥāfir*, "hoof", for "foot", *mishfar*, "camels' lip" for *shafa*, "lip [of a human]", etc. He calls this the "ungainly metaphor" (*istiʿāra mustahdjana*). The third type which he considers less ugly than the second consists of using terms applicable to human beings instead of terms specifically used for animals (cf. the discussion of examples belonging to the second type in Ibn Ḳutayba, *Taʾwīl mushkil al-Ḳurʾān*, 116-7; the discussion of the term *muʿāẓala* in Ḳudāma, *Naḳd*, 103; Ibn Durayd, *Djamhara*, Ḥaydarābād 1344/1925, iii, 489b-91a; Āmidī, *al-Muwāzana*, i, 43-4; Abū Hilāl, *K. al-Ṣināʿatayn*, 301; and ʿAbd al-Ḳāhir al-Djurdjānī's views on this type of expression below). In what appears to be a fourth category he mentions cases (like "my thoughts stumble [while reflecting] on your glory") where the metaphor is "obscure and far fetched" (*khāfiya baʿīda*).

Probably the first to distinguish carefully between the *tashbīh* and the *istiʿāra* and to formulate a closer definition of the figure is ʿAlī b. ʿAbd al-ʿAzīz al-Djurdjānī (d. 392/1001). In a passage in his *al-Wasāṭa* (Cairo 1370/1951, 41) he makes clear that the line by Abū Nuwās: "Love is a mount and you are its rider; turn its bridle and it will obey you" is not an *istiʿāra*, but a simile (*tashbīh*) or a proverbial saying (*ḍarb mathal*). In a proper *istiʿāra* the borrowed term (*al-ism al-mustaʿār*) completely replaces the proper term (*al-aṣl*). The *istiʿāra*, according to him, is "based on establishing a close similarity, on [the existence of] an affinity between the proper and the borrowed expression, on the blending of the [new] term with the concept [to which it is applied]", etc. (*wa-milākuhā taḳrību 'l-shabahi wa-munāsabatu 'l-mustaʿāri lahū li-'l-mustaʿāri minhu wa-'mtizādju 'l-lafẓi bi-'l-maʿnā*, etc.; a different reading and interpretation in Ritter's translation of ʿAbd al-Ḳāhir al-Djurdjānī's *Asrār*, 429; cf. also *al-ʿUmda*, i, 240). He condemns (pp. 429-33) the anthropomorphism in an *istiʿāra* by Mutanabbī: "Many schemes are found together in his mind, though one of these would be [large enough to] occupy the *mind of* [*this*] *time*" and compares this with an *istiʿāra* by Ibn Aḥmar where the wind is characterized as "having no constancy in its mind" (*laysa li-lubbihā zabrū*). In the second example the *istiʿāra* is based on the similarity between the wind blowing from different directions and the erratic behaviour of a person of unstable character. In the case of the first example no such similarity suggests itself to the hearer. The only way to make such *istiʿāra*s to some degree acceptable is to think of the frequent occurrence of personifications of time or fate, or to assume an ellipse ("this time" for "the people living in this time"), though by expecting his audience to do so the poet goes beyond what is aesthetically or grammatically acceptable (the lacunae in the text should be completed from the quotations in Khafādjī, *Sirr*, 144 ff.; Khafādjī does not agree with ʿAlī al-Djurdjānī's qualified acceptance of these and similar examples).

Ibn Rashīḳ (d. 456/1063-4 or 463/1070-1) in his *K. al-ʿUmda* (Cairo 1353/1934, i, 239-50) shows himself familiar with the definition of ʿAlī al-Djurdjānī, but nevertheless draws no clear distinction between simile and metaphor in his examples, and, like his predecessors, fails to explain the exact relation between this last figure and the *tamthīl*, though he classifies *tamthīl* as a type of *istiʿāra* (p. 247; cf. however p. 245, l. 4-5, and on pp. 247 bottom and 249, l. 15 his observations on the absence of the comparative particle in both *tamthīl* and *istiʿāra*). He prefers metaphors that can be easily understood, like "Daybreak carried away the Pleiades in its yellow (or white) cloak" for "Daybreak made the Pleiades fade away" in which, he says, the metaphor is based on a simile (the poet's comparison of the bright cloak with the light of daybreak), to metaphors that are less easy to understand, like "The reins of the morning had come into the hands of the north wind" for "The north wind held sway over the morning" where the poet gives to the morning and to the north wind each an attribute that cannot be associated with it (*mā laysa minhu wa-lā ilayhi*). He does not accept the view of some "radical" (?) (*mutaʿaḳḳib*) theorists who prefer the second type of metaphor (which is based on personification and analogy) and consider the first type inferior because it is based on an [easily understandable] simile. He further illustrates this principle, but fails to analyse it properly, and also points out that the same kind of metaphor may be fitting in one context and ugly in another.

Khafādjī (d. 466/1073-4) in his *Sirr al-Faṣāḥa* (Cairo 1372/1953, 134-69) bases his discussion of the *istiʿāra* on Rummānī and ʿAlī al-Djurdjānī. He does not, however, accept as *istiʿāra*s sentences like "She dropped pearls from narcissi", etc. which he classifies as *tashbīh*. He does not offer an explanation. What he has in mind is perhaps that because *asbalat*, "she dropped", in this context only allows us to take "pearls" and "narcissi" as standing for "tears" and "eyes" a simile is forced upon the hearer and it becomes impossible to argue that the two words are not to be understood in their proper sense (but cf. Ibn al-Athīr, *al Mathal*, i, 359). In "And the head is ablaze with hoariness" (Ḳurʾān, XIX, 3) "hoariness" as the notion to which the metaphor is applied (*al-mustaʿār lahū*) is compared to "fire" as the notion from which it is derived (*al-mustaʿār minhu*), but the fire is not mentioned, only one of its attributes, and there is good reason to qualify "to be ablaze" (*al-mustaʿār*) as a term used in an improper way (*Sirr*, 134-6). He prefers *istiʿāra*s that are immediately apparent to the hearer to those that cannot be justified as based on intelligible similarities or are derived from expressions that are themselves metaphors. One may speak of "the eye of a flower" since there is an obvious similarity, but not of "the eye of faith that finds consolation", since there is nothing in faith that could be compared to an eye. The metaphor in "the saddle feeds on (= takes away) the fat of the hump of the camel" is more obvious than that in "the horses and riding animals of passion have become unharnessed", since the latter example derives from another, more common, metaphor: "He rode his passion and ran on its race track". As usual the distinction between *istiʿāra* and *tamthīl* is not clearly defined (see the examples on pp. 166 below and 167 above repeated as *tamthīl* on p. 325).

The most important discussion of the *istiʿāra* is found in the *Asrār al-balāgha* (ed. H. Ritter, Istanbul 1954; German translation H. Ritter, *Die Geheimnisse der Wortkunst des ʿAbdalqāhir al-Curcānī*, Wiesbaden 1959) of ʿAbd al-Ḳāhir al-Djurdjānī (d. 471/1078). In his *Dalāʾil al-Iʿdjāz* (Cairo 1367/1947-8, 331-46) which, according to Ritter (see the Introd. to this ed. of the *Asrār*, 6) was probably written earlier than the *Asrār*, ʿAbd al-Ḳāhir takes his predecessors to task for defining the *istiʿāra* as a transfer (*naḳl*) of terms. He argues that the *istiʿāra* is a claim (*iddiʿāʾ*) that something is identical to something else. The very effect of the figure depends on this claim and consequently there is a transfer of a concept before there is a transfer of a term. In the *Asrār*, however, he describes the *istiʿāra* as generally speaking (*fi 'l-djumla*) the incidental use (*naḳl ghayr lāzim*) of a term in a sense different from its original sense (i.e. the well-known sense supported by literary evidence), so that it appears like a loan (*ʿāriya*) (p. 29 = tr. p. 46; cf. p. 379-81 = tr. p. 441-3) and recognizes that his concept of the figure is essentially that of his predecessors among whom he mentions Āmidī (d. 370/980) and ʿAlī al-Djurdjānī (p. 298 = tr. p. 348, p. 368 = tr. p. 429, p. 370-1 = tr. p. 431-2). They differ from him in that they did not offer a detailed analysis of simile (*tashbīh*), analogy (*tamthīl*), and metaphor (*istiʿāra*), and were content to offer a few examples of these figures without a proper definition. (p. 26-8 = tr. p. 43-5). For ʿAbd al-Ḳāhir the *istiʿāra* is one of various types of trope (*madjāz*) inasmuch as there is always an association (*mulāḥaẓa*) with the normal sense of the term (p. 325-6 = tr. p. 378-80, p. 365 = tr. 425-6). However, in the case of the *istiʿāra* there must exist some property common to the object to which the term is normally applied and the object to which it is applied metaphorically. He draws attention to the etymology of the term *istiʿāra* as derived from *ʿāriya*, "borrowed good", "loan". The owner's claim to his property does not cease to exist, but the borrowed goods perform in the hands of the borrower the same function as in the hands of the owner (p. 372-3 = tr. pp. 432-4; cf. pp. 300-2 = tr. pp. 350-2). If one says: "I see a lion", meaning a courageous man, what one has in his mind is to attribute to the man the most striking property of the lion, its courage; but if one uses the word *yad*, "hand", in the sense of "favour" in "I owe him a favour" (*lahū ʿindī yadun*), one has no intention to describe a property of the hand. It becomes possible to argue that "favour" and not "hand" is the original meaning of the word *yad*, though upon closer examination one finds that there exists a reference to an activity originally involving the hand (cf. also p. 326 ff. = tr. p. 380 ff.). ʿAbd al-Ḳāhir makes a further distinction by pointing out that the *istiʿāra* is more striking than the conventional expression (and as such has an aesthetic function): When a poet uses the term *shafa*, "lip" in speaking of the lip of a horse (*djaḥfal*) or the lip of a camel (*mishfar*) there is only a free use of near synonyms or the use of a general instead of a specific term (p. 30-1 = tr. p. 48-9, p. 373-4 = tr. p. 434-5), but when he uses "horse's lip" or "camel's lip" in speaking of a human being one already has a borderline case, since one can easily imagine that what the poet is trying to say is that the man's lips are thick or that he is as miserable as an animal (p. 34 ff. = tr. p. 52 ff.). ʿAbd al-Ḳāhir distinguishes three types of metaphors:

(a) metaphors based on a comparison of notions that show a close affinity and in any case belong to the same category: "flying" for "running".

(b) metaphors based on a comparison of objects that share certain qualities: "sun" for "beautiful face".

(c) metaphors based on a similarity that can only be understood intellectually, the metaphor consisting of (1) things sensually perceived for intellectual concepts: "light" for "convincing argument", (2) things sensually perceived for other things sensually perceived though the similarity remains a matter of the intellect: "green plants on a dung-hill" for "beautiful women of evil character", and (3) intellectual concepts for other intellectual concepts: "death" for "ignorance", "meeting death" for "facing a serious crisis". For metaphors based on abstract similarity, as well as for the various types of explicit similes that would correspond to them, he uses the term *tamthīl*. The similarity can only be established by analysis (*taʾawwul*), since the metaphor or simile is not based on a common property (as in the comparison of a rose with a cheek), but on something conditioned by a property (it is as difficult to deny the existence of the sun as to deny the truth of a convincing argument), In some cases there is "a similarity between two groups of objects in each of which there exists an inner relation between, not only a simple coordination of, various elements, a relation which can only be expressed in the form of a sentence" [or its equivalent] (*Asrār*, Introd., 14), and the *tamthīl* is therefore closely related to the proverbial sentence (*mathal*): "The bow is in the hands of the bow-cutter" for "The matter has been entrusted to a competent person" (p. 94 = tr. p. 120). According to ʿAbd al-Ḳāhir such sentences owe their peculiar effect to the fact that the mind accepts a not so familiar concept more readily if the author can illustrate it with a situation with which it is thoroughly familiar, such as when one uses an old friend to introduce a newcomer (*Asrār*, Introd., 15). In such sentences the terms themselves are, of course, used in their proper meaning, and hence it becomes possible to explain apparent anthropomorphisms in the Ḳurʾān like "The whole earth is in the grip of his hand on the Day of Resurrection" (Ḳurʾān XXXIX, 67) as analogies for intellectual concepts (p. 331-2 = tr. p. 386-7; Intro., 11), though he warns against arbitrary explanations (p. 363-4 = tr. p. 422-4).

ʿAbd al-Ḳāhir al-Djurdjānī also examines the use of metaphors to create fantastic aetiologies such as are common in post-classical Arabic and Persian poetry. In "Be not surprised that his shirt is torn: He buttoned it in moonlight" the poet assumes that the common metaphor, "moon" for "beautiful face", is accepted as a reality and then alludes to the common belief that moonlight wears out linen (*Asrār*, Introd., 21-2).

An essential difference between ʿAbd al-Ḳāhir al-Djurdjānī and some of his predecessors and followers is that he does not accept as metaphors sentences like *zaydun asadun* or *zayduni ʾl-asadu*, "Zayd is a lion", where a simile is expressed without the help of a specific particle or a verb (cf. however p. 304-5 = tr. p. 354-5). Nor does he consider as such *tadjrīd* expressions like *laḳītu bihī asadan, raʾaytu minhu laythan*, "I met/I saw in him a lion" (p. 310-11 = tr. p. 361-2). He hesitates however in cases like "[He is] a full moon that spreads its light over the earth from east and west, but leaves the place of my camel's saddle in the black darkness", since one cannot compare somebody to the moon and then ascribe to him a property that the moon does not have. Such sentences are based on the assumption that the hearer has already accepted that the subject of the poem is a special kind of moon, so that the poet can attribute to this moon some unusual qualities (p. 305 ff. = tr. p. 355 ff.; for a more detailed discussion of ʿAbd al-Ḳāhir's theories see *Asrār*, Introduction, from which some of the above definitions and translations have been taken).

The compendiums based on ʿAbd al-Ḳāhir al-Djurdjānī, beginning with the *Nihāyat al-īdjāz fī dirāyat al-iʿdjāz* (Cairo 1317/1899) of Fakhr al-Dīn al-Rāzī ([*q.v.*] d. 606/1209) and the *Miftāḥ al-ʿulūm* (Cairo 1356/1937) of Sakkākī ([*q.v.*] d. 626/1228-9), together with the numerous commentaries on these compendiums, almost completely superseded the *Dalāʾil al-iʿdjāz* and the *Asrār al-balāgha*. In the *Nihāya*, which contains a useful summary of Djurdjānī's ideas, Fakhr al-Dīn attempts to clarify the two opposing viewpoints expressed by Djurdjānī on the character of the *istiʿāra*. After offering interesting arguments in favour of the theory outlined in the *Dalāʾil* he declares himself in favour of Djurdjānī's later theory as presented in the *Asrār*: By calling a man a "lion" one attributes to him the lion's courage, not his physical qualities, which means that the word *asad* is used in a more restricted sense (p. 84-5; cf. *Asrār*, 379-81 = tr. 441-3). Hence the metaphor has to be considered a "trope of the language" (*madjāz lughawī*; cf. however Djurdjānī's observations on the *madjāz aḳlī*, the "trope of the intellect" in the relation between a verb and its agent in *Asrār*, 342-5 = tr. 399-402, 376 ff. = tr. 437 ff. and Intro., 23-4). Among the works based on the *Miftāḥ al-ʿulūm*: the *Talkhīs al-Miftāḥ* (a digest of the *Miftāḥ al-ʿulūm*) of Djalāl al-Dīn al-Ḳazwīnī [*q.v.*], also known as the Khaṭīb Dimashḳ (d. 739/1338); *al-Sharḥ al-mukhtaṣar* of Taftāzānī (d. between 791/1389 and 797/1395); and the *ʿUḳud al-djumān* of Suyūṭī ([*q.v.*] d. 911/1505) have been summarized in A. F. Mehren, *Die Rhetorik der Araber* (Copenhagen/Vienna 1853). The question whether the *istiʿāra* constitutes a claim that something is identical with something else (and is therefore a figure depending solely on the intellect, *ʿaḳlī*) or an improper use of a term (and therefore a semantic phenomenon, *lughawī*) is resolved in favour of the last point of view by postulating that in claiming for a man the characteristics of a lion (*asadiyya*) one claims that there are two possible types of lion covered by the term, one generally known (*muta-ʿāraf*) and possessing all the psychical and physical characteristics of the animal, and one not generally known and possessing the psychical, but not the physical characteristics. The context (*ḳarīna*) indicates that not the generally known meaning is intended and distinguishes the *istiʿāra* from a false claim where it would be essential for the author not to include anything in the context that would disprove this claim (*Miftāḥ*, 175-6). Though the author's intention to use a word metaphorically would thus be clear from the context, this context may still contain elements that support its common meaning, as in "Those are they who have purchased error with right direction, and their trade was not profitable" (Ḳurʾān, II, 15) where the common meaning of "purchasing" in the sense of "purchasing goods in the market" is supported by "their trade was not profitable". In this case we speak of an *istiʿāra murashshaḥa* or "prepared *istiʿāra*". In case no such elements exist we have an *istiʿāra mudjarrada*, or "bare *istiʿāra*", as in "I attacked a lion groaning under [the burden of] his armour" (to be distinguished from the *istiʿāra muṭlaḳa* or "absolute *istiʿāra*" in *ʿindī asadun*, "with me is a lion" *i.e.*, a courageous man, where there are no elements in the context supporting "lion" in its proper or in its metaphorical sense; various interpretations of this type of *istiʿāra* in *Shurūḥ al-Talkhīṣ*, Cairo 1937, iv, 127-8). Following Djurdjānī's discus-

sion of the "substratum" (*dhāt*) of the *istiʿāra* (*Asrār*, 42-7 = tr. 63-8), these authors furthermore distinguish an *istiʿāra takhyiliyya* or "fantastic *istiʿāra*", as in the famous line by Abū Dhuʾayb al-Hudhalī: "When fate plunges its talons in its prey, you find that no amulet will help", where the attribution of talons to fate suggests that fate is a wild animal. Since "fate" is here still indicated by its proper term, the *istiʿāra* is achieved "metonymically" (*bi-'l-kināya*; Sakkākī's point of view as expressed in the *Miftāḥ*, 178, l. 6-15 differs from that of Ḳazwīnī, *al-Īḍāḥ*, v, 165 ff. and Suyūṭī, *ʿUḳūd al-djumān*, 99-100). These as well as other terms and definitions adopted by the followers of ʿAbd al-Ḳāhir al-Djurdjānī, though they help to present ʿAbd al-Ḳāhir's ideas in a well-ordered form, do not seem to offer an essentially new approach to his theory of the figure (for further details see Mehren, 31-40, 75-91), but numerous works by authors belonging to this school still remain to be investigated.

Ibn al-Athīr (d. 637/1239) in his *al-Mathal al-sāʾir* (Cairo 1358/1939, i, 57-64, 355-88) sees the metaphor as a shortened simile (*tashbīh maḥdhūf*). He considers it essential that the original notion and the notion substituted for it should share a common characteristic that is obvious and therefore easily recognizable and analogous to the acquaintance (*maʿrifa*) that exists between lender and borrower in a loan transaction. He therefore does not consider as *istiʿāras* examples like the line by Abū Nuwās: "Hoarse is the voice of property (*buḥḥa ṣawtu 'l-māli*) from complaining against you and raising its voice [against its being spent too liberally]", apparently because he sees no good reason for comparing property to a human being with a voice (cf. Ibn Rashīḳ, *al-ʿUmda*, i, 240). He considers this and similar examples as no more than a trope (*madjāz*) resulting from an extension of usage (*tawassuʿ fi 'l-kalām*) and closely resembling the simile by virtue of the annexation in the genitive (pp. 356, 361-2). Nor does he consider as *istiʿāras* anthropomorphisms like "And neither the heaven nor the earth wept over them" (Ḳurʾān XLIV, 28) and the Prophet's description of Uḥud: "This is a mountain we love and that loves us", though the absence of the annexation in the genitive makes these expressions acceptable. Though he offers interesting discussions of the views of some of his predecessors, Ibn al-Athīr's own definitions of the *istiʿāra* are obscure and his choice of examples shows inconsistencies.

Similar inconsistencies exist in the *K. al-Ṭirāz* (Cairo 1332/1914, i, 197-260) of Yaḥyā b. Ḥamza al-ʿAlawī (d. 747/1346), though otherwise this book offers a useful summary of the views of some early as well as some later authors (Ibn al-Athīr and the followers of ʿAbd al-Ḳāhir al-Djurdjānī). The author inclines towards considering expressions like *zaydun asadun* as metaphors, but *zayduni 'l-asadu*, as well as expressions that make use of particles of comparison, as similes (pp. 202-9), a question much debated by ʿAbd al-Ḳāhir. His subtitution of the term *istiʿāra muwashshaḥa*, "ornamented *istiʿāra*", for *istiʿāra murashshaḥa* is no doubt the result of a misreading.

Chapters on the *istiʿāra* in later handbooks likewise offer no more than summaries of earlier definitions and repeat or elaborate the essential elements of the theories of ʿAbd al-Ḳāhir al-Djurdjānī and his school along with some refinements, such as the observation that in "Those are they who have purchased error with right direction, and their trade was not profitable" we have an *istiʿāra murashshaḥa* in which two *istiʿāras*, "buying" and "profitable trade" support each other (Ibn Ḥidjdja, *Khizāna*, Cairo 1304/1886, 49). They sometimes offer copious examples of *istiʿāras* in the work of post-classical poets.

On Abū Bishr's (d. 328/939) translation of the Poetics of Aristotle and the resulting misconceptions on the metaphor in the digest of the Poetics by Avicenna and Averroes see F. Gabrieli in *RSO* xii (1929-30), 293, 301 n. 3, 304, 318, 321; Ḳudāma, *Naḳd*, Intro., 42 (but cf. S. Afnan, *The commentary of Avicenna on Aristotle's Poetics* in *JRAS* (1947), 188; W. Heinrichs, *Arabische Dichtung und Griechische Poetik*, Beirut 1969, 156).

Bibliography: in addition to the fundamental works mentioned in the text: Āmidī, *al-Muwāzana*, Cairo 1380/1961, i, 245-64; Ibn Abi 'l-Iṣbaʿ, *Taḥrīr al-taḥbīr*, Cairo 1383/1963, 97-101; idem, *Badīʿ al-ḳurʾān*, Cairo 1377/1957, 17-27; Shams al-Dīn Muḥ. b. Ḳays al-Rāzī, *al-Muʿdjam fī maʿāyīr ashʿār al-ʿadjam*, ed. Mirzā Muḥ. al-Kazwīnī, Leiden 1909, 336-40; Djalāl al-Dīn al-Ḳazwīnī, *al-Īḍāḥ fī ʿulūm al-balāgha*, Cairo 1368/ 1949, v, 43-183 (detailed notes on the theories of authors belonging to the school of ʿAbd al-Ḳāhir al-Djurdjānī); Taftāzānī, *al-Sharḥ al-muṭawwal*, Istanbul 1330/1911, 354-405; Suyūṭī, *ʿUḳūd al-djumān*, Cairo 1358/1939, 92-100; ʿAbbāsī, *Maʿāhid al-tanṣīṣ*, Cairo 1367-1947, ii, 132-72; Ibn Maʿṣūm, *Anwār al-rabīʿ fī anwāʿ al-badīʿ*, Nadjaf 1388/1968, i, 243-97; H. Ritter, *Über die Bildersprache Niẓāmīs*, Berlin 1927; T. Sabbagh, *La métaphore dans le Coran*, Paris 1943 (uncritical); M. Khalafallah, *Naẓariyyāt ʿAbd al-Ḳāhir al-Djurdjānī*, in *Farouk I University Bulletin of the Faculty of Arts*, ii (1944), 14-48. A useful discussion of contemporary western definitions of the metaphor raising some questions that were also familiar to the mediaeval Arab critics is *Die Metapher* (Bochumer Diskussion) in *Poetica, Zeitschr. für Sprach- und Literaturwissenschaft*, ii (1968), 100-30. (S. A. Bonebakker)

ISTIBDĀD [see ẒULM].

ISTIBRĀʾ, the period of sexual abstinence imposed on an unmarried female slave whenever she changed hands or her master set her free or gave her in marriage. Literally, *istibrāʾ* means to make sure of the "freedom", that is the "emptiness", of the womb. In fact, this period of abstinence was imposed to avoid confusion over paternity since—as there is hardly need to mention—female slaves, especially young ones, were nearly always the concubines of their masters. Nevertheless, the majority of *fuḳahāʾ* often lost sight of the point of this institution and imposed *istibrāʾ* in hypothetical cases where, by the very nature of things, there was no danger of confusion over paternity.

1) When a female slave passed from the ownership of one person to another, for whatever reason—sale, gift, cancellation of sale, exchange, succession, division of spoils or legacy—she had to observe *istibrāʾ*. In theory, all female slaves came under this obligation, not only those who, by reason of their age, were able to bear children but also pre-pubertal girls, even the very young, and post-menopausal women, excepting only, in Mālikī law, girls who were so young that any sexual relationship with them was impossible (Khalīl, *Mukhtaṣar*, ii, 125).

Istibrāʾ was imposed even on a female slave who was virgin at the time of transfer of ownership, though in such a case there was no possibility of confusion over paternity if she became pregnant later. It is surprising to observe the unanimity of the schools on this point; only the Ẓāhirīs gave virgins dispensation

from *istibrāʾ* (Ibn Ḥazm, *Muḥallā*, x, 315). A classical example is a good illustration of the irrational demands of *fiḳh* in this matter. Suppose that a female slave had been sold by a woman or a eunuch (in such cases *istibrāʾ* was "recommended" but not obligatory), the sale having been rescinded by mutual consent (*iḳāla*), she returned to the woman or the eunuch. In this case there could be no possible doubt at all about the origin of a possible pregnancy, yet this female slave had to observe *istibrāʾ* after the dissolution of the sale, even though this took place before the buyer had taken possession of her. Only the Ḥanafīs avoided such an absurdity by waiving *istibrāʾ* except when the dissolution of the sale, by common consent, took place after the buyer had taken possession.

2) Every female slave had to observe *istibrāʾ* at the time of her manumission, including an *umm walad* [see ʿABD] at the death of her master. Here too the Ḥanafīs deviated from the solution common to the three other schools by demanding in the case of the *umm walad* not an *istibrāʾ* of one menstruation but an *ʿidda* of three inter-menstrual periods, as for a free woman, whether the manumission occurred during the lifetime of the master or was a consequence of his death (al-Zaylaʿī, *Tabyīn*, iii, 30).

3) Finally, a slave whose master gave her in marriage to a free man or to another slave had to observe *istibrāʾ*, as it is defined below, except in Ḥanafī law where the position on this point seems, moreover, curious.

In spite of their tendency to insist on *istibrāʾ* on the occasion of any change in the juridical status of a female slave, the *fuḳahāʾ* avoided carrying their system to absurd lengths. Thus exemption was granted to the slave who had had intercourse with her master and was then freed when he married her after manumission. In this case *istibrāʾ* would in fact have had no purpose. Such a hypothetical case should not be confused with one where a man buys a female slave whom he frees on the spot and seeks to marry without *istibrāʾ*. In this case, and with good reason, the Mālikī, Shafiʿi and Ḥanbalī schools insist that there must be an *istibrāʾ*. Their scholars explain that if Ḥanafī law says otherwise this is because Abū Yūsuf, wishing to oblige Caliph Hārūn al-Rashīd, who was impatient to possess a slave he was going to buy, had advised him to set her free and then marry her. This was certainly an instance of word-play (Ibn Ḳudāma, *Mughni*, vii, 507-8).

Duration of *istibrāʾ*. The waiting period which constitutes *istibrāʾ*, during which the female slave was forbidden to have any sexual intercourse, lasts until her accouchement in the case of a slave who is pregnant at the time of her sale, manumission or marriage. For women who are menstruating, the time must embrace one complete menstruation (*ḥayḍ*), that is, the menstruation which proves the emptiness of the womb must begin during the period of "purity" (*ṭuhr*), prior to which the transfer of property, manumission or marriage has taken place. Pre-pubertal or post-menopausal slaves observe a period of retreat of one lunar month. The waiting period is the same whatever the reason for the *istibrāʾ*, with the sole exception, mentioned above, of the *umm walad*, which, in Hanafī law, entails the observation of an abstinence of three *ḳurūʾ*, that is, according to the Ḥanafī definition of the word, of three menstruations. Noteworthy in this respect is a curious rule of Ḥanbalī law which lays down that when a female slave is sold by two co-owners, both of whom have had sexual relations with her, two *istibrāʾ* must be observed (Ibn Ḳudāma, *Mughni*, vii, 509). These intervals belong to the *istibrāʾ* proper, that is the period of abstinence applying to an unmarried slave. When a slave is married and her marriage is dissolved by repudiation or by the death of her husband, it is no longer a matter of *istibrāʾ* but of a genuine *ʿidda* [*q.v.*]. Because of the unquestioned rule of Muslim law that a slave's legal obligations are half those of a free man, this would last for two months and five days if the marriage was dissolved by death and two *ḳurūʾ* if the woman had been repudiated. Remembering the different interpretation of the word *ḳurūʾ* by the various schools, this could mean two inter-menstrual periods (the majority of schools) or two menstruations (Ḥanafī school).

Istibrāʾ in the case of termination of slavery. In all cases when a female slave changes master, it is incumbent on the man who acquires her (by sale, gift, inheritance etc.) to see that the said slave fulfils her obligation; in other words he must abstain from sexual intercourse with her until the time of *istibrāʾ* has expired. The four schools are unanimous on this point and, apart from a few isolated jurists, only the Ẓāhirīs imposed this obligation on the vendor (Ibn Ḥazm, *Muḥallā*, x, 315). Mālikī law worked out an ingenious system that enabled all the pertinent regulations of *fiḳh* to be both effective and easily workable. It entailed giving the slave who should observe *istibrāʾ* into the hands of a trustworthy person, preferably a woman, who forbade the new owner to come near her until the period of abstinence had elapsed. This system was known as the *muwādaʿa*, from *wadīʿa*, a trust.

Sanctions for default in *istibrāʾ*. The man who acquires a new female slave and has sexual relations with her without respecting the waiting period of *istibrāʾ* commits a grave sin (*ithm*); although purely religious, this sanction was somewhat awkward for a man who was a believer but also impatient. For his benefit, Ḥanafī jurisconsults invented a *ḥīla* [*q.v.*], or legal expedient, which permitted the law to be evaded but not infringed. This *ḥīla* consisted of marrying the newly acquired slave to a man of straw, often the dealer himself, who repudiated her then and there, that is before consummating the marriage. In this way she was released from the *ʿidda* and since she had been married *istibrāʾ* did not apply to her. The schools who condemned *ḥiyal* in principle, such as the Ḥanbalīs and Mālikīs, rejected this expedient without hesitation. (Ibn Ḳudāma, *Mughnī*, vii, 513; Khalīl, *Mukhtaṣar*, ii, 123).

Yet the acquirer who had not respected *istibrāʾ* could suffer indirectly the consequences of his negligence. Supposing, for example, that the slave gave birth to a child less than six months after she had been bought; this was proof that she had been pregnant by her previous master and therefore an *umm walad*; since this meant that she should have been neither sold nor given away, the act of acquisition by her new master was automatically annulled and the slave returned to her former master.

All possible combinations of *istibrāʾ* with the *ʿidda*s of freed slaves (identical with those of free women) and the *ʿidda*s of married slaves have been the object of lengthy discussions in works of *fiḳh*, to which reference should be made.

Bibliography: The works on *fiḳh*, generally in the chapter on the *ʿidda*, especially Marghīnānī, *Hidāya*, Cairo 1936, iv, 65 ff.; Ramlī, *Nihāyat al-Muḥtādj* (Shāfiʿī), Cairo 1938, vii, 154-62; Khalīl, *Mukhtaṣar*, tr. Bousquet, ii, 123-8; Ibn Ḳudāma, *Mughni* Cairo 1367, vii, 500 ff. For a comparison between the schools see Dimashḳī, *Raḥmat al-*

umma on the margin of Shaʿrānī's *Mizan*, ed. Ḥalabī, ii, 88-9; Santillana, *Istituzioni*, Rome 1925, i, 252-3. See also ʿABD, ʿIDDA and UMM WALAD.

(Y. LINANT DE BELLEFONDS)

ISTIBṢĀR (KITĀB AL-), an anonymous geographico-historical work of which the full title is *K. al-Istibṣār fī ʿadjāʾib al-amṣār*. The text does not provide any precise information about the author, who is most probably a Moroccan living in the second half of the 6th/12th century. Indeed it seems likely that the original text is the work of a writer referred to as *muʾallif* or *wāḍiʿ*, and that it was subsequently revised and brought up to date by a *nāẓir*, who states (p. 226) his intention of writing a history of the Maghrib together with a composition which he had offered to the sovereign in 580/1184-5 (probably Yaʿḳūb al-Manṣūr, 580/95/1184-99). Although the author states that he was writing in Ramaḍān 587/September-October 1191, events occurring after this date are also related, which suggests that the "reviser" restricted his activity to making additions without deleting conflicting facts. The work is dedicated to a certain Abū ʿImrān ibn Abī Yaḥyā b. Waḳtīn, who is otherwise unknown.

The *K. al-Istibṣār* is divided into three parts, which contain respectively a detailed description of Mecca and Medina, some more or less legendary information on the history and geography of Egypt, and finally a description of North Africa and of the Bilād al-Sūdān interspersed with historical information; the work is of very uneven value, fantastic stories being related side by side with contemporary documents of undeniable interest.

It was the subject of a partial edition by A. von Kremer, *Description de l'Afrique par un géographe arabe anonyme du 6e siècle de l'hégire*, Vienna 1852; thanks to the Mss. Algiers 1560 and Paris, Bibl. Nat. 2225, E. Fagnan was able to fill in some gaps in the rather incomplete text of von Kremer and to give a French translation of it, *L'Afrique septentrionale au XIIe siècle de notre ère*, in *Recueil de notices et mém. de la Soc. archéol. de Constantine*, xxxiii (1899), Constantine 1900; finally, Saad Zaghloul Abdel-Hamid published the complete text, based on the Mss. Bibl. Nat. 2225 and Algiers 1560 and 3216, together with a translation into French of the section relevant to the Holy Places and to Egypt, under the title *Kitāb al-Istibṣār*, etc., Alexandria 1958. Two manuscripts, identical to those used by von Kremer and Fagnan respectively, are in the Bibl. Gén. of Rabat, nos. 415 and 415 *bis*. It is probable that the manuscripts so far used still contain gaps, because the one author who quotes from the work, Ibn Abī Zarʿ (*Ḳirṭās*, 24), reproduces a passage which is not in the text as it has been preserved.

Bibliography: In the article. (CH. PELLAT)

ISTIDJA, ECIJA, a town in the centre of Andalusia, to the south-west of Cordova, which today contains 50,000 inhabitants; it is situated on the banks of the river Genil, which was formerly navigable as far as its confluence with the Guadalquiver. Of Iberian origin and colonized by the Greeks, the town was occupied by the Carthaginians, who have left no trace of their stay there, and then was fortified and embellished by the Romans who, at the time of Augustus, made it a *conventus*, the juridical centre of the district. Nothing is known of it under the Visigoths. The town surrendered to the Arabs after the defeat of Don Rodrigo at Lago de la Janda, and the whole surrounding region submitted to the victors without resistance. In the reign of the amīr al-Ḥakam I, a dispute over the succession broke out between the ruler and his two uncles, Sulaymān and ʿAbd Allāh, sons of ʿAbd al-Raḥmān I; Sulaymān attempted to seize Cordova, and continued to struggle for two years before being defeated in the neighbourhood of Ecija and in the valleys of the Genil and the Guadalquiver; he was finally overcome, captured and put to death, while his brother ʿAbd Allāh went to Aix-la-Chapelle to seek support from Charlemagne.

Ecija remained comparatively peaceful until the time when the rebellion of ʿUmar b. Ḥafṣūn incited the inhabitants, who for the most part were Mozarab, to rise against the government of Cordova, an action which caused Ecija to be regarded as a cursed city inhabited solely by enemies of the Umayyad regime. The amīr ʿAbd Allāh attacked it, and his successor ʿAbd al-Raḥmān III, on coming to the throne and launching his decisive campaigns against Ibn Ḥafṣūn, sent against Ecija his *ḥādjib* Badr with an army which dismantled the town and destroyed its bridge (later rebuilt by al-Manṣūr Ibn Abī ʿAmīr).

On the fall of the caliphate, Ecija was for a time ruled by the Djahwarids of Cordova, but it then passed under the domination of the Banū Birzāl who had made themselves independent in Carmona; but al-Muʿtaḍid of Seville, who had seized all the small Berber states, from Morón to Ronda, mercilessly attacked the territories subject to the petty ruler of Carmona, and this town, together with Ecija, Osuna and Almodovar, came under the rule of Seville. Later, at the beginning of the siege of Cordova by Ferdinand III, al-Mutawakkil Ibn Hūd attempted to oppose the besieging army; he took his troops as far as Ecija, but did not dare to engage in battle; he withdrew to Almeria, and the Cordovans, running short of supplies, surrendered on 22 Shawwāl 633/29 June 1236. The Muslims who wished to remain did not leave the town until 681/1282, when they were expelled and replaced by Christians. From then onwards, Ecija formed one of the bases from which the reconquest of the kingdom of Granada was organized.

ISTIḌLĀL [see MANTIḲ].

ISTĪFĀʾ [see MUSTAWFĪ].

IṢṬIFAN B. **BASĪL** (STEPHANOS), the first translator of the *Materia medica* of Dioscorides. Ibn Abī Uṣaybiʿa speaks of him in two passages in his book: in the first he is cited along with Mūsā b. Khālid as one of the experienced scribes (*kuttāb naḥārīr*), skilled in the art of translating, whom the caliph al-Mutawakkil placed at the disposal of Ḥunayn b. Isḥāḳ [*q.v.*], who was responsible for checking (*yataṣaffaḥ*) their work; the second and more important reference to him is derived from information provided by Ibn Djuldjul in his lost book on the *Explanation of the names of simples according to the treatise of Dioscorides*. The translation of the *Materia medica* from Greek into Arabic, he says, was made in Baghdād in the time of al-Mutawakkil by Iṣṭifan b. Basīl (*al-turdjumān*), under the supervision of Ḥunayn b. Isḥāḳ (*al-mutardjim*) who authorized it (*adjāzahu*). Iṣṭifan gave the Arabic equivalents for the Greek names of the drugs with which he was familiar in his day. Those names for which he knew of no Arabic equivalents he left in Greek, "trusting that God would later send someone who would know

them". It should be noted that this first translation was made directly from the Greek, without any intermediate Syriac version.

(R. ARNALDEZ)

IṢṬIFĀN AL-DUWAYHĪ, Maronite cleric and historian, born in Ihdin, in the northern Lebanon, in 1629. He studied at the Maronite College in Rome from 1641 until his graduation in 1655, then returned as a priest and missionary to serve his community in Mount Lebanon and Aleppo. In 1668 he was promoted to the rank of bishop and appointed to the diocese of Cyprus; two years later, on 20 May 1670, he was elected to succeed as Maronite patriarch.

As head of the Maronite church, Duwayhī proved an efficient reformer and reorganizer. His administration was notable, among other things, for the establishment of the Maronite order of the Antonines in 1695, and the confirmation of its rules in 1700. He died at Ḳannūbīn, the seat of the Maronite patriarchate, on 3 May 1704.

While certainly remembered as a great patriarch, Duwayhī is even better remembered as a historian of the Maronite church and community and of Syria, his three principal historical works being a history of the Maronites (*Taʾri̱kh al-ṭāʾifa al-mārūniyya*) which argues for their perpetual orthodoxy (the Maronites are known to have been originally Monothelites), a chronology of the Maronite patriarchs (*Silsilat baṭārikat al-ṭāʾifa al-mārūniyya*), and a chronicle of the history of Syria from the First Crusade until 1699 (*Taʾrīkh al-azmina*) which is valuable particularly for the period following the Ottoman conquest in 1516, and for its references to the history of the Maronites and the northern Lebanon in the earlier centuries. In general, the historical work of Duwayhī reflects his own exceptional intelligence and his careful Roman training, and even the polemics in his history of the Maronite church, which clearly stand out for what they are, do not detract from the scholarly quality of his work.

ISTIFHĀM (A.), inf. of the verb *istafhama* "to interrogate", a technical term in Arabic grammar signifying interrogation.

Interrogation can be indicated simply by the intonation of the sentence, particularly in prose that is close to the spoken language. Arabic generally uses two interrogative particles: *a-* (negative *a-lā*, *a-mā*, *a-lam*), *hal*. The second (*hal*) is more energetic than the first (*a-*), but is of more restricted use (Reckendorf, *Arabische Syntax*, 19, 10). Sībawayhi (i, 434, line 19-435, lines 1-2) represents the difference between *a-* and *hal* thus: "if you say: *hal taḍribu Zaydan*? "do you hit Zayd?", you are not implying that the act of hitting Zayd is a reality in your mind; you can say: *a-taḍribu Zaydan*?, and then you are implying that the act of hitting is a reality". This amounts to saying: *a-* for interrogation concerning a reality, *hal* concerning an act or a possibility, without the implication of any opinion about their realization (cf. Reckendorf, *loc. cit.*, 35 n. 2). W. H. Worrell (in *ZA*, xxi, 126) sees the essential difference as being one of emphasizing the interrogation in the case of the use of *hal*, that is to say that an emotional element is introduced. It is then of use to consider the usages of *a-*, *hal* and *am* found by G. Bergsträsser, at least in the Ḳurʾān, in *Verneinungs- und Fragepartikeln und Verwandtes im Ḳurʾān* (*Leipziger semitische Studien*, v/4 (1914), §§ 68-9). Besides, *a-* can be followed by *-wa-* or *-fa-* (stronger expressions): *a-wa-taḍribu*?, *a-fa-taḍribu*? *a-* can be followed by the inversion of the direct object complement: *a-Zaydan taḍribu*? All these constructions are prohibited with *hal*.

Disjunctive interrogation: the *ʿarabiyya* of the desert used: *a-* ... *am* (called *al-muttaṣila* "the joined up"), or *aw*: *a-Zaydun ʿindaka am ʿAmrun* or *aw ʿAmrun*? "is it Zayd or ʿAmr that is with you?"; *a-Zaydan laḳīta am Bishran* or *aw Bishran*? "did you meet Zayd or Bishr?". "In the course of its development, the language did not preserve this lack of distinction and reserved *aw* for non-interrogative sentences and *am* for interrogative sentences" (M. Gaudefroy-Demombynes and R. Blachere, *Gr. Ar.*³, 470, lines 1-4). The Arab grammarians make a subtle distinction between *aw* in interrogative sentences and *am*: see Sībawayhi, ch. 281; al-Zamakhsharī, *Mufaṣṣal*, § 542 and Ibn Yaʿīsh, 1153-4; this doctrine was reported by Wright, *Ar. Gr.*³, 308 B and Reckendorf, *Ar. Synt.*, 311, lines 16 f. This distinction is a subtlety invented *a posteriori* to bring order to a lack of distinction, as Gaudefroy-Demombynes and Blachere state (*loc. cit.*, 470, n. 1).

On the use of *hal* ... *aw* or *hal* ... *am*, more frequently *bal am*, see Sībawayhi, ch. 280, Wright, ii, § 167, Reckendorf, *Ar. Synt.*, 311; *am* "but rather" is then called *al-munḳaṭiʿa* "the separated" by the Arab grammarians. This *am al-munḳaṭiʿa* is also found in *am* of: *a-* .... *am* (see Bergsträsser, *loc. cit.*, §§ 73-4).

Remarks: a) For a negative answer to one of the two terms of a disjunctive interrogation, see Reckendorf, *Ar. Synt.*, § 160 c.

b) *a-lā* is very frequently an exclamatory particle: "well, now! come on! look here!" *a-mā* is also found in this sense. See examples: Wright, ii, § 168; Reckendorf, *Ar. Synt.*, 39.

allā (*alā* = *a-lā*, less strong than the preceding one), *hal-lā*, are used as exclamatory particles exhorting someone to do something (with the imperfective), or reproaching someone for not having done something (with the perfective); see Wright, ii, § 169, Reckendorf, *Ar. Synt.*, 39.

c) For rhetorical questions, see Reckendorf, *ibid.*, § 21.

d) In dialect *ha-* is found for *a-*: *ha-mā* for *a-mā*, and *vice-versa*: *al* for *hal*, *allā* for *hallā* (Wright, i, 284 C and 288 A).

ISTIḤḌĀR [see ISTINZĀL].

ISTIḤSĀN and **ISTIṢLĀḤ**, two methods of reasoning much discussed in the books on the-

Uṣūl al-Fiḳh [*q.v.*] in connection with the doctrine of *ḳiyās* [*q.v.*]. The two conceptions as a result of their close relationship are sometimes confused (cf. Shāṭibī, iv, 116-118; Ibn Taymiyya, v, 22). But no one ever seems to have reached a clear and lucid definition of their mutual relationship.

I. The authorities for *istiḥsān* which the followers of this method quote from the Ḳur'ān (XXXIX, 18, 55), *ḥadīth* (*mā ra'āhu 'l-muslimūn ḥasanan fa-huwa ʿinda 'llāhi ḥasanun*) and *idjmāʿ* (going to the bath without previous arrangement about payment etc.), are easily deprived of weight by the opposition and therefore need not be further discussed. On the other hand, it is interesting to note that *istiḥsān* already leaves its literary impress in *ḥadīth*, thus going back to the first half of the 8th century A.D. (see Wensinck, *The Muslim Creed*, 59). For example we already find in Bukhārī (*Waṣāyā*, bāb 8) the expression *istaḥsana* in the meaning of "to make a decision for a particular interpretation of the law as a result of one's own deliberation". Half a century later, Mālik (d. 179/795) uses the expression in connection with legal decisions for which he cannot find authority in tradition (*Mudawwana*, Cairo 1323, xvi, 217; similarly xiv, 134: "This is a matter on which I have received no instruction from my predecessors. It is rather something that we have decided according to opinion" [*wa-innamā huwa shay'un istaḥsannāhu*]). About the same time Abū Yūsuf (d. 182/798, Ḥanafī) says: *al-ḳiyās kāna an . . . illā annī istaḥsantu . . .* ("according to the *ḳiyās* this and that would be prescribed but I have decided according to my opinion" [*Kitāb al-Kharādj*, Būlāḳ 1302, 117]). *Istiḥsān* is thus contrasted even more distinctly with the usual method of deducing legislation (*ḳiyās*). The term, in later centuries also, means a method of finding the law which for any reason is contradictory to the usual *ḳiyās*.

It is noteworthy that Shāfiʿī (d. 820), the founder of the science of the *Uṣūl al-Fiḳh*, fundamentally rejected *istiḥsān*, because he feared that in this way by going beyond the methodically secure and generally recognized principles of legal interpretation a loophole would be made for arbitrary decision. "God has not permitted any man since his Messenger to present views (*ḳawl*) unless from knowledge that was complete before him" (*Risāla*, 70). If any one in spite of this uses *istiḥsān* he is bungling the work of God, the highest legislator (*man istaḥsana fa-ḳad sharaʿa* [quoted in Ghazālī, i, 274 and *pass.*]). Ghazālī (d. 504/1111) and Bayḍāwī (681/1282 or later, also a Shāfiʿī) resumed and developed the discussion initiated by Shāfiʿī in a more comprehensive and systematic fashion. *Istiḥsān* in their view can only be approved in so far as it can be traced to the principle of *takhṣīṣ* (the preference of a particular to a general prescription). But as *takhṣīṣ* is already contained in the doctrine of *ḳiyās*, *istiḥsān* has really no special part to play. Later Shāfiʿī authorities like Subkī (d. 1370) and Maḥallī (864/1460) express similar views.

The supporters of the doctrine of *istiḥsān*—they belong for the most part to the Ḥanafī *madhhab* (Pazdawī [d. 482/1089], Sarakhsī [d. 483/1090], Nasafī [709/1310] etc. down to Baḥr al-ʿUlūm [1225/1810])—make every effort to deprive these objections of their force. To the assertion that the arbitrary opinion of the individual legist is given too much scope, they reply by defining and systematizing *istiḥsān* more accurately. Their principle of diverging in certain cases from *ḳiyās* and using *istiḥsān* is—they say—not decided by personal inclinations or by a lack of methodical thinking but on the contrary by purely material considerations provided for in the law. It is a "concealed *ḳiyās*" (*ḳiyās khafī*), a divergence from an externally obvious *ḳiyās* to an inner and self-conditioned decision. The reason for the preference of *istiḥsān* might be given in the Ḳur'ān, in the Sunna, in the *idjmāʿ* or in the principle of *ḍarūra*, but in any case it is sanctioned by generally recognized methods of proof. Nor it is true that *istiḥsān* can be traced back to the principle of *takhṣīṣ* and thus be brought within the sphere of *ḳiyās* proper. It really lies outside of this narrow sphere and must therefore be recognized as a special form of deduction. For the rest, if we investigate more carefully, we can assert that the form of *istiḥsān* represented by the Ḥanafīs is also used by representatives of other *madhhabs*. It is in practice the common property of all legists.

If we consider the very minute work of systematization which the later Ḥanafīs (*e.g.*, Ibn al-Humām [d. 861/1457]—Ibn Amīr al-Ḥādjdj [879/1474] and Bihārī [1120/1708]—Baḥr al-ʿUlūm [1225/1810] have done on *istiḥsān*, we may actually agree with this last deduction. This method of reasoning, which originally aroused such misgiving because it was undefined, is given a place in the casuistic stepladder of the *ʿilm uṣūl al-fiḳh*, and its possibility of application thus limited to a few accurately definable cases. If nevertheless discussion continued on whether it is justified or not this can only be explained by the fact that the followers of the Shāfiʿī school felt themselves bound from a certain traditional principle not to drop the polemic against *istiḥsān* which had long ago been originated by their master—under different conditions and with more justice.

II. *Istiṣlāḥ* is, as regards its negative side, closely connected with *istiḥsān*; here we have again a question of principle by which the otherwise usual method of deduction is to be excluded in the preparation of legal decisions. The difference from *istiḥsān* is seen only when we enquire into the guiding idea which forms the positive foundation for this principle which is negative in its effects. We then see that *istiṣlāḥ* is more limited and more closely defined in content than *istiḥsān* in so far as it replaces the, in itself only formal, "finding-good" of the latter by the material principle of *maṣlaḥa*. It argues with the demands of human welfare in the widest sense. It might therefore be contrasted with the more comprehensive and more indefinite general conception of *istiḥsān* as a more exactly defined or subordinated species, as indeed al-Ishbīlī (Mālikī, d. 546/1151) already pointed out (Shāṭibī, p. 117). It is just through this greater definiteness that *istiṣlāḥ* gains in force compared with *istiḥsān*. For it is evident that such a plausible idea as that of anxiety for human welfare carries much more conviction in the derivation of legal decisions and can be more readily established than the formal and empty criterion of *istiḥsān*. In this way it is probably to be explained why the principle of *istiṣlāḥ* was on the whole not so strongly disputed as that of *istiḥsān* and why it occasionally, going beyond the denial of the usual *ḳiyās*, even questioned the validity of legal principles emanating directly from the Ḳur'ān, Sunna and *idjmāʿ* (see below).

Relying on the *ḥadīth lā ḍarara wa-lā ḍirāra fi 'l-islām* (in Islām there is no injury or malicious damage) and on other testimony from the Ḳur'ān, Sunna and *idjmāʿ*, later representatives of the *ʿilm uṣūl al-fiḳh* championed the principle that the whole Sharīʿa furthers or is intended to further the welfare of man (*riʿāyat al-maṣāliḥ*). This however does not

yet admit the principle of *istiṣlāḥ* but only a basis for it. *Istiṣlāḥ* is not yet found in operation in the normal deduction of the thesis of *riʿāyat al-maṣāliḥ*, but first occurs in the exceptional case only, namely when the legal principles of the Sharīʿa afford no direct basis for it. It is therefore called more accurately the principle of *al-maṣāliḥ al-mursala, i.e.*, of those cases of the *riʿāyat al-maṣlaḥa* in which the chain of deduction does not run smoothly and free from gaps back to the starting point of legislation (cf. the use of the expression *mursal* in the science of Tradition). *Istiṣlāḥ*, like *istiḥsān*, is therefore as a kind of *ḳiyās khafī* (see above) always in contrast to the more obvious method of deducing legal decisions. It is intended to eliminate or at least to correct deductions which take no note of the idea of *maṣlaḥa* in the sense of the latter. If for example—to take a frequently quoted example—the enemies of Islam attack the Muslims and to protect themselves drive Muslim prisoners in front of them, the Muslim ought properly not to shoot at them in view of the prohibition to kill innocent co-religionists. If nevertheless it is decided to do so and this latter prohibition is disobeyed, this is done with the support of *istiṣlāḥ*: it is believed to be more in keeping with the spirit of the law if a few Muslims are sacrificed than if the whole community is handed over to destruction.

The history of the origin and development of *istiṣlāḥ* cannot be traced so far back as that of *istiḥsān*. It is true that it is asserted by different authorities that Mālik (d. 179/795) was the first to use *istiṣlāḥ*, and indeed there is some ground for this, as for example when he declares it permitted in special cases to sell fresh dates not yet picked for ripened dates—against the usual regulation that fresh fruits cannot be sold for dried (*Mudawwana*, Cairo 1323, x, 90 ff.: *Kitāb al-ʿArāyā*). But in the first place it is not quite certain whether this opinion goes back to Mālik (see p. 94), and secondly a justification of this decision comparable to *istiṣlāḥ* (*li-mā yukhāf min iddikhāl al-maḍarra ʿalā ṣāḥib al-ʿarāyā*: p. 93 f., cf. p. 95) quite obviously comes not from him but—according to Saḥnūn (d. 854)—from the circle of his pupils. It should further be remembered that the term *maṣlaḥa* or *istiṣlāḥ* is not mentioned at all in this connection; and finally it should also be noted that Shāfiʿī (d. 820) in his famous *Risāla* confines the discussion to *istiḥsān*. From this it is probably safe to deduce that the problem of *istiṣlāḥ* was not yet ripe for discussion in his time—unless it was then still regarded as a subdivision of *istiḥsān* and therefore not particularly emphasised. The assertion that Mālik was the first to use *istiṣlāḥ* is therefore in all probability a later ante-dating of the fact that the Mālikīs made the most frequent use of this principle.

Nor in the period following Mālik and his generation is it possible yet to demonstrate clearly the development of *istiṣlāḥ*. The names which are quoted as authorities in the later works in discussion of the principle—apart from Mālik and Shāfiʿī (!)—belong at earliest to the 11th century. Perhaps the gap could be filled to some extent if the old and still unpublished *uṣūl* works were systematically studied. In any case the fact that the principle of *istiṣlāḥ*, according to the present state of our knowledge of the sources, is first found at a comparatively late date, does not yet allow us to deduce with certainty an outside influence (*e.g.*, of the *ratio utilitatis* in Roman law). It is equally unjustifiable, in view of the lack of the necessary preliminary work, to assert the quite natural hypothesis that *istiṣlāḥ* is ultimately to be derived from the Muʿtazilī principle of *ʿadl*.

Imām al-Ḥaramayn al-Djuwaynī (d. 478/1085, Shāfiʿī) is the first of those who are mentioned as followers of the principle of *istiṣlāḥ*. Unfortunately he does not discuss it in his brief *uṣūl* work *al-Waraḳāt* (but see the quotation from his *Mughīth al-Khalḳ* in Goldziher, in *WZKM*, i, 229, note 5). On the other hand, we possess authentic expressions of opinion by the *imām* Ghazālī (d. 1111), also quoted as an authority, which take us into the heart of the discussion (*Mustaṣfā*, i, 284-315). Ghazālī defines the legal term *maṣlaḥa* as "consideration for what is aimed at for mankind in the law" (*al-muḥāfaẓa ʿalā maḳṣūd al-sharʿ . . . min al-khalḳ*: p. 286 f.). By this he means five things: maintenance of religion, of life, of reason, of descendants and property. The consideration of *maṣlaḥa* and its counterpart, the averting of corruption (*dafʿ al-mafsada*), is, according to Ghazālī, generally given by the legal text and therefore coincides with the usual *ḳiyās*. In the cases in which it cannot be deduced by the usual process (*maṣlaḥa mursala*) it is only decisive when there are cogent and unequivocally defined considerations affecting the whole community (*ḍarūrī, ḳaṭʿī, kullī*), for example in the case of defence against an attack made upon the community of Muslims under cover of Muslim prisoners (see above). Otherwise it is not allowed to use *istiṣlāḥ*. If nevertheless a man uses it, he is bungling the work of the divine legislator (p. 311: *wa-man ṣāra ilayhā fa-ḳad sharaʿa*, with reference to Shāfiʿī's above-quoted remark on *istiḥsān*). For the rest Ghazālī refuses to include *istiṣlāḥ*, which he recognises in this limited form, as a special "root" with the other *uṣūl al-fiḳh*, as in his view it depends on a combination of proofs from the Ḳurʾān, *ḥadīth* etc. and therefore does not constitute an integral base.

After Ghazālī, other Shāfiʿī legal theorists express themselves on the problem of *istiṣlāḥ*, *e.g.*, Bayḍāwī (d. 1282 or later)—Isnawī (772/1370) and Subkī (771/1370)—Maḥallī (864/1460)—Bannānī (1198/1784). They discuss at considerable length the views of their predecessors, especially Ghazālī, but contribute very little that is new. On the other hand, the tendency to systematization of the different cases of *istiṣlāḥ* increases. This tendency to systematization however only reaches its height in the later Ḥanafī works on *uṣūl* by Ṣadr al-Sharīʿa Maḥbūbī (d. 747/1346)—al-Taftāzānī (792/1390 or later)—al-Fanarī (c. 905/1500) and especially Ibn al-Humām (861/1457)—Ibn Amīr al-Ḥadjdj (879/1474) and al-Bihārī (1120/1708)—Baḥr al-ʿUlūm (1225/1810). Here we cannot go into the details of their explanations, which are often difficult to follow.

Among the pronounced opponents of *istiṣlāḥ* are mentioned al-Āmidī (d. 631/1233, originally Ḥanbalī, later Shāfiʿī) and Ibn al-Ḥādjib (646/1249, Mālikī) (Bayḍāwī-Isnawī, iii, 135). At a somewhat later period we may probably include under this heading the celebrated Ḥanbalī theologian Ibn Taymiyya (d. 728/1328). In one of his epistles he gives his views on *maṣāliḥ mursala*. His exposition is rather obscure but it is at least clear that the whole question caused him much misgiving. He laments that many rulers and also ordinary mortals have used the principle of *maṣāliḥ* contrary to the law or in ignorance of it and so—just as with *istiḥsān*—have acted illegally as law-makers. The Sharīʿa—he thinks—has not neglected *maṣlaḥa*. If the human understanding thinks it may assume a *maṣlaḥa* which is not represented in the law they are only two possibilities: either the law has already indicated it

without his knowledge or it is a question only of an imaginary and not a real *maṣlaḥa*.

In the foregoing it has already been mentioned that the Mālikīs are regarded as the principal champions of *istiṣlāḥ*. But too much stress should not be laid on this general opinion. It is of course true that Mālikī legal theorists like Shāṭibī (d. 590/1194) and Ḳarāfī (684/1285) took up the discussion of *maṣāliḥ mursala* and carried it further. But on the other hand Ibn al-Ḥādjib who was also a Mālikī is reckoned one of the opponents of the principle (see above). On the contrary, the circle of those who recognise the principle of *istiṣlāḥ* in practice extends far beyond the limits of the Mālikī school. Ḳarāfī even points out that "if one looks carefully, it is in general use in the *madhhabs*" (p. 170). Shāfiʿīs and Ḥanafīs—although with certain limitations and in part under other names—have adopted it and developed it further. The most radical upholder of *istiṣlāḥ* is however a certain Nadjm al-Dīn al-Ṭawfī (d. 716/1316). He is considered a Ḥanbalī but in reality may be claimed as an independent student of law (*mudjtahid*)—precisely on account of his attitude to the question of *istiṣlāḥ*.

Ṭawfī in his *Risāla fi 'l-maṣāliḥ al-mursala* (extracted by Djamāl al-Dīn al-Ḳāsimī from his commentary on Nawawī's *Arbaʿūna ḥadīthan*) puts the ticklish question: What is to be done if the text of the law (*naṣṣ*) and *idjmāʿ* cannot be reconciled with regard for the general welfare (*riʿāyat al-maṣlaḥa*)? His answer is unambiguous: The *riʿāyat al-maṣlaḥa* is decisive, in so far as the legal aspects of everyday life (*muʿāmalāt*) are in question (the sphere of duties relating to worship, *ʿibādāt*, is not affected thereby as they relate to something fundamentally different from the preservation of the welfare of humanity). *Naṣṣ* and *idjmāʿ* are however not simply to be excluded. They are rather to be reconciled subsequently with the demands of the *maṣlaḥa* by the help of exegesis (*bayān*) or specification (*takhṣīṣ*, *i.e.*, by separating a subdivision from the general and the principles applicable to it). In any case however, the *riʿāyat al-maṣlaḥa* represents the highest court of appeal.

In order to strengthen the principle of *riʿāyat al-maṣlaḥa* and justify placing it above *naṣṣ* and *idjmāʿ* Ṭawfī quotes evidence from Ḳur'ān, Sunna, *idjmāʿ* and *naẓar* (reasoning), of course giving first place to the saying attributed to Muḥammad: "there is no injury or malicious damage" (*lā ḍarara wa-lā ḍirāra*). He further points out that the legal texts are of different kinds and contradictory while the idea of *maṣlaḥa* is an integral base, and thus gives a better clue to the solution of legal problems (reference to Ḳur'ān III, 103: "Hold fast together to the cord of Allāh and do not split into parties!"). He takes this opportunity to combat the assertion that the variety of legal interpretation is a special advantage of the Muslim religion (cf. the *ḥadīth*: *ikhtilāfᵘ ummatī raḥmatᵘⁿ*). The disadvantages which result are greater than the advantages: simply because there are such different interpretations, it is sometimes possible to find a lax interpretation to suit one's own wishes and to neglect the more rigorous injunctions. Besides, many non-Muslims, who would readily adopt Islam, are prevented from taking the final step by the multitude of opinions held by jurists and the resulting lack of uniformity in the legal system of Islam.

The author is well aware that his views go beyond the *istiṣlāḥ* of the Mālikīs (p. 60 f.). He is reproached with abandoning by his thesis the path that has been taken by the bulk of the Muslim community (*al-sawād al-aʿẓam*) and attention is called to the words of the Prophet: "Follow the majority! He who takes his own way will go his own way to Hell also" (*ittabiʿū al-sawād al-aʿẓam fa-inna man shadhdha shadhdha fi 'l-nār*). But this would mean reducing every new view and every new method *ad absurdum*. The majority which has to be followed according to the words of Muḥammad is rather the path of clear demonstration. And the latter condition is fulfilled in his (Ṭawfī's) method of *riʿāyat al-maṣlaḥa*.

Ibn Taymiyya in his already mentioned *Risāla* points out emphatically that the mind of man easily makes mistakes in using *maṣlaḥa*, especially if the text of the law does not agree with it. Ṭawfī, his contemporary and for a time pupil, on the other hand, concludes his *Risāla fi 'l-maṣāliḥ al-mursala* with the following words: "As to *maṣlaḥa* with regard to the legal relationships of man to man, it is known to those whom these legal relationships concern by reason of custom and intelligence. If we now see that the deduction given by the law does not comply with it (the *maṣlaḥa*), we know that to obtain it we must let it speak for itself (*fa-'idhā ra'aynā dalīl al-sharʿ mutaḳāʿidᵃⁿ ʿan ifādatihā ʿalimnā annā uḥilnā fī taḥṣīlihā ʿalā riʿāyatihā*) ... And God knows best what is correct".

Ṭawfī lived at a time when the systematization of Islamic law had already been achieved. As a champion of the principle of *riʿāyat al-maṣlaḥa* he was, and still is, an outsider. His *Risāla*, it is true, appeared in print in 1906 in a collection of treatises on *uṣūl al-fiḳh* and again in the periodical *al-Manār*. It seems, however, to have had no immediate effect upon those circles which, in Egypt and elsewhere, have been agitating for a reform of Islamic Law in recent times. Nevertheless, owing to the fact that its radicalism provoked contradiction, it did provide the impulse for a scientific discussion of the theoretical legal importance of *maṣlaḥa*.

Bibliography: I. *Istiḥsān*: Shāfiʿī, *Risāla* (at the beginning of *Kitāb al-Umm*, Būlāḳ 1321), 69 f.; *Kitāb al-Umm*, vii, Būlāḳ 1325, 270-7; Abu 'l-Ḥusayn Muḥammad b. ʿAlī b. al-Ṭayyib al-Baṣrī al-Muʿtazilī, *Kitāb al-Muʿtamad fī uṣūl al-fiḳh*, ii, Damascus 1385/1965, 838-40; Ghazālī, *al-Mustaṣfā*, 2 vols., Cairo 1356/1937, i, 137-9; Bayḍāwī, *Minhādj al-wuṣūl*, with commentary *Nihāyat al-su'ūl* by Djamāl al-Dīn al-Isnawī (on the margin of *al-Taḳrīr wa 'l-taḥbīr* by Ibn Amīr al-Ḥadjdj), 3 vols., Būlāḳ 1316-1317, iii, 140-147; Tādj al-Dīn al-Subkī, *Djamʿ al-djawāmiʿ*, with the commentary of Djalāl al-Dīn al-Maḥallī and glosses by Bannānī, 2 vols., Cairo 1297, ii, 288; Pazdawī, *Kanz al-wuṣūl*, with commentary (*Kashf al-asrār*) by ʿAbd al-ʿAzīz al-Bukhārī, 4 vols., Istanbul 1307-1308, iv, 2-14, 40, 83; Sarakhsī, *al-Mabsūṭ*, x, Cairo 1324, 145; Abu 'l-Barakāt al-Nasafī, *Kashf al-asrār* (*Sharḥ Manār al-anwār*), with commentary by Mullā Djīwan and glosses by Muḥammad ʿAbd al-Ḥalīm al-Luknawī, 2 vols., Būlāḳ 1316, ii, 164-8; Ṣadr al-Sharīʿa al-Maḥbūbī, *Sharḥ al-tawḍīḥ ʿalā 'l-Tanḳīḥ*, with commentary (*al-Talwīḥ*) by Taftāzānī and glosses by Fanarī and Mullā Khusraw, 3 vols., Cairo 1322, iii, 2-10; Ibn al-Humām, *al-Taḥrīr*, with commentary (*al-Taḳrīr wa 'l-taḥbīr*) by Ibn Amīr al-Ḥadjdj, 3 vols., Būlāḳ 1316-1317, iii, 221-238; [Mullā Khusraw], *Mirḳāt al-wuṣūl ilā ʿilm al-uṣūl*, Istanbul 1307, 23 f.; Muḥibb Allāh b. ʿAbd al-Shakūr (Bihārī), *Musallam al-thubūt*, with commentary (*Fawātiḥ al-raḥamūt*) by Muḥammad ʿAbd al-ʿAlī Niẓām al-Dīn (Baḥr al-ʿUlūm), printed along with Ghazālī's *al-Mustaṣfā*, 2 vols.,

(R. Paret)

ISTIḲBĀL in astronomy means the opposition of Sun and Moon, that is, the situation wherein their elongation from each other amounts to 180°. The word can refer to either a mean or a "true" opposition. The opposite of *istiḳbāl* is *idjtimāʿ*, the conjunction (again mean or "true") of the two luminaries. The practical importance of these two concepts is twofold. Eclipses can occur only at the two syzygies, lunar eclipses at opposition and solar eclipses at conjunction. Further, only when the time of the conjunction is known can the time of the first sighting of the New Moon be computed. For these two reasons every *zīdj* contains tables for computing *istiḳbālāt* and *idjtimāʿāt*.

These two terms are sometimes employed in astrology to refer to the diametric aspect and the conjunction of the planets, though generally astrologers prefer the terms *muḳābala* and *ḳirān*. In turn, the latter two terms are sometimes used by astronomers in place of *istiḳbāl* and *idjtimāʿ*. Other astrological aspects are sextile (*tasdīs*), quartile (*tarbīʿ*) and trine (*tathlīth*) at elongations (variously computed) of 60°, 90°, and 120° respectively.

Bibliography: For the astronomical usage see C. A. Nallino, *Al-Battānī*, ii, 29-32, 205-9, and 306-7. For the astrological usage the most convenient reference is al-Bīrūnī, *Kitāb al-tafhīm*, *s.vv.*

(David Pingree)

ISTIKHĀRA (A.), deriving from a root *kh-y-r* which expresses the idea of option or choice, consists of entrusting God with the choice between two or more possible options, either through piety and submission to His will, or else through inability to decide oneself, on account of not knowing which choice is the most advantageous one. To the first category belong the *akhyār* or "chosen", who regulate their lives according to the model inspired by God in the Ḳurʾān and the Law; to the second belong the *mustakhīrūn*, those who seek to escape from indecision with the help of divine inspiration. The divine voice expresses itself either by means of a *ruʾyā* [*q.v.*] or dream, or else by *ḳurʿa* [*q.v.*] or rhapsodomancy.

As a result of its affinities with the ancient practice of incubation, used especially in hiatromancy or medical divination and in necromancy, *istikhāra* is abhorred by Muslim orthodoxy (cf. A. Fischer, in *ZDMG*, lviii (1914), 325), but it is fairly widespread in popular circles, where it is sometimes found in conjunction with the casting of spells and, in effect, the use of ordeals (cf. L. Massignon, in *Annuaire du Collège de France*, 41e année, 1940-1, 86). To prevent the return to pagan customs, Islam fixed the rules under which the rite of *istikhāra* might be practised. A tradition of Djābir relates that the Prophet taught his disciples *istikhāra* in all things, as though he were teaching them a *sūra* of the Ḳurʾān. The practice followed by the Prophet consisted in two *rakʿas*, followed by a prayer, emphasising the omniscience and omnipotence of God and including a reference to the subject of the consultation (cf. al-Shawkānī, *Nayl al-awṭār*, quoted by Muḥammad ʿAbduh, *al-ʿIbādāt fi 'l-Islām*, Cairo n.d., 180). Neither time nor place is fixed for a consultation of this kind. The inspiration revealing the decision to be taken is immediately perceived, or, if the response be insufficiently clear in the consultant's mind, he has recourse to a drawing of lots from the various possible solutions, written separately on pieces of paper (cf. Doutté, *Magie et religion*, 413 f.).

This orthodox practice is generally interpreted in a sense which makes it comparable with incubation. After the invocation, the formulae for which are of different kinds and varying in length (cf. al-Bukhārī, *Tawḥīd*, no. 10, and *Daʿawāt*, no. 48, ed. Krehl-Juynboll, iv, 202 and 450; al-Tirmidhī, ed. Būlāḳ 1292, ii, 266; al-Nawawī, *Ḥilyat al-abrār*, ed. Cairo 1300, 56), the devotee goes to sleep, and it is in a dream that the revelation is made to him. This procedure is observed universally, especially in North-Africa, although it is considered to go beyond the letter of the Law (cf. Ibn al-Ḥādjdj, *al-Madkhal*, Cairo 1320, iii, 54).

A further step in the direction of incubation is taken by those who insist that the efficacy of this rite is dependent upon its being performed in a mosque. According to al-ʿAwfī, *Lubāb*, i, 210, l. 12, one goes into the mosque to perform the *namāz-i istikhāra*. The practice of sleeping in the sanctuary is sufficiently well attested before Islam, just as in the time of the

Prophet. It was by the Kaʿba, where he slept that night, that ʿAbd al-Muṭṭalib is said to have had the dream concerning Zamzam (cf. *Divination*, 262 f.); again, it was by the Kaʿba, where Muḥammad slept, that for the second time (?) there apparently took place the rite for the purification of the heart and entrails (*s̲h̲aḳḳ al-baṭn* and *fatḥ al-ṣadr*), performed for him by the two angels (cf. al-Ṭabarī, i, 1157); it is even said, on this occasion, that "the Ḳurays̲h̲ites were accustomed to sleep beside the Kaʿba" (cf. *ibid.* and al-Azraḳī, *Ak̲h̲bār Makka*, ed. Wüstenfeld, 306). The *isrāʾ* is also said to have taken place when the Prophet slept in the court (*ḥid̲j̲r*) of the Kaʿba (cf. *Divination*, 358). This custom does not appear to be limited to the Kaʿba (for its permanence, see Snouck Hurgronje, *Mekka*, ii, 16, n. 3 and 139); the attendant of al-D̲j̲alsad, an oracular divinity, slept in the sanctuary (cf. J. Wellhausen, *Reste*[2], 53 ff.; T. Fahd, *Le panthéon de l'Arabie centrale à la veille de l'hégire*, Paris 1968 (*Bibliothèque archéologique et historique*, lxxxviii), 84-7).

Orthodoxy is opposed to this practice, apparently out of regard for ritual purity (cf. Ibn al-Ḥād̲j̲d̲j̲, *Madk̲h̲al*, Cairo 1348, ii, 215, 241); but a short work in manuscript of Muḥammad al-S̲h̲awāʾī al-S̲h̲āfiʿī al-K̲h̲aṭīb (d. 954/1644), entitled *Risālat al-ak̲h̲yār fī-man manaʿa 'l-nawm fi 'l-masād̲j̲id min al-as̲h̲rār*, which we have consulted in Bursa (Ulucami 3496, fol. 1-20), refutes the arguments put forward in support of the prohibition of this custom (cf. details in *Divination*, 365 ff.).

In North Africa, where *istik̲h̲āra* is very close to the ancient incubation (cf. Doutté, *Magie et religion*, 414), and more especially in Morocco, people go and sleep in the grottoes, the refuge of the spirits, or beside ancient tombs, or, what is more usual today, in the sanctuary of a marabout, in order to elicit a response to the prayer of *istik̲h̲āra* (*ibid.*, 411 ff.). There even exists magic recipes to ensure the success of this rite (cf. al-Būnī, *S̲h̲ams al-maʿārif*, ii, 8). One of these, for example, is utilized in the search for a thief; a magic formula is written on one's hand, and one then goes to sleep, with this hand placed under the right cheek; the thief is then revealed in a dream (Doutté, *op. cit.*, 357). But the most characteristic is that of *ḥālūmat al-ṭibāʿ al-tāmm*, mentioned by Ibn K̲h̲aldūn, *Muḳaddima*, i, 190, when referring to the *G̲h̲āyat al-ḥakīm* of the Pseudo-Mad̲j̲rīṭī (cf. ed. Ritter and Plessner, Leipzig 1933, 187 ff.; German trans. by the same authors, London 1962, 199 f., in which the term *ḥālūma* does not occur), and which is a technique consisting of obtaining, in a dream of "perfect nature", a response to a question posed at the time of lying down to sleep, after purifying one's conscience, concentrating one's intention, pronouncing the following gibberish words: *Tamāg̲h̲īs bag̲h̲dīsawād, wag̲h̲dās, nufānāg̲h̲adīs*, and formulating one's wish. During sleep, the answer to the question is given. Ibn K̲h̲aldūn states that he had tried this himself and obtained good results (cf. *Divination*, 364 f.).

The *istik̲h̲āra* procedure seems to have been followed by some mystics, such as Ruzbahān Baḳlī, Ibn ʿArabī and Tīpū, sulṭān of Mysore. Their progress along the mystical path of perfection is marked by dreams, recording the passage from one stage to the next (cf. L. Massignon, *Thèmes archétypiques en onirocritique musulmane*, in *Eranos-Jahrbuch*, xii (1945), 242). Some authors claim, in their introductions, to have written their works after an *istik̲h̲āra* (*e.g.*, *apud* al-Nawawī, *Tahd̲h̲īb*, ed. Wüstenfeld, 237). In literary texts, however, the term *istik̲h̲āra* is merely a pious formula for a request to God for aid and advice, with no ritual character (cf. for example *Ag̲h̲ānī*, xviii, 72, xix, 92).

Bibliography: In addition to the sources named in the text, see: T. Fahd, *Divination*, 363-7; Doutté, *Magie et religion*, 410-4. According to Nawawī, *Tahd̲h̲īb*, 744, l. 3, Abū ʿAbd Allāh al-Zubayrī (F. Sezgin, *Geschichte des arabischen Schrifttums*, i. 495) is said to have written a *K. al-Istis̲h̲āra wa 'l-istik̲h̲āra*. (T. Fahd)

ISTIK̲H̲DĀM [see TAWRIYYA]

ISTIḲLĀL, an Arabic verbal noun, from the tenth form of the root *ḳ-l-l*. In Classical and Middle Arabic this form is used with a variety of meanings (see Dozy and other dictionaries), and especially to convey the notion of separate, detached, unrestricted, not shared, or sometimes even arbitrary. It occurs occasionally in a political context—*e.g.*, of a dynasty, a region, a people or a city quarter not effectively subject to some higher authority. Such occurrences are, however, rare, and the word was in no sense a political technical term. In Ottoman official usage, it acquired the meaning of unlimited powers, *e.g.*, in the terms of appointment of a provincial governor or military commander. It seems to have retained something like this meaning in the early 19th century. Thus, in the Turkish translation of Botta's *Storia d'Italia* (*Italya taʾrīk̲h̲i*, Cairo 1249/1834, 4, 8, 9 etc.), it is used to contrast unbridled aristocratic rule (*ber wed̲j̲h-i istiḳlāl*) with free government (*ber wed̲j̲h-i serbestī*), and is commonly linked with *ruk̲h̲ṣat* to denote the arbitrary authority of a ruler.

It was in this sense, the independence of the holder of power from restraints by either subjects or suzerain, that *istiḳlāl* is commonly used in both Turkish and Arabic in the late 18th and early 19th centuries. During the same period, under the influence of European political thought and practice, it began to acquire the modern meaning of political sovereignty for a country or nation (for examples, see the Turkish texts of the treaty of Küčük Kaynard̲j̲a of 1774 concerning the "independence" of the Crimean Tatars (cit. above s.v. ḤURRIYYA ii) and of the London Protocol of 1830 on the independence of Greece (*istiḳlāl-i kāmil*; text in Luṭfī, *Taʾrīk̲h̲*, ii, 15); A. L. Tibawi, *British Interests in Palestine 1800-1901*, London 1961, 147-8, citing a British consular despatch of 1858).

The following article deals with political movements for independence in the Arab countries. (Ed.)

ISTIḲLĀL. In Arabic *istiḳlāl* is a fairly recent addition to the political vocabulary. Despite its use in common parlance, viz., *anā mustaḳill* ("I am independent", that is, free or unfettered), or sometimes to refer to economic independence, that is, autarky (*istiḳlāl iḳtiṣādī*), it is primarily associated with the national independence movements among the Arabs of this century. It is with these movements that this article is concerned.

After World War I, the peace settlement regarding the Ottoman dominions imposed by the Allied Powers in 1919-20 gave Britain and France wider control over the Arab territories in the Fertile Crescent, in addition to the existing arrangements in Egypt, North Africa, South Arabia and the Gulf. Without these developments and the consequences of the Arab Revolt, 1916-18, the term *istiḳlāl* might have had only a limited use, or probably remained obscure, for in the period immediately preceding World War I, Arab political agitation against the Ottoman state was centred upon the attainment of autonomy within

the framework of the political arrangement of decentralization, *al-lāmarkaziyya*. In fact, *istiḳlāl* had no meaning or import in Islamic political thought and vocabulary. It is strictly a modern, imported political notion, which became common and acquired significance with the establishment of European control, or tutelage, over much of the Arab Middle East and North Africa.

Fayṣal's short-lived Arab Kingdom in Damascus in 1918-20 marked the appearance of two variants, or strands, of *istiḳlāl* in Arab political thinking and agitation. One, which originally centred around the Fayṣal, or Arab Revolt, establishment and, after 1920, was represented in Syria, Transjordan, Palestine and ʿIrāḳ by the *Istiḳlalists*, or Istiḳlāl party, tended towards a pan-Arab orientation. It deplored the destruction of Fayṣal's kingdom in Damascus and opposed the mandates in the Fertile Crescent. The other comprised the several, separate independence movements against British or French mandatory and other control in such countries as Egypt, ʿIrāḳ, Syria, Lebanon, Morocco, Tunisia and Algeria, as well as Transjordan and the Sudan, though movements in the latter two areas were less tumultuous. Palestine was a special case. In that country the Palestinian Arab movement for independence failed, and instead Zionism succeeded in founding Israel as the successor state to the British Mandate. After 1922, therefore, *istiḳlāl* referred specifically to the aspiration of ending the mandatory or other tutelory relationship between the newly established Arab political territories, or entities, and Britain or France.

Rather differently in the case of Egypt, *al-istiḳlāl al-tāmm* (complete independence) became the political slogan of at least two parties: the National (*Waṭanī*) party and the Wafd. It referred to the movement for greater independence than had been achieved under the unilateral British Declaration of February 1922 with its Four Reserved Points. It became the slogan of practically every political party and the avowed priority, if not foremost policy, of every government in Egypt. At the outset, it aimed specifically at changing the terms of the particular relationship with Britain. Later it sought to sever that relationship altogether. The first objective was attained by the Wafd with the signing of the Anglo-Egyptian Treaty on 26 August 1936. The second, which became a bitterly contested area of Egyptian politics from 1936 to 1952, was not achieved until the signing of the Evacuation of British Forces from the Suez Canal Area Agreement on 19 October 1954 and, more dramatically, in 1956.

Istiḳlāl was never associated with notions of freedom and civil liberty in Arab states, nor has this situation changed [see ḤURRIYYA]. It refers exclusively to independence from foreign political control, even in certain circumstances from any treaty relationship. To a great extent, this narrow interpretation of *istiḳlāl* derives partly from the present weak economic, social, cultural and political condition of the Arab states generally; so that any relationship with foreign powers is inevitably viewed as one between an inferior and a superior partner.

Those kingdoms and shaykhdoms in the Arabian peninsula and the Gulf—patriarchal, religious-tribal and dynastic states—were not involved in the independence movement, so that *istiḳlāl* was hardly part of their political vocabulary. Saudi Arabia, carved out by Ibn Suʿūd and his Wahhabi warriors, formally became a kingdom in 1932. His dominion was established by victory in battle over other tribal claimants, *e.g.*, the Āl Rashīd in Nadjd and the Sharīf of Mecca in the Ḥidjāz. The Zaydī Imamate of the Yemen had been an independent, and under the Ottomans autonomous, theocracy since Islamic times, and the petty shaykhdoms of the Gulf (until December 1971 the Trucial States under British protection) were autonomous, desert, tribal family enclaves. Under a similar though later protection treaty with Britain in 1899, oil-rich Kuwayt, at the northern end of the Gulf, ruled by the Āl Ṣabbāḥ, became independent in June 1961. With the radicalization of inter-Arab politics in more recent times, particularly under the leadership of ʿAbd al-Nāṣir (Nasser) and the Baʿth party in the 1950s and 60s and the withdrawal of Britain from Aden and South Arabia, the establishment of the South Yemen Republic on 27 November 1967 and the elevation of the Federation of Arabian Emirates, formed on 30 March 1968 and comprising the Trucial States in the Gulf, to sovereign independent status in December 1971, this easternmost part of the Arab world has been brought into the mainstream of the Arab ideology of *istiḳlāl*. Bahrain, following its insular instinct and distinctiveness from the rest of the Federation of Arabian Emirates, opted for its own independence in September 1971.

Istiḳlāl as a political conception and movement must therefore be more appropriately associated with the recent political history of the Fertile Crescent and North African states. Thus the British Mandate over ʿIrāḳ came to an end in October 1932 when that country was admitted to the League of Nations. Yet the independence attained by virtue of the Anglo-ʿIrāḳ Treaty of Preferential Alliance of 30 June 1930 was circumscribed by Britain's control of the conduct of ʿIrāḳī foreign relations and retention of her air bases at Shuʿayba (Baṣra) and Ḥabbāniyya (Baghdād). Efforts at further *istiḳlāl* which led to the signing of the Portsmouth Treaty on 15 January 1948 were nullified by violent protests against its terms, which led to its rejection by the ʿIrāḳīs. The accession of Britain to the Baghdād Pact in 1955 led to a rearrangement of the basis of relations between the two countries. However, the secession of ʿIrāḳ from the Pact under President Ḳāsim may be considered the final act in the severance of the forty-year-old relationship with Britain and, psychologically at least, the attainment of *istiḳlāl tāmm*.

Syria and Lebanon too in the interwar period sought to move from limited autonomy under French tutelage to independence. *Istiḳlāl* became the slogan and political umbrella for the activities of practically all political groups and parties in those two countries. In fact, it became the contentious issue between rival groups. An uncompromising stand for its attainment became the mark of patriotism and political respectability. In any event, both Syria and Lebanon existed as autonomous republics under French Mandate from the mid-1920s. The November 1936 Treaty between Lebanon and France constituted a step towards independence within three years. Earlier in the year, the Syrians had rejected a similar treaty with France. These treaties provided a special relationship with the ex-mandatory power in return for assistance towards and recognition of independent status. The outbreak of World War II in 1939 intervened, and it was not until 1941 that the Free French declared publicly their intention of granting their two wards independence: thus the Free French General Catroux's proclamations regarding Syria and Lebanon in September and November 1941 respectively. Difficulties and disturbances over the transfer of power continued until 1945. The last French forces departed both countries by the end of

1946, at which time they became fully independent.

As a semi-independent emirate under ʿAbd Allāh Ibn al-Ḥusayn, after World War I Transjordan remained ultimately under the control of the British High Commissioner in Jerusalem. By an agreement in 1923, Britain recognized it as an autonomous constitutional state under Amīr ʿAbd Allāh with British tutelage. The activities of the Istiḳlālists with their Arab nationalist demands for complete freedom from British control indirectly helped ʿAbd Allāh to secure greater legislative and administrative autonomy for his fledgling state in a treaty concluded with Britain in 1928. In 1934, he was permitted to establish consular representation abroad, and in 1939 his Legislative Council was transformed into a cabinet. The Treaty of London, concluded with Britain on 22 March 1946, recognized the independent Hashimite Kingdom of Jordan and ʿAbd Allāh was proclaimed its first king. The treaty, which was followed by another in 1948, was modelled on the 1936 Egyptian treaty in the sense that Jordanian independence was circumscribed by a special relationship with Britain. This last vestige of dependence was severed on 13 March 1957.

As far as the decades of the 20s, 30s and 40s are concerned, *istiḳlāl* belonged to Egypt and the Fertile Crescent. With the waning of British power overseas generally and the consequent withdrawal of its presence or influence, heralded by the voluntary dissolution of the Indian Empire in 1947, *istiḳlāl* movements erupted elsewhere in the Arab East. Similarly, the winding up of the French Empire after World War II, first in Indochina and later in Africa, undermined the French position in the Maghrib. In the 50s *istiḳlāl* reached Libya, the Sudan, Tunisia and Morocco. Kuwayt in the east and Algeria in the west followed suit in 1961 and 1962 respectively. Unlike all the other Arab countries, Algeria only attained independence after seven years of bitter war against the French armed forces.

Despite the long historical connection between Egypt and the Sudan, after 1924 the latter was governed in practice solely by Britain, thus ending the Anglo-Egyptian condominium devised in 1899. Greater Sudanization of the country's local administration followed. The 1936 Anglo-Egyptian Treaty led to the rapid evolution of Sudanese nationalism and a movement for an independent Sudan, especially after World War II, not without British encouragement. It proved a much stronger current than the Egyptian plan, backed by Egypt's political protégés in Sudan, for an independent united Nile Valley comprising Egypt and the Sudan under the Egyptian crown or, after 1952, under the Egyptian Republic. As part of the Anglo-Egyptian settlement of 1953-4 for the British evacuation of the Canal, the Sudan, after a three-year transition period, became independent on 1 January 1956.

Paradoxically, Libya, the least developed North African country, was the first to attain *istiḳlāl* on 24 December 1951. Any independence movement during the Italian occupation (1911-42) was no more than the desire of the Sanūsī brotherhood under Idrīs to rid itself of Italian rule. It was also largely a Cyrenaican affair, closely linked in the 30s and 40s with Egypt, where Idrīs, together with his main political lieutenants, had taken refuge. This is not to say that Tripolitanians were not involved in the struggle for independence, but they were more oriented towards the Maghrib and, in the Arab East, towards Syria. It was the British, however, who restored Idrīs to power in Libya in 1949-50. As they were abandoning their positions in Egypt and the Fertile Crescent, the British introduced the old pattern of special arrangements with Libya, which they had helped to independence: this time with a bases agreement concluded in 1952-3. Like other Arab states before it, however, by 1964 Libya demanded the removal of foreign (British and American) bases from its territory in the name of *al-istiḳlāl al-tāmm*, and in response to pressures generated by inter-Arab states conflict as well as a more radical Arab nationalist movement. An army coup d'état on 1 September 1969 overthrew the Sanūsī monarchy, proclaimed a republic and pressed for the immediate removal of all vestiges and semblances of foreign encumbrances on *istiḳlāl*: bases, foreign enterprises and other interests, as well as the large Italian community.

Tunisia and Morocco became independent in 1956. *Istiḳlāl* in Tunisia was led by a combined Western—that is French—educated, secular, bourgeois élite in the Destour party and a more conservative Muslim Arab leadership whose antecedents went back to the constitutional reform movement of Khayr al-Dīn al-Tūnisī [*q.v.*]. There being no specific term for independence in Arabic, the expression *istiḳlāl dākhilī* (internal) was used to describe an intermediate stage which would have provided the substance of independence. Unlike Tunisia, where the Beys of Tunis were not associated with the modern independence movement, in Morocco the Sherifian Alawite sultan Muḥammad V was recognized as the leader of the struggle against the French protectorate. Yet the battle for *istiḳlāl* fought by both Morocco and Tunisia differed from that of Algeria because although France controlled them by earlier protectorate arrangements, they retained a measure of local autonomy. Indigenous Islamic authority and its institutions survived in both countries under French tutelage. Algeria, however, was made an integral part of metropolitan France by legislation, so that the separatist, *istiḳlāl* movement eventually developed into a bitter and bloody war. While the ʿAlawite monarchy survived after independence in Morocco, the hereditary dynasty of the Bey of Tunis did not. The last Bey, Muḥammad al-Amīn, was deposed when the Constituent Assembly abolished his office on 25 July 1957 and proclaimed Tunisia a republic.

On the whole, over the past 50 years, the several Arab movements for national-state independence often co-existed and contended with the desire of some to expand the connotation of *istiḳlāl* to encompass a projected wider entity, that of the Arab nation, cutting across existing state boundaries. The rôle played by this wider conception of *istiḳlāl* in the radicalization of inter-Arab politics became apparent under the Baʿth party's central aspiration towards Arab unity in the 1950s. In individual Arab states, political parties wishing to advance a more pan-Arab and anti-Western national policy often adopted the name of *istiḳlāl*, as for example, the Istiḳlāl party of ʿIrāḳ led by Muḥammad Mahdī Kubba, Ṣiddīḳ Shanshal and Fāʾiḳ al-Sāmarrāʾī, or that of Morocco led by ʿAllāl al-Fāsī.

It is interesting to note that during a particularly intense period of inter-Arab state conflict in the years 1957 to 1967, *istiḳlāl* acquired further ideological dimensions. In that period, the Arab states were polarized into a revolutionary Arab socialist, or radical nationalist, camp on one side, and a conservative or reactionary one on the other. The first camp, which identified with Nasser's leadership and in other respects with Baʿth ideology, comprised mainly those Arab states in which military coups d'état had over-

thrown previous regimes invariably associated with an earlier link with one or another of the European powers. By the late 50s many of these were veering in their foreign policy orientation towards the Soviet Union. Such was the case of Egypt, Syria, ʿIrāḳ, Algeria and the Yemen after 1962. The second camp comprised mainly the traditional monarchies, some of them oil-rich, such as Saudi Arabia, Morocco, Kuwayt and Jordan. The revolutionary camp argued that there was no genuine *istiḳlāl* in the adversary or rival Arab camp because the regimes within it were reactionary and still maintained commercial, economic and political links with Western European and/or American powers. In these circumstances they were considered "agents of imperialism and neo-colonialism" and therefore not "truly independent". Much of this "cold war" between the states in the Arab East and Arab West subsided after the Arab-Israeli war of June 1967. The realization dawned upon most of the Arab states that even with *istiḳlāl* the economic, political and strategic facts of their environment and the requirements of their own survival forced them to maintain a client relationship with a foreign power.

ISTIḲSĀM (A.), 10th form of the root *ḳ-s-m* which embraces two groups of meanings, the one of a magical nature and the other divinatory. The first is applied to formulae and methods for conjuring up demons, for adjuration and exorcism; this latter is the meaning acquired by the 2nd and 4th forms, *ḳassama* and *aḳsama*, particularly in the Christian Arab world, clearly influenced by the Hebrew *ḳesem* (*e.g.*, Deut. xxiii, 23), which has the same meaning. This usage is late, colloquial, and most frequently found among Christian Arabs, who also employ *ḳisām*, "adjuration, exorcism formula, priestly ordination", *taḳsīm*, "conjuration", and *usḳuf ḳāsim*, "ordinant bishop" (cf. Dozy, *Supp.*, ii, 345 ff.; Fagnan, *Additions aux dictionnaires arabes*, 142). Such a usage does not appear in Classical Arabic, or at least is confined to the action of "having someone swear an oath" (*istaḳsamahu*) or "swearing by something" (*istaḳsama bihi*) in the sense of *aḳsama* (cf. *TA*, ed. Būlāḳ, ix, 26; W. R. Smith in *Journal of Philology*, xiii (1885), 278; T. W. Davies, *Magic, divination and demonology among the Hebrews and their neighbours*, London 1899, 44-7).

The second group of meanings was applied everywhere to the whole spectrum of cleromantic methods, understood as the essence of divination, in the sense of the Syriac *ḳṣam*, "to practise divination", from which *ḳōṣūmō*, "soothsayer", was derived (cf. ref. in *Semitica*, viii (1958), 73, n. 4). Initially, *istiḳsām* designated belomancy only (*al-istiḳsām bi'l-azlām*), condemned in the Ḳurʾān (V, 3) along with *maysir* (V, 90), another type of belomancy. Because this condemnation was extended to all similar divinatory practices which were based on chance (cf. al-Ṭabarī, *Tafsīr*[1], ii, 201, l. 3 ff.), *istiḳsām* and *maysir*, roughly representing respectively the religious and profane aspects of belomancy, as I have attempted to establish in *Divination* (180 ff., 204 ff.), became the symbols of pagan divination.

This article deals with *istiḳsām* in the strict sense of sacred belomancy only, as it was practised in association with certain Arab divinities. For other cleromantic methods, the reader should consult the following articles: D̲J̲AMRA (plur. *d̲j̲imār*), for lapidation, an article which, as far as the divinatory aspect is concerned, should be augmented by the section dealing with this practice in *Divination* (188-95); RAML for geomancy and lithomancy, originally grouped together under the word *ṭarḳ* (for the time being, reference can be made to *Divination*, 195-204); MAYSIR for profane belomancy and games of chance (*al-ḍarb bi 'l-kiʿāb*; cf. *ibid.*, 204-14); ḲURʿA for rhapsodomancy (*ibid.*, 214-19); D̲J̲AFR, MALĀḤIM, ḤURŪF, AL-ASMĀʾ AL-ḤUSNĀ (as far as divination is concerned, the latter should be supplemented by *Divination*, 234-41), K̲H̲AWĀṢṢ AL-ḲURʾĀN and ZĀʾIRD̲J̲A for onomatomantic methods (for all these systems, in addition to the articles already completed the sections devoted to them in *Divination*, 219-45, should be consulted).

The ancient Arabs practised three types of belomancy (more suitably termed rhabdomancy, since *zalam*, plur. *azlām*. like *ḳidḥ*, plur. *aḳdāḥ*, designates a dart without point or feather: cf. *Divination*, 181 ff.). The first, that of the nomads, employed two darts tossed in a little goatskin (*ḳirāba*) or a leather bucket (*mudāra*). They made use of it in disputes; the arbitrator must have been the *kāhin* [*q.v.*] of the tribe and the darts must have been part of the cultic equipment in his charge, somewhat in the manner of the Urim and Thummim of the nomadic Hebrews.

The second type was that practised at the sanctuary of al-K̲h̲alaṣa. Three darts responded to the questions of visitors; these darts bore names: al-Āmir (the Commanding), al-Nāhī (the Forbidding) and al-Mutarabbiṣ (the Awaiting). It was the *sādin* or guardian of the sanctuary who tossed the darts. The last occasion they were consulted is supposed to have been by the poet Imruʾ al-Ḳays (*Ag̲h̲ānī*[1], viii, 70), who is said to have broken them for forbidding him to avenge his father.

The third and best-known type was that practised in front of Hubal [*q.v.*] at the Kaʿba. Seven darts were used in this consultation, set in motion by the *sādin* in return for a gratuity and an offering to the god. These arrows bore the following designations: *al-ʿaḳl* (blood-price), used to determine who should pay for any bloodshed: *naʿam* (yes) and *lā* (no), used to find out if action or abstention were appropriate; *minkum* (yours), *min g̲h̲ayrikum* (not yours) and *mulṣaḳ* (the attached), used to decide an individual's tribal affiliation, the first dart replying in the af-

firmative, the second in the negative, and the third with doubt; *al-miyāh* (water), used to ascertain the presence of water in a specified place (cf. Ibn Hishām, 97 f.).

The people of Mecca consulted the opinion of the darts of Hubal, tossed by the *sādin* in the quiver (*kināna*) of the god, in return for a hundred *dirhams* or one camel, every time a serious dispute arose among them. The *Sīra* recounts the story of two belomantic consultations made by the Prophet's grandfather, ʿAbd al-Muṭṭalib, at two important moments of his life: the first to decide to whom to return the precious finds he had made when clearing out the well of Zamzam (Ibn Hishām, 94); the second to discover which of his ten sons should be sacrificed at the Kaʿba in fulfilment of a vow he had made to sacrifice one of his sons should their number reach ten (*ibid.*, 97-100).

Pilgrims too could not have refrained from the practice and belomantic consultation must have been one of the many attractions of the great metropolis of Arab paganism. Numerous texts indicate that the practice of consulting the throw of darts was very widespread. Alongside those attached to the sanctuary, there were others, manipulated either by the *kāhins*, the elders or the notables (see the examples in *Divination*, 189 f.). Al-Nuwayrī, *Nihāya*, iii, 112 f., supplies a longer and more diversified list of darts that were used outside the sanctuary, tossed in a *madāra* (a skin stitched into a bucket) by a *kāhin* wherever there was one to be found or by any other person who held some rank in the tribe or city. To the *naʿam*, *lā* and *mulṣaḳ* known to Ibn Isḥāḳ and his abridger, Ibn Hishām, al-Nuwayrī adds ten other darts with the following names: *ifʿal* (do!), *lā-tafʿal* (don't!), *khayr* (good), *sharr* (evil), *baṭīʾ* (slow), *sarīʿ* (fast), *ḥaḍar* (presence), *safar* (journey), and *ṣarīḥ* (equivalent to Ibn Hishām's *minkum*). Finally, white darts (*ḳidāḥ bayḍāʾ*) were prepared that could bear more precise and detailed inscriptions or equivalent meanings inscribed by explicit agreement between the *kāhin* and the man consulting him. In this way the field of consultation was enlarged and belomancy adapted to the demands of any sphere in which it was practised.

Bibliography: Apart from the sources cited in the article, Azraḳī, *Akhbār Makka*, ed. Wüstenfeld, 73-4; Ṭabarī, i, 1074-8; Ibn al-Athīr, ii, 2-4; T. Fahd, *Une pratique cléromantique à la Kaʿba préislamique*, in *Semitica*, viii (1958), 54-79; in spite of its many defects of form, this monograph will give the reader the basic information about belomancy. It should be supplemented by T. Fahd, *Divination*, 180-8. (T. Fahd)

ISTIMṬĀR [see istisḳāʾ]

ISTIʾNĀF, from *istaʾnafa* (to recommence, to renew), means in modern Arabic appeal, because the case is examined again from the beginning when brought before the court of appeal. In classical *fiḳh* the word is used with this sense of recommencement with regard to the *ʿibādāt*, the religious duties, especially prayer.

Istiʾnāf (the Mālikīs call it *ibtidāʾ*) occurs when the entire prayer, which has been interrupted by the occurrence of a ritual impurity, *ḥadath* [*q.v.*], has to be begun again.

In certain circumstances the *fuḳahāʾ* decided that the continuation (*bināʾ*) of the prayer from the moment when it was interrupted by a fact independent of the believer's will, and which does not, strictly speaking, constitute a ritual impurity, *e.g.*, a serious nose-bleed, is preferable to complete *istiʾnāf*. The schools, and scholars within the same school, do not always agree upon the circumstances which give rise to *istiʾnāf* or, on the contrary, to *bināʾ*.

(Y. Linant de Bellefonds)

ISTINBĀṬ [see māʾ and riyāfa].

ISTINDJĀʾ, purification incumbent upon the Believer after the fulfilment of his natural needs. This practice, which is described in detail, is obligatory (recommended only according to Abū Ḥanīfa) and must be carried out either immediately, or before performing the *ṣalāt* or any other act which requires a state of ritual purity.

Bibliography: All the works of *fiḳh*, *ikhtilāf*, etc. deal with this subject in the chapter on *ṭahāra*; similarly Ghazālī, *Iḥyāʾ*, in the same chapter (iii = 22 of Bousquet's analysis). (Ed.)

ISTINSHĀḲ, the inhaling of water through the nostrils at the time of the *wuḍūʾ* and *ghusl*. This practice is recommended by the various rites (obligatory according to Ibn Ḥanbal). In practice this is not really important since the Believer always performs it during his ablutions.

Bibliography: See istindjāʾ. (Ed.)

ISTINZĀL, a term denoting hydromancy, according to Doutté, *Magie et religion dans l'Afrique du Nord* (Algiers 1909), 389; but in Ibn Khaldūn, *Muḳaddima*, iii, 137 ff., *istinzāl rūḥāniyyāt al-aflāk* is a technique belonging to *sīmyāʾ* [*q.v.*], natural or phantasmagoric magic (cf. T. Fahd, *Divination*, 49, n. 1). The Pseudo-Madjrīṭī prefers to use *istidjlāb* (cf. *Sources Orientales*, vii (1966), 170 ff.). Elsewhere, in al-Būnī and Ibn al-Muwaḳḳiʿ, *istinzāl al-arwāḥ wa-'stiḥḍāruhā fī ḳawālib al-ashbāḥ* denotes the techniques of spiritism, although these are generally denoted by the name *ʿilm al-istiḥḍār*.

According to Ḥādjdjī Khalīfa, this art consists in invoking the presence of djinns or angels and making them perceptible to the senses; only the prophets can achieve this result with the celestial angels; with regard to terrestrial angels, the question is in dispute. It is distinguished from *ʿilm al-ʿazāʾim*, the talismanic art, by the fact that the latter calls upon djinns and angels for the performance of some project, without the need for incarnation, whereas their incarnation is the principal aim of *istiḥḍār* [see siḥr].

Bibliography: Ḥādjdjī Khalīfa, i, 275 f.: definition with reference to the encyclopaedia of the sciences of Ṭāshköprüzāde, *Miftāḥ al-saʿāda*. Among the works devoted to this art, he mentions *K. dhāt ad-dawāʾir wa-'l-ṣuwar*, "illustrated book on the invocation of djinns and their subjection (to man), a ccording to Āṣāf b. Berekhyā, vizier to Solomon . . .; this is no doubt a falsehood" (i, 276, and iii, 324); *Ilhām al-Fattāḥ bi-ḥikmat inzāl al-arwāḥ wa-baththihā fi 'l-ashbāḥ* of Kamāl al-Dīn Muḥammad b. ʿAlī b. al-Wafāʾ, known under the name Ibn al-Muwaḳḳiʿ, d. 1162/1748-9 (i, 423; cf. Brockelmann, S II, 981; *al-Bustān li 'stiḥḍār arwāḥ al-djinn wa'l-shayāṭīn fī ʿilm al-siḥr ʿalā ṭarīḳat al-Ḳifṭ wa 'l-ʿArab*, anonymous (ii, 50); *Tanzīl al-arwāḥ fī ḳawālib al-ashbāḥ* of Aḥmad al-Būnī, d. 622/1225 (ii, 440). We have not succeeded in seeing any of these writings, which have not yet come to light among any of the manuscript collections which we have at present been able to consult. The *ʿilm al-istiḥḍār* cannot be properly

studied until these specialised writings have been discovered. On magic, pending the appearance of the article SIḤR, see a sketch and brief bibliography in *Le Monde du sorcier*: T. Fahd, *Le Monde du sorcier en Islam*, in *Sources Orientales* (vii), 1966, 155-204. For angelology and demonology in Islam, see *Génies, anges et démons*: T. Fahd, *Anges, démons et djinns en Islam*, in *Sources Orientales*, viii (1971), 155-214. (T. FAHD)

ISTIʿRĀḌ, ʿARḌ, the mustering, passing in review and inspection of troops, the official charged with his duty being known as the *ʿāriḍ*, pl. *ʿurrāḍ*. The institution of the *ʿarḍ* was from the start closely bound up with the *Dīwān al-Djaysh* or that department of the bureaucracy concerned with military affairs, and these duties of recruitment, mustering and inspection comprised one of the *dīwān*'s main spheres of activity, the other sphere being that concerned with pensions and salaries [see DĪWĀN and DJAYSH]. The *Ṣāḥib Dīwān al-Djaysh* of the early ʿAbbāsid Caliphate or *ʿĀriḍ al-Djaysh* of its successor states (and especially of those in the central and eastern regions of the caliphate) thus fulfilled the duties of a modern war minister, paymaster-general and quartermaster-general, together with those of a muster-master of former times. Given the strongly military bias of the early caliphate and its epigoni, his office was necessarily of high importance and was not frequently a stepping-stone to the highest of offices, such as the vizierate; thus ʿAlī b. al-Furāt [see IBN AL-FURĀT] was head of the Department of the Army towards the end of al-Muktafī's reign, just before becoming vizier, and the Saldjūḳ official and historian Anūshirwān b. Khālid [*q.v.*] acted as *ʿĀriḍ al-Djaysh* for Sultans Muḥammad b. Malik-Shāh and Maḥmūd b. Muḥammad, and eventually acted as vizier on various occasions to both the ʿAbbāsid caliphs and the Saldjūḳs.

The idea of holding reviews of the army, often with the sovereign as inspecting officer, is rooted in the pre-Islamic past of the Near East. The functions of the Islamic *ʿĀriḍ* were in the Byzantine Empire exercised by the department of the *Logothetes tou Stratiōtikou*. In the Sāsānid Empire, evidence for the existence of a distinct department of military affairs is not explicit, although Christensen believed it probable that there was such a department under the emperors (cf. *L'Iran sous les Sassanides*[2], 213-14). We certainly possess a detailed account of a Sasanid *ʿarḍ* recounted by both Dīnawarī and Ṭabarī. According to this, Khusraw Anūshirwān (531-79) appointed one of his high-born secretaries, Bābak, over his *Dīwān al-Muḳātila*. For the actual review, a wooden platform was set up for the inspecting official. Even the emperor himself was required to present himself, with the cavalryman's equipment of mailed coat, breastplate and leg armour; sword, lance, shield and mace; axe or club, and quiver with the bows already strung and thirty arrows, at his waistbelt; and two spare bowstrings. Nöldeke considered this account too anecdotal to be relied upon, but he was probably unduly sceptical here; we may reasonably assume that some review procedure existed in pre-Islamic Persia (Dīnawarī, 74-5; Ṭabarī, i, 963-5 = Nöldeke, *Geschichte der Perser und Araber zur Zeit der Sassaniden*, 247-9; cf. the anonymous *Mudjmal al-tawārīkh*, 74, where it is said that the Mōbadh or Zoroastrian chief priest acted as *ʿĀriḍ* under Anūshirwān).

The early ʿAbbāsid period saw the operations of the *Dīwān al-Djaysh*, which had developed from the *Dīwān al-Muḳātila* or *Dīwān al-Djund* of Muʿāwiya's time, increase in complexity, so that the *Ṣāḥib Dīwān al-Djaysh* become an influential figure. (It should be noted, however, that the function of *ʿarḍ*, which was one of the duties of the vizier in his rôle as private secretary to the caliph, refers to the term's further meaning of "presentation of petitions, requests", *i.e.*, *ʿarḍ al-maṭālib*, and not to any military duty; cf. Sourdel, *Le vizirat ʿabbāside*, ii, 622-3. Similarly, the *Mīr-ʿArḍ* in the Mughal Empire in India was the official responsible for conveying petitions to the sovereign.) The concerns of the *Dīwān al-Djaysh* included, *inter alia*, the recruitment and registration of soldiers; and the keeping of up-to-date registers of the troops' fighting qualities, their weapons and their mounts, could only be ensured through regular reviews. A careful recording of the physical features of soldiers (the *ḥulā al-ridjāl*) and the brands or marks of mounts (*simāt*) was necessary to prevent intruders or substitutes entering the ranks or good horses being switched round or removed from the stables. Such malpractices led to the *Dīwān* being cheated over unmerited pay issues, and there was also a fear lest enemy spies insinuate themselves into the ranks. So it is natural that writers like Ḳudāma, Hilāl al-Ṣābiʾ, Miskawayh and Māwardī should stress the prime importance of these identificatory procedures, cf. W. Hoenerbach, *Zur Heeresverwaltung der ʿAbbāsiden*: *Dīwān al-ǧaiš*, in *Isl.*, xxix (1949-50), 268 ff. These reviews and inspections were also normally the occasions for pay issues, when the financial aspect of the *Dīwān* was displayed.

Hilāl al-Ṣābiʾ gives the detailed analysis of a caliphal budget from the reign of al-Muʿtaḍid (probably to be dated to Muḥarram 280/March-April 893), and in the course of this he describes the *ʿarḍ* procedure under that ruler. Al-Muʿtaḍid made the whole army muster before him personally in the "Lesser Square" in Baghdād, whilst he sat overlooking it from the galleries of the Ḥasanī Palace. Below him were positioned the secretaries responsible for pay arrangements (*kuttāb al-ʿaṭāʾ*). The commanders and their *ghulāms* [*q.v.*] or military slave troops were drawn up before the caliph. The review now began, with the individual officers presenting registers of the names and pay entitlements of the men under them. The vizier ʿUbayd Allāh b. Sulaymān b. Wahb summoned each man separately, and he was tested for his proficiency at the game of *birdjāṣ*, in which the contestant had to get his lance-point through a metal ring fixed to the top of a wooden column, thus revealing his skill or otherwise in controlling his horse and aiming his weapon (four or five centuries later, tilting at the *birdjāṣ* was a prominent feature of the *furūsiyya* [*q.v.*] exercises and training of the Mamlūk cavalrymen). According to the man's performance, al-Muʿtaḍid graded him in the register (*djarīda*) by a *djīm* (= *djayyid*, excellent), a *ṭāʾ* (= *mutawassiṭ*, moderate) or a *dāl* (= *dūn*, inferior). After this part of the *ʿarḍ*, the secretaries responsible for practical military matters (*kuttāb al-djaysh*) came forward and examined the physical features of the men to check that they corresponded with the details set down in the registers; they were thus able to detect and eject intruders and substitutes (*dukhalāʾ*, *budalāʾ*). The registers with the caliph's marks were handed back to the vizier, and the secretaries then prepared a fresh series of registers on the basis of the threefold proficiency grading. The *djayyid* soldiers were formed into the caliph's "Personal Army", *ʿaskar al-khāṣṣa*, with a pay-period (*razḳa*) of 90 days. The *mutawassiṭ* soldiers were placed under the command of the *Ṣāḥib al-Shurṭa* or Police Commandant of Baghdād, Badr, and used for garrisoning strategic points on

the routes from Baghdād to Lower ʿIrāḳ and western Persia; these were called the "Army of Service", *ʿaskar al-khidma*, with a pay-period of 120 days. The troops considered as *dūn* were sent out to the provinces to help with the tax-collecting, were employed for horsebreaking and stable duties, or were attached to the police commandants of Baghdād, Wāsiṭ and Kūfa (Hilāl, *Wuzarāʾ*, ed. ʿAbd al-Sattār Aḥmad Farādj, Cairo 1958, 17-19, tr. H. Busse, *Das Hofbudget des Chalifen al-Muʿtaḍid billāh (279/892-289/902)*, in *Isl.*, xliii (1967), 17-20, cf. Hoenerbach, *loc. cit.*). Al-Muʿtaḍid was also particularly concerned with overseeing of the royal stables, and excepting the "Personal, Stable", which was part of the palace proper and continuously under his eyes, he used to conduct an *ʿarḍ* each month of all the stables in the *Dār al-ʿĀmma*, the complex of ancillary buildings and workshops attached to the palace, thus ensuring that standards of care and attendance were maintained (Hilāl, *op. cit.*, 22-3, tr. Busse, 24-5; see also IṢTABL).

The dynasties which from the later 3rd/9th century onwards arose in the outlying provinces of the caliphate generally modelled their administrative institutions on those of the ʿAbbāsids in Baghdād. Amongst the Fāṭimids of Egypt and Syria, Ḳalḳashandī speaks of the *Dīwān al-Djaysh* as one of three divisions of a general *Dīwān al-Djaysh waʾl-Marātib*, the other divisions of which were concerned with keeping the registers of the troops and with the allocation of *iḳṭāʿ*s. The *Ṣāḥib Dīwān al-Djaysh* and his assistant *ḥādjib* had the duty of holding *ʿarḍ*s of the troops, in which the physical features of the troops and the marks of their mounts were scrutinised, and he was kept informed of the state of the military personnel by a staff of representatives attached to the army commanders (*Ṣubḥ al-aʿshā*, iii, 492-3).

In the Iranian lands, the designation of *ʿĀriḍ* for the head of the military affairs department gradually supplanted the more general ʿAbbāsid ones like *Ṣāḥib Dīwān al-Djaysh*. The Ṣaffārid brothers Yaʿḳūb and ʿAmr b. Layth built up a vast if transient empire which stretched from eastern Afghanistān to the fringes of ʿIrāḳ; and a *Dīwān al-ʿArḍ* must have grown up inevitably to control and pay the Ṣaffārid forces. The *ʿĀriḍ* or *Raʾīs-i Lashkar* held periodic *ʿarḍ*s for issuing pay and before important battles; Ibn Khallikān, in his long and important article on the two brothers, describes how ʿAmr was the first warrior to appear before the *ʿĀriḍ*, when his physical appearance, arms and mount were inspected before he was given his pay allotment, and the author explicitly compares this procedure with that at the Sāsānid *ʿarḍ* of Khusraw Anūshirwān described above (see Bosworth, *The armies of the Ṣaffārids*, in *BSOAS*, xxxi (1968), 548-51).

The establishment of the Daylamī Būyids in western Persia and ʿIrāḳ saw, amongst other things, a perceptible increase in the amount of territory given as grants (*iḳṭāʿ*s [*q.v.*]) for the upkeep of civilian officials and the military. Hence the Būyid *Dīwān al-Djaysh* expanded greatly in its scope of operations, both military and financial, and grew to dwarf other government departments (see Cahen, *L'Evolution de l'iqtaʿ du IXe au XIIIe siècle*, in *Annales: économies, sociétés, civilisations*, viii (1953), 36-7). Muʿizz al-Dawla laid out a new palace at Baghdād along the Tigris banks and outside the Shammāsiyya Gate, which included a *maydān* or open space for polo (a polo game being frequently part of an *ʿarḍ*; cf. Ibn Isfandiyār, *Taʾrīkh-i Ṭabaristān*, tr. Browne, 249, where the Bāwandid Shāh Ghāzī Rustam plays a stroke of polo at his final *ʿarḍ* at Sārī just before his death in 558/1163) and for reviews of his troops (Tanūkhī, *Nishwār al-muḥāḍara*, ed. and tr. Margoliouth, *The table-talk of a Mesopotamian judge*, text 70-1, tr. 75-7). Under ʿAḍud al-Dawla an increased staff of secretaries and clerks was taken on in the *ʿĀriḍ*'s department to expedite the punctual payment of salaries and thus keep the turbulent soldiery peaceful (Rūdhrāwārī, in *Eclipse of the ʿAbbasid Caliphate*, iii, 43, tr. vi, 40). When the Būyids were at the summit of their power, under monarchs like ʿAḍud al-Dawla and his son Bahāʾ al-Dawla, there were two separate *ʿĀriḍ*s, one for the Daylamīs and one for the Turks, Kurds and Arabs, reflecting ethnic divisions within the forces which could at times prove a source of weakness. Since there seems to have been amongst the Būyids a certain care for purity of Daylamī or Djīlī blood, the expulsion of intruders from the ranks was an especial feature of the Būyid *ʿarḍ*s, when experts on tribal genealogies were employed to assist the *ʿĀriḍ* in his work. The *ʿarḍ*s were also occasions when the allocation of *iḳṭāʿ*s was reviewed or these grants converted into cash payments, but the amīr had to be able to act from a position of strength. It is not infrequently recorded, amongst the Būyids and amongst other dynasties, that the threat to hold an *ʿarḍ* (at which financial and territorial privileges would be reviewed and possibly cancelled) provoked a mutiny of the troops. See for the whole topic of the Būyid *ʿarḍ* and the *ʿĀriḍ*'s functions, Bosworth, *Military organisation under the Būyids of Persia and Iraq*, in *Oriens*, xviii-xix (1965-6), 143-67, esp. 162 ff., and also Busse, *Chalif und Grosskönig, die Buyiden im Iraq (945-1055)*, Beirut 1969, 314-15, 340-1.

Little is known about the formal constitution of the military department under the Sāmānids of Transoxania and Khurāsān, although a *Dīwān Ṣāḥib al-Shuraṭ*, sc. for the Commandant of the Guard, existed in Bukhārā during the time of Naṣr b. Aḥmad (early 4th/10th century), cf. Narshakhī, *The history of Bukhara*, tr. Frye, 26; and Khwārizmī mentions a special "black register" (*al-djarīda al-sawdāʾ*) in which the names and duties of the troops were recorded (*Mafātīḥ al-ʿulūm*, 56, 64; see DAFTAR). Hence the institution of the *ʿarḍ* very probably existed for the Sāmānid army (on which see Bosworth, *An alleged embassy from the Emperor of China to the Amīr Naṣr b. Aḥmad: a contribution to Sāmānid military history*, in *Yād-nāme-yi Minorsky*, Tehran 1969, 17-29), for the Sāmānid administration was the immediate model for that of their successors, the Ghaznavids, and the administration of the latter certainly included a *Dīwān-i ʿArḍ* as one of the five great departments of state.

The Ghaznavid *ʿĀriḍ*'s duties comprised the usual range of financial and military ones, and the office was accounted second only in importance to that of the vizier. *ʿArḍ*s of the whole army, cavalry, infantry and elephants, were held annually on the plain of the Shābahār outside Ghazna, and Gardīzī states that at the *ʿarḍ* of 414/1023 54,000 cavalry and 1,300 elephants were reviewed; on occasions like this, the names of the troops were checked against the muster-roll or *djarīda-yi ʿarḍ*, the troops received their pay and the whole proceedings often ended in a magnificent feast for all present given by the sultan. Subordinate *ʿĀriḍ*s were attached to each of the Ghaznavid armies stationed in the provinces, and these officials held local reviews of the troops and paid them with funds drawn from the provincial treasuries. As was the case all through the Islamic lands at this time, the office of *ʿĀriḍ* was invariably

held by a member of the civilian bureaucracy, Arab or Persian, and not by one of the Turkish soldiery, administrative expertise rather than prowess in the field being the desideratum. See on all these questions, M. Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 137 ff.; Bosworth, *Ghaznavid military organisation*, in *Isl.*, xxxvi (1960), 68 ff.; and idem, *The Ghaznavids, their empire in Afghanistan and eastern Iran 994-1040*, 122 ff.

A particularly interesting account of how an *ʿarḍ* should be conducted is contained in the treatise on kingship and military practice by the 7th/13th century Ghūrid author Fakhr-i Mudabbir Mubārakshāh, the *Ādāb al-mulūk wa-kifāyat al-mamlūk* or *Ādāb al-ḥarb wa'l-shadjāʿa* (*bāb* 18 of the more complete India Office Ms 647, *bāb* 12 of the B.M. Ms Rieu, ii, 487-8 = 267-8 of the printed text by A. S. Khwānsārī, Tehran 1346/1967). There is clearly some factual basis for this account, however much it has been idealised, and it presumably reflects the institution as it developed on the eastern fringes of the Islamic world under such dynasties as the Ghaznavids and Ghūrids, and probably in northern India under the Ghūrids' slave commanders. According to Fakhr-i Mudabbir's account, the *ʿĀriḍ*—described as "the mainstay, the very mother and father of the army, upon whom the strength and reliance of the troops rests"—was accompanied for the *ʿarḍ* by his deputy and by the *Naḳīb*, and they stood on an eminence and inspected the left wing, centre and right wing of the army, in that order. Within this framework of review, the heavy cavalry, the light cavalry, the regularly-salaried infantry and the auxiliary infantry were successively inspected, and the lists given to the *Naḳīb* so that he could arrange these troops on the day of battle. The commanders themselves were all reviewed, and each ordinary cavalryman was written down under bis superior officer. The *ʿĀriḍ* is cautioned not to demand that horses and weapons be produced during a pre-battle *ʿarḍ*, but he should encourage the troops with promises of rewards and promotions, so that they will be stimulated to feats of heroism. At tbe end of the *ʿarḍ*, the *ʿĀriḍ* brings the troops' leaders before the ruler and praises their soldiers. The fear of enemy spies was omnipresent; the *ʿĀriḍ* should, accordingly, make his report to the ruler discreetly, and if cavalrymen already reviewed slip back and mingle with the unreviewed, the spies will become confused and acquire an exaggerated idea of the army's strength. From this passage of the *Ādāb al-mulūk*, there emerge two vital and practical reasons for holding an *ʿarḍ*: firstly, it provided a check on the feudal cavalrymen who of course provided their own arms, equipment and mounts, for the ruler could only be expected to supply these for his household guard at the most; and secondly, the marshal of the army (here to be equated with the *Naḳīb*) utilised knowledge gained from the *ʿarḍ* concerning the exact condition and composition of the troops to set them out in their battle stations when they reached the field.

Under the Great Saldjūḳs, the *Dīwān al-Djaysh* or *Dīwān-i ʿArḍ* was part of the *Dīwān-i Aʿlā* or Great *Dīwān*, and, as under the preceeding dynasty of the Būyids, it was as much a financial as a military organ of government, with the responsibility, for instance, of overseeing *iḳṭāʿ*s and reallocating them when they fell vacant. Till the death of Malik-Shāh, the *ʿĀriḍ al-Djaysh* or *Ṣāḥib-i Dīwān-i ʿArḍ* was usually a civilian official, but thereafter, the office was occasionally held by a Turkish amīr (Lambton, in *Cambridge history of Iran*, v, 233, 259-60). As well as the central military department, provincial offices doubtless existed. This last fact may be inferred from the text of an investiture diploma for an *ʿĀriḍ* given in the second part of the collection of Rashīd al-Dīn Waṭwāṭ's letters, the *Wasāʾil al-rasāʾil wa-dalāʾil al-faḍāʾil* compiled for the Khwārizmshāh Djalāl al-Dīn's brother Ghiyāth al-Dīn Pīrshāh or Shīrshāh; it thus reflects the common Saldjūḳ and Khwārizmshāhī tradition. In it, the appointee is described as *ʿĀriḍ dar djumla-yi mamālik*, and his duties characterised as firstly, a care for the correct pay entitlements of the soldiers, and secondly, the proper conduct of *ʿarḍ*s, with due inspection of equipment and weapons (H. Horst, *Die Staatsverwaltung der Grosselǧūqen und Ḫōrazmšāhs (1038-1231)*, Wiesbaden 1964, 39-41, 109-10). *ʿArḍ*s were held at such usual times as the opening of campaigns (e.g., before the expedition of Alp Arslan to Anatolia which culminated in the victory of Mantzikert); but *ʿarḍ*s could still give rise to disaffection, for the 7,000 troops whom Malik-Shāh dismissed from his army after an *ʿarḍ* at Ray in 473/1081 joined his brother Tekish in eastern Khurāsān, and the latter used them to rebel (Bosworth, in *Cambridge history of Iran*, v, 90).

Although the Great Saldjūḳ empire disintegrated, the military traditions associated with the maintenance of a standing, professional army lived on beyond the cataclysm of the Mongol invasions and were passed on to the later Saldjūḳs of Rūm in Anatolia and to the various Mongol and Türkmen dynasties which came to dominate the whole region from Syria to Afghanistān. Under the Il-Khānids, we find the office of *ʿĀriḍ* or *Amīr-i ʿĀriḍ* still flourishing; his duties included oversight of the army's *iḳṭāʿ*s and, probably, assistance to the khān at army reviews (cf. I. H. Uzunçarşılı, *Osmanlı devleti teşkilatına medhal*, Istanbul 1941, 257). The *ʿArḍ-nāma* or account of a review written by Djalāl al-Dīn Dawānī (d. 908/1502) [*q.v.*] shows the institution of the *ʿarḍ* in common use amongst the Turkmen Aḳ Ḳoyunlu under their greatest ruler, Uzun Ḥasan. In this document there is described an *ʿarḍ* held by Uzun Ḥasan's son Sulṭān Khalīl, governor of Fārs, at Band-i Amīr near Persepolis, which lasted for three days. Some 23,000 troops, comprising the provincial army of Fārs, presented themselves for inspection in the tripartite formation characteristic of Turkish armies, of left wing, right wing and centre. Members of the royal family headed the list; these were followed by the officers, including the élite group of the *tawadjīs*; and then successive detachments (*ḳoshuns*) of the rank-and-file, the *nokars*, comprising armoured troops and archers, and the servants, the *ḳullughčīs* (Minorsky, *A civil and military review in Fārs in 881/1476*, in *BSOS*, x (1940-2), 141-78; Uzunçarşılı, *op. cit.*, 304-12).

Amongst the Mamlūks of Egypt and Syria, the traditional occasions for army reviews figure, as one would expect, in the chronicles; thus when in 832/1428-9 al-Ashraf Barsbāy prepared his expedition against the Tīmūrid Shāh Rukh, the *ḥalḳa* [*q.v.*] was reviewed in the Royal Square (*al-ḥawsh al-sulṭānī*), and even the very young, the aged and the blind were required to go on the venture (D. Ayalon, *Studies on the structure of the Mamlūk army. II*, in *BSOAS*, xv (1953), 455). The civilian head of the military department was the *Nāẓir al-Djaysh*, but the official whose duties corresponded in many ways with those of the earlier *ʿĀriḍ* as overseer of reviews was the military official called the *Naḳīb al-Djuyūsh* (also found with various other titles like *Muḳaddam al-Djuyūsh*,

Amīr al-Djuyūsh, Naḳīb Nuḳabāʾ al-Djuyūsh and *Atābak al-ʿAsākir*), whose office in Cairo had two branches, one for Egypt and one for Syria. He exercised military police functions, being therefore something like a Provost-Marshal. It was he who announced to the army that it should get ready and parade for inspection before an expedition, and for this he sent round his subordinate officials, the *nuḳabāʾ adjnād al-ḥalḳa*, to Cairo and district, and despatched messengers of the *Barīd* or postal service [*q.v.*] to other regions of Egypt (cf. M. Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks d'après les auteurs arabes*, Paris 1923, lxii; Uzunçarşılı, *Medhal*, 383; and Ayalon, in *BSOAS*, xvi (1954), 64 ff.).

In the early Ottoman empire, many administrative and military traditions stemmed from the Ottomans' predecessors, the Rūm Saldjūḳs. The terms *ʿarḍ* and *ʿāriḍ* were not generally used, but a similar institution of military reviews existed under the designation of *yoḳlama*, the officials charged with organising these inspections and recording the results being known as *yoḳlamadjllar*. This institution was certainly flourishing by the time of Süleymān the Magnificent. The *yoḳlama* can best be documented from the journals of campaigns, such as those found in Ferīdūn Beg's *Münsheʾāt-i selāṭīn*. When a campaign was set on foot, the troops arrived from the provinces and were reviewed in the army camp in front of the sultan's tent; the state of the musters was then recorded in special registers or muster-rolls, *yoḳlama defterleri*, and these were then presented to the sultan or commander-in-chief. The *yoḳlama* was particularly important as a means of checking on absentees from the forces, since absenteeism became an increasing problem as a disinclination from the fighting grew after the 10th/16th century. Documents giving orders for the holding of *yoḳlama*s are frequently couched in minatory language. In one document regarding the Janissary cavalry and sent to the *ḳāḍī*s of the *sandjaḳ* of Bursa before departure on an expedition in 980/1572-3, threats of all sorts of dire punishment (*enwāʿ-i ʿitāb we-ʿiḳāb*) are made against those not present at the *yoḳlama*. When Murād IV prepared for his Erivān expedition of 1044/1634-5, even retired soldiers and local defence troops were summoned to the colours, with the death penalty threatened as the ultimate deterrent for absence; the Janissaries were reviewed near the frontiers of eastern Anatolia, and the officers reprehended over absentees from their units (texts in Uzunçarşılı, *Osmanlı devleti teşkilâtından kapukulu ocakları*, Ankara 1943-4, i, 368, ii, 244). It should be noted, however, that our information relates only to reviews held before or during specific campaigns, and not to regular peace-time reviews such as are attested for earlier Islamic times.

It is probable, although it is difficult precisely to document the process, that the institution of the *ʿarḍ* was transferred to the Indian Muslim armies via such epigoni of the Ghaznavids and Ghūrids as the Slave Kings of Delhi. The 8th/14th century historian Baranī, writing under the Delhi sultans, recommends that the *ʿarḍ* should be held twice yearly and that it should include tests in equestrian skill, and inspection of weapons and arrows and of horses' brands, and a recording of the *ḥulā*, physical characteristics of the troops (*Fatāwā-yi djahāndārī*, tr. M. Habib and A. U. S. Khan, Allahabad n.d., 25; *Taʾrīkh-i Fīrūzshāhī*, ed. Sayyid Ahmad Khan, Calcutta 1862, 319, 328). The main musters were held in the capital Delhi itself, possibly inside a great walled enclosure, which was called *alang*, a term also applied to the review itself; the 8th/14th century tower still extant in Delhi called the *Bidjay mandal* "viewing area" seems to have been designed as a viewing platform for the *ʿarḍ*. The sultans' *Dīwān-i ʿArḍ* was headed by an official called in the mid-7th/13th century the *Rāwat-i ʿArḍ* (*rāwat* = Hindi "warrior") or the *ʿĀriḍ al-Ḥasham*, and there were subordinate officials called *nāʾibān-i ʿarḍ-i mulūk*. One duty of these deputy *ʿĀriḍ*s seems to have been that of accompanying military expeditions when there was a chance of plunder, and of then transmitting the sultan's share of the booty back to Delhi. The founder of the Khaldjī dynasty, Djalāl al-Dīn Fīrūz (689-95/1290-6) held the office of *ʿĀriḍ-i Mamālik* when he seized power (Baranī, *Taʾrīkh-i Fīrūzshāhī*, 114, 116, 197, 326, 450).

Almost nothing is known of the *ʿarḍ* in Muslim India in the immediate post-800/1398 period, although it seems likely that the traditional processes of muster and review were preserved in the Indian sultanates rather than re-introduced *de novo* by the Mughals. The recording of the *ḥulā al-ridjāl* is said to have been revived by Shīr Shāh Sūr of Delhi (945-52/1538-45); a *Dīwān-i ʿArḍ-i Mamālik* existed in Mālwa in the 9th/15th century; and the functions of the *ʿĀriḍ* may have been performed in the Bengal sultanate of the 9th/15th and 10th/16th centuries by the official known as the *Wazīr-i Lashkar* or *Lashkar-Wazīr*.

In Mughal India, many of the functions of the classical *ʿĀriḍ* devolved on the *Mīr-Bakhshī* or *Bakhshī al-Mamālik* (*bakhshī*, originally "writer, secretary", a term stemming from Mongol administrative usage), assisted by a number of other *Bakhshī*s, which grew from one to three between the late 10th/16th century and the 12th/18th century; in addition, a *Bakhshī-yi Lashkar* was sometimes temporarily appointed to accompany a specific expedition. The chief *Bakhshī*'s duties were broadly those of an Adjutant-General and a Muster-Master; he was concerned with recruitment, keeping lists of the *manṣabdār*s or officers, arranging a duty roster for the palace guards, issuing grants of pay (*tankhwāh*), and keeping registers of deserters and absentees from reviews. The Mughal army, like other Islamic forces, suffered from the evils of false musters and absenteeism. The Emperor Akbar revived the practice of the Delhi sultans in strictly enforcing a system of descriptive rolls for men and horses and of brands for the animals. The soldiers' rolls were called *čihra*, literally "face", because as well as recording the genealogical and ethnic affiliations of the warrior in question, physical details were also noted; the rolls of the horses were likewise called *čihra-yi aspān*. Horses had normally to be branded by the *Bakhshī*'s subordinate, the *Dārūgha* [*q.v.*], the procedure being known as *dāgh u taṣḥīḥa* "branding and verification". Only commanders of 5,000 and above were exempt from the branding requirements, according to a late 11th/17th century administrative manual, one of those with the title *Dastūr al-ʿamal* (B.M. Ms 6599, second work in the Ms), but they had to parade their horses for inspection when required (it is, however, known from other sources that high officers had their personal brand marks). It thus appears that the general process of *taṣḥīḥa*, requirement of the troops' appearing on parade and the checking of their equipment, is a direct descendant of the classical *ʿarḍ*, and that it was carried out in peacetime at regular intervals, the precise period of time depending on the nature and rate of pay. Thus a *manṣabdār* whose men were paid in *djāgīr* or personal grants (see under IḲTAʿ) had to parade them for review once a year, whereas those paid in cash had to appear at rather

more frequent intervals. During a military expedition, the *Mīr-Ba<u>kh</u>shī* or *Ba<u>kh</u>shī* accompanying the army was expected to lay before the emperor or commander-in-chief a detailed muster-roll on the morning of battle. It was also he who, like the ideal *ʿĀriḍ* in Fa<u>kh</u>r-i Mudabbir's *Ādāb al-mulūk*, deployed the troops in the positions which had often been assigned to them before the actual campaign. In the absence of the emperor, the *Ba<u>kh</u>shī* was not infrequently appointed commander of the force, and on many other occasions he commanded a division of it; but even the *Mīr-Ba<u>kh</u>shī* might serve beneath an ordinary amīr as commander. See W. Irvine, *The army of the Indian Moghuls: its organization and administration*, London 1903, 36-56, also in *JRAS* (1896), 539-55; Ibn Hasan, *The central structure of the Moghul empire*, Karachi 1966, 77-9, 125.

(C. E. Bosworth)

ISTIʿRĀḌ (A), technical term of the <u>Kh</u>awāri<u>dj</u> [*q.v.*], used, in a general sense, of religious murder, the putting to death in particular by the Azāriḳa [*q.v.*] of Muslims and pagans who objected to their still rudimentary doctrine. However this meaning seems to be the result of a semantic evolution (even an involution), the verb *istaʿraḍa* (tenth form) meaning "to ask someone to display his possessions" and, thence, "to give an account of his opinions"; the *istiʿrāḍ* is thus the interrogation to which the enemies of these sectarians were subjected on falling into their hands. There seems also to have occurred an overlapping with the eighth form *iʿtaraḍa*, which means "to examine one by one, to pass under review", but also "to attack someone" and "to strike in all directions, indiscriminately" (cf. al-Ḳālī, *Amālī*, i, 119). In al-Ṭabarī (i, 3368, line 1) there is found, concerning Misʿar b. Fadakī, the phrase *aḳbala yaʿtariḍu 'l-nās* which Mme. Veccia Vaglieri (*Il conflitto ʿAlī-Muʿāwiya*, in *AIUON*, iv (1952), 63) translates "presero a far subire interrogatori alla gente", perhaps while fighting, since the verb could well have here the meaning of "attack"; another attestation appears more certain: al-Mubarrad (*Kāmil*, 616; Cairo ed., 1041; cf. Ibn Abi 'l-Ḥadīd, *<u>Sh</u>arḥ Nah<u>dj</u> al-balā<u>gh</u>a*, i, 382) says in fact of Nāfiʿ that at al-Ahwāz *yaʿtariḍu 'l-nās* (*i.e.*, he made them undergo an interrogation) and killed the children (*wa-yaḳtul al-aṭfāl*) but it is quite clear that the interrogation was followed, in most cases, by the victim's being put to death, and this act is obviously implied in the verb *yaʿtariḍu*. *Iʿtaraḍa* and *istaʿraḍa* seem therefore to mean about the same thing. Concerning *istiʿrāḍ*, when al-Dīnawarī (*Ṭiwāl*, 221) refers to the *istiʿrāḍ al-nās*, he is certainly referring to the inquisition, since he adds *yaḳtulūnahum*; al-Ṭabarī does the same (i, 3380, line 11-2) when he reports the wording of an invitation to rally to the banner of ʿAlī *man lam yaḳtul wa* (*-lam*) *yastaʿriḍ*. However, when, concerning Ḳaṭarī [*q.v.*], al-<u>Dj</u>āḥiẓ says (*Bayān*, iii, 264) that he "professed (*yadīn*) the *istiʿrāḍ*, the bringing (of the women) into captivity (*sibāʾ*) and the murdering of children", the term certainly implies a doctrine involving not only the subjecting to an interrogation but also the putting to death of any recalcitrants (or the proving the sincerity of those who had rallied to the cause by giving them the task of slaughtering a prisoner; cf. H. Laoust, *Schismes*, 45); *istiʿrāḍ* is used in the same sense in a saying attributed to Abū Bayhas (al-Mubarrad, *Kāmil*, 616; Cairo ed., 1041) which justifies this form of terrorism. Hence, *istiʿrāḍ* came to imply less inquisition than the execution, by the extremist groups of <u>Kh</u>āri<u>dj</u>īs, of enemies who were reluctant to join the cause wholeheartedly.

Bibliography: In the article. (Ch. Pellat)

ISTIṢḤĀB, evokes, etymologically, the idea of an implied connection between a present situation and a previous one. In the vocabulary of the *fuḳahāʾ*, it designated the principle by which a given judicial situation that had existed previously was held to continue to exist as long as it could not be proved that it had ceased to exist or had been modified. In general, the institution has not been well understood; it has been regarded as the <u>Sh</u>āfiʿī equivalent of *istiḥsān* and *istiṣlāḥ* [*q.v.*]. But *istiṣḥāb* is not a source of objective law and besides, to the extent that it is a means of preserving rights that have already been established, it is accepted by the Ḥanafīs and Mālikīs as well as by the <u>Sh</u>āfiʿīs and Imāmīs. The presumption of continuity embodied in *istiṣḥāb* explains, for example, why the wife of a missing man cannot remarry, why his heirs cannot benefit from his estate until his death has been established; and why, when someone has set out poverty-stricken on a journey and nothing further has been heard of him, he is considered a pauper for the entire duration of his absence.

The <u>Sh</u>āfiʿīs gave *istiṣḥāb* a much weightier significance than did the Ḥanafīs, which explains why this method of juridical reasoning has been generally, though erroneously, associated with <u>Sh</u>āfiʿī teaching. The word *istiṣḥāb* does not even appear in the *Umm* of the Imām al-<u>Sh</u>āfiʿī and he had recourse to the concept on one occasion only, without naming it (Schacht, *Origins*, 126). However, it is true that later <u>Sh</u>āfiʿī scholars considerably expanded the area of its application by deciding that it was possible, through using this measure, not only to preserve already established rights (as did the other schools) but also to permit the acquisition of new rights. Thus in this school a missing man whose death cannot be established may inherit, which is impossible under Ḥanafī law; in the same way, in <u>Sh</u>āfiʿī law a pre-emptor may avail himself of *istiṣḥāb* in order to prove that he is a co-proprietor, which the Ḥanafīs do not allow (al-Kāsānī, *Badāʾiʿ*, v, 14). Examples of *istiṣḥāb* which might be used for the acquisition of new rights abound in <u>Sh</u>āfiʿī works. It should be noted that Zufar, among the Ḥanafīs, upheld ideas which were very close to those of the <u>Sh</u>āfiʿīs on this point.

ISTI<u>SH</u>RĀḲ [see mustas<u>h</u>riḳūn]

ISTISḲĀʾ, a rogatory rite still practised at the present day (notably in Jordan and Morocco) and dating back to the earliest Arab times (ʿĀdite ac-

cording to Ibn al-Athīr, i, 61; Abrahamic according to Ibn Saʿd, i/1, 22) which is a supplication for rain during periods of great drought. The rite must have been both astral and magical in nature. Obliged to retain it because of its great popularity, primitive Islam tried to remove these features. A precise ritual was established—as in the case of *istikhāra* [*q.v.*], another custom deriving from pagan cultic practices —so that the faithful would not succumb to the temptation of returning to the ways of the Djāhiliyya. With this end in view, *istisḳāʾ* in the pagan manner, that is through the intermediary of the planets (*al-istiṣḳāʾ bi 'l-kawākib*) is condemned in a *ḥadīth*, where it features alongside *hidjāʾ*, insult by reference to genealogy, which was thought of as an action with magical results, and *niyāḥa*, the use of hired mourners (al-Ṭabarī, iii, 2424; Ibn al-Athīr, *Usd*, i, 299; T. Fahd, *Le panthéon de l'Arabie centrale*, 11, n. 2).

Pagan *istisḳāʾ*, or rather *istimṭār*, required the use of fire; *nār al-istisḳāʾ* was one of the numerous sacred fires of ancient Arabia (cf. *Panthéon*, 9-18). It consisted of driving, onto a hilltop that was difficult to reach, oxen with branches of wild grape (*salaʿ*) and mudar plant (*ʿuṣhar*) attached to their tails and hocks. When they reached the top, these branches were fired. The bellowing of the beasts and the cries and supplication of the men rose clamorously towards the astral divinities, imploring them to send down rain (cf. al-Djāḥiẓ, *Ḥayawān*, iv, 466-8; id., *Tarbīʿ*, index s.v. *istimṭār*; Ibn Abī Ḥadīd, *Sharḥ Nahdj al-balāgha*, ii, 252 ff., 418, iv, 434; al-Nuwayrī, *Nihāya*, i, 109). The fire had two functions: it symbolised the devastating drought and caused the bellowing of the bulls so that the gods would hear their dreadful cries.

The magical nature of *istiṣḳāʾ* is also revealed in the manner in which it was practised by Ibn al-Hayyabān, a very pious Palestinian Jew who arrived in Yathrib a few years before the advent of Islam. He lived amoung the Banū Ḳurayẓa, who applied to him every time a drought had lasted too long. He demanded that those who came to him place at their doors a *ṣadaḳa* consisting of one measure of dates or two measures of barley per person. A procession was formed behind him; clouds rolled over and the rain fell as soon as the procession crossed the dried-up stream (Ibn Saʿd, i/1, 104 f.; *Panthéon*, 13; *Sources orientales*, vii (1966), 187 f.).

This magical symbolism even appears in the *istisḳāʾ* rite as it seems to have been performed by the Prophet. In fact, according to al-Shawkānī (d. 1250/1834), *Nayl al-awṭār* (a commentary on the *al-Muntaḳā min akhbār al-Muṣṭafā* of Ibn Taymiyya, d. 652/1254), citing a narrative placed in the mouth of ʿĀʾisha, the Prophet stood on the top of a *minbar* erected for him in an oratory (*muṣallā*) and recited a short doxology which closed with a plea for rain; he then raised his arms to the sky, so high that the whiteness of his armpits could be seen; then he turned his back on the people and turned his cloak inside out while still holding his arms aloft. Turning towards the faithful once more, he came down from the *minbar* and performed two *rakʿa*s. Then God sent forth a cloud which brought thunder, lightning and rain (quoted by Muḥammad ʿAbduh, *ʿIbādāt*, 179).

While still a small boy, Muḥammad is said to have played a part in the rogations celebrated at Mecca as a result of a dream that the mother of Makhrama b. Nawfal al-Zuharī had: she had heard a voice announcing the imminent appearance of a prophet and describing to her a man, who proved to be ʿAbd al-Muṭṭalib, whose intervention would bring about the rain. ʿAbd al-Muṭṭalib convened the members of his family, including his grandson Muḥammad, and one representative from each of the families of Mecca. They made their way in procession to Mount Abū Ḳubays. After a prayer uttered by ʿAbd al-Muṭṭalib, rain swelled the streams. Recounting this story, Ibn Saʿd concludes (i/1, 54): "and they were refreshed because of the Messenger of God".

Even after his death the Prophet is said to have demonstrated his attachment to this custom: he appeared in a dream to a chief of the Muzayna, during a long drought, to command him to go and see the Caliph ʿUmar b. al-Khaṭṭāb and ask why he delayed in uttering the *istisḳāʾ* prayer. At once ʿUmar assembled the people and recited a brief orison and two short prayers. Then he invoked God in these words: "O God, our watercourses have dried up; our strength is exhausted; our souls are weary! There is no strength nor power but Thine, O God; send us water and revive the creatures and the earth" (al-Ṭabarī, i, 2575-6; cf. *Divination*, 265; *Panthéon*, 11 f.).

Among the nomads, the prerogative of *istisḳāʾ* was allied to possession of the *bayt* or bethel and the *ḳubba* or sacred tent; in the temples some divinities were famed in this role [see HUBAL]. In Mecca the leader of the city held this prerogative, which had been transmitted by ʿAbd al-Muṭṭalib to Muḥammad and thence to the caliphs (cf. H. Lammens, *Le culte des Bétyles et les processions religieuses chez les Arabes préislamites*, in *BIFAO* (1919-20), 86). The Prophet's entire family inherited this prerogative (cf. ref. *apud* I. Goldziher, *Zauberelemente*, 308 ff.). ʿUmar b. al-Khaṭṭāb himself once officiated at the *istisḳāʾ* prayer by holding the hand of al-ʿAbbas, the Prophet's uncle (Ibn Saʿd, iv/1, 19). Some of the martyrs of primitive Islam also enjoyed this privilege; because of this, the tomb of Abū Ayyūb, who died at the gates of Constantinople during the rule of Muʿāwiya and was buried in a spot that took his name (Eyyüp, at the base of the Golden Horn), was considered by the Byzantines as a propitious place to pray for rain (according to Ibn Saʿd, iii/2, 50).

In later folklore the power to make rain fall was conferred on certain *walī*s; an opening in the dome of their tombs symbolised this power. Their prestige among the people was so great that everyone wanted to number a "rainmaker" among his ancestors (cf. ref. *apud* I. Goldziher, *loc. cit.*). This phenomenon was particularly pronounced in the Maghrib, where, moreover, pagan rites dating from very early times survive among the Berbers (see Bibliography). For the *ṣalāt al-istisḳāʾ*, see ṢALĀT.

(T. FAHD)

Rain-making ceremonies among the Turks.

The magico-religious practices most generally employed in Turkey to produce rain are (with some regional variations) the following:

(1) Appropriate formulae are recited over a large number of pebbles, which are then put in a bag and sunk in a stream; care must be taken that not a single pebble falls loose in the water, for this would produce a torrential rainfall. When sufficient rain has fallen, the bag is withdrawn from the water.

(2) Collective prayer is offered led by a *khodja*, preferably by a sacred site upon an eminence. During the prayer, the suppliants turn their clothes inside out and stretch their half-open hands in gestures simulating the fall of rain. In some areas it is the custom to make babies cry and lambs bleat by separating them from their mothers. There exist in manuscript anthologies of popular poetry some *ilāhī*s in Turkish composed to be sung during these collective prayers.

(3) Besides prayers addressed to God, attempts to procure the intervention of a saint and rites of sympathetic magic, there are found also collective meals provided for the poor of the community, with the same object of appeasing the Divine wrath by works of charity (drought being regarded as a punishment from heaven).

(4) Another group of ceremonies is found in the traditions of the children, which similarly belong to the domain of sympathetic magic. These are ceremonies with the character of games, when children go from door to door to collect money, singing appropriate words and carrying a doll usually representing a woman dressed in fantastic style. This doll is called by different names in different areas: *Çömçe-gelin* "ladle-bride", *Kepçe-kadın* "strainer-woman", *Yağmur-gelini* "rain-bride". The children eat, all together, a meal bought with the proceeds of the collection. In some regions (Samsun, Sinop) this ceremony is called *Göde-göde* ("frog-frog"); money is collected by children taking from door to door a bucket of water with a frog in it. The common feature of these "children's collections" is that the doll or the children themselves are sprinkled with water by the housewives as they pass in procession in front of the houses.

Some less common ceremonies, such as the immersion in water of a horse's skull, on which prayer formulas have been written, are probably survivals from ancient practices of sacrifice.

The use of stones which after a magico-religious ceremony acquire the power to induce rainfall is the most widespread method of all, and is probably the Anatolian form taken by the very old Turco-Mongol practice of inducing rain by the "*yada*-stone". For the data on this subject found in Chinese and Arabic sources, see the communication by Köprülüzâde M. Fuʾād in *Actes du Congrès International d'histoire des religions*, held in Paris, 1923, vol. 2.

Bibliography: For the subject in general, and especially for Anatolian Turkish practices, see the addendum by P. N. Boratav to the article *Istisḳā* in *İA*. See also *Söz Derleme Dergisi*, supp. ii: *Folklor Sözleri*, s.vv. *Çömçe-gelin* and *Göde-göde*. For data collected since 1949, see the abstracts of *Türk folklor araştırmaları* by P. N. Boratav in *Oriens*, headings XI and XIV.

ISTIṢLĀḤ [see istiḥsān]

ISTIṬĀʿA, capacity, power to act, *maṣdar* of the tenth form of *ṭāʿ*, to obey. If the term itself is not ḳurʾānic, the verb *istaṭāʿ* is used frequently in the text. Like its *maṣdar*, it was to become a technical term of the *uṣūl al-dīn* and the *ʿilm al-kalām*. The translation "capacity" is generally used (for example Tritton, *Muslim Theology*, London 1947, 68 and n. 2). Wensinck prefers "faculty", others "power" (*pouvoir*). In this last sense, the *ʿilm al-kalām* readily considers *ḳudra* and *istiṭāʿa* to be identical (see remarks of ʿAbd al-Djabbār, *Sharḥ al-uṣūl al-khamsa*, ed. ʿAbd al-Karīm ʿUthmān, Cairo 1384/1965, 393). As quasi-synonyms for *istiṭāʿa*, al-Djurdjānī was to suggest (*Taʿrīfāt*, ed. Flügel, Leipzig 1845, 18) the terms *ḳudra* (power), *ḳuwwa* (faculty, in the sense of potentiality), *wasʿ* (faculty, in the sense of power) and *ṭāḳa* (faculty, power).

The idea in question dominates the analysis of the act of free choice (*ikhtiyār*). It was to be discussed, from the earliest elaborations of the science of *kalām*, under extremely diverse meanings, or nuances of meanings. In his *Maḳālāt al-Islāmiyyīn*, al-Ashʿarī summarises at length the opinions of his forerunners. — A detailed analysis of the various theses here brought together will be found ap. R. Brunschvig, *Devoir et Pouvoir*, in *St. Isl.*, xx, 1-46. We shall restrict ourselves to certain references:

1) Ghaylān and the Murdjiʾīs made almost no distinction between *istiṭāʿa* and *ḳudra*, or even *ḳuwwa*. And for them, the capacity of a man in regard to his acts depends above all upon his physical aptitude to accomplish them.

2) Among the Muʿtazilīs, the Baghdād school was likewise to see in *istiṭāʿa* the physical integrity which renders the act possible. For Abu 'l-Hudhayl and other Baṣrians, however, it is an accident which is superimposed upon this integrity (cf. R. Brunschvig, *art. cit.*, 14). For the Muʿtazilīs in general, in any case it precedes the act, it does not compel action, and it ceases when the act is performed. Once the act is created by man, the notion of "capacity to act" no longer enters into the question. An exposé of the subject, from the Muʿtazilī point of view, will be found in ʿAbd al-Djabbār, *op. cit.*, 390 ff. (see p. 390, the note of ʿAbd al-Karīm ʿUthmān; cf. also al-Khayyāṭ, *Kitāb al-Intiṣār*, ed. Nyberg and trans. Nader, Beirut 1954, 62-72). — But for Ḍirār, the capacity which precedes the act continues to exist during its performance.

3) The group known as *Mudjbira*, to whom al-Ashʿarī, regarding them to some extent as his precursors, was to give the name *Ahl al-ithbāt*, defined *istiṭāʿa* as the whole body of elements which join together in the performance of the act. — The Rāfiḍī Shīʿī Hishām b. al-Ḥakam enumerates five of these: health and integrity (physical); favourable circumstances; the desired time; instruments; motive (*sabab*). The act is produced, and it cannot be not produced, when all these elements are present (cf. al-Ashʿarī, *Maḳālāt*, ed. ʿAbd al-Ḥamīd, Cairo n.d., i, 110-2; and W. Montgomery Watt, *Free Will and Predestination*, London 1948, 116-7). With these tendencies may be linked the opinion of al-Nadjdjār, already very close to the Ashʿarī line: "the capacity" does not last, it does not exist before the act, it is created by God for the act and at the instant of the act whose accomplishment it governs.

4) Al-Ashʿarī deals with *istiṭāʿa* from his own point of view in the *Ibāna* (ed. Cairo n.d., 53-5), and devotes to it a chapter of the *Lumaʿ* (ed. and English trans. R. McCarthy, Beirut 1953, 54-9, 76-96). The "capacity" is created directly by God "with the act and for the act". It does not pre-exist it, a point of difference from the Muʿtazilī thesis. A man who does not have the requisite physical integrity is stricken with powerlessness (*ʿadjz*); he would certainly be incapable

of performing the act, but that is not the true conception of *istiṭāʿa*. If, on the contrary, the power (*ḳudra*) to act fails him, and whatever his physical integrity may be, the power to act fails the man, it is because God has not created in him the corresponding "capacity"; in this way He has not attributed to him the *kasb* or *iktisāb* which permits the subject to "acquire" the act, and which is the source of moral qualification. It is in this sense that one can say that God is "the creator of human acts", of any act whatever, whether good or bad. Must it thereby be concluded that man is "constrained"? On this point copious As͟hʿārī discussions are to be found on the "acquisition" of acts. Al-Bāḳillānī for example, who treats at length of *istiṭāʿa* in his *Tamhīd* (ed. McCarthy Beirut 1957, 286-95), is at great pains to distinguish it from "constraint" (*iḍṭirār* [*q.v.*]); the trembling of the hand of the paralytic man is "constrained"; on the contrary, thanks to *istiṭāʿa* created by God, man chooses and likes the act which he elicits. One could not therefore call him "constrained", *muḍṭarr* (*ibid.*, 393). In his *Irs͟hād*, al-D͟juwaynī does no more than mention *istiṭāʿa* (ed. and French trans. Luciani, Paris 1938, 122/196, 125/201) as a quasi-synonym for the "power" which guarantees the *kasb*. And this power seems indeed to be in accord with the integrity of the means and instruments. The fact remains that, like every accident, it is directly created by God and that, like every accident, it does not "last". Therefore, it does not precede the act, as the Muʿtazilīs would have it, but is concomitant with it (*ibid.*, 125/201). Throughout the As͟hʿārī treatises there are repeated affirmations, similar in their basis but with nuances peculiar to each author. Al-D͟jurd͟jānī condenses these in his *Taʿrīfāt* (18-19), defining "capacity" as "the accident created by God in animate beings who, thanks to it, perform acts of free choice". He specifies that "real" capacity (*ḥaḳīḳiyya*) is the perfection of the "power" which obligatorily determines the beginning of the act and is concomitant with it. To put it briefly, let us say that the notion of *istiṭāʿa* is at the very root of the As͟hʿarī notion of *kasb*, the relationship or linking together of the effect produced and the agent.

5) Unlike al-As͟hʿarī, al-Māturīdī in his *Kitāb al-Tawḥīd* (see analyses and ref. ap. R. Brunschvig, *art. cit.*, 25-6) was to introduce, as two successive periods of time: a) the integrity of the physical means, which is a gift of God and which precedes the act—thus giving the name "capacity" to what al-As͟hʿarī called the absence of *ʿad͟jz*; b) a qualification (*maʿnā*) which causes the act to be performed, which relates it to recompense or punishment, and gives it moral value. This "qualification" which defines *istiṭāʿa* is as it were the counterpart of the Māturīdī notion of *kasb*; it is a "quality" corresponding to human "contingent power".

6) We find a fairly closely related distinction in Ibn Ḥazm, but with different presuppositions: a) health and physical integrity, prior to the act; b) an accident directly and instantaneously created by God for the fulfilment of the act; it is, and is no more than, concomitant with this last. This second sense, says Ibn Ḥazm, is "the perfection of capacity". From this it ensues that the unbeliever has "the capacity to believe" according to the first meaning; but no longer so according to the second (*Kitāb al-Fiṣal fi 'l-milal*, ed. Cairo 1347, iii, 21-6, 31).—It may be added that similar theses were maintained by some jurists or theologians whose line of thought was far removed from Ẓāhirism, for example the Ḥanafī al-Taḥāwī and the Imāmī al-Kulaynī. Moreover, a comparison may be made with the thinking of Ibn Taymiyya. It is true that he no longer referred to *istiṭāʿa*, but spoke rather of a *ḳudra* preceding the act, which conditions it without necessitating it, and of a *ḳudra* concomitant with the act and rendering it necessary (cf. R. Brunschvig, *art. cit.*, 41).—Doubtless it is to the "antecedent" *istiṭāʿa*, accepted by al-Māturīdī and Ibn Ḥazm, that al-D͟jurd͟jānī refers (*Taʿrīfāt*, 19) when he adds to the As͟hʿarī definitions quoted above that the capacity is "healthy" if impediments such as sickness and other similar things disappear.

A multiplicity of further references could be given. These would emphasise that the notion of *istiṭāʿa* as a technical term varies with the different schools, and sometimes with the writers; and that it is always closely dependent upon theses founded on the intrinsic reality or non-reality of human freedom of choice.

Bibliography: In the article. (L. Gardet)

ISTIT͟HNĀʾ (A.), inf. of the verb *istat͟hnā* "to except", a technical term in Arabic grammar signifying "exception". This assumes, first of all, a complete sentence; then (when the proposition has been stated) one or more beings are excepted from the functions exercised in the sentence. In English, *except* is used, *e.g.*: *Everyone came* except *Zayd.* Arabic uses means of expression of various origins (Sībawayhi, i, ch. 185): *g͟hayra* (a noun signifying "difference"); *siwā*, *suwā* (more rarely *sawāʾa*, *siwāʾa*) (also a noun); *illā* (= **in-lā* "if not") "except"; the verbs *k͟halā*, *ʿadā* (invariable 3rd pers. masc. sing.); *ḥās͟hā* (>*ḥās͟ha*) (an ancient verbal noun, used exclamatorily, transferred from its original sense, see Fleischer, *Kleinere Schriften*, 405); very much more rarely, as a substitute for *illā*: *lā yakūnu*, *laysa*, followed by the accusative.

G͟hayra, *siwā*, *ḥās͟hā*, as nouns, are the first term of an annexation and the second goes into the genitive; the English sentence above is rendered: *d͟jāʾa 'l-ḳawmu g͟hayra*, or *siwā* or *ḥās͟hā*, *Zaydⁱⁿ*; al-Farrāʾ and al-Mubarrad also accept the accusative after *ḥās͟hā* (see the account of Ibn Yaʿīs͟h, 269, lines 2-19).

Illā, *k͟halā*, *ʿadā*, are followed by the accusative: *d͟jāʾa 'l-ḳawmu illā*, or *k͟halā* or *ʿadā*, *Zaydaⁿ*. Ibn Mālik (*Alfiyya*, verse 329) also accepts the genitive after *k͟halā* and *ʿadā*, as did al-Ak͟hfas͟h al-Awsaṭ (for *k͟halā*, see also al-Zamak͟hs͟harī, *Mufaṣṣal*, 31, line 7 and Ibn Yaʿīs͟h, 261, lines 16-20).

Illā is regarded as being added to a complete affirmative sentence; if this sentence is negative (or interrogative with a negative sense) the accusative can be used, or, preferably, the case of the preceding general term (Ibn Mālik, *Alfiyya*, verses 316-7 and Ibn ʿAḳīl, i, 507): *mā d͟jāʾa 'l-ḳawmu illā Zayduⁿ* (or *Zaydaⁿ*) (see Wright, ii, 336). If the thing excepted is different in kind from that from which it is excepted, the Ḥid͟jāz uses only the accusative after *illā*, and the Tamīm the accusative or the case of the preceding general term; thus, following the pattern sentence: *mā d͟jāʾa 'l-ḳawm illā ḥimāraⁿ* (Ḥid͟jāz), *illā ḥimāruⁿ* (Tamīm) "the people did not come, only a donkey" (Ibn Yaʿīs͟h, 264, lines 8-17). Nöldeke (*Zur Grammatik*, § 37) gives still further variations in the construction of *illā*.

In our opinion, if one wishes to account for the different constructions of *illā*, one should start with *g͟hayr*. This was a noun and the important word in the construction: *g͟hayra Zaydⁱⁿ*, literally: "with the difference of Zayd" (*g͟hayra*, in the acc., as indicating the state (the *ḥāl*) of the subject, or if one wishes, as complement of manner). *Illā* was a simple particle; by analogy, in view of the similarity of sense, the

construction of *ghayra* in the accusative was transferred to the noun following *illā* "except". It is thus a simple analogical construction. The non-observance of this analogy leaves scope for variations in construction, *e.g.*, *mā djāʾa 'l-ḳawmu illā Zaydᵃⁿ* (analogical construction), *illā Zaydᵘⁿ* (construction merely *ad sensum*).

Remarks: a) The Arab grammarians (cf. Sībawayhi, i, 314, line 17; Ibn Yaʿīsh, 260, line 17) see in *illā* the *ḥarf* proper of the *istithnāʾ*; but *ghayra* is frequently used, and *siwā* is not uncommon in the texts; *khalā*, *ʿadā* and particularly *ḥāshā* are found less often. Detailed investigations by numerical analysis of texts, however, have not yet given us the respective frequencies. In fact, differences of distribution must have occurred in the Arab tribes.

b) Fleischer (*Kleinere Schriften*, 734) sees in *ghayr* "difference" an ancient infinitive of a 1st form verb *ghāra* (i), now disappeared, which served as the basis of *ghayyara* "to change". Reckendorf (*Die syntaktischen Verhältnisse*, 146, *Anm.* 1) finds the etymology of *ghayr* obscure. Comparative Semitics gives no satisfactory explanation, so Fleischer may perhaps be right.—For the etymology of *siwā*, see Fleischer, *loc. cit.*, 735, lines 13 f.

c) Annexation accounts for the construction of *ghayr*, *siwā*, *ḥāshā* with the genitive; but it is quite certain that frequency of use tended to obscure the origin of these words and to reduce them to mere grammatical tools. *Ghayra* retains its nominal character because of other constructions. For the Baṣrans, *siwā*, *sawāʾa* were merely *ẓarf*; for the Kūfans, they were *ism* and *ẓarf* (Ibn al-Anbārī, *Kitāb al-Inṣāf*, ed. G. Weil, Discussion 39). In *ḥāshā* the Kūfans saw a verb (*ibid.*, Discussion 37).

Paris), particularly: ch. 185-7, 190, 193, 199, 201-2; Zamakhsharī, *Mufaṣṣal*, 2nd ed. Broch, §§ 88-96, particularly: §§ 88-90 and *Sharḥ* of Ibn Yaʿīsh, 258-82, particularly: 258-75, ed. G. Jahn; Ibn Mālik, *Alfiyya*, verses 316-31 and *Sharḥ* of Ibn ʿAḳīl, i, 505-27, ed. Muḥyi 'l-Dīn ʿAbd al-Ḥamīd; Raḍī al-Dīn al-Astarābādhī, *Sharḥ al-Kāfiya*, i, 205-28, ed. Istanbul 1275, to be consulted last, interesting, but more difficult to follow in its discussions.

(H. Fleisch)

ISTIWĀʾ (khaṭṭ al-), the line of equality, of equilibrium, that is to say the equator, which divides the earth into two hemispheres, the northern and the southern, and joins together all those points of the globe where day and night are equal. The particulars relating to the equator and to the division of the earth are furnished by the *ṣūrat al-arḍ*, which is of Greek, Indian or Persian inspiration, and revised and corrected through the observations of scholars of the time of al-Maʾmūn [cf. djughrāfiyā].

The equator is the largest circle of the earth; as such, it corresponds to the circle of the zodiac, which is the largest of all the circles of the celestial sphere. Its circumference is estimated at 360 degrees, or generally at 9,000 parasangs (equivalent to about 54,000 km.), and its distance from each of the two poles is 90 degrees. Other estimates fix the equatorial circumference at 24,000 miles (1 mile = one third of a parasang), corresponding to a diameter of 7,636 miles, approximately 48,000 and 15,000 km. respectively; Al-Masʿūdī himself gives very variable figures: 13,500 miles for half the circumference, or 20,160 miles for the total circumference, corresponding to a diameter of 6,414.5 miles, or again, still for the total circumference, 6,600 parasangs (= 19,800 miles) corresponding to a diameter of 2,100 parasangs (= 6,300 miles), or lastly 24,000 miles for a diameter of 7,667 miles. Yāḳūt for his part gives figures that range from 6,800 to 27,000 parasangs.

The division of the earth into two hemispheres is not the only function of the equator. It also marks the limit of inhabited lands in their furthest longitudinal extent, from East to West, from the extremities of China to the Fortunate or Eternal Islands (*al-Djazāʾir al-khālidāt* [*q.v.*]). Mid-way, according to a conception inherited from India, an island is situated, at the same distance from the North and the South as from the East and the West: this is the dome of the earth (Arin, Uzayn, Udjdjayn [*q.v.*]).

Finally, the equator plays an essential part in the division of climates (*aḳālīm*, sing. *iḳlīm* [*q.v.*]), and, through these, in the distinction between inhabited and uninhabited lands, this time in the North-South direction. Just as in the North, towards Thule, at a latitude of about 60°, life ceases to be possible on account of the intense cold, so in the South, at a latitude generally estimated at from 21° to 24°, life disappears on account of the excessive heat. On the whole from North to South, life extends merely over a latitude of approximately 80 degrees. Although certain authors attribute to the southern hemisphere seven climates corresponding to those of the northern hemisphere, it remains true that a parallel situation does not hold good in respect of life, which is thus limited to only one quarter of the globe—from 0 to 180 degrees from East to West and from —20 to +60 degrees in the South-North direction. In general, if, in the architecture of the world, it was perceived to be a line of equilibrium, in the description of inhabited lands the equator was always regarded more or less as a limit, with the risks which its crossing imply: reflecting this state of mind and this latent mistrust, the Arab geographical texts, even when describing the countries of the South, have nothing to say on the theme of "crossing the line", so dear to modern explorers.

ISTOLNĪ (ISTŌNĪ) BELGHRĀD (also Ustōlnī, Ustōnī Belghrād)—cf. Serbian: Stolni Belgrad; German: Stuhlweissenburg; Latin: Alba Regia; Hun-

garian: Székesfehérvár—a fortress town to the south-west of Buda. Here, during the 10th-16th centuries, was held the coronation of the Hungarian kings in the Church of St. Stephen—a church which was also their burial place. Istolnī Belgh̲rād (*beyāẓ iskemle ḳalʿesi*, to use the words of Ewliyā Čelebi, vii, 55) was located where the stream Sarvisius (Isthvanfius, 267—cf. Nehr-i S̲h̲arwīz in Ewliyā Čelebi, vii, 63), flowing from Lake Balaton, spread outward to form reed-filled marshes. Reinforced with bastions controlling the approaches across the fens and also protected by a wall and a ditch (cf. Giovio, *Historiae*, ii, 308 r), the fortress was difficult to attack. It fell nonetheless to the Ottoman Turks in 950/1543. Thereafter Istolnī Belgh̲rād became the centre of a large Ottoman *sand̲j̲aḳ* embracing in 995/1586-7 (cf. Fekete, *Siyāqat-Schrift*, i, 442) a number of important places, amongst them Pesperīm (Vezprém), Pōlāta (Palota), and Yanīḳ (Györ). The Christians besieged and took the fortress in 1010/1601, only to lose it again to the Ottomans in 1011/1602. Istolnī Belgh̲rād remained under Turkish rule until the War of the Sacra Liga (1684-99) when, reduced to narrow straits (*ultimâ esurie confracta*: Wagner, ii, 43) by a strict blockade, it surrendered to the Christians in 1099/1688, thereby coming definitively and finally into their possession.

(V. J. Parry)

IṬĀʿA [see ṬĀʿA].

ĪṬĀʾ [see ʿARŪḌ, ḲĀFIYA]

IʿTĀḲ [see ʿABD]

ĪṬALIYA, Italy, a name which seldom occurs in the classical Arab authors and which al-Idrīsī [*q.v.*] uses only once in his *Nuzhat al-mus̲h̲tāḳ* (cf. M. Amari, *BAS*, 15); in the Arab works on history and geography, together with less common expressions like *arḍ Ifrand̲j̲* [see IFRAND̲J̲] and *al-arḍ al-kabīra* (which sometimes denotes Calabria alone), one finds the terms الأنبردية ، أنكبردية أنكبردة, which more specifically denote the regions in the centre and south of Italy under the domination of the Lombard principalities, although, in the *Muʿd̲j̲am al-buldān* of Yāḳūt, the territory denoted by the term الأنكبردة (strangely transliterated as al-Ankaburda) extends from Provence to Calabria.

The particulars furnished by Arab geographers and travellers in regard to Italy, both the peninsula and the islands, are not all equally complete and trustworthy. It need hardly be emphasised that, in their writings, Sicily (as will be made clear in the article ṢIḲILLIYYA) was given a place of particular importance, in view of the fact that, for almost two and a half centuries, the island formed part of the *Dār al-Islām* [*q.v.*]. Among the remarkable output of Arab geographical writings, one work outstanding for the wealth and detail of the information it contains is the *Nuzhat al-mus̲h̲tāḳ*, four sections of which are devoted to Italy—three to its mainland territory (3rd section of the IVth climate, 2nd and 3rd sections of the Vth) and one to its island territory (2nd section of the IVth climate).

Although it should sometimes be treated with reserve, the information given by al-Idrīsī is only rarely the fruit of pure imagination: a typical and perhaps unique example is the fanciful, legendary description of the city of Rome. As regards the topicality of the particulars given, it should be borne in mind that they sometimes reflected the political and ethnic situation of certain cities in the 12th century (the *Nuzhat al-mus̲h̲tāḳ* was completed in S̲h̲awwāl 548/January 1154), but at other times they derived from out-of-date sources, and show that the compiler or his informants found it impossible to bring the material up to date (on this question, cf. G. Furlani, *La Giulia e la Dalmazia nel "Libro di Ruggero" di al-Idrīsī*, in *Aegyptus*, vi, Milan 1925, 60 ff.).
